PREFACE TO FIRST EDITION

FOR many years a need has been felt by chemists for a book which shall collect into convenient form for ready reference the various data concerning the solubility of chemical substances that have been published from time to time in chemical periodicals and elsewhere.

The first mention that can be found of such a plan was made in 1731, when Peter Shaw delivered Chemical Lectures in London, as may be seen from the following:—

EXTRACTS from PETER SHAW'S Chemical Lectures, publicly read at London in 1731 and 1732. London. Second Edition, London 1755. 8vo.

Page 97. Experiment I.—That Water as a Menstruum dissolves more of one body and less of another.

[He shows that two ounces of water dissolve two ounces of Epsom salt, five drachms of common salt, and eight grains of cream of tartar. Only in the latter case much remained undissolved until boiled.]

“It might be proper for the further Improvement of Chemistry and Natural Philosophy to form a Table of the Time and Quantity wherein all the known Salts are dissolvable in Water. . . . Such a Table regularly formed might ease the Trouble of refining Salts, by shewing at once without future Trial or Loss of Time how much Water each Salt required to dissolve it for Clarification, Filtration, or Crystallization. It would likewise supply us with a ready and commodious Way of separating any Mixture of Salts, by shewing which would first shoot out of the Mixture upon Crystallization. . . . The same Table might also direct us to a ready and commodious Method of separating two Salts without waiting for Crystallization. . . .”

It was many years, however, before the scheme suggested by Peter Shaw was put into execution. Professor F. H. Storer published the first work that undertook to carry out the idea in its entirety, in 1864, in a book, which he entitled “First Outlines of a Dictionary of Solubilities of Chemical Substances,” and which contained a compilation of nearly all the data on the subject published before 1860. It was at once recognized as a most valuable contribution to chemical literature; but for many years it has been difficult to obtain this work, as the limited edition which was published was soon wholly exhausted. Since then nothing has appeared on the subject except the brief tabulations found in various reference books, and no attempt has been made to cover the whole subject.

It is needless to state that the growth of chemical science since the publication of Professor Storer's book has been so enormous that that work has lost, at least to a great extent, the practical value it possessed thirty years ago. This growth has been indeed so great, and the data which have accumulated since 1860 so far surpass the earlier in volume, that a simple revision of Professor Storer's book was impracticable, and it therefore seemed best to start afresh.

With the facilities offered by the various scientific libraries at Harvard University, the Massachusetts Institute of Technology, and other libraries in Boston, it has been possible to collect nearly all the data relating to the subject. For the work before 1860 Professor Storer's work has been found invaluable.

The method pursued has been to form a preliminary list of compounds with more or less data by consulting the two most complete works on inorganic chemistry—Gmelin-Kraut's "*Handbuch der anorganischen Chemie*" and Graham-Otto-Michaelis's "*Lehrbuch*." These statements have been verified and elaborated by consulting the original memoirs in all the periodicals devoted to chemical literature which were obtainable. The "*Jahresbericht der Chemie*" also has been used extensively in tracing references, but the original memoirs have always been consulted and references given to them when possible.

It has been found impracticable to draw any distinction as to reliability between the various data given by different observers. It was manifestly impossible to attempt to verify experimentally the statements of those who have carried on the researches, for the most assiduous labor of many could only cover a small portion of the attested facts. Therefore, even when two statements are directly contradictory, both have been given with the authority for each. The only exception to this has been made when more recent discoveries have shown beyond any reasonable doubt the falsity of previous work. In this way some of the older manifestly inaccurate work has been omitted. In a majority of cases the more recent work may be considered to be the more accurate, but this is not the invariable rule. A Synchronistic Table of the more common periodicals is given in the Appendix, whereby it is easy to determine the date of the publication of a research to which reference is made.

It may be objected by the practical chemist that most of the work previous to 1850 might well have been omitted, but a great deal of this work possesses at least a historical value, and often furnishes facts which have not since been verified. Much of the earlier work, when obviously of less importance, has been printed in smaller type.

The aim has been to include in this volume all analyzed inorganic substances, that is, all substances which do not contain carbon, but exception has been made in the case of CO_2 , CO , CS_2 , the carbonates, cyanides, ferro-cyanides, etc., which are here included.

The work has been brought up to March, 1894, when this volume went to press, and the results of researches published since that time are not included in the present edition.

It is hoped that this book will fill to some extent the want that has been felt by chemists for a compilation of this nature. While it has been attempted to make the book as free from errors as possible, nevertheless it is naturally impossible to avoid many mistakes, and the compiler will be very grateful to those who may call his attention to any errors or omissions.

A. M. C.

CAMBRIDGE, MASS., Aug., 1895.

PREFACE TO SECOND EDITION

DURING the twenty-five years which have elapsed since the publication of the first edition of this dictionary, a very large amount of work has been published in chemical periodicals, containing data concerning the solubility of inorganic chemical compounds. As it was impossible for the compiler of the first edition to devote the time necessary for the collecting of the published data, it was necessary to employ assistance, and Dr. Dorothy A. Hahn, Professor of Chemistry, Mt. Holyoke College, was engaged for this work. Dr. Hahn has collected the larger part of the material in this book, which work in spite of its arduous and tedious nature, she has performed in a most painstaking manner.

The compilation and arrangement of the data collected by Dr. Hahn, which devolved upon the original author, took much time. This, together with difficulties in printing, caused by the general conditions after the war, has delayed the publication until the present year, although the work was begun in 1916, and it has only been brought up to January 1st of that year.

Since the publication of the first edition of this work, Dr. Atherton Seidell has brought out two editions of his book, entitled "Solubilities of Inorganic and Organic Substances," which covers quite a different field, as he considers only quantitative data and those only for the commoner substances. Dr. Seidell has followed the plan in most cases where there are several available solubility determinations of a substance, of selecting and averaging the more reliable results, and embodying them in tables. Although this undoubtedly facilitates ready reference, it has seemed better to adhere to the original plan of the first edition, and to publish all the data in the form of the original authorities with references and dates, so that the user may be at liberty to use his own judgment in selection. Some few of the tables arranged by Dr. Seidell, however, have seemed to possess decided advantages over any other published data and they have been incorporated in the present volume. It is desired also to acknowledge indebtedness to Dr. Seidell's work for certain other tables where the original sources were not available to the present compilers.

The same plan and arrangement used in the first edition has been followed with certain elaboration, however, of the arrangement of data on the solubility of two or more salts in a solvent, which is explained in the Explanatory Preface.

Data published since the first edition on the cobalt and chromium ammonia compounds and those of the platinum group have been omitted, as it seemed that solubility data on those compounds possessed very little general interest.

As stated in the preface of the first edition, while every possible attempt has been made to avoid errors, it is manifestly impossible to avoid many mistakes in a work of this nature, and the compiler will be glad to have his attention called to any errors or omissions.

WILMINGTON, Del., Jan., 1921.

A. M. C.

EXPLANATORY PREFACE

IN order to reduce this volume to a convenient size the subject-matter has been abbreviated and condensed as far as seemed compatible with clearness; but it has been the aim not to use any abbreviations which are not at once intelligible without consulting the explanatory table. The more common chemical formulæ have been universally used, thereby saving a large amount of space without detracting from ready intelligibility to chemists.

The solubility of the substance in water is first given, the data being arranged chronologically in the longer articles. Then follow the specific gravities of the aqueous solutions, and also any data obtainable regarding their boiling-points; other physical data concerning solutions are not included. Following this is the solubility of the substance in other solvents—first the inorganic acids, then alkali and salt solutions, and finally organic substances.

Owing to the great increase of data, published during the last twenty years, on the simultaneous solubility of two or more salts in a given solvent, it has been found necessary to plan some arrangement, whereby such data can easily be found, and the plan adopted is as follows: The data for the solubility of two salts in a solvent is placed under the salt which comes first according to the alphabetical arrangement in this dictionary, and the order of the data on various salts under the same heading follows the alphabetical order of the salts considered. Thus the data on the solubility of $\text{NH}_4\text{Cl} + \text{BaCl}_2$, $\text{NH}_4\text{Cl} + \text{CuCl}_2$, and $\text{NH}_4\text{Cl} + \text{PbCl}_2$, and $\text{NH}_4\text{Cl} + (\text{NH}_4)_2\text{SO}_4$ are placed under Ammonium Chloride and arranged in the given order. Certain exceptions have been made to this rule, where the data directly concerns the solubility of a salt in a solution of another salt, in which case, it is placed under the former. Numerous cross references, however, are given, which it is hoped will avoid confusion.

In many cases no definite distinction can be drawn between the phenomena of solution and decomposition. At present the theory of solution is in a confused state, and until what really takes place when a substance dissolves is thoroughly understood no distinct line can be drawn. The whole subject is unsettled at the present time; for while many chemists believe in the so-called "dissociation" theory, yet the "hydrate" theory is not without its supporters. It is not my intention to discuss the theoretical side of the question, which has been so well treated in many recent works. It is, however, obvious that the phenomena are essentially different, when, for example, sodium carbonate is dissolved in water, in which case the original salt is deposited on evaporation, and when iron is dissolved in sulphuric acid, and the solution deposits a sulphate of iron. Yet it is still the custom to speak of iron as soluble in sulphuric acid, although it would be much more accurate to say that the sulphuric acid was decomposed by the iron. It has thus been found impracticable to draw a sharp line between solu-

tion and decomposition, and the term "soluble" has in general been used where a solution of some sort is formed by the action of the solvent.

The matter of alphabetical arrangement of chemical compounds, in the present somewhat confused state of chemical nomenclature, has been a difficult question to decide. The plan followed has been practically that of the standard Dictionaries of Chemistry, whereby the compounds of metals with one of the non-metallic elements have been classified under the metals, while the salts of the other acids (the oxygen acids so called and some few others) have been arranged alphabetically under the acids. Thus barium chloride is found under barium, while barium chlorate is found under chloric acid. No exception has been made in the case of the rare metals, as is usually the custom in Dictionaries of Chemistry. Double salts are to be found under the word which comes first alphabetically; thus, "common alum," potassium aluminum sulphate, is found under aluminum sulphate as aluminum potassium sulphate (under sulphuric acid), but ammonia chrome alum is found under ammonium sulphate as ammonium chromium sulphate. In the same way the double sulphate and chromate of potassium is found under potassium chromate (chromic acid), and not under potassium sulphate (sulphuric acid). The double chloride of ammonium and magnesium is found under ammonium chloride (ammonium), while the double chloride of potassium and magnesium is found under magnesium chloride (magnesium). An exception is made, however, in the case of double compounds of salts of oxygen acids with salts containing a single non-metallic element, in which case they are always found under the oxygen acid. Thus the double sulphate and chloride of lead, PbSO_4 , PbCl_2 , is found under lead sulphate (sulphuric acid), and not under lead chloride (lead).

The above method in some cases widely separates analogous compounds, but it was found to be the only practical way to a strictly alphabetical arrangement, which is no necessary in a book containing so many very short articles.

The ammonia addition-products furnished another difficulty. While their nature is more or less definitely understood in the cobalt, platinum, etc., compounds, and a definite nomenclature is in general use, there is an absolute lack of anything of the kind in the less definite compounds. It is good usage to speak of cuprammonium compounds, but how shall we designate the analogous cadmium compounds? "Cadmammonium" has not yet received the sanction of chemists, and AlCl_3 , NH_3 is a still worse case for naming. I have, therefore, not attempted to name these compounds, but classified them all under the salts to which the ammonia is added, affixing the word ammonia, thus: aluminum chloride ammonia, cadmium chloride ammonia, and also cupric chloride ammonia for the salt now almost universally known as cuprammonium chloride.

The ammonia compounds of cobalt, chromium, mercury, and the platinum metals are arranged alphabetically according to their universally accepted names, a list of which is given under each of those elements.

It has further been necessary to settle arbitrarily the question whether a substance should be considered as a double salt or a salt of a compound acid con-

taining one of the metals. For example, "fluosilicates" (or silicofluorides, as some may prefer) is the general name for the double fluorides of SiF_4 and a metal, but this unanimity in usage gradually disappears as the basic elements become more nearly alike, so that it is impossible to draw a line between such compounds and a compound such as the double chloride of magnesium and potassium, for which indeed the name "potassium chloromagnesate" has been proposed. The aim has been in all these cases to follow the best usage rather than make an absolutely homogeneous system of nomenclature out of the existing confusion.

In the matter of formulæ no attempt at uniformity has been made. Thus in the case above some chemists write the formula of the double chloride of magnesium and potassium as KMgCl_3 , others as $\text{KCl}, \text{MgCl}_2$. The form here used has been in most cases that of the author from whom the data are taken.

The prefixes mono, di, tri, ortho, pyro, etc., have in general been disregarded in the alphabetical arrangement, and have been printed in italics. Exceptions to this have been made, however, in the cobalt, chromium, etc., ammonium compounds, and in a few others, as dithionic, perchloric, etc., acids. Cross references have been used, so as to prevent any confusion arising from lack of uniformity in this respect.

In the Appendix will be found formulæ and tables for the conversion of the degrees of various hydrometer scales into specific gravity, and a Synchronistic Table of the Periodicals to which references are most frequently made.

A DICTIONARY OF CHEMICAL SOLUBILITIES
INORGANIC

DICTIONARY

OF

CHEMICAL SOLUBILITIES

INORGANIC

Actinium emanation.

Solubility coefficient of actinium emanation in H_2O at room temp. is 2.

If the solubility of actinium emanation in H_2O is made = 1, the relative solubility of the emanation in sat. $KCl + Aq = 0.9$; in conc. $H_2SO_4 = 0.95$; in ethyl alcohol = 1.1; in amyl alcohol = 1.6; in benzaldehyde = 1.7; in benzene = 1.8; in toluene = 1.8; in petroleum = 1.9; in $CS_2 = 2.1$ at 18° .

(Hevesy, Phys. Zeit. 1911, 12. 1221.)

Air, Atmospheric.

See also Nitrogen and Oxygen.

100 vols. H_2O at 15° and 760 mm. absorb about 5 vols. atmospheric air. (Saussure.)

1 vol. H_2O at t° and 760 mm. pressure absorbs V vols. atmospheric air reduced to 760 mm. and 0° .

t°	V	t°	V	t°	V
0	0.02471	7	0.02080	14	0.01822
1	0.02406	8	0.02034	15	0.01795

6	16.54	16	13.48	25	11.81
8	15.81	18	13.03

(Hamberg, J. pr. (2) 33. 447.)

1 l. H_2O absorbs cc. N from air at t° and 760 mm. pressure.

t°	cc. N	t°	cc. N	t°	cc. N
0	19.29	10	15.36	20	12.80
5	17.09	15	13.95	25	11.81

(Dittmar, Challenger Expedition, vol. 1. pt. 1.)

1 l H₂O sat with air at t° and 760 mm. contains cc. O (red to 0° and 760 mm.)

t°	cc O	t°	cc O	t°	cc O
0	10.187	11	7.692	22	6.114
1	9.910	12	7.518	23	5.999
2	9.643	13	7.352	24	5.886
3	9.387	14	7.192	25	5.776
4	9.142	15	7.038	26	5.669
5	8.907	16	6.891	27	5.564
6	8.682	17	6.730	28	5.460
7	8.467	18	6.614	29	5.357
8	8.260	19	6.482	30	5.255
9	8.063	20	6.356		
10	7.873	21	6.233		

(Winkler, B. 22. 1773.)

1 vol H₂O absorbs 0.01748 vol. air at 24.05° and 760 mm. pressure. (Winkler, B. 21. 2851.)

Composition of the absorbed air between 0° and 24° is 34.91% O and 65.09% N (Bunsen); between 15° and 16°, 32.17% O and 67.83% N (König and Kranch, Z anal. 19. 259); 32% O and 68% N (Regnault), at 0°, 35.1% O; 10°, 34.8% O; 20°, 34.3% O; 25°, 33.7% O (Winkler, B. 21. 2483). See also Roscoe and Lunt, and Pettersson and Söndén, page 1.

Solubility of atmos. oxygen and nitrogen in 1000 cc. H₂O at 760 mm. pressure (calc.).

50	1297	1140			

(Winkler, B. 1901, 34. 1409.)

Sea-water absorbs less O and N from air than pure H₂O, but the ratio between O and N remains constant. In sea-water sat. with air at 6.22° the oxygen was 33.50% of the total gas absorbed. (Pettersson and Söndén.)

1 l. sea-water absorbs cc. N and O from air at t° and 760 mm. pressure.

t°	cc. N	cc. O	N+O	% O
0	14.41	7.77	22.18	35.03
5	13.22	6.93	20.15	34.39
10	12.08	6.29	18.37	34.24
15	11.01	5.70	16.71	34.11

(Tornøe, Norwegian North Atlantic Exped. Chem. 18.)

1 l sea water absorbs cc. N from air at t° and 760 mm

t°	cc N	t°	cc N	t°	cc N
0	15.60	10	12.47	20	10.41
5	13.86	15	11.34	25	9.62

(Dittmar)

1 l sea-water absorbs cc N (0° and 760 mm) from atmospheric air at t° and 760 mm pressure (dry)

t°	cc N	t°	cc N	t°	cc N
0	14.85	10	12.06	20	10.25
2	14.20	12	11.62	22	9.98

6	13.04	16	10.87	25	9.62
8	12.53	18	10.54		

(Hamburg)

Absorption of air which is free from carbonic acid by H_2SO_4 at 18° and 760 mm. α = coefficient of solubility

H_2SO_4	α	H_2SO_4	α
98%	0.0173	70%	0.0055
90%	0.0107	60%	0.0059
80%	0.0069	50%	0.0076

(Tower, Z. anorg 1906, 50, 388)

Absolute alcohol absorbs 0.11 vol gas from air, $\frac{1}{3}$ of which is O and $\frac{2}{3}$, N. On mixing with an equal vol. H_2O , $\frac{2}{3}$ of the dissolved gas is given off (Doberainer)

100 vols alcohol (95.1 %) absorb 14.1 vols air (Robinet, C. R. 58, 608)

100 vols. petroleum absorb 6.8 vols air

" " oil of lavender " 6.89 " "

" " benzene " 14.0 " "

" " oil of turpentine " 24.18 " "

(Robinet, l.c.)

1 vol ether at 760 mm. pressure absorbs 0.290 vols. air at 0° ; 0.287 vols. at 10° ; 0.286 vols. at 15° . (Christoff, Z. phys. Ch. 1912, 79, 459.)

Alcohol. $\text{C}_2\text{H}_5\text{OH}$.

Sp. gr. of pure ethyl alcohol + Aq. at 25° .

50	0.909852	—	—

(Osborne, McKelvy and Bearce, Bureau of Standards, Sci. Paper No. 197.)

Alum, Ammonia.

See Sulphate, aluminum ammonium.

Alum, Chrome.

See Sulphate, aluminum chromium.

Alum, Iron.

See Sulphate, aluminum ferric.

Alum, Potash.

See Sulphate, aluminum potassium.

Alumina.

See Aluminum oxide.

Aluminic acid, $\text{H}_2\text{Al}_2\text{O}_4 = \text{Al}_2\text{O}_3, \text{H}_2\text{O}$.

Aluminum hydroxide possesses acid properties, and salts corresponding to an acid of the above formula exist

See Aluminum hydroxide.

Aluminates.

All aluminates are insol in H_2O except those of K and Na (Fremy) and Ba (Beckmann, J. pr. (2) 26, 385).

Barium aluminate, $\text{BaAl}_2\text{O}_4 + 4\text{H}_2\text{O}$.

Sol. in 10 pts. H_2O ; can be recryst. from alcohol. (Deville, J. pr. 87, 299)

+ $5\text{H}_2\text{O}$ Sl. sol in H_2O with decomp. (Allen, Am. Ch. J. 1900, 24, 313.)

+ $7\text{H}_2\text{O}$. Sl. sol. in cold, not completely sol. in hot H_2O . Sol. in cold dil. HCl + Aq. (Beckmann, J. pr. (2) 26, 385.)

$\text{Ba}_2\text{Al}_2\text{O}_5 + 5\text{H}_2\text{O}$. Sol. in 20 pts H_2O by boiling. (Beckmann, B. 14, 2151)

Insol. in alcohol.

Sl. sol. in H_2O with decomp.; insol. in alcohol. (Allen, Am. Ch. J. 1900, 24, 311.)

$\text{Ba}_3\text{Al}_2\text{O}_8 + 7 - 11\text{H}_2\text{O}$. Sol. in 15 pts. H_2O with decomp into $\text{Ba}_2\text{Al}_2\text{O}_5 + 5\text{H}_2\text{O}$; insol. in alcohol. (Beckmann.)

Barium aluminate bromide, $\text{BaAl}_2\text{O}_4, \text{BaBr}_2 + 11\text{H}_2\text{O}$.

Sol. in H_2O . (Beckmann, J. pr. (2) 26, 385, 474.)

Barium aluminate chloride, $\text{BaAl}_2\text{O}_4, 3\text{BaCl}_2 + 6\text{H}_2\text{O}$.

Sol. in H_2O . (Beckmann, l.c.)

$\text{BaAl}_2\text{O}_4, \text{BaCl}_2 + 11\text{H}_2\text{O}$. Sol. in H_2O . (Beckmann, l.c.)

Barium aluminate iodide, $\text{BaAl}_2\text{O}_4, \text{BaI}_2$.

Sol. in H_2O . (Beckmann, l.c.)

Calcium aluminate, $\text{CaO}, \text{Al}_2\text{O}_3$.

Decomp. by H_2O but does not "set." Sol. in HCl ; insol. in $\text{HNO}_3, \text{H}_2\text{SO}_4$, and HF . (Dufau, C. R. 1900, 131, 543.)

$\text{Ca}_2\text{Al}_2\text{O}_5 + 7\text{H}_2\text{O}$. Slowly decomp. by H_2O ; sl. sol. in H_2O . (Allen, Am. Ch. J. 1900, 24, 316.)

$\text{Ca}_3\text{Al}_2\text{O}_8$. Insol. in H_2O ; not decomp. by KOH + Aq; sol. in acids. (Tissier, C. R. 48, 627.)

+6H₂O. Ppt; sl. sol. in H₂O; insol. in alcohol. (Allen, Am. Ch. J. 1900, **24**, 316.)

3Al₂O₃.4CaO+3H₂O. Ppt. (Friedel, Bull. Soc. Min. 1903, **26**, 121; C. C. 1904, I, 430)

Cobalt aluminate.

"*Thenard's* or *Leithner's* blue." Insol. in H₂O.

CoAl₂O₄. Insol. in H₂O and acids. (Ebelmen)

Cobalt magnesium aluminate, [MgCo]Al₂O₄.

"*Spinel Blue*." Insol. in H₂O or HCl+Ag. (Ebelmen.)

Glucinum aluminate, GAl₂O₄.

Min. *Chrysoberyll*. Not attacked by acids, but decomp. by KOH+Ag.

Iron (ferrous) aluminate, FeAl₂O₄.

Min. *Hercynite*. Not attacked by acids.

Lithium aluminate, LiAlO₂.

Sol. in H₂O. (Weyberg, C. C. 1906, II, 1659.)

Lithium hydrogen aluminate, LiHAl₂O₄+5H₂O.

Sl. sol. in H₂O; decomp. on boiling. (Allen, Am. Ch. J. 1900, **24**, 310.)

Magnesium aluminate, MgAl₂O₄.

Min. *Spinel*. Insol. in H₂O.

Insol. in HNO₃+Ag; very sl. sol. in HCl+Ag; partly sol. in H₂SO₄ at boiling temp. (Abich, Pogg. **23**, 316.)

Sol. by standing 2 hours at 210° with a mixture of 3 pts. H₂SO₄ and 1 pt. H₂O, or by boiling with this mixture together with HF. (Mitscherlich, J. pr. **81**, 108.)

Sl. sol. in HCl, HF, and H₂SO₄; insol. in HNO₃. (Dufau, Bull. Soc. 1901, (3) **25**, 669.)

Manganous aluminate.

Insol. in H₂O and acids. (Ebelmen, A. ch. (3) **22**, 225.)

MnAl₂O₄. Insol. in HCl+Ag; readily attacked by HF, HNO₃ and H₂SO₄.

Decomp. by fusion with alkali chlorate, nitrate, oxide or carbonate. (Dufau, C. R. 1902, **135**, 963.)

Nickel aluminate.

Insol. in H₂O.

Potassium aluminate, K₂Al₂O₄+3H₂O.

Decomp. by dissolving in pure H₂O with separation of Al₂O₃. (Freymy, A. ch. (3) **12**, 362.) Can be recrystallised from water containing a little alkali, without decomposition. (Freymy.)

Insol. in alcohol.

Sodium aluminate, Na₂Al₂O₄.

Easily and completely sol. in cold H₂O. (Schaffgotsch, Pogg. **43**, 117.)

+4H₂O. Insol. in alcohol. (Allen, Am. Ch. J. 1900, **24**, 308.)

Na₂Al₂O₄. Miscible with hot H₂O, and as sol. as NaOH in cold H₂O. Insol. in alcohol but decomp. thereby. (Tissier, C. R. **43**, 102.)

Strontium aluminate, Sr₂Al₂O₆+6H₂O.

Sl. sol. in H₂O (with slow decomp. in Ag. solution). (Allen, Am. Ch. J. 1900, **24**, 314.)

Thallium aluminate, Tl₄Al₂O₅+7H₂O.

Not completely sol. in, but slowly hydrolysed by H₂O.

Readily sol. in dil. acids and in the fixed alkalies.

Insol. in abs. alcohol. (Hawley, J. Am. Chem. Soc. 1907, **29**, 303.)

Zinc aluminate, ZnAl₂O₄.

Insol. in acids or alkalies.

Min. *Gahnite* (*Automolite*).

+xH₂O. Sol. in KOH, and NH₄OH+Ag. (Berzelius.)

Aluminicoantimoniotungstic acid.

Ammonium aluminicoantimoniotungstate, 6(NH₄)₂O, 2Al₂O₃, 3Sb₂O₅, 18WO₃+17H₂O.

A shellac-like gum. (Daniels, J. Am. Chem. Soc. 1908, **30**, 1856.)

Barium aluminicoantimoniotungstate, 5BaO, 2Al₂O₃, 3Sb₂O₅, 18WO₃+6H₂O.

Somewhat insol. in dil. HCl. (Daniels, J. Am. Chem. Soc. 1908, **30**, 1857.)

Silver aluminicoantimoniotungstate, 6Ag₂O, 2Al₂O₃, 3Sb₂O₅, 18WO₃+12H₂O.

Ppt.

Sol. in NH₄OH+Ag but requires HNO₃ (1:10) to dissolve it. (Daniels, J. Am. Chem. Soc. 1908, **30**, 1857.)

Aluminicoarseniotungstic acid.

Ammonium aluminicoarseniotungstate, 6(NH₄)₂O, 2Al₂O₃, 3As₂O₅, 18WO₃+14H₂O.

Sparingly sol. in H₂O. (Daniels, J. Am. Chem. Soc. 1908, **30**, 1854.)

Barium aluminicoarseniotungstate, 4BaO, 2Al₂O₃, 3As₂O₅, 18WO₃+12H₂O.

Very sl. sol. in H₂O.

Sol. in very dil. HCl or HNO₃. (Daniels, J. Am. Chem. Soc. 1908, **30**, 1855.)

Cadmium aluminicoarseniotungstate, 4CdO, 2Al₂O₃, 3As₂O₅, 18WO₃+17H₂O.

Sol. in dil. mineral acids and in strong NH₄OH+Ag. (Daniels, J. Am. Chem. Soc. 1908, **30**, 1855.)

Aluminicomolybdic acid.

Ammonium aluminicomolybdate, 3(NH₄)₂O, Al₂O₃, 12MoO₃+19H₂O.

Ppt. (Hall, J. Am. Chem. Soc. 1907, **29**, 696.)

+20H₂O. More sol. in H₂O than potassium

Liquids	Loss in mg
5 % citric acid + Aq	2 15
1 % "	1 90
5 % lactic acid + Aq	4 77
5 % butyric acid + Aq	1 31
Coffee	0 50
Tea	0
Beer	0
4 % boric acid + Aq	1 77
5 % carbolic acid + Aq	0 23
1 % "	0 49
1 % salicylic acid + Aq	6 35

(Lunge, C N. 65. 110.)

The apparent solubility of this metal in H₂O is due to the presence of minute quantities of Na. Absolutely pure Al does not lose any weight to H₂O and the H₂O remains perfectly clear. Also dil. acids remain perfectly clear. (Moissan, C R 1895, 121. 79-98; C C. 1896, 1. 193.)

Sl. attacked by H₂O at 80°. (W. Smith, J. Soc Chem Ind. 1904, 23. 475.)

Easily sol. in dil. or conc. HCl + Aq, whether hot or cold; also in HBr, HI, or HF + Aq. Insol. in dil. H₂SO₄ + Aq (de la Rive), sl. attacked by cold, easily by hot conc. H₂SO₄. Not attacked by HNO₃ + Aq even when conc. and boiling (Wohler), easily sol. in dil. H₂SO₄, or HNO₃ + Aq in vacuo (Weeren, B 24. 1798), slowly sol. in 27 % HNO₃ + Aq, 100 ccm. HNO₃ + Aq requiring 2 months to dissolve 2 g Al (Montemartini, Gazz ch it 22. 397), very sl. sol. in most organic acids, but solubility is increased by presence of NaCl.

Not attacked by dil. or conc. HNO₃ at ord. temp. but attacked by hot HNO₃. Attacked by H₃PO₄. (Smith, J. Soc. Chem. Ind 1904, 23. 475.)

Completely sol. at 100° in two hours in HNO₃, sp. gr. 1.15-1.46. (Stillman, J Am Chem Soc 1897, 19. 714.)

Very easily sol. in HNO₃ (contrary to the usual statement in text-books). (Woy, C C 190, 1. 94.)

Slowly attacked by HNO₃ + Aq (20-25 %) at 25-30°. (Deventer, Chem. Weekbl. 1907, 4. 69.)

Dil. HNO₃ or H₂SO₄ does not attack Al on account of formation of layer of gas. Action is increased by vacuum. Solutions of metallic chlorides, the metal of which is insol. and attaches itself to the Al (Pt, Au, Cu, Hg) increase the solubility, but when metal is soluble in the acid (Fe, Zn, etc.), there is no increase of solubility. (Ditte, C. R 1890, 110. 573.)

Violently attacked by dil. or conc. H₃PO₄ + Aq. (Winteler.)

Not attacked by solution of HCl in liquid HCN (Kahlenberg, J phys. Chem 1902, 6. 662.)

Very easily sol. in conc. or dil. KOH, or NaOH + Aq. Slowly attacked by NH₄OH +

Aq (Wohler); sol. in BaO₂H₂ + Aq (Beckmann, J pr (2) 26. 385), slowly sol. in CaO₂H₂ + Aq.

Sol. in excess of 10 % KOH + Aq and in NaOH and LiOH + Aq, sol. in hot conc. Ba(OH)₂, Sr(OH)₂ and Ca(OH)₂ + Aq. (Allen, Am Ch J 1900, 24. 304-331.)

Attacked by hot conc. NH₄OH + Aq (Smith, J Soc Chem Ind 1904, 23. 475.)

Sl. attacked by sulphates, or nitrates + Aq, but all chlorides, bromides, and iodides, except those of the alkalies and alkaline earths, even AlCl₃ + Aq, dissolve the metal. Insol. in alum, or in NaCl + Aq, but sol. in alum + NaCl + Aq (Tissier, C R 41. 362), sol. in NaCl + Aq (Deville, A ch (3) 43. 14), sol. in neutral FeCl₃ + Aq in vacuo (Weeren, B 24. 1798.) Violently attacked by CuCl₂ + Aq (Tommasi, Bull Soc (2) 37. 443.)

Rapidly sol. in K₂S₂O₈ + Aq, more slowly sol. in (NH₄)₂S₂O₈ + Aq (Levi, Gazz ch it 1908, 38. (1) 583.)

Attacked by (NH₄)₂PO₄ + Aq. Sl. attacked by NaNO₃ + Aq or KNO₃ + Aq at 100°. (Smith, J Soc Chem Ind 1904, 23. 475.)

Not affected by NH₄NO₃ + Aq (Hodgkinson, C N. 1904, 90. 142.)

Attacked by POCl₃ at 100° (Remtzer, B. 13. 845.)

Insol. in liquid NH₃. (Gore, Am Ch J. 1898, 20. 826.)

Insol. in liquid CO₂. (Buchner, Z. phys. Ch 1906, 54. 674.)

Attacked by NOCl (Sudborough, Chem. Soc 1891, 59. 659.)

92 % alcohol attacks Al less than H₂O. Pure Al is attacked less than commercial. (Hugou-neng, J. Pharm. 1895, (6) 1. 537.)

Sol. in organic acids containing chlorides (Smith, J. Soc. Chem Ind 1904, 23. 475.)

Acetic, tartaric and citric acids attack Al only at first. Metal is covered by layer of hydroxide but on addition of haloid salts, gradual solution ensues (Ditte, C R 1898, 127. 919.)

Not attacked by sugar + Aq. (Klein, C. R. 102. 1170.)

Aluminum arsenide.

Decomp. by H₂O with evolution of AsH₃. (Wohler, Pogg. 11. 160.)

Decomp. by H₂O. (Fonze-Diacon, C. R. 1900, 130. 1315.)

Aluminum boride, Al₂B₄.

Very slowly sol. in hot conc. HCl + Aq, and hot NaOH + Aq, but easily in moderately strong warm HNO₃ + Aq. (Hampe, A 183. 75.)

Al₂B₂₄. Not attacked by HCl, or KOH + Aq. Scarcely attacked by boiling H₂SO₄. Hot conc. HNO₃ + Aq dissolves gradually but completely (Hampe, l. c.)

Aluminum borocarbide, Al₃C₂B₁₈

Insol. in H₂O, HCl + Aq, H₂SO₄ + Aq, or

KCH + Aq, slowly sol in hot conc HNO_3 + Aq. (Haupe, l c)

Aluminum bromide, AlBr_3

Anhydrous Dissolved by H_2O with great violence and evolution of much heat. Very sol in alcohol. More sol in CS_2 than AlI_3 (Weber, Pogg. 103. 264)

Sol in SOCl_2 (Besson, C. R. 1896, 123. 884)

Sol in $\text{C}_2\text{H}_5\text{Br}$ (Plotnikoff, C. C. 1902, II. 617)

Sol in acetone (Naumann, B. 1904, 37. 4328), (Eidmann, C. C. 1899, II. 1014.)

Solubility of AlBr_3 in organic liquids

Solvent	t°	Mols per 100	t°	Mols per 100	t°	Mols per 100
Benzo-phenone	48°	0	130°	43 2	50°	66 0

	70	40	7	65.5		
	80	44 3	20	67 9		

(Menschutkin, Ann. Inst. Pol. P.-le-Gr., 13. 1.)

+6 H_2O . Very sol. in H_2O .

+15 H_2O . (Panfiloff, J. B. 1895. 785)

Aluminum antimony bromide, $2\text{AlBr}_3, 5\text{SbBr}_5 + 24\text{H}_2\text{O}$.

Hygroscopic. Decomp. by H_2O . (Weinland, B. 1903, 36. 258)

Aluminum potassium bromide, $\text{AlBr}_3, \text{KBr}$.

Sol. in H_2O . (Weber, Pogg. 103. 267.)

Aluminum bromide ammonia, $\text{AlBr}_3, x\text{NH}_3$.

Decomp. by H_2O . (Weber, Pogg. 103. 267.)

Aluminum perbromide carbon bisulphide, $\text{AlBr}_3, \text{Br}_4, \text{CS}_2$

Sol in ether, ethyl bromide, ethylene bromide and benzene; decomp by H_2O (Plotnikoff, J. Russ phys Chem Soc 1901, 33. 91, C. C. 1901, I. 1193)

$2\text{AlBr}_3, \text{Br}_4, \text{CS}_2$. Sol. in ether and benzene; insol in petroleum ether. (Plotnikoff, l. c.)

Aluminum bromochloride, AlCl_2Br

Deliquescent. Somewhat less violently dissolved by H_2O than is AlBr_3 (v Bartial, Z. anorg. 1907, 55. 154)

+6 H_2O . Deliquescent. Sol in H_2O without evolution of heat. (v. Bartial, Z. anorg. 1907, 55. 155)

Aluminum carbide, Al_4C_3 .

Decomp by fused KOH at 100°; insol. in fuming HNO_3 in the cold, decomp by H_2O , and dil acids. (Moissan, Bull Soc. 1894, (3) 11. 1012, C. R. 1894, 119. 16-20)

Insol. in acetone (Naumann, B. 1904, 37. 4328)

Aluminum chloride, basic, $\text{Al}_6\text{O}_{14}\text{H}_{10}, \text{HCl}$.

Easily sol in H_2O (Schlumberger, Bull. Soc 1895, (3) 13. 56)

Aluminum chloride, AlCl_3

Anhydrous Very deliquescent. Sol in H_2O with a hissing noise and evolution of heat. Solution of AlCl_3 in H_2O loses HCl on evaporation, and AlCl_3 is finally wholly converted into Al_2O_3 .

Sol. in 1.432 pts. H_2O at 15°. (Gerlach.)

AlCl_3 + Aq containing 19.15 % AlCl_3 boils at 103.4°; AlCl_3 + Aq containing 38.3 % AlCl_3 boils at 112.8°. (Gerlach.)

Sp gr. of AlCl_3 + Aq at 15°.

(Jones & Pearce, Am. Ch. J. 1907, 38. 726.)

Sol. in 1 pt. strong alcohol at 12.5° (Wenzel); easily sol. in ether; sl. sol. in CS_2 ; insol. in ligroine or benzene.

Difficultly sol. in AsBr_3 . (Walden, Z. anorg. 1902, 29. 374.)

Sol. in AlBr_3 . (Isbekow, Z. anorg. 1913, 84. 26.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 826.)

Insol. in CS_2 at ord. temp. (Arcowski, Z. anorg. 1894, 6. 257.)

Sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Difficultly sol. in acetone. (Naumann, B. 1904, 37. 4328.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in methylal. (Eidmann, C. C. 1899, II. 1014.)

Solubility of AlCl_3 in organic liquids.

Solvent	t°	Mols. per 100	t°	Mols. per 100	t°	Mols. per 100

(Menschutkin, Ann. Inst. Pol. P.-le-Gr., 13. 1.)

+6 H_2O . Very deliquescent; very sol. in H_2O . Sol. in 0.25 pt. H_2O . (Thomson.)

Sol. in 2 pts. abs. alcohol at ordinary temp., and 1.5 pts. at b.-pt (Thomson.)

Completely insol. in a solution of ether in H_2O sat. with HCl (Havens, Am. J. Sci. 1898, (4) 6. 46.)

Aluminum ammonium chloride, $\text{AlCl}_3, \text{NH}_4\text{Cl}$. (Baud, A. ch. 1904, (8) 1. 46.)

Aluminum antimony chloride.

See Chlorantimonate, aluminum.

Aluminum barium chloride, $2\text{AlCl}_3, \text{BaCl}_2$. (Baud, C. R. 1901, 133. 869.)

Aluminum calcium chloride, basic.

$3\text{CaO}, \text{CaCl}_2, \text{Al}_2\text{O}_3 + 10\text{H}_2\text{O}$. (Steinmetz, Z. phys. Ch. 1905, 52. 466.)

$10\text{CaO}, \text{CaCl}_2, 6\text{Al}_2\text{O}_3$. Slowly decomp. by boiling H_2O . (Gorgeu, Bull. Soc. 1887, (2) 48. 51.)

Aluminum calcium chloride, $4\text{AlCl}_3, 3\text{CaCl}_2$. (Baud, A. ch. 1904, (8) 1. 51.)

Aluminum nitrosyl chloride, $\text{AlCl}_3, \text{NOCl}$.

Deliquescent, and decomp. by H_2O . (Weber Pogg. 118. 471.)

Aluminum palladium chloride, $\text{AlCl}_3, \text{PdCl}_2 + 10\text{H}_2\text{O}$.

See Chloropalladite, aluminum.

Aluminum phosphorus pentachloride, $\text{AlCl}_3, \text{PCl}_5$.

Decomp. violently by H_2O . (Baudrimont.)

Aluminum phosphoryl chloride, $\text{AlCl}_3, \text{POCl}_3$.

Deliquescent. Sol. in H_2O with decomp. Sol. in warm POCl_3 , from which it separates on cooling. (Casselman, A. 98. 220.)

Aluminum platinum chloride, $\text{AlCl}_3, \text{PtCl}_2 + 15\text{H}_2\text{O}$.

See Chloroplatinite, aluminum.

Aluminum potassium chloride, $\text{AlCl}_3, \text{KCl}$.

Slowly deliquescent. Sol. in H_2O with evolution of heat and decomp. (Degen, A. 18. 332.)

Aluminum selenium chloride, $2\text{AlCl}_3, \text{SeCl}_4$.

Sol. in H_2O with evolution of heat and separation of traces of selenium. (Weber, Pogg. 104. 427.)

Aluminum sodium chloride, $\text{AlCl}_3, \text{NaCl}$.

Much less deliquescent than AlCl_3 . Sol. in H_2O with evolution of heat. Upon evaporating, NaCl crystallises out. (Wöhler.)

Aluminum strontium chloride, $4\text{AlCl}_3, 3\text{SrCl}_2$. (Baud, A. ch. 1909, (8) 1. 52.)

Aluminum sulphur chloride, $2\text{AlCl}_3, \text{SCl}_4$.

Decomp. by H_2O with evolution of much

heat and separation of some sulphur (Weber, Pogg, 104. 421.)

$\text{AlCl}_3, \text{SCl}_4$. Decomp. by H_2O . (Ruff, B. 1901, 34. 1757.)

Aluminum tellurium chloride, $2\text{AlCl}_3, \text{TeCl}_4$.

Very sol. in dil $\text{H}_2\text{SO}_4 + \text{Aq}$ (Weber, J. pr. 76. 313.)

Aluminum chloride ammonia, $\text{AlCl}_3, \text{NH}_3$.

Sol. in H_2O . (Rose, Pogg, 24. 248.)

Completely sol. in H_2O . (Baud, C. R. 1901, 132. 135.)

$\text{AlCl}_3, 2\text{NH}_3$. Very hygroscopic. (Stillman, Am. Ch. J. 1895, 17. 750.)

$\text{AlCl}_3, 3\text{NH}_3$. Decomp. by H_2O .

$\text{AlCl}_3, 5\text{NH}_3$. M. pt. 380° . (Baud, C. R. 1901, 132. 135.)

$\text{AlCl}_3, 6\text{NH}_3$. Decomp. by H_2O . (Stillman, Am. Ch. J. 1895, 17. 752) Somewhat hygroscopic. (Baud, C. R. 1901, 132. 135.)

Aluminum chloride nitric oxide, $2\text{AlCl}_3, \text{NO}$.

Very hygroscopic. Decomp. rapidly in the air. Sol. in $\text{KOH} + \text{Aq}$. (Thomas, C. R. 1895, 121. 130.)

Aluminum chloride phosphine, $3\text{AlCl}_3, \text{PH}_3$.

Decomp by H_2O or $\text{NH}_4\text{OH} + \text{Aq}$. (Rose Pogg, 24. 295)

Aluminum chloride hydrogen sulphide.

Deliquescent. Decomp. by H_2O or $\text{NH}_4\text{OH} + \text{Aq}$. (Wohler.)

Aluminum chloride sulphur dioxide, $\text{AlCl}_3, \text{SO}_2$.

Decomp. by H_2O , alcohol, or benzene. (Adrianowski, B. 12. 688.)

$2\text{AlCl}_3, \text{SO}_2$. (Baud, A. ch. 1904, (8) 1. 32.)

Aluminum cobalt, Co_3Al_3 .

Sol. in strong acids. (Brunck, B. 1901, 34. 2734.)

Aluminum copper, Cu_4Al_3 .

Sol. in aqua regia; decomp. by HCl . (Brunck, B. 1901, 34. 2733.)

Aluminum fluoride, AlF_3 .

Anhydrous. Not attacked by H_2O or acids, and only very slightly by boiling conc. H_2SO_4 . Insol. in boiling $\text{KOH} + \text{Aq}$. (Deville, C. R. 42. 49.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in acetone. (Naumann, B. 1904, 37. 4328.)

$+ \frac{1}{2}\text{H}_2\text{O}$. Insol. in H_2O . Sl. sol. in HF . (Baud, C. R. 1902, 135. 1104.)

$+ \text{H}_2\text{O}$. Completely but only sparingly sol. in H_2O . (Mazzucchelli, Real. Ac. Linc. 1907, (5) 16, I. 775; Chem. Soc. 1907, 92, (2), 549.)

$+ 3\frac{1}{2}\text{H}_2\text{O}$. Two modifications: (1) Easily sol. in H_2O . Sol. in HF . (2) Insol. in H_2O . Sl. sol. in HF . (Baud, C. R. 1902, 135. 1104.)

$+ 7\text{H}_2\text{O}$. Sol. in H_2O . (Deville, A. ch. (3) 61. 329.)

Min. *Fluellite*.

$+ 8\frac{1}{2}\text{H}_2\text{O}$. Very efflorescent. Sat. solution contains 3.85 g. AlF_3 per 100 g. at 11° and 1.2 g. at -0.2° . (Mazzucchelli, Real. Ac. Linc. 1907, (5) 16, I. 775, Chem. Soc. 1907, (2), 92. 549.)

Aluminum hydrogen fluoride, $3\text{AlF}_3, 2\text{HF} + 5\text{H}_2\text{O}$.

Sol. in H_2O ; precipitated by alcohol. (Deville.)

$2\text{AlF}_3, \text{HF} + 5\text{H}_2\text{O}$. (Deville, A. ch. (6) 61. 329.)

Aluminum ammonium fluoride, $\text{AlF}_3, \text{NH}_4\text{F}$.

Somewhat sol. in H_2O ; insol. in H_2O containing NH_4OH or NH_4F . (Berzelius, Pogg. 1. 45.)

$\text{AlF}_3, 2\text{NH}_4\text{F} + 1.5\text{H}_2\text{O}$. Sol. in 100 pts H_2O at 16° . (Baud, C. R. 1902, 135. 1338.)

$\text{AlF}_3, 3\text{NH}_4\text{F}$. Nearly insol. in H_2O ; easily sol. in dil. acids. (Petersen, J. pr. (2) 40. 35.)

Quite easily sol. in H_2O , but insol. in $\text{NH}_4\text{F} + \text{Aq}$. (Helmholtz, Z. anorg. 3. 129.)

Aluminum barium fluoride.

Apparently not obtained in pure state. (Röder.)

Aluminum calcium fluoride, $\text{AlF}_3, \text{CaF}_2 + \text{H}_2\text{O}$.

Min. *Evigtokite*.

Aluminum calcium sodium fluoride, $\text{AlF}_3, \text{CaF}_2, \text{NaF} + \text{H}_2\text{O}$.

Min. *Pachnolite*.

Aluminum cobaltous fluoride, $\text{AlF}_3, \text{CoF}_2 + 7\text{H}_2\text{O}$.

Sol. in dil. $\text{HF} + \text{Aq}$. (Weinland, Z. anorg. 1899, 22. 272.)

Aluminum cupric fluoride, $2\text{AlF}_3, \text{CuF}_2$.

Very slowly but completely sol. in H_2O . (Berzelius.)

$\text{AlF}_3, 2\text{CuF}_2 + 11\text{H}_2\text{O}$. Sol. in dil. $\text{HF} + \text{Aq}$. (Weinland, Z. anorg. 1899, 22. 272-76.)

$2\text{AlF}_3, 3\text{CuF}_2 + 18\text{H}_2\text{O}$. Sol. in dil. $\text{HF} + \text{Aq}$. (Weinland.)

Aluminum cupric hydrogen fluoride, $\text{AlF}_3, \text{CuF}_2, \text{HF} + 8\text{H}_2\text{O}$.

Efflorescent in the air. Sol. in dil. $\text{HF} + \text{Aq}$. (Weinland, Z. anorg. 1899, 22. 272.)

Aluminum iron (ferrous) fluoride, $\text{AlF}_3, \text{FeF}_2 + 7\text{H}_2\text{O}$.

Sl. sol. in dil. $\text{HF} + \text{Aq}$. (Weinland, Z. anorg. 1899, 22. 270.)

Aluminum lithium fluoride.

Insol. in H_2O . (Berzelius.)

Aluminum magnesium fluoride.

$2\text{AlF}_3, \text{MgF}_2$ (?). (Röder.)

Aluminum nickel fluoride, $\text{AlF}_3, \text{NiF}_2 + 7\text{H}_2\text{O}$
Sl. sol in dil $\text{HF} + \text{Aq}$ (Weinland, Z anorg 1899, 22. 271)

Aluminum potassium fluoride, $\text{AlF}_3, 3\text{KF}$
Very sl sol in acid solutions, and still less in H_2O (Gay-Lussac and Thénard)
 $\text{AlF}_3, 2\text{KF}$ As above

Aluminum silicon fluoride.
See Fluosilicate, aluminum.

Aluminum sodium fluoride.
 $2\text{AlF}_3, 3\text{NaF}$ Min *Chalcite*
 $\text{AlF}_3, 2\text{NaF}$ Min *Chodneffite*
 $\text{AlF}_3, 3\text{NaF}$ Min *Cryolite* Sl sol in H_2O Insol in $\text{HCl} + \text{Aq}$. Decomp. by H_2SO_4 , or by boiling with $\text{NaOH} + \text{Aq}$.

Aluminum strontium fluoride.
As the Ba salt (Roder)

Aluminum thallous fluoride, $2\text{AlF}_3, 3\text{TlF}$.
Ppt. Sl sol in H_2O (Ephraim, Z anorg 1909, 61. 243)

Aluminum zinc fluoride, $\text{AlF}_3, \text{ZnF}_2 + 7\text{H}_2\text{O}$.
Sol in dil $\text{HF} + \text{Aq}$ (Weinland, Z. anorg 1899, 22. 272)
 $2\text{AlF}_3, \text{ZnF}_2$ Slowly but completely sol in H_2O . (Berzelius)

Aluminum hydroxide, $\text{Al}_2\text{O}_3, \text{H}_2\text{O}$
 $= \text{Al}_2\text{O}_3(\text{OH})_2$.

Dehydrated by conc acids, without dissolving. (Beccquerel, C R., 67. 108)

Min. *Diaspore* Insol in $\text{HCl} + \text{Aq}$, and not attacked by boiling conc H_2SO_4 , unless it has been ignited

$\text{Al}_2\text{O}_3, 2\text{H}_2\text{O} = \text{Al}_2\text{O}(\text{OH})_4$ Pptd Al hydroxide, when boiled twenty hours with H_2O is insol. in acids and alkalies, and has the above composition. (St. Gilles, A. ch (3) 46. 57.)

Min *Bauxite*

Soluble modifications—(a) *Meta-aluminum hydroxide From basic Al acetate* Sol in H_2O and more readily in $\text{HC}_2\text{H}_3\text{O}_2$. The aqueous solution is coagulated by traces of alkalies, many acids, and salts, while other acids and salts have no effect. Thus, 1 pt. H_2SO_4 in 1000 pts. H_2O , added to 7000 pts of above solution containing 20 pts Al_2O_3 , converts the liquid into a nearly solid mass Citric, tartaric, oxalic, chromic, molybdic, racemic, suberic, salicylic, benzoic, gallic, lactic, cinnamic, butyric, valeric, camphoric, picric, uric, meconic, comenic, and hemipinic acids act in the same way. HCl and HNO_3 have far less action, 600 mols. being necessary to produce the same effect as 1 mol. H_2SO_4 , while acetic, formic, boric, arsenious, pyro-

meconic, and opianic acids do not coagulate the solution, except when moderately conc 1 pt KOH in 1000 pts H_2O coagulates 9000 pts of the solution NaOH , NH_4OH , and $\text{Ca}(\text{OH})_2$ have the same effect.

The solution is not coagulated by acetates, unless added in large quantity, and even then the ppt is redissolved when treated with H_2O . Nitrates and chlorides coagulate with difficulty; Na_2SO_4 , MgSO_4 , and $\text{CaSO}_4 + \text{Aq}$, however, have as strong an action as a liquid containing the same amount of H_2SO_4 . A teaspoonful of the solution introduced into the mouth solidifies at once from the action of the saliva. The ppt formed by acids is not sol in an excess of the acid, but by the long continued action of conc. H_2SO_4 , especially if hot, the ppt is dissolved, boiling conc. $\text{HCl} + \text{Aq}$ also dissolves it, but less readily than H_2SO_4 . The ppt is sol in boiling conc. $\text{KOH} + \text{Aq}$. The residue, when the solution is evaporated at 100° , has composition $\text{Al}_2\text{O}_3, 2\text{H}_2\text{O}$, and is insol in acids. (Crum, Chem. Soc. 6. 225)

(b) *By Dialysis.* Sol. in H_2O , from which it is separated by extremely small amounts of various substances, as acids, ammonia, salts (especially K_2SO_4), caramel, etc. An excess of acid dissolves the coagulum. If the solution contains 0.5% Al_2O_3 or less, it may be boiled without change, but the hydroxide separates out suddenly when it is reduced to $\frac{1}{2}$ its vol., and even very dil. solutions gelatinise spontaneously in a few days. The solution is not coagulated by alcohol or sugar (Graham, A. 121. 41)

$\text{Al}_2\text{O}_3, 3\text{H}_2\text{O} = \text{Al}(\text{OH})_3$. *Crystallised* Difficultly sol. in acids and alkalies (Cossa, N. Cim (2) 3. 228) Insol in boiling $\text{HCl} + \text{Aq}$. (Wöhler, A. 113. 249.) Sl sol. in $\text{KOH} + \text{Aq}$; nearly insol. in cold H_2SO_4 , HCl , $\text{HNO}_3 + \text{Aq}$; very slowly sol. in hot $\text{HCl} + \text{Aq}$, more readily in hot H_2SO_4 . (v. Bonsdorff, Pogg 27. 275)
 α -modification. Unstable. Changes into β -modification. Sol. in $\text{N-H}_2\text{SO}_4$ at ord. temp. Sol in N-NaOH and in hot NaOH of concentration $5\text{Na}_2\text{O}, 100\text{H}_2\text{O}$ (Russ, Z. anorg. 1904, 41. 226.)

β -modification. Insol. in $\text{N-H}_2\text{SO}_4$ at ord. temp. Difficulty sol in warm N-NaOH , but easily sol in hot NaOH of concentration $5\text{Na}_2\text{O}, 100\text{H}_2\text{O}$. Its solubility in NaOH increases with increase in concentration of the hydroxyl ions. (Russ)

δ -modification Easily sol. in conc. H_2SO_4 ; only sl sol. in HCl , HNO_3 or acetic acids, or in alkali + Aq (Tommasi, C. C. 1905, II. 605.)

Min. *Gibbsite* Sol. in $\text{HCl} + \text{Aq}$, and dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. Readily sol. in conc. KOH , and $\text{NaOH} + \text{Aq}$.

Precipitated Completely insol in H_2O or $\text{H}_2\text{CO}_3 + \text{Aq}$. Easily sol in acids when freshly pptd., but solubility diminishes on standing.

Easily sol in KOH or $\text{NaOH} + \text{Aq}$ (Sonnenschein.)

Herz (Z. anorg. 25, 155) found that aluminum hydroxide which has been dried in a vacuum dessicator requires for solution in $\text{NaOH} + \text{Aq}$. 3 atoms Na to 1 atom Al. Slade (Z. Elektrochem. 1911, 17, 261) was unable to obtain this result. Herz says Slade's error is due to insufficient shaking of the solution. (Herz, Z. Elektrochem. 1911, 17, 403.)

New solubility determinations verify the statement of Herz (Z. anorg. 25, 155) that the solubility of $\text{Al}(\text{OH})_3$ in $\text{NaOH} + \text{Aq}$ is proportional to the concentration of NaOH . They do not, however, verify his statement that the ratio Na : Al in the solutions is always 3 : 1, for the author finds that the ratio Na : Al varies from 2 : 1 to 10 : 1 depending on the conditions of precipitation and the method and duration of drying of the $\text{Al}(\text{OH})_3$, (Slade, Z. Elektrochem. 1912, 18, 1.)

Sl. sol. in $\text{NH}_4\text{OH} + \text{Aq}$ when freshly pptd., but presence of NH_4 salts diminish its solubility, and it separates out completely after long standing (Fresenius.)

Somewhat sol. in $\text{NH}_4\text{OH} + \text{Aq}$, the more readily the larger the vol. of H_2O . Somewhat sol. in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$, but less than in $\text{NH}_4\text{OH} + \text{Aq}$. Sl. sol. in dil. $\text{NH}_4\text{Cl} + \text{Aq}$, unless that salt be in large excess. It is finally wholly pptd. if allowed to stand several days.

18752 pts. $\text{NH}_4\text{OH} + \text{Aq}$ (4 % NH_4OH) dissolve an amt. of $\text{Al}(\text{OH})_3$ corresponding to one pt. Al_2O_3 , NH_4Cl prevents this solubility almost completely (Hanamann, Pharm. Viertelj. 12, 527.)

$\text{Al}(\text{OH})_3$, prepared by ppt. of a solution of $\text{Al}(\text{NO}_3)_3$ with NH_4OH , filtered and washed, is insol. in $\text{NH}_4\text{OH} + \text{Aq}$.

$\text{Al}(\text{OH})_3$ prepared by pptn. of a solution of potassium aluminate with NH_4Cl , is sol. in a large excess of NH_4OH if this is added to the ppt. at once. This modification which is sol. in NH_4OH is unstable and easily goes over into the modification which is insol. in NH_4OH (Renz, B. 1903, 36, 2751.)

Conc. $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ does not dissolve $\text{Al}(\text{OH})_3$, and not a trace is dissolved by boiling conc. $\text{NH}_4\text{Cl} + \text{Aq}$ (Weeren, Pogg. 92, 97.)

With $\text{NH}_4\text{F} + \text{Aq}$, it forms a double salt, $\text{AlF}_3 \cdot 3\text{NH}_4\text{F}$, which is sol. in H_2O , but not in $\text{NH}_4\text{F} + \text{Aq}$ (Helmholtz, Z. anorg. 3, 127.)

Insol. in $(\text{NH}_4)_2\text{S} + \text{Aq}$ (Malaguti and Durocher, A. ch. (3) 17, 421.) Fuchs found, on the contrary, that it is not wholly insol. in $(\text{NH}_4)_2\text{S} + \text{Aq}$. (Fresenius, Quant.)

Insol. in $\text{FeCl}_3 + \text{Aq}$ (Béchamp.)

Determinations of the solubility of aluminum hydroxide in $\text{AlCl}_3 + \text{Aq}$ show that part goes into solution to form a compound, while the greater part is in the colloidal form. (Fischer, Z. anorg. 1904, 40, 46.)

Only sl. sol. in conc. $\text{Al}_2(\text{SO}_4)_3 + \text{Aq}$, but solubility increases with decrease in concentration of $\text{Al}_2(\text{SO}_4)_3$ until it reaches a maximum at a concentration of 32 % $\text{Al}_2(\text{SO}_4)_3$ at 20°, 28 % at 40°, and 38 % at 60°. With further decrease in concentration of $\text{Al}_2(\text{SO}_4)_3$

the solubility of $\text{Al}(\text{OH})_3$ in $\text{Al}_2(\text{SO}_4)_3$ diminishes (Kremann, C. A. 1909, 2422.)

Sol. in $\text{Ba}(\text{OH})_2 + \text{Aq}$ (Rose.)

Sol. in boiling $\text{Fe}(\text{NO}_3)_3$, $\text{Cr}(\text{NO}_3)_3$, $\text{Bi}(\text{NO}_3)_3$, $\text{Hg}(\text{NO}_3)_2$, HgNO_3 , SnCl_2 , and $\text{SbCl}_3 + \text{Aq}$ (Persoz.)

Insol. in HCN or cold $\text{KCN} + \text{Aq}$, but sl. sol. in hot $\text{KCN} + \text{Aq}$. (Rose.)

Insol. in $\text{KC}_2\text{H}_3\text{O}_2 + \text{Aq}$ (Osann, 1821.)

When moist, sol. in $\text{H}_2\text{SO}_4 + \text{Aq}$, from which it is reprecipitated on boiling. (Berthier, A. ch. (3) 7, 76.)

Somewhat sol. in $\text{NaC}_2\text{H}_3\text{O}_2 + \text{Aq}$. (Mercier.)

Not pptd. by $\text{NH}_4\text{OH} + \text{Aq}$ in presence of Na citrate (Spiller.)

Sol. in ethyl amine, amyl amine, sinkaline, ethyl picoline hydroxide, stubethylum hydroxide, triethyltoluonyl ammonium hydroxide + Aq . (Friedlander.)

Sol. in alkyl amines (Renz, B. 1903, 36, 2751.)

Insol. in acetone (Naumann, B. 1904, 37, 432S.)

Sol. to a considerable extent in $\text{K}_2\text{C}_4\text{H}_4\text{O}_6 + \text{Aq}$.

Very sl. sol. in cane sugar + Aq (Ramsey.)

Solubility in glycerine + Aq containing about 60 % by vol. of glycerine 100 cc. of the solution contain 0.25 g. Al_2O_3 . (Müller, Z. anorg. 1905, 43, 322.)

$\text{Al}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$ Insol. in H_2O , $\text{NH}_4\text{OH} + \text{Aq}$ and alcohol. Sol. in HCl and $\text{HNO}_3 + \text{Aq}$ (Zunino, Gazz. ch. it. 1900, 30 (1), 194.)

$\text{Al}_2\text{O}_3 \cdot \text{H}_2\text{O}$, "Trialuminum hydroxide"

Not sol. in conc. acids in the cold; not sol. in KOH (cold) and only sl. sol. in hot KOH . Characterized by its solubility in exactly one mol. dil. HCl . Dil. solutions do not gelatinize even on long standing. Conc. solution of NH_4Cl and other salts cause ppt. which redissolves on addition of H_2O .

Alkalies and alkali carbonates decompose the salt with HCl and ppt. trialuminum hydroxide. H_2SO_4 and sol. sulphates give insol. compds. with the hydrate. HNO_3 like HCl gives soluble compds. with the hydrate. (Structural formula given.) (Schlumberger, Bull. Soc. 1895, (5) 13, 41-65; C. C. 1895, I, 421.)

Aluminum iodide, AlI_3 .

Anhydrous. Fumes on air and deliquesces. Sol. in H_2O with evolution of much heat. Sol. in CS_2 and crystallizes from the hot sat. solution on cooling. (Weber.) Sol. in alcohol (Weber); ether and tetrachlormethane. (Gustavson.)

Sol. in AlBr_3 (Isbekow, Z. anorg. 1913, 84, 26.)

+ $6\text{H}_2\text{O}$. Very sol. in H_2O .

Aluminum mercuric iodide, $\text{AlI}_3 \cdot \text{HgI}_2 \cdot 8\text{H}_2\text{O}$.

Very deliquescent; sol. in H_2O without decomposition. (Duboin, C. R. 1908, 146, 1028.)

Aluminum potassium iodide, AlI_3 , KI

Sol. in H_2O with evolution of much heat. (Weber, Pogg. 101. 469.)

Aluminum iodide ammonia, AlI_3 , 3NH_3

Decomp. by H_2O . (Weber, Pogg. 103. 263.)

Aluminum iodide mercuric oxyiodide, 2AlI_3 , HgO , $3\text{HgI}_2 + 15\text{H}_2\text{O}$.

(Duboin, C. R. 1907, 145. 714.)

Aluminum iron, FeAl_3 .

Readily sol. in strong HNO_3 (Brunck, B. 1901, 34. 2734.)

Aluminum manganese, Mn_2Al_7 .

Sol. in strong HCl . (Brunck, B. 1901, 34. 2735)

Aluminum molybdenum, Al_4Mo .

Easily sol. in hot HNO_3 or HCl . (Wohler, A. 1860, 115. 103.)

Al_2Mo . (Guillet, C. R. 1901, 133. 293.)

AlMo . (Guillet.)

AlMo_4 . Not attacked by dil. $\text{HCl} + \text{Aq}$. (Guillet.)

AlMo_{20} . Not attacked by $\text{HCl} + \text{Aq}$. (Guillet.)

Aluminum nickel, Al_3Ni .

Sol. in strong acids (Brunck, B. 1901, 34. 2734.)

Aluminum nitride, Al_3N_2

Slowly attacked by hot or cold H_2O . Decomp. by acids and aqueous solutions of the alkalis, especially when they are concentrated. (Mallet, A. 186. 155.)

Easily decomp. H_2O when finely powdered (Rossi, C. R. 1895, 121. 942.)

Decomp. by moist air and by boiling H_2O and by alkalis + Aq . (Franck, Ch. Z. 1897, 21. 263.)

Aluminum oxide, Al_2O_3 .

Crystalline. Min *Corundum*, *sapphire*, *ruby*, *emery*. Insol. in acids.

Amorphous. Ignited Al_2O_3 is insol. in acids except that it dissolves slowly when heated with a mixture of 1 pt. H_2SO_4 and 1 pt. H_2O . (Berzelius.) Slowly sol. in boiling $\text{HCl} + \text{Aq}$. (Rose, Pogg. 52. 595.)

Sol. in 22 pts. of a mixture of 8 pts. H_2SO_4 and 1 pt. H_2O . (Mitscherlich.) The lower the temperature at which Al_2O_3 has been heated, the more sol. is it in acids and alkalis.

Solubility in (calcium succate + sugar) + Aq .

1 l. solution containing 418.6 g. sugar and 34.3 g. CaO dissolves 1.35 g. Al_2O_3 ; 1 l. solution containing 296.5 g. sugar and 24.2 g. CaO dissolves 0.32 g. Al_2O_3 ; 1 l. solution containing 174.4 g. sugar and 14.1 g. CaO dis-

solves 0.19 g. Al_2O_3 . (Bodenbender, J. B. 1865. 600)

Insol. in acetone. (Naumann, B. 1904, 37. 4328.)

See also **Aluminum hydroxide**.

Aluminum peroxide, Al_2O_3 , $\text{Al}_2\text{O}_4 + 10\text{H}_2\text{O}$.

Ppt.; sol. in acids with decomp (Terni, C. A. 1912. 3068.)

Aluminum oxybromide.

Basic aluminum bromides containing three equivalents or less of Al_2O_3 to one of AlBr_3 are sol. in H_2O . Those containing more than three equivalents are insol. (Ordway, Am. J. Sci. (2) 26. 203.)

Aluminum oxychloride.

Sol. in dil. acids or alkalis. Decomp. by H_2O . (Hautefeuille and Perrey, C. R. 100. 1220.)

Basic aluminum chlorides containing two equivalents or less of Al_2O_3 to one of AlCl_3 are sol. in H_2O . Those containing more than two equivalents are insol. (Ordway.)

Al_2O_3 , $3\text{AlCl}_3 + 3\text{H}_2\text{O}$. (Tommasi, Bull. Soc. (2) 37. 443.)

Al_2O_3 , $8\text{AlCl}_3 + 3\text{H}_2\text{O}$. (Tommasi.)

$3\text{Al}_2\text{O}_3$, $\text{AlCl}_3 + 15\text{H}_2\text{O}$. (Tommasi.)

Aluminum phosphide, Al_3P .

Unstable. (Franck, Ch. Z. 1898, 22. 240.)

Al_2P_2 . Decomp. by H_2O . (Fonzes-Diacon, C. R. 1900, 130. 1315.)

Unstable. (Franck, Ch. Z. 1898, 22. 240.)

Al_3P_7 . Decomp. by H_2O and acids. (Franck.)

Al_3P_7 . Decomp. by H_2O and acids. (Franck, Ch. Z. 1898, 22. 288.)

Al_6P_8 . Unstable. (Franck, Ch. Z. 1898, 22. 240)

Aluminum platinum, $\text{Pt}_3\text{Al}_{10}$

The Al is dissolved out by HCl . (Brunck, B. 1901, 34. 2735.)

Aluminum selenide, Al_2Se_3

Decomp. by H_2O . (Fonzes-Diacon, C. R. 1900, 130. 1315.)

Aluminum silicide, Al_2Si_4 .

More easily sol. in acids than Al. (Winkler, J. pr. 91. 193.)

Aluminum chromium silicide, $\text{Al}_2\text{Cr}_4\text{Si}_8$.

Insol. in hot conc. HCl , HNO_3 , H_2SO_4 and aqua regia. Sol. in cold HF or in $\text{HF} + \text{HNO}_3$. Sol. in molten alkali. Insol. in $\text{NaOH} + \text{Aq}$, $\text{KOCi} + \text{Aq}$ or fused KClO_3 or KHSO_4 . (Manchot and Kieser, A. 1904, 337. 356.)

$\text{Al}_2\text{Cr}_4\text{Si}_8$. Insol. in hot conc. HCl , HNO_3 , H_2SO_4 and aqua regia. Sol. in HF and in molten alkali. (Manchot and Kieser, A. 1904, 337. 353.)

Aluminum tungsten silicide.

Insol. in most acids and aqua regia. Easily sol. in HF, HNO_3 and in molten alkali. Not attacked by dil. $\text{NaOH} + \text{Aq.}$ (Manchot and Kieser, A. 1904, **337**. 360.)

Aluminum vanadium silicide, $\text{Al}_2\text{V}_8\text{Si}_{12}$.

Sol. in HF. Not attacked by hot conc. HCl , HNO_3 , H_2SO_4 or aqua regia. Decomp. by fusing with NaOH . Stable toward fused KClO_3 . (Manchot, A. 1907, **357**. 134.)

Aluminum sulphide, Al_2S_3 .

Decomp. by H_2O . Sol. in acids and alkalis. (Regelsberger, Z. Elektrochem, 1898, **4**. 548.) Al_2S_3 . Decomp. in moist air and by H_2O . (Wöhler.) Insol. in acetone. (Naumann, B. 1904, **37**. 4328.)

Aluminum chromium sulphide, $\text{Al}_2\text{S}_3\cdot\text{CrS}$.

Sl. attacked by $\text{HCl} + \text{Aq.}$ Gradually decomp. by HNO_3 . (Houdard, C. R. 1907, **144**. 1115.)

Aluminum magnesium sulphide, $\text{Al}_2\text{S}_3\cdot\text{MgS}$.

Decomp. by H_2O , alcohol and acids. (Houdard, C. R. 1907, **144**. 1116.)

Aluminum potassium sulphide.

Violently decomposed by H_2O . (St. Claire Deville, J. pr. **71**. 293.) Does not exist. (Gratama, R. t. c. **3**. 4.)

Aluminum silver sulphide, $5\text{Al}_2\text{S}_3\cdot 4\text{Ag}_2\text{S}$.

(Cambi, Real. Ac. Linc. (5) **21**, II. 838.)

Aluminum telluride.

Decomp. by H_2O . (Wöhler, Pogg. **11**. 160.)

Aluminum titanide, Al_4Ti .

Not attacked by H_2O or by cold HNO_3 . Sl. sol. in warm HNO_3 . Sol. in cold conc. H_2SO_4 or HCl . Sol. in warm $\text{KOH} + \text{Aq.}$ (Levy, A. ch. 1902, (6) **25**. 449.)

Sol. in HCl and in aqua regia. (Guillet.) Al_4Ti . Sol. in hot dil. H_2SO_4 and in hot $\text{KOH} + \text{aq.}$ Sol. in hot conc. acids. (Manchot, A. 1907, **357**. 142.)

Al_4Ti_2 . Aluminothermic product is sol. in HCl and aqua regia. (Guillet.)

Aluminosulphuric acid, $\text{Al}_2(\text{SO}_4\text{H})_6 + 7\text{H}_2\text{O}$.

Sol. in H_2O with decomp. into $\text{Al}_2(\text{SO}_4)_3$ and H_2SO_4 . (Silberberger, M. 1904, **25**. 222.)

Diamide, N_2H_4 .

See Hydrazine.

Amidochromic acid.**Amidochromates.**

Do not exist. Those described by Darm-

stadter and Lowenthal are impure bichromates. (Wyruboff, Bull. Soc. 1894, (3) **11**. 845-53; C. C. 1894, II. 610.)

Ammonium amidochromate, $(\text{NH}_4)\text{NH}_2\text{CrO}_3$.

Very sol. in H_2O . (Löwenthal, Z. anorg. 1894, **6**. 363.)

Is ammonium dichromate. (Wyruboff, Bull. Soc. (3) **11**. 845.)

Lithium amidochromate, $\text{LiNH}_2\text{CrO}_3$.

Very sol. in H_2O and acids. (Löwenthal, Z. anorg. 1894, **6**. 364.)

Potassium amidochromate, KCrO_3NH_2 .

Sol. only in H_2O . Sat. solution in H_2O contains 13 % of the salt. (Heintze, J. pr. (2) **4**. 214.)

Amidophosphoric acid, $\text{HPO}_3(\text{NH}_2) = \text{PO}(\text{NH}_2)(\text{OH})_2$.

Sol. in H_2O , but decomp. on standing or by heat. (Stokes, Am. Ch. J. **15**. 198.)

Aluminum amidophosphate.

Ppt. Sol. in $\text{NH}_4\text{OH} + \text{Aq.}$ (Stokes.)

Ammonium amidophosphate, $\text{NH}_4\text{HPO}_3(\text{NH}_2)$.

Very sol. in H_2O . (Stokes.)

Barium amidophosphate, $\text{BaPO}_3(\text{NH}_2) + \text{H}_2\text{O}$.

Very sl. sol. in H_2O . (Stokes.) $\text{BaH}_2(\text{PO}_3\text{NH}_2)_2 + 2\frac{1}{2}\text{H}_2\text{O}$. Quite difficultly sol. in H_2O . (Stokes.)

Calcium amidophosphate, $\text{CaPO}_3(\text{NH}_2)$.

Much less sol. in H_2O than Ba salt. (Stokes.)

$\text{CaH}_2(\text{PO}_3\text{NH}_2)_2$. Much less sol. in H_2O than the Ba salt. (Stokes.)

Chromic amidophosphate.

Ppt. Sol. in warm $\text{NH}_4\text{OH} + \text{Aq.}$ (Stokes.)

Cobalt amidophosphate.

Neutral. Ppt.

Acid. Sl. sol. in H_2O ; sol. in $\text{NH}_4\text{OH} + \text{Aq.}$

Cupric amidophosphate.

Neutral. Sl. sol. in H_2O .

Acid. Nearly insol. in H_2O .

Ferrous amidophosphate.

Neutral. Sol. in much H_2O , and in $\text{HC}_2\text{H}_3\text{O}_2$, or $\text{NH}_4\text{OH} + \text{Aq.}$

Acid. Nearly insol. in H_2O or $\text{NH}_4\text{Cl} + \text{Aq.}$ Sol. in $\text{NH}_4\text{OH} + \text{Aq.}$

Ferric amidophosphate.

Neutral. Ppt. Sol. in excess of alkali

amidophosphate and in $\text{NH}_4\text{OH} + \text{Aq}$ Insol.
in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$

Acid As the neutral salt

Hydroxylamine amidophosphate,
 $(\text{NH}_3\text{O})\text{HPO}_3(\text{NH}_2)$

Sl. sol in H_2O (Stokes)

Lithium amidophosphate, $\text{LiHPO}_3(\text{NH}_2)$

Sl. sol in H_2O (Stokes.)

Magnesium amidophosphate, $\text{MgPO}_3(\text{NH}_2) + 7\text{H}_2\text{O}$.

Very sl. sol in H_2O , quite easily sol in dil $\text{NH}_4\text{Cl} + \text{Aq}$. Sol in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ (Stokes.)
 $\text{MgH}_2(\text{PO}_3\text{NH}_2)_2 + 3\frac{1}{2}\text{H}_2\text{O}$ Insol. in $\text{NH}_4\text{Cl} + \text{Aq}$. (Stokes)

Manganese amidophosphate.

Neutral. Ppt

Acid Sl. sol in H_2O .

Nickel amidophosphate.

Neutral Ppt. Sol. in $\text{HC}_2\text{H}_3\text{O}_2$ or $\text{NH}_4\text{OH} + \text{Aq}$

Acid. Sl. sol. in H_2O .

Potassium amidophosphate, $\text{K}_2\text{PO}_3(\text{NH}_2)$.

Very sol in H_2O and not decomp. by boiling. (Stokes.)

$\text{KHPO}_3(\text{NH}_2)$. Easily sol in cold H_2O ; insol in alcohol. (Stokes.)

Silver amidophosphate, $\text{Ag}_2\text{PO}_3(\text{NH}_2)$.

Almost insol. in H_2O Sol. in HNO_3 or $\text{NH}_4\text{OH} + \text{Aq}$.

$\text{AgHPO}_3(\text{NH}_2)$. Sl. sol in H_2O ; easily sol. in dil. HNO_3 or $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$, also in $\text{NH}_4\text{OH} + \text{Aq}$.

Sodium amidophosphate, $\text{Na}_2\text{PO}_3(\text{NH}_2)$.

Not deliquescent; very sol in H_2O ; pptd. from aqueous solution by alcohol. (Stokes.)

$\text{NaHPO}_3(\text{NH}_2) + \frac{1}{4}(\text{?})\text{H}_2\text{O}$. Nearly insol. in cold, and decomp. by hot H_2O . Insol. in alcohol.

Zinc amidophosphate.

Neutral. Perceptibly sol. in H_2O .

Acid. Sl. sol. in H_2O ; sol. in NH_4OH or $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$.

Diamidophosphoric acid, $\text{PO}(\text{NH}_2)_2\text{OH}$.

Sol. in cold H_2O ; almost insol. in alcohol; stable in the air but decomp. when heated and by boiling in aq solution. (Stokes, Am. Ch. J. 1894, 16. 130.)

Barium diamidophosphate, $[\text{PO}(\text{NH}_2)_2\text{O}]_2\text{Ba}$.

Very sol. in H_2O ; insol. in alcohol; aq. solution decomp. slowly. (Stokes, Am. Ch. J. 1894, 16. 134.)

Magnesium diamidophosphate, $[\text{PO}(\text{NH}_2)_2\text{O}]_2\text{Mg}$

Sol. in H_2O ; insol in alcohol (Stokes)

Potassium diamidophosphate, $\text{PO}(\text{NH}_2)_2\text{OK}$.

Sol. in H_2O ; not deliquescent; insol. in alcohol (Stokes.)

Silver diamidophosphate, $\text{PO}(\text{NH}_2)_2\text{OAg}$

Very stable; insol in H_2O Very sol in $\text{NH}_4\text{OH} + \text{Aq}$ (Stokes)

Sodium diamidophosphate, $\text{PO}(\text{NH}_2)_2\text{ONa}$

Sol in H_2O , not deliquescent, insol. in alcohol (Stokes)

Diamidotrihydroxylphosphoric acid.

Silver diamidotrihydroxylphosphate,
 $(\text{AgO})_3\text{P}(\text{NHAg})_2$.

(Stokes, Am. Ch. J. 1894, 16. 147.)

$(\text{AgO})_3\text{P}(\text{NH}_2)(\text{NHAg})$ Insol in cold H_2O (Stokes.)

$(\text{AgO})_3\text{P}(\text{NH}_2)_2$. Decomp. by cold H_2O . (Stokes.)

$+ 2\text{H}_2\text{O}$ Decomp. by boiling H_2O . (Stokes)

Amidoimidophosphoric acid.

Amidohezimidoheptaphosphoric acid, OH.
 $\text{PO}(\text{NH}_2)[\text{NH PO}(\text{OH})]_5 \text{NH PO}(\text{OH})_2$
 $= \text{P}_7\text{N}_7\text{O}_{15}\text{H}_{18}$.

Known only in solution in H_2O . (Stokes, Am. Ch. J. 1898, 20. 758.)

Silver diamidopyrimidophosphate,
 $\text{NH}(\text{PO}(\text{NH}_2)\text{OAg})_2$

Almost insol. in H_2O ; sol in $\text{NH}_4\text{OH} + \text{Aq}$. (Stokes, Am. Ch. J. 1894, 16. 136)

Silver amidotetrimido pentaphosphate,
 $\text{P}_5\text{N}_5\text{O}_{11}\text{H}_3\text{Ag}_9$.

Ppt. (Stokes, Am. Ch. J. 1898, 20. 752.)

Silver amidohezimidoheptaphosphate,
 $\text{P}_7\text{N}_7\text{O}_{15}\text{H}_3\text{Ag}_7$.

Ppt.; decomp. by acetic acid. (Stokes, Am. Ch. J. 1898, 20. 759.)

Sodium amidodiamidotriphosphate,
 $\text{PO ONa} < \text{NH PO}(\text{ONa})_2$.

$= \text{P}_3\text{N}_3\text{O}_7\text{H}_4\text{Na}_4 + \text{H}_2\text{O}$.

Unstable; sol. in H_2O ; insol. in alcohol. (Stokes, Am. Ch. J. 1896, 18. 643.)

Sodium amidohezimidoheptaphosphate,
 $\text{P}_7\text{N}_7\text{O}_{15}\text{H}_3\text{Na}_7$.

Sol. in H_2O ; pptd. by alcohol. (Stokes, Am. Ch. J. 1898, 20. 758.)

Amidophosphimic acid.**Silver amidophosphimate, $P(NH)NH_2(OAg)_2$.**

Decomp. by heat; decomp. in contact with H_2O (Stokes, Am Ch J 1894, **16**, 139.)

$(AgO)_2P(NAg)(NHAg)$ (?) Sl. sol. in $NH_4OH + Aq$ (Stokes, Am Ch. J. 1894, **16**, 149.)

Amidosulphonic acid, $HOSO_2NH_2$

Easily sol. in H_2O , less easily in alcohol (Berglund, B **9**, 252 and 1896.)

Very stable; less easily sol. in H_2O than its K salt. (Raschig, A **241**, 177)

Stable in air. Non-deliquescent when cold. Sol. in 5 pts. H_2O at 0° and in $2\frac{1}{2}$ pts. H_2O at 70° . Solution in H_2O can be boiled several minutes without decomp. Solubility is decreased by addition of H_2SO_4 , so that if $1\frac{1}{5}$ – $1\frac{1}{4}$ pt. H_2SO_4 is added to H_2O , 100 pts of the liquid dissolve only 3 pts. $HOSO_2NH_2$ in the cold. Pptd. from solution by HNO_3 or glacial acetic acid, but not by HCl . Solubility is decreased by presence of $NaHSO_4$. (Divers and Haga, Chem Soc. 1896, **69**, 1641.)

Amidosulphonates.

Easily sol. in H_2O ; sl. sol. in alcohol

Aluminum amidosulphonate.

Very sol. in H_2O (Berglund, Bull. Soc. (2) **29**, 422.)

Ammonium amidosulphonate, $(NH_4)NH_2SO_3$.

Deliquescent Sol. in H_2O ; insol. in alcohol.

Ammonium silver amidosulphonate,

$NH_4SO_3(NH_2)$, $AgSO_3(NH_2)$.

(Ephraim & Gurewitsch, B. 1910, **43**, 148)

Barium amidosulphonate, $Ba(NH_2SO_3)_2$.

Sol. in 3 pts. H_2O . (Berglund, l.c.)

Cadmium amidosulphonate, $Cd(NH_2SO_3)_2 + 5H_2O$.

Very sol. in H_2O . (B.)

Calcium amidosulphonate, $Ca(NH_2SO_3)_2 + 4H_2O$.

Very sol. in H_2O . (B.)

Cobalt amidosulphonate, $Co(NH_2SO_3)_2 + 3H_2O$.

Sol. in H_2O . (B.)

Copper amidosulphonate, $Cu(NH_2SO_3)_2 + 2H_2O$.

Sol. in H_2O . (B.)

Gold (auric) potassium amidosulphonate, $K_2Au_2(NSO_3)_3$.

Very sl. sol. in cold, more easily sol. in hot

H_2O Sol. in dil $HCl + Aq$ (Hofmann, B 1912, **45**, 1735)

Lead amidosulphonate, $Pb(NH_2SO_3)_2 + H_2O$

The most sol. of all amidosulphonates. (B)

Lithium amidosulphonate. $LiNH_2SO_3$

Deliquescent. (B)

Magnesium amidosulphonate.

Very sol. in H_2O

Manganese amidosulphonate, $Mn(NH_2SO_3)_2 + 3H_2O$

Very sol. in H_2O (B.)

Mercuric amidosulphonate, basic, -

$Hg(HgOSO_3NH_2)_2$

Insol. in 3.5 % $HNO_3 + Aq$ Very sol. in 3 % $HCl + Aq$. (Hofmann, B. 1912, **45**, 1733. $+ 2H_2O$. Insol. in hot H_2O Sol. in $KOH + Aq$. (Divers and Haga, Chem Soc. 1896, **69**, 1649.)

Mercuric potassium amidosulphonate, $KHgNSO_3$

Very sl. sol. in cold H_2O and cold dil. $KOH + Aq$. Sol. in 3 % $HCl + Aq$. (Hofmann, B. 1912, **45**, 1732)

Mercuric sodium amidosulphonate,

$NaHgNSO_3$.

Nearly completely sol. in hot H_2O . (Hoffmann, B. 1912, **45**, 1734.)

Nickel amidosulphonate, $Ni(NH_2SO_3)_2 + 3H_2O$

Sol. in H_2O . (B.)

Potassium amidosulphonate, KNH_2SO_3 .

Sol. in H_2O . (Berglund.)

Potassium silver amidosulphonate,

$NHAgSO_3K + H_2O$.

Decomp. by H_2O ; sol. in $NH_4OH + Aq$. (Hoffmann, B. 1912, **45**, 1734.)

Silver amidosulphonate, $AgNH_2SO_3$.

Sol. in 15 pts. H_2O at 19° (B.)

Sodium amidosulphonate, $NaNH_2SO_3$.

Sol. in H_2O .

Strontium amidosulphonate, $Sr(NH_2SO_3)_2 + 4H_2O$.

Sol. in H_2O .

Thallium amidosulphonate, $TlNH_2SO_3$.

Sol. in H_2O .

Uranyl amidosulphonate.

Sol. in H_2O .

Zinc amidosulphonate, $Zn(NH_2SO_3)_2 + 4H_2O$.

Sol. in H_2O .

Amidosulphurous acid.**Ammonium amidosulphite, $\text{NH}_2 \text{SO}_2 \text{NH}_4$**

Very deliquescent. Decomp. in the air with loss of NH_3 . Sol. in H_2O with decomp. Sol. in anhydrous alcohol. Sl. sol. in dry ether. (Divers, Chem. Soc. 1900, 77. 330.)

Ammonia, NH_3 .

Very sol in H_2O , with evolution of much heat.

1 vol. H_2O absorbs 670 vols. ($\frac{1}{2}$ pt. by weight) NH_3 at $+10^\circ$ and 29.8 in pressure, sp. gr. of solution = 0.875. (Davy.)

At low temperatures H_2O absorbs more than $\frac{1}{2}$ its weight of NH_3 , and sp. gr. of solution = 0.850. (Dalton) 100 pts H_2O absorb 8.41 pts. NH_3 at 24° ; 5.96 pts at 55° (Osann.)

1 vol. H_2O absorbs 780 vols. NH_3 , 6 vols. H_2O increasing to 10 vols. sat. $\text{NH}_4\text{OH} + \text{Aq}$; 1 vol. sat. $\text{NH}_4\text{OH} + \text{Aq}$ contains 468 vols. NH_3 (Thomson.)

1 vol. H_2O absorbs 450 vols. NH_3 at 15° (Dumas.)

1 vol. H_2O absorbs 700 vols. NH_3 at ordinary temperature. (Otto.)

100 pts H_2O absorb in NH_3 gas 47.7 pts. NH_3 by weight. (Berzelius.)

1 vol. H_2O absorbs 505 vols NH_3 and vol. is increased to 1.5 vol., and sp. gr. becomes 0.900. (Ure.)

1 vol. H_2O at 0° and 760 mm. absorbs 1177.3 vols. NH_3 . (Sims.)

1 vol. H_2O at 0° and 760 mm. absorbs 1146 vols. NH_3 . (Roscoe and Dittmar.)

1 vol. H_2O at 0° and 760 mm. absorbs 1049.6 vols. NH_3 . (Carius.)

1 vol. H_2O at 0° and 760 mm. absorbs 1270 vols. NH_3 . (Berthelot.)

1 vol. H_2O at 0° and 760 mm. absorbs 1050 vols. NH_3 . (Bunsen.)

100 cc. H_2O absorb 64.50 g. NH_3 . (Raoult.)

Solubility of NH_3 in H_2O at 760 mm. and t° :

1 g. H_2O absorbs g. NH_3 , according to Roscoe and Dittmar (A. 122. 347) (R.D.); and according to Sims (A. 118. 345) (S).

(Roscoe and Dittmar, A. 112. 349.)

In proportion as the temperature is higher, so much the more nearly does the solubility of NH_3 in H_2O conform to the law of Henry and Dalton, but only obeys it completely when the temperature is 100° , as is seen in the following table.

Solubility of NH_3 in H_2O at various pressures and temperatures: P=partial pressure, i. e. total pressure minus the tension of aqueous vapour at the given temperature; G=grams NH_3 dissolved in 1 g. H_2O at the given pressure; G at 760=grams NH_3 that would be contained in 1 g. H_2O if the solubility was proportional to the pressure.

Solubility of NH_3 in H_2O at temps. below 0° . One gram H_2O dissolves

grams NH_3	Temp.
0 947	-3.9°
1 115	-10°
1 768	-20°
2 781	-30°
2 946	-40°

(Mallet, Am. Ch. J 1897, 19, 807.)

The solubility of NH_3 in H_2O does not follow Dalton's law at ord temp., but does at temp. near 100° . (Konowaloff, J Russ Phys. Chem. Soc. 1894, 26, 48; Chem. Soc. 1896, 70 (2), 351.)

NH_3 is much less sol. in KOH , or $\text{NaOH} + \text{Aq}$ than in H_2O .

Solubility of NH_3 in H_2O , and $\text{KOH} + \text{Aq}$ of various strengths: 100 pts. solvent absorbs g. NH_3 at t° .

t°	H_2O	$\text{KOH} + \text{Aq}$ 11 25% K_2O	$\text{KOH} + \text{Aq}$ 25 25% K_2O
0	90 00	72 00	49.50
8	72 75	57 00	37.50
16	59 75	46 00	28 50
24	49 50	37 25	21.75

(Raoult, A. ch. (5) 1. 262.)

100 pts sat. KOH + Aq dissolve only 1 pt NH_3

Solubility in NaOH + Aq is the same as in KOH + Aq of the same strength

NH_4Cl + Aq absorbs slightly less NH_3 than the same vol H_2O . NaNO_3 , and NH_4NO_3 + Aq absorb almost the same amount NH_3 as the same vol. H_2O . (Raoult, *l c*)

Solubility of NH_3 in 100 pts. $\text{Ca}(\text{NO}_3)_2$ + Aq

t°	H ₂ O	$\text{Ca}(\text{NO}_3)_2$ + Aq 28.38% $\text{Ca}(\text{NO}_3)_2$	$\text{Ca}(\text{NO}_3)_2$ + Aq 59.03% $\text{Ca}(\text{NO}_3)_2$

(Riesenfeld, Z. phys. Ch. 1903, 45. 462.)

The solubility of NH_3 in NaNO_3 , NH_4NO_3 and in $\text{AgNO}_3 \cdot 2\text{NH}_3$ + Aq is nearly the same as in pure H_2O (Konowaloff, C C. 1898, II. 659).

Distribution-coefficient of NH_3 between water and CHCl_3 = 26.3 at 20°; 24.9 at 25°; 23.2 at 30°.

The distribution-coefficient of NH_3 between CHCl_3 and a number of salt solutions has been determined for the purpose of studying the nature of metal-ammonia compounds in aqueous solution. (Dawson, Chem. Soc. 1900, 77. 1242)

Distribution of NH_3 between H_2O and CHCl_3 at 18°.

(de Bruyn, R. t. c. 11. 112)

1 vol. abs. alcohol at 20° and 760 mm. pressure absorbs 340 vols. NH_3 gas. (Müller, W. Ann. 1891, 43. 567.)1 l. methyl alcohol sat. with NH_3 contains 218 g. NH_3 at 0° ; sp. gr. of solution = 0.770; coefficient of solubility = 425.0. (Delépine).1 vol. oil of rosemary absorbs 9.75 vols. NH_3 at 29° .1 vol. oil of lavender absorbs 47 vols. NH_3 at 20° . (Saussure.)1 vol. caoutchine absorbs 3 vols. NH_3 . (Himly.)Valerol absorbs much NH_3 . (Gerhardt, A. ch. (3) 7. 278.)1 vol. ether at 760 mm. pressure absorbs 17.13 vols. NH_3 at 0° ; 12.35 vols. at 10° and 10.27 vols. at 15° . (Christoff, Z. phys. Ch. 1912, 79. 459.)+ H_2O . Colorless crystals.+ $\frac{1}{2}\text{H}_2\text{O}$. Large transparent crystals. (Rupert, J. Am. Chem. Soc. 1909, 31. 868.)

Ammonia, with metal salts.

For the ammonia addition-products of metal salts, see under the respective metal salts, except in the case of Co, Cr, Hg, and the Pt metals, for which see cobalt ammonium, chromium ammonium, etc., compounds, for

further reference New data on Co and Cr ammonium compounds and those of the Pt metals, published since the first edition, has not been included in the present edition

Ammonium amalgam, $\text{NH}_4, x\text{Hg}$.

Decomp. by H_2O , but more easily in presence of naphtha, alcohol, or ether.

Ammonium azoimide, $\text{N}_4\text{H}_4 = \text{NH}_4\text{N}_3$.

Easily sol. in H_2O ; sl. sol. in absolute alcohol, easily in 80% alcohol. Insol. in ether or benzene. (Curtius, B. 24. 3344.)

Ammonium cobalt azoimide, $\text{NH}_4\text{N}_3, \text{CoN}_6$.

Rather sol. in H_2O . (Curtius and Russom, J. pr. 1898, (2) 58. 302.)

Ammonium bromide, NH_4Br .

Easily sol. in H_2O with absorption of much heat.

1 pt. NH_4Br dissolves in pts. H_2O at t° .

t°	Pts. H_2O	t°	Pts. H_2O	t°	Pts. H_2O
10	1 51	30	1 23	100	0 78
16	1 39	50	1.06

(Eder, W. A. B. 82. (2) 1284.)

Sol. in 809 pts. ether (0.729 sp. gr.). (Eder, l.c.)

Sol. in acetone. (Eidmann, C. C. 1899. II, 1014); (Naumann, B. 1904, 37. 4328.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in ethylacetate. (Naumann, B. 1910, 43. 314.)

Ammonium tribromide, NH_4Br_3 .

Gives off Br in air. Sol. in H_2O . (Roozeboom, B. 14. 2398.)

Decomp. in the air. Very sol. in H_2O . (Chattaway, Chem. Soc. 1915, 107. 106.)

Ammonium antimony bromide, $3\text{NH}_4\text{Br}$, 2SbBr_3 .

Easily sol. in abs. alcohol. (Caven, C. C. 1905. II, 293.)

$7\text{NH}_4\text{Br}$, 3SbBr_3 . Easily sol. in abs. alcohol. (Caven, C. C. 1905. II, 293.)

See also Bromantimonate, ammonium.

Ammonium bismuth bromide, NH_4Br , BiBr_3 + H_2O .

Deliquescent. Decomp. by H_2O . Sol. in alcohol. (Nicklès, C. R. 51. 1097.)

Ammonium cadmium bromide, NH_4Br , CdBr_2 + $\frac{1}{2}\text{H}_2\text{O}$.

Sol. in 0.73 pt. H_2O , 5.3 pts. abs. alcohol, 280 pts. ether (sp. gr. 0.729), and 24 pts. alcohol ether (1:1). (Eder, Dingl. 221. 89.)

Sol. in H_2O without decomp. between 1° and 110.1°.

100 pts. of the solution contain at:

1° 14.8° 52.2° 110.1°

53.82 58.01 65.32 75.83 pts. of the salt. (Rimbach, B. 1905, 38. 1555.)

$4\text{NH}_4\text{Br}$, CdBr_2 . Sol. in 0.96 pt. H_2O , from which it is pptd. by alcohol or ether. (Eder.)

Solubility in H_2O at t°.

Below 160° the salt is decomp. by H_2O ; at 160° it is sol. in H_2O without decomp.

t°	100 pts. of the solution contain			Solid phase
	Pts. Cd	Pts. Br	Pts. NH_4	
0.8	14.72	50.46	6.67	Double salt + NH_4Br
13.0	14.94	51.48	6.85	"
44.5	15.01	53.85	7.35	"
76.4	14.60	55.28	7.80	"
123.5	15.50	59.50	8.45	"
160.0	14.70	62.67	9.43	Double salt

(Rimbach, B. 1905, 38. 1558.)

Not sol. in HBr + Aq without decomp. (Rimbach.)

Not sol. without decomp. in LiBr + Aq , CaBr_2 + Aq , MgBr_2 + Aq , NiBr_2 + Aq , or

CoBr_2 + Aq , even though very conc. solutions are used. Sol. without decomp. in ZnBr_2 + Aq . (Rimbach, B. 1905, 38. 1571.)

Ammonium chloromolybdenum bromide, $2\text{NH}_4\text{Br}$, $\text{Cl}_4\text{Mo}_3\text{Br}_2$.

Decomp. by pure H_2O . Can be crystallized from HBr + Aq . Apparently sol. without decomp. in alcohol. (Blomstrand.)

Ammonium cuprous bromide.

$4\text{NH}_4\text{Br}$, Cu_2Br_2 . Fairly stable in air.

$2\text{NH}_4\text{Br}$, Cu_2Br_2 + H_2O . Fairly stable in air. (Wells, Z. anorg. 1895, 10. 159.)

Ammonium cuprous bromide ammonia, NH_4Br , Cu_2Br_2 , 3NH_3 .

(Fleurent, C. R. 1891, 113. 1047.)

Ammonium cupric bromide, $2\text{NH}_4\text{Br}$, CuBr_2 + $2\text{H}_2\text{O}$.

Very sol. in H_2O . (de Koninck, B. 21. 777 R.)

Ammonium iridium bromide.

See Bromiridate, ammonium.

Ammonium iron (ferric) bromide, $(\text{NH}_4)_3\text{FeBr}_4$ + $2\text{H}_2\text{O}$.

Very deliquescent; sol. in H_2O . (Walden, Z. anorg. 1894, 7. 332.)

Ammonium lead bromide, $12\text{NH}_4\text{Br}$, 7PbBr_2 + $7\text{H}_2\text{O}$.

Decomp. on air, or with cold H_2O . (André, C. R. 96. 1502.)

$6\text{NH}_4\text{Br}$, PbBr_2 + H_2O . Decomp. by cold H_2O . (A.)

$7\text{NH}_4\text{Br}$, PbBr_2 + $1\frac{1}{2}\text{H}_2\text{O}$. Stable on air; decomp. by cold H_2O . (A.)

None of the above compounds exist. (Wells, Sill. Am. J. 146. 25.)

$2\text{NH}_4\text{Br}$, PbBr_2 . Decomp. by H_2O . Sol. in conc. KOH + Aq and in strong acids. (Fonzes-Diacon, Bull. Soc. 1897, (3) 17.351.)

NH_4Br , 3PbBr_2 (Wells.)

Ammonium magnesium bromide, NH_4Br , MgBr_2 + $6\text{H}_2\text{O}$.

Deliquescent. Sol. in H_2O . (Lerch, J. pr. (2) 28. 338.)

Ammonium mercuric bromide, 2HgBr_2 , NH_4Br .

Decomp. by H_2O into its constituent salts. (R&ay, Chem. Soc. 1902, 81. 648.)

Ammonium molybdenum bromide, $2\text{NH}_4\text{Br}$, MoBr_3 + H_2O .

Easily sol. in H_2O . (Rosenheim, Z. anorg. 1905, 46. 322.)

Ammonium molybdenum bromide chloride.

See Ammonium chloromolybdenum bromide.

Ammonium osmium bromide.*See Bromosmate, ammonium.***Ammonium osmyl bromide, $(\text{NH}_4)_2\text{OsO}_3\text{Br}_4$.**Sol. in H_2O . (Wintrebert, A. ch. 1903, (7) 28. 95.)**Ammonium osmyl oxybromide,**

(Wintrebert, A. ch. 1903 (7) 28. 117.)

Ammonium palladium bromide.*See Bromopalladate, ammonium, and Bromopalladite, ammonium.***Ammonium platinum bromide.***See Bromoplatinate, ammonium.***Ammonium rhodium bromide.***See Bromorhodite, ammonium.***Ammonium selenium bromide.***See Bromoselenate, ammonium.***Ammonium tellurium bromide.***See Bromotellurate, ammonium.***Ammonium thallic bromide, NH_4Br , $\text{TlBr}_3 + 2\text{H}_2\text{O}$.**Sol. in H_2O . (Willm.)+ $4\text{H}_2\text{O}$ Efflorescent. Sol. in H_2O . (Nicklès.)+ $5\text{H}_2\text{O}$ Sol. in H_2O (Nicklès.)**Ammonium stannous bromide (ammonium bromostannite), NH_4Br , $\text{SnBr}_2 + \text{H}_2\text{O}$.**Sol. in H_2O . (Benas, C. C. 1884. 958.)+ $2\text{NH}_4\text{Br}$, SnBr_2 Sol. in H_2O . (Raymann and Preis, A. 223. 323.)+ H_2O Sol. in H_2O . (Benas, l.c.)+ $2\text{H}_2\text{O}$. (Richardson, Am. Ch. J. 14. 96.) NH_4Br , $2\text{SnBr}_2(?)$. (Benas.)**Ammonium stannic bromide, $2\text{NH}_4\text{Br}$, SnBr_4 .***See Bromostannate, ammonium.***Ammonium uranyl bromide, $2\text{NH}_4\text{Br}$, $\text{UO}_2\text{Br}_2 + 2\text{H}_2\text{O}$.**Very deliquescent, and sol. in H_2O . (Sendtner.)**Ammonium zinc bromide, $2\text{NH}_4\text{Br}$, ZnBr_2 .**Deliquescent, and sol. in H_2O . (Bödeker, J. B. 1860. 17.)+ H_2O Very deliquescent, and sol. in H_2O . (André, A. ch. (6) 3. 104.)+ $x\text{H}_2\text{O}$. (Ephraim, Z. anorg. 1908, 59. 66.)+ $3\text{NH}_4\text{Br}$, ZnBr_2 Sol. in H_2O . Decomp. only by great dilution. (Jones & Knight, Am. Ch. J. 1899, 22. 136.)+ H_2O Not hygroscopic. (Ephraim, Z. anorg. 1908, 59. 66.)**Ammonium bromide arsenic trioxide.***See Arsenite bromide, ammonium.***Ammonium bromide mercuric chloride,**

Ppt (Rây, Chem Soc 1902, 81. 649.)

Ammonium bromide mercuric iodide,Decomp by H_2O . Sol. in alcohol without decomp. (Grossmann, B. 1903, 36. 1602.)+ $3\text{NH}_4\text{Br}$, 2HgI_2 . Decomp by H_2O . Sol. in alcohol without decomp (Grossmann, B. 1903, 36. 1602.)**Ammonium lead bromochloride,**Decomp by H_2C . (Fonzes-Diacon, Bull. Soc. 1897, (3) 17. 350.)+ $\text{NH}_4\text{Pb}_2\text{Cl}_4\text{Br}$. Decomp. by H_2O . (Fonzes-Diacon, Bull. Soc. 1897, (3) 17. 349.)**Ammonium bromochloriodide, NH_4ClBrI .**Very stable; sol. in H_2O (Chattaway, Chem. Soc. 1915, 107. 108.)**Ammonium lead bromiodide, $\text{NH}_4\text{PbBrI}_2 + 2\text{H}_2\text{O}$ and $\text{NH}_4\text{Pb}_2\text{BrI}_4$.**Decomp. by H_2O . Sol. in conc. $\text{KOH} + \text{Aq}$ and in strong acids (Fonzes-Diacon, Bull. Soc. 1897, (3) 17. 352.)**Ammonium bromiodobromide, NH_4BrIBr .**

Decomp. in the air Sol. in ether (Jackson, Am. Ch. J. 1900, 24. 28.)

Ammonium chloride, NH_4Cl .(Sal-ammoniac) Not deliquescent. Sol. in H_2O with reduction of temp.Sol. in 2 24 pts. H_2O . (Wenzel.)
 $\text{NH}_4\text{Cl} + \text{Aq}$ sat. at 10° has sp. gr. = 1.072 (T.)
Sol. in 2.72 pts cold, and 1 pt. boiling H_2O (M. R. and P.)Sol. in 3 pts. H_2O at 18.75° (Abl.)
Sol. in 6 pts cold, and 1 pt. boiling H_2O . (Fourcroy)100 pts. H_2O at 18.75° dissolve 36.75 pts. NH_4Cl
 $\text{NH}_4\text{Cl} + \text{Aq}$ sat. at its b.-pt. (114.2°) contains 88.9 pts NH_4Cl in 100 pts of the solution. (Berzelius.)100 pts H_2O at 15° dissolve 33-36 pts; and at 100° , 100 pts NH_4Cl . (Ure's Dict.) $\text{NH}_4\text{Cl} + \text{Aq}$ sat. at 15° has sp. gr. = 1.075209, and contains at least 31.88 pts NH_4Cl dissolved in every 100 pts H_2O . (Michel and Kraft, A. ch. (3) 41. 478.) $\text{NH}_4\text{Cl} + \text{Aq}$ sat at 10° contains 23.8% NH_4Cl . (Eller.) $\text{NH}_4\text{Cl} + \text{Aq}$ sat. in the cold contains 14.3% NH_4Cl . (Fourcroy.)Sol. in 1 pt. H_2O at 113.5° , b.-pt. of sat. solution. (Griffiths)Sol. in 2.7 pts. H_2O at 18.75° , forming a liquid of 1.08 sp. gr. (Karsten, 1840.)Sol. in 2.727 pts. H_2O at 10° . (Gren's Handbuch.)100 pts. H_2O at 718 mm. pressure and t° dissolve pts. NH_4Cl

t°	Pts. NH_4Cl	t°	Pts. NH_4Cl	t°	Pts. NH_4Cl	t°	Pts. NH_4Cl

(Dijken, Z. phys. Ch. 1897, **24**, 107.)

B.-pt. of NH_4Cl + Aq, containing pts. NH_4Cl to 100 pts H_2O . G=according to Gerlach (Z. anal. **26**, 439); L=according to Legrand (A. ch. (2) **59**, 436)

B.-pt.	G	L	B.-pt.	G	L
101°	6.5	7.8	109°	50.6	53.5
102	12.8	13.9	110	56.2	59.9
103	19.0	19.7	111	61.9	66.4
104	24.7	25.2	112	67.8	73.3
105	29.7	30.5	113	74.2	80.5
106	34.6	35.7	114	81.3	88.1
107	39.6	41.3	114.2	...	88.9
108	45.0	47.3	114.8	87.1

Sat. NH_4Cl + Aq boils at 115.8° at 718 mm. pressure (Alluard, C. R. **59**, 500)

NH_4Cl + Aq containing 74.2 pts. NH_4Cl to 100 pts. H_2O forms a crust at 113°; highest temperature observed, 114.8° (Gerlach, Z. anal. **26**, 426)

NH_4Cl + Aq containing 10% NH_4Cl boils at 101.7°; 20% NH_4Cl , at 104.4°. (Gerlach.)

NH_4Cl + Aq containing 10.6% NH_4Cl gives off NH_3 at 37°. (Leeds, Am. J. Sci. (3) **7**, 197.)

When NH_4Cl + Aq is boiled, or even evap. on water bath, a little NH_3 is expelled. (Fresenius.)

30 pts. NH_4Cl mixed with 100 pts H_2O lower the temp. from 13.3° to -5.1°, that is 18.4°. (Rüdorff, B. **2**, 68.)

Freezing-point of sat. solution is -15.4°, the same temp. which is caused by mixing 25 pts. NH_4Cl with 100 pts. snow. (Rüdorff, Pogg. **122**, 337.)

Conc HCl + Aq precipitates part of NH_4Cl from sat. NH_4Cl + Aq. (Vogel, J. pr. **2**, 199.)

Solubility of NH_4Cl in HCl + Aq at 0°. NH_4Cl = mols. NH_4Cl (in milligrammes) dissolved in 10 cc. of the liquid; HCl = mols. HCl (in milligrammes) dissolved in 10 cc. of the liquid.

NH_4Cl	HCl	Sum of mols.	Sp. gr.

50°	0 8	111 2	

(Biltz and Marcus, Z. anorg 1911, 71. 170)

$\text{NH}_4\text{Cl} + \text{NH}_4\text{NO}_3$ 100 pts H_2O dissolve 29.1 pts $\text{NH}_4\text{Cl} + 173.8$ pts. NH_4NO_3 at 19.5° (Rüdorff, B. 6. 482)

$\text{NH}_4\text{Cl} + \text{Ba}(\text{NO}_3)_2$. 100 pts. H_2O dissolve at 18 5°—

	1	2	3	4	5
NH_4Cl	36 7	38.6	38 06	39 18	
$\text{Ba}(\text{NO}_3)_2$		8.6	16 73	17 02	8 9

2, sat. $\text{Ba}(\text{NO}_3)_2 + \text{Aq}$ treated with NH_4Cl ; 3, sat. $\text{NH}_4\text{Cl} + \text{Aq}$ treated with $\text{Ba}(\text{NO}_3)_2$; 4, simultaneous treatment of both salts with H_2O . (Karsten.)

$\text{NH}_4\text{Cl} + \text{KNO}_3$. 100 pts H_2O dissolve at 18 5°—

	1	2	3	4	5	6
KNO_3	29 9	30 56	37 68	38 62		34 2
NH_4Cl		44.33	37 98	39 84	36 7	38 8
		74 89	75 66	78 46		73:0

1 and 5, according to Mulder; 2, sat. $\text{KNO}_3 + \text{Aq}$ treated with NH_4Cl ; 3, sat. $\text{NH}_4\text{Cl} + \text{Aq}$ treated with KNO_3 ; 4, simultaneous treatment of NH_4Cl and KNO_3 (Karsten); 6, by warming solution with excess of both salts, and cooling to 14 8°. The amount of excess of one or the other salt has no influence. (Rüdorff)

$\text{NH}_4\text{Cl} + \text{NaNO}_3$. Slowly sol. in sat. $\text{NaNO}_3 + \text{Aq}$, at first to a clear solution, but afterwards NaCl separates out. (Karsten)

$\text{NH}_4\text{Cl} + \text{KCl}$. 100 pts. H_2O dissolve—

	(Rüdorff) 15°	(Karsten) 18 75°		
KCl	16 97	34 4	16 27	
NH_4Cl	28.90	..	29 83	37 02

	(Rüdorff) 22°	(Mulder) At b-pt.		
KCl	19.1	58.5	21 9	
NH_4Cl	30 4	..	67.7	87 3

100 pts. sat. solution of $\text{NH}_4\text{Cl} + \text{KCl}$ contain 30.61 pts. of the two salts at 13–16°. (v. Hauer, J. pr. 103. 114.)

$\text{NH}_4\text{Cl} + \text{NaCl}$. 100 pts. H_2O dissolve—

	10–20°	(Mulder) 10°	10°	(v. Hauer) 13–16°
NH_4Cl		19 50	33 3	18 8–20 3
NaCl	35 8	30 00		24 6–26 1
		49 50		43 4–46 4

	(Karsten) 18.75°	(Rüdorff) 18.7°	(Mulder) At b-pt.
NH_4Cl	22 06	37 02	22 9
NaCl	26 38	23 9	87 3
	48 44	46 8	78 5
			22 3
			100 8
			40 4

Sp gr. of sat. solution of $\text{NH}_4\text{Cl} + \text{NaCl}$ is 1.179. (Karsten.)

$\text{NH}_4\text{Cl} + (\text{NH}_4)_2\text{SO}_4$. 100 pts. H_2O dissolve 26.8 pts. $\text{NH}_4\text{Cl} + 46 5$ pts. $(\text{NH}_4)_2\text{SO}_4$ at 21.5°. (Rüdorff, B. 6. 484.)

Solubility in $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$ at 30°.

Composition of the solution		Solid phase
% by wt. NH_4Cl	% by wt. $(\text{NH}_4)_2\text{SO}_4$	
0	44	$(\text{NH}_4)_2\text{SO}_4$
6 86	36.15	"
14 62	28 6	"

22 3	16 33	"
24.06	12 72	"
29.5	0	"

(Schreinemakers, Z. phys. Ch. 1909, 69. 562)

$\text{NH}_4\text{Cl} + \text{CuSO}_4$. Sol. in sat. $\text{CuSO}_4 + \text{Aq}$, at first to a clear solution, but a double sulphate of NH_4 and Cu soon separates. (Karsten)

$\text{NH}_4\text{Cl} + \text{MgSO}_4$. Slowly and difficultly sol. in sat. $\text{MgSO}_4 + \text{Aq}$ with subsequent separation of double sulphate. (Karsten.)

$\text{NH}_4\text{Cl} + \text{K}_2\text{SO}_4$. 100 pts. H_2O dissolve, at 18 75°—

		a	b	c	
K_2SO_4	10 8	11 1	13.26	13.28	
NH_4Cl	..	38 2	37 94	37.92	36.7
		49 3	51.20	51 20	

In (a) NH_4Cl was added to sat. $\text{K}_2\text{SO}_4 + \text{Aq}$. In (b) K_2SO_4 was added to sat. $\text{NH}_4\text{Cl} + \text{Aq}$. In (c) NH_4Cl and K_2SO_4 were treated together with H_2O . (Karsten.)

100 pts H₂O at 14° dissolve 14.1 pts. K₂SO₄ + 36.8 pts. NH₄Cl = 50.9 pts K₂SO₄ + NH₄Cl, under all conditions. (Rudorff, Pogg. 148. 565.)

100 pts. H₂O dissolve at b-pt —

K ₂ SO ₄ . .	26 75	33 3- 33 9	87 3
NH ₄ Cl. . .		90 4-111 8	
		123 7-145 7	

(Mulder.)

NH₄Cl + Na₂SO₄. 100 pts H₂O dissolve 28.9 pts. NH₄Cl + 24.7 pts Na₂SO₄, if NH₄Cl + Aq sat. at 10° is sat. with Na₂SO₄ at 11°.

100 pts H₂O dissolve 31.8 pts. NH₄Cl + 9.0 pts. Na₂SO₄, if Na₂SO₄ + Aq sat. at 10° is sat with NH₄Cl at 11°. (Mulder, J. B. 1866. 68.)

Sol in sat. Na₂SO₄ + Aq. (Karsten)

Sol in sat. ZnSO₄ + Aq. (Karsten)

Sl. sol in liq. NH₃ at -50°. (Moissan, C. R. 1901, 133. 713.)

Very sol in liq. NH₃ (Franklin, Am. Ch. J. 1898, 20. 826.)

Very sl. sol. in absolute alcohol.

100 pts alcohol of 0.939 sp. gr. dissolve—
at 4° 8° 27° 38° 56°

11.2 12.6 19.4 23.6 30.1 pts. NH₄Cl.
(Gerardin, A. ch. (4) 5. 129.)

14 pts boiling highest rectified spirit dissolve 1 pt NH₄Cl. (Wenzel)

100 pts alcohol of—

0.900 sp. gr. dissolve 6.5 pts. NH₄Cl

0.872 " " " 4.75 " "

0.834 " " " 1.5 " "

(Kirwan)

Though somewhat sol. in pure absolute alcohol, NH₄Cl is absolutely insol. in alcohol in presence of methyl amine chlorides (Winkles, A. 93. 324.)

100 pts absolute methyl alcohol dissolve 3.35 pts at 19°.

100 pts. absolute ethyl alcohol dissolve 0.62 pt. at 19°. (de Bruyn, Z. phys. Ch. 10. 783.)

Solubility of NH₄Cl in methyl alcohol.

Sol. in formic acid. (Zanninovich-Tessarini, Z. phys. Ch. 1896, 19. 251.)

Ammonium antimony chloride, $\text{SbCl}_5(\text{NH}_4)_3$, $\text{SbCl}_5(\text{NH}_4)_3$.

Ppt. Decomp. by H_2O (Weinland, B. 1905, 38. 1085.)

$\text{SbCl}_5(\text{NH}_4)$, SbCl_5 , NH_4OH . Very deliquescent; sl. sol. in H_2O with decomp. (Weinland, B. 1901, 34. 2635.)

Ammonium antimonous chloride, NH_4Cl , SbCl_3 .

Deliquescent. (Dehérain, C. R. 52. 734.)

$2\text{NH}_4\text{Cl}$, $\text{SbCl}_3 + 2\text{H}_2\text{O}$. Permanent in dry air; decomp. by much H_2O . (Poggiale)

$3\text{NH}_4\text{Cl}$, $\text{SbCl}_3 + 3\text{H}_2\text{O}$. As above.

Ammonium antimonie chloride, $3\text{NH}_4\text{Cl}$, SbCl_5 .

Decomp. by H_2O . (Dehérain, C. R. 52. 734.)

$4\text{NH}_4\text{Cl}$, SbCl_5 . Decomp. by H_2O . (D.)

See also Chlorantimonate, ammonium.

Ammonium antimony platinum chloride, $(\text{Sb}, \text{Pt})\text{Cl}_5(\text{NH}_4)_2$.

Ppt. (Weinland, B. 1905, 38. 1084)

Ammonium antimony tin chloride, $(\text{Sb}, \text{Sn})\text{Cl}_5(\text{NH}_4)_2$.

Ppt. (Weinland, B. 1905, 38. 1085)

Ammonium arsenyl chloride, $2\text{NH}_4\text{Cl}$, AsOCl + $\frac{1}{2}\text{H}_2\text{O}$.

(Wallace, Phil Mag. (4) 16. 358)

Ammonium bismuth chloride, NH_4Cl , 2BiCl_3 .

Deliquescent (Dehérain, C. R. 54. 724)

$2\text{NH}_4\text{Cl}$, BiCl_3 . Decomp. by H_2O . (Arppe.) Pogg. 64. 237.)

+ $2\frac{1}{2}\text{H}_2\text{O}$. (Rammelsberg.)

$3\text{NH}_4\text{Cl}$, BiCl_3 . Decomp. by H_2O . (Arppe)

$5\text{NH}_4\text{Cl}$, 2BiCl_3 . (Rammelsberg)

Ammonium bismuth potassium chloride,

$2\text{NH}_4\text{Cl}$, BiCl_3 , KCl .

(Dehérain, C. R. 54. 724.)

Ammonium cadmium chloride, NH_4Cl , CdCl_2 .

Solubility of NH_4Cl , CdCl_2 in H_2O at t°.

t°	Pts. by weight in 100 pts of solution			g. in 100 g. solution	Grams in 100 H_2O	Mols. H_2O free salt dissolved by 100 mols. H_2O
	Cl	Cd	NH_4			
2.4°	13 44	14 26	2 24	29 94	42.74	3 25
16.0	15 07	15 82	2 56	33 45	50 26	3.83
41 2	17 46	18 61	2 89	38.96	63.83	4 86
63.8	19 73	20 92	3 34	43 99	78.54	5.98
105 9	23.52	24 70	4 01	52 58	109 33	8 30

(Rimbach, B. 1897, 30. 3076.)

+ $\frac{1}{2}$ H₂O. Sl. sol. in H₂O, alcohol, and wood spirit (v. Hauer, W. A. B. 13. 449.)

4NH₄Cl, CdCl₂. Sol in H₂O (v. Hauer.)

Decomp. by H₂O to NH₄Cl, CdCl₂. Decomp. increases with decrease of temp. At 3.9° approximately wholly decomp. to NH₄Cl, CdCl₂. At 113.9° very nearly all is 4NH₄Cl, CdCl₂. (Rimbach, B. 1897, 30. 3077.)

Solubility of 4NH₄Cl, CdCl₂ in H₂O at t°.

t°	Pts dissolved in 100 pts by weight of solution		
	Cd	Cl	NH ₄
3 9	5 75	18 17	7 37
16 1	6 93	20 26	7 97
40 2	9 91	23 84	8 92
58 5	12 50	26 53	9 35
112 9	16 66	31 79	10 78
113 9	16 51	32 71	11 30

(Rimbach, B. 1897, 30. 3071.)

Sol. without decomp. in 37.3% HCl(d=1.19) and 24.8% HCl(d=1.125). (Rimbach, B. 1905, 38. 1569.)

Solubility of 4NH₄Cl, CdCl₂+NH₄Cl in H₂O at t°.

t°	In 100 pts. by wt of the solution			Composition of the solid phase	
	Pts. by wt. Cd	Pts. by wt. Cl	Pts. by wt. NH ₄	Mol. % NH ₄ Cl	Mol. % Tetra-salt
1 0	2 82	17 11	7.82	59 0	41 0
13.2	2 76	18 84	8 71	74 0	26.0
40 1	3 16	22 56	10 49	71 0	29.0
58 2	3 51	25 21	11 72	69 0	31 0

(Rimbach, B. 1902, 35. 1300.)

Solubility of 4NH₄Cl, CdCl₂+NH₄Cl, CdCl₂ in H₂O at t°.

t°	In 100 pts by wt. of the solution			Composition of the solid phase	
	Pts. by wt. Cd	Pts. by wt. Cl	Pts. by wt. NH ₄	Mol. % Mono-salt	Mol. % Tetra-salt
1.1	5 34	17 62	7 27	49 6	50 4
14 0	7 12	19 86	7 84	47 0	53 0
40.7	10 24	23 82	8 85	77 0	23 0
58 5	12 50	26 53	9 35	.	.

(Rimbach, B. 1902, 35. 1300.)

Sol. without decomp. in 50% LiCl+Ag, 33.3% CaCl₂+Ag and 50% MgCl₂+Ag. (Rimbach, B. 1905, 38. 1569.)

Ammonium chloromolybdenum chloride, 2NH₄Cl, Cl₄Mo₃Cl₂+2H₂O.

Decomp. by pure H₂O; can be crystallized from HCl+Ag. (Blomstrand.)

Ammonium chromium chloride, 2NH₄Cl, CrCl₃+H₂O.

Sol. in H₂O with decomp. (Neumann, A. 244. 229.)

+6H₂O=2NH₄Cl, [CrCl₂.4H₂O]Cl+2H₂O.

Hygroscopic. Decomp. by H₂O and by alcohol. (Weinland, B. 1907, 40. 3770.)

Ammonium cobaltous chloride, NH₄Cl, CoCl₂+6H₂O.

Deliquescent in moist air. Very easily sol. in H₂O. (Hautz, A. 66. 284.)

Ammonium cobaltous chloride ammonia, NH₄Cl, CoCl₂, NH₃. (F. Rose)

Ammonium cuprous chloride, 4NH₄Cl Cu₂Cl₂.

Decomp. in the air.

4NH₄Cl, 3Cu₂Cl₂. Decomp. by H₂O, not by alcohol (Ritthausen, J. pr. 59. 369.)

Fairly stable in air. (Wells, Z. anorg. 1895, 10. 158.)

Ammonium cupric chloride,

NH₄Cl, CuCl₂.

Solubility of NH₄Cl, CuCl₂ in absolute alcohol at 25°.

g CuCl ₂	Solid phase	g CuCl ₂	Solid phase
4 65	NH ₄ Cl+NH ₄ Cl, CuCl ₂	12 90	NH ₄ Cl, CuCl ₂
4 74	NH ₄ Cl+NH ₄ Cl, CuCl ₂	34 92	NH ₄ Cl, CuCl ₂ +CuCl ₂ , C ₂ H ₅ OH
6 45	NH ₄ Cl, CuCl ₂	34 50	

(Foote and Walden, J. Am. Ch. Soc. 1911, 33. 1032.)

+2H₂O. Sol. in 2 pts. H₂O. (Hautz, A. 66. 280.)

Does not exist, (Meerburg, C. C. 1904. II, 1362.)

2NH₄Cl, CuCl₂+2H₂O Easily sol. in H₂O, also in alcohol, even when absolute. (Cap and Henry, J. pr. 13. 184.)

Solubility of 2NH₄Cl, CuCl₂ in H₂O at t°.

g 2NH ₄ Cl, CuCl ₂ in 100 g of the solution	t°	Solid phase
3 87	-1 5°	ice
5 88	-2 48	"
8 78	-3 95	"
9 97	-4 60	"
13 12	-6 40	"
15 84	-8 04	"
17 64	-9 24	"
20 12	-10 80	"
±20 3	±-11 0	ice+2NH ₄ Cl, CuCl ₂ .2H ₂ O
20 46	-10	2NH ₄ Cl, CuCl ₂ .2H ₂ O
21 16	-5	"
22 02	0	"

27 70	30	"
30 47	40	"
33 24	50	"
36 13	60	"
39 25	70	"
43 36	80	"

(Meerburg, Z. anorg. 1905, 45. 8.)

Somewhat sol. in liq. NH_3 . (Franklin and Kraus, *Am. Ch. J.* 1898, **20**, 827.)

Is the only hydrate of $2\text{NH}_4\text{Cl}$, CuCl_2 existing between -11° and $+80^\circ$. (Meerburg, *C. C.* 1904, II, 1362.)

$+3\text{H}_2\text{O}$. (Bourgeois, *Bull. Soc.* 1898, (3) 19, 786.)

Ammonium cupric chloride ammonia,
 $2\text{NH}_4\text{Cl}$, CuCl_2 , 2NH_3 .

Decomp. by H_2O , less easily by alcohol.
Decomp. by acids. (Rutthausen.)

Ammonium indium chloride, $2\text{NH}_4\text{Cl}$, InCl_3
 $+ \text{H}_2\text{O}$.

Easily sol. in H_2O . (Meyer.)

Ammonium iodine chloride, NH_4Cl , ICl_3 .

More sol. in H_2O than KCl , ICl_3 . (Filhol, *J. Pharm.* 26, 441; *Berz J. B.* 20, (2) 110.)

Ammonium iridium trichloride.

See Chloriridite, ammonium.

Ammonium iridium tetrachloride.

See Chloriridate, ammonium.

Ammonium iron (ferrous) chloride, NH_4Cl ,
 FeCl_2 .

Easily sol. in H_2O ; insol. in alcohol. (Winkler.)

Ammonium iron (ferric) chloride, $2\text{NH}_4\text{Cl}$,
 $\text{FeCl}_3 + \text{H}_2\text{O}$.

Deliquescent. Sol. in H_2O without decomp. (Fritzsche); sol. in 3 pts. H_2O at 18.75° . (Abl.)
Sol. in H_2O . (Walden, *Z. anorg.* 1894, 1, 332.)

Ammonium iron (ferric) potassium chloride,
 NH_4Cl , FeCl_3 , $\text{KCl} + 1\frac{1}{2}\text{H}_2\text{O}$.

Min. *Kremersite*. Deliquescent.

Ammonium lead chloride, NH_4Cl , $2\text{PbCl}_2 + 3\text{H}_2\text{O}$.

Sol. in H_2O without decomp. (?). (André, *C. R.* 96, 1502.)

$6\text{NH}_4\text{Cl}$, $\text{PbCl}_2 + \text{H}_2\text{O}$.

$9\text{NH}_4\text{Cl}$, $\text{PbCl}_2 + 1\frac{1}{2}\text{H}_2\text{O}$.

$9\text{NH}_4\text{Cl}$, $2\text{PbCl}_2 + 2\frac{1}{2}\text{H}_2\text{O}$.

$10\text{NH}_4\text{Cl}$, $\text{PbCl}_2 + \text{H}_2\text{O}$.

$11\text{NH}_4\text{Cl}$, $2\text{PbCl}_2 + 3\frac{1}{2}\text{H}_2\text{O}$.

$18\text{NH}_4\text{Cl}$, $\text{PbCl}_2 + 4\text{H}_2\text{O}$.

All these salts are decomp. by H_2O . (André *A. ch.* (6) 3, 104.)

Of the salts prepared by André, only one NH_4Cl , 2PbCl_2 exists. (Wells, *Sill. Am. J.* 146, 25.)

Solubility determinations show that NH_4Cl , 2PbCl_2 is the only double salt formed at 25° . (Foote, *Am. Ch. J.* 1907, 37, 121.)

NH_4Cl , $\text{PbCl}_2 + \frac{1}{2}\text{H}_2\text{O}$. (Wells, *l.c.*)

Ammonium lead tetrachloride.

See Chloroplumbate, ammonium.

Ammonium magnesium chloride, NH_4MgCl_2
 $+ 6\text{H}_2\text{O} = \text{NH}_4\text{Cl}$, $\text{MgCl}_2 + 6\text{H}_2\text{O}$.

Deliquescent. Very sol. in H_2O .

Sol. in 6 pts. cold H_2O . (Fourcroy.)

Solubility in $\text{NH}_4\text{Cl} + \text{Aq}$ at t° .

t°	Per 1000 Mol. H_2O	
	Mol. NH_4Cl	Mol. MgCl_2
3 5°	27 5	55 7
25 0	42.1	56 4
50.0	62 9	59.1

(Biltz, *Z. anorg.* 1911, 71, 170.)

$4\text{NH}_4\text{Cl}$, $5\text{MgCl}_2 + 33\text{H}_2\text{O}$. Sol. in H_2O . (Berthelot and André, *A. ch.* (6) 11, 294.)

Ammonium manganous chloride, NH_4Cl ,
 $\text{MnCl}_2 + \frac{1}{2}\text{H}_2\text{O}$.

Sol. in $1\frac{1}{2}$ pts. H_2O at ordinary temp. (Hautz, *A.* 66, 280); does not exist. (Saunders, *Am. Ch. J.* 14, 134.)

$2\text{NH}_4\text{Cl}$, $\text{MnCl}_2 + \text{H}_2\text{O}$. Sol. in H_2O (Rammelsberg); does not exist. (Saunders.)
 $+ 2\text{H}_2\text{O}$. Easily sol. in H_2O , but with decomp. into NH_4Cl and MnCl_2 . (Saunders.)

Ammonium manganic chloride, $2\text{NH}_4\text{Cl}$,
 MnCl_3 .

Sol. in H_2O ; less sol. in $\text{NH}_4\text{Cl} + \text{Aq}$. Unstable. (Neuman, *M.* 1894, 15, 490.)
 $+ \text{H}_2\text{O}$. Decomp. by H_2O . Sol. in HCl apparently without decomp. (Rice, *Chem. Soc.* 1898, 73, 260.)

Ammonium mercuric chloride, $2\text{NH}_4\text{Cl}$,
 $\text{HgCl}_2 + \text{H}_2\text{O}$ (sal alembroth).

Sol. in 0.66 pt. H_2O at 10° , and in nearly every proportion of hot H_2O .

NH_4Cl , HgCl_2 . Easily sol. in H_2O .

$+ \frac{1}{2}\text{H}_2\text{O}$. Easily sol. in H_2O . (Kane.)

$2\text{NH}_4\text{Cl}$, $3\text{HgCl}_2 + 4\text{H}_2\text{O}$. Easily sol. in H_2O . (Holmes, *C. N.* 5, 351.)

NH_4Cl , 2HgCl_2 . Very sol. in H_2O . (Rây, *Chem. Soc.* 1902, 81, 648.)

NH_4Cl , 5HgCl_2 . (Strömholm, *J. pr.* 1902, (2) 66, 441.)

Ammonium mercuric sodium chloride, NH_4Cl ,
 HgCl_2 , 4NaCl (?).

Sol. in H_2O . (Kossmann, *A. ch.* (3) 27, 243.)

Ammonium molybdenum chloride, $2\text{NH}_4\text{Cl}$,
 $\text{MoCl}_3 + \text{H}_2\text{O}$.

Very sol. in H_2O . Nearly insol. in alcohol and ether. (Chilesotti, *C. C.* 1903, II, 652.)

See also Ammonium chloromolybdenum chloride.

Ammonium molybdenum chloride iodide.

See Ammonium chloromolybdenum iodide.

Ammonium molybdenyl chloride, $2\text{NH}_4\text{Cl}$, $\text{MoO}_2\text{Cl}_2 + 2\text{H}_2\text{O}$.

(Weinland, Z. anorg. 1905, **44**, 98.)

$2\text{NH}_4\text{Cl}$, MoOCl_3 . Sol in H_2O ; insol. in H_2O sat. with HCl (Klason, B. 1901, **34**, 149.)

Ammonium nickel chloride, NH_4Cl , $\text{NiCl}_2 + 6\text{H}_2\text{O}$.

Deliquescent in moist air Easily sol. in H_2O . (Hautz.)
 $4\text{NH}_4\text{Cl}$, $\text{NiCl}_2 + 7\text{H}_2\text{O}$ (?).

Ammonium osmium tetrachloride.

See Chlorosmate, ammonium.

Ammonium osmium sesquichloride.

See Chlorosmite, ammonium.

Ammonium osmyl chloride, $(\text{NH}_4)_2\text{OsO}_2\text{Cl}_4$.

Sol. in H_2O . Decomp. by HCl . (Wintrebert, A. ch. 1903, (7) **28**, 92.)

Ammonium osmyl oxychloride,

$(\text{NH}_4)_2\text{OsO}_3\text{Cl}_2$.

Very sl. sol. in H_2O . Sol. in $\text{KOH} + \text{Ag}$ with decomp. (Wintrebert, A. ch. 1903, (7) **28**, 116.)

Ammonium palladium chlorides.

See Chloropalladate, ammonium and chloropalladite, ammonium.

Ammonium rhodium dichloride, $4\text{NH}_4\text{Cl}$, $\text{RhCl}_2 + 3\frac{1}{2}\text{H}_2\text{O}$.

Sol. in H_2O , but decomp. slowly. (Willm. B. **16**, 3033.)

Does not exist. (Leidie, A. ch. (6) **17**, 277.)

Ammonium rhodium trichloride.

See Chlororhodite, ammonium.

Ammonium rhodium chloride ammonium nitrate, Rh_2Cl_6 , $6\text{NH}_4\text{Cl}$, $2\text{NH}_4\text{NO}_3$.

See Chlororhodite nitrate, ammonium.

Ammonium ruthenium trichloride.

See Chlororuthenite, ammonium.

Ammonium ruthenium tetrachloride.

See Chlororuthenate, ammonium.

Ammonium tellurium chloride.

See Chlorotellurate, ammonium.

Ammonium thallic chloride, $3\text{NH}_4\text{Cl}$, TiCl_3 .

Easily sol. in H_2O . (Willm.)

$+2\text{H}_2\text{O}$. Easily sol. in H_2O and alcohol. (Nickles, J. Pharm. (4) **1**, 28.)

Ammonium thorium chloride, $8\text{NH}_4\text{Cl}$, $\text{ThCl}_4 + 8\text{H}_2\text{O}$.

Sol. in H_2O . (Chydenius.)

Ammonium tin (stannous) chloride (ammonium chlorostannite), NH_4Cl , $\text{SnCl}_2 + \text{H}_2\text{O}$.

Decomp. by H_2O . Resembles K salt. (Richardson, Am. Ch. J. **14**, 93.)

$2\text{NH}_4\text{Cl}$, $\text{SnCl}_2 + \text{H}_2\text{O}$. Sol. in H_2O , but decomp. by boiling. (Rammelsberg.)

Contains $2\text{H}_2\text{O}$. (Richardson.)

$4\text{NH}_4\text{Cl}$, $\text{SnCl}_2 + 3\text{H}_2\text{O}$. Decomp. by H_2O . (Poggiale, C. R. **20**, 1182.)

Does not exist. (Richardson.)

Ammonium tin (stannic) chloride.

See Chlorostannate, ammonium.

Ammonium titanium chloride, $2\text{NH}_4\text{Cl}$, $\text{TiCl}_4 + 2\text{H}_2\text{O}$.

Ppt.; decomp. in moist air; sol. in fuming HCl ; insol. in ether. (Rosenheim, Z. anorg. 1901, **26**, 242.)

Ammonium titanium chloride, $3\text{NH}_4\text{Cl}$, TiCl_4 . Sol. in H_2O .

$6\text{NH}_4\text{Cl}$, TiCl_4 . Sol. in H_2O . (Rose.)

Ammonium tungsten chloride, $(\text{NH}_4)_3\text{W}_2\text{Cl}_8 = 3\text{NH}_4\text{Cl}$, 2WCl_3 .

Easily sol. in H_2O . Nearly insol. in most organic solvents. (Olsson, B. 1913, **46**, 577.)

Ammonium uranyl chloride.

Very deliquescent, and sol. in H_2O . (Peligot.)

$2\text{NH}_4\text{Cl}$, $(\text{UO}_2)_2\text{Cl}_2 + 2\text{H}_2\text{O}$. Solution at 15° contains in 100 g. 3.51 g., NH_4 , 40.67 g. UO_2 and 19.15 g. Cl , hence there is considerable decomp. (Rimbach, B. 1904, **37**, 466.)

Ammonium vanadium chloride, $2\text{NH}_4\text{Cl}$, $\text{VCl}_3 + \text{H}_2\text{O}$.

Difficulty sol. in H_2O and alcohol (Stahler, B. 1904, **37**, 4412.)

Ammonium zinc chloride, NH_4Cl , $\text{ZnCl}_2 + 2\text{H}_2\text{O}$.

Deliquescent. Very sol. in H_2O . (Hautz, A. **66**, 287.)

$2\text{NH}_4\text{Cl}$, ZnCl_2 . Sol. in H_2O . (Rammelsberg, Pogg. **94**, 507.)

$+ \text{H}_2\text{O}$. Deliquescent in moist air. Sol. in $\frac{2}{3}$ pt. cold H_2O with absorption of heat. Sol. in 0.28 pt. hot H_2O (Golfier-Bassayre, A. ch. **70**, 344); sol. in $\frac{1}{2}$ pt. cold H_2O . (Hautz, A. **66**, 287.)

$3\text{NH}_4\text{Cl}$, ZnCl_2 . Sol. in H_2O . (Marignac.)

$+ \text{H}_2\text{O}$. (Berthelot, A. ch. (6) **11**, 294.)

$4\text{NH}_4\text{Cl}$, ZnCl_2 . (Dehérain.)

$6\text{NH}_4\text{Cl}$, $\text{ZnCl}_2 + \frac{2}{3}\text{H}_2\text{O}$. (Berthelot, *l.c.*)

Ammonium chloride zinc oxychloride, 2ZnCl_2 , $8\text{NH}_4\text{Cl}$, ZnO .

Sol. in a little H_2O , but decomp. by excess. (André.)

3ZnCl_2 , $10\text{NH}_4\text{Cl}$, ZnO . As above. (André, A. ch. (6) **3**, 88.)

Ammonium chloride antimony fluoride, NH_4Cl , SbF_3 .

Easily sol. in H_2O . (de Haen, B. **21**, 901 R.)

Ammonium chloride arsenic trioxide.

See Arsenite chloride, ammonium.

Ammonium chloride bismuth bromide,
 $3\text{NH}_4\text{Cl}, \text{BiBr}_3 + \text{H}_2\text{O}.$

Deliquescent, decomp. by H_2O . (Muir, Chem Soc **31**, 148.)

$2\text{NH}_4\text{Cl}, \text{BiBr}_3 + 3\text{H}_2\text{O}$. Decomp. by H_2O (Muir)

$5\text{NH}_4\text{Cl}, 2\text{BiBr}_3 + \text{H}_2\text{O}$. Decomp. by H_2O . (Muir.)

Ammonium chloride chromic oxychloride,
 $2\text{NH}_4\text{Cl}, \text{CrOCl}_3$

Decomp. in the air Sol in conc HCl without decomp (Weinland, B. 1906, **39**, 4045)

Ammonium chloride cuprocupric thiosulphate,
 $2\text{NH}_4\text{Cl}, \text{Cu}_2\text{O}, \text{CuO}, 3\text{S}_2\text{O}_3.$

See Thiosulphate ammonium chloride, cuprocupric.

Ammonium chloride lead iodide, $3\text{NH}_4\text{Cl}, \text{PbI}_2.$

Decomp. with H_2O . (Behrens, Pogg. **62**, 252)

$4\text{NH}_4\text{Cl}, \text{PbI}_2 + 2\text{H}_2\text{O}$. Decomp. with H_2O . (Poggiale, C. R. **20**, 1180)

Ammonium chloride mercuric bromide,
 $\text{NH}_4\text{Cl}, \text{HgBr}_2$

(Edhem-Bey, Dissert. 1885.)

Ammonium chloride platinum sulphite.

See Chloroplatosulphite, ammonium.

Ammonium chloride tin (stannous) bromide,
 $2\text{NH}_4\text{Cl}, \text{SnBr}_2 + \text{H}_2\text{O}.$

Sol in H_2O . (Raymann and Preis, A. **223**, 323.)

Ammonium dichloriodide, $\text{NH}_4\text{Cl}_2\text{I}$

Slowly decomp. when exposed to dry air at ord. temp. Very sol. in H_2O . (Chattaway, Chem. Soc. 1915, **107**, 107.)

Ammonium tetrachloriodide, $\text{NH}_4\text{Cl}_4\text{I}.$

Decomp. in the air. (Chattaway, Chem. Soc. 1915, **107**, 107.)

Ammonium lead chloriodide, $\text{NH}_4\text{PbClI}_2 + 2\text{H}_2\text{O}$ and $(\text{NH}_4)_2\text{PbClI}_2 + 2\text{H}_2\text{O}.$

Sol. in $\text{KOH} + \text{Aq}$ and in strong acids; decomp. by H_2O . (Fonzes-Diacon, Bull. Soc. 1897, (3) **17**, 348.)

Ammonium fluoride, $\text{NH}_4\text{F}.$

Abundantly sol. in H_2O ; sl. sol. in alcohol. (Marignac, Ann. Min. (5) **15**, 221.)

Insol. in liquid NH_3 . (Ruff and Geisel, B. 1903, **36**, 820.)

Almost insol. in liquid NH_3 at 50° . (Moissan, C. R. 1901, **133**, 713.)

Sol. in methyl alcohol. (Carrara, Gazz. ch. it. 1896, **26**, 119.)

Ammonium hydrogen fluoride, $\text{NH}_4\text{F}, \text{HF}.$

Deliquescent in moist air. Sol. in H_2O .

Ammonium antimony fluoride, $2\text{NH}_4\text{F}, \text{SbF}_3.$

Deliquescent, sol. in 0.9 pt cold H_2O . Insol. in alcohol or ether (Fluckinger, A. **84**, 248)

$\text{NH}_4\text{F}, 4\text{SbF}_3$ 3 pts sol. in 2 pts. H_2O (Raad and Hauser, B. 1890, **23**, R. 125.)

$\text{NH}_4\text{F}, \text{SbF}_3$ Easily sol. in H_2O . (Marignac, A. **145**, 239)

Ammonium bismuth fluoride, $2\text{NH}_4\text{F}, \text{BiF}_3.$

Insol in H_2O Rather difficultly sol in acids. (Helmholt, Z. anorg. **3**, 115.)

Ammonium cadmium fluoride, $\text{NH}_4\text{F}, \text{CdF}_2$

Insol in H_2O Sol. in acids on boiling (Helmholt, Z. anorg. **3**, 115)

Ammonium chromium fluoride, $3\text{NH}_4\text{F}, \text{CrF}_3$

Easily sol in H_2O Sl sol in $\text{NH}_4\text{F} + \text{Aq}$. (Petersen, J. pr. (2) **40**, 52.)

$2\text{NH}_4\text{F}, \text{CrF}_3 + \text{H}_2\text{O}$. (Wagner, B. **19**, 896)

Ammonium cobaltous fluoride, $2\text{NH}_4\text{F}, \text{CoF}_2 + 2\text{H}_2\text{O}.$

Sl. sol. in H_2O . (Wagner, B. **19**, 896.)

Easily sol. in H_2O . (Helmholt, Z. anorg. **3**, 132.)

Ammonium columbyl fluoride.

See Fluoxycolumbate, ammonium.

Ammonium columbium fluoride oxyfluoride,
 $3\text{NH}_4\text{F}, \text{CbF}_5, \text{CbOF}_3.$

See Fluoxycolumbate columbium fluoride, ammonium.

Ammonium copper fluoride, $2\text{NH}_4\text{F}, \text{CuF}_2 + 2\text{H}_2\text{O}$

Insol. in H_2O . (Helmholt, Z. anorg **3**, 115.)

Nearly insol. in H_2O but decomp. thereby. (Haas, Ch. Z. 1908, **32**, 8.)

Ammonium glucinum fluoride, $2\text{NH}_4\text{F}, \text{GlF}_2.$

Sol. in H_2O . (Marignac, A. ch. (4) **30**, 51)

Very sol. in H_2O . (Helmholt, Z. anorg **3**, 130.)

Ammonium iron (ferrous) fluoride, $2\text{NH}_4\text{F}, \text{FeF}_2.$ (Wagner, B. **19**, 896.)

$\text{NH}_4\text{F}, \text{FeF}_2 + 2\text{H}_2\text{O}$. (W.)

Ammonium iron (ferric) fluoride, $2\text{NH}_4\text{F}, \text{FeF}_3.$

More sol. in H_2O than the corresponding K compound. Decomp. by boiling. (Nicklès, J. Pharm. (4) **7**, 15.)

$3\text{NH}_4\text{F}, \text{FeF}_3$. Sl. sol. in H_2O . (Marignac, A. ch. (3) **60**, 306.)

Easily sol. in acids. (Helmholt, Z. anorg. **3**, 124.)

Ammonium manganic fluoride, $2\text{NH}_4\text{F}, \text{MnF}_4.$

More sol. than the K salt. (Nicklès, C. R. **65**, 107.)

True composition is $4\text{NH}_4\text{F}$, Mn_2F_6 . (Christensen, J. pr (2) 34. 41)

See also Fluomanganate, ammonium.

Ammonium manganyl fluoride.

See Fluoxymanganate, ammonium.

Ammonium molybdenum fluoride.

Insol in H_2O . Sol. in $\text{HCl} + \text{Aq}$. (Berzelius.)

See also Fluomolybdate, ammonium.

Ammonium molybdenyl fluoride.

See Fluoxymolybdate, ammonium.

Ammonium nickel fluoride, $2\text{NH}_4\text{F}$, $\text{NiF}_2 + 2\text{H}_2\text{O}$.

Sol in H_2O . (Wagner, B. 19. 896.)

Easily sol. in H_2O . (Helmholt, Z. anorg. 3. 143.)

Ammonium scandium fluoride, $(\text{NH}_4)_3\text{ScF}_6$.

Easily sol. in H_2O . Aqueous solution is not decomp. by boiling. Decomp. by acids. (R. I. Meyer, Z. anorg. 1914, 86. 275.)

Ammonium silicon fluoride.

See Fluosilicate, ammonium.

Ammonium silver fluoride, $2\text{NH}_4\text{F}$, $\text{AgF} + \text{H}_2\text{O}$.

Not hygroscopic. Sol. in H_2O ; sol. in conc $\text{NH}_4\text{F} + \text{Aq}$. Sol. in alcohol. (Grützner, Arch. Pharm. 1900, 238. 3.)

$15\text{NH}_4\text{F}$, $\text{AgF} + 4\text{H}_2\text{O}$. More deliquescent than NH_4F . (Böhm, Dissert. 1906.)

Ammonium tantalum fluoride.

See Fluotantalate, ammonium.

Ammonium tantaly fluoride.

See Fluoxytantalate, ammonium.

Ammonium tellurium fluoride, NH_4F , TeF_4 .

Decomp. by H_2O . (Högbom, Bull. Soc. (2) 35. 60.)

Ammonium tin (stannous) fluoride, $2\text{NH}_4\text{F}$, $\text{SnF}_2 + 2\text{H}_2\text{O}$.

Sol. in H_2O . (Wagner, B. 19. 896.)

Ammonium tin (stannic) fluoride, $2\text{NH}_4\text{F}$, SnF_4 .

See Fluostannate, ammonium.

Ammonium titanium sesquifluoride.

See Fluotitanate, ammonium.

Ammonium titanyl fluoride.

See Fluoxypertitanate, ammonium.

Ammonium tungstyl fluoride.

See Fluoxytungstate, ammonium.

Ammonium uranyl fluoride.

See Fluoxuyranate, ammonium.

Ammonium vanadium sesquifluoride.

See Fluovanadate, ammonium.

Ammonium vanadyl fluoride.

See Fluoxyvanadate, ammonium.

Ammonium zinc fluoride, $2\text{NH}_4\text{F}$, ZnF_2 .

Sol. in H_2O . (R. Wagner.)

+ $2\text{H}_2\text{O}$. Very sl. sol in H_2O . Easily sol. in dil. acids. (Helmholt.)

Ammonium zirconium fluoride.

See Fluozirconate, ammonium.

Ammonium fluoride manganic oxyfluoride,

$2\text{NH}_4\text{F}$, MnOF_2 .

Precipitate. (Nicklès.)

See also Fluoxymanganate, ammonium.

Ammonium fluoride molybdenum trioxide,

$2\text{NH}_4\text{F}$, MoO_3 .

Decomp. by H_2O . (Mauro, Gazz. ch. it. 18. 120.)

Ammonium fluoride tungsten oxyfluoride.

See Fluoxytungstate, ammonium.

Ammonium fluoride tungsten oxyfluoride

ammonium tungstate, $4\text{NH}_4\text{F}$, WO_2F_2 , $(\text{NH}_4)_2\text{WO}_4$.

See Fluoxytungstate tungstate, ammonium.

Ammonium fluoride vanadium oxyfluoride.

See Fluoxyvanadate, and fluoxyhypovanadate, ammonium.

Ammonium hydroselenide, NH_4HSe .

Sol. in H_2O with decomp. (Bineau, A. ch. (2) 67. 229.)

Ammonium hydrosulphide, NH_4SH .

Sol. in H_2O and alcohol. Solutions decomp. on air.

Ammonium hydroxide, NH_4OH .

See Ammonia,

Ammonium imidosulphamide,

$(\text{S}_2\text{O}_4\text{N}_2\text{H}_4)\text{NH}_4$.

(Hantzsch, B. 1905, 38. 1033.)

Ammonium iodide, NH_4I .

Very deliquescent. Sol. in 0.60 pt. H_2O . (Eder, Dingl. 221. 89.)

Sp. gr. of aqueous solution of NH_4I at 18° containing—

	10	20	30	40	50% NH_4I .
1	0652	1 1397	1.2260	1 3260	1 4415

(Kohlrausch, W. Ann. 1879. 1.)

$\text{NH}_4\text{I} + \text{Aq}$ containing 12.51% NH_4I has sp. gr. $20^\circ/20^\circ = 1.0846$.

$\text{NH}_4\text{I} + \text{Aq}$ containing 19.19% NH_4I has sp. gr. $20^\circ/20^\circ = 1.1359$.

(Le Blanc and Rohland, Z. phys. Ch. 1896, 19. 279.)

Very easily sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 826.)

Very sol. in liquid NH_3 at -50° . (Moissan, C. R. 1901, 133. 713.)

Sol. in SOCl_2 . (Walden, Z. anorg. 1900, 25. 216.)

Sol. in liquid SO_2 . (Walden, Z. anorg. 1902, 30. 160.)

Sol. in 4 0 pts. abs. alcohol. (Eder, *l.c.*)

" 210 " ether. (Eder, *l.c.*)

" 20 " alcohol-ether (1 : 1). (Eder, *l.c.*)

Sol. in acetone. (Eidmann, C.C. 1899, II. 1014.); (Naumann, B. 1904, 37. 4328.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Sl. sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Ammonium diiodide, NH_4I_2

Sol. in alcohol, ether, CS_2 , and $\text{KI} + \text{Aq}$; less sol. in chloroform. (Guthrie, Chem. Soc. (2) 1. 239.)

Ammonium triiodide, NH_4I_3

Sl. deliquescent. Sol. in little H_2O , but decomp. by much H_2O . (Johnson, Chem. Soc. 33. 397.)

Ammonium antimony iodide, NH_4I , $\text{SbI}_3 + 2\text{H}_2\text{O}$

Decomp. by H_2O . (Nicklès, C. R. 51. 1097.)

$3\text{NH}_4\text{I}$, $4\text{SbI}_3 + 9\text{H}_2\text{O}$. Decomp. by H_2O , with separation of SbOI . Sol. in $\text{HC}_2\text{H}_3\text{O}_2$, HCl , and $\text{H}_2\text{C}_4\text{H}_7\text{O}_6 + \text{Aq}$. Decomp. by CS_2 . (Schäfer, Pogg. 109. 611.)

$3\text{NH}_4\text{I}$, $\text{SbI}_3 + 3\text{H}_2\text{O}$. As above.

$4\text{NH}_4\text{I}$, $\text{SbI}_3 + 3\text{H}_2\text{O}$. As above.

Ammonium bismuth iodide, NH_4I , $\text{BiI}_3 + \text{H}_2\text{O}$

Deliquescent; decomp. by H_2O . (Nicklès, C. R. 51. 1097.)

$4\text{NH}_4\text{I}$, $\text{BiI}_3 + 3\text{H}_2\text{O}$. As above. (Linau, Pogg. 111. 240.)

$2\text{NH}_4\text{I}$, $\text{BiI}_3 + 2\frac{1}{2}\text{H}_2\text{O}$. Decomp. by H_2O , or MCl , MBr , or $\text{MI} + \text{Aq}$. (Nicklès, J. pr. (2) 39. 116.)

Ammonium cadmium iodide, $2\text{NH}_4\text{I}$, $\text{CdI}_2 + 2\text{H}_2\text{O}$

Deliquescent. (Croft.)

Sol. at 15° in 0.58 pt. H_2O , 0.70 pt. abs. alcohol., 8.9 pts. ether (sp. gr. 0.729), and 1.8 pts. alcohol-ether (1 : 1). (Eder, Dingl. 221. 89.)

100 pts. of the solution in H_2O contain 85.97 pts. of the salt at 14.5° . (Rimbach, B. 1905, 38. 1563.)

NH_4I , $\text{CdI}_2 + \frac{1}{2}\text{H}_2\text{O}$. Sol. at 15° in 0.90 pt. H_2O , 0.88 pt. abs. alcohol, and 2.4 pts. ether (sp. gr. 0.729). (Eder, *l.c.*)

$+ \text{H}_2\text{O}$. (Grossmann, Z. anorg. 1902, 33. 154.)

Ammonium chloromolybdenum iodide, $2\text{NH}_4\text{I}$, $\text{Cl}_4\text{Mo}_3\text{I}_2 + 2\text{H}_2\text{O}$

Decomp. by H_2O . Cryst. from $\text{HI} + \text{Aq}$. (Blomstrand.)

Ammonium cuprous iodide, $2\text{NH}_4\text{I}$, $\text{Cu}_2\text{I}_2 + \text{H}_2\text{O}$

Decomp. on the air, or by H_2O , or alcohol. (Sagher, C. R. 104. 1440.)

$+ \frac{1}{2}\text{H}_2\text{O}$. Decomp. by H_2O with separation of Cu_2I_2 . (Gossner, Zeit. Kryst. 1903, 33. 501.)

Ammonium cupric iodide ammonia, $2\text{NH}_4\text{I}$, CuI_2 , $2\text{NH}_3 + 2\text{H}_2\text{O}$

Insol. in H_2O or alcohol; sl. sol. in $\text{NH}_4\text{OH} + \text{Aq}$.

$+ 6\text{H}_2\text{O}$. Unstable (Sagher, C. R. 104. 1440.)

NH_4I , 2CuI_2 , 3NH_3 . (Fleurent, C. R. 1891, 113. 1047.)

Ammonium iridium diiodide, $2\text{NH}_4\text{I}$, IrI_2

Insol. in cold or hot H_2O , and in alcohol. Sol. in warm dil. acids (Oppler.)

Ammonium iridium sesquiodide.

See Iodiridite, ammonium.

Ammonium iridium tetraiodide.

See Iodiridate, ammonium.

Ammonium lead iodide, NH_4I , $\text{PbI}_2 + 2\text{H}_2\text{O}$

Decomp. by much H_2O . (Wells, Sill. Am. J. 146. 25.)

$4\text{NH}_4\text{I}$, $3\text{PbI}_2 + 6\text{H}_2\text{O}$. Sl. sol. in H_2O . (Monsier, C. R. 1895, 120. 444.)

Sol. in H_2O with decomp. Sol. in strong $\text{KOH} + \text{Aq}$ and in strong acids. (Fonze-Diacon, Bull. Soc. 1897, (3) 17. 347.)

Ammonium magnesium iodide, NH_4I , $\text{MgI}_2 + 6\text{H}_2\text{O}$

Very deliquescent. (Lerch, J. pr. (2) 28. 338.)

Ammonium mercuric iodide, NH_4I , $\text{HgI}_2 + \text{H}_2\text{O}$

Decomp. into its constituents by H_2O . (Boullay, A. ch. (2) 34. 345.)

Sol. without decomp. in alcohol and ether. NH_4I , 2HgI_2 . Decomp. by H_2O . Sol. in $\text{KI} + \text{Aq}$. Very sol. in alcohol; ether and nitrobenzol. (Low, Zeit. Kryst. 51. 138.)

Ammonium silver iodide, $2\text{NH}_4\text{I}$, AgI

Deliquescent. Decomp. by H_2O . (Poggiale.)

Ammonium thallic iodide, NH_4I , TlI_3

Sol. in H_2O . (Nicklès, J. Pharm. (4) 1. 32.)

Ammonium tin (stannous) iodide, NH_4I , SnI_2

Decomp. by small amt. H_2O but completely sol. in a large amt. (Boullay, A. ch. (2) 34. 376.)

$+ 1\frac{1}{2}\text{H}_2\text{O}$. (Personne.)

Ammonium zinc iodide, $2\text{NH}_4\text{I}$, ZnI_2

Extremely deliquescent, and sol. in H_2O . (Rammelsberg, Pogg. 43. 665.)

NH_4I , $\text{ZnI}_2 + 4\frac{1}{2}\text{H}_2\text{O}$ Hygroscopic.
(Ephram, Z anorg. 1910, 67. 384.)

Ammonium iodide arsenic trioxide.

See Arsenite iodide, ammonium.

Ammonium cobalt nitride.

See Ammonium cobalt azoimide.

Ammonium ruthenium dihydronitrosobromide, $\text{NO} \cdot \text{Ru}_2\text{H}_2(\text{NH}_3)_6\text{Br}_3 \cdot 2\text{HBr}$.

Ppt. (Brizard, A ch. 1900, (7) 21. 363.)

Ammonium ruthenium nitrosochloride, $3\text{NH}_4\text{Cl} \cdot 2\text{HCl} \cdot \text{NO} \cdot \text{Ru}_2\text{H}_2\text{Cl}_3$.

Ppt. (Brizard, A ch. 1900, (7) 21. 354.)

Ammonium ruthenium dihydronitrosochloride, $\text{NO} \cdot \text{Ru}_2\text{H}_2(\text{NH}_3)_6\text{Cl}_3 \cdot 2\text{HCl}$

Ppt. (Brizard, A. ch. 1900, (7) 21. 358.)

Ammonium peroxide, $(\text{NH}_4)_2\text{O}_2$.

M.-pt. -2° . Sl. sol. in ether without decomp. (D'Ans, B. 1913, 46. 3076.)

Sol. in alcohol; insol. in ether; decomp. slowly in aq. solution. (Melikoff, B. 1897, 30. 3145.)

Ammonium hydrogen peroxide, $(\text{NH}_4)_2\text{O}_2 \cdot \text{H}_2\text{O}_2$.

Decomp. at ordinary temp. (Melikoff, B. 1898, 31. 447.)

+ H_2O . Unstable; deliquesces at ordinary temp.; sol. in alcohol; insol. in light petroleum. (Melikoff, B. 1898, 31. 152.)

Ammonium selenide, $(\text{NH}_4)_2\text{Se}$.

Sol. in H_2O with decomp. (Bineau, A. ch (2) 67. 229.)

Stable in the air. Sol. in H_2O ; aq. solution decomp. slowly. (Lenher and Smith, J. Am. Chem. Soc. 1898, 20. 277.)

Ammonium hydrogen selenide, NH_4HSe .

Sol. in H_2O . (Fabre, C. R. 103. 269.)

Ammonium monosulphide, $(\text{NH}_4)_2\text{S}$.

Decomp. on air. Sol. in H_2O , but solution decomposes rapidly.

Very sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 826.)

Ammonium disulphide, $(\text{NH}_4)_2\text{S}_2$.

Sol. in H_2O with decomp.

Does not exist. (Bloxam, Chem. Soc. 1895, 67. 293.)

Ammonium tetrasulphide, $(\text{NH}_4)_2\text{S}_4$.

Easily sol. in H_2O . Conc. solution is stable, dil. solution decomp. on air. Easily sol. in alcohol without decomp., but solution decomp. on the air more rapidly than the aqueous solution. (Fritzsche, J. pr. 32. 313.)

+ $\frac{1}{2}\text{H}_2\text{O}$. When dissolved in H_2O , it is at once dissociated with deposition of S. (Bloxam, Chem. Soc. 1895, 67. 303.)

Ammonium pentasulphide, $(\text{NH}_4)_2\text{S}_5$

Decomp. on air. Sol. in H_2O with separation of S. Sol. in alcohol without decomp., but solution decomposes quickly on standing. (Fritzsche, J. pr. 32. 313.)

Rapidly decomp. by H_2O with separation of S. (Bloxam, Chem. Soc. 1895, 67. 298.)

+ H_2O . Decomp. by H_2O with separation of S. (Bloxam, Chem. Soc. 1895, 67. 298.)

Ammonium heptasulphide, $(\text{NH}_4)_2\text{S}_7$.

More stable on air, and less easily decomposed by H_2O than $(\text{NH}_4)_2\text{S}_5$.

+ $1\frac{1}{2}\text{H}_2\text{O}$. Decomp. by H_2O with separation of S. Slowly attacked by dil. HCl + Aq. (Bloxam, Chem. Soc. 1895, 67. 307.)

Tetrammonium heptasulphide, $(\text{NH}_4)_4\text{S}_7 + 4\text{H}_2\text{O}$.

Sol. in H_2O . Solution can be kept for a long time without depositing S. (Bloxam, Chem. Soc. 1895, 67. 298.)

Diammonium enneasulphide, $(\text{NH}_4)_2\text{S}_9 + \frac{1}{2}\text{H}_2\text{O}$.

Decomposed by H_2O with separation of S. Not attacked by boiling dil. HCl + Aq. on account of formation of a hard crust of S on the crystals. (Bloxam, Chem. Soc. 1895, 67. 306.)

Tetrammonium enneasulphide, $(\text{NH}_4)_4\text{S}_9$.

Solution in H_2O deposits crystals of $(\text{NH}_4)_2\text{S}_9$ on standing. (Bloxam, Chem. Soc. 1895, 67. 302.)

+ $3\frac{1}{2}\text{H}_2\text{O}$. Decomp. by H_2O with separation of S. (Bloxam, Chem. Soc. 1895, 67. 299.)

Ammonium polysulphides.

Conc. NH_3 + Aq. dissolves H_2S to form $(\text{NH}_4)_2\text{S}_2 \cdot 2\text{NH}_4\text{SH}$. On dilution more H_2S is absorbed to form $(\text{NH}_4)_2\text{S}_3 \cdot 4\text{NH}_4\text{SH}$, then $(\text{NH}_4)_2\text{S}_4 \cdot 8\text{NH}_4\text{SH}$, then $(\text{NH}_4)_2\text{S}_5 \cdot 18\text{NH}_4\text{SH}$ and finally NH_4SH . (Bloxam, Chem. Soc. 1895, 67. 284.)

Ammonium copper sulphide, $(\text{NH}_4)_2\text{S}_2 \cdot 2\text{CuS}_2$ (?).

Sol. in warm H_2O , but decomp. on standing. Warm KOH + Aq. acts similarly; sl. sol. in NH_4OH + Aq., Na_2CO_3 + Aq., or absolute alcohol. Insol. in ether. Decomp. by dil. acids. (Priwoznik, B. 6. 1291.)

Correct formula is NH_4CuS_4 . Sl. sol. in H_2O . Decomp. by conc. and dil. acids. Easily sol. in NaOH . Sl. sol. in alcohol. (Biltz, B. 1907, 40. 976.)

Ammonium gold polysulphide, $\text{AuS}_2 \cdot \text{NH}_4$.

Ppt. (Hofmann, B. 1903, 36. 3092; B. 1904, 37. 245.)

Ammonium iridium pentadecasulphide, $\text{IrS}_{15}(\text{NH}_4)_3$.

Ppt. (Hofmann, B. 1904, 37. 247.)

Ammonium palladium undecasulphide,
 $\text{PdS}_{11}(\text{NH}_4)_2 + \frac{1}{2}\text{H}_2\text{O}$.

Ppt. (Hofmann, B. 1904, **37**. 248.)

Ammonium platinum pentaecasulphide,
 $\text{PtS}_{15}(\text{NH}_4)_2 + 2\text{H}_2\text{O}$.

Can be washed with CS_2 without decomp.
 Sol. in alcohol. Insol. in ether. (Hofmann,
 B. 1903, **36**. 3091.)

Ammonium stannic sulphide.

See Sulphostannate, ammonium.

Ammonium telluride, NH_4HTe .

Easily sol. in H_2O . (Bineau, A. ch. (2) **67**.
 229.)

**Ammonium sulphide ammonia, $(\text{NH}_4)_2\text{S}$,
 2NH_3 .**

Very unstable. (Bloxam, Chem. Soc. 1895,
67. 294.)

**Ammonium acetyl sulphomelid, $(\text{NSO.ONH}_4)_2$
 (?).**

(Hantzsch and Stuer, B. 1905, **38**. 1039.)

Ammonplatindiamine comps.

See Platintriamine comps.

Ammondisulphonic acid, $\text{NH}_2(\text{SO}_3\text{H})_2$.

Known only in its salts. (Claus, A. **158**.
 52 and 194.)

Contains 2 at. H less, and is identical with
 imidosulphonic acid $\text{NH}(\text{SO}_3\text{H})_2$, which see.
 (Raschig, A. **241**. 161.)

Ammontrisulphonic acid, $\text{NH}_2(\text{SO}_3\text{H})_3$.

Known only in its salts. (Claus, A. **158**.
 52 and 194.)

Contains 2 at. H less, and is nitrirosulphonic
 acid $\text{N}(\text{SO}_3\text{H})_3$, which see. (Raschig, A. **241**.
 161.)

Ammontetrasulphonic acid, $\text{NH}(\text{SO}_3\text{H})_4$.

Known only in its salts. (Claus, A. **158**.
 52 and 194.)

Does not exist, but was impure nitrirosulpho-
 nic acid, which see. (Raschig, A. **241**.
 161.)

Anhydroarseniotungstic acid, $\text{H}_3\text{AsW}_3\text{O}_{28}$.

See under Arseniotungstic acid.

Anhydrooxycobaltamine chloride,

Easily sol. in H_2O , but decomposes after a
 few minutes; can be recrystallized from dil.
 $\text{HCl} + \text{Aq}$. Precipitated from sat. H_2O solu-
 tion by conc. $\text{HCl} + \text{Aq}$, or alcohol. (Vort-
 mann, M. Ch. **6**. 404.)

$\text{Co}_2(\text{NH}_3)_{10} \left(\begin{array}{c} \text{Cl} \\ \text{OH} \end{array} \right) \text{Cl}_4$. Sol. in H_2O . (Vort-
 mann.)

**Anhydrooxycobaltamine chloride mercuric
 chloride, $\text{Co}_2(\text{NH}_3)_{10}(\text{ClO}_2\text{H})\text{Cl}_4, 3\text{HgCl}_2$.**

Can be recryst. from very dil. hot $\text{HCl} + \text{Aq}$.

— chloroplatinate, $\text{Co}_2(\text{NH}_3)_{10}(\text{ClO}_2\text{H})\text{Cl}_4$,
 2PtCl_4 .

Can be recrystallized from H_2O containing
 HCl .

— chloronitrate,
 $\text{Co}_2(\text{NH}_3)_{10}\text{Cl}(\text{O.OH})(\text{NO}_3)_4 + \text{H}_2\text{O}$.

Can be recrystallized from dil. $\text{HCl} + \text{Aq}$.

$\text{Co}_2(\text{NH}_3)_{10}\text{Cl}(\text{O.OH})\text{Cl}_2(\text{NO}_3)_2 + \text{H}_2\text{O}$.

More easily sol. in H_2O than the preceding
 comp.

— chlorosulphate,
 $\text{Co}_2(\text{NH}_3)_{10}\text{Cl}(\text{O.OH})(\text{SO}_4)_2$.

— dichromate, $[\text{Co}_2(\text{NH}_3)_{10}\text{O.OH}]_2(\text{Cr}_2\text{O}_7)_5$
 $+ 8\text{H}_2\text{O}$.

Sl. sol. in H_2O .

— nitrate, $\text{Co}_2(\text{NH}_3)_{10}(\text{NO}_3)_4(\text{O.OH})(\text{NO}_3)_4$
 $+ \text{H}_2\text{O}$.

Sl. sol. in pure H_2O with immediate decomp.
 Can be recrystallized from H_2O containing
 HNO_3 .

— sulphate, $[\text{Co}_2(\text{NH}_3)_{10}\text{O.OH}]_2(\text{SO}_4)_5$,
 $2\text{H}_2\text{SO}_4 + 2\text{H}_2\text{O}$.

Sl. sol. in cold H_2O . When crystallized
 from dil. $\text{H}_2\text{SO}_4 + \text{Aq}$, is converted into—

$[\text{Co}_2(\text{NH}_3)_{10}\text{O.OH}]_2(\text{SO}_4)_5, \text{H}_2\text{SO}_4 + 3\text{H}_2\text{O}$,
 which by further recrystallization from very
 dil. $\text{H}_2\text{SO}_4 + \text{Aq}$ becomes—

$[\text{Co}_2(\text{NH}_3)_{10}\text{O.OH}]_2(\text{SO}_4)_6 + 8\text{H}_2\text{O}$. Sl. sol.
 in cold H_2O . (Vortmann.)

Anhydrophospholuteotungstic acid,
 $\text{H}_3\text{PW}_3\text{O}_{28}$.

See under Phosphotungstic acid.

Antimonic Acid.

Metantimonic acid, HSbO_3 .

Very sl. sol. in H_2O ; sol. in conc $\text{HCl} + \text{Aq}$;
 sl. sol. in dil. $\text{HNO}_3 + \text{Aq}$; easily sol. in tar-
 taric acid + Aq ; easily sol. in hot KOH , or
 $\text{NaOH} + \text{Aq}$; completely insol. in $\text{NH}_4\text{OH} +$
 Aq . (Freymy, A. ch. (3) **23**. 407.)

Sl. sol. in H_2O . Very sl. sol. in KOH and
 $\text{K}_2\text{CO}_3 + \text{Aq}$. Insol. in $\text{NH}_4\text{OH} + \text{Aq}$. Insol.
 in $\text{HNO}_3 + \text{H}_2\text{SO}_4$. Slowly sol. in cold, quickly
 in hot $\text{HCl} + \text{Aq}$. Sl. sol. in tartaric
 and oxalic acid, and in $\text{KHC}_2\text{O}_4 + \text{Aq}$. (Senderens,
 Bull. Soc. 1899, (3) **21**. 48.)

Insol. in acetone. (Naumann, B. 1904, **37**.
 4329.)

Pyroantimonic acid, $\text{H}_4\text{Sb}_2\text{O}_7$.

More sol. in H_2O and acids than H_3SbO_4 .
 Sol. in cold NH_4OH , or $\text{KOH} + \text{Aq}$. (Freymy.)

Slowly sol. in cold H_2O .

5.88 g. Sb_2O_5 in 1 l. H_2O at 15°

8.55 " " " 1 l. " " 25°

21.30 " " " 1 l. " " 60°

(Delacroix, J. Pharm. 1897, **6**. 337–41.)

Sl. sol. in H_2O . Very sl. sol. in KOH and $K_2CO_3 + Aq.$ Insol. in $NH_4OH + Aq.$ and in $HNO_3 + H_2SO_4$. Slowly sol. in cold, quickly in hot $HCl + Aq.$ Sl. sol. in tartaric acid, oxalic acid and $KHC_2O_4 + Aq.$ (Senderens, Bull. Soc. 1899, (3) 21. 43)

Orthoantimononic acid, H_3SbO_4

Sl. sol. in H_2O . Insol. in $NH_4OH + Aq$ Easily sol. in $KOH + Aq.$ (Fremy.)

Does not exist. (Raschig, B. 18. 2745)

Has, however, been prepared by Daubrawa (A. 186. 110), Conrad (C. N. 40. 198), and Beilstein and Blaese (Bull. Ac. St. Petersburg. 33. 97).

Very sol. in H_2O . (Delacroix, Bull. Soc. 1899 (3) 21. 1049.)

Very sl. sol. in H_2O , in KOH and $K_2CO_3 + Aq.$ Slowly sol. in cold, quickly in hot $HCl + Aq.$ Insol. in $NH_4OH + Aq.$ and in $HNO_3 + H_2SO_4$. Sl. sol. in tartaric acid, oxalic acid and $KHC_2O_4 + Aq.$ (Senderens, Bull. Soc. 1899, (3) 21. 52.)

+ $\frac{1}{2}H_2O$. (Beilstein and Blaese.)

According to Beilstein and Blaese only one antimononic acid, H_3SbO_4 , exists.

Tetraantimononic acid, $Sb_2O_5 + 4H_2O = H_3Sb_2O_8$

Slowly sol. in cold H_2O .

Solution sat. at t° contains g. Sb_2O_5 per litre—

t°	15°	25°	60°	70°
g. Sb_2O_5	5.88	8.3	8.75	21.30

Decomp. in solution by heating to 100° or long standing in the cold to Sb_2O_5 , $3H_2O$. (Delacroix, Bull. Soc. 1899, (3) 21. 1049.)

Insol. in H_2O . Very sl. sol. in KOH and $K_2CO_3 + Aq.$ Slowly sol. in cold, quickly in hot $HCl + Aq.$ Insol. in $NH_4OH + Aq.$ Insol. in $HNO_3 + H_2SO_4$. Sl. sol. in tartaric acid, oxalic acid and in $KHC_2O_4 + Aq.$ (Senderens, Bull. Soc. 1899, (3) 21. 51.)

Herantimononic acid, $Sb_2O_5 + 6H_2O = H_{12}Sb_2O_{11}$

Sol. in H_2O to the extent of 22 g. Sb_2O_5 per l. but on standing becomes turbid and a white powder is pptd. until finally only 3 g. Sb_2O_5 are dissolved per l. (Senderens, Bull. Soc. 1899, (3) 21. 43-49.)

Antimonates.

a. Antimonates. From $HSbO_3$. Some of the K and NH_4 salts are sol. in H_2O , the others are slightly sol. or insol.

β . Pyroantimonates. From $H_4Sb_2O_7$. As a class, insol. in H_2O , but decomp. thereby except in presence of large excess of alkali. (Fremy, A. ch. (3) 12. 499.)

Probably do not exist. (Beilstein and Blaese.)

Aluminum antimonate, $Al_2O_3, 3Sb_2O_5$ (?)

Ppt. Somewhat sol. in excess of Al salts + $Aq.$ Insol. in $K_4Sb_2O_7 + Aq.$

$Al(SbO_3)_3 + 15H_2O = AlH_5(SbO_4)_3 + 12H_2O$.

Ppt. (Beilstein and Blaese, Bull. Ac. St. Petersburg 33. 101.)

$Al(SbO_3)_3 + 7H_2O = AlH_5(SbO_4)_3 + 4H_2O$.

Ppt. (B. and B.)

$Al_2O_3, Sb_2O_5 + 9H_2O$. Ppt. (Ebel, B. 22. 3043.)

Ammonium antimonate, $NH_4SbO_3 + 2H_2O$

Insol. in H_2O .

+ $2\frac{1}{2}H_2O$. Insol. in H_2O (Senderens, Bull. Soc. 1899, (3) 21. 56.)

+ $6H_2O$. See $(NH_4)_2H_2Sb_2O_7 + 5H_2O$.

Ammonium pyroantimonate, $(NH_4)_4Sb_2O_7$

Known only in solution.

$(NH_4)_4H_2Sb_2O_7 + 5H_2O$

Sol. in H_2O , but decomp. by standing or boiling into insol. salt. Insol. in alcohol. (Fremy, J. pr. 45. 215). Composition is $NH_4SbO_3 + 6H_2O$, according to Raschig (B. 18. 2743).

Barium antimonate, $Ba(SbO_3)_2$

Ppt. Scarcely sol. in H_2O . Slowly sol. in $BaCl_2 + Aq.$

+ $2H_2O$. Somewhat sol. in H_2O . Easily sol. in $HCl + Aq.$ (Delacroix, Bull. Soc. 1899, (3) 21. 1051.)

+ 5, or $6H_2O$. Ppt.

$BaSb_4O_7 + 5H_2O$. Sol. in conc. HCl . (Delacroix, Bull. Soc. 1899, (3) 21. 1051.)

$BaO, 3Sb_2O_5 + 5H_2O$. Insol. in H_2O . Incompletely sol. in HCl . (Delacroix, l.c.)

$BaO, 4Sb_2O_5 + 15H_2O$. (Delacroix, l.c.)

$9BaO, 10Sb_2O_5 + 18H_2O$. Insol. in $HCl + Aq.$ (Delacroix, l.c.)

Bismuth antimonate, $BiSbO_4 + H_2O$

Ppt. Insol. in H_2O ; sol. in $HCl + Aq.$ (Cavazzi, Gazz. ch. it. 15. 37.)

$3Bi_2O_3, Sb_2O_5 + H_2O$. Insol. in H_2O ; sol. in $HCl + Aq.$ (Cavazzi.)

$2Bi_2O_3, Sb_2O_5$. As above (Cavazzi.)

Cadmium antimonate, $Cd(SbO_3)_2 + 2H_2O$

Insol. in H_2O . (Senderens, Bull. Soc. 1899, (3) 21. 56.)

+ $3\frac{1}{2}H_2O$. Very sol. in H_2O . Sol. in $HCl + Aq.$ (Ebel, Dissert. 1890.)

+ $5H_2O$. Insol. in H_2O . (Senderens, l.c.)

+ $6H_2O$. Ppt. Insol. in H_2O (Ebel, B. 22. 3043)

Calcium antimonate, $Ca(SbO_3)_2$

Ppt

+ $5H_2O$. Ppt. (Heffter, Pogg. 86. 418.)

+ $6H_2O$. Insol. in H_2O . (Senderens, Bull. Soc. 1899, (3) 21. 56.)

$3CaO, 2Sb_2O_5 + 6H_2O$. Min. *Ullmanite*.

Chromic antimonate, $Cr(SbO_3)_3 + 14H_2O$

Ppt. (Beilstein and Blaese.)

Cobaltous antimonate, $Co(SbO_3)_2 + 5H_2O$

Insol. in H_2O . Loses $3H_2O$ in the presence of H_2SO_4 and passes into $Co(SbO_3)_2 + 2H_2O$,

also insol. in H_2O (Senderens, Bull. Soc. 1899, (3) **21**. 55.)

+ $6\text{H}_2\text{O}$. Ppt. (Ebel, B. **22**. 3043.)

+ $7\text{H}_2\text{O}$. Sl. sol. in H_2O . Sl. sol. in boiling solutions of cobalt salts

+ $12\text{H}_2\text{O}$. Ppt. (Heffter, Pogg. **86**. 448.)

Cobaltous hydrogen antimonate, $\text{CoH}_4(\text{SbO}_4)_2 + \text{H}_2\text{O}$.

(Gorgeul, Ann. Phys. Beibl. 1897, **21**. 198.)

Cupric antimonate, 3CuO , $2\text{Sb}_2\text{O}_5$.

Ppt. (Beilstein and Blaesé.)

$\text{Cu}(\text{SbO}_3)_2$. Insol. in H_2O , acids, or alkalies. (Berzelius.)

+ $2\text{H}_2\text{O}$. Insol. in H_2O . (Senderens, Bull. Soc. 1899, (3) **21**. 55.)

+ $5\text{H}_2\text{O}$. Ppt. (Ebel, B. **22**. 3043.)

Insol. in H_2O . (Senderens, *l.c.*)

CuO , $2\text{Sb}_2\text{O}_5 + 9\text{H}_2\text{O}$. Insol. in H_2O . Sol. in Sb_2O_3 , $4\text{H}_2\text{O} + \text{Aq}$ (Delacroix, Bull. Soc. 1899, (3) **21**. 1054.)

2CuO , $3\text{Sb}_2\text{O}_5 + 10\text{H}_2\text{O}$. Insol. in H_2O . Sol. in NH_4OH and in *tri*antimonic acid + Aq. (Delacroix, *l.c.*)

CuO , $6\text{Sb}_2\text{O}_5 + 16\text{H}_2\text{O}$. (Delacroix, *l.c.*)

Cupric antimonate ammonia, $\text{Cu}(\text{SbO}_3)_2$, $4\text{NH}_3 + 4\text{H}_2\text{O}$.

Insol. in H_2O and $\text{NH}_4\text{OH} + \text{Aq}$. (Schuff, A. **123**. 39.)

$\text{CuSb}_2\text{N}_5\text{H}_{21}\text{O}_{12} = \text{Cu}(\text{ONH}_4)\text{OH}$, $2(\text{NH}_4\text{SbO}_3 + 2\text{H}_2\text{O})$ (Raschig, B. **18**. 2743.)

$\text{Cu}(\text{SbO}_3)_2 \cdot 3\text{NH}_3 + 9\text{H}_2\text{O}$. (Delacroix, Bull. Soc. 1901, (3) **25**. 289.)

Glucinum antimonate, $\text{Gl}(\text{SbO}_3)_2 + 6\text{H}_2\text{O}$.

Somewhat sol. in hot H_2O . Easily sol. in warm HCl . (Ebel, Dissert. **1890**.)

Iron (ferrous) antimonate.

Sl. sol. in H_2O . (Berzelius.)

Iron (ferric) antimonate.

Insol. in H_2O (B.)

Fe_2O_3 , $\text{Sb}_2\text{O}_5 + 7\text{H}_2\text{O}$ Ppt. (Ebel, B. **22**. 3043.)

Fe_2O_3 , $2\text{Sb}_2\text{O}_5 + 11\text{H}_2\text{O}$. Ppt. (Beilstein and Blaesé.)

$\text{Fe}(\text{SbO}_3)_3 + 6\frac{1}{2}\text{H}_2\text{O}$. Ppt. (B. and B.)

Lead antimonate, basic, $\text{Pb}_3(\text{SbO}_3)_2(\text{OH})_4 + 2\text{H}_2\text{O} = \text{Pb}_3(\text{SbO}_4)_2 + 4\text{H}_2\text{O}$.

Min. *Bleinerite*, *Bindheimite*.

$2\text{Pb}(\text{SbO}_3)_2$, $\text{PbO} + 11\text{H}_2\text{O}$. Ppt. (B. and B.)

Lead antimonate, $\text{Pb}(\text{SbO}_3)_2$.

Insol. in H_2O . Incompletely decomp. by acids. (Berzelius.)

Naples Yellow. Insol. in H_2O .

+ $2\text{H}_2\text{O}$. Insol. in H_2O . (Senderens, Bull. Soc. 1899, (3) **21**. 57.)

+ $5\text{H}_2\text{O}$. Ppt. (Ebel, B. **22**. 3043.)

+ $6\text{H}_2\text{O}$. Ppt. (Beilstein and Blaesé.)

+ $9\text{H}_2\text{O}$. Insol. in H_2O . (Senderens, *l.c.*)

Lead antimonate chloride, $\text{Pb}(\text{SbO}_3)_2$, PbCl_2 . Min. *Nadorite*. Sol. in HCl , HNO_3 , and tartaric acid + Aq.

Lithium antimonate, LiSbO_3 .

Sl. sol. in cold, sol. in hot H_2O , and crystallizes on cooling. Much more sol. than NaSbO_3

+ $3\text{H}_2\text{O}$. Ppt. Sl. sol. in H_2O . (Beilstein and Blaesé.)

Magnesium antimonate, $\text{Mg}(\text{SbO}_3)_2 + 12\text{H}_2\text{O}$.

Sol. in hot, less sol. in cold H_2O . (Heffter.)

Sol. in $\text{MgSO}_4 + \text{Aq}$; insol. in $\text{KSbO}_3 + \text{Aq}$. (Berzelius.)

Manganous antimonate, $\text{Mn}(\text{SbO}_3)_2$.

Difficultly sol. in H_2O .

When heated, is sol. only in strong acids

+ $2\text{H}_2\text{O}$. Insol. in H_2O . (Senderens, Bull. Soc. 1899, (3) **21**. 56.)

+ $5\text{H}_2\text{O}$. Ppt. (Ebel, B. **22**. 3043.)

+ $6\text{H}_2\text{O}$. Insol. in H_2O . (Senderens, *l.c.*)

+ $7\text{H}_2\text{O}$. Ppt. (Beilstein and Blaesé.)

Mercurous antimonate.

Insol. in H_2O . (Berzelius.)

Mercuric antimonate, $\text{Hg}(\text{SbO}_3)_2$

Insol. in H_2O , alkalies, and most acids.

Sl. attacked by boiling H_2SO_4 , and $\text{HCl} + \text{Aq}$.

+ $2\text{H}_2\text{O}$. Insol. in H_2O (Senderens, Bull. Soc. 1899, (3) **21**. 55.)

+ $5\text{H}_2\text{O}$. Insol. in H_2O . (Senderens.)

+ $6\text{H}_2\text{O}$. Ppt. (Beilstein and Blaesé.)

Nickel antimonate, $\text{Ni}(\text{SbO}_3)_2 + 2\text{H}_2\text{O}$.

Insol. in H_2O . (Senderens, Bull. Soc. 1899, (3) **21**. 54.)

+ $5\text{H}_2\text{O}$. Insol. in H_2O . (Senderens.)

+ $6\text{H}_2\text{O}$. Ppt. Insol. in H_2O . (Heffter, Pogg. **86**. 446.)

+ $12\text{H}_2\text{O}$. Sl. sol. in H_2O . (Heffter.)

Potassium antimonate, KSbO_3 .

Insol. in H_2O . Sol. in warm $\text{KOH} + \text{Aq}$, but separates nearly completely on cooling. By boiling with H_2O , or by standing for a long time with cold H_2O , it gradually dissolves as $2\text{KSbO}_3 + 5\text{H}_2\text{O}$, or $\text{K}_2\text{H}_2\text{Sb}_2\text{O}_7 + 4\text{H}_2\text{O}$, or $2\text{KH}_2\text{SbO}_4 + 3\text{H}_2\text{O}$.

Insol. in CS_2 . (Arctowski, Z. anorg. 1894, **6**. 257.)

+ H_2O . Insol. in H_2O . (Senderens, Bull. Soc. 1899, (3) **21**. 57.)

+ $1\frac{1}{2}\text{H}_2\text{O}$ ($= 2\text{KSbO}_3 + 5\text{H}_2\text{O}$ of Fremy).

Easily sol. in H_2O , especially if warm. Solution is pptd. by $\text{NH}_4\text{Cl} + \text{Aq}$. (Fremy, A. ch. (3) **12**. 499.)

+ $2\frac{1}{2}\text{H}_2\text{O}$. 100 pts. H_2O at 20° dissolve 2.81 pts. anhydrous salt; sp. gr. of solution sat. at $18^\circ = 1.0263$ Composition is given as $\text{K}_2\text{H}_2\text{Sb}_2\text{O}_7 + 4\text{H}_2\text{O}$. (Knorre and Olschewsky, B. **20**. 3043.)

+ $3\frac{1}{2}\text{H}_2\text{O}$. Insol. in H_2O . (Senderens, *l.c.*)

+ $4\frac{1}{2}$ H₂O. Sol. in H₂O. (Delacroix, J. Pharm 1897, (6) 6. 533)
 2K₂O, 3Sb₂O₅+10H₂O. Sl. sol. in H₂O. (Delacroix, J. Pharm 1897, 6. 337)
 +10H₂O. (Delacroix, l.c.)

Potassium pyroantimonate, K₄Sb₂O₇.

Deliquescent, decomp. by boiling with H₂O into K₂SbO₃+5H₂O, by cold H₂O into K₂H₂Sb₂O₇+6H₂O. (Fremy.)

Does not exist. (Knorre and Olschewsky.)
 Insol. in liq. NH₃. (Franklin, Am. Ch. J. 1898, 20. 829.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Potassium hydrogen pyroantimonate, K₂H₂Sb₂O₇.

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014.)

+2 $\frac{1}{2}$ H₂O. (Senderens, Bull. Soc. 1899, (3) 21. 57.)

+3 $\frac{1}{2}$ H₂O. Very difficultly sol. in hot or cold H₂O. (Knorre and Olschewsky, B. 18. 2358)

+6H₂O. Quite difficultly sol. in cold H₂O. Not precipitated by NH₄Cl+Aq. Aqueous solution gradually decomposes. (Fremy.)
 +4H₂O. See 2K₂SbO₃+5H₂O.

Potassium antimonate sulphantimonate, K₂SbO₃, K₃SbS₄+5H₂O.

Decomp. on air, and with cold H₂O. Sol. in hot H₂O. (Rammelsberg.)

Silver antimonate.

Insol. in H₂O. (Berzelius.)
 AgSbO₃+3H₂O=AgH₂SbO₄+2H₂O. Easily sol. in NH₄OH+Aq, when freshly pptd (Beilstein and Blaese.)

+1 $\frac{1}{2}$ H₂O. Ppt. (Ebel, B. 22. 3043.)

Silver antimonate ammonia, AgH₂SbO₄, 2NH₃+H₂O.

(Beilstein and Blaese.)

Sodium antimonate, NaSbO₃.

Sol. in much H₂O, but soon becomes decomposed into Na₂H₂Sb₂O₇.

+3 $\frac{1}{2}$ H₂O, composition of Na₂H₂Sb₂O₇+6H₂O, according to Beilstein and Blaese.

1000 pts. H₂O dissolve 0.31 pt. NaSbO₃+3 $\frac{1}{2}$ H₂O at 12.3°

1000 pts. alcohol of 15.8% dissolve 0.13 pt. NaSbO₃+3 $\frac{1}{2}$ H₂O at 12.3°

1000 pts. alcohol of 25.6% dissolve 0.07 pt. NaSbO₃+3 $\frac{1}{2}$ H₂O at 12.3°

Somewhat more sol. when freshly precipitated.

Absolutely insol. in glacial HC₂H₃O₂.

Presence of NaOH or Na salts diminish solubility, while NH₄OH or K salts increase it

slightly. (Beilstein and Blaese, Bull. Ac. St. Petersb. 33. 201.)

+4 $\frac{1}{2}$ H₂O. Sol. in H₂O. (Delacroix, Bull. Soc. 1899, (3) 21. 1051.)

2Na₂O, 3Sb₂O₅+10H₂O. (Delacroix, l.c.)
 Na₂O, 3Sb₂O₅+11H₂O. (Delacroix, l.c.)

Sodium pyroantimonate, Na₂H₂Sb₂O₇+6H₂O.

Boiling H₂O dissolves $\frac{1}{3}$ pt. of this salt. (Fremy.) 1000 pts. H₂O dissolve 2.5 pts. salt. (Ebel, B. 22. 3044.) See also NaSbO₃+3 $\frac{1}{2}$ H₂O.

+5H₂O. (Knorre and Olschewsky.)

Strontium antimonate, Sr(SbO₃)₂+6H₂O.

Ppt. Less sol. in H₂O than SrSO₄. (Heffter, Pogg. 86. 418.)

Thallos antimonate, TlSbO₃+2H₂O=
TlH₂SbO₄+H₂O.

Somewhat sol. in H₂O, when freshly precipitated; insol. when dried. (Beilstein and Blaese.)

Tin (stannous) antimonate, 2SnO, Sb₂O₅.

Ppt. (Lenssen, A. 114. 113.)
 Sn(SbO₃)₂+2H₂O. Attacked with difficulty by acids or alkalis, most easily by hot conc. H₂SO₄. (Schiff, A. 120. 55.)

2SnO, 3Sb₂O₅+4H₂O.

SnO, 2Sb₂O₅.

Tin (stannic) antimonate.

Insol. in H₂O. (Levol, A. ch. (3) 1. 504)

Uranium antimonate, 5UO₂, 3Sb₂O₅+15H₂O.

Ppt. Sol. in hot conc. HCl+Aq, and in UCl₃+Aq (Rammelsberg)

Zinc antimonate, Zn(SbO₃)₂.

Very slightly sol. in H₂O (Berzelius), sol. in solutions of Zn salts

+2H₂O. (Ebel, Dissert. 1890.)

Insol. in H₂O. (Senderens, Bull. Soc. 1899, (3) 21. 57.)

+5H₂O. Not wholly insol. in cold, moderately sol. in hot H₂O. (Ebel, Dissert. 1890.)

+6H₂O. Insol. in H₂O. (Senderens.)

Antimoniomolybdic acid.

Ammonium antimoniomolybdate, 5(NH₄)₂O, 4Sb₂O₅, 7MoO₃+12H₂O.

Readily sol. in hot H₂O. (Gibbs, Am. Ch. J. 7. 392)

Antimoniotungstic acid, 3Sb₂O₅, 4WO₃+11H₂O.

Sol. in H₂O. (Hallopeau, C. R. 1896, 123. 1068.)

Potassium antimoniotungstate, 3K₂O, 3Sb₂O₅, 4WO₃+4H₂O.

Much more sol. in hot than in cold H₂O. Decomp. by HCl, H₂SO₄ and HNO₃. (Hallopeau, C. R. 1896, 123. 1066.)

+16H₂O Much more easily sol. in hot than cold H₂O. Decomp. by HCl, H₂SO₄, and HNO₃ (Hallopeau, *l.c.*)
 6K₂O, 4Sb₂O₃, 12WO₃+25H₂O.
 Sl. sol. in H₂O (Gibbs, Am. Ch. J. 7. 392.)

Antimoniuretted hydrogen.

See Antimony hydride.

Antimonosomolybdic acid.

Ammonium antimonosomolybdate, 6(NH₄)₂O, 3Sb₂O₃, 17MoC₃+21H₂O.

Insol. in cold H₂O. (Gibbs, Am. Ch. J. 7. 313)

Antimonosophosphotungstic acid.

Potassium antimonosophosphotungstate, 12K₂O, 5Sb₂O₃, 6P₂O₅, 22WO₃+48H₂O.

Nearly insol. in cold or warm H₂O. (Gibbs, Am. Ch. J. 7. 392)

Antimonosotungstic acid.

Ammonium antimonosotungstate.

Sol. in H₂O.

Barium antimonosotungstate, 4BaO, 6Sb₂O₃, 22WO₃+36H₂O.

Precipitate; very sl. sol. in hot H₂O. (Gibbs, Am. Ch. J. 7. 313)

Antimonous acid, HSbO₃

(Long, J. Am. Chem. Soc 1895, 17. 87.)

+1½H₂O. Ppt. (Schaffner, A. 51. 182.)

H₃SbO₃. Ppt. (Clarke and Stallo, B. 13. 1793.)

Does not exist. (Guntz, C. R. 102. 1472)

H₃SbO₃. When freshly pptd., is sol. in dil. KOH, and NaOH+Aq. Scarcely sol. in NH₄OH+Aq, or in (NH₄)₂CO₃, or KHCO₃+Aq.

Completely sol. in K₂CO₃, and Na₂CO₃+Aq, especially if warm. When recently pptd. is sl. sol. in succinic acid+Aq.

Calcium antimonite, CaSb₂O₄ (?).

Min. *Romeite*. Insol. in acids.

Cobaltous antimonite (?).

Sl. sol. in H₂O. (Berzelius.)

Cuprous antimonite, Cu₃(SbO₃)₂.

Insol. in H₂O. Sol. in acids; most easily in conc. HCl+Aq. (Hausmann and Stromeyer, Schw. J. 19. 241.)

Cupric antimonite (?).

Insol. in H₂O. (Berzelius.)

CuSb₂O₅. Min. *Ammiolite*.

CuSb₂O₄. Sol. in HCl+Aq, tartaric and citric acids. (Harding, Z. anorg. 1899, 20. 238.)

Iron (ferrous) antimonite (?).

More sol. in H₂O than the antimonate. (Dumas.)

Potassium antimonite, K₂O, 3Sb₂O₃

Easily decomp. by cold H₂O. Not decomp. by KOH+Aq containing over 20.9% K₂O. (Corimimbœuf, C. R. 115. 1305)
 +3H₂O. As above. (C.)

Potassium antimonite iodide, K₂O, SSb₂O₃, 2KI.

Insol. and not decomp. by cold or hot H₂O. Not decomp. by acids or alkalis. Aqua regia decomp. slowly. Tartaric acid dissolves gradually. (Gruhl, Dissert 1897.)

Sodium antimonite, NaSbO₂+3H₂O

Difficultly sol. in H₂O. (Terreil, A. ch. (4) 7. 380.)

2Na₂O, 3Sb₂O₃+H₂O. Decomp. by H₂O, but not by NaOH+Aq containing 94.3 g. NaOH per l. (Corimimbœuf)

Na₂O, 2Sb₂O₃. Decomp. by H₂O but not by NaOH+Aq containing 188.6 g. NaOH per l. (C.)

Na₂O, 3Sb₂O₃. Decomp. by H₂O, but not by NaOH+Aq containing 113.2 g. NaOH per l. (C.)

+2H₂O=NaH₂(SbO₂)₂ (Terreil.)

Antimony, Sb.

Does not decomp. H₂O. Not attacked by HCl+Aq (Berzelius); slowly sol. in conc. HCl+Aq (Debray); slowly sol. in conc. warm HCl+Aq (Troost). Attacked by very conc. HCl+Aq only when finely divided (Schützenberger, Willm); very sl. attacked by dil. or conc. acid (Guntz). Not attacked by boiling HCl+Aq (Gmelin). By careful experiments, pure Sb is absolutely insol. in dil. or conc. hot or cold HCl+Aq, except when in contact with oxygen. (Ditte and Metzner, A. ch. (6) 29. 889.)

Insol. in dil. or cold conc., but sol. in hot conc. H₂SO₄. Oxidized but not dissolved by HNO₃+Aq. Easily and completely sol. in aqua regia.

Very slowly attacked by pure HNO₃+Aq of 1.51–1.42 sp. gr.; weaker acid has no marked action whether it contains NO₂ or not. HCl+HNO₃ has no action if dil. or at low temp., but when even very dil. and KNO₃ is added, the action will begin. (Millon, A. ch. (3) 6. 101.)

Not attacked in 10 months by 2% HNO₃+Aq. Sb is not dissolved by HNO₃+Aq of any concentration, a white powder being always left, which is insol. in HNO₃+Aq or H₂O. (Montemartini, Gazz. ch. it. 22. 384.)

Insol. in alkalis+Aq.

Somewhat sol. in distilled H₂O. More or less sol. in solutions of acids, alkalis and salts and in alcohol and ether. Only sl. sol. in a mixture of alcohol and ether. (Ruff and Albert, B. 1905, 38. 54.)

Alkaline H₂O₂ converts Sb into antimonic acid, but neutral H₂O₂ is without action. (Clark, Chem. Soc. 1893, 63. 886.)

Insol. in liquid NH₃. (Gore, Am. Ch. J. 1898, 20. 826.)

Easily attacked by pyrosulphuryl chloride (Heumann and Köchlin, B. 16. 479.)

Sb is sol in a mixture of HNO_3 and tartaric acid or other polybasic acids (Czerwek, Z. anal. 1906, 45. 507.)

Not attacked by a mixture of alcohol and ether. (Cohen, Z. phys. Ch. 1904, 47. 12.)

$\frac{1}{2}$ cc. oleic acid dissolves 0.0007 g Sb in 6 days (Gates, J. phys. Ch. 1911, 15. 143.)

There are three modifications

1. Ordinary gray metallic.

2. Black amorphous Unstable at ord temp. By boiling with H_2O is changed to metallic Sb.

3. Yellow. Very unstable. At -50° goes over rapidly into the ordinary black modification. Sol. in CS_2 at a little above -90° . (Stock, B. 1903, 37. 898.)

Unstable above -90° . (Stock, B. 1905, 38. 3837.)

Antimony arsenide, Sb_2As_3 .

(Descamps, C R. 86. 1065.)

Antimony tribromide, SbBr_3 .

Deliquescent; decomp. by H_2O .

Very sol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 826.)

Very sol. in warm liquid AsBr_3 , forming a solution with sp. gr = 3.685 at 47° . (Retgers, Z. phys. Ch. 1893, 11. 339.)

Sol. in S_2Cl_2 . (Walden, Z. anorg 1900, 25. 217.)

Sol. in AlBr_3 . (Isbekow, Z. anorg. 1913, 84. 27.)

Easily sol. in PCl_3 and PBr_3 . (Walden, Z. anorg. 1900, 25. 211.)

Sol. in alcohol and CS_2 .

Sol. in ether forming two layers. (Hayes, J. Chem. Soc. 1902, 24. 360.)

Sol. in acetone. (Naumann, B. 1904, 37. 4328.)

Solubility of SbBr_3 in organic liquids.

Data in parentheses indicate labile equilibrium.

Solvent	t°	Mols per 100	t°	Mols per 100	t°	Mols per 100

(Menschutkin, Ann. Inst. Pol. P. le Gr. 13. 1.)

Antimony bromide with MBr.

See Bromantimonate, M.

Also below.

Antimony hydrogen bromide, $\text{SbBr}_3 \cdot \text{HBr} + 3\text{H}_2\text{O}$.

Very hygroscopic. Decomp. by H_2O . (Weinland and Feige, B. 1903, 36. 256.)

See Metabromantimonic acid.

Antimony caesium bromide, $2\text{SbBr}_3, 3\text{CsBr} + 2\text{H}_2\text{O}$.

Loses Br_2 in the air. (Weinland, B. 1903, 36. 257.)

Antimony calcium bromide, $\text{SbBr}_3, \text{CaBr}_2 + 8\text{H}_2\text{O}$.

Easily decomp. (Benedict, Proc. Am. Acad. 1895, 30. 9.)

Antimony glucinum bromide, $3\text{SbBr}_3, 2\text{GlBr}_2 + 18\text{H}_2\text{O}$.

Hydrosopic. Easily decomp. (Weinland, B. 1903, 36. 258.)

Antimony magnesium bromide, $\text{SbBr}_3, \text{MgBr}_2 + 8\text{H}_2\text{O}$.

As Ca salt. (Benedict, Proc. Am. Acad. 1895, 30. 9.)

Antimony potassium bromide, $10\text{SbBr}_3, 23\text{KBr} + 27\text{H}_2\text{O}$.

(Herty, Am. Ch. J. 1894, 16. 496.)

Antimony rubidium bromide, $2\text{SbBr}_3, 3\text{RbBr}$.

Decomp. by H_2O ; can be recryst. from dil $\text{HBr} + \text{Aq.}$ (Wheeler, Z. anorg. 5. 258.)

SbRb_2Br_3 . Slowly loses Br_2 in the air. Decomp. by H_2O . (Weinland, B. 1903, 36. 259.)

$10\text{SbBr}_3, 23\text{RbBr}$ (?). Cryst. from conc. $\text{HBr} + \text{Aq.}$ (Wheeler.)

The composition assigned to this salt by Wheeler (Z. anorg. 5. 253) is incorrect. (Ephram, B. 1903, 36. 1817.)

Antimony vanadium bromide, $\text{SbBr}_3, \text{VBr}_4 + 7\text{H}_2\text{O}$.

Hydrosopic. Decomp. by H_2O . Sol. in dil. HCl and in tartaric acid. (Weinland, B. 1903, 36. 260.)

Antimony bromide potassium chloride, $\text{SbBr}_3, 3\text{KCl} + 1\frac{1}{2}\text{H}_2\text{O}$.

Slowly deliquescent. Very sol. in H_2O .

Sat. solution contains 120.5 g. to 100 cc. H_2O , and has sp. gr. = 1.9.

Decomp. by much H_2O . (Atkinson, Chem. Soc. 43. 290.)

Does not exist. (Herty, Am. Ch. J. 1894, 16. 497.)

See also Antimony chloride potassium bromide.

Antimony bromofluoride, SbF_3Br .

Decomp. by H_2O . (Ruff, B. 1906, 39. 4319.)

Antimony trichloride, SbCl_3 .

Deliquescent. Decomp. by H_2O with precipitation of SbOCl . This precipitation is prevented by tartaric, citric, or hydrochloric acid, or by conc. solutions of chlorides of alkalies and alkaline earths.

Solubility in H_2O .
100 pts. SbCl_3 sol in pts. H_2O at t° .

t°	Pts H_2O

1 & 2. (Meerburg, Z. anorg. 1903, 33. 302.)
3 & 4. (Noodt, Z. anorg. 1903, 33. 302.)

Somewhat sol. in liquid $(\text{CN})_2$. (Centnerszwer, Bull. Soc. 1901, (3) 28. 405.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 826.)

Easily sol. in PCl_3 and PBr_3 . (Walden, Z. anorg. 1900, 25. 211.)

Sol. in S_2Cl_2 . (Walden, Z. anorg. 1900, 25. 217.)

Easily sol. in AsBr_3 . (Walden, Z. anorg. 1902, 29, 374.)

Sol. in alcohol without decomp. Very sol. in hot CS_2 , but solubility diminishes rapidly on cooling. (Cooke, Proc. Am. Acad. 13, 72.)

1 g. SbCl_3 is sol. in 0.186 g. acetone at 18° Sp. gr. of sat. solution $18^\circ/4^\circ = 2.216$. (Naumann, B. 1904, 37, 4332.)

Sol. in ethyl acetate. (Naumann, B. 1904, 37, 3601.)

1 pt. sol. in 16.97 pts. of ethyl acetate at 18° . Sp. gr. of sat. solution $18^\circ/4^\circ = 1.7968$. (Naumann, B. 1910, 43, 320.)

Sol. in benzonitrile. (Naumann, B. 1914, 47, 1369.)

Sol. in methylal (Eidmann, C. C. 1899, II, 1014.)

Solubility of SbCl_3 in organic liquids. Data in parentheses indicate labile equilibrium.

(Menschutkin, Ann. Inst. Pol. P.-le Gr., 13. 1.)

Antimony hydrogen trichloride, 2SbCl_3 , $\text{HCl} + 2\text{H}_2\text{O}$.

Deliquescent. Decomp. by H_2O .

Melts in crystal H_2O at 16° . (Engel, C. R. 106, 1797.)

Antimony pentachloride, SbCl_5 .

Deliquesces to $\text{SbCl}_3 + 4\text{H}_2\text{O}$, which can be crystallized out of a little H_2O . Decomp. by more H_2O into SbO_2Cl . Sol. in a large amt. of H_2O , if it is added all at one time. Precipitation by H_2O is also hindered by presence of tartaric, or hydrochloric acid.

+ H_2O . Deliquescent. Sol. in chloroform. (Anschütz and Evans, A. 239, 285.)

+ $4\text{H}_2\text{O}$. Insol. in chloroform. (Anschütz and Evans.)

Antimony pentachloride with MCl .

See Chlorantimonate, M.

See also below.

Antimony hydrogen pentachloride, SbCl_5 , $\text{HCl} + 4\frac{1}{2}\text{H}_2\text{O}$.

"Metachlorantimonic acid" according to Weinland and Schmid, (Z. anorg. 1905, 44. 43.)

Very easily sol. in H_2O , alcohol, acetone and glacial acetic acid. Aqueous solution decomp. on standing with separation of Sb_2O_5 but remains clear in presence of 10% HCl (Weinland and Schmid, Z. anorg. 1905, 44. 43.)

SbCl_5 , $5\text{HCl} + 10\text{H}_2\text{O}$. Not deliquescent. Decomp. by H_2O . Melts in crystal H_2O at about 55° . (Engel, C. R. 106. 1797.)

Antimony antimonyl chloride, SbCl_3 , SbOCl .

More easily attacked by H_2O than SbOCl . (Bemmelen, Z. anorg. 1903, 33. 293.)

Antimony antimonyl potassium chloride, SbCl_3 , SbOCl , 2KCl .

Not deliquescent. Immediately decomp. by hot or cold H_2O ; sol. in hot glacial $\text{HC}_2\text{H}_3\text{O}_2$, or in HCl , or tartaric acid + Aq .

Insol. in $\text{KCl} + \text{Aq}$, hot or cold alcohol, CS_2 , or ligroine. (Benedikt, Proc. Am. Acad. 29. 217.)

Antimony antimonyl rubidium chloride, SbCl_3 , SbOCl , 2RbCl .

Sol. in very dil. $\text{HCl} + \text{Aq}$. (Wells, Am. J. Sci. 1897, (4) 3. 463.)

Antimony barium chloride, SbCl_3 , $\text{BaCl}_2 + \frac{3}{2}\text{H}_2\text{O}$.

Decomp. by H_2O .

Antimony caesium chloride, SbCl_3 , 6CsCl .

Decomp. by H_2O . Cryst. from dil. $\text{HCl} + \text{Aq}$. (Godeffroy, Arch. Pharm. (3) 12. 47.)

2SbCl_3 , 3CsCl . Decomp. by H_2O ; sl. sol. in cold, easily in hot dil. $\text{HCl} + \text{Aq}$. This is identical with the above salt. (Saunders, Am. Ch. J. 14. 152.)

SbCl_3 , 2CsCl . Sol. in boiling conc. $\text{HCl} + \text{Aq}$ without decomp. (Setterberg, Oef. Vet. Akad. 1882, 6. 23.)

SbCl_3 , CsCl . Cryst. from $\text{HCl} + \text{Aq}$ without decomp. (Setterberg, Oef. Vet. Akad. 1882, 6. 27.)

Antimony calcium chloride, SbCl_3 , $\text{CaCl}_2 + 8\text{H}_2\text{O}$.

Easily decomp. (Benedict, Proc. Am. Acad. 1895, 30. 9.)

SbCl_3 , $\text{CaSbCl}_6 \cdot \text{OH} + 9\text{H}_2\text{O}$. Deliquescent; sl. sol. in H_2O . (Weinland, B. 1901, 34. 2635.)

Antimony chromium chloride,

CrCl_3 , $3\text{SbCl}_5 + 13\text{H}_2\text{O}$. (Weinland.) should be

$[\text{SbCl}_6]_3[\text{Cr}(\text{OH}_2)_6] + 7\text{H}_2\text{O}$; and CrCl_3 , $\text{SbCl}_5 + 10\text{H}_2\text{O}$ should be

$[\text{SbCl}_6][\text{Cr}(\text{OH}_2)_4\text{Cl}_2] + 6\text{H}_2\text{O}$. (Pfeiffer, Z. anorg. 1903, 36. 349.)

Antimony glucinum chloride, SbCl_3 , $\text{GlCl}_2 + 3\text{H}_2\text{O}$.

Very hygroscopic. Decomp. by H_2O . Very easily sol. in HCl . (Ephraim, B. 1903, 36. 1822.)

$+4\text{H}_2\text{O}$. Ppt. Decomp. by H_2O . Sol. in HCl . (Ephraim, B. 1903, 36. 1822.)

Antimony hydrazine chloride, SbCl_3 , $3\text{N}_2\text{H}_4\text{Cl}$.

Sol. in conc. $\text{HCl} + \text{Aq}$; decomp. by H_2O . (Ferratini, C. A. 1912, 1613.)

Antimony lithium chloride, SbCl_3 , $2\text{LiCl} + 5\text{H}_2\text{O}$.

Hygroscopic. Decomp. by H_2O . Very easily sol. in HCl . (Ephraim, B. 1903, 36. 1821.)

$+6\text{H}_2\text{O}$. Decomp. by H_2O ; easily sol. in HCl . (Ephraim, B. 1903, 36. 1822.)

Antimony magnesium chloride, SbCl_3 , $\text{MgCl}_2 + 5\text{H}_2\text{O}$.

Hydroscopic. Decomp. by H_2O . Can be cryst. from HCl without decomp. (Ephraim, B. 1903, 36. 1823.)

2SbCl_3 , MgCl_2 . Hygroscopic. Decomp. by H_2O . Very sol. in HCl . (Ephraim.)

SbCl_3 , $\text{MgSbCl}_6 \cdot \text{MgOH} + 17\text{H}_2\text{O}$. Hydroscopic. Sol. in H_2O with decomp. (Weinland, B. 1901, 34. 2635.)

Antimony nitrosyl chloride, SbCl_3 , NOCl .

Very deliquescent; decomp. by pure H_2O ; sol. in H_2O containing tartaric acid (Weber, Pogg. 123. 347.)

2SbCl_3 , 5NOCl . Decomp. by H_2O . (Sudborough, Chem. Soc. 59. 661.)

Antimony phosphorus chloride, SbCl_3 , PCl_5 .

Deliquescent. (Weber, Pogg. 125. 78.)

Antimony phosphoryl chloride, SbCl_3 , POCl_3 .

Deliquescent. (Weber.)

Antimony platinum potassium chloride,

$(\text{Sb}, \text{Pt})\text{Cl}_6\text{K}_3$.

Ppt. (Weinland, B. 1905, 38. 1086.)

Antimony potassium chloride, SbCl_3 , 2KCl .

Sol. in H_2O without decomp. (Jacquelin, A. ch. (2) 66. 128.)

Not deliquescent. Immediately decomp. by hot or cold H_2O . Sol. in HCl , or tartaric acid + Aq . (Benedikt, Proc. Am. Acad. 29. 219.)

$+2\text{H}_2\text{O}$. Very efflorescent.

SbCl_3 , 3KCl . Deliquescent. Decomp. by hot H_2O . (Poggiale.)

$+2\text{H}_2\text{O}$. (Romanis, C. N. 49. 273.)

Not obtained by Benedikt (l.c.)

10SbCl_3 , 23KCl . True composition of above salts. Sol. in H_2O . (Herty, Am. Ch. J. 1894, 16. 495.)

SbCl_3 , 2KCl is the only true compound, all

others being isomorphous mixtures. (Jordis, B. 1903, **36**, 2539.)

$2\text{SbCl}_4, 3\text{KCl}$ Deliquescent. Decomp. by H_2O . (Bosek, Chem. Soc. 1895, **67**, 516.)

$\text{SbCl}_4\text{KSbCl}_6\text{KOH}$. Hydrosopic. Sol. in H_2O with decomp. (Weinland, B. 1901, **34**, 2635.)

See also Antimony antimonyl potassium chloride.

Antimony rubidium chloride, $\text{SbCl}_3, \text{RbCl}$.

Decomp on air or with H_2O . (Saunders, Am. Ch. J. **14**, 162.)

$2\text{SbCl}_3, \text{RbCl} + \text{H}_2\text{O}$. Decomp. on air. (Wheeler, Z. anorg. **5**, 253.)

$\text{SbCl}_3, 6\text{RbCl}$. Decomp. by H_2O . (Godefroy, Arch. Pharm. (3) **9**, 343.)

Formula is $10\text{SbCl}_3, 23\text{RbCl}$ (?). (Saunders Am. Ch. J. **14**, 159.)

$10\text{SbCl}_3, 23\text{RbCl}$ (?). Decomp. by H_2O ; sol. in $\text{HCl} + \text{Aq}$. (Saunders.)

Formula is $3\text{SbCl}_3, 7\text{RbCl}$. (Wells and Foote, Am. J. Sci. 1897, (4) **3**, 461.)

Composition assigned to this salt by Saunders (Am. Ch. J. **14**, 155) is incorrect. (Ephraim, B. 1903, **36**, 1817.)

$3\text{SbCl}_3, 5\text{RbCl}$. As above. (Saunders.)

Formula is $2\text{SbCl}_3, 3\text{RbCl}$. (Wheeler.)

Rb_2SbCl_6 . Ppt. Decomp. by H_2O . (Weinland, B. 1905, **38**, 1083.)

$\text{Rb}_2\text{SbCl}_6, 2\text{Rb}_2\text{SbCl}_6$. Ppt. Decomp. by H_2O . (Weinland, B. 1901, **34**, 2635.)

Antimony selenium chloride, $\text{SbCl}_3, \text{SeCl}_4$.

Deliquescent (Weber.)

Antimony selenyl chloride, $\text{SbCl}_3, \text{SeOCl}_2$.

Very deliquescent. (Weber, Pogg. **125**, 325.)

Antimony sodium chloride, $\text{SbCl}_3, 3\text{NaCl}$ (?).

Decomp. by much H_2O . (Poggiale.)

Antimony sulphur chloride, $2\text{SbCl}_3, 3\text{SCl}_2$.

Decomp. by H_2O .

$\text{SbCl}_3, \text{SCl}_4$. Sol. in dil. $\text{HNO}_3 + \text{Aq}$.

Mpt. $125-126^\circ$ in an atmos. of chlorine. Violently decomp. by H_2O . (Ruff, B. 1904, **37**, 4515.)

Antimony thallium chloride, $\text{SbCl}_3, 3\text{TlCl}$.

Ppt. (Ephraim, Z. anorg. 1909, **61**, 249.)

$\text{SbCl}_4, \text{TlCl}$. (Ephraim and Barteczko, Z. anorg. 1909, **61**, 251.)

$2\text{SbCl}_4, 2\text{TlCl}, \text{TlCl}_3$. Slowly decomp. by cold H_2O . (Ephraim and Barteczko, Z. anorg. 1909, **61**, 253.)

Antimony trichloride ammonia, $\text{SbCl}_3, \text{NH}_3$.

Not very deliquescent. Decomp. by H_2O .

Antimony pentachloride ammonia, $\text{SbCl}_5, 6\text{NH}_3$.

Decomp. by H_2O . (Persoz.)

Antimony pentachloride cyanhydric acid, $\text{SbCl}_5, 3\text{HCN}$.

Deliquescent, decomp by H_2O . (Klein, A. **74**, 85.)

Antimony pentachloride nitric oxide, $2\text{SbCl}_5, \text{NO}$.

Decomp. by H_2O . (Besson, C. R. **108**, 1012.)

Antimony pentachloride nitrogen peroxide, $3\text{SbCl}_5, 2\text{NO}_2$.

Decomp. by H_2O . (Besson.)

Antimony pentachloride nitrogen sulphide, $\text{SbCl}_5, \text{N}_4\text{S}_4$.

Easily decomp. (Davis, Chem. Soc. 1906, **89**, 1577.)

Decomp. by cold H_2O , HCl , H_2SO_4 and warm alcohol, also by boiling with $\text{KOH} + \text{Aq}$. Almost insol. in organic solvents. (Wölbling, Z. anorg. 1908, **57**, 283.)

Antimony chloride potassium bromide, $\text{SbCl}_3, 3\text{KBr} + 1\frac{1}{2}\text{H}_2\text{O}$.

Very deliquescent. Decomp. by much H_2O . (Atkinson, Chem. Soc. **43**, 289.)

$2\text{SbCl}_3, 3\text{KBr} + 2\text{H}_2\text{O}$. (Atkinson.)

$\text{SbCl}_3, \text{KBr} + \text{H}_2\text{O}$. (Atkinson.)

Above are mixtures. (Herty, Am. Ch. J. **1894**, **16**, 497.)

See Antimony bromide potassium chloride.

Antimony chlorofluoride, SbCl_3F_2 .

(Swarts, Z. anorg. 1896, **12**, 71.)

Antimony fluoiodide, SbF_3I .

Slowly decomp. by H_2O . (Ruff, B. 1906, **39**, 4321.)

$(\text{SbF}_3)_2\text{I}$. Sol. in H_2O with pptn. of I_2 . (Ruff, B. 1906, **39**, 4321.)

Antimony trifluoride, SbF_3 .

Deliquescent. Sol. in H_2O .

Solubility in H_2O at t° .

t°	100 g of the solution contain g. SbF_3	100 g. H_2O contain g. SbF_3

(Rosenheim, Z. anorg. 1909, 61. 192.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 826.)

Antimony pentafluoride, SbF_5

Sol. in H_2O . (Marignac, A. 145. 239.)
Very hygroscopic; bpt. 155° . Sol. in H_2O with hissing. (Ruff, B. 1904, 37. 678.)
+ $2\text{H}_2\text{O}$. (Ruff, B. 1904, 37. 679.)

Antimony pentafluoride diantimony trifluoride, $\text{Sb}_2\text{F}_{11} = 2\text{SbF}_5, \text{SbF}_3$.

Hygroscopic; bpt. 390° . Easily sol. in H_2O . (Ruff, B. 1904, 37. 680.)

Antimony pentafluoride pentaantimony trifluoride, $\text{SbF}_5, 5\text{SbF}_3$.

B pt. 384° (corr.). (Ruff, B. 1904, 37. 681.)

Antimony caesium fluoride,

$\text{CsF}, 2\text{SbF}_3$.

$\text{CsF}, 3\text{SbF}_3$.

$4\text{CsF}, 7\text{SbF}_3$.

CsF, SbF_3 .

$2\text{CsF}, \text{SbF}_3$.

(Wells, Am. J. Sci. 1901, (4) 11. 451.)

Antimony lithium fluoride, $\text{SbF}_3, 2\text{LiF}$.

Sol. in more than 20 pts. H_2O . (Flückinger, Pogg. 87. 245.)

SbF_3, LiF . Easily sol. in H_2O . (Stein, Chem. Z. 13. 357.)

Antimony potassium fluoride, $\text{SbF}_3, 2\text{KF}$.

Sol. in less than 2 pts. boiling, and in 9 pts. cold H_2O . Insol. in alcohol or ether.

SbF_3, KF . More sol. than $\text{SbF}_3, 2\text{KF}$. Sol. in 2.8 pts. H_2O . (Flückinger, Pogg. 87. 245.)

SbF_3, KF . Easily sol. in H_2O .

$\text{SbF}_3, 2\text{KF} + 2\text{H}_2\text{O}$. Easily sol. in H_2O . (Marignac, A. 145. 239.)

Antimony sodium fluoride, $\text{SbF}_3, 3\text{NaF}$.

Sol. in 14 pts. cold, and 4 pts. boiling H_2O . Sol. in HF . (Flückinger, Pogg. 87. 245.)

SbF_3, NaF . 100 pts. cold H_2O dissolve 93 pts. 100 pts. hot H_2O dissolve 166 pts. (Stein, Wagners' J. B. 1887. 1160.)

$4\text{SbF}_3, \text{NaF}$. As NH_4 salt. (Raad and Hauser, B. 1890, 23. R. 125.)

$\text{SbF}_3, 2\text{NaF}$. Easily sol. in H_2O . (Marignac, A. 145. 329.)

Antimony thallium fluoride, TlF, SbF_3 .

Sol. in H_2O without decomp. (Ephraim, B. 1909, 42. 4458.)

$\text{TlF}, 2\text{SbF}_3$. Sol. in H_2O without decomp. (Ephraim.)

$\text{TlF}, 3\text{SbF}_3$. Sol. in H_2O without decomp. Decomp. by cold conc. H_2SO_4 . (Ephraim.)

Antimony trifluoride ammonia, $\text{SbF}_3, 2\text{NH}_3$.

Sl. sol. in liquid NH_3 . (Ruff, B. 1906, 39. 4326.)

Antimony trifluoride ammonium chloride.

$\text{SbF}_3, \text{NH}_4\text{Cl}$.

Easily sol. in H_2O . (de Haen, B. 21. 901 R.)

Antimony trifluoride ammonium sulphate,

$\text{SbF}_3, (\text{NH}_4)_2\text{SO}_4$.

More sol. than K or Na salt. 1 pt. H_2O dissolves 1.4 pts. at 24° and 15 pts. at 100° . (de Haen, B. 21. 902 R.)

Antimony fluoride lithium chloride, $\text{SbF}_3, \text{LiCl}$

Sol. in H_2O . (Stein, Chem. Z. 13. 357.)

Antimony pentafluoride nitrosyl fluoride, SbF_5, NOF .

Hygroscopic. Decomp. by H_2O . Sol. in liquid NH_3 with decomp. Sl. sol. in NOCl , SiCl_4 , PCl_5 , AsCl_3 , Se_2Cl_2 , and SOCl_2 . (Ruff, Z. anorg. 1908, 55. 394.)

Antimony trifluoride potassium chloride, SbF_3, KCl .

100 pts. H_2O dissolve 51 pts. at 24° and 300 pts. at 100° . (de Haen, B. 21. 901 R.)

- Antimony trifluoride potassium sulphate**, $\text{SbF}_3, \text{K}_2\text{SO}_4$.
Sol. in H_2O . (de Haen.)
 $2\text{SbF}_3, \text{K}_2\text{SO}_4$. Very sol. in H_2O . (Mayer, B. 1894, 27. R. 922.)
- Antimony trifluoride sodium chloride**, $\text{SbF}_3, \text{NaCl}$
Easily sol. in H_2O . (de Haen, B. 21. 901 R.)
- Antimony trifluoride sodium sulphate**, $\text{SbF}_3, \text{Na}_2\text{SO}_4$.
Sol. in H_2O . (de Haen.)
- Antimony fluoiodide**, SbF_2I .
Mpt. 80° ; slowly decomp. by H_2O (Ruff, B. 1906, 39. 4321.)
 $(\text{SbF}_2)_2\text{I}$ Mpt. $110-115^\circ$; decomp. by H_2O . (Ruff.)
- Antimony fluosulphide**, SbF_2S .
Very hygroscopic. Decomp. by H_2O . Sol. with decomp. in alcohol Sol. in CCl_4 . (Ruff, B. 1906, 39. 4322.)
- Antimony gold**, Au_3Sb .
Insol. in equal pts. of HNO_3 and tartaric acids (Roessler, Z. anorg. 1895, 9. 72)
- Antimony hydride**, SbH_3 .
Scarcely sol. in H_2O . 1000 ccm. H_2O absorb 4.12 cc. SbH_3 at 10.5° . Decomp. by long contact with H_2O ; also by conc. H_2SO_4 or $\text{KOH} + \text{Aq}$. (Jones, Chem. Soc. 29. 641.)
- Antimony trihydroxide**, $\text{Sb}_2\text{O}_3, 2\text{H}_2\text{O} = \text{Sb}_2\text{O}(\text{OH})_4$.
(Schaffner, A. 51. 182.)
 $\text{Sb}(\text{OH})_3$. Ppt. (Clarke and Stolla, B. 13. 1787.)
Does not exist. (Guntz, C. R. 102. 1472)
See Antimonous acid and antimony trioxide.
- Antimony triiodide**, SbI_3 .
Decomp. by H_2O or 80% alcohol. Sol. in $\text{HI} + \text{Aq}$; sol. in boiling CS_2 , and in boiling benzene, but separates out on cooling. Almost insol. in CHCl_3 . (Cooke, Proc. Am. Acad. (2) 5. 72.)
Easily sol. in AsBr_3 . (Walden, Z. anorg. 1902, 29. 374.)
Sol. in warm AsBr_3 . Sp. gr. of a solution sat. at 40° , which solidifies at 37° , = 3.720. This dissolves further AsI_3 , whereby the mpt. sinks to 31° and sp. gr. rises to 3.801. By mixing the latter solution with a solution of AsI_3 in CH_2I_2 , a liquid can be obtained with a sp. gr. of 3.702 at 20° . (Retgers, Z. phys. Ch. 1893, 11. 340.)
Sol. in PCl_5 . (Beckmann, Z. anorg. 1906, 51. 110.)
Sol. in SO_2Cl_2 . (Walden, Z. anorg. 1900, 25. 215.)
- Sol. in SOCl_2 and S_2Cl_2 . (Walden, Z. anorg. 1900, 25. 216.)
Sol. in AsCl_3 . (Walden, Z. anorg. 1900, 25. 214.)
Sol. in SnCl_4 . (Walden, Z. anorg. 1900, 25. 218.)
Sol. in POCl_3 . (Walden, Z. anorg. 1900, 25. 212.)
Easily sol. in PCl_5 and PBr_3 . (Walden, Z. anorg. 1900, 25. 211.)
Partly sol. in, and partly decomp. by alcohol or ether. (M'Ivor, Chem. Soc. (2) 14. 328.)
Insol. in oil of turpentine and CCl_4 .
100 pts. methylene iodide dissolve 11.3 pts. SbI_3 at 12° ; sp. gr. of solution = 3.453. (Retgers, Z. anorg. 3. 343.)
Sol. in C_6H_6 . (Retgers, Z. phys. Ch. 1893, 11. 334.)
Sol. in acetone. (Naumann, B. 1904, 37. 4328.)
- Antimony pentaiodide**, SbI_5 .
Very unstable. (Pendleton, C. N. 48. 97.)
- Antimony barium iodide**, $\text{SbI}_3, \text{BaI}_2 + 9\text{H}_2\text{O}$.
Decomp. by H_2O Sol. in HCl , $\text{HC}_2\text{H}_3\text{O}_2$, or $\text{H}_2\text{C}_4\text{H}_7\text{O}_6 + \text{Aq}$ CS_2 dissolves out SbI_3 . (Schaffer, Pogg. 109. 611.)
- Antimony caesium iodide**, $2\text{SbI}_3, 3\text{CsI}$.
Sl. sol. in $\text{HI} + \text{Aq}$. Exists in two distinct forms. (Wells, Am. J. Sci. 1901, (4) 11. 455.)
- Antimony potassium iodide**, $2\text{SbI}_3, 3\text{KI} + 3\text{H}_2\text{O}$.
Decomp. by H_2O . Sol. in HCl , $\text{HC}_2\text{H}_3\text{O}_2$, or $\text{H}_2\text{C}_4\text{H}_7\text{O}_6 + \text{Aq}$. CS_2 dissolves out SbI_3 . (Schaffer, Pogg. 109. 611.)
 $\text{SbI}_3, 2\text{KI} + 2\frac{1}{2}\text{H}_2\text{O}$ Decomp. by H_2O . (Nicklès, J. Pharm. (3) 39. 116.)
- Antimony rubidium iodide**, $2\text{SbI}_3, 3\text{RbI}$.
Decomp. by H_2O . (Wheeler, Z. anorg. 5. 259.)
- Antimony sodium iodide**, $2\text{SbI}_3, 3\text{NaI} + 12\text{H}_2\text{O}$.
As $2\text{SbI}_3, 3\text{KI}$. (Schaffer, Pogg. 109. 611.)
- Antimony thalious iodide**, $2\text{SbI}_3, 3\text{TlI}$.
Decomp. by H_2O and by $\text{HCl} + \text{Aq}$, also by alcohol. (Ephraïm, Z. anorg. 1908, 58. 354.)
- Antimony nitride**, SbN .
Decomp. by heat. (Franz Fischer, B. 1910, 43. 1471.)
- Antimony trioxide**, Sb_2O_3 .
Very sl. sol. in H_2O . Sol. in 8900-10,000 pts. H_2O at 100° ; 55,000-61,100 pts. at 15° . (Schulze, J. pr. (2) 27. 320.)
Sol. in $\text{HCl} + \text{Aq}$. Insol. in $\text{HNO}_3 + \text{Aq}$, but not as insol. as metastannic acid. Sol. in cold fuming HNO_3 or H_2SO_4 . Insol. in dil., but sol. in conc. alkalies, or alkali carbonates +

Aq. Sol. in cold NH_4Cl , or NH_4NO_3 + Aq.
Sol. in 15 pts. boiling SbCl_3 (Schneider, Pogg. 108. 407.)

Sol. in $\text{HC}_2\text{H}_3\text{O}_2$, or $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$ + Aq, and not pptd. from these solutions by H_2O . Easily sol. in benzoic acid. Insol. in pyrotartaric acid. Very sol. in $\text{KHC}_4\text{H}_4\text{O}_6$ + Aq. Sol. in glycerine.

Somewhat sol. in H_3PO_4 + Aq. (Kohler, Dingl. 1885, 258. 520.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 826.)

Sol. in lactic acid. (Kretzschmar, Ch. Z. 1888, 12. 943.)

Sol. in grape sugar solution to which $\text{Ca}(\text{OH})_2$ has been added. (Vogel, B. 1885, 18, R. 38.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329; Erdmann, C. C. 1899, II. 1014.)

Sol. in glycerine in presence of alkalies. (Kohler, Dingl. 1885, 258. 520.)

Exists in a sol. colloidal modification. (Spring, B. 16. 1142.)

Min. *Valentinite*, *Senarmonite*.

+ H_2O . See Antimonous acid.

Antimony tetroxide, Sb_2O_4 .

Insol. in H_2O . Slightly attacked by acids; hot conc. HCl + Aq acts only slightly. (Fresenius.)

Min. *Cervantite*. Sl. sol. in HCl + Aq.

Antimony pentoxide, Sb_2O_5

Insol. in H_2O . Easily sol. in HCl + Aq. Sl. sol. in conc. KOH + Aq.

"Antimonoxyd" is sol. in glycerine in presence of alkalies.

100 g. glycerine, to which have been added 10 g. NaOH + Aq (1:1), dissolve 20.6 g. at b.-pt.; 20 g. NaOH + Aq (1:1), dissolve 36.0 g. at b.-pt.; 40 g. NaOH + Aq (1:1), dissolve 68.5 g. at b.-pt.; 80 g. NaOH + Aq (1:1), dissolve 93.0 g. at b.-pt.; 120 g. NaOH + Aq (1:1), dissolve 119.2 g. at b.-pt. (Köhler, Dingl. 258. 520.)

See also Antimonie acid.

Antimony nitrogen pentoxide, $2\text{Sb}_2\text{O}_5, \text{N}_2\text{O}_5$.

Not decomp. by H_2O . (Thomas, C. R. 1895, 120. 1116.)

Antimony oxybromide.

See Antimonyl bromide.

Antimony oxychloride.

See Antimonyl chloride.

Antimony oxyfluoride.

See Antimonyl fluoride.

Antimony oxysulphide, Sb_2OS_2 .

Min. *Antimony blende* (*kermesite*).

Insol. in H_2O or dil. acids, except HCl + Aq. (Schneider, Pogg. 110. 147.)

Antimony palladium, Sb_2Pd .

Sl. sol. in equal pts. of HNO_3 and tartaric acids. (Roessler, Z. anorg. 1895, 9. 69.)

Antimony platinum, Sb_2Pt .

Insol. in equal pts. of HNO_3 and tartaric acids. (Roessler, Z. anorg. 1895, 9. 67.)

Antimony phosphide, SbP .

Insol. in benzene, ether, or CS_2 . (M'Ivor, B. 6. 1362.)

Antimony selenide, SbSe .

(Chrétien, C. R. 1906, 142. 1341.)

Sb_2Se_4 . (Chrétien, l.c.)

Sb_4Se_8 . (Chrétien, l.c.)

Sb_2Se_3 Sol. in KOH + Aq. (Hofacker, A. 107. 6.)

Sb_2Se_3 . (Hofacker.)

Antimony selenide, with M selenide.

See Selenoantimonates, M.

Antimony trisulphide, Sb_2S_3 (*Kermes*).

Insol. in H_2O and dil. acids.

1 l. H_2O dissolves 5.2×10^{-6} mols. pptd. Sb_2S_3 at 18° . (Weigel, Z. phys. Ch. 1907, 58. 294.)

Decomp. by conc. HNO_3 or H_2SO_4 . Sol. in conc. HCl + Aq. Easily sol. in dil. KOH , NaOH , $(\text{NH}_4)_2\text{S}$, and K_2S + Aq. Sl. sol. in NH_4OH + Aq; very sl. sol. in $(\text{NH}_4)_2\text{CO}_3$ + Aq; insol. in KSH + Aq. (Fresenius.)

Sol. in a mixture of 50 pts. H_2O and 18 pts. HCl (sp. gr. 1.16) even when completely sat. with H_2S . (Lang and Carson, J. Soc. Chem. Ind. 1902, 21. 1018.)

Sl. sol. in H_2SO_3 + Aq. (Guerout, C. R. 1872, 75. 1276.)

Cryst. Sb_2S_3 is only sl. sol. in NH_4OH + Aq (1 pt. in about 2000 pts. NH_3).

Pptd. amorphous Sb_2S_3 is appreciably more sol. (1 pt. in 600 pts. NH_3). (Garot, J. pr. 1843, 29. 83.)

Sl. sol. in hot 2% $\text{Na}_2\text{B}_4\text{O}_7$ + Aq, still less sol. in cold. (Materne, C. C. 1906, II. 557.)

Insol. in NH_4Cl + Aq.

Sol. in 14–15 pts. pure SbCl_3 . (Schneider, Pogg. 108. 407.)

Slowly sol. in $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$ + Aq.

Sol. in boiling Na_2SbS_4 + Aq.

Sol. in hot citric, tartaric and oxalic acids. Sl. sol. in malic, benzoic, picric and pyrogallic acids. Insol. in formic and acetic acids. Especially easily sol. in citric and oxalic acids with addition of KNO_3 , KNO_2 or KClO_3 . (Bolton, C. N. 1878, 37. 86 and 99.)

Sol. in ethylamine sulphhydrate + Aq.

Min. *Stibnite*. Sol. in cold citric acid + Aq. (Bolton, C. N. 37. 14.)

Soluble modification. Sb_2S_3 may be obtained in a colloidal state in aqueous solution containing 1 pt. Sb_2S_3 to 200 pts. H_2O . This can be boiled without decomp., but Sb_2S_3 is pptd. by acids and salts.

Table of maximum dilution of solutions of acids and salts which cause pptn of Sb_2S_3 .

HCl	1 : 270
H_2SO_4	1 : 140
$\text{H}_2\text{C}_2\text{O}_4$	1 : 45
K_2SO_4	1 : 65
$(\text{NH}_4)_2\text{SO}_4$	1 : 130
MgSO_4	1 : 1720
MnSO_4	1 : 2060
NaCl	1 : 135
BaCl_2	1 : 2050
MgCl_2	1 : 5800
CoCl_2	1 : 2500
KNO_3	1 : 75
Fe_2Cl_6	1 : 2500
$\text{Ba}(\text{NO}_3)_2$	1 : 1250
$\text{K}_2\text{Al}_2(\text{SO}_4)_4$	1 : 35,000
$(\text{NH}_4)_2\text{Fe}_2(\text{SO}_4)_4$	1 : 800
$\text{K}_2\text{Cr}_2(\text{SO}_4)_4$	1 : 40,000
$\text{KSbOC}_4\text{H}_4\text{O}_6$	1 : 18

(Schulze, J. pr. (2) 27. 320.)

Antimony trisulphide with M_2S .

See Sulphantimonites, M.

Antimony pentasulphide, Sb_2S_5 .

Insol. in H_2O , or H_2O containing H_2S . Sol. in conc. $\text{HCl} + \text{Aq}$. Completely sol. in $\text{NH}_4\text{OH} + \text{Aq}$; traces dissolve in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. Easily sol. in KOH , or $\text{NaOH} + \text{Aq}$, or in alkali sulphides $+ \text{Aq}$. Sol. in 50 pts. cold dil. $\text{NH}_4\text{OH} + \text{Aq}$. (Geiger.)

Insol. in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$.

Insol. in cold, but sol. in hot alkali carbonates $+ \text{Aq}$. (Berzelius.)

Insol. in $\text{Na}_2\text{SbS}_4 + \text{Aq}$.

When boiled with alcohol, ether, CS_2 , oil of turpentine, etc., portion of the S is dissolved out. (Berzelius)

CS_2 dissolves about 5% of the sulphur. (Rammelsberg.)

Antimony pentasulphide with M_2S .

See Sulphantimonates, M.

Antimony sulphochloride, SbSCl_3 .

Decomp. by moist air or H_2O . (Cloeze, A. ch. (3) 30. 374.)

$\text{Sb}_2\text{S}_2\text{Cl}$. Easily attacked by acids; insol. in CS_2 . (Ouvrard, C. R. 116. 1516.)

$\text{Sb}_2\text{S}_2\text{Cl}$. (Ouvrard)

2SbSCl , $3\text{Sb}_2\text{S}_3$. Decomp. by dil. $\text{HCl} + \text{Aq}$. (Schneider.)

SbSCl , 7SbCl_3 . Deliquescent; decomp. by H_2O . (Schneider, Pogg. 108. 407.)

Antimony sulphofluoride, SbF_3S .

See Antimony fluosulphide.

Antimony sulphoiodide, SbSI .

Not attacked by H_2O , and decomp. only by conc. acids. Insol. in CS_2 . (Schneider, Pogg. 110. 147.)

$\text{Sb}_2\text{S}_2\text{I}_2$. (Henry and Garot.)

$\text{Sb}_2\text{S}_2\text{I}_2$. Sol. in dry CS_2 . Very easily decomp. (Ouvrard, C. R. 117. 108.)

Antimony sulphur dioxide, SbSO_2 .

Ppt (Faktor, C. C. 1900, I. 1211.)

Antimony telluride, SbTe .

Insol. in H_2O .

Sb_2Te_3 . Insol. in H_2O . (Oppenheim, J. pr. 71. 277.)

Antimonyl bromide, SbOBr .

Insol. in CS_2 . (Cooke, Proc. Am. Acad. 13. 104.)

Sl. sol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 826.)

$\text{Sb}_4\text{O}_5\text{Br}_2$ (M'Ivor, C. N. 29. 179.)

$10\text{Sb}_4\text{O}_5\text{Br}_2$, SbBr_3 .

Antimonyl chloride.

From SbCl_3 . SbOCl . Insol. in H_2O . Decomp. by boiling with H_2O ; sol. in $\text{HCl} + \text{Aq}$. Insol. in alcohol or ether; sol. in CS_2 , CHCl_3 , or C_6H_6 . (Sabanajew, Zeit Ch. 1871. 204.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 826.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

$\text{Sb}_4\text{O}_5\text{Cl}_2$ *Algaroth powder* Decomp. by H_2O . Sol. in $\text{HCl} + \text{Aq}$ (Cooke, Proc. Am. Acad. 13. 1); tartaric acid $+ \text{Aq}$. (Schäffer, A. 152. 135.)

$\text{Sb}_4\text{O}_{11}\text{Cl}_2$. (Cooke.)

$\text{Sb}_4\text{OCl}_{12}$.

$\text{Sb}_4\text{O}_{50}\text{Cl}_{23}$.

From SbCl_5 . SbOCl_3 . Deliquescent. Decomposed by H_2O . Sol. in H_2O . (Daubrawa, A. 184. 118.)

Does not exist. (Anschütz and Evans, A. 239. 285.)

$\text{Sb}_2\text{OCl}_{13}$. Deliquescent. Insol. in CS_2 ; easily sol. in tartaric acid $+ \text{Aq}$. (Williams, C. N. 24. 224.)

$\text{Sb}_2\text{O}_4\text{Cl}_7$. (Williams.)

SbO_2Cl . Decomp. by hot H_2O into HSbO_3 .

Antimonyl fluoride.

From SbF_3 . $\text{Sb}_4\text{O}_5\text{F}_8$. Not deliquescent. (Flückiger, Pogg. 87. 249.)

Antimonyl caesium fluoride, SbF_4OH , CsF .

(Wells, Am. J. Sci. 1901, (4) 11. 456.)

Antimonyl sodium fluoride, SbOF_3 , $\text{NaF} + \text{H}_2\text{O}$.

Deliquescent. Easily sol. in H_2O . (Marignac, A. 145. 239.)

Antimonyl iodide, $\text{Sb}_4\text{O}_5\text{I}_2$.

Difficultly sol. in solution of tartaric acid or tartrates. Decomp. by HCl , HNO_3 , or $\text{H}_2\text{SO}_4 + \text{Aq}$. Easily sol. in alkalies, or $(\text{NH}_4)_2\text{S} + \text{Aq}$.

SbOI . Insol. in CS_2 . (Cooke, Proc. Am. Acad. (2) 5. 72.)

Antimonyl sulphide.

See Antimony oxysulphide.

Argon, A.

100 cc H₂O dissolve 4.05 cc argon at 13.9°. Critical t.—121.6° under 50.6 atmos. Bpt.—186.9°. Sp. gr. 19.9. (Rayleigh, C. N. 1895, 71. 51–62; 299–302, C. C. 1895. 467.)

Coefficient of absorption in H₂O at 12° = 0.0394; at 13.9° = 0.0405. (Ramsay, Phil. Trans. 1895, 186. A. 225.)

Absorption by H₂O at t°.

t°	Coefficient of absorption
0°	0.0561
10	0.0438
20	0.0379
30	0.0348
40	0.0338
50	0.0343

(Antropoff, Roy. Soc. Proc. 1910, 83. A. 480.)

Absorption of argon by H₂O at t° and 760 mm. pressure.

t°	Coefficient of absorption
0°	0.05780
1	0.05612
5	0.05080
10	0.04525
15	0.04099
20	0.03790
25	0.03470
30	0.03256
35	0.03053
40	0.02865
45	0.02731
50	0.02567

(Estreicher, Z. phys. Ch. 1899, 31. 184.)

1 l. H₂O at 38° absorbs 25.7 cc. A.

1 l. blood absorbs 25.3 cc. A. (Regnard and Schloesing, C. R. 1897, 124. 303.)

Not absorbed by members of the fatty series of organic compounds; with members of the aromatic series absorption was observed varying from 8% of the volume employed for benzene to 1% for aniline. (Berthelot, C. R. 1899, 129. 71.)

Arsenamide, As(NH₂)₃.

Insol. in liquid NH₃. Decomp. by H₂O. (Hugot, C. R. 1904, 139. 55.)

Arsenic, As.

Unaltered by pure H₂O. Insol. in HCl + Aq. if air is excluded, but sl. sol. in presence of air. Not attacked by dil. H₂SO₄ + Aq. Oxidized by conc. H₂SO₄, HNO₃, or aqua regia. Not attacked at 20° by HNO₃, conc. or dil., or containing NO₂; nor by HNO₃ + HCl, as long as they do not act on each other; but if treated with the above mixture in extremely dilute state, and a few drops of KNO₃ + Aq.

are added, the As is attacked at once. (Millon, A. ch. (3) 6. 101.)

Sol. in sea water; 0.009 mg. per liter off Brittany; 0.01 to 0.09 mg. per liter near Azores. (Gautier, C. R. 1903, 137. 232.)

Insol. in liquid NH₃. (Franklin, Am. Ch. J. 1898, 20. 827.)

Insol. in liquid NH₃. (Hugot, A. ch. 1900, (7) 21. 31.)

Insol. in NaOH, KOH, or NH₄OH + Aq. Sol. in S₂Br₂. (Hannay, Chem. Soc. (2) 11. 823.)

Insol. in alcohol and ether.

Sol. in certain fatty oils

Insol. in methylene iodide. (Retgers, Z. anorg. 3. 343.)

½ ccm. oleic acid dissolves 0.0032 g. As in 6 days. (Gates, J. phys. Ch. 1911, 15. 143.)

Yellow modification. Very unstable. (McLeod, C. N. 1894, 70. 139.)

Fairly stable in liquid air. (Thomson, Chem. Soc. 1906, 90. (2) 745.)

100 ccm. CS₂ dissolve at:

46° 20° 12° 0° —15° —60°
11 8 6 4 2 0.2 5 1 0 g. As.

Less sol. in benzene and ethyl acetate. (Erdmann, Z. anorg. 1902, 32. 448.)

Arsenic acid. See page 59.

Arsenic bromide, AsBr₃.

Decomp. by H₂O. Completely sol. in about 3 pts. boiling H₂O, and much less, in presence of HBr. (Wallace, Phil. Mag. (4) 17. 261.)

Sol. in CS₂.

Sol. in AlBr₃. (Isbekow, Z. anorg. 1913, 84. 26.)

Easily sol. in PCl₃ and PBr₃. (Walden, Z. anorg. 1900, 25. 211.)

Sol. in S₂Cl₂. (Walden, Z. anorg. 1900, 25. 217.)

Arsenic caesium bromide, 2AsBr₃, 3CsBr.

Decomp. by H₂O; can be recryst. from conc. HBr + Aq. (Wheeler, Z. anorg. 4. 451.)

Arsenic rubidium bromide, 2AsBr₃, 3RbCl.

As the corresponding Cs comp.

Arsenic bromide ammonia, AsBr₃, 3NH₃.

Decomp. by H₂O. (Besson, C. R. 110. 1258.)

Arsenic bromide copper, 2AsBr₃, 7Cu.

Stable toward hot H₂O. Decomp. by KOH. (Hilpert and Herrman, B. 1913, 46. 2224.)

Arsenic bromide silver, AsBr₃, 3Ag.

Scarcely decomp. by cold H₂O. (Hilpert and Herrmann.)

Arsenic chloride, AsCl₃.

Miscible with little H₂O, and with alcohol, ether, and volatile oils. Decomp. by much H₂O, or by boiling. (Gmelin.)

Miscible with oil of turpentine, and with olive oil. Somewhat sol. in $\text{HCl} + \text{Aq.}$

Easily sol. in PCl_3 and PBr_3 . (Walden, Z. anorg. 1900, **25**, 211.)

Sol. in liquid CN . (Centnerszwer, J. russ phys Ges. 1901, **33**, 545.)

Sol. in S_2Cl_2 . (Walden, Z. anorg 1900, **25**, 217.)

Arsenic pentachloride, AsCl_5 .

Fumes in the air with evolution of hydrogen chloride. Readily sol. in CS_2 , and absolute ether cooled to -30° . (Baskerville, J. Am. Chem. Soc. 1902, **24**, 1070.)

Arsenic caesium chloride, $2\text{AsCl}_3, 3\text{CsCl}$.

Decomp. by H_2O . 100 pts. $\text{HCl} + \text{Aq}$ (1.2 sp. gr.) dissolve 0.429 pt. salt. (Wheeler, Z. anorg **4**, 451.)

Arsenic iridium phosphorus chloride.

See Iridium phosphorus chloride arsenic chloride.

Arsenic rubidium chloride, $2\text{AsCl}_3, 3\text{RbCl}$.

Decomp. by H_2O . 100 pts. $\text{HCl} + \text{Aq}$ (sp. gr. 1.2) dissolve 2.935 pts salt. (Wheeler, Z. anorg. **4**, 451.)

Arsenic sulphur chloride, $2\text{AsCl}_3, 3\text{SCl}_2$.

Decomp. by H_2O . (Rose.)

Above compound is a mixture. (Nilson, C. N. **81**, 81.)

Arsenic chloride ammonia, $2\text{AsCl}_3, 7\text{NH}_3$.

Decomp. by cold H_2O , with evolution of NH_3 . From the solution crystallizes $\text{As}_4\text{Cl}_2\text{N}_2\text{H}_{10}\text{O}_8$.

Sol. in alcohol without decomp. (Rose, Pogg. **52**, 62.)

Composition is $\text{AsCl}_3, 4\text{NH}_3$. (Besson, C. R. **110**, 1258.)

Arsenic chloride copper, $2\text{AsCl}_3, 7\text{Cu}$.

Somewhat decomp. by H_2O . Decomp. by KOH , or hot HCl . (Hilpert and Herrman, B. 1913, **46**, 2224.)

Arsenic chloride silver, $2\text{AsCl}_3, 7\text{Ag}$.

H_2O , NH_4OH and KOH split off Ag . (Hilpert and Hermann.)

Arsenic trifluoride, AsF_3 .

Sol. in H_2O with evolution of heat and decomposition. (Berzelius.)

Easily sol. in benzene. (Moissan, C. R. **99**, 874.)

Miscible with alcohol and ether. (M'Ivor, C. N. **30**, 169.)

Arsenic pentafluoride, AsF_5 .

Sol. in H_2O , alkalis + Aq and liquid AsF_3 with evolution of heat. Absorbed by ether, alcohol and benzene with evolution of heat. (Ruff, B. 1906, **39**, 67.)

Arsenic potassium fluoride, $\text{AsF}_5, \text{KF} + \frac{1}{2}\text{H}_2\text{O}$.

$\text{AsF}_5, 2\text{KF} + \text{H}_2\text{O}$

$\text{AsF}_5, \text{AsOF}_3, 4\text{KF} + 3\text{H}_2\text{O}$. (Maignac, A. **145**, 237.)

Arsenic fluoride ammonia, $2\text{AsF}_3, 5\text{NH}_3$.

Easily decomp. by H_2O . (Besson, C. R. **110**, 1258.)

Arsenic pentafluoride nitrosyl fluoride, AsF_5, NOF .

Decomp. by H_2O , fuming HCl , $\text{NaOH} + \text{Aq}$, dry ether and dry alcohol with evolution of NO . Sol. in conc. HNO_3 , hot conc. H_2SO_4 , boiling NOCl and AsF_3 . Insol. in CCl_4 and CS_2 . (Ruff, Z. anorg. 1908, **58**, 327.)

Arsenic trifluoride sulphur tetrachloride, $2\text{AsF}_3, \text{SCl}_4$.

Very hydropscopic. Decomp. by H_2O and NaOH . Decomp. by thionyl chloride, CCl_4 , CS_2 , abs. alcohol and ether. Decomp. by ligroin, benzene and toluene. (Ruff, B. 1904, **37**, 4520.)

Arsenic hydride, AsH_3 .

Sl. sol. in H_2O and alkali hydrates + Aq , with subsequent decomposition. H_2O absorbs $\frac{1}{3}$ vol. AsH_3 . Decomp. by conc. acids. Absorbed rapidly by oil of turpentine, slightly by fixed oils, and not at all by alcohol, ether, or $\text{KOH} + \text{Aq}$. (Gmelin.)

Insol. in $\text{KOH} + \text{Alcohol}$. (Meissner.)

Not more sol. in alkaline solutions than in pure H_2O . (Berzelius.)

AsH_3 . *Solid* Insol. in H_2O , alcohol, ether, and CS_2 . (Wiederhold, Pogg. **118**, 615.)

Insol. in H_2O ; sol. in methylene iodide, xylene, or in conc. $\text{KOH} + \text{Aq}$. (Retgers, Z. anorg. **4**, 403.)

Arsenic hydride boron bromide, $\text{AsH}_3, \text{BBr}_3$.

Easily decomp. Decomp. by H_2O . Appreciably sol. in AsH_3 , or BBr_3 . Insol. in CS_2 . (Stock, B. 1901, **34**, 949.)

Arsenic diiodide, As_2I_4 .

Decomp. by H_2O or alkalis; easily sol. in alcohol, ether, chloroform, or carbon disulphide. (Bamberger and Phillip, B. **14**, 2643.)

Not attacked by cold conc. H_2SO_4 or by cold fuming HNO_3 . The latter oxidizes on warming. Decomp. by pyridine. Sol. in boiling acetic anhydride. (Hewitt and Winmill, Chem. Soc. 1907, **91**, 962.)

Arsenic triiodide, AsI_3 .

Sol. in 3.32 pts. boiling H_2O , and solution if boiled down deposits pure AsI_3 , but if left to cool slowly, deposits crystals of As_2O_3 and AsOI .

Sl. sol. in $\text{HCl} + \text{Aq}$.

Sol. in POCl_3 , PCl_3 and PBr_3 . (Walden, Z. anorg. 1900, **25**, 212.)

Sol. in PCl_3 . (Beckmann, Z. anorg. 1906, 51. 110.)

Sol. in SOCl_2 , S_2Cl_2 and SO_2Cl_2 . (Walden, Z. anorg. 1900, 25. 216.)

Sol. in SnCl_4 . (Walden, l.c.)

Easily sol. in AsBr_3 . (Walden, Z. anorg. 1902, 29. 374.)

Sol. in AsCl_3 . (Walden, Z. anorg. 1900, 25. 214.)

Sol. in alcohol without decomp.

Sol. in ether, benzene, chloroform, and CS_2 .

100 pts. methylene iodide dissolve 17.4 pts.

AsI_3 at 12° . (Retgers, Z. anorg. 3. 343.)

Arsenic pentaide, AsI_5 .

More or less sol. in H_2O , alcohol, CHCl_3 , ether and CS_2 . (Sloan, C. N. 1882, 46. 194.)

Arsenic caesium iodide, 2AsI_3 , 3CsI .

Decomp. by H_2O ; sol. in conc. $\text{HI} + \text{Aq}$. (Wheeler, Z. anorg. 4. 451.)

Arsenic rubidium iodide, 2AsI_3 , 3RbI .

As the corresponding Cs comp.

Arsenic sulphur iodide.

See Arsenic sulphioidide.

Arsenic triiodide ammonia, 2AsI_3 , 9NH_3 .

Insol. in benzene. (Bamberger and Phillip, B. 14. 2643.)

AsI_3 , 4NH_3 . (Besson, C. R. 110. 1258.)

Arsenic nitride, AsN .

Easily decomp. into As and N. (Hugot, C. R. 1904, 139. 56.)

Decomp. by heat. (Franz Fischer, B. 1910, 43. 1471.)

Arsenic suboxide, As_2O (?).

Insol. in H_2O ; decomp. by dil. acids or $\text{NH}_4\text{OH} + \text{Aq}$.

Does not exist (Geuther, A. 240. 208.)

Arsenic trioxide, As_2O_3 .

"White arsenic" exists in two modifications: $\alpha\text{As}_2\text{O}_3$,—crystalline, octahedral, opaque, porcelainous, etc.; $\beta\text{As}_2\text{O}_3$,—amorphous, vitreous, "arsenic glass."

The data concerning the solubility of As_2O_3 are very contradictory, the reasons being that (1) the solubility of the two modifications is different; (2) that the length of time necessary to effect solution differs in the two modifications; and (3) that there is a tendency of the amorphous As_2O_3 to go over into the crystalline state during the process of solution. $\alpha\text{As}_2\text{O}_3$ is also not easily moistened, especially when in a pulverulent condition, which is not the case with the β modification. (Winkler, J. pr. (2) 31. 247.)

The older data are very unreliable, but possess a certain historical interest.

1 pt. As_2O_3 is sol. in 10.55 pts. (Wenzel); 11.34 pts. (Fischer); 11.86 pts. in $\frac{1}{4}$ hour (Klaproth); 12.2 pts. (Bucholz); 15.0 pts. (Brandt; Bergman), 16.0 pts. (Vogel); 24 pts. (Lametherie); 40 pts. (Pomer); 64 pts.

(Baumé), 80 pts. (Navier), 200 pts. (Aschof and Nasse, 1812), 640 pts. (Hagen, 1796) boiling H_2O .

1 pt. As_2O_3 is sol. in 7.72 pts. H_2O if α , or 9.33 pts. if β (Gumbort); in 24 pts. H_2O if α , or 21 pts. if β (Taylor).

Sol. in 53.3 pts. H_2O at 18.75° . (Abl.)

Sol. in 30 pts. H_2O . (Nussebrook.)

After the solution in H_2O at 100° has been left standing at ordinary temperatures—

1 pt. As_2O_3 remains dissolved in 16 pts. H_2O at 16° , and 20 pts. H_2O at 7° (Bucholz), in 33 pts. H_2O at 7° (Klaproth); in 38.45 pts. H_2O after 3 days, 55 pts. H_2O after 8 days, 64.50 pts. H_2O after 2.3 weeks at 10° (Fischer), in 33.52 pts. if $\alpha\text{As}_2\text{O}_3$ was used, 55.06 pts. if $\beta\text{As}_2\text{O}_3$ was used (Gumbort), in 38 pts. if $\alpha\text{As}_2\text{O}_3$ after 6 months, 53.71 pts. if $\beta\text{As}_2\text{O}_3$ after 48 hours (Taylor).

When an excess of pulverized As_2O_3 is left to digest for several days with cold H_2O —

1 pt. dissolves in 50 pts. (Bucholz), in 66 pts. (Fischer), in 80 pts. at 15° (Bergman), in 80 pts. if α , and 103 pts. if β (Gumbort), 96 pts. at 10° (Spelman); 96 pts. at 35.5° (Hahnemann), 320 pts. H_2O at 20° (Aschof and Nasse, 1812).

H_2O at 15.6° or below dissolves less than $\frac{1}{4}\%$ As_2O_3 (Dalton).

To dissolve 1 pt. As_2O_3 in 12 pts. H_2O , it is necessary to boil an excess of As_2O_3 with H_2O , if 1 pt. As_2O_3 is boiled with 12 pts. H_2O , considerable remains undissolved; and even with 1 pt. As_2O_3 to 50–60 pts. H_2O long continued boiling is necessary to effect solution. If a clear solution saturated by long boiling with an excess of As_2O_3 is poured off and evaporated continuously to $\frac{1}{2}$ its original bulk, no As_2O_3 separates out, and the solution contains 1 pt. As_2O_3 to 6 pts. H_2O . (Fischer.)

100 pts. aqueous solution of $\beta\text{As}_2\text{O}_3$ sat. at 15° contain 0.96 pt. As_2O_3 , and 9.68 pts. when sat. at 100° . (Gumbort.)

If 1 pt. pulverized As_2O_3 be digested 10 days at 19 – 25° in 6–10 pts. H_2O , the solution contains 1 pt. As_2O_3 to 50 pts. H_2O . A solution of same strength is obtained in 25 days by digesting 1 pt. As_2O_3 in 40 pts. H_2O . If 1 pt. As_2O_3 be immersed in 80 pts. H_2O , the resulting solution contains 1 pt. As_2O_3 to 90 pts. H_2O , if in 160 pts. H_2O , 1 pt. As_2O_3 to 180 pts. H_2O ; if in 240 pts. H_2O , 1 pt. As_2O_3 to 280 pts. H_2O ; if in 1000 pts. H_2O , 1 pt. As_2O_3 to 1900 pts. H_2O ; and even when 1 pt. As_2O_3 is digested at ordinary temperatures for several days with 16,000–100,000 pts. H_2O , a portion remains undissolved. Pulverized $\alpha\text{As}_2\text{O}_3$ was set aside with H_2O in closed bottles for 18 years; when 1 pt. As_2O_3 was present in 1000 pts. H_2O , a perfect solution was obtained; when 1 pt. As_2O_3 in 100 pts. H_2O , 0.017% As_2O_3 was undissolved; when 1 pt. As_2O_3 in 35 pts. H_2O , 0.35% As_2O_3 was undissolved, so that the solution contained 1 pt. As_2O_3 to 54 pts. H_2O . (Gmelin.)

Porcelainous modification ($\alpha\text{As}_2\text{O}_3$) is much more sol. in H_2O than the vitreous ($\beta\text{As}_2\text{O}_3$). 100 pts. H_2O at ordinary temperature dissolve 0.96 pt. $\beta\text{As}_2\text{O}_3$ and 1.25 pts. $\alpha\text{As}_2\text{O}_3$; 100 pts. boiling H_2O dissolve 0.68 pts. $\beta\text{As}_2\text{O}_3$ and 1.47 pts. $\alpha\text{As}_2\text{O}_3$, and when the temperature of this solution has fallen to 15° , the solution from $\beta\text{As}_2\text{O}_3$ retains 1.78 pts., and that from $\alpha\text{As}_2\text{O}_3$ retains 2.9 pts. (Berzelius [citing Gumbort].)

$\beta\text{As}_2\text{O}_3$ dissolves more quickly and abundantly than $\alpha\text{As}_2\text{O}_3$. The same amount H_2O which will take up 36–38 pts. $\beta\text{As}_2\text{O}_3$ at 12 – 13° will dissolve only 12–14 pts. $\alpha\text{As}_2\text{O}_3$, or 100 pts. H_2O dissolve 4 pts. $\beta\text{As}_2\text{O}_3$ and 1.2–1.3 pts. $\alpha\text{As}_2\text{O}_3$. By long boiling with H_2O , $\alpha\text{As}_2\text{O}_3$ is converted into $\beta\text{As}_2\text{O}_3$, and thus acquires the solubility of the latter, so that 100 pts. boiling H_2O can take up 11 pts. As_2O_3 . But at low temperature $\beta\text{As}_2\text{O}_3$ is converted into $\alpha\text{As}_2\text{O}_3$ when in contact with H_2O , so that the solution becomes weaker after a while, and retains only the proportion of As_2O_3 corresponding to the solubility of $\alpha\text{As}_2\text{O}_3$. Comminution, which hastens the rate of solubility of $\alpha\text{As}_2\text{O}_3$ without increasing the amount dissolved, diminishes the solubility of $\beta\text{As}_2\text{O}_3$, as this is converted into $\alpha\text{As}_2\text{O}_3$.

by the friction or contact with H_2O . As_2O_3 , which has been rendered opaque by NH_4OH , and that which has been crystallized from an aqueous solution, are equally sol in H_2O . (Bussy, C. R. 24. 774; A. 64. 286.)

100 pts. H_2O dissolve 1.707 pts. $\beta\text{As}_2\text{O}_3$ in 2½ years; 100 pts. boiling H_2O dissolve 11.46 pts. $\beta\text{As}_2\text{O}_3$ in 3 hours, and 11.86 pts. in 12 hours; 10.14 pts. $\alpha\text{As}_2\text{O}_3$ in 3 hours, and 10.18 pts. in 12 hours. (Rose, Ann Phys (1) 36. 494.)

A cold sat. solution which stood over excess of As_2O_3 for 10 months at 10–20° contains 1.2% As_2O_3 ; hot sat. solution a few days after saturation contains 2.25–2.50% As_2O_3 . If trace of HCl is present, the solution contains 3.8% As_2O_3 . Hot sat. solution of porcelain mod. of As_2O_3 contains 4 days after saturation 2.4% As_2O_3 at 24°; after 82 days at 14°, 1.5%; after 4 months at 12°, 1.3% As_2O_3 (Bacaloglo, J. pr. 83. 111.)

According to later experiments, 1 pt. $\alpha\text{As}_2\text{O}_3$ dissolves in 355 pts. H_2O in 1 day at 15°, while 1 pt. $\beta\text{As}_2\text{O}_3$ dissolves in 108 pts. H_2O under the same conditions. 1 pt. $\alpha\text{As}_2\text{O}_3$ dissolves in 46 pts. H_2O , if solution is prepared at 100°, and allowed to stand 24 hours at 15°, while 1 pt. $\beta\text{As}_2\text{O}_3$ dissolves in 30 pts. H_2O under the same conditions. (Büchner, N. Rep. Pharm. 22. 265.)

100 pts. H_2O dissolve pts. $\alpha\text{As}_2\text{O}_3$ and $\beta\text{As}_2\text{O}_3$ at ordinary temperature.

Time	$\alpha\text{As}_2\text{O}_3$	$\beta\text{As}_2\text{O}_3$
1 hour	0.023	1.589
3 hours	0.088	2.356
6 hours	0.353	3.666
12 hours	0.364	3.361
24 hours	0.956	3.306
2 days	1.627	2.629
4 days	1.814	2.429
1 week	1.673	1.763
3 weeks	1.776	1.713
2½ years	1.712	1.707

In the solution of $\beta\text{As}_2\text{O}_3$, octahedral crystals were deposited on the sides of the vessel after 12 hours, which continued to increase. There was no such deposit in the case of $\alpha\text{As}_2\text{O}_3$.

From the maxima in the above table, 100 pts. H_2O can dissolve 3.7 pts. $\beta\text{As}_2\text{O}_3$ and 1.7 pts. $\alpha\text{As}_2\text{O}_3$ at ordinary temperature.

100 pts. boiling H_2O dissolve 11.46 pts. $\beta\text{As}_2\text{O}_3$ and 10.140 pts. $\alpha\text{As}_2\text{O}_3$ in 3 hours; 11.86 pts. $\beta\text{As}_2\text{O}_3$ and 10.176 pts. $\alpha\text{As}_2\text{O}_3$ in 12 hours. (Cl. Winkler, J. pr. (2) 31. 247.)

100 pts. H_2O dissolve 1.75 pts. of a third modification (hexagonal crystalline) at ordinary temperature, and 2.75 pts. at 100°. (Claudet, Chem. Soc. (2) 6. 179.)

$\beta\text{As}_2\text{O}_3$ dissolves more rapidly in $\text{HCl} + \text{Aq}$ than $\alpha\text{As}_2\text{O}_3$. (Schultz-Sellac, B. 4. 109.)

While 100 ccm. H_2O dissolve 0.8507 g. $\beta\text{As}_2\text{O}_3$ at 18.5°, 100 ccm. H_2O containing 1.3195 g. HCl dissolve 1.1513 g. $\beta\text{As}_2\text{O}_3$; containing 6.09 g HCl , 1.2724 g. $\beta\text{As}_2\text{O}_3$. (Chodounsky, Listy Chemické, 13. 114.)

100 ccm. H_2O dissolve 1.495 g. As_2O_3 at 15°. (Wood, Chem. Soc. 1908, 93. 412.)

Solubility of crystalline As_2O_3 in H_2O .

1 l. of the sat. solution contains at:

2° 15° 25° 39 8° bpt.
12 006 16 566 20 384 29 302 60 + g. As_2O_3
(Bruner, Z anorg 1903, 37. 456.)

Much more easily sol in many acids than in H_2O . Easily sol. in fuming H_2SO_4 . (Schultz-Sellac.)

100 pts. dilute $\text{H}_2\text{SO}_4 + \text{Aq}$ of various strengths dissolve at t°.

t°	Pts $\beta\text{As}_2\text{O}_3$	t°	Pts $\beta\text{As}_2\text{O}_3$	Ratios of amts. ds- solved at 80°. 18.5°
80°	1 0195	18 5°	0 5422	1.88 : 1
..	1 3664	.	0 7203	1.89 : 1
	1.1933	.	0 6522	1.84 : 1

(Chodounsky, l. c.)

Decomp. by HNO_3 or aqua regia into As_2O_5 . Sol. in $\text{H}_2\text{PO}_4 + \text{Aq}$. (Bergman.)

More sol. in $\text{HCl} + \text{Aq}$ than in H_2SO_4 , or $\text{HNO}_3 + \text{Aq}$, and still less in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. Solubility in $\text{HCl} + \text{Aq}$.

Conc. of $\text{HCl} + \text{Aq}$	Grams of As_2O_3 per 100 cc. of solution
0 46N	1.52
0 98N	1.41
2.03N	1.17
3.13N	1.11
3.81N	1.13
5.32N	2.20
6.50N	5.11
7.85N	12.28
9.17N	18.16

As the concentration of the acid increases, the solubility of the oxide decreases, a minimum being reached when the concentration of the solvent is about 3.2N. Beyond this point, an increase in the concentration of the solvent leads to a corresponding increase in the solubility. (Wood, Chem. Soc. 1908, 93. 413.)

Insol. in liquid CO_2 . (Büchner, Z. phys. Ch. 1906, 54. 674.)

Easily sol. in cold $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$. (Bergman.)

When pulverized, it dissolves in hot $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$, but separates out on cooling.

Easily sol. in hot benzoic acid + Aq .

Sol. in tartaric acid + Aq .

Easily sol. in alkali hydrates, or carbonates + Aq .

Easily sol. in NH_4 arsenite + Aq at $70-80^\circ$, crystallizing out on cooling. (Berzelius)

Sol. in hot $\text{K}_2\text{C}_2\text{O}_4$ + Aq.

Sol. in AsCl_3 . (Penney and Wallace)

More sol. in $\text{Na}_2\text{B}_4\text{O}_7$ + Aq than in H_2O .

Very sl. sol. in absolute alcohol. (Vogel.)

Sol. in 80 pts. highly rectified spirit. (Wenzel)

When 1 pt. powdered As_2O_3 is digested 30 days in 10-40 pts. alcohol, a solution is formed containing 1 pt. As_2O_3 to 60 pts. alcohol; when 1 pt. As_2O_3 is digested with 60-150 pts. alcohol, a solution is formed containing 1 pt. As_2O_3 to 124-140 pts. alcohol. (Fischer.)

Sol. in 70-80 pts. alcohol (Thompson)

Alcohol dissolves 0.446 pt. $\beta\text{As}_2\text{O}_3$ (Rose, A. Phys. (1) 52. 455)

100 pts. alcohol dissolve pts. As_2O_3 :

Vol. % of alcohol	$\alpha\text{As}_2\text{O}_3$ at 15°	$\alpha\text{As}_2\text{O}_3$ at b. pt. of alcohol	$\beta\text{As}_2\text{O}_3$ at 15°
56	1 680	4 895	0 504
79	1.430	4 551	0 540
84			0 565
86	0 715	3 197	
88			0 717
100	0 025	3 402	1.060

(Gurardin, J. Pharm. (3) 46. 269.)

100 pts. absolute alcohol dissolve 0.446 pt. $\beta\text{As}_2\text{O}_3$ in $2\frac{1}{4}$ years. (Winkler, J. pr. (2) 31. 347.)

Nearly insol. in ether.

100 pts. ether dissolve 0.454 pt. $\beta\text{As}_2\text{O}_3$. (Winkler.)

Ether extracts 1 mg. As_2O_3 from sat. As_2O_3 + Aq for every 15 cc. ether used; less is extracted when the solution is acidified with HCl , and almost none if acidified with H_2SO_4 or $\text{H}_2\text{C}_4\text{O}_6$. (Selmi, B. 13. 206.)

$\alpha\text{As}_2\text{O}_3$ is sol. in 50 pts. boiling nitrobenzol. $\beta\text{As}_2\text{O}_3$ is insol. in boiling nitrobenzol. (Auerbach, Z. anorg. 1903, 37. 353.)

$\beta\text{As}_2\text{O}_3$ dissolves in oil of turpentine, but $\alpha\text{As}_2\text{O}_3$ is insol. therein. $\alpha\text{As}_2\text{O}_3$ is very sl. sol. in benzene or petroleum ether, but more sol. in methyl alcohol, ethyl alcohol, ether, or chloroform. (Selmi.)

100 pts. CS_2 dissolve 0.001 pt. $\beta\text{As}_2\text{O}_3$ in $2\frac{1}{4}$ years. (Winkler.)

Sl. sol. in the fatty oils.

1000 pts. castor-oil dissolve 1.33 pts. As_2O_3 at ordinary temperature, and 9 pts. at boiling temperature. 1000 pts. other oils dissolve 0.6-0.8 pt. As_2O_3 in the cold, and about 1.7 pts. on boiling. (Berzelius.)

Insol. in chinoline or aniline. (Hoffmann, A. ch. (3) 9. 143, 169.)

Moderately sol. in chinolin. (Beckmann and Gabel, Z. anorg. 1906, 51. 236.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329); (Eidmann, C. C. 1899, II. 1014.)

Sol. in amyl alcohol and is divided between it and H_2O in the constant ratio of 1 : 5.47 at 25° . (Auerbach, Z. anorg. 1903, 37. 376.)

Min. *Arsenolite*.

Arsenic trioxide pentoxide, $3\text{As}_2\text{O}_3$, $2\text{As}_2\text{O}_5$ + $3\text{H}_2\text{O}$.

Decomp. by H_2O . (Joly, C. R. 100. 1221.)

$2\text{As}_2\text{O}_3$, As_2O_3 + H_2O . Decomp. by H_2O . (Joly.)

As_2O_3 , As_2O_3 + H_2O . (Joly.)

Arsenic tetroxide, As_2O_4 .

Sl. sol. in H_2O from which it is partially pptd. by alcohol. More easily sol. in alkali carbonates or HCl + Aq. Most easily sol. in NaOH or KOH + Aq. (Herbst, Dissert. 1894)

Arsenic pentoxide, As_2O_5 .

Deliquescent in moist air; slowly sol. in H_2O , forming H_3AsO_4 , which see. Easily sol. in alcohol, much more sol. in alcohol than As_2O_3 . Very sl. sol. in the fatty oils, 100 pts. of oil dissolving 0.2 pt. As_2O_5 in the cold, and 1 pt. with partial decomp. on boiling. (Berzelius)

1000 pts. boiling poppy-oil dissolve 27 pts. As_2O_5 ; 1000 pts. boiling castor-oil dissolve 34 pts. As_2O_5 . (Heimpel and Grundner.)

+ $4\text{H}_2\text{O}$. Solubility in H_2O at t° .

t°	Pts. H_3AsO_4 in 100 pts. solution	t°	Pts. H_3AsO_4 in 100 pts. solution
-55°	69.9	-5°	80.0

140	96.8

(Menzies and Potter, J. Am. Chem. Soc. 1912, 34. 1464.)

$\text{As}_2\text{O}_3 + 4\text{H}_2\text{O}$ and $3\text{As}_2\text{O}_3 + 5\text{H}_2\text{O}$ are the only hydrates that can be isolated. (Menzies and Potter.)

See also Arsenic Acid.

Arsenic trioxide, with alkali haloid.

See Arsenite, alkali haloid.

Arsenic sulphur trioxide, $\text{As}_2\text{O}_3, \text{SO}_3$

Deliquescent; decomp. by H_2O . (Adie, Chem. Soc. 55. 157.)

$\text{As}_2\text{O}_3, 2\text{SO}_3$. As above. (Adie.)

$\text{As}_2\text{O}_3, 3\text{SO}_3$. (Weber, B. 19. 3136.)

$\text{As}_2\text{O}_3, 4\text{SO}_3$. As above (Adie)

$\text{As}_2\text{O}_3, 6\text{SO}_3$. (Weber)

$\text{As}_2\text{O}_3, 8\text{SO}_3$ As above. (Adie.)

Arsenic oxychloride, etc.

See Arsenyl chloride, etc.

Arsenic phosphide, AsP .

Decomp. by H_2O Not attacked by cold H_2SO_4 or HCl , and only sl sol therein on warming Easily decomp. by HNO_3 , KOH , NaOH , $\text{BaO}_2\text{H}_2 + \text{Aq}$. Insol in alcohol, ether, chloroform; sl. sol. in CS_2 .

$\text{P}_2\text{As}_2\text{O}_3$. Product of action of H_2O on above compound, which it resembles. (Janowsky, B. 6. 216.)

Arsenic monoselenide, As_2Se .

Insol. in most organic and inorganic solvents. Sol. very slowly in conc HCl and H_2SO_4 . Sol in boiling alkali hydroxides + Aq . (Szarvasy, B. 1897, 30. 1245)

Arsenic triselenide, As_2S_3 .

Partially sol. in $\text{KOH} + \text{Aq}$ if boiled with it for a long time. (Uelsmann, A. 116. 123.)

Arsenic pentaselenide, As_2Se_5 .

Insol. in most solvents, as conc. HCl . Sol in alkali hydrates and sulpho-hydrates + Aq . (Szarvasy, B. 1895, 28. 2655-2656.)

Insol. in H_2O , in dil acids and in conc. HCl Sl. sol. in warm $\text{HNO}_3 + \text{Aq}$. Oxidized by cold fuming HNO_3 . Sol. in alkalies and in hot alkali carbonates + Aq . Insol. in alcohol, ether, CS_2 , etc. (Glever, Z. anorg. 1895, 10. 129.)

Arsenic selenosulphide.

See Arsenic sulphoselenide.

Arsenic sulphide, As_2S_3 .

Ppt. Insol. in NH_4OH or in colorless $(\text{NH}_4)_2\text{S} + \text{Aq}$. Sol. in yellow $\text{NH}_4\text{SH} + \text{Aq}$ (Scott, Chem. Soc. 1900, 77. 652.)

Arsenic disulphide, As_2S_2 .

Min. *Realgar*. Difficultly sol. in alkali sulphides + Aq . Partly dissolved by $\text{KOH} + \text{Aq}$ with decomposition. Sol. at 150° in a sealed tube in $\text{NaHCO}_3 + \text{Aq}$, and crystallizes out on cooling. (Senarmont, A. ch. (3) 32. 158.)

Arsenic trisulphide, As_2S_3 .

Insol. in H_2O when prepared in the dry way, but when prepared moist is very liable to go into the colloidal modification mentioned below. Insol in H_2O containing H_2SO_4 , HNO_3 , HCl , $\text{H}_2\text{C}_2\text{O}_4$, $\text{HC}_2\text{H}_3\text{O}_2$, $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$, CO_2 , NH_4Cl , KNO_3 , $(\text{NH}_4)_2\text{SO}_4$, MgSO_4 . (Bontigny.)

Insol. in H_2O . Traces are dissolved by $\text{H}_2\text{S} + \text{Aq}$. Sl. decomp. by boiling with H_2O , or long contact with cold H_2O . (Fresenius.)

1 l H_2O dissolves 2.1×10^{-6} mols. pptd. As_2S_3 at 18° . (Weigel, Z. phys. Ch 1907, 58. 294.)

Insol. in dil. acids. Insol. in cold, and scarcely attacked by hot conc $\text{HCl} + \text{Aq}$.

Easily decomp. by HNO_3 or aqua regia

Easily sol in cold KOH , NaOH , or $\text{NH}_4\text{OH} + \text{Aq}$, also in alkali carbonates, or sulphates + Aq .

Sol. in hot $\text{KHSO}_3 + \text{Aq}$.

Sol in citric acid, and alkali citrates + Aq . (Spiller)

Slowly sol. in cold 2% $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$. Easily sol on heating. (Materne, C. C. 1906, II. 557.)

Insol in CS_2 .

Min. *Orpiment*.

As_2S_3 may also be obtained in a colloidal form, sol. in H_2O . Sat solution contains 34.46% As_2S_3 ; it is decomp. by standing, but may be boiled without undergoing decomposition; most acids and many salts ppt. As_2S_3 (Schulze, J. pr. (2) 25. 431.)

The following solutions cause pptn. of As_2S_3 in a solution of the colloidal modification, when added in the given state of dilution:—

$\text{HCl} + \text{Aq}$. . .	1 : 555
$\text{HNO}_3 + \text{Aq}$. . .	1 : 276
$\text{H}_2\text{SO}_4 + \text{Aq}$. . .	1 : 255
$\text{H}_2\text{SO}_3 + \text{Aq}$. . .	1 : 138
$\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$. . .	1 : 65
$\text{H}_3\text{PO}_4 + \text{Aq}$. . .	1 : 26
$\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. . .	1 : 0 18
$\text{K}_2\text{SO}_4 + \text{Aq}$. . .	1 : 76
$\text{Na}_2\text{SO}_4 + \text{Aq}$. . .	1 : 129
$(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$. . .	1 : 188

K ₃ Fe(CN) ₆ +Aq . . .	1 : 81

Cold conc. solutions of boric, arsenious, tartaric, benzoic, and salicylic acids, also cane sugar, or chloral hydrate cause no pptn. Absolute alcohol and glycerine may also be mixed with the solutions without causing pptn. (Schulze, J. pr. (2) 25. 442.)

+6H₂O; decomp. completely into As₂S₃ under a pressure of 6000 to 7000 atmos. (Spring, Z. anorg. 1895, 10. 186.)

Arsenic pentasulphide, As₂S₅.

Insol. in H₂O Sol. in NH₄OH, KOH, NaOH+Aq, and solutions of alkali sulphides and carbonates. Sol in BaO₂H₂, and CaO₂H₂+Aq.

Sol. in citric acid, and alkali citrates+Aq. (Spiller.)

Alcohol dissolves out S on boiling. (Berselius.)

Sol. in alkali arsenates+Aq. (Nilson, J. pr. (2) 14. 155.)

+H₂O. (Nilson, l.c.)

Arsenic trisulphide, with M₂S.

See Sulpharsenites, M.

Arsenic pentasulphide, with M₂S.

See Sulpharsenates, M.

Arsenic sulphobromide, AsS₂Br₃=AsSBr+SBr₂.

Decomp. by H₂O. (Hannay, Chem. Soc. 33. 284.)

Arsenic sulphochloride, As₂S₃Cl.

Slowly decomp. by boiling H₂O. Sol. in hot AsCl₃ without decomp. (Ouvrard, C. R. 116. 1516.)

AsS₂Cl. Decomp. by H₂O. Sol. in NH₄OH, and alkali carbonates+Aq. (Ouvrard.)

AsS₂Cl. Slowly decomp. by boiling H₂O. Sol. in alkali carbonates and in NH₄OH+Aq. (Ouvrard, C. R. 1893, 116. 1517.)

Arsenic sulphoiodide, AsSI.

Insol. in alcohol, chloroform or carbon disulphide. (Schneider, J. pr. (2) 23. 486.)

Formula is probably As₂S₃, AsI₃.

Slowly attacked by HCl+Aq; somewhat more easily by HNO₃+Aq Easily sol. in KOH, or NH₄OH+Aq (Schneider, J pr (2) 34. 505.)

2AsI₃, SI₆. Decomp. on air. (Schneider, J. pr (2) 36. 509)

As₂S₃I₂. Less sol. in CS₂ than AsI₃. (Ouvrard, C. R. 117. 107.)

As₂SI₄. (Ouvrard.)

See also Arsenyl sulphoiodide.

Arsenic sulphoselenide, As₂SeS₂.

Easily sol. in cold NH₄SH+Aq. Nearly completely sol in (NH₄)₂CO₃+Aq. (v. Gerichten, B. 7. 29.)

As₂SSe₂. More difficultly sol. than the preceding comp. in NH₄SH+Aq. (v. Gerichten.)

As₂Se₂S₃. Sp. gr.=6.402 at ca 750°.

Insol. in most solvents. Easily sol. in alkali hydroxides and sulphides+Aq. (Szarvasy, B. 1895, 28. 2661.)

As₂Se₂S₂. Sp. gr.=11.35 at 550-600°.

Insol. in most solvents Easily sol. in alkali hydroxides and sulphides+Aq. (Szarvasy, B. 1895, 28. 2659.)

Arsenic telluride, As₂Te₂.

Sol. in HNO₃ and HNO₃+HCl+Aq. (Oppenheim, J. pr 71. 266.)

As₂Te₃. As above. (Oppenheim.)

Arsenic acid, anhydrous, As₂O₅.

See Arsenic pentoxide.

Metaarsenic acid, HAsO₃.

Slowly sol in cold, quite easily sol. in hot H₂O, with considerable evolution of heat, and conversion into H₃AsO₄. (Kopp, A. ch. (3) 48. 196.)

Orthoarsenic acid, H₃AsO₄.

Sol. in H₂O, with absorption of heat.

1 pt. As₂O₅ dissolves in 0.405 pt. H₂O at 12.5°, or 100 pts. H₂O dissolve 244.81 pts. As₂O₅ at 12.5°. (Vogel)

Sol. in 0.5 pt. H₂O. (Thénard.)

Sol. in 6 pts. cold H₂O, and more quickly in 2 pts. hot H₂O. (Buchholz.)

100 pts. H₂O at 15.56° dissolve 150 pts. As₂O₅. (Ure's Dict.)

H₃AsO₄+Aq sat. at 15° contains 15% As₂O₅.

Sp. gr. of H₃AsO₄+Aq at 15°. a=sp. gr. if % is As₂O₅; b=sp. gr. if % is H₃AsO₄.

(Kopp, calculated by Gerlach, Z. anal. 27. 316.)

See also Arsenic pentoxide.

Pyroarsenic acid, $\text{H}_4\text{As}_2\text{O}_7$.

Very deliquescent; easily sol. in H_2O with evolution of much heat, and conversion into H_3AsO_4 .

Arsenates.

Arsenates of the alkali metals, and acid arsenates of the alkaline-earth metals are sol. in H_2O . Neutral and basic arsenates are easily sol. in mineral acids, including H_3AsO_4 ;

less sol in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. The neutral alkaline-earth arsenates are less sol in $\text{NH}_4\text{OH} + \text{Aq}$ than in H_2O , but more sol. in $\text{NH}_4\text{Cl} + \text{Aq}$ (Field). The alkali arsenates are sol. in hot glycerine (Lefèvre, C. R. 108. 1058)

Aluminum arsenate, $\text{Al}_2(\text{AsO}_4)_2$

Ppt. Insol in H_2O , difficultly sol in acids. (Coloriano, C. R. 103. 273)

Insol. in acetone (Naumann, B. 1904, 37. 4328)

$2\text{Al}_2\text{O}_3, 3\text{As}_2\text{O}_5$. Nearly unattacked by boiling H_2O , sol in dil acids. (Lefèvre, A. ch. (6) 27. 5)

Aluminum potassium arsenate, $2\text{Al}_2\text{O}_3, 3\text{K}_2\text{O}, 3\text{As}_2\text{O}_5$. (Lefèvre.)

Aluminum sodium arsenate, $2\text{Al}_2\text{O}_3, 3\text{Na}_2\text{O}, 3\text{As}_2\text{O}_5$ (Lefèvre)

Ammonium arsenate, $(\text{NH}_4)_3\text{AsO}_4 + 3\text{H}_2\text{O}$

Difficultly sol. in H_2O . Less sol in H_2O than $(\text{NH}_4)_2\text{HAsO}_4$. (Mitscherlich.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 826.)

Ammonium hydrogen arsenate, $(\text{NH}_4)_2\text{HAsO}_4$

Effloresces, giving off NH_3 ; more sol. in H_2O than $(\text{NH}_4)_3\text{AsO}_4$. (Salkowsky, J. pr. 104. 129)

Insol. in acetone. (Eidmann, C C 1899, II. 1014)

Ammonium dihydrogen arsenate, $\text{NH}_4\text{H}_2\text{AsO}_4$

Not efflorescent Very sol. in H_2O .

Ammonium barium arsenate, $\text{NH}_4\text{BaAsO}_4 + \frac{1}{2}\text{H}_2\text{O}$.

Sol. by 10 days' contact in 1391 pts. H_2O ; in 18,832 pts. of a mixture of 1 pt. $\text{NH}_4\text{OH} + \text{Aq}$ and 3 pts. H_2O ; in 227 pts. of a solution of 1 pt. NH_4Cl in 10 pts. H_2O ; and in 2169 pts. of a solution of 1 pt. NH_4Cl in 10 pts. $\text{NH}_4\text{OH} + \text{Aq}$ and 60 pts. H_2O . (Lefèvre, A. ch. 1892, (6) 27. 13.)

$(\text{NH}_4)_2\text{BaH}_2(\text{AsO}_4)_2$. Efflorescent. Insol. in H_2O ; easily sol. in dil. $\text{HNO}_3 + \text{Aq}$. (Bauermann, Arch. Pharm. 36. 36.)

Ammonium calcium arsenate, $\text{NH}_4\text{CaAsO}_4 + \frac{1}{2}\text{H}_2\text{O}$.

1000 pts. pure H_2O dissolve 0.20 pt. this salt; 1000 pts. $\text{NH}_4\text{Cl} + \text{Aq}$ (containing 50 pts. NH_4Cl) dissolve 4.15 pts. this salt; 900 pts. $\text{H}_2\text{O} + 100$ pts. NH_4OH (sp. gr. = 0.880) dissolve 0.01 pt. this salt. (Field, Chem. Soc. 11. 6.)

Soluble by 10 days' contact in 2167 pts. H_2O at 15° ; in 381 pts. $\text{NH}_4\text{Cl} + \text{Aq}$ (1 : 7); in

43478 pts. $\text{NH}_4\text{OH} + \text{Aq}$ (1 : 3); in 10570 pts. $\text{NH}_4\text{Cl} + \text{NH}_4\text{OH} + \text{Aq}$ (1 : 10 : 60). (Lefèvre, A. ch. 1892, (6) 27. 13)

+6 H_2O . Sol. in hot, very sl. sol. in cold H_2O , sl. sol. in NH_4Cl , and $\text{NH}_4\text{OH} + \text{Aq}$. (Wach, Schw. J. 12. 285)

+7 H_2O (Bloxam, C. N. 54. 163)

$(\text{NH}_4)_2\text{CaH}_2(\text{AsO}_4)_2$. Efflorescent. Insol in H_2O ; easily sol. in dil. $\text{HNO}_3 + \text{Aq}$. (Bauermann, Arch. Pharm. 36. 36.)

$(\text{NH}_4)_3\text{Ca}_2\text{H}_2(\text{AsO}_4)_3 + 3\text{H}_2\text{O}$.

$(\text{NH}_4)_3\text{Ca}_2\text{H}_2(\text{AsO}_4)_3 + 3\text{H}_2\text{O}$ (Bloxam, C. N. 54. 163.)

Ammonium glucinum arsenate, $\text{NH}_4\text{GlAsO}_4 + 4\frac{1}{2}\text{H}_2\text{O}$.

More stable than the corresponding potassium salt. (Bleyer, Z. anorg. 1912, 75. 291.)

Ammonium iron (ferric) dihydrogen arsenate, $\text{NH}_4\text{H}_2\text{AsO}_4, \text{FeAsO}_4$.

Hydrolyzed by H_2O .

Sol. in cold conc. HCl , hot HNO_3 , hot dil. H_2SO_4 , and in hot arsenic acid + Aq containing 75% arsenic pentoxide.

Sol. in hot conc. $\text{NH}_4\text{OH} + \text{Aq}$. Completely hydrolyzed by caustic alkalis.

Insol. in conc. $\text{NH}_4\text{Cl} + \text{Aq}$ and in 50% acetic acid. (Curtman, J. Am. Chem. Soc. 1910, 32. 628)

Ammonium magnesium arsenate, $\text{NH}_4\text{MgAsO}_4$.

Sl. sol. in H_2O . Sol. in acids.

Anhydrous salt is sol. in 2784 pts. H_2O at 15°, in 15,904 pts. $\text{NH}_4\text{OH} + \text{Aq}$ (1 : 3) (0.96 sp. gr.), in 1386 pts. $\text{NH}_4\text{Cl} + \text{Aq}$ (1 : 70); in 886.7 pts. $\text{NH}_4\text{Cl} + \text{Aq}$ (1 : 7); in 3014 pts. NH_4Cl (1 pt) + NH_4OH (0.96 sp. gr.) (10 pts) + Aq (60 pts.); in 32,827 pts. magnesia mixture. (Fresenius, Z. anal. 3. 206.)

Anhydrous salt is sol. in 4389 pts. $\text{NH}_4\text{NO}_3 + \text{Aq}$ (1 : 50); in 2561.5 pts. $\text{KCl} + \text{Aq}$ (1 : 165); in 1422 pts. ammoniacal solution of 3.5 g. tartaric acid in 250 cc. H_2O ; in 933.5 pts. ammoniacal solution of 2.5 g. citric acid in 250 cc. H_2O . (Puller, Z. anal. 10. 62.)

+1 $\frac{1}{2}$ H_2O .

Sol. in 2656 pts. H_2O at 15°; in 15,038 pts. $\text{NH}_4\text{OH} + \text{Aq}$ (1 : 3) (0.96 sp. gr.), in 844 pts. $\text{NH}_4\text{Cl} + \text{Aq}$ (1 : 7); in 1315 pts. $\text{NH}_4\text{Cl} + \text{Aq}$ (1 : 70); in 2871 pts. NH_4Cl (1 pt) + NH_4OH (0.96 sp. gr.) (10 pts) + Aq (60 pts.). (Fresenius)

1000 pts. pure H_2O dissolve 0.14 pt. salt; 1000 pts. $\text{NH}_4\text{Cl} + \text{Aq}$ (containing 100 pts. NH_4Cl) dissolve 0.95 pt. salt, 900 pts. $\text{H}_2\text{O} + 100$ pts. NH_4OH (sp. gr. 0.880) dissolve 0.07 pt. salt (Field, Chem. Soc. 11. 6)

+6 H_2O . Sl. efflorescent. Sl. sol. in H_2O .

Very sl. sol. in $\text{NH}_4\text{OH} + \text{Aq}$.

Solubility of $\text{NH}_4\text{MgAsO}_4 + 6\text{H}_2\text{O}$ in H_2O and NH_4 salts + Aq .
Grams salt dissolved in 100 g. solvent.

t°	H_2O	5% $\text{NH}_4\text{NO}_3 + \text{Aq}$	5% $\text{NH}_4\text{Cl} + \text{Aq}$	$\text{NH}_4\text{OH} + \text{Aq}$ 1 pt. $\text{NH}_4\text{OH} + \text{Aq}$ (0.96) + 4 pts H_2O	4% $\text{NH}_4\text{OH} + \text{Aq} + 5\%$ $\text{NH}_4\text{Cl} + \text{Aq}$	4% $\text{NH}_4\text{OH} + \text{Aq} + 10\%$ $\text{NH}_4\text{Cl} + \text{Aq}$

(Wenger, Dissert. 1911.)

Ammonium manganous arsenate, $\text{NH}_4\text{MnAsO}_4 + 6\text{H}_2\text{O}$.

Nearly insol. in cold H_2O ; easily sol. in dil. acids; insol. in alcohol. (Otto, J. pr. 2. 414.)

Ammonium sodium arsenate, $\text{NH}_4\text{NaHASO}_4 + 4\text{H}_2\text{O}$.

Sol. in H_2O . (Uelsmann, Zeit. f. ges. Nat. 23. 347.)

Ammonium sodium hydrogen arsenate, $(\text{NH}_4)_2\text{Na}_2\text{H}_6(\text{AsO}_4)_4 + 6\text{H}_2\text{O}$.

Sol. in H_2O . (Filhol and Senderens, C. R. 94. 649.)

Ammonium strontium arsenate, $\text{NH}_4\text{SrAsO}_4 + \frac{1}{2}\text{H}_2\text{O}$.

Sol. by 10 days' contact in 3229 pts. H_2O , in 11,586 pts. dil. $\text{NH}_4\text{OH} + \text{Aq}$, in 199 pts.

of a mixture of 1 pt. NH_4Cl in 7 pts. H_2O , and in 1519 pts. of a solution of 1 pt. NH_4Cl in 10 pts. $\text{NH}_4\text{OH} + \text{Aq}$ and 60 pts. H_2O . (Lefèvre, A. ch. 1892, (6) 27. 13.)

Ammonium uranyl arsenate, $\text{NH}_4(\text{UO}_2)\text{AsO}_4 + x\text{H}_2\text{O}$.

Insol. in H_2O , $\text{HC}_2\text{H}_3\text{O}_2$, and saline solutions as $\text{NH}_4\text{Cl} + \text{Aq}$; sol. in mineral acids. (Puller, Z. anal. 10. 72.)

Ammonium vanadium arsenate,

$\text{NH}_4(\text{VO}_2)_2\text{AsO}_4$, and $(\text{NH}_4)_2\text{HASO}_4 + 2(\text{VO}_2)_2\text{H}_2\text{AsO}_4$.

See Arseniovanadate, ammonium.

Ammonium arsenate tellurate.

See Arseniotellurate, ammonium.

Antimony arsenate (?)

Insol. in H_2O ; insol. in acids after ignition, but when fresh is sol. in conc. boiling $HCl + Aq$, and sl. sol. in $HNO_3 + Aq$. (Dumas)

Barium arsenate, $Ba_3(AsO_4)_2$

1000 pts. pure H_2O dissolve 0.55 pt $Ba_3(AsO_4)_2$, 1000 pts. $NH_4Cl + Aq$ (containing 50 pts. NH_4Cl) dissolve 1.95 pts. $Ba_3(AsO_4)_2$, 900 pts. $H_2O + 100$ pts. $NH_4OH + Aq$ (sp. gr. = 0.88) dissolve 0.03 pt. $Ba_3(AsO_4)_2$. (Field, Chem. Soc. 11. 6)

Sol. in cold HNO_3 , and $HCl + Aq$ (Berzelius); $H_2C_2H_4O_6$, and $HC_2H_3O_2 + Aq$. (Anthon.)

Solubility in H_2O is not increased by presence of NH_4 , Na, or K salts. (Laugier.)

Not pptd. in presence of Na citrate (Spiller)
+ $1\frac{1}{2}H_2O$. (Salkowsky, J. pr. 104. 129)

Barium hydrogen arsenate, $BaHAsO_4 + \frac{1}{2}H_2O$

Very sl. sol. in H_2O , but decomp. thereby into $Ba_3(AsO_4)_2$ and $BaH_4(AsO_4)_2$ (Berzelius.)

Sl. sol. in cold acids
+ H_2O . Sl. sol. in either $BaCl_2 + Aq$ or $Na_2HAsO_4 + Aq$ (Maumené, J. B. 1864. 237.)

Barium tetrahydrogen arsenate, $BaH_4(AsO_4)_2 + 2H_2O$

Easily sol. in H_2O . (Setterberg, Berz. J. B. 26. 206.)

Difficultly sol. in little, but decomp. by much H_2O . Easily sol. in $HCl + Aq$, less easily in $HC_2H_3O_2 + Aq$ (Hormann, Dissert, 1879.)

Barium arsenate, acid, $BaO, 2As_2O_5 + 4H_2O$

Very sl. sol. in H_2O . (Mitscherlich)

Barium pyroarsenate, $Ba_2As_2O_7$

Insol. in H_2O , but decomp. thereby into $BaHAsO_4 + H_2O$. (Lefèvre, C. R. 108. 1058.)

Barium potassium arsenate, $BaKAsO_4$

Sl. decomp. by cold H_2O , rapidly sol. in dil. acids. (Lefèvre, A. ch. (6) 27. 1.)

Barium sodium arsenate, $BaNaAsO_4 + 9H_2O$

(Joly, C. R. 1887, 104. 1702.)

Barium arsenate chloride, $3Ba_3(AsO_4)_2, BaCl_2$

Insol. in H_2O ; sol. in dil. $HNO_3 + Aq$. (Lechartier, C. R. 65. 172.)

Bismuth arsenate, basic, $BiAsO_4, 3Bi_2O_3$

Insol. in H_2O . Sol. in mineral acids. (Cavazzi, Gazz. ch. it. 14. 289)

$5Bi_2O_3, 2As_2O_5 + 8H_2O$. Min. *Rhagite*
Easily sol. in $HCl + Aq$; sl. sol. in $HNO_3 + Aq$.

Bismuth arsenate, $BiAsO_4 + \frac{1}{2}H_2O$

Insol. in H_2O Insol. in $HNO_3 + Aq$ in presence of H_3AsO_4 , or alkali arsenates + Aq ; sol. in $HCl + Aq$. (Salkowsky, J. pr. 104. 129)

Not wholly insol. in $HNO_3 + Aq$. (Schneider, J. pr. (2) 20. 418)

Very sol. in $H_3AsO_4 + Aq$. (Dumas.)

Insol. in $Bi(NO_3)_3 + Aq$. (Dumas.)

Sol. in $Bi(NO_3)_3 + Aq$. (Salkowsky.)

Insol. in conc. $Bi(NO_3)_3 + Aq$ containing a small quantity of HNO_3 (Schneider.)

Bismuth copper arsenate, $Bi_2Cu_{20}As_{10}H_{44}O_{70} = Bi_2O_3, 20CuO, 5As_2O_5 + 22H_2O$

Min. *Mizate*. Decomp. by dil. $HNO_3 + Aq$ into insol. $BiAsO_4$, and $Cu_3(AsO_4)_2$, which goes into solution. (Dana.)

Bismuth uranyl arsenate, $Bi_2(AsO_4)_2, 8BiO_3H_3, (UO_2)_3(AsO_4)_2$

Min. *Walpurgite*.

Cadmium arsenate, $Cd_3(AsO_4)_2$

Ppt. (Salkowsky, J. pr. 104. 129.)

$2CdO, As_2O_5$. (Lefèvre, C. R. 110. 405.)

$5CdO, 2As_2O_5 + 5H_2O$ Ppt. (Salkowsky.)

Cadmium pyroarsenate, $Cd_2As_2O_7$

(de Schulten.)

Cadmium hydrogen arsenate, $CdHAsO_4 + H_2O$

Decomp. by H_2O . (Demel, B. 12. 1279.)

$CdH_4(AsO_4)_2 + 2H_2O$. Decomp. by excess of H_2O . (de Schulten, Bull. Soc. (3) 1. 473.)

Cadmium potassium arsenate, $2CdO, K_2O, As_2O_5$

(Lefèvre, C. R. 110. 405)

Cadmium sodium arsenate, $CdO, 2Na_2O, As_2O_5$

Slowly sol. in dil. acids (Lefèvre, C. R. 110. 405.)

$2CdO, 4Na_2O, 3As_2O_5$. (Lefèvre.)

Cadmium arsenate bromide, $3Cd_3(AsO_4)_2, CdBr_2$

Sol. in very dil. $HNO_3 + Aq$. (de Schulten, Bull. Soc. (3) 1. 472.)

Cadmium arsenate chloride, $3Cd_3(AsO_4)_2, CdCl_2$

Sol. in very dil. $HNO_3 + Aq$. (de Schulten.)

Cæsium arsenate, $Cs_2O, 2As_2O_5 + 5H_2O$

Ppt. (Ephraim, Z. anorg. 1910, 65. 246.)

Calcium arsenate, $Ca_3(AsO_4)_2 + 3H_2O$

Ppt. Insol. in H_2O ; sol. in $H_3AsO_4 + Aq$. (Kotschoubey, J. pr. 49. 182.)

Calcium pyroarsenate, $Ca_2As_2O_7$

Slowly decomp. by cold H_2O into $CaHAsO_4 + \frac{1}{2}H_2O$. (Lefèvre.)

Calcium hydrogen arsenate, $\text{CaHAsO}_4 + \frac{1}{2}\text{H}_2\text{O}$.

Insol. in H_2O . (Debray, A. ch. (3) 61. 419.)
+ H_2O . Min. *Hardingite*. Easily sol. in acids

+ $2\frac{1}{2}\text{H}_2\text{O}$. Min. *Pharmacolite*. Easily sol in acids.

+ $3\text{H}_2\text{O}$. Insol in H_2O ; sol. in HCl , HNO_3 , or $\text{H}_3\text{AsO}_4 + \text{Aq}$; also in $(\text{NH}_4)_2\text{SO}_4$, NH_4NO_3 , $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$, and $\text{NH}_4\text{Cl} + \text{Aq}$ (Pfaff)

Calcium tetrahydrogen arsenate,
 $\text{CaH}_4(\text{AsO}_4)_2$.

Sol. in H_2O . (Graham.)
+ H_2O . Sl. sol in H_2O . Decomp. by much hot H_2O into H_3AsO_4 and $\text{Ca}_3(\text{AsO}_4)_2$ (Hormann, Dissert. 1879.)

Calcium iron (ferric) arsenate, 6CaO , $4\text{Fe}_2\text{O}_3$, $5\text{As}_2\text{O}_5 + 15\text{H}_2\text{O}$ (?).

Min. *Arseniosiderite*. Sol in acids

Calcium magnesium arsenate, $\text{Ca}_5\text{H}_2(\text{AsO}_4)_4$,
 $\text{Mg}_5\text{H}_2(\text{AsO}_4)_4 + 10\text{H}_2\text{O}$.

Min. *Picropharmacolite*. Easily sol. in acids.

$\text{Ca}_3(\text{AsO}_4)_2$, $\text{Mg}_3(\text{AsO}_4)_2$. Sol in $\text{HNO}_3 + \text{Aq}$. (Kuhn.)

Min. *Berzelinite*. Sol. in $\text{HNO}_3 + \text{Aq}$.
 $\text{Ca}_8\text{Mg}_6\text{H}_{14}(\text{AsO}_4)_{14} + 49\text{H}_2\text{O}$. Min. *Wapplerite*.

Calcium potassium arsenate, CaKAsO_4 .

(Lefèvre, A. ch. (6) 27. 5.)

Calcium sodium arsenate, CaNaAsO_4

(Lefèvre, A. ch. (6) 27. 1.)
 4CaO , $2\text{Na}_2\text{O}$, $3\text{As}_2\text{O}_5$. Not attacked by boiling H_2O ; easily sol in dil. acids. (Lefèvre.)

Calcium uranyl arsenate, $\text{Ca}(\text{UO}_2)_2(\text{AsO}_4)_2 + 8\text{H}_2\text{O}$.

Min. *Uranospinité*.

Calcium vanadium arsenate, CaHAsO_4 ,
 $2(\text{VO}_2)\text{H}_2\text{AsO}_4 + 8\text{H}_2\text{O}$.

See *Arseniovanadate*, calcium.

Calcium arsenate chloride, $\text{Ca}_3(\text{AsO}_4)_2$, CaCl_2 .

Insol in H_2O , sol. in dil $\text{HNO}_3 + \text{Aq}$. (Lechartier, C. R. 65. 172.)

$3\text{Ca}_3(\text{AsO}_4)_2$, CaCl_2 . As above. (Lechartier.)

Cerous arsenate, CeHAsO_4 .

Insol. in H_2O . Sol. in arsenic acid + Aq . (Berzelius.)

Ceric hydrogen arsenate, $\text{Ce}(\text{HAsO}_4)_2 + 6\text{H}_2\text{O}$.

Ppt. Insol. in H_2O and dil. acids. (Barbieri, B. 1910, 43. 2216.)

Ceric dihydrogen arsenate, $\text{Ce}(\text{H}_2\text{AsO}_4)_4 + 4\text{H}_2\text{O}$.

Sol. in conc. HNO_3 . (Barbieri l. c.)

Chromic arsenate, $2\text{Cr}_2\text{O}_3$, $3\text{As}_2\text{O}_5$.

Insol. in H_2O and conc. boiling acids. (Lefèvre, A. ch. (6) 27. 5.)

Chromic potassium arsenate, $2\text{Cr}_2\text{O}_3$, $3\text{K}_2\text{O}$, $3\text{As}_2\text{O}_5$.

(Lefèvre.)

Chromic sodium arsenate, $2\text{Cr}_2\text{O}_3$, $3\text{Na}_2\text{O}$, $3\text{As}_2\text{O}_5$.

(Lefèvre.)

Cobaltous arsenate, basic, 4CoO , As_2O_5 .

Easily sol. in acids. (Gentile, J. B. 1851. 359.)

$\text{Co}(\text{CoOH})\text{AsO}_4$. Insol in H_2O ; difficultly sol. in acids. (Coloriano.)

Cobaltous arsenate, $\text{Co}_3(\text{AsO}_4)_2 + 8\text{H}_2\text{O}$.

Ppt. Insol. even in boiling H_2O ; easily sol. in HNO_3 , HCl , and $\text{NH}_4\text{OH} + \text{Aq}$; sol. in $\text{H}_3\text{AsO}_4 + \text{Aq}$ (Proust); sol. in dil. $\text{FeSO}_4 + \text{Aq}$. (Karsten, Pogg. 60. 266.)

Min. *Cobalt bloom*, *Erythrite*. Easily sol. in acids.

5CoO , $2\text{As}_2\text{O}_5 + 3\text{H}_2\text{O}$. Insol in H_2O ; difficultly sol. in acids (Coloriano, C. R. 103. 273.)

2CoO , As_2O_5 . Sl. attacked by boiling H_2O ; easily sol. in dil. acids. (Lefèvre.)

Cobaltous hydrogen arsenate, $\text{CoH}_4(\text{AsO}_4)_2$.

Sol. in H_2C .

Cobaltous potassium arsenate, CoKAsO_4 .

(Lefèvre)

Cobaltous sodium arsenate, CoNaAsO_4 .

(Lefèvre.)

4CoO , $2\text{Na}_2\text{O}$, $3\text{As}_2\text{O}_5$. (Lefèvre.)

Cobaltous vanadium arsenate,

$\text{Co}(\text{VO}_2)_2\text{H}_2(\text{AsO}_4)_2 + 8\text{H}_2\text{O}$.

See *Arseniovanadate*, cobaltous.

Cobaltous arsenate ammonia, $\text{Co}_3(\text{AsO}_4)_2$,
 $\text{NH}_3 + 7\text{H}_2\text{O}$.

(Ducru, A. ch. 1901, (7) 22. 185.)

$\text{Co}_3(\text{AsO}_4)_2$, $2\text{NH}_3 + 6\text{H}_2\text{O}$. (Ducru, l. c.)

$\text{Co}_3(\text{AsO}_4)_2$, $3\text{NH}_3 + 5\text{H}_2\text{O}$. (Ducru, l. c.)

Cuprous arsenate, $2\text{Cu}_2\text{O}$, As_2O_5 .

(Hampe, Dissert. 1874.)

$4\text{Cu}_2\text{O}$, As_2O_5 . (Hampe, l. c.)

Cuprous pyroarsenate, $\text{Cu}_4\text{As}_2\text{O}_7$.

Ppt. Sol. in NH_4OH or $\text{KOH} + \text{Aq}$. (Reichard, B. 1898, 31. 2166.)

Cupric arsenate, basic, 8CuO , $\text{As}_2\text{O}_5 + 12\text{H}_2\text{O}$.

Min. *Chalcophyllite*. Easily sol. in acids and $\text{NH}_4\text{OH} + \text{Aq}$.

6CuO , $\text{As}_2\text{O}_5 + 3\text{H}_2\text{O}$. Min. *Aphanesite*, *Chioclasite*. Sol. in acids and ammonia.

5CuO , $\text{As}_2\text{O}_5 + 2\text{H}_2\text{O}$. Min. *Erinite*. Sol. in $\text{HNO}_3 + \text{Aq}$.

+5H₂O. Min. *Cornwallite*. Sol in acids, and NH₄OH+Aq.

+9H₂O. Min. *Tirolite*.

4CuO, As₂O₅+H₂O. Insol in H₂O. (Debray, A. ch. (3) 61. 423.)

Min. *Olivénite*. Sol in acids, and NH₄OH+Aq; decomp. by hot KOH+Aq.

+7H₂O. Min. *Euchroite* Sol in HNO₃+Aq.

+4½H₂O (Hirsch, C C 1891, I. 15.)

Cupric arsenate, Cu₃(AsO₄)₂.

Insol in H₂O. Easily sol. in HCl+Aq; sl. sol. in other acids; sol. in NH₄OH+Aq. (Coloriano, C. R. 103. 273)

Insol in methyl acetate. (Naumann, B. 1909, 42. 3790)

Insol. in liquid NH₃. (Franklin, Am. Ch. J. 1898, 20. 827.)

+4H₂O. Decomp. by hot H₂O. (Debray.)

+5H₂O. Min. *Trichalcite*. Easily sol in cold HCl+Aq.

Cupric arsenate, acid, 5CuO, 2As₂O₅.

Sol. in H₂SO₄+Aq. (Vogel)

+3H₂O. (Salkowsky.)

+8, 9½, and 12½H₂O (Hirsch.)

CuHAsO₄+H₂O. Insol. in H₂O. (Coloriano.)

+1½H₂O Insol in H₂O. (Debray, A. ch. (3) 61. 419)

8CuO, 3As₂O₅+12H₂O. (Hirsch.)

Cupric lead arsenate, 3CuO, PbO, As₂O₅+2H₂O.

Min. *Bayldontite*. Nearly insol. in HNO₃+Aq.

Cupric potassium arsenate, CuKAsO₄.

Slowly sol. in NH₄OH+Aq; easily sol. in acids. (Lefèvre, A. ch. (6) 27. 5.)

8CuO, K₂O, As₂O₅. Easily sol. in dil. acids. (Lefèvre)

Cupric sodium arsenate, CuNaAsO₄.

(Lefèvre.)

3CuO, Na₂O, 2As₂O₅. Very sol in dil. acids. (Lefèvre.)

2Cu₃(AsO₄)₂, NaH₂AsO₄+5H₂O. Ppt. (Hirsch, C. C. 1891, I. 15.)

6Cu₃(AsO₄)₂, 2NaH₂AsO₄, Na₂HAsO₄+13½H₂O, or 16H₂O. Ppt. (Hirsch.)

3Cu₃(AsO₄)₂, Na₂HAsO₄+9½H₂O. Ppt. (Hirsch.)

4Cu₃(AsO₄)₂, Na₂HAsO₄+11H₂O. Ppt. (Hirsch.)

Cupric uranyl arsenate, Cu(UO₂)₂(AsO₄)₂+8H₂O.

(Werther, A. 68. 312.)

Min. *Zeunerite*.

Cupric vanadium arsenate,

Cu(VO₂)₂H₂(AsO₄)₂+3H₂O.

See *Arseniovanadate, cupric*.

Cupric arsenate ammonia, Cu₃(AsO₄)₂, 3NH₃+4H₂O.

Insol. in cold or hot H₂O. (Damour, J. pr. 37. 485)

2CuO, As₂O₅, 4NH₃+3H₂O. Decomp. by H₂O. (Schiff, A. 123. 42.)

Cupric arsenate calcium carbonate, 5CuO, As₂O₅, CaCO₃+4H₂O, or 9H₂O.

Min. *Tyrolite*. Easily sol in acids, and NH₄OH+Aq.

Cupric arsenate sodium chloride, 2Cu₃(AsO₄)₂, NaCl+7½H₂O.

Decomp. by hot H₂O. (Hirsch, Dissert. 1891.)

3Cu₃(AsO₄)₂, 2NaCl+13½H₂O

+17½H₂O. (Hirsch, l.c.)

5Cu₃(AsO₄)₂, 3NaCl+23H₂O. (Hirsch.)

Didymium arsenate, Di₂H₃(AsO₄)₃.

Ppt. Insol. in H₂O; sl. sol in weak acids. (Marignac, A. ch. (3) 38. 164)

5Di₂(AsO₄)₂, As₂O₅+3H₂O. Ppt.

Glucinum arsenate, Gl₃(AsO₄)₂.

Insol. in H₂O; sol. in H₃AsO₄+Aq. (Berzelius)

Glucinum hydrogen arsenate, GlHAsO₄.

Obtained in impure state by heating As₂O₅ with Gl(OH)₃ in a sealed tube at 220°. (Bleyer, Z. anorg. 1912, 75. 287)

Glucinum tetrahydrogen arsenate,

GlH₄(AsO₄)₂

Very hygroscopic. (Bleyer, Z. anorg. 1912, 75. 287.)

Glucinum potassium arsenate, KGlAsO₄, ½GlO+5H₂O.

Unstable. Amorphous. Easily hydrolyzed, giving more basic salts. (Bleyer, Z. anorg. 1912, 75. 289.)

Glucinum sodium arsenate, NaGlAsO₄, ½GlO+6H₂O.

Unstable. Easily hydrolyzed. (Bleyer, Z. anorg. 1912, 75. 290.)

Iron (ferrous) arsenate, Fe₃(AsO₄)₂+6H₂O (?).

Ppt. Sl. sol. in NH₄OH+Aq. Insol. in (NH₄)₂AsO₄+Aq or other NH₄ salts+Aq. (Wittstein.)

+8H₂O. Min. *Symplectite*. Sol. in HCl+Aq.

Iron (ferric) arsenate, basic, 16Fe₂O₃, As₂O₅+24H₂O.

Insol. in NH₄OH+Aq. (Berzelius.)

2Fe₂O₃, As₂O₅+12H₂O. Insol. in NH₄OH+Aq.

3Fe₂O₃, 2As₂O₅

3Fe₃(AsO₄)₂, Fe₂O₃H₂+12H₂O. Min.

Pharmacosiderite. Easily sol. in acids; decomp. by KOH+Aq.

Iron (ferric) arsenate, $\text{Fe}_2\text{O}_3, \text{As}_2\text{O}_5$.

Ppt. Insol. in H_2O . Decomp. by hot H_2O . Sol in HCl , H_2SO_4 and HNO_3 . (Metzke, Z. anorg. 1898, 19. 473.)

+ $4\text{H}_2\text{O}$. Min. *Scorodite*. Easily sol. in HCl +Aq; insol. in HNO_3 +Aq.

+ $8\text{H}_2\text{O}$. Insol. in H_2O . When freshly pptd., sol. in NH_4OH +Aq. Sol. in HCl , or HNO_3 +Aq. Insol. in $\text{HC}_2\text{H}_3\text{O}_2$, or NH_4 salts+Aq. (Wittstein.)

Sol in warm H_2SO_4 +Aq or $(\text{NH}_4)_2\text{SO}_4$ +Aq. (Berthier, A. ch. (3) 7. 79.)

Iron (ferric) arsenate, acid, $\text{Fe}_2\text{O}_3, 3\text{As}_2\text{O}_5$ + $16.7\text{H}_2\text{O}$.

Ppt.; sl. sol. in acids with a yellow color, and in NH_4OH +Aq with a red color. (Metzke, Z. anorg. 1898, 19. 476.)

$2\text{Fe}_2\text{O}_3, 3\text{As}_2\text{O}_5$ + $12\text{H}_2\text{O}$. Insol. in H_2O or $\text{HC}_2\text{H}_3\text{O}_2$ +Aq.

Sol. in mineral acids

Sol. only in conc. H_3AsO_4 +Aq.

Sol. in $(\text{NH}_4)_3\text{AsO}_4$, and other NH_4 salts +Aq. (Wittstein)

Sol. in NH_4OH +Aq.

+ $22\frac{1}{2}\text{H}_2\text{O}$. Ppt. Sl. sol. in acids with a yellow color, and in NH_4OH +Aq with a red color. (Metzke, Z. anorg. 1898, 19. 475.)

Iron (ferroferric) arsenate, $6\text{FeO}, 3\text{Fe}_2\text{O}_3, 4\text{As}_2\text{O}_5$ + $32\text{H}_2\text{O}$.

Insol. in H_2O . Sol. in HCl +Aq. Decomp. by KOH +Aq. (Wittstein, J. B. 1866. 243.)

Iron (ferric) lead arsenate, $5\text{Fe}_2(\text{AsO}_4)_2, \text{Pb}_3(\text{AsO}_4)_2$.

Min. *Carminé Spar Carminite*. Sol. in acids; KOH +Aq dissolves out As_2O_5 . (Sandberger)

Iron (ferric) potassium arsenate, $2\text{Fe}_2\text{O}_3, 3\text{K}_2\text{O}, 3\text{As}_2\text{O}_5$

Not attacked by boiling H_2O ; easily sol. in dil. acids. (Lefèvre)

$\text{Fe}_2\text{C}_3, \text{K}_2\text{O}, 2\text{As}_2\text{O}_5$. (Lefèvre.)

Iron (ferric) sodium arsenate, $\text{Fe}_2\text{O}_3, \text{Na}_2\text{O}, 2\text{As}_2\text{O}_5$.

(Lefèvre.)

$2\text{Fe}_2\text{O}_3, 3\text{Na}_2\text{O}, 3\text{As}_2\text{O}_5$. (Lefèvre.)

Lanthanum arsenate, $\text{La}_2\text{H}_3(\text{AsO}_4)_3$.

(Frerichs and Smith.)

Doubtful. (Cleve, B. 11. 910.)

Lead arsenate, basic, $15\text{PbO}, 2\text{As}_2\text{O}_5$ (?)

Ppt. (Stromholm, Z. anorg. 1904, 38. 446.)

Lead arsenate, $\text{Pb}_3(\text{AsO}_4)_2$.

Insol. in H_2O , NH_4OH , or NH_4 salts+Aq. (Wittstein.)

Sol. in 2703.5 pts. $\text{HC}_2\text{H}_3\text{O}_2$ +Aq containing 38.94% $\text{HC}_2\text{H}_3\text{O}_2$. (Bertrand, Monit. Scient. (3) 10. 477.)

Sol. in sat. NaCl +Aq. (Becquerel, C. R. 20. 1523.)

Not pptd. in presence of Na citrate. (Spiller.)

Lead pyroarsenate, $\text{Pb}_2\text{As}_2\text{O}_7$.

Insol. in H_2O or $\text{HC}_2\text{H}_3\text{O}_2$ +Aq. Sol. in HCl , or HNO_3 +Aq. (Rose.)

Decomp. by cold H_2O . (Lefèvre.)

+ H_2O = PbHAsO_4 . Ppt (Salkowsky, J. pr. 104. 109.)

Lead potassium arsenate, PbKAsO_4 .

(Lefèvre, A. ch. (6) 27. 5.)

Lead sodium arsenate, PbNaAsO_4 .

(Lefèvre)

$4\text{PbO}, 2\text{Na}_2\text{O}, 3\text{As}_2\text{O}_5$. Superficially decomp. by cold H_2O . (Lefèvre.)

Lead arsenate chloride, $3\text{Pb}_3(\text{AsO}_4)_2, \text{PbCl}_2$.

Sol. in dil. HNO_3 +Aq. (Lechartier.)

Min. *Mimetite*. Sol. in HNO_3 , and KOH +Aq.

Lithium arsenate, Li_3AsO_4 .

Ppt. Sol. in dil. acids and in $\text{HC}_2\text{H}_3\text{O}_2$ +Aq. (de Schulten, Bull. Soc. (3) 1. 479.)

LiH_2AsO_4 + $\frac{3}{2}\text{H}_2\text{O}$. Decomp. by H_2O into H_2AsO_4 and Li_3AsO_4 . (Rammelsberg, Pogg. 128. 311.)

Magnesium arsenate, $\text{Mg}_3(\text{AsO}_4)_2$.

Ppt.

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790)

+ $7\text{H}_2\text{O}$, + $8\text{H}_2\text{O}$, + $10\text{H}_2\text{O}$, and + $22\text{H}_2\text{O}$. (Grühl, Dissert. 1897.)

+ $8\text{H}_2\text{O}$. Min. *Hörnseite*. Insol. in H_2O ; easily sol. in acids.

Magnesium hydrogen arsenate, MgHAsO_4 .

+ $\frac{1}{2}\text{H}_2\text{O}$. Insol. in H_2O . (de Schulten, C. R. 100. 263.)

+ $5\text{H}_2\text{O}$. (Schiefer.)

+ $6\frac{1}{2}\text{H}_2\text{O}$. Insol. in H_2O . 1000 pts. boiling H_2O dissolve 1.5 pts. (Thompson.)

Sol. in HNO_3 +Aq before ignition, but insol. in acids after ignition. (Graham, A. 29. 29.)

+ $7\text{H}_2\text{O}$. Min. *Roesslerite*. Sol. in HCl +Aq.

Magnesium tetrahydrogen arsenate,

$\text{MgH}_4(\text{AsO}_4)_2$.

Very deliquescent; sol. in H_2O . (Schiefer.)

Magnesium potassium arsenate, MgKAsO_4 .

Insol. in, but decomp. by cold H_2O . (Rose.)

Easily sol. in dil. acids. (Lefèvre.)

+ $7\text{H}_2\text{O}$. (Kinkelin, Dissert. 1893.)

$4\text{MgO}, 2\text{K}_2\text{O}, 3\text{As}_2\text{O}_5$. Not attacked by boiling H_2O ; slowly sol. in dil. acids. (Lefèvre)

Magnesium potassium hydrogen arsenate, $\text{KMgH}(\text{AsO}_4)_2$ + $x\text{H}_2\text{O}$.

Decomp. by H_2O . (Kinkelin, Dissert. 1893.)

$\text{Mg}_3\text{KH}_2(\text{AsO}_4)_3 + 5\text{H}_2\text{O}$. (Chevron and Drouiche, J. B. 1888, 523.)

Magnesium potassium sodium arsenate, $\text{Mg}_2\text{KNa}(\text{AsO}_4)_2 + 10\text{H}_2\text{O}$.
(Kinkelin, Dissert. 1883.)

Magnesium sodium arsenate, MgNaAsO_4 .
Insol. in H_2O . Very sl. sol. in dil. acids. (Lefèvre.)
 4MgO , $2\text{Na}_2\text{O}$, $3\text{As}_2\text{O}_5$. (Lefèvre.)

Magnesium vanadium arsenate,
 $\text{MgH}_2(\text{VO}_2)_2(\text{AsO}_4)_2 + 9\text{H}_2\text{O}$ and
 MgHAsO_4 , $2(\text{VO}_2)_2\text{H}_2\text{AsO}_4 + 9\text{H}_2\text{O}$.
See Arseniovanadate, magnesium.

Magnesium arsenate chloride, $\text{Mg}_3(\text{AsO}_4)_2$,
 MgCl_2 .
Insol. in H_2O ; sol. in dil. $\text{HNO}_3 + \text{Aq}$ (Lechartier, C. R. 65. 172.)

Magnesium arsenate fluoride, $\text{Mg}_3(\text{AsO}_4)_2$,
 MgF_2 .
Insol. in H_2O ; sol. in dil. $\text{HNO}_3 + \text{Aq}$ (Lechartier.)

Manganous arsenate, basic, 6MnO , $\text{As}_2\text{O}_5 + 3\text{H}_2\text{O}$ (?).

Min. *Chondroarsenite*. Easily and completely sol. in dil. HCl , and $\text{HNO}_3 + \text{Aq}$.

Manganous arsenate, $\text{Mn}_3(\text{AsO}_4)_2 + \text{H}_2\text{O}$.
Insol. in H_2O ; sl. sol. in acids. (Coloriano, C. R. 103. 273.)
 5MnO , $2\text{As}_2\text{O}_5 + 5\text{H}_2\text{O}$. Insol. in H_2O . (Coloriano.)

2MnO , As_2O_5 . Sl. decomp. by cold H_2O , but rapidly on heating. (Lefèvre.)
 $\text{MnHAsO}_4 + \text{H}_2\text{O}$ Decomp. by boiling H_2O into 5MnO , $2\text{As}_2\text{O}_5 + 5\text{H}_2\text{O}$. Sol. in HNO_3 , H_2SO_4 , or $\text{H}_3\text{AsO}_4 + \text{Aq}$.

Manganous tetrahydrogen arsenate,
 $\text{MnH}_4(\text{AsO}_4)_2$.
Deliquescent. Easily sol. in H_2O . (Schiefer.)

Manganous potassium arsenate, MnKAsO_4 .
(Lefèvre, A. ch. (6) 27. 5.)

Manganous sodium arsenate, MnNaAsO_4 .
Very sol. in dil. acids. (Lefèvre.)
 2MnO , $4\text{Na}_2\text{O}$, $3\text{As}_2\text{O}_5$. Not attacked by boiling H_2O ; very sol. in dil. acids. (Lefèvre.)

Manganous arsenate chloride, $\text{Mn}_3(\text{AsO}_4)_2$,
 MnCl_2 .
Insol. in H_2O ; sol. in dil. $\text{HNO}_3 + \text{Aq}$. (Lechartier, A. 58. 259.)

Manganic arsenate, $\text{Mn}_2(\text{AsO}_4)_2 + 2\text{H}_2\text{O}$.
Insol. in H_2O ; sol. in acids.

Mercurous arsenate, $(\text{Hg}_2)_3(\text{AsO}_4)_2$.
Insol. in H_2O ; difficultly sol. in acids. (Coloriano, C. R. 103. 273.) Ppt. (Haack, C. C. 1890, II. 736.)

$\text{Hg}_2(\text{AsO}_3)_2$ Insol. in H_2O , $\text{HC}_2\text{H}_3\text{O}_2$, or alcohol. Decomp. by cold $\text{HCl} + \text{Aq}$. Sl. sol. in cold $\text{HNO}_3 + \text{Aq}$, from which it is precipitated by NH_4OH as Hg_2HASO_4 (Simon, Pogg. 41. 424.)

Mercurous hydrogen arsenate, Hg_2HASO_4 .
Insol. in H_2O , $\text{HC}_2\text{H}_3\text{O}_2$, or $\text{NH}_4\text{OH} + \text{Aq}$. Decomp. by cold $\text{HCl} + \text{Aq}$; sol. in cold $\text{HNO}_3 + \text{Aq}$ without decomp; very sl. sol. without decomp. in $\text{NH}_4\text{NO}_3 + \text{Aq}$. (Simon, Pogg. 41. 424.)

Mercuric arsenate, $\text{Hg}_3(\text{AsO}_4)_2$.
Ppt. Sol. in H_3AsO_4 or $\text{HNO}_3 + \text{Aq}$. (Bergmann.) Very sl sol in H_2O . Easily sol. in $\text{HCl} + \text{Aq}$. Sl. sol. in $\text{HNO}_3 + \text{Aq}$. Insol. in $\text{H}_3\text{AsO}_4 + \text{Aq}$ (Haack, C. C. 1890, II. 736.)

Mercurous silver arsenate, $\text{Hg}_2\text{AgAsO}_4$.
Sol. in hot conc. HNO_3 . (Jacobsen, Bull. Soc. 1909, (4) 5. 948.)

Mercurous arsenate nitrate, Hg_2AsO_4 , $\text{HgNO}_3 + \text{H}_2\text{O}$.
Insol. in H_2O or $\text{HC}_2\text{H}_3\text{O}_2$; sol. in $\text{HNO}_3 + \text{Aq}$. (Simon, Pogg. 41. 424.)
 $3\text{Hg}_2\text{AsO}_4$, 2HgNO_3 , $2\text{Hg}_2\text{O}$. Ppt. (Haack.)

Molybdenum arsenate.
Ppt.

Nickel arsenate, basic, 5NiO , As_2O_5 .
Min. — (Bergemann.)
 $\text{Ni}(\text{NiOH})\text{AsO}_4$. Difficultly attacked by acids or alkalis. (Coloriano, Bull. Soc. (2) 45. 241.)
 5NiO , $2\text{As}_2\text{O}_5 + 3\text{H}_2\text{O}$. As above.

Nickel arsenate, $\text{Ni}_3(\text{AsO}_4)_2$.
Min. — (Bergemann.)
 $+ x\text{H}_2\text{O}$. Insol. in H_2O . Sol. in H_3AsO_4 , and conc. mineral acids. Easily sol. in $\text{NH}_4\text{OH} + \text{Aq}$
 $+ 2\text{H}_2\text{O}$. Insol. in H_2O ; difficultly sol. in acids. (Coloriano, Bull. Soc. 45. 241.)
 $+ 8\text{H}_2\text{O}$. Min. *Nickel-bloom*, *Annabergite*. Easily sol. in acids.
 $\text{NiHAsO}_4 + \text{H}_2\text{O}$. Sol. in H_2O . Difficultly attacked by acids. (Coloriano, C. R. 103. 274.)

Nickel potassium arsenate, 12NiO , $3\text{K}_2\text{O}$, $5\text{As}_2\text{O}_5$.
(Lefèvre.)
 2NiO , K_2O , As_2O_5 . Rapidly sol. in dil. acids. (Lefèvre.)

Nickel sodium arsenate, NiNaAsO_4 .
Very slowly sol. in dil. acids. (Lefèvre.)
 4NiO , $2\text{Na}_2\text{O}$, $3\text{As}_2\text{O}_5$. (Lefèvre.)

Nickel arsenate ammonia,
 $\text{Ni}_3(\text{AsO}_4)_2 \cdot \text{NH}_3 + 7\text{H}_2\text{O}$.
 $\text{Ni}_3(\text{AsO}_4)_2 \cdot 2\text{NH}_3 + 6\text{H}_2\text{O}$.
 $\text{Ni}_3(\text{AsO}_4)_2 \cdot 3\text{NH}_3 + 5\text{H}_2\text{O}$. (Dueru, C. R. 1900, 131. 703.)

Palladium arsenate (?)

Ppt.

Platinum arsenate (?)Ppt Sol. in $\text{HNO}_3 + \text{Aq.}$ **Potassium arsenate, K_3AsO_4** Deliquescent. Very sol. in H_2O . (Graham, Pogg. **32**. 47.)Insol. in ethyl acetate. (Naumann, B. 1904, **37**. 3601)**Potassium hydrogen arsenate, K_2HASO_4** Sol. in H_2O .**Potassium dihydrogen arsenate, KH_2AsO_4** Sol in 5.3 pts. H_2O at 6° , forming a solution of sp. gr. 1.1134. Much more sol. in hot H_2O . Insol. in alcohol

Sol in 26,666 pts. boiling conc. alcohol. (Wenzel)

Potassium sodium hydrogen arsenate,Sol. in H_2O . $\text{K}_3\text{Na}_2\text{H}_6(\text{AsO}_4)_4 + 9\text{H}_2\text{O}$ Sol. in H_2O , and not easily decomp. thereby into its constituents. (Filhol and Senderens, C. R. **95**. 343)**Potassium strontium arsenate, K_2SrAsO_4** (Lefèvre, C. R. **108**. 1058)**Potassium vanadium arsenate, $\text{K}(\text{VO}_2)_2\text{AsO}_4 + 2\frac{1}{2}\text{H}_2\text{O}$**

See Arseniovanadate, potassium.

Potassium zinc arsenate, KZnAsO_4

(Lefèvre)

Potassium arsenate sulphate.

See Arseniosulphate, potassium.

Rhodium arsenate (?)

Ppt.

Rubidium metaarsenate, RbAsO_3 Sol. in H_2O . (Bouchonnet, C. R. 1907, **144**. 642.)**Rubidium arsenate, $\text{Rb}_3\text{AsO}_4 + 2\text{H}_2\text{O}$** Very hygroscopic; sol. in H_2O to give an alkaline solution. Absorbs CO_2 from the air (Bouchonnet, l.c.)**Rubidium pyroarsenate, $\text{Rb}_4\text{As}_2\text{O}_7$**

(Bouchonnet, l.c.)

Rubidium hydrogen arsenate, $\text{Rb}_2\text{HASO}_4 + \text{H}_2\text{O}$ Absorbs CO_2 from the air. Very hygroscopic; sol. in H_2O . Insol. in alcohol. (Bouchonnet, l.c.)**Rubidium dihydrogen arsenate, RbH_2AsO_4** Not hygroscopic. Very sol. in H_2O ; aq. solution is acid to litmus. (Bouchonnet, l.c.)**Silver arsenate, Ag_3AsO_4** Insol. in H_2O . Sol. in acids; easily sol. in $\text{H}_3\text{AsO}_4 + \text{Aq.}$ (Joly, C. R. **103**. 1071.)1 l H_2O dissolves 0.0085 g. Ag_3AsO_4 at 20° . (Whitby, Z anorg. 1910, **67**. 108.)Much less sol. in H_3AsO_4 than Ag_3PO_4 (Graham)Sol in $\text{NH}_4\text{OH} + \text{Aq.}$ (Scheele.)Sol in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$ Insol in NH_4 sulphate, nitrate, or succinate + Aq. (Wittstein.)Very sl sol. in $\text{NH}_4\text{NO}_3 + \text{Aq.}$ more easily in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq.}$ (Graham.)Sol. in $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq.}$ but not so easily as Ag_3PO_4 .

Not pptd. in presence of Na citrate. (Spiller)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, **20**. 829)**Silver hydrogen arsenate, Ag_3HASO_4** Decomp. by H_2O , with formation of Ag_3AsO_4 . (Setterberg, Berz J. B. **26**. 208.) AgH_2AsO_4 . Decomp. by H_2O . (Joly, C. R. **103**. 1071.) $\text{Ag}_2\text{O} \cdot 2\text{As}_2\text{O}_5$ Decomp. by H_2O Rather sl. sol. in $\text{HNO}_3 + \text{Aq.}$ Very easily sol. in $\text{NH}_4\text{OH} + \text{Aq.}$ (Hurtzig and Geuther, A. **111**. 168.)**Silver arsenate ammonia, $\text{Ag}_3\text{AsO}_4 \cdot 4\text{NH}_3$** Easily sol. in H_2O . (Widmann, Bull. Soc. (2) **20**. 64.)**Silver arsenate sulphate, $3\text{Ag}_2\text{O} \cdot \text{As}_2\text{O}_5 \cdot \text{SO}_3$** Decomp. by H_2O , with separation of Ag_3AsO_4 ; decomp by dil $\text{H}_2\text{SO}_4 + \text{Aq.}$ (Setterberg, Berz J. B. **26**. 209)**Sodium arsenate, $\text{Na}_3\text{AsO}_4 + 12\text{H}_2\text{O}$** Permanent in dry air. Sol. in 3.57 pts H_2O at 15.5° (Graham.) 100 pts. H_2O at 15.5° dissolve 28 pts. $\text{Na}_3\text{AsO}_4 + 12\text{H}_2\text{O}$. (Berzelius.) Sol. in 3.75 pts H_2O at 17° ; or 100 pts. H_2O at 17° dissolve 26.7 pts; or sat. $\text{Na}_3\text{AsO}_4 + \text{Aq}$ at 17° contains 21.1% $\text{Na}_3\text{AsO}_4 + 12\text{H}_2\text{O}$ or 10.4% Na_3AsO_4 , and has sp. gr. 1.1186. (Schiff, A. **113**. 350)Melts in crystal H_2O at 85.5° .Sp. gr. of $\text{Na}_3\text{AsO}_4 + \text{Aq}$ at 17° . $\% = \% \text{Na}_3\text{AsO}_4 + 12\text{H}_2\text{O}$.

%	Sp. gr.	%	Sp. gr.	%	Sp. gr.
1	1.0053	9	1.0490	17	1.0945
2	1.0107	10	1.0547	18	1.1003
3	1.0161	11	1.0603	19	1.1061
4	1.0215	12	1.0659	20	1.1121
5	1.0270	13	1.0716	21	1.1179
6	1.0325	14	1.0773	22	1.1238
7	1.0380	15	1.0830
8	1.0435	16	1.0887

(Schiff, calculated by Gerlach, Z. anal. **8**. 286.)

"Arsenate of soda" dissolves in 60 pts. boiling alcohol. (Wenzel.)

 $+4\frac{1}{2}\text{H}_2\text{O}$. (Hall, Chem. Soc. **51**. 93.) $+10\text{H}_2\text{O}$. Efflorescent. (Hall.)

Sodium hydrogen arsenate, $\text{Na}_2\text{HAsO}_4 + 7\text{H}_2\text{O}$.

Not efflorescent. (Schiff.)

Solubility in $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$. A table is given which records the g of As_2O_5 in 100 cc. of the filtrate. (Curry, J. Am. Chem. Soc. 1915, 37. 1685.)

+ $7\frac{1}{2}\text{H}_2\text{O}$ (Lescœur, C. R. 104. 1171.)

+ $12\text{H}_2\text{O}$. Efflorescent. Sol. in H_2O , sol. in 179 pts. H_2O at 14° ; or 100 pts. H_2O at 14° dissolve 56 pts. $\text{Na}_2\text{HAsO}_4 + 12\text{H}_2\text{O}$. Sat. $\text{Na}_2\text{HAsO}_4 + \text{Aq}$ contains 35.9% $\text{Na}_2\text{HAsO}_4 + 12\text{H}_2\text{O}$, or 16.5% Na_2HAsO_4 , and has sp. gr. = 1.1722. (Schiff, A. 113. 350.)

100 pts H_2O at 7.2° dissolve 22.265 pts. (Thompson.)

100 pts H_2O dissolve 17.2 pts. $\text{Na}_2\text{HAsO}_4 + 12\text{H}_2\text{O}$ at 0° , and 140.7 pts. at 30° . (Tilden, Chem. Soc. 45. 409.)

Melts in crystal H_2O at 28° . (Tilden.)

Sp. gr. of $\text{Na}_2\text{HAsO}_4 + \text{Aq}$ at 14° .
 $\frac{g}{\text{cc}} = \frac{g}{\text{cc}} \text{Na}_2\text{HAsO}_4 + 12\text{H}_2\text{O}$.

%	Sp. gr.	%	Sp. gr.	%	Sp. gr.
1	1.0042	15	1.0665	29	1.1358
2	1.0084	16	1.0712	30	1.1410
3	1.0126	17	1.0759	31	1.1463

14	1.0618	28	1.1306		

(Schiff, calculated by Gerlach, Z. anal. 8. 280.)

Insol. in alcohol
 + $13\frac{1}{2}\text{H}_2\text{O}$. (Setterberg.)

Sodium dihydrogen arsenate, $\text{NaH}_2\text{AsO}_4 + \text{H}_2\text{O}$.

More sol. in H_2O than Na_2AsO_4 or Na_2HAsO_4 . (Schiff.)

+ $2\text{H}_2\text{O}$. Efflorescent. (Joly and Duffet, C. R. 102. 1391.)

Sodium trihydrogen diarsenate,
 $\text{Na}_2\text{H}_3(\text{AsO}_4)_2 + 3\text{H}_2\text{O}$.

Sol. in H_2O . (Filhol and Senderens, C. R. 95. 343.)

Sodium strontium arsenate, NaSrAsO_4 .

Not attacked by boiling H_2O . (Lefèvre.)

+ $9\text{H}_2\text{O}$. Scarcely sol. in H_2O . (Joly, C. R. 104. 905.)

+ $18\text{H}_2\text{O}$. (Joly.)

Sodium uranyl arsenate, $\text{Na}(\text{UO}_2)\text{AsO}_4$.

Ppt. (Werther, A. 68. 312.)

Sodium zinc arsenate, NaZnAsO_4 .

Slowly sol. in dil. acids. (Lefèvre.)

$\text{Na}_2\text{ZnAs}_2\text{O}_7$. As above. (Lefèvre.)

Sodium arsenate fluoride, Na_3AsO_4 , $\text{NaF} + 12\text{H}_2\text{O}$.

Sol. in 9.5 pts. H_2O at 25° , and 2 pts. at 75° . (Briegleb, A. 97. 95.)

Sodium arsenate stannate, $6\text{Na}_2\text{O}$, $2\text{As}_2\text{O}_5$, $\text{SnO}_2 + 50\text{H}_2\text{O}$.

More difficultly sol. than sodium stannate. (Haeffely, Phil. Mag. (4) 10. 290.)

$5\text{Na}_3\text{AsO}_4$, $\text{Na}_2\text{SnO}_3 + 60\text{H}_2\text{O}$. (Prandtl, B. 1907, 40. 2133.)

Sodium arsenate sulphate, $\text{Na}_3\text{As}_2\text{O}_{19}$, $2\text{Na}_2\text{SO}_4$.

Sol. in H_2O (Mitscherlich.)

$\text{Na}_4\text{As}_2\text{O}_7$, Na_2SO_4 (Setterberg.)

Sodium arsenate tungstate, $\text{Na}_4\text{As}_2\text{O}_7$, $\text{Na}_2\text{W}_2\text{O}_{10} + 20\text{H}_2\text{O}$.

See Arseniotungstate, sodium.

Strontium arsenate, $\text{Sr}_3(\text{AsO}_4)_2$.

Not attacked by boiling H_2O ; easily sol. in dil. acids. (Lefèvre, A. ch. (6) 27. 5.)

Strontium pyroarsenate, $\text{Sr}_2\text{As}_2\text{O}_7$.

Decomp. by cold H_2O into $\text{SrHAsO}_4 + 1\frac{1}{2}\text{H}_2\text{O}$. (Lefèvre.)

Strontium hydrogen arsenate, $\text{SrHAsO}_4 + 1\frac{1}{2}\text{H}_2\text{O}$.

Insol. in cold, but decomp. by hot H_2O into a basic, and a sol. acid salt. 100 pts. H_2O at 15.5° dissolve 0.284 pt. (Thompson, 1831.)

Sol. in $\text{HC}_2\text{H}_3\text{O}_2$, and very easily in $\text{HCl} + \text{Aq}$. (Kotschoubey, J. pr. 49. 182.)

Sol. in $\text{HNO}_3 + \text{Aq}$.

$\text{SrH}_4(\text{AsO}_4)_2 + 2\text{H}_2\text{O}$. Partly sol. in H_2O . (Hörmann, Dissert. 1879.)

Strontium vanadium arsenate, SrHAsO_4 , $2(\text{VO}_2)\text{H}_2\text{AsO}_4 + 7\frac{1}{2}\text{H}_2\text{O}$.

See Arseniovanadate, strontium.

Strontium arsenate chloride, $3\text{Sr}_3(\text{AsO}_4)_2$, SrCl_2 .

Insol. in H_2O ; easily sol. in dil. $\text{HNO}_3 + \text{Aq}$. (Lechartier, C. R. 65. 172.)

Thallos arsenate, Ti_3AsO_4 .

Sol. in H_2O . (Willm, A. ch. (4) 5. 5.)

Thallos hydrogen arsenate, Ti_2HAsO_4 .

Very easily sol. in H_2O . (Willm.)

Thallos dihydrogen arsenate, TiH_2AsO_4 .

Easily sol. in H_2O . (Willm.)

Thallic arsenate, $\text{TiAsO}_4 + 2\text{H}_2\text{O}$.

Insol. in H_2O ; sol. in $\text{HCl} + \text{Aq}$; decomp. by NH_4OH , or $\text{KOH} + \text{Aq}$. (Willm.)

Thorium hydrogen arsenate, $\text{Th}(\text{HAsO}_4)_2 + 6\text{H}_2\text{O}$.

Insol. in H_2O or $\text{H}_3\text{AsO}_4 + \text{Aq}$ (Berzelius).

Ppt., insol. in H_2O (Barbieri, C. A. 1911. 3385).

$\text{Th}(\text{H}_2\text{AsO}_4)_4 + 4\text{H}_2\text{O}$. Decomp. by H_2O (Barbieri, *l. c.*)

Tin (stannous) arsenate, $\text{SnHAsO}_4 + \frac{1}{2}\text{H}_2\text{O}$

Insol. in H_2O . (Lenssen, A. 114. 113.)

Tin (stannic) arsenate, $2\text{SnO}_2, \text{As}_2\text{O}_3$.

Ppt. Insol. in H_2O and dil. $\text{HNO}_3 + \text{Aq}$. (Haefely, Phil. Mag. (4) 10. 290.)

$\text{Sn}_3(\text{AsO}_4)_4 + 6\text{H}_2\text{O}$. Insol. in H_2O ; sol. in conc. $\text{HCl} + \text{Aq}$, and in aqua regia; insol. in $\text{HNO}_3 + \text{Aq}$ or H_2SO_4 (Williams, Proc. Soc. Manchester, 15. 67.)

Colloidal. Very slowly sol. in H_2O , from which it is pptd. by HCl , HNO_3 , or $\text{H}_2\text{SO}_4 + \text{Aq}$; also by BaCl_2 , CaCl_2 , NH_4Cl , and $\text{FeCl}_3 + \text{Aq}$, and by AgNO_3 , or $\text{KI} + \text{Aq}$. Not pptd. by alcohol, $\text{HC}_2\text{H}_3\text{O}_2$, HgCl_2 , Na_2CO_3 , K_2CO_3 , or $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. The pptd. jelly is readily sol. in conc. acids, and KOH , or $\text{NaOH} + \text{Aq}$. (Williams, *l. c.*)

Tin (stannous) arsenate chloride, $\text{Sn}_3(\text{AsO}_4)_2, \text{SnCl}_2 + 2\text{H}_2\text{O}$

Decomp. on air. (Lenssen, A. 114. 113.)

Titanium arsenate (?).

Insol. in H_2O . Sol. in titanous acid, arsenic acid, or $\text{HCl} + \text{Aq}$. Sol. in Ti salts + Aq . (Rose)

Titanyl arsenate, $5\text{TiO}_2, 2\text{As}_2\text{O}_3$.

Sol. in acids without decomp. Scarcely attacked by KOH or by $\text{NH}_4\text{OH} + \text{Aq}$. (Reichard, B. 1894, 27. 1026)

Uranous arsenate, $\text{U}_3(\text{AsO}_4)_2$.

Ppt.

Uranous hydrogen arsenate, $\text{UH}_2(\text{AsO}_4)_2 + 3\text{H}_2\text{O}$.

Ppt. Sol. in $\text{HCl} + \text{Aq}$.

Uranyl arsenate, $(\text{UO}_2)\text{HAsO}_4 + 4\text{H}_2\text{O}$.

Insol. in H_2O , $\text{HC}_2\text{H}_3\text{O}_2$, and saline solutions, as $\text{NH}_4\text{Cl} + \text{Aq}$; sol. in the mineral acids; sol. in $\text{K}_2\text{CO}_3 + \text{Aq}$. (Werther, A. 68. 313.)

$(\text{UO}_2)_4(\text{AsO}_4)_2 + 3\text{H}_2\text{O}$. (Werther.)

$(\text{UO}_2)_2\text{As}_2\text{O}_7$. Insol. in H_2O , sol. in acids.

$(\text{UO}_2)_3(\text{AsO}_4)_2 + 12\text{H}_2\text{O}$.

Min. *Troegerite*.

Vanadium dihydrogen arsenate, $(\text{VO}_2)_2\text{H}_2\text{AsO}_4 + 4\text{H}_2\text{O}$.

Easily sol. in H_2O . (Friedheim, B. 23. 2600.)

See *Arseniovanadic acid*.

Vanadium zinc arsenate, $(\text{VO}_2)_2\text{ZnH}_2(\text{AsO}_4)_2 + 5\frac{1}{2}\text{H}_2\text{O}$, and $2(\text{VO}_2)_2\text{H}_2\text{AsO}_4 + 6\frac{1}{2}\text{H}_2\text{O}$.

See *Arseniovanadate, zinc*.

Vanadyl arsenate, $(\text{VO})_2\text{HAsO}_4 + \text{H}_2\text{O}$.

Very slowly sol. in H_2O ; insol. in alcohol; easily sol. in $\text{HCl} + \text{Aq}$ (Berzelius.)

Composition given by Friedheim (B. 23. 2600).

Yttrium arsenate, YtHAsO_4 .

Ppt. Insol. in acetic, easily sol. in mineral acids.

Zinc arsenate, basic, $4\text{ZnO}, \text{As}_2\text{O}_5 + \text{H}_2\text{O}$.

(Friedel, J. B. 1866. 949.)

Min. *Adamite*. Easily sol. in dil. $\text{HCl} + \text{Aq}$, and is attacked by $\text{HC}_2\text{H}_3\text{O}_2$.

Zinc arsenate, $\text{Zn}_3(\text{AsO}_4)_2$

(deSchulten, Bull. Soc. (3) 2. 300.)

$+ 3\text{H}_2\text{O}$. Ppt. Sol. in HNO_3 , and $\text{H}_3\text{AsO}_4 + \text{Aq}$. (Köttig, J. pr. 48. 182.)

$+ 8\text{H}_2\text{O}$.

Min. *Köttigite*.

Zinc arsenate, acid, $\text{Zn}_3\text{H}_2(\text{AsO}_4)_4$.

Easily sol. in cold $\text{HCl} + \text{Aq}$, less easily in cold HNO_3 . Sol. in KOH , or $\text{NaOH} + \text{Aq}$ (Gorguel, Dissert, 1894.)

$+ 3\text{H}_2\text{O}$. Insol. in H_2O , sol. in H_3AsO_4 , or $\text{HNO}_3 + \text{Aq}$. (Mitscherlich.)

$+ 5\text{H}_2\text{O}$. Sol. in dil. $\text{HCl} + \text{Aq}$. (Demel, B. 12. 1279.) Could not be obtained, (Coloriano, Bull. Soc. (2) 45. 709.)

$2\text{ZnO}, \text{As}_2\text{O}_5$. Very slowly decomp. by cold, rapidly by boiling H_2O . (Lefèvre)

$\text{ZnHAsO}_4 + \text{H}_2\text{O}$. Insol. in H_2O . (Debray, Bull. Soc. (2) 2. 14.)

Decomp. by hot H_2O into $4\text{ZnO}, \text{As}_2\text{O}_5 + \text{H}_2\text{O}$. (Coloriano, C. R. 103. 273.)

$\text{Zn}(\text{ZnOH})_2\text{As}_2\text{O}_7 + 7\text{H}_2\text{O}$ (Gorgeul.)

Zinc arsenate ammonia, $\text{Zn}_3(\text{AsO}_4)_2, 2\text{NH}_3 + 3\text{H}_2\text{O}$

Insol. in H_2O ; sol. in acids, NH_4OH , or $\text{KOH} + \text{Aq}$. (Bette, A. 15. 141.)

Zirconium arsenate, $2\text{ZrO}_2, \text{As}_2\text{O}_5 + \frac{5}{2}\text{H}_2\text{O} = (\text{ZrO})\text{HAsO}_4 + \frac{3}{2}\text{H}_2\text{O}$.

Ppt. Insol. in H_2O or $\text{HCl} + \text{Aq}$. (Paykull, B. 6. 1467.)

Perarsenic acid.

See *Perarsenic acid*.

Arsenicotungstic Acid.

Ammonium vanadium arsenicotungstate.

See *Arsenicovanadicotungstate, ammonium*.

Arsenicovanadicotungstic acid.

Ammonium arsenicovanadicotungstate, $16(\text{NH}_4)_2\text{O}, 5\text{As}_2\text{O}_3, 15\text{V}_2\text{O}_5, 26\text{WO}_3 + 101\text{H}_2\text{O}$.

Sl. sol. in cold, readily sol. in hot H_2O . (Rogers, J. Am. Chem. Soc. 1903, 25. 308.)

Arsenimide, $\text{As}_2(\text{NH})_3$.

Decomp. by H_2O . (Hugot, C. R. 1904, 139. 56.)

Arsenioarsenic acid, $3\text{As}_2\text{O}_3$, $2\text{As}_2\text{O}_5 + 3\text{H}_2\text{O}$.

Decomp. by H_2O . (Joly, C. R. 100. 1221)
 $3\text{As}_2\text{O}_3$, $\text{As}_2\text{O}_5 + \text{H}_2\text{O}$ Decomp. by H_2O (Joly)
 As_2O_3 , $\text{As}_2\text{O}_5 + \text{H}_2\text{O}$. Decomp. by H_2O . (Joly)

See also *Arsenic trioxide pentoxide*.

Arseniochromic acid.**Ammonium arseniochromate**, $2(\text{NH}_4)_2\text{O}$, As_2O_5 , $4\text{CrO}_3 + \text{H}_2\text{O}$

Insol. in H_2O . (Friedheim and Mozkin, Z anorg. 1894, 6. 280)

$3(\text{NH}_4)_2\text{O}$, As_2O_5 , 8CrO_3 Decomp. by recryst. from H_2O . (Friedheim and Mozkin, Z. anorg. 1894, 6. 281)

Potassium arseniochromate, $2\text{K}_2\text{O}$, As_2O_5 , 4CrO_3

Decomp. by recryst. from H_2O . (Friedheim and Mozkin, Z. anorg. 1894, 6. 275.)

$2\text{K}_2\text{O}$, As_2O_5 , $4\text{CrO}_3 + \text{H}_2\text{O}$. Decomp. by recryst. from H_2O . (Friedheim and Mozkin, l. c.)

Arseniomolybdic acid, As_2O_5 , $6\text{MoO}_3 + 10\text{H}_2\text{O}$.

By recryst. from H_2O the comp. with $18\text{H}_2\text{O}$ is formed. (Pufahl, Dissert. 1888.)

$+16\text{H}_2\text{O}$. Sol. in H_2O . (Debray)
 $+18\text{H}_2\text{O}$. Completely sol. in H_2O Sp. gr. of sat. solution at 18° is 2.21. Easily sol. in abs alcohol. Insol. in CS_2 , liq. hydrocarbons and CHCl_3 (Pufahl, l. c.)

As_2O_5 , $7\text{MoO}_3 + 14\text{H}_2\text{O}$. (Seyberth; B. 7. 391)

As_2O_5 , $18\text{MoO}_3 + 28\text{H}_2\text{O}$. Very sol. in H_2O Sp. gr. of sat. solution at $18.3^\circ = 2.45$ and 1 cc contains 2.16 g acid. Easily sol. in absolute alcohol; insol. in CS_2 , liquid hydrocarbons and CHCl_3 (Pufahl, l. c.)

Sol. in ether with subsequent separation into two layers. See Phosphotungstic acid (Drechsel, B. 20. 1452)

$+38\text{H}_2\text{O}$ Efflorescent. When recryst comp. with $28\text{H}_2\text{O}$ is formed. (Pufahl, l. c.)

As_2O_5 , $20\text{MoO}_3 + 27\text{H}_2\text{O}$. Sl. sol in $\text{HNO}_3 + \text{Aq}$. (Debray, C. R. 78. 1408)

Ammonium arseniomolybdate, $(\text{NH}_4)_2\text{O}$, As_2O_5 , $2\text{MoO}_3 + 3\text{H}_2\text{O}$.

(Friedheim, Z anorg 1894, 6. 28.)
 $+4\text{H}_2\text{O}$. (Friedheim, l. c.)

$(\text{NH}_4)_2\text{O}$, As_2O_5 , $6\text{MoO}_3 + 2\text{H}_2\text{O}$. Sl. sol. in cold H_2O ; sol. in acids (Debray.)

$+4\text{H}_2\text{O}$. Sl. sol. in cold, very easily sol. in hot H_2O . (Pufahl, l. c.)

$2(\text{NH}_4)_2\text{O}$, As_2O_5 , $6\text{MoO}_3 + 6\text{H}_2\text{O}$. Sl. sol. in H_2O . Cannot be recryst. therefrom. (Pufahl.)

$+12\text{H}_2\text{O}$. (Friedheim, Z. anorg. 1894, 6. 31)

$3(\text{NH}_4)_2\text{O}$, As_2O_5 , $6\text{MoO}_3 + 4\text{H}_2\text{O}$. (Friedheim, l. c.)

$+8\text{H}_2\text{O}$ (Friedheim, l. c.)
 $(\text{NH}_4)_2\text{O}$, $2\text{H}_2\text{O}$, 7MoO_3 , $\text{As}_2\text{O}_5 + 4\text{H}_2\text{O}$.

Sol in hot H_2O . (Seyberth, B. 7. 391)
 Not obtained (Pufahl.)

$7(\text{NH}_4)_2\text{O}$, $2\text{As}_2\text{O}_5$, $14\text{MoO}_3 + 28\text{H}_2\text{O}$. (Friedheim, l. c.)

$5(\text{NH}_4)_2\text{O}$, As_2O_5 , $16\text{MoO}_3 + 5\text{H}_2\text{O}$. (Friedheim, Z anorg. 1894, 6. 31.)

$5(\text{NH}_4)_2\text{O}$, As_2O_5 , $16\text{MoO}_3 + 9\text{H}_2\text{O}$. Nearly insol. in cold, sol in boiling H_2O . Easily sol. in $\text{NH}_4\text{OH} + \text{Aq}$ (Gibbs, Am Ch. J. 3. 402.)

$+12\text{H}_2\text{O}$. (Pufahl, l. c.)
 $2(\text{NH}_4)_2\text{O}$, As_2O_5 , $18\text{MoO}_3 + 17\text{H}_2\text{O}$. (Pufahl, l. c.)

$3(\text{NH}_4)_2\text{O}$, As_2O_5 , $18\text{MoO}_3 + 14\text{H}_2\text{O}$. Very sol. in H_2O and alcohol. (Kehrmann, Z. anorg. 1894, 7. 421.)

$3(\text{NH}_4)_2\text{O}$, As_2O_5 , 20MoO_3 . Easily sol. in H_2O . (Debray, C. R. 78. 1408.)

$3(\text{NH}_4)_2\text{O}$, As_2O_5 , $24\text{MoO}_3 + 12\text{H}_2\text{O}$. Decomposed by H_2O , especially when boiling.

Easily sol in $\text{NH}_4\text{OH} + \text{Aq}$, less easily sol. in warm H_2SO_4 and boiling $\text{H}_2\text{AsO}_4 + \text{Aq}$. Sl. sol in molybdic acid + Aq , HNO_3 , and conc. $\text{NH}_4\text{NO}_3 + \text{Aq}$. (Pufahl, l. c.)

$\text{NH}_4\text{NO}_3 + \text{Aq}$. (Pufahl, l. c.)

Barium arseniomolybdate, BaO , As_2O_5 , $6\text{MoO}_3 + 10\text{H}_2\text{O}$.

Sl. sol. in H_2O . Partially decomp. by boiling. (Pufahl, l. c.)

3BaO , As_2O_5 , 6MoO_3 . Sl. sol. in H_2O . (Pufahl, l. c.)

3BaO , As_2O_5 , 7MoO_3 Ppt. (Seyberth)

3BaO , As_2O_5 , 18MoO_3 . Decomp. by H_2O . (Pufahl, l. c.)

Cadmium arseniomolybdate, CdO , $2\text{H}_2\text{O}$, As_2O_5 , $6\text{MoO}_3 + 11\text{H}_2\text{O}$.

(Pufahl)
 3CdO , $3\text{H}_2\text{O}$, As_2O_5 , $18\text{MoO}_3 + 33\text{H}_2\text{O}$. (Pufahl.)

Cæsium arseniomolybdate, Cs_2O , As_2O_5 , 6MoO_3 .

Sl sol in H_2O . (Pufahl, l. c.)

$4\text{Cs}_2\text{O}$, As_2O_5 , $26\text{MoO}_3 + 15\text{H}_2\text{O}$. Ppt. (Ephraim, Z anorg. 1910, 65. 246.)

Calcium arseniomolybdate, CaO , As_2O_5 , $6\text{MoO}_3 + 10\text{H}_2\text{O}$.

Rather difficultly sol. in cold H_2O . (Pufahl, l. c.)

3CaO , As_2O_5 , 6MoO_3 . As Ba salt. (Pufahl, l. c.)

3CaO , As_2O_5 , $18\text{MoO}_3 + 32\text{H}_2\text{O}$. Very sol. in H_2O . Solution sat. at 18° has sp. gr. = 2.163. (Pufahl, l. c.)

Cobalt arseniomolybdate, CoO , $2\text{H}_2\text{O}$, As_2O_5 , $6\text{MoO}_3 + 11\text{H}_2\text{O}$.

(Pufahl.)
 3CoO , $3\text{H}_2\text{O}$, As_2O_5 , $18\text{MoO}_3 + 33\text{H}_2\text{O}$. (Pufahl.)

Cupric arseniomolybdate, CuO , $2\text{H}_2\text{O}$, As_2O_5 , $6\text{MoO}_3 + 15\text{H}_2\text{O}$. (Pufahl.)

3CuO , $3\text{H}_2\text{O}$, As_2O_5 , $18\text{MoO}_3 + 34\text{H}_2\text{O}$. (Pufahl.)

- Lithium arseniomolybdate**, Li_2O , As_2O_5 , $6\text{MoO}_3 + 14\text{H}_2\text{O}$.
Very sol. in H_2O . (Pufahl, *l.c.*)
 $3\text{Li}_2\text{O}$, As_2O_5 , $18\text{MoO}_3 + 34\text{H}_2\text{O}$. Solution sat. at 15° has sp. gr. of 2.481. (Pufahl, *l.c.*)
- Magnesium arseniomolybdate**, MgO , As_2O_5 , $6\text{MoO}_3 + 13\text{H}_2\text{O}$.
Very sol. in H_2O . (Pufahl, *l.c.*)
 3MgO , As_2O_5 , $18\text{MoO}_3 + 36\text{H}_2\text{O}$ Sol. in H_2O . (Pufahl, *l.c.*)
- Manganese arseniomolybdate**, MnO , $2\text{H}_2\text{O}$, As_2O_5 , $6\text{MoO}_3 + 11\text{H}_2\text{O}$.
(Pufahl.)
 3MnO , $3\text{H}_2\text{O}$, As_2O_5 , $18\text{MoO}_3 + 33\text{H}_2\text{O}$ (Pufahl.)
- Nickel arseniomolybdate**, NiO , $2\text{H}_2\text{O}$, As_2O_5 , $6\text{MoO}_3 + 11\text{H}_2\text{O}$.
(Pufahl.)
 3NiO , $3\text{H}_2\text{O}$, As_2O_5 , $18\text{MoO}_3 + 34\text{H}_2\text{O}$. (Pufahl.)
- Potassium arseniomolybdate**, K_2O , As_2O_5 , $2\text{MoO}_3 + 5\text{H}_2\text{O}$.
Sol. in H_2O . (Friedheim, Z. anorg. 2. 314.)
 K_2O , As_2O_5 , $6\text{MoO}_3 + 5\text{H}_2\text{O}$. Sol. in hot H_2O without decomp. (Friedheim, Z. anorg. 1892, 2. 330.)
 K_2O , As_2O_5 , $18\text{MoO}_3 + 25\text{H}_2\text{O}$. Easily sol. in cold H_2O . Decomp. on dilution. (Pufahl, *l.c.*)
 $3\text{K}_2\text{O}$, As_2O_5 , $18\text{MoO}_3 + 26\text{H}_2\text{O}$. Easily sol. in H_2O . (Pufahl, *l.c.*)
 $3\text{K}_2\text{O}$, As_2O_5 , 20MoO_3 . Insol. in H_2O . (Debray, C. R. 78. 1408.)
 $3\text{K}_2\text{O}$, As_2O_5 , $24\text{MoO}_3 + 12\text{H}_2\text{O}$. Somewhat sol. in H_2O acidified with HNO_3 . (Pufahl, *l.c.*)
- Rubidium arseniomolybdate**, $3\text{Rb}_2\text{O}$, $3\text{As}_2\text{O}_5$, $5\text{MoO}_3 + 9\text{H}_2\text{O}$.
Easily sol. in H_2O . (Ephraim, Z. anorg. 1910, 65. 241.)
 Rb_2O , As_2O_5 , 6MoO_3 . Sl. sol. in H_2O (Pufahl, *l.c.*)
 $4\text{Rb}_2\text{O}$, As_2O_5 , $18\text{MoO}_3 + 40\text{H}_2\text{O}$. Pptd. (Ephraim, Z. anorg. 1910, 65, 241-4.)
- Silver arseniomolybdate**, $3\text{Ag}_2\text{O}$, As_2O_5 , $6\text{MoO}_3 + x\text{H}_2\text{O}$.
(Pufahl, Leipzig, 1888.)
 $6\text{Ag}_2\text{O}$, As_2O_5 , $18\text{MoO}_3 + 22\text{H}_2\text{O}$. Sl. sol. in H_2O . Very sol. in NH_4OH and in dil. HNO_3 . (Pufahl, *l.c.*)
 $7\text{Ag}_2\text{O}$, $2\text{As}_2\text{O}_5$, $36\text{MoO}_3 + 30\text{H}_2\text{O}$. Sl. sol. in cold, easily sol. in hot H_2O strongly acidified with HNO_3 . (Pufahl, *l.c.*)
- Sodium arseniomolybdate**, Na_2O , As_2O_5 , $2\text{MoO}_3 + 8\text{H}_2\text{O}$.
(Friedheim, Z. anorg. 1892, 2. 357.)
 Na_2O , As_2O_5 , $6\text{MoO}_3 + 12\text{H}_2\text{O}$. Very sol. in H_2O . Solution sat. at 19.8° has sp. gr. = 1.678. (Friedheim, *l.c.*)
- $3\text{Na}_2\text{O}$, As_2O_5 , $6\text{MoO}_3 + 11\text{H}_2\text{O} + 12\text{H}_2\text{O}$, and $+13\text{H}_2\text{O}$. Sl. sol. in cold H_2O . (Pufahl, *l.c.*)
 $3\text{Na}_2\text{O}$, As_2O_5 , $18\text{MoO}_3 + 24\text{H}_2\text{O}$. Easily sol. in H_2O . (Pufahl, *l.c.*)
 $+30\text{H}_2\text{O}$. Sl. sol. in cold H_2O . (Pufahl, *l.c.*)
- Strontium arseniomolybdate**, SrO , As_2O_5 , $6\text{MoO}_3 + 10\text{H}_2\text{O}$.
As Ba salt. (Pufahl, *l.c.*)
 3SrO , As_2O_5 , 6MoO_3 . As Ba salt. (Pufahl, *l.c.*)
 3SrO , As_2O_5 , $18\text{MoO}_3 + 32\text{H}_2\text{O}$. Very sol. in H_2O . (Pufahl, *l.c.*)
- Thallium arseniomolybdate**, $6\text{Tl}_2\text{O}$, As_2O_5 , $18\text{MoO}_3 + x\text{H}_2\text{O}$.
Ppt. (Pufahl.)
 $3\text{Tl}_2\text{O}$, $3\text{H}_2\text{O}$, As_2O_5 , $18\text{MoO}_3 + 3\text{H}_2\text{O}$. Ppt. (Pufahl.)
- Zinc arseniomolybdate**, ZnO , $2\text{H}_2\text{O}$, As_2O_5 , $6\text{MoO}_3 + 11\text{H}_2\text{O}$.
(Pufahl.)
 3ZnO , As_2O_5 , $18\text{MoO}_3 + 37\text{H}_2\text{O}$. Very sol. in H_2O . (Pufahl.)
- Arseniophosphovanadicotungstic acid.**
- Ammonium arseniophosphovanadicotungstate**, $88(\text{NH}_4)_2\text{O}$, $2\text{As}_2\text{O}_5$, $12\text{P}_2\text{O}_5$, $69\text{V}_2\text{O}_3$, $148\text{WO}_3 + 484\text{H}_2\text{O}$.
Sol. in H_2O . Insol. in alcohol and ether. (Rogers, J. Am. Chem. Soc. 1903, 25. 313.)
- Arseniophosphovanadicovanadiotungstic acid.**
- Ammonium arseniophosphovanadicovanadiotungstate**, $99(\text{NH}_4)_2\text{O}$, $2\text{As}_2\text{O}_5$, $12\text{P}_2\text{O}_5$, $6\text{V}_2\text{O}_3$, $66\text{V}_2\text{O}_5$, $191\text{WO}_3 + 522\text{H}_2\text{O}$.
Sl. sol. in cold H_2O . (Rogers, J. Am. Chem. Soc. 1903, 25. 314.)
- Arseniophosphovanadiotungstic acid.**
- Ammonium arseniophosphovanadiotungstate**, $82(\text{NH}_4)_2\text{O}$, $3\text{As}_2\text{O}_5$, $12\text{P}_2\text{O}_5$, $52\text{V}_2\text{O}_5$, $201\text{WO}_3 + 567\text{H}_2\text{O}$.
Very sol. in warm H_2O . Insol. in organic solvents. (Rogers, J. Am. Chem. Soc. 1903, 25. 312.)
- Arseniosulphuric acid.**
- Ammonium arseniosulphate**, $2(\text{NH}_4)_2\text{O}$, As_2O_5 , $2\text{SO}_3 + 3\text{H}_2\text{O}$.
Can be recryst. from H_2O . (Friedheim and Mozkin, Z. anorg. 1894, 6. 290.)
- Potassium arseniosulphate**, $2\text{K}_2\text{O}$, As_2O_5 , $2\text{SO}_3 + 3\text{H}_2\text{O}$.
(Friedheim and Mozkin, Z. anorg. 1894, 6. 289.)
 $5\text{K}_2\text{O}$, As_2O_5 , $8\text{SO}_3 + 6\text{H}_2\text{O}$. (Friedheim and Mozkin, Z. anorg. 1894, 6. 291.)

Sodium arseniosulphate, $2\text{Na}_2\text{O}$, As_2O_3 , $2\text{SO}_3+3\text{H}_2\text{O}$.

(Friedheim and Mozkin, Z. anorg. 1894, 6. 290.)

Arseniotelluric acid.

Ammonium arseniotellurate, $2(\text{NH}_4)_2\text{O}$, As_2O_5 , $\text{TeO}_3+4\text{H}_2\text{O}$.

Sol. in H_2O . (Weinland, Z. anorg. 1901. 28. 65.)

$4(\text{NH}_4)_2\text{O}$, $3\text{As}_2\text{O}_5$, $2\text{TeO}_3+11\text{H}_2\text{O}$. Sol. in H_2O . (Weinland.)

Sodium arseniotellurate, $2\text{Na}_2\text{O}$, As_2O_5 , $2\text{TeO}_3+9\text{H}_2\text{O}$.

Ppt. (Weinland. l.c.)

Arseniotungstic acid, $3\text{H}_2\text{O}$, As_2O_5 , $16\text{WO}_3+32\text{H}_2\text{O}=\text{H}_3\text{AsW}_3\text{O}_{28}+16\text{H}_2\text{O}$ (α -anhydroarsenioluteotungstic acid).

Sol. in H_2O . (Kehrmann, A. 245. 45.)

$3\text{H}_2\text{O}$, As_2O_5 , 19WO_3 (?). Sp. gr. of sat solution in H_2O is 3.279. (Fremery, B. 17. 296.)

Is a mixture containing principally $\text{H}_3\text{AsW}_3\text{O}_{28}+16\text{H}_2\text{O}$. (Kehrmann.)
 As_2O_5 , $18\text{WO}_3+x\text{H}_2\text{O}$. Sol. in H_2O . (Kehrmann, Z. anorg. 1899, 22. 292.)

Aluminum ammonium arseniotungstate.

See Aluminicoarseniotungstate, ammonium.

Ammonium arseniotungstate, $4(\text{NH}_4)_2\text{O}$, $2\text{H}_2\text{O}$, As_2O_5 , $6\text{WO}_3+3\text{H}_2\text{O}$.

Sl. sol. in cold H_2O or HNO_3+Aq ; easily sol. in boiling H_2O . (Gibbs, Proc. Am Acad. 16. 135.)

$7(\text{NH}_4)_2\text{O}$, As_2O_5 , $14\text{WO}_3+17\text{H}_2\text{O}$. Very sl. sol. even in boiling H_2O . (Fremery, l.c.)

$3(\text{NH}_4)_2\text{O}$, As_2O_5 , $16\text{WO}_3+16\text{H}_2\text{O}=(\text{NH}_4)_3\text{AsW}_3\text{O}_{28}+8\text{H}_2\text{O}$. Sol. in H_2O . (Kehrmann.)

$5(\text{NH}_4)_2\text{O}$, As_2O_5 , $17\text{WO}_3+8\text{H}_2\text{O}$. Can be recryst. from H_2O without decomp. Decomp. by long boiling with H_2O . (Kehrmann, Z. anorg. 1899, 22. 294.)

$3(\text{NH}_4)_2\text{O}$, As_2O_5 , 18WO_3+14 , or $18\text{H}_2\text{O}$. Very sol. in cold H_2O . Can be recryst. from H_2O . (Kehrmann, l.c.)

$3(\text{NH}_4)_2\text{O}$, As_2O_5 , $21\text{WO}_3+x\text{H}_2\text{O}$. Easily sol. in H_2O . Easily decomp. on recryst. (Kehrmann, l.c.)

$3(\text{NH}_4)_2\text{O}$, As_2O_5 , $24\text{WO}_3+12\text{H}_2\text{O}$. More sol. in H_2O than corresponding phosphotungstate. (Kehrmann, l.c.)

Barium arseniotungstate, 2BaO , As_2O_5 , $16\text{WO}_3+x\text{H}_2\text{O}$.

Sol. in H_2O . (Péchar, A. ch. (6) 22. 262.)

7BaO , As_2O_5 , $22\text{WO}_3+54\text{H}_2\text{O}$. Sol. in H_2O . Can be recryst. therefrom. (Kehrmann, l.c.)

Potassium arseniotungstate, $3\text{K}_2\text{O}$, $3\text{H}_2\text{O}$, As_2O_5 , 6WO_3 .

Insol. in H_2O . Readily sol. in alkali hydroxides + Aq. (Gibbs.)

$3\text{K}_2\text{O}$, As_2O_5 , $16\text{WO}_3+16\text{H}_2\text{O}=\text{K}_3\text{AsW}_3\text{O}_{28}+8\text{H}_2\text{O}$. Sol. in H_2O . (Kehrmann.)

$5\text{K}_2\text{O}$, As_2O_5 , $17\text{WO}_3+22\text{H}_2\text{O}$. Scarcely sol. in cold H_2O . (Kehrmann, Z. anorg. 1899, 22. 295.)

$3\text{K}_2\text{O}$, As_2O_5 , $18\text{WO}_3+14\text{H}_2\text{O}$. Efflorescent. (Kehrmann, l.c.)

$3\text{K}_2\text{O}$, As_2O_5 , $19\text{WO}_3+16\text{H}_2\text{O}$ (?). Sol. in H_2O . (Fremery.)

Silver arseniotungstate, $\text{Ag}_3\text{AsW}_3\text{O}_{28}$.

Insol. in H_2O (Kehrmann, A. 245. 55); perhaps identical with—

$6\text{Ag}_2\text{O}$, As_2O_5 , $16\text{WO}_3+11\text{H}_2\text{O}$. Insol. in H_2O . (Gibbs.)

Sodium arseniotungstate, $3\text{Na}_2\text{O}$, As_2O_5 , $3\text{WO}_3+20\text{H}_2\text{O}$.

Very sol. in H_2O . (Lefort, C. R. 92. 1461.)

Arsenious acid, HAsO_2 .

Solubility of HAsO_2 in amyl alcohol + Aq. at 25°

a_w = mol. of HAsO_2 in 1 l. of H_2O .

a_a = mol. of HAsO_2 in 1 l. of amyl alcohol.

h = partition coefficient.

a_w	a_a	h
0.0449	0.0082	5.48
0.0446	0.0083	5.38
0.0887	0.0164	5.41
0.0892	0.0161	5.53
0.1800	0.0324	5.55

(Auerbach, Z. anorg. 1903, 37. 356.)

Solubility of HAsO_2 in sat. H_3BO_3 + Aq and amyl alcohol.

a_w = mol. of HAsO_2 in 1 l. of H_2O .

a_a = mol. of HAsO_2 in 1 l. of amyl alcohol.

h = partition coefficient.

a_w	a_a	h
0.0859	0.0161	5.33
0.1720	0.0321	5.35

(Auerbach, l.c.)

Insol. in ethyl acetate. (Naumann, B. 1904, 37. 3601.)

See Arsenic trioxide.

Arsenites.

All arsenites, except those of the alkali metals, are partially or wholly insol. in H_2O , but easily sol. in acids; several are sol. in $(\text{NH}_4)_2\text{SO}_4$, NH_4NO_3 , or $\text{NH}_4\text{Cl}+\text{Aq}$.

All basic arsenites are sol. in acids except those that give an insol. salt with the bases. Many are sol. in excess of $\text{As}_2\text{O}_3+\text{Aq}$.

Aluminum arsenite, $\text{Al}_2\text{O}_3, \text{As}_2\text{O}_3$

Sl. sol. in boiling H_2O . Easily sol. in $\text{NaOH} + \text{Aq}$ and in acids. (Reichard, B. 1894, 27. 1029)

Aluminum arsenite iodide, $\text{AlI}_3, 6\text{As}_2\text{O}_3 + 16\text{H}_2\text{O}$.

(Gruhl, Dissert. 1897.)

Ammonium arsenite, NH_4AsO_2 .

Very sol. in H_2O . (Luynes, J. pr. 72. 180)
Insol. in acetone. (Eidmann, C. C. 1899, II. 1014); (Naumann, B. 1904, 37. 4328)
 $(\text{NH}_4)_3\text{AsO}_3$ (?). Sol. in H_2O . (Stavenhagen, J. pr. 1895, (2) 51. 11.)

$(\text{NH}_4)_4\text{As}_2\text{O}_5$. Very sol. in H_2O . Insol in alcohol or ether. (Stein, A. 74. 218)
Could not be obtained. (Stavenhagen.)

Ammonium arsenite bromide, $2\text{As}_2\text{O}_3, \text{NH}_4\text{Br}$

Sl. sol. in H_2O . (Rudorff, B. 19. 2679.)

Ammonium arsenite chloride, $\text{As}_2\text{O}_3, \text{NH}_4\text{Cl}$.

Sl. sol. in H_2O . Sol. in warm dil. $\text{NH}_4\text{OH} + \text{Aq}$. (Rudorff)

Ammonium arsenite iodide, $2\text{As}_2\text{O}_3, \text{NH}_4\text{I}$.

Sl. sol. in boiling H_2O . Sol. in warm dil. $\text{NH}_4\text{OH} + \text{Aq}$. (Rudorff.)

Antimony arsenite (?).

Ppt. Sol. in a small amount H_2O , but insol. in a large quantity. (Berzelius.)

Completely sol. in $\text{KOH} + \text{Aq}$. (Reynolds.)

Barium arsenite, $\text{Ba}(\text{AsO}_2)_2$.

Easily sol. in H_2O when recently pptd, but insol after being dried. Pptd from aqueous solution by boiling. (Filhol, A. 68. 308.)

Only sl. sol. in H_2O . (Stavenhagen, J. pr. 1895, (2) 51. 18.)

$\text{Ba}_3(\text{AsO}_3)_2$. Sl. sol. in cold H_2O ; sol. in hot H_2O and dil. acids. (Stavenhagen, J. pr. 1895, (2) 51. 17.)

$\text{BaH}_4(\text{AsO}_3)_2$ Ppt. (Bloxam, Chem. Soc. 15. 281)

$+34\text{H}_2\text{O}$. Moderately sol. in cold, more easily sol. in hot H_2O . Insol. in alcohol. (Perper, Dissert. 1894.)

$\text{Ba}_2\text{As}_2\text{O}_5 + 2\text{H}_2\text{O}$. Easily sol. in H_2O . (Stavenhagen, J. pr. 1895, (2) 51. 18.)

$+4\text{H}_2\text{O}$. Sl. sol. in H_2O ; also somewhat sol. in alcohol. (Stein, A. 74. 218.)

Sl. sol. in $\text{H}_3\text{AsO}_4 + \text{Aq}$ and $\text{BaO}_2\text{H}_2 + \text{Aq}$. (Dumas.)

Sol. in $\text{NH}_4\text{Cl} + \text{Aq}$. (Wackenroder, A. 41. 316.)

Not pptd. from solutions containing Na citrate. (Spiller.)

BaAs_4O_7 . Sol. in H_2O . Less sol. in alcohol. (Reichard, B. 1894, 27. 1033.)

Bismuth arsenite, $\text{BiAsO}_3 + 5\text{H}_2\text{O}$ (?).

Easily sol. in $\text{HNO}_3 + \text{Aq}$. (Schneider, J. p. (2) 20. 419.)

Sl. sol. in H_2O . (Stavenhagen, J. pr. 1895, (2) 51. 35.)

Cadmium arsenite, $\text{Cd}_3(\text{AsO}_3)_2$

Sl. sol. in H_2O ; easily sol. in $\text{NH}_4\text{OH} + \text{Aq}$ and dil. acids. (Stavenhagen, *l.c.*)

$\text{Cd}_2\text{As}_2\text{O}_5$. Ppt (Reichard, B. 1898, 31. 2168)

Sol. in acids without decomp; insol. in alkalis (Reichard, B. 1894, 27. 1033.)

$5\text{CdO}, \text{As}_2\text{O}_3 + 12\text{H}_2\text{O}$. Not attacked by KOH , $\text{Ba}(\text{OH})_2$ or alkali carbonates $+ \text{Aq}$. Insol in $\text{KCN} + \text{Aq}$. (Reichard, Ch. Z. 1902, 26. 1145)

Cæsium arsenite bromide, $\text{As}_2\text{O}_3, \text{CsBr}$.

Sol. in H_2O . (Wheeler, Z. anorg. 4. 451.)

Cæsium arsenite chloride, $\text{As}_2\text{O}_3, \text{CsCl}$.

As above.

Cæsium arsenite iodide, $\text{As}_2\text{O}_3, \text{CsI}$.

As above.

Calcium arsenite, $\text{Ca}(\text{AsO}_2)_2$.

Somewhat sol. in H_2O ; sol. in $\text{Ca}(\text{OH})_2 + \text{Aq}$ or $\text{As}_2\text{O}_3 + \text{Aq}$. (Simon, Pogg. 47. 417.)

$\text{Ca}_3(\text{AsO}_3)_2$. Ppt. (Kühn, J. B. 1852. 379.)
Only sl. sol. H_2O ; readily sol. in dil. acids. (Stavenhagen, *l.c.*)

Sol. in H_2O , insol. in alcohol. (Reichard, B. 1894, 27. 1036.)

$3\text{CaO}, 2\text{As}_2\text{O}_3 + 3\text{H}_2\text{O}$. Sl. sol. in H_2O ; easily sol. in $\text{NH}_4\text{Cl} + \text{Aq}$; sol. in $\text{As}_2\text{O}_3 + \text{Aq}$. (Stein)

$\text{CaH}_4(\text{AsO}_3)_2 + x\text{H}_2\text{O}$. Moderately sol. in H_2O . Insol. in abs. alcohol. (Perper, Dissert. 1894.)

$\text{Ca}_2\text{As}_2\text{O}_5$. Sl. sol. in H_2O ; 1 pt. in 3000-4000 pts. H_2O . Alkali chlorides increase solubility slightly. (Stavenhagen, *l.c.*)

Sl. sol. in H_2O , insol. in H_2O containing CaO_2H_2 . (Berzelius)

Not pptd in presence of 4000-5000 pts. H_2O . (Harting, Lassaingne.)

Not pptd from solutions containing NH_4 salts, and when pptd is sol. in $(\text{NH}_4)_2\text{SO}_4$, NH_4NO_3 , $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$, and $\text{NH}_4\text{Cl} + \text{Aq}$ (Gieseke and Schweigger.)

Sol. in $\text{NH}_4\text{AsO}_3 + \text{Aq}$. (Schweigger.)

Sol. in $\text{CaCl}_2 + \text{Aq}$. (Ordway.)

Easily sol. in dil. acids. Not pptd. from solutions containing sodium citrate. (Spiller)

Calcium arsenite iodide, $\text{CaI}_2, 3\text{As}_2\text{O}_3 + 12\text{H}_2\text{O}$.

Sl. sol. in H_2O . Decomp. on heating. (Gruhl, Dissert. 1897.)

Chromic arsenite, CrAsO_3 .

Sol. in H_2O , but slowly decomp. by boiling. (Neville, C. N. 34. 220.)

Sol. in HCl ; repptd. by $\text{NH}_4\text{OH} + \text{Aq}$; sol. in $\text{KOH} + \text{Aq}$. (Reichard, B. 1894, 27. 1028.)

Cobaltous arsenite basic, $7\text{CoO}, \text{As}_2\text{O}_3$.

Very sol. in dil., difficultly sol. in conc. H_2SO_4 . Sol. in conc. NaOH and in conc. $\text{NH}_4\text{OH} + \text{Aq}$ (Reichard, Z. anal. 1903, 42. 10.)

Cobaltous arsenite, $3\text{CoO}, \text{As}_2\text{O}_3$.

Sol KOH+Aq with decomp. (Identical with salt of Girard) (Reichard, B 1894, 27. 1031.)

+ $4\text{H}_2\text{O}$. Sl. sol. in H_2O ; easily sol in acids (Stavenhagen, J pr 1895, (2) 51. 39).

$3\text{CoO}, 2\text{As}_2\text{O}_3 + 4\text{H}_2\text{O}$ Sol. in HNO_3 (Girard, C. R. 1852, 34. 918.)

$\text{Co}_3\text{H}_6(\text{AsO}_3)_4$ Insol. in H_2O ; sol. in HNO_3 , HCl , or $\text{NH}_4\text{OH} + \text{Aq}$. (Proust.)

Only sol. in KOH, or NaOH+Aq when formed in a solution containing an excess of those reagents. (Reynoso, C. R 31. 68)

$\text{Co}_2\text{As}_2\text{O}_5$ Ppt. (Reichard, B. 1898, 31. 2165)

Sol in HNO_3 and $\text{HCl} + \text{Aq}$. (Proust)

Cupric arsenite, $\text{Cu}(\text{AsO}_2)_2$.

(Avery, J. Am. Chem. Soc 1906, 28. 1161)

Insol. in liquid NH_3 (Franklin, Am. Ch. J. 1898, 20. 827.)

+ H_2O . Sl. sol. in H_2O . (Stavenhagen, l c.)

+ $2\text{H}_2\text{O}$. Sl. sol. in H_2O ; insol. in alcohol. (Stavenhagen, l c)

$2\text{CuO}, \text{As}_2\text{O}_3$. Ppt. (Stavenhagen, l c)

$3\text{CuO}, \text{As}_2\text{O}_3$ (Scheele's green.) Insol. in H_2O ; sol in KOH+Aq, $\text{NH}_4\text{OH} + \text{Aq}$, and in most acids. Formula is $\text{Cu}_3(\text{AsO}_3)_2 + 2\text{H}_2\text{O}$. (Sharples, C. N 35. 89)

Sol in $\text{NH}_4\text{OH} + \text{Aq}$ without decomp. Sol. in KOH+Aq with decomp. (Reichard, B. 1894, 27. 1026)

Insol. in pyridine. (Schroeder, Dissert. 1901.)

$5\text{CuO}, \text{As}_2\text{O}_3$. Insol. in H_2O , sol. in acids, $\text{NH}_4\text{OH} + \text{Aq}$ and conc. MOH+Aq. (Reichard, Ch. Z. 1902, 26. 1142.)

$x\text{CuO}, y\text{As}_2\text{O}_3$. Min. *Tripphente*. Easily sol. in HNO_3 and in $\text{HCl} + \text{Aq}$.

Didymium arsenite, $\text{D}_{12}\text{H}_3(\text{AsO}_3)_3$.

Ppt (Frerichs and Smith, A. 191. 355.)

Does not exist (Cleve, B. 11. 910.)

Glucinum arsenite iodide, $\text{GII}_2, 3\text{As}_2\text{O}_3 + 8\text{H}_2\text{O}$.

Decomp. by H_2O . (Gruhl, Dissert. 1897.)

Gold (aurous) arsenite, $3\text{Au}_2\text{O}, \text{As}_2\text{O}_3$.

Decomp by light. (Reichard, B. 1894, 27. 1027.)

Gold (auric) arsenite, $\text{AuAsO}_3 + \text{H}_2\text{O}$.

Very sol. in H_2O , $\text{NH}_4\text{OH} + \text{Aq}$ and dil acids. (Stavenhagen, J pr 1895, (2) 51. 28)

Iron (ferrous) arsenite, $\text{FeO}, \text{As}_2\text{O}_3$.

Decomp. in the air when moist; sol. in $\text{NH}_4\text{OH} + \text{Aq}$ when freshly pptd. (Reichard, B. 1894, 27. 1029-30.)

$\text{Fe}_2\text{As}_2\text{O}_5$. Ppt. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$; insol. in NH_4 arsenite, or other NH_4 salts + Aq. (Wittstein.)

Iron (ferric) arsenite, basic, $4\text{Fe}_2\text{O}_3, \text{As}_2\text{O}_3 + 5\text{H}_2\text{O}$.

Ppt H_2O extracts As_2O_3 . Sol. in conc. acids with separation of As_2O_3 . Acetic acid is without action. (Bunsen and Berthold, 1834.)

Sol. in KOH, or NaOH+Aq.

Iron (ferric) arsenite, $\text{Fe}_2\text{O}_3, \text{As}_2\text{O}_3$.

Sol in $\text{NH}_4\text{OH} + \text{Aq}$ when freshly pptd. (Reichard, B. 1894, 27. 1030)

$\text{Fe}_4\text{As}_2\text{O}_5$. Ppt. (Reichard, B. 1898, 31. 2170.)

+ $7\text{H}_2\text{O}$. Sol. in NaOH, and KOH+Aq.

"Ferric arsenite" is sl. sol. in $\text{Al}_2(\text{SO}_4)_3 + \text{Aq}$. (Kynaston, DmgI 235. 326.)

Lanthanum arsenite, $\text{La}_2\text{H}_3(\text{AsO}_3)_3$.

Ppt. (Frerichs and Smith, A 191. 355.)

Does not exist. (Cleve, B. 11. 910.)

Lead arsenite, $\text{Pb}(\text{AsO}_2)_2 + x\text{H}_2\text{O}$.

Sl sol in H_2O . Insol. in KOH, but sol. in NaOH+Aq. (Berzelus.)

$\text{Pb}_2\text{As}_2\text{O}_5$. Insol. in H_2O , NH_4OH , NH_4 arsenite, or other NH_4 salts+Aq (Wittstein)

$\text{Pb}_3(\text{AsO}_3)_2$. Scarcely sol. in H_2O ; easily sol. in HNO_3 , or $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. Boiling H_2O dissolves some As_2O_3 . Not completely insol. in KOH+Aq. (Streng, A 129. 238.)

Sol. in acetic acid; insol in H_2O in the presence of ammonium salts; sol. in NaOH+Aq; sl. sol. in KOH+Aq. (Reichard, B. 1894, 27. 1024.)

+ H_2O Sl. sol. in H_2O ; easily sol in dil. acids. (Stavenhagen, J. pr 1895, (2) 51. 33.)

Lead arsenite chloride, $\text{Pb}_3\text{As}_2\text{O}_5, 2\text{PbCl}_2$.

Min. *Ekladmite*. Easily sol in $\text{HNO}_3 + \text{Aq}$, and warm $\text{HCl} + \text{Aq}$.

Magnesium arsenite, $\text{Mg}_3(\text{AsO}_3)_2$.

Insol. in $\text{NH}_4\text{OH} + \text{Aq}$, but sol in a large excess of $\text{NH}_4\text{Cl} + \text{Aq}$. (Rose.)

Very sol. in boiling H_2O and in dil. acids. Sol. in $\text{NH}_4\text{Cl} + \text{Aq}$ (Reichard, B. 1894, 27. 1032.)

Very sol. in H_2O and dil. acids. (Stavenhagen, l c)

$\text{Mg}_3\text{As}_2\text{O}_5 + 4\text{H}_2\text{O}$. Hygroscopic. Very sol. in H_2O and acids. (Stavenhagen, l c.)

$3\text{MgO}, 2\text{As}_2\text{O}_3 + 3\text{H}_2\text{O}, + 15\text{H}_2\text{O}$, and + $18\text{H}_2\text{O}$. (Perper, Dissert 1894.)

Magnesium arsenite iodide, $\text{MgI}_2, 3\text{As}_2\text{O}_3 + 12\text{H}_2\text{O}$.

Moderately sol. in H_2O . (Gruhl, Dissert. 1897.)

Manganous arsenite, $\text{Mn}_3(\text{AsO}_3)_2 + 3\text{H}_2\text{O}$.

Sol. in H_2O ; insol. in alcohol; easily oxidized by moist air. (Stavenhagen, l c.)

$3\text{MnO}, 2\text{As}_2\text{O}_3$ (Reichard, B. 1894, 27. 1032.)

$\text{Mn}_2\text{H}_2\text{As}_2\text{O}_{10} + 4\text{H}_2\text{O}$ Sl. sol. in H_2O .
Very sol. in acids and alkali (Stavenhagen, *l.c.*)
 $\text{Mn}_3\text{As}_2\text{O}_8$. Ppt. (Reichard, B. 1898, **31**. 2165)

Mercurous arsenite, $\text{Hg}_2\text{O} \cdot \text{As}_2\text{O}_3$

Decomp. by light. Decomp. by H_2O .
(Reichard, B. 1894, **27**. 1022.)

Hg_3AsO_3 . Only sl. sol. in H_2O ; sol. in dil. acids. (Stavenhagen, J. pr. 1895, (2) **51**. 24.)

Gradually and completely decomposed by H_2O . (Reichard, Ch. Z. 1902, **26**. 1143.)

Mercuric arsenite, $\text{Hg}_2(\text{AsO}_3)_2$.

Sl. sol. in H_2O . (Stavenhagen, *l.c.*)

Decomp. more easily by H_2O than is the mercurous comp. (Reichard, Ch. Z. 1902, **26**. 1143.)

$2\text{HgO} \cdot \text{As}_2\text{O}_3$. Not decomp. by boiling with H_2O . Undecomp. by boiling acids. Decomp. by $\text{KOH} + \text{Aq}$, $\text{K}_2\text{CO}_3 + \text{Aq}$ and $\text{NH}_4\text{OH} + \text{Aq}$. (Reichard, B. 1894, **27**. 1021.)

$\text{Hg}_3\text{As}_2\text{O}_8$. Ppt. Decomp. by boiling H_2O . Very sl. sol. in $\text{H}_2\text{SO}_4 + \text{HCl}$. (Reichard, B. 1898, **31**. 2170.)

Nickel arsenite, $\text{Ni}_3(\text{AsO}_3)_2$.

Insol. in H_2O ; easily sol. in $\text{NH}_4\text{OH} + \text{Aq}$ (Proust.)

Ppt. (Reichard, B. 1898, **31**. 2165.)

$3\text{NiO} \cdot 2\text{As}_2\text{O}_3$. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$ (identical with salt of Girard) (Reichard, B. 1894, **27**. 1031.)

$+4\text{H}_2\text{O}$ Insol. in H_2O , sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Proust.)

Sol. in $\text{KOH} + \text{Aq}$. (Girard, C. R. **34**. 918.)

$2\text{NiO} \cdot \text{As}_2\text{O}_3$. Insol. in H_2O ; sol. in $\text{NH}_4\text{OH} + \text{Aq}$, sol. in $\text{KOH} + \text{Aq}$. (Reynoso, C. R. **31**. 68.)

Platinum arsenite, $\text{Pt}_2(\text{AsO}_3)_4$.

Sol. in H_2O and alcohol; very unstable. (Stavenhagen, *l.c.*)

Potassium arsenite, KAsO_3 .

Sol. in H_2O ; sl. sol. in alcohol (Pasteur, A. **68**. 309.)

Insol. in ethyl acetate. (Naumann, B. 1904, **37**. 3601.)

Does not exist. (Stavenhagen, *l.c.*)

K_3AsO_8 . Very sol. in H_2O ; sol. in alcohol. (Stavenhagen, *l.c.*)

$\text{K}_4\text{As}_2\text{O}_8 + 6\text{H}_2\text{O}$. Very sol. in H_2O ; sol. in alcohol. (Stavenhagen, *l.c.*)

$\text{K}_3\text{As}_2\text{O}_7 + 2\text{H}_2\text{O}$ Sol. in H_2O ; sl. sol. in alcohol. (Pasteur, A. **68**. 309.)

Potassium arsenite bromide, $4\text{As}_2\text{O}_3, 2\text{KBr}$.

More sol. in H_2O than iodide (Schiff and Sestini, A. **228**. 72.)

$2\text{As}_2\text{O}_3, \text{KBr}$. (Rüdorff, B. **19**. 2675.)

Potassium arsenite chloride, $2\text{As}_2\text{O}_3, \text{KCl}$.

Much more quickly sol. in hot H_2O than bromide or iodide (Rüdorff, B. **19**. 2675.)

$\text{As}_2\text{O}_3, \text{KCl}$ Decomp. by H_2O

Potassium arsenite iodide, $3\text{As}_2\text{O}_3, 2\text{KI} + \text{H}_2\text{O}$.

Sl. sol. in cold H_2O ; sol. in 20 pts. boiling, and 40 pts. cold H_2O (Emmet, Sill. Am. J. (2) **18**. 583.)

$6\text{KAsO}_3, 2\text{KI} + 3\text{H}_2\text{O}$ Sol. in H_2O and alcohol. Decomp. by acids. (Harms.)

$2\text{KH}(\text{AsO}_3)_2, \text{As}_2\text{O}_3, 2\text{KI}$. Sl. sol. in H_2O . (Harms, A. **91**. 371.)

$2\text{As}_2\text{O}_3, \text{KI}$. Very difficultly sol. even in boiling H_2O . Very easily sol. in $\text{KOH} + \text{Aq}$, but much less so in $\text{K}_2\text{CO}_3 + \text{Aq}$. (Rüdorff, B. **19**. 2670.)

Sol. in 40 pts. cold, 20 pts. hot H_2O ; sol. in alkalis. (Schiff and Sestini, A. **228**. 72.)

Potassium arsenite sulphate, $\text{K}_3\text{AsO}_3, 10\text{K}_2\text{SO}_4$.

(Stavenhagen, Zeit. angew. ch. 1894, **8**. 166.)

Rubidium arsenite, RbAsO_3 .

Sol. in H_2O ; aq. solution is alkaline to litmus. Insol. in alcohol. (Bouchonnet, C. R. 1907, **144**. 641.)

Rubidium arsenite bromide, $\text{As}_2\text{O}_3, \text{RbBr}$.

Decomp. by H_2O . (Wheeler, Z. anorg. **4**. 451.)

Rubidium arsenite chloride, $\text{As}_2\text{O}_3, \text{RbCl}$.

As above.

Rubidium arsenite iodide, $\text{As}_2\text{O}_3, \text{RbI}$.

As above.

Silver arsenite, Ag_3AsO_3 .

Insol. in H_2O . Not pptd. in presence of 20,000 pts. H_2O . (Harting.)

1 l. H_2O dissolves 0.0115 g. Ag_3AsO_3 at 20° . (Whitby, Z. anorg. 1910, **67**. 108.)

Only sl. sol. in H_2O and in dil. acids; readily sol. in $\text{NH}_4\text{OH} + \text{Aq}$ and conc. acids. (Stavenhagen, *l.c.*)

Decomp. by light, by $\text{KOH} + \text{Aq}$ and by $\text{NH}_4\text{OH} + \text{Aq}$. (Reichard, B. 1894, **27**. 1022-23.)

Easily sol. in $\text{HNO}_3 + \text{Aq}$ and other acids. (Marcet.)

More easily sol. in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ than Ag_3PO_4 ; sl. sol. in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ (Santos, C. N. **38**. 94.)

Insol. in $\text{KOH} + \text{Aq}$. (Kühn, Arch. Pharm. (2) **69**. 267.)

Easily sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Marcet.)

Insol. in $\text{NH}_4\text{OH} + \text{Aq}$, but sol. therein in presence of alkali nitrates. (Santos, *l.c.*)

Incompletely sol. in $(\text{NH}_4)_2\text{CO}_3$, $(\text{NH}_4)_2\text{SO}_4$, or $\text{NH}_4\text{NO}_3 + \text{Aq}$. (Wittstein, Repert. **51**. 41.)

Decomp. by $\text{NH}_4\text{Cl} + \text{Aq}$ Sol in $\text{KAsO}_2 + \text{Aq}$ (Kuhn, *l.c.*)

Not pptd. in solutions containing sol citrates. (Spiller.)

Sol in methyl acetate (Naumann, B 1909, 42. 3790)

Sl. sol in methyl acetate. (Bezold, Dissert 1908.)

Insol. in ethyl acetate (Hamers, Dissert. 1906); (Naumann, B. 1910, 43. 314)

+ H_2O . Very sol. in H_2O , $\text{NH}_4\text{OH} + \text{Aq}$ and in dil acids. (Stavenhagen, J. pr. 1895, (2) 51. 29)

$2\text{Ag}_2\text{O}$, As_2O_3 . Ppt (Pasteur, J. Pharm. (3) 13. 395.)

Could not be obtained. (Stavenhagen, *l.c.*)

$3\text{Ag}_2\text{O}$, $2\text{As}_2\text{O}_3$. Sol in cold $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. (Santos)

Sol in $\text{NH}_4\text{OH} + \text{Aq}$ and in potassium arsenite + Aq . (Girard, C. R. 34. 918)

Ppt. (Reichard, B. 1898, 31. 2167.)

Could not be obtained. (Stavenhagen, *l.c.*)

Silver arsenite ammonia, $2\text{Ag}_2\text{O}$, As_2O_3 , 4NH_3 .

Insol. in H_2O or alcohol. (Girard)

Sodium arsenites.

Correspond to potassium arsenites, but have not been obtained in crystalline form. All are very sol. in H_2O . (Pasteur, A 68. 308.)

Na_3AsO_3 . Very sol. in H_2O . (Stavenhagen, *l.c.*)

Insol. in ethyl acetate. (Naumann, B. 1904, 37. 3602)

Sodium arsenite bromide, $2\text{As}_2\text{O}_3$, NaBr .

Decomp. by warm H_2O . (Rudorff, B. 21. 3052)

Sodium arsenite iodide, $2\text{As}_2\text{O}_3$, NaI .

Decomp. by hot H_2O . (Rudorff.)

Strontium arsenite, $\text{Sr}_3(\text{AsO}_3)_2$.

Sol. in H_2O . (Stavenhagen, *l.c.*)

Sol. in H_2O , insol in alcohol (identical with Stein) (Reichard, B 1894, 27. 1036.)

$\text{Sr}_2\text{As}_2\text{O}_5 + 2\text{H}_2\text{O}$. Quite easily sol. in H_2O . (Stein)

Sl. sol. in H_2C , $\text{SrO}_2\text{H}_2 + \text{Aq}$, or $\text{H}_3\text{AsO}_4 + \text{Aq}$. (Dumas)

Very sl sol. in alcohol (Stein.)

Easily sol. in H_2O and in acids. (Stavenhagen, J pr 1895, (2) 51. 17.)

$\text{Sr}_2\text{As}_2\text{O}_5$. Moderately sol. in H_2O . (Reichard, B. 1894, 27. 1036)

Strontium arsenite iodide, SrI_2 , $3\text{As}_2\text{O}_3 + 12\text{H}_2\text{O}$.

As Ba comp. (Grühl, Dissert. 1897.)

Thallium arsenite, Tl_3AsO_3 .

Sl. sol. in H_2O and alcohol; easily sol. in acids, especially in dil. H_2SO_4 . (Stavenhager, *l.c.*)

Tin (stannous) arsenite, $\text{Sn}_3(\text{AsO}_3)_2$

Ppt; decomp. by acids and alkali. (Reichard, B 1898, 31. 2169)

+ $2\text{H}_2\text{O}$ Sl sol. in H_2O . Easily sol in dil. acids and alkalies. (Stavenhagen, *l.c.*)

Tin (stannic) arsenite, $\text{Sn}_3(\text{AsO}_3)_4 + 5\frac{1}{2}\text{H}_2\text{O}$

Sl sol. in H_2O . (Stavenhagen, *l.c.*)

5SnO_2 , $2\text{As}_2\text{O}_3$. Ppt. Sol. in acids without decomp. (Reichard, B. 1894, 27. 1025.)

$\text{Sn}_7\text{As}_2\text{O}_{17}$ Ppt. (Reichard, B. 1898, 31. 2169.)

Uranium arsenite, UO_2 , As_2O_3 .

Insol in $\text{NH}_4\text{OH} + \text{Aq}$; only sl sol $\text{KOH} + \text{Aq}$. Sol. in acids. (Reichard, B. 1894, 27. 1029.)

Zinc arsenite, ZnO , As_2O_3 .

Ppt. (Avery, J. Am. Chem. Soc. 1906, 28. 1163.)

3ZnO , As_2O_3 . Sol. in acids without decomp. Easily sol in $\text{NH}_4\text{OH} + \text{Aq}$. (Reichard, B. 1894, 27. 1033.)

Arseniovanadic acid, As_2O_5 , $\text{V}_2\text{O}_5 + 2\text{H}_2\text{O}$.

Easily sol. in H_2O , but solution easily decomposes; crystallizes from H_2O with $10\text{H}_2\text{O}$. Composition is vanadium dihydrogen arsenate $(\text{VO}_2)_2\text{H}_3\text{AsO}_4$ (Friedheim, B 23. 2600.)

+ 14 , and + $18\text{H}_2\text{O}$. (Ditte, C. R. 102. 757.) Could not be obtained. (Friedheim.)

$3\text{As}_2\text{O}_5$, $2\text{V}_2\text{O}_5$ (Berzelius.) Correct formula is as above. (Friedheim.)

$3\text{H}_2\text{O}$, $7\text{As}_2\text{O}_5$, $6\text{V}_2\text{O}_5$ (Gibbs, Am. Ch. J. 7. 209.) Could not be obtained. (Friedheim.)

$3\text{H}_2\text{O}$, $5\text{As}_2\text{O}_5$, $8\text{V}_2\text{O}_5 + 24\text{H}_2\text{O}$ (Gibbs.) Could not be obtained. (Friedheim.)

Arseniovanadates.

According to Friedheim (Z. anorg. 1892, 2. 319) the arseniovanadates are double arsenates of VO_2 and NH_4 .

Ammonium arseniovanadate, $(\text{NH}_4)_2\text{O}$,

As_2O_5 , $2\text{V}_2\text{O}_5 + 5\text{H}_2\text{O}$.

Efflorescent in dry air, sl. sol. in cold, decomp. by hot H_2O . Composition is ammonium divanadium arsenate $= (\text{VO}_2)_2(\text{NH}_4)\text{AsO}_4 + 2\frac{1}{2}\text{H}_2\text{O}$. (Friedheim, B. 23. 2600.)

Sl. sol. in cold H_2O . Somewhat more easily sol. in hot H_2O with separation of V_2O_5 . (Schmitz-Dumont, Dissert. 1891.)

$2(\text{NH}_4)_2\text{O}$, $3\text{As}_2\text{O}_5$, $2\text{V}_2\text{O}_5 + 4\text{H}_2\text{O}$. Cannot be crystallized from H_2O . Composition is $(\text{NH}_4)_2\text{HAsO}_4 + 2(\text{VO}_2)_2\text{H}_2\text{AsO}_4$. (Friedheim.)

Decomp. under H_2O to $(\text{NH}_4)_2\text{O}$, $2\text{V}_2\text{O}_5$, $\text{As}_2\text{O}_5 + 5\text{H}_2\text{O}$. (Schmitz-Dumont, *l.c.*)

$5(\text{NH}_4)_2\text{O}$, $4\text{As}_2\text{O}_5$, $2\text{V}_2\text{O}_5 + 18\text{H}_2\text{O}$. Sol. in H_2O . (Ditte, C. R. 102. 1019.) Does not exist. (Friedheim, B. 23. 2605.)

Calcium arseniovanadate, 2CaO , $3\text{As}_2\text{O}_5$, $2\text{V}_2\text{O}_5 + 21\text{H}_2\text{O} = \text{CaHAsO}_4 + 2(\text{VO}_2)_2\text{H}_2\text{AsO}_4 + 8\text{H}_2\text{O}$.

Can be crystallized in presence of vanadic acid without decomp. (Friedheim.)

Efflorescent. Sol. in H_2O . (Schmitz-Dumont, *l c*)

Cobalt arseniovanadate, CoO , As_2O_5 , $\text{V}_2\text{O}_5 + 9\text{H}_2\text{O} = \text{Co}(\text{VO}_2)_2\text{H}_2(\text{AsO}_4)_2 + 8\text{H}_2\text{O}$.

Sol. in H_2O . (Friedheim.)

Copper arseniovanadate, CuO , As_2O_5 , $\text{V}_2\text{O}_5 + 4\text{H}_2\text{O} = \text{Cu}(\text{VO}_2)_2\text{H}_2(\text{AsO}_4)_2 + 3\text{H}_2\text{O}$.

Sol. in H_2O (Friedheim.)

Magnesium arseniovanadate, MgO , As_2O_5 , $\text{V}_2\text{O}_5 + 10\text{H}_2\text{O} = (\text{VO}_2)_2\text{MgH}_2(\text{AsO}_4)_2 + 9\text{H}_2\text{O}$.

Sol. in H_2O . (Friedheim.)

Moderately sol. in H_2O . Solution decomp. on standing. (Schmitz-Dumont, *l c*.)

2MgO , $3\text{As}_2\text{O}_5$, $2\text{V}_2\text{O}_5 + 23\text{H}_2\text{O} = \text{MgHAsO}_4 + 2(\text{VO}_2)_2\text{H}_2\text{AsO}_4 + 9\text{H}_2\text{O}$. Sol. in H_2O . (Friedheim.)

Sol. in H_2O but solution decomp. on evaporation. (Schmitz-Dumont, *l c*.)

Potassium arseniovanadate, K_2O , As_2O_5 , $2\text{V}_2\text{O}_5 + 5\text{H}_2\text{O} = (\text{VO}_2)_2\text{KAsO}_4 + 2\frac{1}{2}\text{H}_2\text{O}$.

Sol. in H_2O . (Friedheim.)

Sl. sol. in cold H_2O . Partially decomp. on heating. (Schmitz-Dumont.)

Strontium arseniovanadate, 2SrO , $3\text{As}_2\text{O}_5$, $2\text{V}_2\text{O}_5 + 20\text{H}_2\text{O} = \text{SrHAsO}_4 + 2(\text{VO}_2)_2\text{H}_2\text{AsO}_4 + 7\frac{1}{2}\text{H}_2\text{O}$.

Sol. in H_2O . (Friedheim.)

$+21\text{H}_2\text{O}$. Easily sol. in H_2O . (Schmitz-Dumont.)

Zinc arseniovanadate, ZnO , As_2O_5 , $\text{V}_2\text{O}_5 + 6\frac{1}{2}\text{H}_2\text{O} = \text{Zn}(\text{VO}_2)_2\text{H}_2(\text{AsO}_4)_2 + 5\frac{1}{2}\text{H}_2\text{O}$.

Sol. in H_2O . (Friedheim.)

2ZnO , $3\text{As}_2\text{O}_5$, $2\text{V}_2\text{O}_5 + 5\text{H}_2\text{O}$, and $+18\text{H}_2\text{O} = \text{ZnHAsO}_4 + 2(\text{VO}_2)_2\text{H}_2\text{AsO}_4$, and $+6\frac{1}{2}\text{H}_2\text{O}$. Sol. in H_2O . (Friedheim.)

Arseniovanadicotungstic acid.

Ammonium arseniovanadicotungstate, $17(\text{NH}_4)_2\text{O}$, $2\text{As}_2\text{O}_5$, $14\frac{1}{2}\text{V}_2\text{O}_5$, $29\text{WO}_3 + 98\text{H}_2\text{O}$.

Sl. sol. in cold H_2O . Readily sol. in boiling H_2O . Insol. in alcohol, ether, benzene, CS_2 , CHCl_3 , acetone, nitrobenzene, aniline and acetic anhydride. (Rogers, J. Am. Chem. Soc. 1903, 25. 307.)

Arseniovanadicovanadic acid.

Ammonium arseniovanadicovanadate, $5(\text{NH}_4)_2\text{O}$, $12\text{As}_2\text{O}_5$, 12VO_2 , $6\text{V}_2\text{O}_5 + 7\text{H}_2\text{O}$.

Sl. sol. in cold, sol. in hot H_2O , from which crystallizes—

$4(\text{NH}_4)_2\text{O}$, $9\text{As}_2\text{O}_5$, 9VO_2 , $8\text{V}_2\text{O}_5 + 11\text{H}_2\text{O}$. Sol. in H_2O . (Gibbs, Am. Ch. J. 7. 209.)

Arseniovanadicovanadiotungstic acid.

Ammonium arseniovanadicovanadiotungstate, $17(\text{NH}_4)_2\text{O}$, $2\text{As}_2\text{O}_5$, $7\text{V}_2\text{O}_5$, $4\text{V}_2\text{O}_5$, $32\text{WO}_3 + 73\text{H}_2\text{O}$.

Sl. sol. in cold, readily sol. in boiling H_2O . (Rogers, J. Am. Chem. Soc. 1903, 25. 310.)

Arseniovanadiotungstic acid.

Ammonium arseniovanadiotungstate, $18(\text{NH}_4)_2\text{O}$, $2\text{As}_2\text{O}_5$, $13\text{V}_2\text{O}_5$, $39\text{WO}_3 + 88\text{H}_2\text{O}$.

Sol. in H_2O . Insol. in organic solvents. (Rogers, J. Am. Chem. Soc. 1903, 25. 306.)

Arseniuretted hydrogen, AsH_3 .

See Arsenic hydride.

Arsenochromic acid.

Potassium arsenochromate, $\text{K}_4\text{Cr}_2\text{As}_2\text{O}_{16} + 12\text{H}_2\text{O}$.

Sol. in moderately conc. mineral acids. (Tarugi, C. C. 1897, II 724.)

$\text{K}_7\text{Cr}_3\text{As}_5\text{O}_{32} + 24\text{H}_2\text{O}$. Ppt. Sol. in dil. warm acids. (Tarugi.)

Potassium hydrogen arsenochromate,

$\text{K}_4\text{H}_6\text{Cr}_3\text{As}_2\text{O}_{16}$.

(Tarugi, C. C. 1897, II. 724.)

Arsensoarseniotungstic acid.

Potassium arsenosoarseniotungstate, $10\text{K}_2\text{O}$, $4\text{As}_2\text{O}_5$, As_2O_3 , $21\text{WO}_3 + 26\text{H}_2\text{O}$.

Precipitate. Sol. in a large amount of hot H_2O . (Gibbs, Am. Ch. J. 7. 313.)

Arsenosomolybdic acid.

Ammonium arsenosomolybdate, $3(\text{NH}_4)_2\text{O}$, $5\text{As}_2\text{O}_5$, $12\text{MoO}_3 + 24\text{H}_2\text{O}$.

Sl. sol. in H_2O . (Gibbs, Am. Ch. J. 7. 313.)

Ammonium barium arsenosomolybdate, $3(\text{NH}_4)_2\text{O}$, 2BaO , $5\text{As}_2\text{O}_5$, $10\text{MoO}_3 + 50\text{H}_2\text{O}$.

Ppt. (Ephraim, Z. anorg. 1910, 66. 57.)

Ammonium cupric arsenosomolybdate, $(\text{NH}_4)_2\text{O}$, CuO , $2\text{As}_2\text{O}_5$, $4\text{MoO}_3 + 2\text{H}_2\text{O}$, and $2(\text{NH}_4)_2\text{O}$, CuO , $3\text{As}_2\text{O}_5$, $6\text{MoO}_3 + 13\text{H}_2\text{O}$.

Ppts. (Ephraim, Z. anorg. 1910, 66. 58.)

Barium arsenosomolybdate, 3BaO , $2\text{As}_2\text{O}_5$, $8\text{MoO}_3 + 13\text{H}_2\text{O}$.

Very sl. sol. in H_2O . (Gibbs.)

Copper arsenosomolybdate, 2CuO , $3\text{As}_2\text{O}_5$, 6MoO_3 .

Sol. in H_2O . (Gibbs.)

Manganese arsenosomolybdate, 2MnO , $3\text{As}_2\text{O}_5$, $6\text{MoO}_3 + 6\text{H}_2\text{O}$, and $+15\text{H}_2\text{O}$.

Insol. in H_2O . (Gibbs.)

Potassium arsenosomolybdate, $3K_2O, As_2O_3, 5MoO_3 + 3H_2O$.

Easily sol. in H_2O . (Ephraim, Z. anorg. 1910, **66**, 54.)

$3K_2O, As_2O_3, 8MoO_3 + 18H_2O$. Easily sol. in H_2O . (Ephraim.)

Sodium arsenosomolybdate, $Na_2O, As_2O_3, 2MoO_3 + 6H_2O$.

Easily sol. in H_2O . (Ephraim, Z. anorg. 1910, **66**, 56.)

$2Na_2O, As_2O_3, 4MoO_3 + 13H_2O$. Ppt. (Ephraim.)

Zinc arsenosomolybdate, $2ZnO, 3As_2O_3, 6MoO_3 + 6H_2O$.

Sol. in H_2O . (Gibbs.)

Arsenosophosphotungstic acid.

Potassium arsenosophosphotungstate, $10K_2O, 14As_2O_3, 3P_2O_5, 32WO_3 + 28H_2O$.

Moderately sol. in cold, very easily in hot H_2O . (Gibbs.)

$7K_2O, 2As_2O_3, 4P_2O_5, 60WO_3 + 55H_2O$. Sol. in hot H_2O with decomp. (Gibbs.)

Potassium sodium arsenosophosphotungstate, $5K_2O, Na_2O, 2As_2O_3, 2P_2O_5, 12WO_3 + 15H_2O$.

(Gibbs, Am. Ch. J. **7**, 313.)

Arsenosotungstic acid.

Ammonium arsenosotungstate, $7(NH_4)_2O, 2As_2O_3, 18WO_3 + 18H_2O$.

Sol. in H_2O . (Gibbs.)

Barium arsenosotungstate, $4BaO, As_2O_3, 9WO_3 + 21H_2O$.

Precipitate. Nearly insol. in H_2O . (Gibbs.)

Sodium arsenosotungstate, $9Na_2O, 8As_2O_3, 16WO_3 + 55H_2O$.

Very sol. in H_2O . (Gibbs, Am. Ch. J. **7**, 313.)

Arsenyl bromide, $AsOBr$.

H_2O dissolves out As_2O_3 ; insol. in alcohol. (Sérullas.)

$+H_2O$. (Wallace, Phil. Mag. (4) **17**, 122.)

$As_2O_3Br_3 = 2AsBr_3, 3As_2O_3 + 12H_2O$.

Arsenyl bromide with MBr.

See Arsenite bromide, M.

Arsenyl chloride, $AsOCl$.

Sol. in H_2O with decomp.

$+H_2O$. (Wallace, Phil. Mag. (4) **16**, 358.)

As_2O_4Cl . (Wallace)

Arsenyl chloride with MCl.

See Arsenite chloride, M.

Arsenyl potassium fluoride, $AsOF_3, KF + H_2O$.

(Marignac, A. **145**, 237.)

Arsenyl iodide, $As_3I_2O_{11} = 2AsOI, 3As_2O_3 + 12H_2O$.

Decomp. by H_2O . (Wallace, Phil. Mag. (4) **17**, 122.)

Sl. sol. in cold H_2O , less sol. in alcohol. (Plisson, J. Pharm. **14**, 46.)

Arsenyl iodide with MI.

See Arsenite iodide, M.

Arsenyl sulphoiodide, $As_3I_2S_2O_9$.

Scarcely attacked by cold H_2O . Boiling H_2O extracts AsI_3 . Decomp. by hot HNO_3 or H_2SO_4 . Easily sol. in KOH , or $NH_4OH + Aq$. (Schneider, J. pr. (2) **36**, 513.)

Arsine.

See Arsenic hydride.

Atmospheric air.

See Air, atmospheric.

Auriamine, $Au(OH)_2NH_2$

(Jacobsen, C. R. 1908, **146**, 1214.)

Diauriamine, $Au_2(OH)_4NH$.

(Jacobsen, C. R. 1908, **146**, 1214.)

Sesquiauriamine, NAu_3, NH_3 .

Decomp. by H_2O into NAu_3 . (Raschig, A. **235**, 341.)

Auric acid, HAu_2O_4 .

Sol. in HBr , or $HCl + Aq$. (Kruss, B. **19**, 2546.)

Ammonium aurate.

See Auroamidoimide.

Barium aurate, $BaAu_2O_4 + 5H_2O$.

Sl. sol. in H_2O . (Weigand, Zeit. angew. Ch. 1905, **19**, 139.)

$+6H_2O$. Sl. sol. in H_2O . Sol. in dil. H_2SO_4 and in dil. HNO_3 . Sol. in HCl . Decomp. by alcohol. (Meyer, C. R. 1907, **145**, 806.)

Calcium aurate (?).

Insol. in H_2O ; sol. in $CaCl_2 + Aq$. (Fremy, A. ch. (3) **31**, 485.)

$CaAu_2O_4 + 6H_2O$. As Ba salt. (Meyer, C. R. 1907, **145**, 806.)

Magnesium aurate (?).

Ppt. Insol. in H_2O ; sol. in $MgCl_2 + Aq$. (Pelletier.)

Potassium aurate, $KAuO_2 + 3H_2O$.

Very sol. in H_2O , and easily decomp. (Fremy, A. ch. (3) **31**, 483.)

Sol. in alcohol; the solution in alcohol does not decomp. below 50° . (Figuier, A. ch. (3) **11**, 364.)

Potassium aurate sulphite, $KAuO_2, 2K_2SO_3 + 5H_2O$.

Sol. in H_2O with decomp. Nearly insol. in alkaline solutions. (Fremy, A. ch. (3) **31**, 485.)

Sodium aurate, $\text{Na}_2\text{Au}_2\text{O}_4 + 2\text{H}_2\text{O}$.

Sol. in H_2O . Sol. in dil. H_2SO_4 , dil. HNO_3 , and HCl with decomp. Decomp. by alcohol. (Meyer, C. R. 1907, **145**. 806.)

Strontium aurate, $\text{SrAu}_2\text{O}_4 + 6\text{H}_2\text{O}$.

As Ba salt. (Meyer.)

Auriimide chloride, $\text{Au}(\text{NH})\text{Cl}$.

(Raschig.)

Auriimide nitrate, $\text{Au}_2\text{N}_2\text{H}_2\text{O}$, 2HNO_3 , or AuN , $\text{HNO}_3 + \frac{1}{2}\text{H}_2\text{O}$, or $\text{Au}_2\text{O}(\text{NH})_2$, 2HNO_3 .

Not deliquescent. Decomp. by hot H_2O into $\text{Au}_2\text{O}(\text{NH})_2$. (Schottländer, J. B. 1884. 453.)

Auroamidoimide, $\text{Au}(\text{HN})\text{NH}_2 + 3\text{H}_2\text{O}$.

(Fulminating gold.) Insol. in H_2O ; not attacked by dil. acids; sol. in conc. acids, and in moderately dil. acids, when freshly precipitated. Insol. in alkalis or alcohol. Sol. in $\text{KCN} + \text{Aq}$.

Triauroamine, $\text{Au}_3\text{N} + 5\text{H}_2\text{O}$.

Not decomp. by boiling dil. acetic acid, HNO_3 , or H_2SO_4 . (Raschig, A. 1886, **235**. 349.)

Auricyanhydric acid, $\text{HAu}(\text{CN})_4 + 1\frac{1}{2}\text{H}_2\text{O}$.

Easily sol. in H_2O , alcohol, or ether.

See also Bromauricyanides.

Chlorauricyanides.

Iodauricyanides.

Ammonium auricyanide, $\text{NH}_4\text{Au}(\text{CN})_4$.

Easily sol. in H_2O or alcohol. Insol. in ether.

Cobaltous auricyanide, $\text{Co}[\text{Au}(\text{CN})_4]_2 + 9\text{H}_2\text{O}$.

Sl. sol. in cold, easily in hot H_2O . Sl. sol. in alcohol. (Lindbom.)

Potassium auricyanide, $\text{KAu}(\text{CN})_4 + 1\frac{1}{2}\text{H}_2\text{O}$.

Efflorescent. Sl. sol. in cold, easily in hot H_2O . Easily sol. in alcohol.

Silver auricyanide, AgAuCN_4 .

Insol. in H_2O or $\text{HNO}_3 + \text{Aq}$. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$.

Diaurodiamine nitrate.

See Auriimide nitrate.

Aurobromhydric acid.

See Bromauric acid.

Aurobromic acid.

See Bromauric acid.

Aurochlorhydric acid.

See Chlorauric acid.

Aurochloric acid.

See Chlorauric acid.

Aurocyanhydric acid.

Aurocyanides with MCN.

See Cyanide, aurous with MCN.

Azinosulphonic acid.

Ammonium azinosulphonate, $\text{N}_3\text{SO}_3\text{NH}_4$.

(Traube, B. 1914, **47**. 944.)

Barium azinosulphonate, $(\text{N}_3\text{SO}_3)_2\text{Ba}$.

(Traube, B. 1914, **47**. 944.)

Potassium azinosulphonate, $\text{N}_3\text{SO}_3\text{K}$.

Easily sol. in H_2O . Can be cryst. from boiling abs. alcohol. (Traube, B. 1914, **47**. 943.)

Sodium azinosulphonate, $\text{N}_3\text{SO}_3\text{Na}$

(Traube, B. 1914, **47**. 944.)

Azoimide, HN_3 .

Miscible with H_2O and alcohol (Curtius and Radershausen, J. pr. (2) **43**. 207.)

Stable in aq. solution; decomp. slowly by dil. boiling HCl . (Curtius, J. pr. 1898, (2) **55**. 265.)

For salts of HN_3 , see azoimide of metal under metal.

Azoimide, hydroxylamine, $\text{N}_3\text{H}_2\text{N}_2\text{OH}$.

Sol. in H_2O . Gradually volatilizes at ord. temp. (Dennis, J. Am. Chem. Soc. 1907, **29**. 22.)

Azophosphoric acid.

See Pyrophosphamic acid.

Deutazophosphoric acid.

See Pyrophosphodiamic acid.

Barium, Ba.

Decomp. by H_2O and abs. alcohol. (Guntz, C. R. 1901, **133**. 874.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, **20**. 827.)

Barium amalgam, BaHg_{13} .

Stable in contact with liquid amalgam up to 30° . Can be cryst. from Hg without decomp. if temp. does not exceed 30° . (Kerp, Z. anorg. 1900, **25**. 68.)

BaHg_{12} . Stable in contact with liquid amalgam from 30° – 100° . Can be cryst. from Hg without decomp. at any temp. within these limits. (Kerp.)

Barium amide, $\text{Ba}(\text{NH}_2)_2$.

B.-pt. 280° . (Mentrel, C. C. 1903, I. 276.)

Decomp. by H_2O . (Guntz and Mentrel, Bull. Soc. 1903, (3) **29**. 578.)

Barium potassium amide.

See Potassium ammonobarate.

Barium ammonia, $\text{Ba}(\text{NH}_3)_6$.

Takes fire in the air. Only sl. sol. in liquid NH_3 . Violently decomp. by H_2O . (Mentrel, C. R. 1902, **135**. 740.)

Barium arsenide, Ba_3As_2 .

Decomp. by H_2O . (Lebeau, C. R. 1899, 129. 48.)

Barium azoimide, $\text{Ba}(\text{N}_3)_2$.

Very sl. hygroscopic; explosive

12.5	pts. are sol. in 100 pts. H_2O at 0°
16 2	" " " " " " H_2O " 10 5°
16 7	" " " " " " H_2O " 15°
17 3	" " " " " " H_2O " 17°

0 0172 pts. are sol. in 100 pts. abs. alcohol at 16°.

Insol. in ether. (Curtius, J. pr. 1898, (2) 58. 290.)

See also Barium nitride.

Barium boride, BaB_6 .

Sol. in fused oxidizing agents, not decomp. by H_2O ; insol. in aq. acids; sl. sol. in conc. H_2SO_4 , sol. in dil. and conc. HNO_3 . (Moissan, C. R. 1897, 125, 634.)

Barium subbromide sodium bromide, BaBr , NaBr .

Decomp. by H_2O . (Guntz, C. R. 1903, 136. 750.)

Barium bromide, BaBr_2 , and $+2\text{H}_2\text{O}$.

100 pts. H_2O dissolve—

at 0°	20°	40°	60°	80°	100°
98	104	114	123	135	149

Sat. $\text{BaBr}_2 + \text{Aq}$ contains at:

—20°	—9°	+7°	16°	19°	40°

210	14.9	67.7

(Étard, A. ch. 1894, (7) 3. 287.)

Very sol. in absolute alcohol. (Hunefeld.) 100 pts. absolute methyl alcohol dissolve 50 pts. BaBr_2 at 22.5°.

100 pts. absolute ethyl alcohol dissolve 3 pts. BaBr_2 at 22.5°. (de Bruyn, Z. phys. Ch. 10. 783.)

Sat solution in 87% alcohol contains 6% BaBr_2 . (Richards, Z. anorg. 3. 455.)

100 pts. absolute methyl alcohol dissolve 45.8 pts. $\text{BaBr}_2 + 2\text{H}_2\text{O}$ at 15°.

100 pts. 93.5% methyl alcohol dissolve 27.3 pts. $\text{BaBr}_2 + 2\text{H}_2\text{O}$ at 15°.

100 pts. 50% methyl alcohol dissolve 4 pts. $\text{BaBr}_2 + 2\text{H}_2\text{O}$ at 15°. (de Bruyn, Z. phys. Ch. 10. 787.)

100 g. $\text{BaBr}_2 + \text{CH}_3\text{OH}$ contain 0.4 g. BaBr_2 at the critical temp. (Centnerszwer, Z. phys. Ch. 1910, 72. 437.)

At 15°, 1 pt. by weight is sol. in:

36	pts. methyl alcohol, sp. gr. 0.709
207	" ethyl " " " 0.8035
652	" propyl " " " 0.8085

(Rohland, Z. anorg. 1897, 15. 413.)

Nearly insol. in boiling amyl alcohol, 10 ccm. dissolving only an amt. equal to 1.3 mg BaO . (Browning, Sill. Am. J. 144. 459.)

Sol. in acetone. (Naumann, B. 1904, 37. 4328; Eidmann, C. C. 1899, II. 1014)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370)

Difficultly sol. in methyl acetate. (Naumann, B. 1909, 42. 3789.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Barium cadmium bromide, BaBr_2 , $\text{CdBr}_2 + 4\text{H}_2\text{O}$.

Sol. in H_2O . (v. Hauer, W. A. B. 20. 40.)

Barium rhodium bromide.

See Bromorhodite, barium.

Barium bromide ammonia, $\text{BaBr}_2 \cdot 8\text{NH}_3$.

Decomp. by H_2O . (Joannis, C. R. 1905, 140. 1244.)

Barium bromide hydrazine, $\text{BaBr}_2 \cdot 2\text{N}_2\text{H}_4$.

Hygroscopic. Very sol. in H_2O . Insol. in alcohol. (Franzen, Z. anorg. 1908, 60. 291.)

Barium bromofluoride, $\text{BaBr}_2 \cdot \text{BaF}_2$.

Insol. in and undecomp. by boiling alcohol. Sol. in HBr and in HNO_3 . Decomp. by H_2O , hot H_2SO_4 , dil. HCl , dil. HNO_3 , or dil. acetic acid. (Defacqz, C. R. 1904, 138. 199.)

Barium carbide, BaC_2 .

Decomp. by H_2O . (Maquenne, C. R. 144. 360.)

Sp. gr. 3.75. Easily decomp. by H_2O and dil. acids. (Moissan, Bull. Soc. 1894, (3) 11. 1008.)

Barium carbonyl, Ba(CO)₂.

Sol. in H₂O. (Guntz and Mentrel, Bull. Soc. 1903, (3) 29. 586.)

Barium subchloride, BaCl.

Decomp. by H₂O. (Guntz, C. R. 1903, 136. 751.)

Barium subchloride sodium chloride, BaCl, NaCl.

Decomp. by H₂O. (Guntz, C. R. 1903, 136. 750.)

Barium chloride, BaCl₂, and +2H₂O.

Permanent in dry air.

100 pts. H₂O at t° dissolve (a) pts. BaCl₂ and (b) pts. BaCl₂+2H₂O.

t°	a	b	t°	a	b
15.64	34 86	43 50	74 89	59.94	65.51
49 31	43 84	55 63	105 48	59 58	77.89

(Gay-Lussac, A. ch. (2) 11. 309.)

100 pts H₂O at t° dissolve 32.62+0.2711t pts. BaCl₂ (Kopp)

100 pts H₂O dissolve pts. BaCl₂+2H₂O at t°.

t°	Pts. BaCl ₂ +2H ₂ O	t°	Pts. BaCl ₂ +2H ₂ O

(Mulder, calculated from his own and other observations. Scheik. Verhandel. 1864. 45.)

The saturated solution contains—

60.3 pts. BaCl₂ to 100 pts. H₂O, and boils at 104.1°. (Mulder.)

60.1 pts. BaCl₂ to 100 pts. H₂O, and boils at 104.4°. (Legrand.)

61.8 pts. BaCl₂ to 100 pts. H₂O, and boils at 104.5°. (Griffith.)

59.58 pts. BaCl₂ to 100 pts. H₂O, and boils at 105.48° (Gay-Lussac); at 106° (Kremers).

54.1 pts. BaCl₂ to 100 pts. H₂O, and forms crust at 104.4°; highest temperature observed, 104.9°. (Gerlach, Z. anal. 26. 426.)

Sat. BaCl₂+Aq contains at:

100° 130° 144° 160° 180° 215°
36 37.3 37.5 38.9 40.7 43.1% BaCl₂
(Étard, A. ch. 1894, (7) 2. 535.)

Aq. solution contains 27.6% BaCl₂ at 30°. (Shreinemakers, C. C. 1910, I. 9.)

Solubility of $\text{BaCl}_2 + 2\text{H}_2\text{O}$ in H_2O equals 1.745 mol.-litre at 30° . (Masson, Chem. Soc. 1911, 99. 1136)

$\text{BaCl}_2 + \text{Aq}$ sat at 8° has sp. gr 1.27. (Anthon)
 $\text{BaCl}_2 + \text{Aq}$ sat at 15° has sp. gr 1.282 (Michel and Krafft.)

$\text{BaCl}_2 + \text{Aq}$ sat at 18.1° has sp. gr. 1.285, and contains 44.31 pts $\text{BaCl}_2 + 2\text{H}_2\text{O}$ to 100 pts. H_2O . (Karsten.)

Sp. gr. of $\text{BaCl}_2 + \text{Aq}$ at 19.5°

(Schrenemakers, Ch. Weekbl. 1911, 7. 202.)

$\text{BaCl}_2 + \text{KCl}$. Sol. in sat. $\text{KCl} + \text{Aq}$, at first without pptn. The KCl is pptd. after a time until a state of equilibrium is reached.

100 pts. H_2O at 16.6° dissolve 33.8–27.2 pts KCl and 18.2–34.9 pts. BaCl_2 . (Kopp, A. 34. 267.)

100 g. sat solution of $\text{BaCl}_2 + \text{KCl}$ contain 13.83 g. BaCl_2 and 18.97 g. KCl at 25° . (Foote, Am. Ch. J. 32. 253.)

$\text{BaCl}_2 + \text{Ba}(\text{NO}_3)_2$. BaCl_2 is sol. in sat $\text{Ba}(\text{NO}_3)_2 + \text{Aq}$.

Solubility of $\text{BaCl}_2 + \text{Ba}(\text{NO}_3)_2$ in H_2O . Both salts present in solid phase.

t°	Gms. per 100 gms solution		t°	Gms per 100 gms. solution	
	BaCl_2	$\text{Ba}(\text{NO}_3)_2$		BaCl_2	$\text{Ba}(\text{NO}_3)_2$
0	22.5	4.3	100	31	14
20	24.5	6.0	140	32	20
40	26.5	7.5	180	33	26
60	28.5	9.5	210	32	32

(Etard, A. Ch. (7) 2. 535)

Very slowly sol. in sat. $\text{NaNO}_3 + \text{Aq}$ with separation of $\text{Ba}(\text{NO}_3)_2$.

Rapidly sol. in sat. $\text{KNO}_3 + \text{Aq}$, forming $\text{Ba}(\text{NO}_3)_2$, which separates out. (Karsten.)

$\text{BaCl}_2 + \text{NaCl}$. BaCl_2 is sol. in $\text{NaCl} + \text{Aq}$ at first without separation of NaCl , which, however, finally separates.

100 pts. H_2O dissolve, when both salts are in excess—

	1	2	3	4	5	6
NaCl . . .	35.9	4.1	...	40.4	35.3	...
BaCl_2 . . .		34.5	35.0	...	19.4	60.3
		38.6			54.7	

1, 2, and 3 are at 17° . (Kopp, A. 34. 268.)
4, 5, and 6 are at b.-pt. (Mulder.)

Solubility of $\text{BaCl}_2 + \text{NaCl}$.

100 pts. H_2O dissolve pts. BaCl_2 and NaCl at t°.

t°	Pts. BaCl_2	Pts NaCl	t°	Pts BaCl_2	Pts NaCl

(Schreinemakers and Massink, Chem. Weekbl. 1910, 7. 213.)

100 pts. absolute methyl alcohol dissolve 2.18 pts. BaCl_2 at 15.5° , and 7.3 pts. $\text{BaCl}_2 \cdot 2\text{H}_2\text{O}$ at 6° . (de Bruyn, Z. phys. Ch. 10. 783.)

At 15°C . 1 pt. by weight is sol. in:—

78 pts. methyl alcohol of sp. gr. 0.790
7,000 " ethyl " " " 0 8035
100,000 " propyl " " " 0.8085
(Rohland, Z. anorg. 1897, 15. 413.)

Absolutely insol. in boiling amyl alcohol. (Browning, Sill. Am. J. 144. 459.)

Absolutely insol. in acetic ether. (Cann, C R. 102. 363.)

Very sl. sol. in acetone. (Krug and M'Elroy, J. Anal. Ch. 6. 184.)

100 pts. by weight of glycerine dissolve 10 pts. BaCl_2 at 15.5° . (de Bruyn, Z. phys. Ch. 10. 783.)

Insol in acetone. (Naumann, B. 1904, 37. 4329.) (Eidmann, C. C. 1899, II. 1014.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in anhydrous pyridine, 97% pyridine + Aq. and 95% pyridine + Aq. Sl. sol. in 93% pyridine + Aq. (Kahlenberg, J. Am. Chem. Soc. 1908, 30. 1107.)

+ H_2O . Solution of monohydrate sat. at 6° contains 31.57% BaCl_2 . (Schreinemakers, Chem. Weekbl. 1910, 7. 213.)

2.5 grams of the monohydrate are sol. in 100 cc. of methyl alcohol at 14° . (Kirschner, Z. phys. Ch. 1911, 76. 176.)

Exact solubility in methyl alcohol cannot be determined as $\text{BaCl}_2 + \text{H}_2\text{O}$ separates out from a sat. solution of the dihydrate. (Kirschner, Z. phys. ch. 1911, 76. 177.)

Barium cadmium chloride, $\text{BaCl}_2 \cdot \text{CdCl}_2 + 4\text{H}_2\text{O}$.

Easily sol. in H_2O . (v. Hauer.)

Solubility in H₂O at t°.

(Rimbach, B. 1897, 30. 3083.)

Barium mercuric chloride, basic, BaCl₂, HgO +6H₂O.Decomp. by H₂O. (André, C. R. 104. 431.)**Barium mercuric chloride, BaCl₂, 2HgCl₂+2H₂O.**Efflorescent in dry air; sol. in H₂O. (v. Bonsdorff, Pogg. 17. 130.)The salt BaCl₂, 2HgCl₂+2H₂O described by Bonsdorff does not form under the conditions which he gives. (Foote, Am. Ch. J. 1904, 32. 251.)BaCl₂, 3HgCl₂+6H₂O. Solubility determinations with mixtures of BaCl₂ and HgCl₂ show that these chlorides do not form a double salt at 25°, but that a transition temp exists at about 17.2° below which the salt BaCl₂, 3HgCl₂+6H₂O forms. (Foote, Am. Ch. J. 1904, 32. 251.)+8H₂O. Less sol. in H₂O than the Sr and Mg double salts. (Swan, Am. Ch. J. 1898, 20. 633.)**Barium rhodium chloride, 3BaCl₂, Rh₂Cl₆.**

See Chlororhodite, barium.

Barium stannous chloride, BaCl₂, SnCl₂+4H₂O.Sol. in H₂O. (Poggiale, C. R. 20. 1183.)**Barium stannic chloride.**

See Chlorostannate, barium.

Barium uranium chloride, BaCl₂, UCl₄.Decomp. by H₂O. (Aloy, Bull. Soc. 1899, (3) 21. 265.)**Barium zinc chloride, BaCl₂, ZnCl₂+4H₂O.**Deliquescent, and sol. in H₂O. (Warner, C. N. 27. 271.)

Pptd. from warm solution only. (Ephraim, Z. anorg. 1910, 67. 381.)

+2½H₂O. Pptd. from cold solution. (Ephraim.)**Barium chloride hydrazine, BaCl₂, 2N₂H₄.**

Hydrosopic. (Franzen, Z. anorg. 1908, 60. 290.)

Barium chloride hydroxylamine, BaCl₂, 2NH₂OH.Very sol. in H₂O. (Crismer, Bull. Soc. (3) 3. 118.)**Barium chloride sulphuric anhydride, BaCl₂, 2SO₃.**Decomp. by H₂O. (Schultz-Sellack, B. 4. 113.)**Barium chlorofluoride, BaClF.**Difficultly sol. in H₂O, but much more sol. than BaF₂. Decomp. by H₂O, so that when washed on filter, the filtrate contains more BaCl₂ than BaF₂. (Berzelius, Pogg. 1. 19.)Insol. in and undecomp. by boiling alcohol; sol. in conc. HCl and HNO₃. Decomp. by hot H₂O, hot H₂SO₄, dil. acetic acid, dil. HCl or dil. HNO₃. (Defacqz, C. R. 1904, 138. 198.)**Barium cyanamide, BaCN₂.**Decomp. by H₂O. (Frank, C. C. 1902, II. 774.)

Barium subfluoride sodium fluoride, BaF, NaF.

Decomp. by H₂O. (Guntz, C. R. 1903, 136. 750.)

Barium fluoride, BaF₂.

Scarcely sol. in H₂O (Berzelius); less sol. in H₂O than CaF₂.

1 liter H₂O dissolves 1630 mg. BaF₂ at 18°. (Kohlrausch, Z. phys. Ch. 1904, 50. 356.)

1605 mg. are contained in 1 l. of sat. solution at 18°. (Kohlrausch, Z. phys. Ch. 1908, 64. 168.)

Insol. in molten MnCl₂, MnBr₂, MnI₂, MnCl₂+BaCl₂, MnBr₂+BaBr₂ and MnI₂+BaI₂. (Defacqz, A. ch. 1904, (8) 1. 350.)

Easily sol. in HCl, HNO₃, or HF+Aq. (Gay-Lussac and Thénard.)

Sl. sol. in liquid HF. (Franklin, Z. anorg. 1905, 46. 2)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Sol. in an aqueous solution of sodium citrate. (Spiller.)

Barium tin (stannic) fluoride.

See Fluostannate, barium.

Barium tellurium fluoride, BaF₂, 2TeF₄.

Decomp. by H₂O. (Hogbom, Bull. Soc. (2) 35. 60.)

Barium titanium fluoride.

See Fluotitanate, barium.

Barium titanyl fluoride, TiO₂F₂, BaF₂.

See Fluoxypertitanate and fluoxytitanate, barium.

Barium uranyl fluoride.

See Fluoxyuranate, barium.

Barium vanadyl fluoride.

See Fluoxyvanadate, barium.

Barium zirconium fluoride, 3BaF₂, 2ZrF₄+2H₂O.

Insoluble precipitate. (Marignac.)

See also Fluozirconate, barium.

Barium fluoiodide, BaF₂, BaI₂.

Decomp. by H₂O, dil. HCl, dil. HNO₃ or hot H₂SO₄. Sol. in HI and HNO₃. Insol. in and undecomp. by boiling alcohol. Decomp. by dil. acetic acid. (Defacqz, C. R. 1904, 138. 199.)

Barium hydride, BaH.

Decomp. by H₂O or HCl+Aq. (Winkler, B. 24. 1979.)

Decomp. by H₂O. (Guntz, C. R. 1901, 132. 964.)

Barium hydrosulphide, BaS₂H₂.

Easily sol. in H₂O. Insol. in alcohol.

+4H₂O. Sol. in H₂O, and the solution dissolves S. (Veley, Chem. Soc. 49. 369.)

Barium hydroxide, BaO₂H₂.

100 pts cold H₂O dissolve 5 pts. BaO₂H₂
boiling 50

(Davy)

100 pts. H₂O at 20° dissolve 3.45 pts. BaO.

(Bineau, C. R. 41. 509)

100 pts. H₂O at 13° dissolve 2.86 pts. BaO.

" " 47° " 13.3 "

" " 70° " 17.9 "

(Osann.)

100 pts. H₂O dissolve pts. BaO at t°.

(Schreinemakers, Z. phys. Ch. 1909, 68. 84.)

50% alcohol dissolves less than 0.5% of its wt. of BaO₂H₂+8H₂O. (Beckmann, J. pr. 1883, (2) 27. 138.)

Barium subiodide sodium iodide, BaI, NaI.
Decomp. by H₂O. (Guntz, C. R. 1903, 136. 750.)

Barium iodide, BaI₂.

Not deliquescent. Very sol. in H₂O and alcohol. 100 pts. of anhydrous salt dissolve: at 0° 19 5° 30° 40° 60° 90° 106°
in 59 48 44 43 41 37 35 pts. H₂O.
(Kremers, Pogg. 103. 66.)

Sp. gr. of BaI₂+Aq containing:

5	10	15	20	25	30% BaI ₂
1.045	1.091	1.143	1.201	1.265	1.333
35	40	45	50	55	60% BaI ₂
1.412	1.495	1.596	1.704	1.825	1.970

(Kremers, Pogg. 111. 63, calculated by Gerlach, Z. anal. 8. 279)

Easily sol. in alcohol. (Henry.)

Sl. sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Sol. in acetone. (Naumann, B. 1904, 37. 4328; Eidmann, C. C. 1899, II. 1014.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3789.)

+2H₂O. At 15° C., 1 pt. by weight in sol. in:

22	pts. methyl alcohol	sp. gr. 0.790
93	"	" 0.8035
307	"	" 0.8085

(Rohland, Z. anorg. 1897, 15. 413.)

+7H₂O. (Thomson, B. 10. 1343.)

The composition of the hydrates formed by BaI₂ at different dilutions is calculated from determinations of the lowering of the fr.-pt. produced by BaI₂ and of the conductivity and sp. gr. of BaI₂+Aq. (Jones, Am. Ch. J. 1905, 34. 306.)

Barium iodide, basic, Ba(OH)I+9H₂O.
See Barium oxyiodide.

Barium bismuth iodide, BaI₂, 2BiI₃+18H₂O.
Deliquescent; decomp. by H₂O. (Linna, Pogg. 111. 240)

Barium cadmium iodide, BaI₂, CdI₂+5H₂O.
Deliquescent. (Croft.)

Barium mercuric iodide, BaI₂, 2HgI₂.
Decomp. by much H₂O. (Boullay.)
BaI₂, HgI₂. Sol. in H₂O. (Boullay.)
Sp. gr. of sat. solution = 3.575–3.588. (Rohrbach, W. Ann. 20. 169.)
+5H₂O. (Duboin, C. R. 1906, 143. 314.)
2BaI₂, 3HgI₂+16H₂O. (Duboin, C. R. 1906, 142. 888.)
BaI₂, 5HgI₂+8H₂O. As the corresponding Ca salt. (Duboin, C. R. 1906, 142. 888.)
3BaI₂, 5HgI₂+21H₂O. Very deliquescent. (Duboin, C. R. 1906, 142. 889.)

Barium stannous iodide.

Very sol. in H₂O. (Boullay.)

Barium zinc iodide, BaI₂, 2ZnI₂.
Deliquescent, and sol. in H₂O. (Rammelsberg.)
+4H₂O. Very hygroscopic. (Ephraim, Z. anorg. 1910, 67. 385.)

Barium nitride, Ba₃N₂.

Decomp. H₂O violently, not alcohol. (Maquenne, A. ch. (6) 29. 219.)
BaN₃.

See Barium azoimide.

Barium oxide, BaO.

Sol. in H₂O with evolution of heat.
Easily sol. in dil. HNO₃, or HCl+Aq.
Solubility in NaOH+Aq. See Barium hydroxide.

Solubility in Na₂O, HCl, +H₂O at 30°. (Schreinemakers, Z. phys. Ch. 1909, 68. 98.)

Solubility in Na₂O, NaCl, BaCl₂+Aq at 30°. (Schreinemakers.)

Insol. in liquid NH₃. (Gore, Am. Ch. J. 1893, 20. 827.)

Sol. with combination in absolute alcohol and anhydrous wood-spirit. Insol. in ether.

Easily sol. in absolute methyl alcohol.

1 l. absolute ethyl alcohol sat. with BaO at 9° contains 213.8 g. BaO. (Berthelot, Bull. Soc. 8. 389.)

Sol. in methyl alcohol. (Neuberg and Neimann, Biochem. Z. 1906, 1. 173.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

See also Barium hydroxide.

Barium peroxide, BaO₂.

Insol. in H₂O; decomp. by boiling H₂O.

Sol. in acids with formation of hydrogen dioxide.

Forms hydrate with $8\text{H}_2\text{O}$; also $10\text{H}_2\text{O}$ (Berthelot, A. ch. (5) **21**. 157); also a compound $\text{BaO}_2 \cdot \text{H}_2\text{O}_2$, which is very unstable, sl. sol. in cold H_2O , and insol. in alcohol or ether. (Schone, A. **192**. 257.)

+ $8\text{H}_2\text{O}$ 100 cc. pure H_2O dissolve 0.168 g. $\text{BaO}_2 + 8\text{H}_2\text{O}$; if H_2O contains 0.3 g. $\text{Ba}(\text{OH})_2 + 8\text{H}_2\text{O}$, only 0.102 g. $\text{BaO}_2 + 8\text{H}_2\text{O}$ are dissolved; if 0.6 g. $\text{Ba}(\text{OH})_2 + 8\text{H}_2\text{O}$ only 0.019 g. $\text{BaO}_2 + 8\text{H}_2\text{O}$ are dissolved. (Schone, A. **1878**, **192**. 266.)

Insol. in acetone. (Eidmann, C. C. **1899**, II. 1014; Naumann, B. **1904**, **37**. 4329.)

Barium oxybromide, $\text{Ba}(\text{OH})\text{Br} + 2\text{H}_2\text{O}$.

Decomp. by H_2O . (Beckmann, J. pr. (2) **27**. 132.)

$\text{BaBr}_2 \cdot \text{BaO} + 5\text{H}_2\text{O}$. Sl. sol. in H_2O . (Tassily, C. R. **1895**, **120**. 1340.)

Barium oxychloride, $\text{Ba}(\text{OH})\text{Cl} + 2\text{H}_2\text{O}$.

Decomp. by H_2O . (Beckmann, J. pr. (2) **26**. 388, 474.)

Barium mercury oxychloride, $\text{BaCl}_2 \cdot \text{HgO} + 6\text{H}_2\text{O}$.

Decomp. by H_2O (André, C. R. **104**. 431.)

Barium oxyiodide, $\text{Ba}(\text{OH})\text{I} + 9\text{H}_2\text{O}$.

Decomp. by H_2O and alcohol. (Beckmann, B. **14**. 2154.)

$\text{BaI}_2 \cdot \text{BaO} + 9\text{H}_2\text{O}$. Sl. sol. in H_2O . (Tassily, C. R. **1895**, **120**. 1340.)

Barium oxysulphides, $\text{Ba}_7\text{O}_4\text{S}_3 + 58\text{H}_2\text{O}$,
 $\text{Ba}_2\text{OS} + 10\text{H}_2\text{O}$, $\text{Ba}_4\text{OS}_3 + 28\text{H}_2\text{O}$.

Very unstable; decomp. by recrystallization into BaS_2H_2 and BaO_2H_2 .

Barium phosphide, BaP_2 .

Decomp. by H_2O . (Dumas, A. ch. **32**. 364.)

Ba_3P_2 . Crystallized. Sol. in dil. acids; insol. in conc. acids; decomp. by H_2O . Insol. in organic solvents at ord. temp. (Jaboin, C. R. **1899**, **129**. 765.)

Barium selenide, BaSe .

Sol. in H_2O with decomp.

Sl. sol. in H_2O . (Favre, C. R. **102**. 1469.)

Barium silicide, Ba_2Si .

(Jüngst, C. C. **1905**, I. 195.)

BaSi_2 . Slowly decomp. by H_2O , not by $\text{NH}_4\text{OH} + \text{Aq}$. Rapidly decomp. by conc. NaOH . Sol. in HNO_3 , H_2SO_4 and H_3PO_4 with evolution of spontaneously inflammable gas. Sol. in HF and HCl . Sol. in acetic acid without evolution of gas. (Moissan, *Traité* ch. min. **1904**, III. 680.)

Decomp. rapidly in both hot and cold H_2O . (Bradley, C. N. **1900**, **82**. 150.)

Barium sulphide, BaS

Sol. in H_2O with decomp.

Crystallized. Decomp. by H_2O .

Attacked by cold conc. HNO_3 . (Mourlot, A. ch. **1899**, (7) **17**. 521.)

Cryst. modification is less readily acted on by air and other reagents than the amorphous modification; sol. in fuse oxidizing agents. (Mourlot, C. R. **1898**, **126**. 645.)

+ H_2O . (Neuberg and Neimann, *Biochem. Z.* **1906**, **1**. 174.)

+ $6\text{H}_2\text{O}$. Slowly sol. in boiling H_2O , with decomp.; insol. in, but decomp. by boiling alcohol. (Schone.)

Barium sulphide, $\text{Ba}_4\text{S}_7 + 25\text{H}_2\text{O}$ (?).

Sol. in H_2O . (Schone, Pogg. **112**. 215.)

Barium trisulphide, BaS_3 .

Sol. in large amount of boiling H_2O . (Schone, Pogg. **112**. 215.)

Barium tetrasulphide, $\text{BaS}_4 + \text{H}_2\text{O}$.

Easily sol. in H_2O , especially if hot; sol. in 2.42 pts. H_2O at 15° ; insol. in CS_2 or alcohol. (Schone, Pogg. **112**. 224.)

+ $2\text{H}_2\text{O}$. (Veley, *Chem. Soc.* **49**. 369.)

Barium pentasulphide, BaS_5 .

Known only in solution.

Barium mercuric sulphide, $\text{BaS} \cdot \text{HgS} + 5\text{H}_2\text{O}$.

Sol. in H_2O . (Wagner, J. pr. **98**. 23.)

Barium nickel sulphide, $\text{BaS} \cdot 4\text{NiS}$.

Sol. in warm conc. HCl . (Bellucci, C. A. **1909**, 293.)

Barium stannic sulphide.

See Sulphostannate, barium.

Barium uranyl sulphide, $6\text{BaS} \cdot \text{UO}_2\text{S} + x\text{H}_2\text{O}$ (?)

Decomp. by $\text{HCl} + \text{Aq}$. (Remelé, Pogg. **124**. 159.)

Baryta.

See Barium oxide, BaO .

Beryllium, Be .

For beryllium and its salts, see Glucinum and the corresponding salts.

Bismuth, Bi .

Not attacked by H_2O . Very slowly attacked by $\text{HCl} + \text{Aq}$ (Troost). Very sl. sol. in conc. $\text{HCl} + \text{Aq}$ (Schützenberger, Willm). Not attacked by dil. $\text{HCl} + \text{Aq}$ (Naquet and Hanriot). Very slowly attacked by cold $\text{HCl} + \text{Aq}$ (Godefroy). According to very careful experiments pure Bi is absolutely unattacked by hot or cold, dil. or conc. $\text{HCl} + \text{Aq}$ except in presence of oxygen. (Ditte and Metzner, A. ch. (6) **29**. 397.)

Not attacked by dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. Decomp.

by hot conc. H_2SO_4 . Easily sol. in dil. or conc. HNO_3 +Aq. or aqua regia.

Not attacked by pure HNO_3 +Aq. of 1.52 to 1.42 sp. gr. at 20° ; violently attacked by a more dil. acid, but the acid becomes concentrated thereby. Conc. HNO_3 +Aq. attacks only by heating or adding NO_2 . (Millon, A. ch. (3) 6. 95.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 827.)

$\frac{1}{2}$ ccm oleic acid dissolves 0.0091 g. Bi in 6 days. (Gates, J. phys. Chem. 1911, 15. 143.)

Bismuth arsenide, Bi_3As_4 .

(Descamp, C. R. 86. 1065.)

Bismuth dibromide, Bi_2Br_4 .

Not known in a pure state. (Weber, Pogg. 107. 599.)

Bismuth tribromide, BiBr_3 .

Very deliquescent. Decomp. by H_2O . Sol. in alcohol or ether.

Sol. in AlBr_3 . (Isbekow, Z. anorg. 1913, 84. 27.)

Bismuth hydrogen bromide, BiBr_3 , $2\text{HBr} + 4\text{H}_2\text{O}$.

Deliquescent.

Decomp. in the air. (Aloy, Bull. Soc. 1906, (3) 35. 398.)

Bismuth caesium bromide, 2BiBr_3 , 3CsBr .

Ppt. Insol. in HBr .

Sol. in HCl and in HNO_3 . (Hutchins, J. Am. Chem. Soc. 1907, 29. 33.)

Bismuth potassium bromide, $\text{BiBr}_3 \cdot 2\text{KBr}$.

Decomp. by H_2O . (Aloy, Bull. Soc. 1906, (3) 35. 398.)

Bismuth bromide ammonia, BiBr_3 , 3NH_3 .

Sol. in HCl +Aq.

BiBr_3 , 2NH_3 (?).

2BiBr_3 , 5NH_3 . Not deliquescent; not decomp. by H_2O ; easily sol. in dil. acids. (Muir, Chem. Soc. 29. 144.)

Bismuth bromide potassium chloride,

$\text{K}_2\text{BiCl}_3\text{Br}_3 + 1\frac{1}{2}\text{H}_2\text{O}$.

Decomp. by H_2O . (Atkinson, Chem. Soc. 43. 289.)

Bismuth dichloride, Bi_2Cl_4 .

Very deliquescent. Decomp. by H_2O , dil. acids, or conc. NH_4Cl +Aq. (Weber, Pogg. 107. 596.)

Bismuth trichloride, BiCl_3 .

Deliquescent. Decomp. by H_2O . Sol. in dil. HCl +Aq. and alcohol. Not decomp. by H_2O in presence of citrates. (Spiller.)

0.08 g sol. in 100 ccm. liquid H_2S . (Antony, C. C. 1905, I. 1692.)

Moderately sol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 827.)

1 g. BiCl_3 is sol. in 5.59 g. acetone at 18° . Sp. gr. of sat. solution $18^\circ/4^\circ = 0.9194$. (Naumann, B. 1904, 37. 4331.)

Sol. in acetone and in methylal. (Eidmann, C. C. 1899, II. 1014.)

Sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Sol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

1 pt. is sol. in 60.36 pts. ethyl acetate at 18° . Sp. gr. at $18^\circ/40^\circ = 0.9106$. (Naumann, B. 1910, 43. 320.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Bismuth chloride, Bi_2Cl_8 (?).

Decomp. by H_2O . (Dehérain, C. R. 54. 724.)

Bismuth hydrogen chloride, 2BiCl_3 , $\text{HCl} + 3\text{H}_2\text{O}$.

Not deliquescent. Decomp. by H_2O . (Engel, C. R. 106. 1797.)

BiCl_3 , 2HCl . (Jacquelin, A. ch. (2) 62. 363.)

Bismuth caesium chloride, BiCl_3 , 3CsCl .

Decomp. by H_2O . Sl. sol. in cold dil. HCl +Aq. but easily sol. on warming. (Brigham, Am. Ch. J. 14. 181.)

2BiCl_3 , 3CsCl . As above. (Brigham.)

BiCl_3 , 6CsCl . Easily sol. in H_2O and dil. HCl +Aq. (Godeffroy, B. 8. 9.)

Does not exist. (Brigham.)

Bismuth hydrazine chloride, BiCl_3 ,

$3\text{N}_2\text{H}_4\text{HCl}$.

Sol. in acids, from which it is pptd. by H_2O . (Ferratini, C. A. 1912. 1613.)

Bismuth nitrosyl chloride, BiCl_3 , NOCl

Very deliquescent. Decomp. by H_2O . (Sudborough, Chem. Soc. 59. 662.)

Bismuth potassium chloride, BiCl_3 , $\text{KCl} + \text{H}_2\text{O}$.

Decomp. by H_2O . Cannot be recryst. except from conc. BiCl_3 + HCl . Decomp. by HCl +Aq. into BiCl_3 , $2\text{KCl} + 2\text{H}_2\text{O}$. (Brigham, Am. Ch. J. 14. 167.)

BiCl_3 , 2KCl . Decomp. by H_2O . (Arppe, Pogg. 64. 37.)

Deliquescent.

Sol. in H_2O with decomp. into the oxychloride when excess H_2O is used. (Aloy, Bull. Soc. 1906, (3) 35. 397.)

+ $2\text{H}_2\text{O}$. Decomp. by H_2O . (Jacquelin, J. pr. 14. 1.)

Sol. in moderately conc. HCl +Aq.

BiCl_3 , 3KCl . Decomp. by H_2O . (Arppe.)

Does not exist. (Brigham.)

Bismuth rubidium chloride, BiCl_3 , $\text{RbCl} + \text{H}_2\text{O}$.

Decomp. by H_2O ; sol. in dil. $\text{HCl} + \text{Aq}$, from which BiCl_3 , 3RbCl crystallizes. (Brigham, Am. Ch. J. 14. 174.)

BiCl_3 , 3RbCl . Decomp. by H_2O ; sol. in dil. $\text{HCl} + \text{Aq}$ without decomp. (Brigham.)

BiCl_3 , 6RbCl . Decomp. by H_2O ; sol. in $\text{HCl} + \text{Aq}$ (Godeffroy, B. 8. 9); does not exist. (Brigham.)

10BiCl_3 , 23RbCl (?). As above. (Brigham.)

Bismuth sodium chloride, BiCl_3 , $2\text{NaCl} + \text{H}_2\text{O}$.

+ $3\text{H}_2\text{O}$. Decomp. by H_2O . (Arppe, Pogg. 64. 237.)

BiCl_3 , 3NaCl .

Bismuth thalious chloride, BiCl_3 , 3TlCl .

Ppt. (Ephraim, Z. anorg. 1909, 61. 254.)

BiCl_3 , 6TlCl . Ppt. (Ephraim.)

Bismuth chloride ammonia, 2BiCl_3 , NH_3 .

Stable. (Dehéraim, C. R. 54. 724.)

BiCl_3 , 2NH_3 . (D.)

BiCl_3 , 3NH_3 . (D.)

Bismuth chloride nitric oxide, BiCl_3 , NO .

Very hygroscopic. (Thomas, C. R. 1895, 121. 129.)

Bismuth chloride nitrogen peroxide, BiCl_3 , NO_2 .

Decomp. by moist air, but stable in dry air. (Thomas, C. R. 1896, 122. 612.)

Bismuth chloride selenide.

See Bismuth selenochloride.

Bismuth trifluoride, BiF_3 .

Insol. in H_2O or alcohol. (Gott and Muir, Chem. Soc. 53. 138.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 827.)

Bismuth hydrogen fluoride, BiF_3 , 3HF .

Deliquescent. Decomp. by boiling H_2O . (Muir, Chem. Soc. 39. 21.)

Bismuth gold, Au_3Bi .

Insol. in equal pts. of HNO_3 and tartaric acids. (Roessler, Z. anorg. 1895, 9. 71.)

Bismuthous hydroxide, $\text{Bi}(\text{OH})_3$.

Sol. in strong acids. Insol. in solutions of alkalis, alkali carbonates, $(\text{NH}_4)_2\text{CO}_3$, or NH_4NO_3 ; or of amyl amine (Wurtz). When recently pptd. is sol. in $\text{NH}_4\text{Cl} + \text{Aq}$, but insol. in $\text{NH}_4\text{NO}_3 + \text{Aq}$ (Brett, 1837). Not pptd. in presence of Na citrates (Spiller).

Solubility of freshly pptd. $\text{Bi}(\text{OH})_3$ in $\text{NaOH} + \text{Aq}$.

g NaOH per l	g Bi dissolved per l at 20°	g Bi dissolved per l at 100°

(Moser, Z. anorg. 1909, 61. 386.)

Bi_2O_3 , $2\text{H}_2\text{O}$.

Bi_2O_3 , H_2O . (Muir, Chem. Soc. 32. 131.)

See also Bismuth trioxide.

Bismuth tetrahydroxide, Bi_2O_4 , H_2O .

Bi_2O_4 , $2\text{H}_2\text{O}$. (Wernicke, Pogg. 141. 109.)

Bismuthic hydroxide (Bismuthic acid), Bi_2O_5 , H_2O .

Insol. in H_2O ; easily decomp. by acids. (Fremy, A. ch. (3) 12. 495.) Decomp. by H_2SO_4 ; not attacked by $\text{SO}_2 + \text{Aq}$; neither dissolved nor decomp. by dil. $\text{HNO}_3 + \text{Aq}$, but slowly converted into an allotropic modification (?). Partially decomp. by conc. HNO_3 . Slowly but wholly dissolved by hot conc. HNO_3 . Sl. sol. in conc. $\text{KOH} + \text{Aq}$. (Arppe.) Sol. in about 100 pts. boiling $\text{KOH} + \text{Aq}$, so conc. that it solidifies on removing the lamp. (Muir, Chem. Soc. 51. 77.)

Bi_2O_5 , $2\text{H}_2\text{O}$. (Bödeker, A. 123. 61.)

Does not exist. (Hoffmann and Geuther.)

Bismuth iodide, BiI_3 .

Not attacked by cold H_2O , but by boiling, BiOI is formed. 100 pts. absolute alcohol dissolve $3\frac{1}{2}$ pts. salt at 20°. (Gott and Muir, Chem. Soc. 57. 138.)

Sol. in HNO_3 , and $\text{HI} + \text{Aq}$, from which it is reprecipitated by H_2O or alcohol. Sol. in $\text{KI} + \text{Aq}$ or $\text{KOH} + \text{Aq}$. (Rammelsberg.)

Sl. sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 827.)

100 g. absolute alcohol dissolve 3.5 g. BiI_3 at 20° . (Gott and Muir, Chem. Soc. 57. 138.)

Sol. in acetone. (Naumann, B. 1904, 37. 4328.)

100 pts. methylene iodide dissolve 0.15 pt. BiI_3 at 12° , and very little more at higher temperatures. (Retgers, Z. anorg. 3. 343.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Bismuth hydrogen iodide, BiI_3 , $\text{HI} + 4\text{H}_2\text{O}$.
(Arppe, Pogg. 44. 248.)

Bismuth caesium iodide, $3\text{CsI} \cdot 2\text{BiI}_3$.

Very sl. sol. in H_2O . (Wells, Am. J. Sci. 1897, (4) 3. 464.)

Bismuth calcium iodide, 2BiI_3 , $\text{CaI}_2 + 18\text{H}_2\text{O}$.
Deliquescent; decomp. by H_2O . (Linau, Pogg. 111. 240.)

Bismuth magnesium iodide, 2BiI_3 , $\text{MgI}_2 + 12\text{H}_2\text{O}$.

Deliquescent; decomp. by H_2O . (Linau, Pogg. 111. 240.)

Bismuth potassium iodide, BiI_3 , 4KI .

Ppt. (Arppe, Pogg. 44. 237.)

BiI_3 , 3KI . (Astre, C. R. 110. 1137.)

BiI_3 , 2KI . Sol. in acetic ether. (Astre.)
 $+4\text{H}_2\text{O}$. Sol. in small amt. H_2O without pptn., but decomp. by much H_2O .

BiI_3 , 2KI , HI . (Arppe.)

2BiI_3 , $3\text{KI} + 2\text{H}_2\text{O}$. (Astre.)

BiI_3 , $\text{KI} + \text{H}_2\text{O}$. Decomp. by H_2O . (Nicklès, C. R. 51. 1097.)

2BiI_3 , KI . Sol. in acetic ether. (Astre.)

Bismuth sodium iodide, BiI_3 , $\text{NaI} + \text{H}_2\text{O}$.

Deliquescent; decomp. by H_2O . (Nicklès, C. R. 51. 1097.)

2BiI_3 , $3\text{NaI} + 12\text{H}_2\text{O}$. As above. (Linau, Pogg. 111. 240.)

Bismuth zinc iodide, 2BiI_3 , $\text{ZnI}_2 + 12\text{H}_2\text{O}$.

Very deliquescent. (Linau, Pogg. 111. 240.)

Bismuth iodide ammonia, BiI_3 , 3NH_3 .

Decomp. by H_2O . (Rammelsberg.)

Bismuth iodide zinc bromide.

Sol. in H_2O . (Linau, Pogg. 111. 240.)

Bismuth nitride.

Explosive. (Fischer, B. 1910, 43. 1471.)

BiN . Ppt. Decomp. by H_2O or dil. acids. (Franklin, J. Am. Chem. Soc. 1905, 27. 847.)

Bismuth dioxide, Bi_2O_3 .

Sol. in conc. $\text{HNO}_3 + \text{Aq}$. Decomp. by strong acids, and boiling $\text{KOH} + \text{Aq}$.

Decomp. by H_2O . (Tanatar, Z. anorg. 1901, 27. 438.)

Bismuth trioxide, Bi_2O_3 .

Insol. in H_2O . Sol. in conc. acids

Solubility of Bi_2O_3 in $\text{HNO}_3 + \text{Aq}$ at 20° .

(Rutten.)

Solubility in $\text{NaOH} + \text{Aq}$ at 25° .

Conc. of NaOH Mol/l	g Bi_2O_3 in 100 cc. of solution Mean result
1 0	0.0013 \pm 0.0002
2.0	0.0026 \pm 0.0002
3.0	0.0049 \pm 0.0005

(Knox, Chem. Soc. 1909, 95. 1767.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014.)

Min. *Bismute*. Easily sol. in $\text{HNO}_3 + \text{Aq}$.

See also *Bismuthous hydroxide*.

Bismuth tetroxide, Bi_2O_4 .

Sol. in conc. $\text{HCl} + \text{Aq}$, with evolution of Cl_2 ; in oxygen acids with evolution of O . Less easily sol. in conc. H_2SO_4 than in HNO_3 , or $\text{HCl} + \text{Aq}$.

Bismuth oxide, Bi_4O_9 (?)

(Hoffmann and Geuther.)

Bismuth pentoxide, Bi_2O_5 .

Sol. in dil. acids. Combines with H_2O to form bismuthic hydroxide, which see. (Hasebroek, B. 20. 213.)

Bismuth oxybromide, etc.

See *Bismuthyl bromide*, etc.

Bismuth palladium, PdBi_2 .

Insol. in equal pts. HNO_3 and tartaric acids. (Roessler, Z. anorg. 1895, 9. 70.)

Bismuth platinum, PtBi_2 .

Insol. equal pts. HNO_3 and tartaric acids. (Roessler, Z. anorg. 1895, 9. 69.)

Bismuth phosphide, Bi_3P .
(Cavazzi.)**Bismuth triselenide, Bi_2Se_3**

Insol. in H_2O , alkalies, or alkali sulphides + Aq ; sl. attacked by $\text{HCl} + \text{Aq}$; oxidized by $\text{HNO}_3 + \text{Aq}$. (Schneider, Pogg. 94. 628.)
Min. *Frenzelite*.

Bismuth potassium selenide.

See *Selenobismuthite*, potassium.

Bismuth selenochloride, BiSeCl .

Not attacked by H_2O ; very sl. sol. in $\text{HCl} + \text{Aq}$; easily and completely sol. with decomp. in $\text{HNO}_3 + \text{Aq}$ (Schneider.)

Bismuth disulphide, $\text{Bi}_2\text{S}_2 + 2\text{H}_2\text{O}$ (?)

Insol. in H_2O . Decomp. by $\text{HCl} + \text{Aq}$.

Bismuth trisulphide, Bi_2S_3 .

Insol. in H_2O .

1 l. H_2O dissolves 0.35×10^{-6} moles Bi_2S_3 at 18° . (Weigel, Z. phys. Ch. 1907, 58. 294.)

Easily sol. in moderately dil. $\text{HNO}_3 + \text{Aq}$, and conc. $\text{HCl} + \text{Aq}$, with separation of S . Insol. in alkalies, alkali sulphides, $\text{Na}_2\text{S}_2\text{O}_3$, or $\text{KCN} + \text{Aq}$; insol. in NH_4Cl , or $\text{NH}_4\text{NO}_3 + \text{Aq}$ (Brett). Insol. in potassium thiocarbonate + Aq . (Rosenblatt, Z. anal. 26. 15.)

Insol. in alkali hydroxides or alkali hydro-sulphides.

Insol. in $2\text{N} - (\text{NH}_4)_2\text{S} + \text{Aq}$.

0.0090 g. Bi_2S_3 is sol. in 100 cc. $\text{N} - \text{Na}_2\text{S}_2 + \text{Aq}$ at 25° . (Knox, Chem. Soc. 1909, 95. 1764.)

Somewhat sol. in $\text{Na}_2\text{S} + \text{Aq}$. 75 cc. of $\text{Na}_2\text{S} + \text{Aq}$ (sp. gr. 1.06) dissolve an amt. of Bi_2S_3 corresponding to 0.031 g. Bi_2O_3 . (Stillman, J. Am. Chem. Soc. 1896, 18. 683.)

Solubility in $\text{Na}_2\text{S} + \text{NaOH} + \text{Aq}$ at 25° .

Conc of Na_2S Mol/l.	Conc of NaOH Mol/l	g Bi_2S_3 in 100 cc. of solution
0 5	1 0	0 0185
1 0	1 0	0 0838

(Knox, Chem. Soc. 1909, 95. 1763.)

Bismuth sulphide pptd. from acid solution is not dissolved by subsequent treatment with $\text{K}_2\text{S} + \text{Aq}$. (Stone, J. Am. Chem. Soc. 1896, 18. 1091.)

Sol. in $\text{K}_2\text{S} + \text{Aq}$. (Ditte, C. R. 1895, 120. 187.)

Solubility in $\text{K}_2\text{S} + \text{KOH} + \text{Aq}$ at 25° .

Conc of K_2S Mol/l.	Conc of KOH Mol/l.	g. Bi_2S_3 in 100 cc of solution
0 5	1 0	0 0240
1 0	1.0	0.1230
1 25	1.25	0.2354

(Knox, Chem. Soc. 1909, 95. 1763.)

Solubility in alkali sulphides + Aq at 25°.

Alkali sulphide	Conc. of alkali sulphide Mol / l	g Bi ₂ S ₃ in 100 cc. of solution
Na ₂ S	0 5	0 0040
	1 0	0 0238
	1 5	0 1023
K ₂ S	0 5	0 0042
	1 0	0 0337
	1. 25	0 0639

(Knox, Chem. Soc. 1909, 95. 1762.)

Decomp. by FeCl₃ + Aq (Cammerer, C. C. 1891, II. 525.)

Insol in KCN + Aq. (Hoffmann, A 1884, 223. 134.)

Min. *Bismuthinite*. Easily sol. in HNO₃ + Aq**Bismuth cuprous sulphide**, Bi₂S₃, Cu₂S.Insol. in H₂O. Sol. with decomp. in HNO₃ + Aq. (Schneider, J. pr. (2) 40. 564.)Min. *Emplectonite*.**Bismuth potassium sulphide**, Bi₂S₃, K₂S.

(Schneider, Pogg. 136. 460.)

Insol in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Bi₂S₃. 4K₂S + 4H₂O. Decomp. by H₂O. Very sol in K₂S + Aq. Efflorescent in dry air. (Ditte, C. R. 1895, 120. 186.)

See also Sulphobismuthite, potassium.

Bismuth silver sulphide, Bi₂S₃, Ag₂S.Insol. in cold HCl, or HNO₃. Sol. in warm HNO₃ with separation of S, in boiling HCl with separation of H₂S.Min. *Plenargyrite*, *Matildite* (Schneider, J. pr. 1890, (2) 41. 414.)**Bismuth sodium sulphide**, Bi₂S₃, Na₂S.

(Schneider.)

Bismuth sulphide telluride, Bi₂S₃, 2Bi₂Te₃.Min. *Tetradymite*. Sol. in HNO₃ with separation of S.Bi₂S₃, 2Bi₂Te.Min. *Joseite*. As above.**Bismuth sulphobromide**, BiSBr₂.

(Muir and Eagles, Chem Soc. 1895, 67. 91.)

Bismuth sulphochloride, BiSCl.Insol. in H₂O or dil. HCl + Aq. Sol. in conc. HCl, or HNO₃ + Aq. Decomp. by alkalis + Aq. (Schneider, Pogg. 93. 464.)**Bismuth sulphoiodide**, BiSI.Not attacked by boiling H₂O, and dil. acids. Decomp. by hot conc. HCl + Aq, and HNO₃ + Aq. KOH + Aq dissolves out I₂. (Schneider, Pogg. 110. 114.)**Bismuth telluride**, Bi₂Te₃.Min. *Tetradymite*. Sol. in HNO₃ + Aq.

See also Bismuth sulphide telluride.

Bismuthic acid, HBiO₃.

See Bismuthic hydroxide.

Potassium bismuthate, KBiO₃.Sol. in H₂O. (Arppe.)KH(BiO₃)₂. Insol in H₂O.Not decomp. by boiling H₂O. (André, C. R. 113. 860.)No salts of HBiO₃ can exist. (Muir and Carnegie, Chem. Soc. 51. 77.)**Bismuthicotungstic acid**.**Ammonium bismuthicotungstate**, 3(NH₄)₂O, 2Bi₂O₃, 11WO₃ + 10H₂O.

A yellow oil which dries to a yellow glass. (E. F. Smith, J. Am. Chem. Soc. 1903, 25. 1232.)

Potassium bismuthicotungstate, 3K₂O, 2Bi₂O₃, 11WO₃ + 15H₂O.

A yellow oil which dried to a pale yellow glass. (E. F. Smith, J. Am. Chem. Soc. 1903, 25. 1233.)

Strontium bismuthicotungstate, 3SrO, 2Bi₂O₃, 11WO₃ + 11H₂O.A yellow wax, insol in pure H₂O, but sol. in H₂O containing a few drops HNO₃. (E. F. Smith, J. Am. Chem. Soc. 1903, 25. 1233.)**Bismuthyl bromide**, BiOBr.Insol. in H₂O; sol. in moderately conc. HBr + Aq.Insol. in H₂O. (Herz, Z. anorg. 1903, 36. 348.)Bi₂O₃Br₂. Insol. in H₂O; easily sol. in conc. HCl, or HNO₃ + Aq; less sol. in dil. HNO₃ + Aq.Bi₁₁O₁₃Br₇. As the preceding comp. (Muir.)**Bismuthyl chloride**, BiOCl.Insol. in H₂O or dil. acids. Sol. in conc. HCl, or HNO₃ + Aq.Insol. in liquid NH₃. (Franklin, Am. Ch. J. 1898, 20. 827.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

+ H₂O. (Heintz, Pogg. 63. 55.)+ 3H₂O. (Phillips, Br. Arch. (1) 39. 41.)Bi₂O₃Cl₂. (Arppe.)BiO₂Cl₂. Insol. in H₂O; sol. in hot HCl, or HNO₃ + Aq. (Muir.)**Bismuthyl fluoride**, BiOF.Insol. in H₂O; sol. in HCl, HBr, or HI + Aq. (Gott and Muir, Chem. Soc. 33. 139.)BiOF, 2HF. Insol. in H₂O.

Bismuthyl iodide, BiOI.

Not decomp. by H_2O or alkaline solutions.
Sol. in $\text{HCl} + \text{Aq.}$ Decomp. by $\text{HNO}_3 + \text{Aq.}$
(Schneider, J. pr. **79**, 424.)

Insol. in KCl , or $\text{KI} + \text{Aq.}$
 $3\text{BiOI} \cdot 7\text{Bi}_2\text{O}_3$. Sol. in dil. HCl ; decomp.
by HNO_3 ; insol. in boiling H_2O and alkali
(Blyth, C. N. 1896, **74**, 200.)

BiI_3 , $5\text{Bi}_2\text{O}_3$. Ppt. Sl. sol. in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq.}$
Not decomp. by H_2O . (Fletcher and Cooper, Pharm. J. (3) **13**, 254.)

4BiI_3 , $5\text{Bi}_2\text{O}_3$. Easily sol. in $\text{HCl} + \text{Aq.}$
Decomp. by $\text{HNO}_3 + \text{Aq.}$ Sl. attacked by
 H_2SO_4 ; somewhat sol. in $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$, and
 $\text{KHC}_4\text{H}_4\text{O}_6 + \text{Aq.}$

Sol. in $(\text{NH}_4)_2\text{S}$, and $\text{KOH} + \text{Aq.}$ (Storer's Dict.)

Bismuthyl sulphide, Bi₂O₃S.

(Hermann, J pr. **75**, 452.)
 $\text{Bi}_2\text{O}_3\text{S}$. Insol. in H_2O . (Scherpenberg, C. C. **1889**, II. 641.)

$\text{Bi}_4\text{O}_3\text{S}$
Min. *Karelinite*.

Boracic acid.

See Boric acid.

Borax.

See Tetraborate, sodium.

Boric acid, anhydrous, B₂O₃.

See Boron trioxide.

Metaboric acid, HBO₃.

Sol. in H_2O .
Sl. sol. in hot glacial acetic acid. (Holt, Chem. Soc. 1911, **100**, (2) 720.)

Orthoboric acid, H₃BO₃.

Sol. in 33 pts H_2O at 10°
" 25 " " 20°
" 3 " " 100°
(Berzelius)

Sol in 20 pts H_2O at 18.75°. (Abl)
100 pts. H_2O at 100° dissolve 2 pts. (Ure's Dict)

1 pt. crystallized acid dissolves in—

25.66 pts. H_2O at 19°.
14.88 " " 25°.
12.66 " " 37.5°.
10.16 " " 50°.

Insol. in hot glacial acetic acid. (Holt, Chem. Soc 1911, 100. (2) 720.)

Borates.

No borate is quite insol. in H₂O; the alkali borates are very sol. The less sol. borates are easily decomp by H₂O; the easily sol. salts are also decomp., but less quickly. The less sol. borates are easily sol. in H₂BO₃, HNO₃, etc. They are more sol. in H₂O containing tartaric acid or potassium tartrate than in pure H₂O. (Souberain.) The normal borates of the alkaline-earths are sol. to no inconsiderable extent in H₂O, and more readily in hot, than in cold H₂O. (Berzelius, Pogg. 34. 568.)

All borates are insol., or sl. sol. in alcohol.

Aluminum borate, 2Al₂O₃, B₂O₃.Min. *Jeremciewite*.+3H₂O. Ppt. (Rose, Pogg 91. 452.)3Al₂O₃, B₂O₃. *Crystallized*. Insol. in HNO₃+Aq. (Ebelsmen, A. ch. (3) 33. 62.)3Al₂O₃, 2B₂O₃+7H₂O. Ppt. (Rose, l. c.)**Ammonium borate.**The system (NH₄)₂O, B₂O₃, H₂O at 60° has

been studied by Sborgi. (Real. Ac. Linc. 1915 (5) **24**. I, 1225.)

Ammonium diborate.

Difficultly sol in acetone (Naumann, B. 1904, **37**. 4328.)

Ammonium tetraborate, $(\text{NH}_4)_2\text{B}_4\text{O}_7 + 4\text{H}_2\text{O}$,
or perhaps $\text{NH}_4\text{H}(\text{BO}_3)_2 + 1\frac{1}{2}\text{H}_2\text{O}$

Sol. in 12 pts. cold H_2O , decomp. by heat. (Rammelsberg, Pogg. **90**. 21.)

Sol. in acetone (Eidmann, C. C. **1899**, II 1014.)

Ammonium octoborate, $(\text{NH}_4)_2\text{B}_8\text{O}_{18} + 6\text{H}_2\text{O}$

Sol in 8 pts. cold, decomp. by boiling H_2O (Rammelsberg, Pogg. **90**. 21.)

Min. *Livdellerite*. Sol. in H_2O with decomp.

Ammonium dekaborate, $(\text{NH}_4)_2\text{B}_{10}\text{O}_{18} + 6\text{H}_2\text{O}$.

Permanent. Sol in H_2O (Rammelsberg.)

$+ 8\text{H}_2\text{O}$. (Atterberg, Bull. Soc. (2) **22**. 350)

Ammonium dodekaborate, $(\text{NH}_4)_2\text{B}_{12}\text{O}_{18} + 9\text{H}_2\text{O}$.

Sol. in hot H_2O . (Bech, Sill. Am. J. (2) **17**. 129.)

Ammonium perborate, NH_4BO_3 .

See Perborate, ammonium.

Ammonium calcium borate, $(\text{NH}_4)_8\text{CaB}_4\text{O}_{11}$
 $= \text{CaB}_4\text{O}_7 + 4(\text{NH}_4)_2\text{O}$.

(Ditte, C. R. **96**. 1663.)

Ammonium magnesium borate.

Sol. in H_2O , decomp. by boiling. (Rammelsberg, Pogg. **49**. 451.)

Ammonium zinc borate, $4(\text{NH}_4)_2\text{B}_4\text{O}_7$,
 $\text{Zn}(\text{BO}_3)_2 + 5\text{H}_2\text{O}$.

(Ditte, C. R. **96**. 1663.)

Barium borate, $\text{Ba}(\text{BO}_3)_2$.

Ppt. (Ouvrard, C. R. 1906, **142**. 283.)

Sol. in 3,300 pts. 45% alcohol.

" 7,800 " 50 "

" 25,000 " 60 "

" 55,000 " 75 "

(Berg, Z. anal. **16**. 25.)

$+ 10\text{H}_2\text{O}$. Sl. sol. in cold, more readily in hot H_2O , especially in presence of ammonium salts. (Berzelius, Pogg. **34**. 568.) Sol. in sodium citrate + Aq. (Spiller.) Insol. in wood spirit. (Ebelmen.)

$2\text{BaO} \cdot \text{B}_2\text{O}_3$. Decomp. by H_2O forming BaO , $\text{B}_2\text{O}_3 + 4\text{H}_2\text{O}$. (Ouvrard, C. R. 1906, **142**. 283.)

3BaO , B_2O_3 . Easily sol. in mineral acids. Sl attacked by dil. acetic acid. (Ouvrard, C. R. 1901, **132**. 258.)

$\text{BaB}_4\text{O}_{11}$. Slowly sol. in warm dilute HNO_3 + Aq. (Ditte, C. R. **77**. 892.)

$+ 5\text{H}_2\text{O}$. Sol. in 100 pts. cold, and more freely in hot H_2O . When freshly pptd. sol. in cold NH_4Cl + Aq (Wackenroder, A. **41**. 315), NH_4NO_3 + Aq (Brett, Phil Mag (3) **10**. 96), and BaCl_2 + Aq (Rose).

$\cdot \text{BaB}_6\text{O}_{10} + 13\text{H}_2\text{O}$. (Laurent, A. ch (2) **67**. 215.)

$\text{Ba}_2\text{B}_5\text{O}_{15}$. (Bloxam, Chem. Soc. **14**. 143.)
 5BaO , $2\text{B}_2\text{O}_3$.

$\text{Ba}_3\text{B}_{10}\text{O}_{18} + 6\text{H}_2\text{O}$ Sol. in 100 pts. cold H_2O Easily sol. in ammonium nitrate, or chloride, or barium chloride + Aq. (Rose, Pogg. **87**. 1.)

$\text{Ba}_2\text{B}_6\text{O}_{11}$. Easily sol. in warm dilute acids. $+ 6\text{H}_2\text{O}$.

Barium borate bromide, 3BaO , $5\text{B}_2\text{O}_3$, BaBr_2 . (Ouvrard, C. R. 1906, **142**. 283.)

Barium borate chloride, 3BaO , $5\text{B}_2\text{O}_3$, BaCl_2 .

Unaffected by H_2O . Sol. in acids. (Ouvrard, C. R. 1906, **142**. 283.)

Bismuth borate, $\text{BiBO}_3 + 2\text{H}_2\text{O}$.

Ppt. Sl. sol. in H_2O Decomp. by H_2S . Not decomp. by KOH + Aq. (Vanino, J. pr. 1906, (2) **74**. 152.)

Cadmium borate, $\text{Cd}_3(\text{BO}_3)_2$.

Insol in H_2O , easily sol. in dil. acids (Ouvrard, C. R. 1900, **130**. 174.)

$\text{Cd}(\text{BO}_3)_2$ Difficultly sol. in H_2O (Stromeyer); insol. in H_2O , sol. in HCl + Aq (Odling); easily sol in warm NH_4Cl + Aq (Rose).

(Guertler, Z. anorg. 1904, **40**. 242.)
 3CdO , $2\text{B}_2\text{O}_3 + 3\text{H}_2\text{O}$. Ppt. Sl. sol. in H_2O (Rose, Pogg. **88**. 299)

CdO , $2\text{B}_2\text{O}_3 + 2\text{H}_2\text{O}$ (Ditte, A. ch. 1883, (5) **30**. 255.)

CdO , $4\text{B}_2\text{O}_3 + 10\text{H}_2\text{O}$. Sol. in H_2O ; decomp on heating. (Ditte, A. ch. 1883, (5) **30**. 255.)

Cadmium borate bromide, 6CdO , $8\text{B}_2\text{O}_3$, CdBr_2 .

Insol. in H_2O and fuming HCl or HBr + Aq. (Rousseau and Allaire, C. R. 1894, **119**. 72.)

Cadmium borate chloride, 6CdO , $8\text{B}_2\text{O}_3$, CdCl_2 .

(Rousseau and Allaire, C. R. 1894, **118**. 1256.)

Cadmium borate iodide, 6CdO , $8\text{B}_2\text{O}_3$, CdI_2 . (Allaire, C. R. 1898, **127**. 557.)

Cæsium borate, $\text{Cs}_2\text{B}_6\text{O}_{10}$.

Very sol. in H_2O , less in alcohol. (Reischle, Z. anorg. **4**. 116.)

Calcium borate, $\text{Ca}(\text{BO}_2)_2$.

Sl. sol. in H_2O ; insol. in alkali chlorides, or boiling conc. acetic acid + Aq; sol. in cold or hot solutions of ammonium salts, especially ammonium nitrate, in CaCl_2 + Aq, and also easily sol. in dilute mineral acids at 50° . (Ditte, C. R. 80. 490, 561.)

+ $2\text{H}_2\text{O}$.

+ $4\text{H}_2\text{O}$; two modifications of which one is very unstable. (van't Hoff and Meyerhoffer, A. 1906, 351. 101.)

+ $6\text{H}_2\text{O}$. When warmed in H_2O it goes over into $\text{CaB}_2\text{O}_4 + 4\text{H}_2\text{O}$. (van't Hoff and Meyerhoffer.)

Sol. in H_2O without decomp.; 1 l. solution contains 2 g. salt. (Ditte, C. R. 96. 1663.)

CaB_4O_7 . Decomp. by H_2O . (Blount, C. N. 54. 208.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

+ $3\text{H}_2\text{O}$. (Ditte, C. R. 96. 1663.)

+ $4\text{H}_2\text{O}$. Min. *Bechelite*.

+ $6\text{H}_2\text{O}$. Min. *Borocalcite*. Sol. in acids.

$\text{CaB}_6\text{O}_{10} + 4\text{H}_2\text{O}$.

+ $8\text{H}_2\text{O}$. Unstable. On standing in the solution in which it is formed it changes into $\text{CaB}_6\text{O}_{10} + 4\text{H}_2\text{O}$.

+ $12\text{H}_2\text{O}$. Unstable. Goes over into $\text{CaB}_6\text{O}_{10} + 8\text{H}_2\text{O}$. (van't Hoff and Meyerhoffer, A. 1906, 351. 104.)

$\text{CaB}_8\text{O}_{13} + 12\text{H}_2\text{O}$. (Ditte, C. R. 96. 1663.)

$2\text{CaO} \cdot \text{B}_2\text{O}_3$. Insol. in H_2O , sol. in dil. acids. (Ouvrard, C. R. 1905, 141. 353.)

$\text{Ca}_2\text{B}_6\text{O}_{11}$ (Ditte, C. R. 77. 785.)

+ $3\text{H}_2\text{O}$. Min. *Pandermite*, *Prceite*. See $4\text{CaO} \cdot 5\text{B}_2\text{O}_3 + 9\text{H}_2\text{O}$.

+ $5\text{H}_2\text{O}$. Min. *Colemanite*.

If all the Ca is in form of colemanite, the solution contains in 100 g., 4.8 g. H_3BO_3 and 0.1 g. CaO. (van't Hoff, B. A. B. 1907, 653.)

+ $7\text{H}_2\text{O}$.

+ $9\text{H}_2\text{O}$. (van't Hoff and Meyerhoffer, A. 1906, 351. 101.)

$3\text{CaO} \cdot \text{B}_2\text{O}_3$. Easily sol. in dil. acids. (Ouvrard, C. R. 1901, 132. 258.)

$3\text{CaO} \cdot 5\text{B}_2\text{O}_3 + 9\text{H}_2\text{O}$. (van't Hoff, B. A. B. 1906, II. 568.)

$4\text{CaO} \cdot 5\text{B}_2\text{O}_3 + 9\text{H}_2\text{O}$. True composition of Pandermite. (van't Hoff, B. A. B. 1906, II. 572.)

Calcium iron (ferrous) borate silicate, $\text{Ca}_2\text{FeB}_2\text{Si}_2\text{O}_{10}$.

Min. *Homelite*. Easily sol. in HCl + Aq.

Calcium magnesium borate, $\text{CaO} \cdot \text{MgO} \cdot 3\text{B}_2\text{O}_3 + 6\text{H}_2\text{O}$.

Min. *Hydroboracite*. Somewhat sol. in H_2O . Easily sol. in warm HCl + Aq or HNO_3 + Aq.

$3\text{CaO} \cdot 3\text{MgO} \cdot 4\text{B}_2\text{O}_3$. (Ditte, C. R. 77. 894.)

Calcium sodium borate, $2\text{CaO} \cdot \text{Na}_2\text{O} \cdot 5\text{B}_2\text{O}_3 + 8\text{H}_2\text{O}$.

(van't Hoff, B. A. B. 1907, 303.)

$\text{Ca}_3\text{B}_{10}\text{O}_{18}$, $\text{Na}_3\text{B}_3\text{O}_9 + 15$, or $24\text{H}_2\text{O}$.

Min. *Natroborealcite*, *Ulexite*. Decomp. by boiling with H_2O . Sol. in acids.

$\text{Ca}_2\text{Na}_4\text{B}_{12}\text{O}_{22} + 15\text{H}_2\text{O}$. Min. *Franklandite*. Sl. sol. in H_2O ; easily sol. in HCl , and HNO_3 + Aq.

Calcium borate bromide, $3\text{CaO} \cdot 3\text{B}_2\text{O}_3 \cdot \text{CaBr}_2$.

Sl. attacked by H_2O . Very sol. in dilute acetic acid (Ouvrard, C. R. 1905, 141. 1023.)

$3\text{CaO} \cdot 5\text{B}_2\text{O}_3 \cdot \text{CaBr}_2$. Hardly attacked by cold H_2O or very dil. acetic acid. Sol. in strong acids, even when dilute. (Ouvrard, C. R. 1905, 141. 1023.)

Calcium borate chloride, $\text{Ca}_3\text{B}_2\text{O}_6 \cdot \text{CaCl}_2$.

Decomp. quickly by moist air or H_2O , slowly by absolute alcohol. (Chatelier, C. R. 99. 276.)

$3\text{CaO} \cdot 3\text{B}_2\text{O}_3 \cdot \text{CaCl}_2$ (Ouvrard, C. R. 1905, 141. 353.)

$3\text{CaO} \cdot 5\text{B}_2\text{O}_3 \cdot \text{CaCl}_2$. Sl. attacked by cold H_2O and dil. acetic acid + Aq. Strong acids dissolve even when very dilute. (Ouvrard, C. R. 1905, 141. 352.)

Calcium borate silicate, $2\text{CaO} \cdot \text{B}_2\text{O}_3 \cdot 2\text{SiO}_2 + \text{H}_2\text{O}$.

Min. *Datolite*. Sol. in HCl + Aq with separation of gelatinous silica.

+ $2\text{H}_2\text{O}$. Min. *Botryokite*.

$\text{CaO} \cdot \text{B}_2\text{O}_3 \cdot \text{SiO}_2$. Min. *Danburite*. Very sl. attacked by HCl + Aq before ignition.

Chromous borate.

Precipitate. Sol. in free acids; insol. in borax + Aq. (Moberg.)

Chromic borate, $7\text{Cr}_2\text{O}_3 \cdot 4\text{B}_2\text{O}_3$.

Insol. in H_2O ; sol. in excess of borax + Aq. (Hebberling, C. C. 1870. 122.)

Chromic magnesium borate, $3\text{Cr}_2\text{O}_3 \cdot 6\text{MgO} \cdot 2\text{B}_2\text{O}_3$.

Not attacked by acids. (Ebelmen, A. ch. (3) 33. 52.)

$2\text{Cr}_2\text{O}_3 \cdot 9\text{MgO} \cdot 3\text{B}_2\text{O}_3$. (Mallard, C. R. 105. 1260.)

Cobaltous borate, $3\text{CoO} \cdot 2\text{B}_2\text{O}_3 + 4\text{H}_2\text{O}$.

Sl. sol. in H_2O . (Rose, Pogg. 88. 299.)

$3\text{CoO} \cdot \text{B}_2\text{O}_3$. (Mallard, C. R. 105. 1260.)

$2\text{CoO} \cdot \text{B}_2\text{O}_3$. (Ouvrard, C. R. 1900, 130. 337.)

Cobaltous borate bromide, $6\text{CoO} \cdot 8\text{B}_2\text{O}_3 \cdot \text{CoBr}_2$.

(Rousseau and Allaire, C. R. 1894, 119. 73.)

Cobaltous borate chloride, $6\text{CoO} \cdot 8\text{B}_2\text{O}_3 \cdot \text{CoCl}_2$.

(Rousseau and Allaire, C. R. 1894, 118. 1257.)

Cobaltous borate iodide, $6\text{CoO} \cdot 8\text{B}_2\text{O}_3 \cdot \text{CoI}_2$.

(Allaire, C. R. 1898, 127. 557.)

Cuprous borate, $3\text{Cu}_2\text{O} \cdot 2\text{B}_2\text{O}_3$.

(Guertler, Z. anorg. 1904, 38. 459.)

Cupric borate.

Composition depends on temperature and concentration of solutions. Boiling H_2O dissolves out all the boric acid. Sol in acids; slowly sol in hot conc. $NH_4Cl + Aq$

$Cu(BO_2)_2$ Insol in cold dil. acids, even HF. Slowly sol in hot conc. HCl. Not attacked by alkalis or alkali carbonates + Aq (Guertler, Z anorg 1904, **38**, 456.)

Insol. in methyl acetate (Naumann, B 1909, **42**, 3790)

Cupric borate ammonia, $CuB_4O_7 \cdot 4NH_3 + 6H_2O$.

Efflorescent. Can be recrystallized from a little $NH_4OH + Aq$ (Pasternack, A **151**, 227.)

Didymium borate, $DiBO_3$.

Insol in H_2O acidulated with HCl + Aq (Cleve, Bull. Soc (2) **43**, 363)

$Di_2(B_4O_7)_3$. Insol. in H_2O ; sol. in acids. (Frerichs and Smith, A **191**, 355)

Glucinum borate, basic, $5GHO \cdot B_2O_3$.

Insol. in H_2O , sol. in acids (Kruss and Morahit, B **23**, 735)

Iron (ferrous) borate.

Ppt. H_2O dissolves out all the boric acid. (Tunnerman.)

Iron (ferric) borate, $Fe_2(BO_2)_6 + 3H_2O$.

Ppt. Insol in H_2O .

Min. *Lagonite*. Sol in acids.

$2Fe_2O_3 \cdot 3B_2O_3$. (Mallard, C. R. **105**, 1260)

$6Fe_2O_3 \cdot B_2O_3 + 6H_2O$. Ppt. (Rose, Pogg. **89**, 473)

$9Fe_2O_3 \cdot B_2O_3 + 9H_2O$. Ppt (Rose)

Iron (ferric) magnesium borate, $3Fe_2O_3 \cdot 6MgO \cdot 2B_2O_3$

Insol. in H_2O . Sol. in conc. HCl + Aq (Ebelmen, A ch (3) **33**, 53.)

$2Fe_2O_3 \cdot 9MgO \cdot 3B_2O_3$. (Mallard, C. R. **105**, 1260.)

Iron (ferroferric) magnesium borate, $3MgO \cdot FeO \cdot Fe_2O_3 \cdot B_2O_3$.

Min. *Ludwigite*. Slowly sol. in HCl + Aq, when finely powdered.

Iron (ferrous) borate bromide, $6FeO \cdot 8B_2O_3 \cdot FeBr_2$.

Slowly sol. in hot $HNO_3 + Aq$. (Rousseau and Allaire, C. R. **116**, 1445.)

Iron (ferrous) borate chloride, $6FeO \cdot 8B_2O_3 \cdot FeCl_2$.

Slowly sol. in hot $HNO_3 + Aq$. (Rousseau and Allaire, C. R. **116**, 1195.)

Lanthanum borate, $2La_2O_3 \cdot B_2O_3$.

(Nordenskjold, Pogg. **114**, 618.)

$La_2(B_4O_7)_3$. Ppt. (Smith)

Formula is $La_2B_6O_{15} + xH_2O$. (Cleve, B. **11**, 910.)

Lead borate, basic,

$2PbO \cdot B_2O_3 + 2H_2O$ Ppt

$4PbO \cdot 3B_2O_3 + 4H_2O$ Ppt

+ $5H_2O$ Ppt

$6PbO \cdot 5B_2O_3 + 6H_2O$ Ppt

$8PbO \cdot 3B_2O_3 + 8H_2O$ Ppt

$9PbO \cdot 5B_2O_3 + 9H_2O$. Ppt (Rose, Pogg. **87**, 470)

Lead borate, $Pb(BO_2)_2 + H_2O$

Insol in H_2O . Easily sol in dil HNO_3 , or boiling $HC_2H_3O_2 + Aq$. Decomp by H_2SO_4 , HCl, also by boiling KOH, or NaOH + Aq. Insol in alcohol (Herapath, Phil Mag (3) **34**, 375)

Sol. in $NH_4Cl + Aq$; sol. in sat NaCl + Aq. $2PbO \cdot 3B_2O_3 + 4H_2O$ (Herapath.)

$PbB_4O_7 + 4H_2O$. Slightly sol. in pure H_2O , but insol. in solutions of Na salts as $Na_2B_4O_7 + Aq$ (Soubeiran)

Lead borate chloride, $Pb(BO_2)_2 \cdot PbCl_2 + H_2O$.

Insol. in cold, very slowly decomp by hot H_2O into its constituents. Easily sol. in dil. hot $HNO_3 + Aq$; insol in alcohol. (Herapath, Phil. Mag. (3) **34**, 375)

Lead borate nitrate, $Pb(BO_2)_2 \cdot Pb(NO_3)_2 + H_2O$.

Insol. in alcohol. (Herapath.)

Lithium borate, $LiBO_2$

Solubility in H_2O .

100 g H_2O dissolve g. $LiBO_2$ at t°.

t°	g $LiBO_2$	t°	g $LiBO_2$
0	0.7	30	4.9
10	1.4	40	11.12
20	2.6	45	20.

(Le Chatelier, C. R. 1897, **124**, 1094)

Insol. in acetone. (Eidmann, C. C. **1899**, II. 1014; Naumann, B. 1904, **37**, 4329.)

Insol in methyl acetate. (Naumann, B. 1909, **42**, 3790.)

Insol. in ethyl acetate (Naumann, B. 1910, **43**, 314.)

+ $8H_2O$. (Le Chatelier, Bull. Soc. 1899, (3) **21**, 35.)

+ $16H_2O$. Effloresces in the air, slowly sol in cold H_2O , rapidly in hot H_2O . (Le Chatelier, C. R. 1897, **124**, 1092.)

$Li_2H_4(BO_3)_2 + 14H_2O$. (Reischle, Z. anorg. **4**, 166.)

$Li_2B_4O_7$. Deliquescent; easily sol. in H_2O . (Arfvedson, A. ch. **10**, 82.)

Sol. in acetone. (Eidmann, C. C. **1899**, II. 1014.)

Insol. in acetone. (Naumann, B. 1904, **37**, 4329)

Insol. in methyl acetate. (Naumann, B. 1909, **42**, 3790.)

+ $5H_2O$. Insol. in alcohol. (Filsinger, Arch. Ph. (3) **8**, 198.)

Li_2O , $3\text{B}_2\text{O}_3 + 6\text{H}_2\text{O}$ Very sol. in H_2O , insol in alcohol (Filsinger)

Li_2O , $4\text{B}_2\text{O}_3$ Insol in H_2O (Le Chatelier, Bull Soc 1899, (3) 21. 35.)

+ $10\text{H}_2\text{O}$ Sol in H_2O , insol. in alcohol. (Filsinger.)

"Acid lithium borate" is less sol than the tetraborate (Gmelin)

Li_2O , $5\text{B}_2\text{O}_3 + 10\text{H}_2\text{O}$. (Dukelski, C. A 1908. 1089)

Magnesium borate, $\text{Mg}(\text{BO}_2)_2$.

(Ditte, C. R. 77. 893.)

+ $3\text{H}_2\text{O}$. Min. *Pinnoute*

+ $4\text{H}_2\text{O}$ (Laurent, A. ch (2) 67. 215)

+ $8\text{H}_2\text{O}$ Insol in cold or hot H_2O , easily sol in $\text{HCl} + \text{Aq}$. Decomp by conc $\text{HCl} + \text{Aq}$ into H_3BO_3 and MgCl_2 . (Wohler.)

$\text{MgB}_4\text{O}_7 + 8\text{H}_2\text{O}$ (Popp, A. Suppl 8. 1.)

MgO , $3\text{B}_2\text{O}_3 + 8\text{H}_2\text{O}$ Very slowly sol. in H_2O (Rose, A. 84. 221)

Sol in 75 pts cold H_2O . (Rammelsberg, Pogg. 49. 445)

2MgO , B_2O_3 . Insol in H_2O , but sol. in $\text{Na}_2\text{CO}_3 + \text{Aq}$. (Guertler, Z anorg. 1904, 40. 236.)

+ H_2O . Very sl. sol. in $\frac{1}{10}$ N $\text{HCl} + \text{Aq}$ (van't Hoff, B. A. B. 1907, 658.)

Min. *Ascharite*.

3MgO , B_2O_3 Insol in H_2O ; easily sol. in acids. (Ebelmen, A. 80. 208)

Very sl. sol in cold, but somewhat decomp by boiling H_2O . (Rammelsberg.)

+ $9\text{H}_2\text{O}$. Somewhat sol in cold H_2O . (Wohler, Pogg 28. 525.)

3MgO , $2\text{B}_2\text{O}_3$ Sol. in warm H_2SO_4 or $\text{HNO}_3 + \text{Aq}$ (Ditte, C. R 77. 893.)

MgO , $6\text{B}_2\text{O}_3 + 18\text{H}_2\text{O} = \text{Mg}(\text{BO}_2)_2$, $10\text{HBO}_2 + 13\text{H}_2\text{O}$. (Rammelsberg, Pogg 49. 445.)

3MgO , $4\text{B}_2\text{O}_3$ Sol. in hot dil acids, insol. in acetic acid. (Ditte, C. R 77. 893.)

5MgO , $2\text{B}_2\text{O}_3 + 1\frac{1}{2}$, and $3\text{H}_2\text{O}$ Min. *Szibelyite*. Difficultly sol. in $\text{HCl} + \text{Aq}$

9MgO , B_2O_3 . (Mallard, C. R. 105. 260.)

Magnesium manganous borate, $3\text{Mg}_2\text{B}_2\text{O}_6$, $4\text{Mn}_2\text{B}_2\text{O}_5 + 7\text{H}_2\text{O}$.

Min *Sussexite*. Sol. in $\text{HCl} + \text{Aq}$

Magnesium potassium borate, $\text{KMg}_2\text{B}_{11}\text{O}_{19} + 9\text{H}_2\text{O}$.

Min. *Kalborite*. Insol in H_2O (Feit, Ch Z 1889, 13. 1188)

2MgO , $2\text{K}_2\text{O}$, $11\text{B}_2\text{O}_3 + 20\text{H}_2\text{O}$. (van't Hoff and Lichtenstein, B. A. B. 1904, 936.)

Magnesium sodium borate, $\text{Mg}_2\text{B}_5\text{O}_{11}$,

$\text{Na}_2\text{B}_4\text{O}_7 + 30\text{H}_2\text{O}$

Efflorescent. About as sol. in cold H_2O as borax; solution separates out a Mg borate on warming, which redissolves on cooling. Decomp. by boiling H_2O . (Rammelsberg.)

Magnesium strontium borate, 3MgO , 3SrO , $4\text{B}_2\text{O}_3$.

Easily sol. in dil. acids. (Ditte, C. R. 77. 895)

Magnesium borate bromide, $2\text{Mg}_3\text{B}_8\text{O}_{13}$, MgBr_2 or 6MgO , $8\text{B}_2\text{O}_3$, MgBr_2

(Rousseau and Allaire, C. R 1894, 119, 71)

Magnesium borate chloride, $2\text{Mg}_3\text{B}_8\text{O}_{13}$, MgCl_2 .

Min. *Boracite* Insol. in H_2O ; slowly sol. in acids (Kraut)

Stassfurthite Easily sol in warm acids. (Bischof.)

Magnesium borate iodide, 6MgO , $8\text{B}_2\text{O}_3$, MgI_2 .

(Allaire, C. R 1898, 127. 556.)

Magnesium borate phosphate, $\text{Mg}(\text{BO}_2)_2$, $2\text{MgHPO}_4 + 7\text{H}_2\text{O}$.

Min. *Lunenburgite*

Magnesium borate sulphate, $2\text{Mg}_3\text{B}_4\text{O}_9$, $3\text{MgSO}_4 + 12\text{H}_2\text{O}$.

Min. *Magnesium sulphoborate*.

Sol in mineral acids when ground (Nauert, B. 1893, 26. 874)

Manganous borate, MnB_4O_7 (?).

Insol in H_2O (Berzelius), very sl. sol. in H_2O (Thomas, Am. Ch. J. 4. 358); decomp. by warm, slowly by cold H_2O Sol. in $\text{MgSO}_4 + \text{Aq}$ (Berzelius).

+ $3\text{H}_2\text{O}$. (Endemann and Paisley, Zeit. angew Ch 1903, 16. 176)

+ $5\text{H}_2\text{O}$. Ppt (Endemann and Paisley.) Very hygroscopic. (Endemann, Am Ch. J. 1903, 29. 72.)

3MnO , B_2O_3 (Mallard, C. R. 105. 1260.) Not attacked by H_2O . Very sol in acids.

(Ouvrard, C. R. 1900, 130. 336.) 3MnO , $2\text{B}_2\text{O}_3$. (Mallard.)

$\text{MnH}_4(\text{BO}_3)_2$ Very sl. sol. in H_2O

Solubility in 2% $\text{Na}_2\text{SO}_4 + \text{Aq}$. At 18.5° , 0.77 g. $\text{MnH}_4(\text{BO}_3)_2$ are dissolved per litre;

at 40° , 0.65 g.; at 60° , 0.36 g.; at 80° , 0.12 g.

Solubility in 2% $\text{NaCl} + \text{Aq}$ 1 l solution dissolves 1.31 g salt at 18.2° ; 0.6 g at 59° ; and 0.29 g. at 80° .

Solubility in 2% $\text{CaCl}_2 + \text{Aq}$ 1 l. $\text{CaCl}_2 + \text{Aq}$ dissolves 2.91 g salt at 17.6° ; 2.44 g. at 43.0° ; 2.25 g. at 61° ; and 1.35 g. at 80° . (Hartley and Ramage, Chem. Soc. 63. 129)

Manganous borate bromide, 6MnO , $8\text{B}_2\text{O}_3$, MnBr_2 .

(Rousseau and Allaire, C. R. 1894, 119. 73.)

Manganous borate chloride, 6MnO , $8\text{B}_2\text{O}_3$, MnCl_2 .

(Rousseau and Allaire, C. R. 1894, 118. 1257.)

Molybdenum borate, MoO_3 , $2\text{B}_2\text{O}_3$ (?).

Insol. in H_2O ; sol. in $\text{H}_2\text{BO}_3 + \text{Aq}$. (Berzelius.)

Molybdenum borate, $\text{Mo}_2\text{O}_3, \text{B}_2\text{O}_3$.

Precipitate. Insol. in H_2O ; sl. sol. in a solution of boric acid. (Berzelius.)

See Boromolybdic Acid.

Nickel borate, $\text{Ni}(\text{BO}_2)_2 + 2\text{H}_2\text{O}$.

Insol. in H_2O . Easily sol. in acids. Easily sol. in warm $\text{NH}_4\text{Cl} + \text{Aq}$ (Rose, Pogg. 88. 299.)

$2\text{NiO}, \text{B}_2\text{O}_3 + x\text{H}_2\text{O}$. Easily sol. in acids. (Rose.)

$3\text{NiO}, 2\text{B}_2\text{O}_3 + 5\text{H}_2\text{O}$. Easily sol. in acids. (Rose.)

$3\text{NiO}, \text{B}_2\text{O}_3$. Not attacked by H_2O ; sol. in acids. (Ouvrard, C. R. 1900, 130. 337.)

Nickel borate bromide, $6\text{NiO}, 8\text{B}_2\text{O}_3, \text{NiBr}_2$.

(Rousseau, C. R. 1894, 119. 73)

Nickel borate chloride, $6\text{NiO}, 8\text{B}_2\text{O}_3, \text{NiCl}_2$.

(Rousseau, C. R. 1894, 118. 1257.)

Potassium borates.

Solubility of B_2O_3 in $\text{K}_2\text{O} + \text{Aq}$ at 30° .

Solution contains		Solid phase
% by wt. K_2O	% by wt. B_2O_3

At 30° only the three potassium borates $\text{K}_2\text{O}, \text{B}_2\text{O}_3 + 2.5\text{H}_2\text{O}$; $\text{K}_2\text{O}, 2\text{B}_2\text{O}_3 + 4\text{H}_2\text{O}$ and $\text{K}_2\text{O}, 5\text{B}_2\text{O}_3 + 8\text{H}_2\text{O}$ exist in stable form. (Dukelski, Z. anorg. 1906, 50. 42.)

Potassium metaborate, KBO_2 .

Sol. in small amount of H_2O . (Berzelius, Pogg 34. 568)

$+1\frac{1}{4}\text{H}_2\text{O}$. Only stable hydrate. (Dukelski, Z. anorg. 1906, 50. 42.)

$+1\frac{1}{2}\text{H}_2\text{O}$. (Atterberg, Bull. Soc (2) 22. 350.)

Potassium tetraborate, $\text{K}_2\text{B}_4\text{O}_7$.

Very sol. in H_2O

$+4\text{H}_2\text{O}$. (Atterberg, Bull. Soc. (2) 22. 350)

Only stable hydrate. (Dukelski, l. c.)

$+5\text{H}_2\text{O}$. Very sol. in H_2O ; more sol. than $\text{K}_2\text{B}_6\text{O}_{10}$ or $\text{K}_2\text{B}_{12}\text{O}_{19}$.

$+6\text{H}_2\text{O}$. (Atterberg, l. c.)

Potassium hexaborate, $\text{K}_2\text{B}_6\text{O}_{10} + 5$, and $8\text{H}_2\text{O}$.

Easily sol. in H_2O .

Does not exist. (Dukelski, l. c.)

Potassium dekaborate, $\text{K}_2\text{B}_{10}\text{O}_{16} + 8\text{H}_2\text{O}$.

Sol. in H_2O . (Rammelsberg)

Only hydrate (Dukelski)

Potassium dodekaborate, $\text{K}_2\text{B}_{12}\text{O}_{18} + 10\text{H}_2\text{O}$.

Sl. sol. in cold, very sol. in hot H_2O . (Laurent, A. ch. 67. 215)

$= \text{K}_2\text{B}_{10}\text{O}_{16}$. (Rammelsberg)

Does not exist. (Dukelski)

Potassium borate fluoride, KBO_2, KF .

Sol. in H_2O . (Schiff and Sestini, A. 228. 72.)

$\text{KBO}_2, 2\text{KF}$. Sol. in little, decomp. by much H_2O . Insol. in H_2O . (Schiff and Sestini, A. 228. 72)

Rubidium borate, $\text{Rb}_2\text{B}_4\text{O}_7$.

Anhydrous. (Reischle, Z. anorg. 4. 166.)

$+6\text{H}_2\text{O}$. Not deliquescent or efflorescent.

Sol. in H_2O . (Reissig, A. 127. 33.)

Samarium borate, SmBO_3 .

Insol. in H_2O ; sol. in $\text{HCl} + \text{Aq}$. (Cleve, Bull. Soc. (2) 43. 1670)

Scandium borate, ScBO_3 .

Sol. in dil. acids. (Crookes, Phil. Trans. 1910, 210. A. 364)

Silver borate, AgBO_2 .

Sl. sol. in H_2O . By washing with H_2O the boric acid is dissolved out. (Rose, Pharm. Centralbl. 1853. 205.)

Sol. with decomp. in $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ (Herschel); sol. in $\text{NH}_4\text{NO}_3 + \text{Aq}$ if pptd. cold.

1 l. H_2O dissolves ca. 6×10^{-2} gram-atoms at 25° . (Abegg and Cox, Z. phys. Ch. 1903, 46. 11.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

$3\text{Ag}_2\text{O}, 4\text{B}_2\text{O}_3$. (Rose, l. c.)

Sodium borates.

Solubility of B_2O_3 in $Na_2O + Aq$ at 30° .

Solution contains		Solid phase

At 30° , only the four sodium borates $Na_2O, B_2O_3 + 4H_2O$; $Na_2O, B_2O_3 + 8H_2O$; $Na_2O, 2B_2O_3 + 10H_2O$; and $Na_2O, 5B_2O_3 + 10H_2O$ exist as stable phases.

(Dukelski, Z. anorg. 1906, 50. 46.)

Sodium metaborate, $NaBO_2$.

Anhydrous. Easily sol. in H_2O , with evolution of heat.

+ H_2O . Easily sol. in H_2O . (Benedikt.)+ $2H_2O$. Easily sol. in H_2O . (Benedikt, B. 7. 703.)+ $3H_2O$. Easily sol. in H_2O . (Berzelius.)

+ $4H_2O$. Sl. efflorescent. Sol. in hot, less sol. in cold H_2O . Melts at 57° in its crystal H_2O . (Dukelski, Z. anorg. 50. 42.)

+ $4\frac{1}{2}H_2O$. (Atterberg, Z. anorg. 1906, 48. 370.)

+ $5\frac{1}{2}H_2O$. (Atterberg.)+ $8H_2O$. (Atterberg)

+ $4H_2O$ and + $8H_2O$ are the only hydrates formed. (Dukelski.)

System Na_2O, B_2O_3, H_2O at 60° investigated by Sborgi (Real. Ac. Linc. 1915, (5) 24. I, 443.)

Sodium tetraborate, $Na_2B_4O_7$ (Borax).100 g. H_2O dissolve at:

5°	10°	21°	5°	30°	37°	5°
----	-----	-----	----	-----	-----	----

1 3 1 6 2 8 3 9 5.6 g. anhydrous salt.

45°	50°	54°	55°	56°	57°
-----	-----	-----	-----	-----	-----

8 1 10.5 13.3 14 2 15 0 16 0 g anhydrous salt.

(Horn and van Wagener, Am. Ch J 1903, 30. 347.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Sol. in amyl alcohol in the presence of meta-arsenious acid and excess of H_3BO_3 (Auerbach, Z. anorg. 1903, 37. 358.)

+ $4H_2O$.+ $5H_2O$.100 g H_2O dissolve at:

65°	70°	80°	90°	100°
-----	-----	-----	-----	------

22.0 24.4 31.4 40.8 52.3 g. anhydrous salt.

(Horn and van Wagener, Am. Ch. J 1903, 30. 347.)

+ $6H_2O$. Grows opaque in the air. (Bechi, Sill. Am. J. (2) 17. 129.)

+ $10H_2O$. Only stable hydrate. (Dukelski, Z. anorg. 50. 30.) Efflorescent on surface in dry air. Not efflorescent when free from Na_2CO_3 . (Sims.)

Sol in 12 pts cold, and 2 pts hot H_2O . Sat cold $Na_2B_4O_7 + Aq$ contains 9.23%, and sat hot $Na_2B_4O_7 + Aq$ contains 33.33% $Na_2B_4O_7$. (Gmelin)

Sol in 20 pts cold, and 6 pts boiling H_2O . (Wallenius)

Sol. in 15 pts. H_2O at 18.75° (Abl)
100 pts. H_2O at 15.5° dissolve 5 pts; at 65° , 40 pts.; at 100° , 166 pts $Na_2B_4O_7 + 10H_2O$. (Ure's Dictionary)

100 pts sat $Na_2B_4O_7 + Aq$ at 105.5° contain 32.5 pts. $Na_2B_4O_7$, or 100 pts. H_2O dissolve 110.54 pts $Na_2B_4O_7$, or 1 pt. $Na_2B_4O_7$ is sol in 0.9047 pt. H_2O at 105.5° (Griffith, Quar. J. Sci. 18. 90)

Solubility in 100 pts. H_2O at t° .

t°	Pts. $Na_2B_4O_7$	Pts. $Na_2B_4O_7 + 10H_2O$	t°	Pts. $Na_2B_4O_7$	Pts. $Na_2B_4O_7 + 10H_2O$

40	8 79	17 90	100	55 16	201 43
50	12.93	27 41			

(Poggiale, A. ch. (3) 8. 46.)

100 pts. H_2O dissolve 1.4 pts. $Na_2B_4O_7$ at 0° , and 55.3 pts. at 100° . (Mulder.)

$Na_2B_4O_7 + Aq$ sat. at 15° has sp. gr. = 1.0199, and contains 3.926 pts $Na_2B_4O_7$ to 100 pts. H_2O . (Michel and Krafft, A. ch. (3) 41. 471.)

$\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$ sat at 17° has sp. gr = 1.0205 (Stolba, J. pr. 97. 503)

Sp. gr of $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$ at 15°

$\frac{\%}{\text{Na}_2\text{B}_4\text{O}_7}$	$\frac{\%}{\text{Na}_2\text{B}_4\text{O}_7 + 10\text{H}_2\text{O}}$	Sp. gr	$\frac{\%}{\text{Na}_2\text{B}_4\text{O}_7}$	$\frac{\%}{\text{Na}_2\text{B}_4\text{O}_7 + 10\text{H}_2\text{O}}$	Sp. gr
1	0.52	1.0049	4	2.11	1.0199
2	1.06	1.0099	5	2.64	1.0249
3	1.59	1.0149	6	3.17	1.0299

(Gerlach, Z. anal. 28. 473)

Sp. gr of $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$ sat at $15^\circ = 1.032$ (Gerlach)

Sat $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$ boils at 105.5° , and contains 110.5 pts $\text{Na}_2\text{B}_4\text{O}_7$ to 100 pts H_2O (Griffith.)

Sat $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$ forms a crust at 103° , and contains 60.14 pts $\text{Na}_2\text{B}_4\text{O}_7$ to 100 pts H_2O ; highest temp observed, 104.3° (Gerlach, Z. anal. 26. 427)

B-pt. of $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$ containing pts $\text{Na}_2\text{B}_4\text{O}_7$ to 100 pts H_2O

B-pt	Pts $\text{Na}_2\text{B}_4\text{O}_7$	B-pt	Pts $\text{Na}_2\text{B}_4\text{O}_7$
100 5°	8.64	103 0°	61.2
101.0	17.2	103.5	75.4
101.5	26.5	104.0	90.8
102.0	37.5	104.5	109.0
102.5	48.5	104.6	112.3

(Gerlach, Z. anal. 26. 452)

M.-pt of $\text{Na}_2\text{B}_4\text{O}_7 + 10\text{H}_2\text{O}$ is 75.5° . (Tilden, Chem. Soc. 45. 407)

Insol in alcohol

100 g alcohol (0.941 sp. gr.) dissolve 2.48 g. at 15.5° (U. S. P.)

Sol in alcoholic solution of $\text{Na}_2\text{C}_2\text{H}_3\text{O}_2$. (Stromeyer)

Sol in 14.7 pts. glycerine of 1.225 sp. gr (Vogel)

Sol. in 1 pt glycerine. (Schultze, Arch. Pharm. (3) 6. 149)

100 g glycerine dissolve 60.3 g. at 15.5° (U. S. P.)

Min. T_{melt} .

Sodium borate, $\text{Na}_2\text{B}_2\text{O}_7 + 10\text{H}_2\text{O}$.

Sol in 5-6 pts. cold H_2O . (Bolley, A. 68. 122.) Perhaps sodium hydrogen tetraborate $\text{Na}_2\text{HB}_4\text{O}_7 + 4\frac{1}{2}\text{H}_2\text{O}$.

$\text{Na}_2\text{B}_{10}\text{O}_{16} + 10\text{H}_2\text{O}$. Decomp. by H_2O . (Atterberg, Z. anorg. 48. 370.)

Stabile. (Dukelski, Z. anorg. 50. 42.)

+ $11\text{H}_2\text{O}$. (Laurent, C. R. 29. 5.)

Sodium borate fluoride, NaBO_2 , $3\text{NaF} + 4\text{H}_2\text{O}$

Sol. in H_2O .

Basarow (B. 7. 112) considers this salt to be a mixture.

$\text{Na}_2\text{B}_4\text{O}_7$, $12\text{NaF} + 22\text{H}_2\text{O}$. Can be separated into its constituents by H_2O . (Berzelius, Berz. J. B. 23. 96)

Strontium borate, $\text{Sr}(\text{BO}_2)_2$

(Ditte, C. R. 77. 788)

Easily hydrated by H_2O forming SrO , $\text{B}_2\text{O}_3 + 2\text{H}_2\text{O}$. Very sol in dil. acetic acid. (Ouvrard, C. R. 1906, 142. 282)

Insol in acetone (Naumann, B. 1904, 37. 4329.)

+ $2\text{H}_2\text{O}$. (Ouvrard, l. c.)

+ $4\text{H}_2\text{O}$. (Ouvrard, l. c.)

+ $5\text{H}_2\text{O}$. 1 l. H_2O dissolves 2.3 g at 10°

(Ditte, A. ch. 1883 (5) 30. 253)

SrB_4O_7 . Insol. in H_2O , sol. in dil. acids.

(Guertler, Z. anorg. 1904, 40. 243)

+ $4\text{H}_2\text{O}$. Sol in 130 pts boiling H_2O . 100 pts. H_2O at 100° dissolve 7.7 pts (Ure's Dict.)

Easily sol in cold NH_4 salts + Aq , sol. in cold $\text{HNO}_3 + \text{Aq}$

$2\text{SrO} \cdot \text{B}_2\text{O}_3$. Easily decomp by H_2O forming B_2O_3 , SrO , $4\text{H}_2\text{O}$. Very sol in acids (Ouvrard, C. R. 1906, 142. 282)

$3\text{SrO} \cdot \text{B}_2\text{O}_3$. Less easily attacked by H_2O than Ca comp. Very sol. in mineral acids. Sl. attacked by dil. acetic acid. (Ouvrard, C. R. 1901, 132. 258.)

$\text{SrB}_6\text{O}_{10}$. Very sl. sol. in H_2O ; sol. in acids. (Laurent)

$\text{SrB}_5\text{O}_{11} + 7\text{H}_2\text{O}$. Ppt. (Laurent)

+ $12\text{H}_2\text{O}$. (Ditte)

$\text{Sr}_2\text{B}_3\text{O}_9$. Sol in cold mineral acids and acetic acid (Ditte, C. R. 77. 785)

$2\text{SrO} \cdot 3\text{B}_2\text{O}_3$. Easily sol in acids. (Ditte, l. c.)

Strontium borate bromide, 3SrO , $5\text{B}_2\text{O}_3$, SrBr_2 .

As the chloride (Ouvrard, C. R. 1906, 142. 283.)

Strontium borate chloride, 3SrO , $5\text{B}_2\text{O}_3$, SrCl_2 .

Sl. attacked by cold H_2O . not attacked by dilute acetic acid. (Ouvrard, C. R. 1906, 142. 282.)

Thallous borate, $\text{TlBO}_2 + \frac{1}{2}\text{H}_2\text{O}$

Decomp. in the air. (Buchta, J. pr. 1913, (2) 88. 784)

$\text{Tl}_2\text{B}_2\text{O}_7$. (Buchta.)

$\text{Tl}_2\text{B}_4\text{O}_{11}$. Ppt. Sol. in boiling H_2O ; insol. in cold dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. (Crookes)

+ $2\text{H}_2\text{O}$. (Buchta, J. pr. 1913 (2) 88. 774.)

$\text{Tl}_2\text{B}_6\text{O}_{10} + 3\text{H}_2\text{O}$. (Buchta.)

$\text{Tl}_2\text{B}_8\text{O}_{13} + 4\text{H}_2\text{O}$. (Buchta.)

$\text{Tl}_2\text{B}_{10}\text{O}_{16} + 8\text{H}_2\text{O}$. (Buchta.)

$\text{Tl}_2\text{B}_{12}\text{O}_{19} + 7\text{H}_2\text{O}$. (Buchta.)

Thorium borate (?).

Precipitate. Insol. in H_2O and $\text{H}_3\text{BO}_3 + \text{Aq}$. (Berzelius.)

Tin (stannous) borate (?).

Ppt. (Wenzel.)

Devanadyl borate.

Insol in H_2O ; sol in $H_3BO_3 + Aq.$ (Berzelius)

Ytterbium borate, $YbBO_3$.

Insol in conc. HCl , sol. in HF . (Cleve, Z anorg. 1902, **32**. 148)

Yttrium borate.

Precipitate. (Berlin, Pogg. **43**. 105)

Zinc borate, $3ZnO, 2B_2O_3$.

(Mallard, C. R. **105**. 1260.)

Decomp. by H_2O ; very sol in dil acids (Ouvrard, C. R. 1900, **130**. 336)

$ZnO, 2B_2O_3 + 4H_2O$ Sol. in H_2O with decomp. (Ditte, A. ch. 1883, (5) **30**. 256)

$3ZnO, 4B_2O_3 + H_2O$. Ppt. (Holdermann, Arch Pharm 1904, **242**. 567.)

$ZnO, 4B_2O_3 + 10H_2O$. (Ditte, A. ch. 1883, (5) **30**. 256)

$9ZnO, 4B_2O_3 + 9H_2O$. Sl. sol. in $H_3BO_3 + Aq$ (Rose, Pogg. **88**. 299.)

$3ZnO, B_2O_3$. Insol. in mineral acids. (le Chatelier, C. R. **113**. 1034)

Zinc borate ammonia, $ZnB_4O_7, 4NH_3 + 6H_2O$.

Easily sol. in NH_4OH , $HC_2H_3O_2$, H_2SO_4 , HCl , and $HNO_3 + Aq$ (Büchner, A. **151**. 234.)

Zinc borate bromide, $6ZnO, 8B_2O_3, ZnBr_2$.

(Rousseau and Allaire, C. R. **116**. 1446.)

Zinc borate chloride, $6ZnO, 8B_2O_3, ZnCl_2$.

Insol. in HCl (Rousseau, C. R. 1894, **118**. 1256.)

Zinc borate iodide, $6ZnO, 8B_2O_3, ZnI_2$.

(Allaire, C. R. 1898, **127**. 556.)

Zirconium borate, (?)

Insol. in H_2O .

Perboric acid.

See Perboric Acid.

Boric phosphoric acid.

See Phosphoboric acid.

Boric tungstic acid.

See Borotungstic acid.

Boric acid sulphur trioxide.

See Borosulphuric acid.

Borimide, $B_2(NH)_3$.

Decomp. by H_2O ; insol. in all indifferent solvents; sol. in liquid $NH_3 + S$ to form a dark blue solution. (Stock, B. 1901, **34**. 3044.)

Borimide hydrochloride, $B_2(NH)_3, 3HCl$.

Decomp. by H_2O ; insol. in all ordinary organic solvents. (Stock, B. 1901, **34**. 3045.)

Borofluorhydric acid, $HBFl_4$.

See Fluoboric acid.

Borofluorides.

See Fluoborides.

Boromolybdic acid.

Sol. in H_2O . Decomp. by alcohol (Berzelius)

Boron, B.

(a) *Amorphous* Somewhat sol. in pure H_2O , when not ignited. Salts and acids separate it out of aqueous solution. Upon evaporation of H_2O solution a crust is formed, which is only partially sol in H_2O (Berzelius, Pogg. **2**. 113.) Decomp. by hot H_2SO_4 and cold moderately conc. $HNO_3 + Aq$. Strongly ignited amorphous B is much less easily attacked by reagents than freshly pptd, and is insol. in H_2O . (Berzelius.) Insol in caustic alkalis + Aq , also in alcohol and ether. Above boron was very impure. (Moissan, C. R. **114**. 392.)

Pure B is not attacked by acids, but has a strong reducing action on $KMnO_4 + Aq$, $FeCl_3 + Aq$, etc. (Moissan, C. R. **114**. 617.)

Does not melt at 1500° . Readily sol in conc. acids, as H_2SO_4 , HNO_3 , H_3PO_4 ; very sl. sol. in hydracids; decomp H_2O at red heat. (Moissan, A. ch 1895, (7) **6**. 313-14)

Insol. in liquid NH_3 (Gore, Am. Ch J. 1898, **20**. 827.)

(b) *Crystallized*. 1. Insol in H_2O , HCl , or $KOH + Aq$. Very slightly and slowly attacked by boiling conc. H_2SO_4 . Gradually sol in hot conc. HNO_3 . Formula is Al_2B_{24} (Hampe, A. **183**. 75)

2. Very slightly attacked by conc. HCl or H_2SO_4 ; slowly but completely sol. in conc. HNO_3 ; insol. in $KOH + Aq$. Formula is $C_2Al_3B_{48}$ (Hampe.)

$C_2Al_3B_{44}$ *Crystalline*. Insol. in a solution of CrO_3 in H_2SO_4 . Insol. in hot conc. HCl and H_2SO_4 . Sol. in hot conc HNO_3 (Biltz, B. 1910, **43**. 303.)

Boron tribromide, BBr_3 .

Sol. in H_2O or alcohol with decomp. (Nicklès, C. R. **60**. 800.)

Boron phosphorus bromide, BBr_3, PBr_3 .

Decomp. by H_2O .

Sol. in CS_2 , and $CHCl_3$. Decomp. by alcohol, ether, etc. (Tarble, C. R. **116**. 1521.)

BBr_3, PBr_3 . Sl. sol. in cold, easily in hot CS_2 . (Tarble.)

Boron bromide ammonia, $BBr_3, 4NH_3$.

Decomp by H_2O and alkalis. (Besson, C. R. **114**. 542.)

Boron bromide phosphine, BBr_3, PH_3 .

Violently decomp. by H_2O . (Besson, C. R. **113**. 78.)

Boron bromide phosphorus trichloride,
 $2\text{BBr}_3 \cdot \text{PCl}_3$.

Decomp. by H_2O . Sol in BBr_3 , PCl_3 , CS_2 , and CHCl_3 . Insol. in petroleum ether. (Tarnble, C. R. 1901, **132**, 84.)

Boron bromide phosphorus pentachloride,
 $2\text{BBr}_3 \cdot \text{PCl}_5$.

Sol in BBr_3 and CS_2 ; decomp. by H_2O ; insol in light petroleum (Tarnble, C. R. 1901, **132**, 85.)

Boron bromide phosphorus diiodide, $2\text{BBr}_3 \cdot \text{PI}_2$

Sol. in BBr_3 , CS_2 , CHCl_3 , insol. in light petroleum; decomp. by H_2O . (Tarnble, C. R. 1901, **132**, 205.)

Boron bromide phosphoryl chloride, $\text{BBr}_3 \cdot \text{POCl}_3$.

Very easily decomp. (Oddo and Tealdi, Gazz. ch it 1903, **33**, (2) 431.)

Boron bromoiodide, BBr_2I .

Decomp. violently by H_2O . (Besson, C. R. **112**, 100.)

BBrI_2 (Besson, C. R. **112**, 100.)

Boron bromosulphide, $\text{B}_2\text{S}_3 \cdot \text{BBr}_3$.

Decomp. by H_2O . (Stock, B. 1901, **34**, 3040.)

Boron carbide, B_4C .

Very stable; insol in HF and in HNO_3 ; sol. in KOH at red heat. (Moissan, Bull. Soc 1894, (3) **11**, 1101.)

Insol in acids; sol in fused alkali. (Moissan, C. R. 1894, **118**, 559.)

BC or B_2C_2 . Insol. in all the usual solvents. (Mullhäuser, Z. anorg. **5**, 92.)

Boron trichloride, BCl_3 .

Rapidly absorbed by H_2O and alcohol with decomposition.

Boron nitrosyl chloride, $\text{BCl}_3 \cdot \text{NOCl}$.

Decomp. violently by H_2O . (Geuther, J. pr. (2) **8**, 854.)

Boron phosphoryl chloride, $\text{BCl}_3 \cdot \text{POCl}_3$.

Decomp immediately by H_2O . (Gustavson, Zeit. Chem. **1870**, 521.)

Boron chloride ammonia, $2\text{BCl}_3 \cdot 3\text{NH}_3$.

Decomp. by H_2O . (Berzelius, Pogg. **2**, 147.)

Boron chloride phosphine, $\text{BCl}_3 \cdot \text{PH}_3$.

Decomp. by H_2O . (Besson, C. R. **110**, 516.)

Boron chlorosulphide, $\text{B}_2\text{S}_3 \cdot \text{BCl}_3$.

Decomp. by H_2O . (Stock, B. 1901, **34**, 3040.)

Boron trifluoride, BF_3 .

H_2O absorbs 700 vols. BF_3 gas to form a

liquid of 1.77 sp. gr. On boiling, $\frac{1}{3}$ of the BF_3 is given off, and a residue boiling at $165\text{--}200^\circ$, with composition $\text{BF}_3 + 2\text{H}_2\text{O}$ or $\text{HBO}_2 + 3\text{HF}$, is left. (J. Davy, A. ch. **86**, 178.)

1 ccm. H_2O absorbs at 0° and 762 mm pressure 1 057 ccm. BF_3 .

1 vol conc. H_2SO_4 of 1.85 sp. gr. absorbs 50 vols BF_3 .

Absorbed by alcohol with decomp.

Cold oil of turpentine absorbs 68% of BF_3 .

Boron fluoride ammonia, $\text{BF}_3 \cdot \text{NH}_3$, $\text{BF}_3 \cdot 2\text{NH}_3$, and $\text{BF}_3 \cdot 3\text{NH}_3$.

Decomp. by H_2O .

Boron fluoride cyanhydric acid, $\text{BF}_3 \cdot \text{HCN}$

Very unstable. (Paton, C. R. **113**, 85.)

Boron fluoride phosphine, $2\text{BF}_3 \cdot \text{PH}_3$

Very unstable at ordinary temp. Decomp. by H_2O . (Besson, C. R. **110**, 80.)

Boron hydride, BH_3 .

Not obtained free from H. Sl sol. in H_2O . (Jones, Chem. Soc. **35**, 41.)

See *Cycloborane*.

B_2H_{10} . B.-pt. $16\text{--}17^\circ$ at 760 mm.

Very unstable. Takes fire spontaneously in the air.

Decomp. by H_2O , dil. HCl , and oxidized by conc. HNO_3 with explosive violence.

Absorbed by $\text{NaOH} + \text{Aq}$.

Decomp. by alcohol. Sol in dry benzene. (Stock, B. 1912, **45**, 3562.)

B_2H_{12} . B.-pt. 100° at atmospheric pressure. Decomp. by H_2O . With aqueous alkalis, hydrogen is evolved. (Stock, B. 1912, **45**, 3565.)

B_2H_6 . Insol. in HCl . Sol. in aqua regia and $\text{Br}_2 + \text{Aq}$. (Winkler, B. **1890**, **23**, 778.)

$\text{B}_{10}\text{H}_{14}$. M.-pt. 99.5° ; not attacked by cold or boiling H_2O . Sol. in dil. $\text{NaOH} + \text{Aq}$. Sol. in alcohol, ether, benzene, and CS_2 . (Stock, B. 1913, **46**, 3360.)

Boron iodide, BI_3 .

Very hygroscopic, and instantly decomp. by H_2O or alcohol. Very sol in CS_2 , CCl_4 , C_6H_6 ; less sol. in PCl_3 , AsCl_3 , and a great many organic liquids. (Moissan, C. R. **112**, 717.)

Boron iodide ammonia, $\text{BI}_3 \cdot 5\text{NH}_3$.

Decomp. by H_2O . (Besson, C. R. **114**, 542.)

Boron iodophosphide, BI_2P .

Very hygroscopic; decomp. by H_2O . Not attacked by cold conc. H_2SO_4 , even if fuming, but on heating decomposition takes place. Very sl. sol. in CS_2 . Insol. in benzene, PCl_3 , or CCl_4 . (Moissan, C. R. **113**, 624.)

BIP . Less hygroscopic than BI_2P , but otherwise the properties are similar. (Moissan.)

Boron nitride, BN.

Insol. in H_2O , conc. HNO_3 , conc HCl + Aq. or conc solutions of alkalis.

Decomp by hot conc. H_2SO_4 or HF . (Wohler, A 74. 70.)

Boron trioxide, B_2O_3 .

Deliquescent. Sol in H_2O with a large increase in temp. (Ditte, C. R. 85. 1069.)

1 pt dissolves—

at 18.75°	in 47.01 pts. H_2O .
25°	27.75 " "
37.5°	18.73 " "
50°	15.13 " "
62.5°	9.29 " "
75°	7.28 " "
87.5°	5.58 " "
100°	4.74 " "

Or 100 pts. H_2O dissolve—

at 18.75°	2.13 pts. B_2O_3 .
25°	3.60 " "
37.5°	4.24 " "
50°	6.61 " "
62.5°	10.76 " "
75°	13.73 " "
87.5°	17.92 " "
100°	21.09 " "

(Brandes and Firnhaber, Arch. Pharm. 7. 50.)

1 litre H_2O dissolves—

at 0°	11.00 g. B_2O_3 .
12°	16.50 " "
20°	22.49 " "
40°	39.50 " "
62°	64.50 " "
80°	95.00 " "
102°	164.50 " "

(Ditte, C. R. 85. 1069.)

Sat. H_2O solution boils at 100°. (Brandes and Firnhaber.)

Sat. H_2O solution boils at 103.3°. (Griffiths, Quar. J. Sci. 18. 90.)

Sol. in acetic acid, hot conc. HCl + Aq, HNO_3 , and H_2SO_4 . From the three latter it separates on cooling or dilution with H_2O .

Solubility in Na_2O + Aq at 30°.

See Borates, sodium.

Solubility in K_2O + Aq at 30°.

See Borates, potassium.

Insol. in hot glacial acetic acid. (Holt, Chem. Soc 1911, 100. (2) 720)

Insol. in alcohol. (Graham.)

Sol. in alcohol. (Berzelius, Ebelen.)

Sol. in oils.

See also Boric acid.

Boron trioxide potassium fluoride, B_2O_3 , 2KF.

Gradually sol. in H_2O . Decomp. by much H_2O . Insol. in alcohol. (Schiff and Sestini, A. 228. 82.)

Boron oxychloride, BOCl .

(Gustavson, Zeit. Chem. 1870. 521.)

BOCl_3 . Slowly decomp. by H_2O . (Councler, J. pr. (2) 18. 399.)

Oxychlorides of either the above formulæ do not exist; the true formula for boron oxychloride is $\text{B}_2\text{O}_{11}\text{Cl}_2$. (Lorenz, A. 247. 226)

Boron phosphide, BP.

Insol. in H_2O Sol. in conc. boiling alkalis + Aq with decomp. Decomp. by HNO_3 + Aq (Besson, C. R. 113. 78.)

Insol. in PCl_3 , AsCl_3 , SbCl_3 , CCl_4 , and in fact in all known solvents.

Not attacked by boiling H_2O , conc. HCl , or HI + Aq Sol in conc. HNO_3 with decomp. on heating. Not attacked by cold H_2SO_4 . (Moissan, C. R. 113. 726.)

B_3P_3 Not attacked by boiling conc. HNO_3 + Aq. Insol. in all solvents. (Moissan.)

Boron phosphoiodide.

See Boron iodophosphide.

Boron selenide, B_2Se_3

Violently decomp. by H_2O . (Sabatier, C. R. 112. 1000.)

Boron trisulphide, B_2S_3 .

Decomp. with violence with H_2O . Combines with alcohol and ether. (Fremy, A. ch. (3) 38. 312.)

Insol. in most solvents, but sl. sol. in PCl_3 without decomp.; more sol. in SCl_3 , but does not crystallize from the solution. (Moissan, C. R. 115. 203.)

Boron trisulphide ammonia, $\text{B}_2\text{S}_3, 6\text{NH}_3$.

Ppt. (Stock, B. 1901, 34. 3042.)

Boron pentasulphide, B_2S_5 .

Decomp. by H_2O and alcohol. (Moissan, C. R. 115. 271)

Borosulphuric acid, $\text{BOHSO}_4 + \text{SO}_3$.

Decomp. by H_2O . (Schultz-Sellac, B. 4. 12.)

$\text{B}(\text{HSO}_4)_3$. Very deliquescent. Easily sol. in fuming H_2SO_4 . (D'Arcy, Chem. Soc. 55. 155.)

$\text{SO}_3(\text{O}.\text{BO})_2$. Hygroscopic. Deliquescent. Sol. in H_2O with decomp. Decomp. by cold alcohols. (Pictet, Bull. Soc. 1908, (4) 3. 1121.)

$(\text{SO}_3)_2\text{B}_2\text{O}_3$. Hygroscopic. Deliquescent. Sol. in H_2O with decomp. Decomp. by cold alcohols. (Pictet, Bull. Soc. 1908, (4) 3. 1121.)

Boronotungstic acid, $\text{H}_4\text{B}_2\text{W}_9\text{O}_{32} + 22\text{H}_2\text{O} = 9\text{WO}_3, \text{B}_2\text{O}_3, 2\text{H}_2\text{O} + 22\text{H}_2\text{O}$.

Sol. in less than $\frac{1}{2}$ pt. H_2O , and as easily sol. in alcohol and ether. Sp. gr. of aqueous solution is somewhat under 3. (Klein, A. ch. (5) 28. 370.)

Aluminum boronotungstate, $\text{Al}_4(\text{B}_2\text{W}_9\text{O}_{32})_3 + 65\text{H}_2\text{O}$.

Extremely sol. in H_2O . (Klein.)

Ammonium —, $(\text{NH}_4)_4\text{B}_2\text{W}_9\text{O}_{32} + 18\text{H}_2\text{O}$.

Quickly effloresces. (Klein.)

Barium boronotungstate, $\text{Ba}_2\text{B}_2\text{W}_9\text{O}_{32} + 19\text{H}_2\text{O}$

Sol in 4 pts. cold, and less than $\frac{1}{2}$ pt. hot H_2O . (Klein.)

Cadmium —, $\text{Cd}_2\text{B}_2\text{W}_9\text{O}_{32} + 18\text{H}_2\text{O}$

Deliquescent.

100 pts. of salt dissolve in less than 8 pts. H_2O at 19° Sp gr of solution is 3.28 (Klein.)

Sp. gr. of sat. solution at $15.6^\circ/4^\circ = 3.2887$; at $16.2^\circ/4^\circ = 3.2868$. (Kahlbaum, Z anorg 1902, 29. 229)

Calcium —, $\text{Ca}_2\text{B}_2\text{W}_9\text{O}_{32} + 15\text{H}_2\text{O}$

Sol. in $\frac{1}{10}$ pt H_2O . Solution has sp gr. = 3.10. (Klein)

Cerium —, $\text{Ce}_4(\text{B}_2\text{W}_9\text{O}_{32})_3 + 57\text{H}_2\text{O}$.

Very sol. in H_2O , sp gr. of solution is over 3

Chromium —, $\text{Cr}_4(\text{B}_2\text{W}_9\text{O}_{32})_3 + 74\text{H}_2\text{O}$

Very sol. in H_2O , sp gr. of solution is 2.80 (Klein.)

Cobalt —, $\text{Co}_2\text{B}_2\text{W}_9\text{O}_{32} + 18\text{H}_2\text{O}$.

Very sol. in H_2O ; sp gr. of solution sat. at $19^\circ = 3.36$. (Klein)

100 pts H_2O dissolve 306.8 pts. anhydrous salt at 16.2° ; 288 pts at 18.5° ; 299.7 pts. at 19.6° , 286 pts at 21.8°

Sp gr of solution sat at $19.2^\circ/4^\circ = 3.1369$. (Kahlbaum, Z. anorg. 1902, 29. 218)

Copper —, $\text{Cu}_2\text{B}_2\text{W}_9\text{O}_{32} + 19\text{H}_2\text{O}$.

25 pts. H_2O dissolve 100 pts. salt Sp. gr. of solution = 2.6. (Klein.)

Lead —, $\text{Pb}_2\text{B}_2\text{W}_9\text{O}_{32} + 11\text{H}_2\text{O}$.

Sl. sol. in cold, easily sol. in hot H_2O . (Klein.)

Lithium —, (?).

Very sol. in H_2O . Sp. gr. of solution is about 3.

Magnesium —, $\text{Mg}_2\text{B}_2\text{W}_9\text{O}_{32} + 22\text{H}_2\text{O}$.

Very sol. in H_2O . (Klein)

Manganous —, $\text{Mn}_2\text{B}_2\text{W}_9\text{O}_{32} + 17\text{H}_2\text{O}$.

100 pts dissolve in 13 pts. H_2O . Sp. gr. of solution at $19^\circ = 3.15$. (Klein.)

Mercurous —, $3\text{Hg}_2\text{O}$, B_2O_3 , $9\text{WO}_3 + 14\text{H}_2\text{O}$ (?).

Precipitate.

Insol in H_2O . (Klein.)

Sol. in 20,000 pts. dil. cold, and 1000 pts. boiling $\text{HNO}_3 + \text{Aq}$ of 1.42 sp. gr.

Nickel —, $\text{Ni}_2\text{B}_2\text{W}_9\text{O}_{32} + 18\text{H}_2\text{O}$.

Very sol in H_2O ; sp. gr. of sat. solution at $19^\circ = 3.32$.

100 pts. H_2O dissolve 261.6 pts. at 21.2° .

Sp. gr. $15.75^\circ/4^\circ$ of solution = 2.2959. (Kahlbaum, Z. anorg. 1902, 29. 218.)

Potassium boronotungstate, $\text{K}_4\text{B}_2\text{W}_9\text{O}_{32} + 13\text{H}_2\text{O}$.

5 pts salt dissolve in 8 pts H_2O at 19° to form a solution of 1.38 sp. gr. The solution sat. at 100° has sp gr of over 2 (Klein.)

Silver —, $\text{Ag}_4\text{B}_2\text{W}_9\text{O}_{32} + 14\text{H}_2\text{O}$

Very sl sol in H_2O

Sodium —, $\text{Na}_2\text{H}_2\text{B}_2\text{W}_9\text{O}_{32} + 23\text{H}_2\text{O}$

Very sol in H_2O Solution sat. at 19° contains 84 pts salt to 16 pts H_2O (Klein)

$\text{Na}_4\text{B}_2\text{W}_9\text{O}_{32} + 12\text{H}_2\text{O}$. Sol in less than $\frac{1}{3}$ pt H_2O .

Thallium —, $\text{Tl}_2\text{B}_2\text{W}_9\text{O}_{32} + 5\text{H}_2\text{O}$.

Sl sol in hot H_2O and nearly insol in cold H_2O . (Klein)

Uranyl —, $(\text{UO}_2)_3(\text{B}_2\text{W}_9\text{O}_{32})_2 + 30\text{H}_2\text{O}$.

Very sol. in H_2O (Klein)

Sp. gr of solution = 3.1.

Zinc —, $\text{Zn}_2\text{B}_2\text{W}_9\text{O}_{32} + 2\text{H}_2\text{O}$.

Very sol in H_2O . Sp. gr of solution = 3.15. (Klein)

Borodecitungstic acid.

Barium borodecitungstate, $\text{Ba}_2\text{B}_2\text{W}_{10}\text{O}_{35} + 20\text{H}_2\text{O}$.

Sol. in H_2O . (Klein, C R. 99. 35)

Boroduodecitungstic acid, $\text{H}_8\text{B}_2\text{W}_{11}\text{O}_{43} = 4\text{H}_2\text{O}$, B_2O_3 , 12WO_3 .

Known only in solution, which decomposes into boronotungstic acid and tungstic acid, when evaporated to a certain concentration. (Klein, C. R. 99. 35.)

Barium potassium boroduodecitungstate, 3BaO , K_2O , B_2O_3 , $12\text{WO}_3 + 28\text{H}_2\text{O}$

Potassium —, $\text{K}_8\text{B}_2\text{W}_{12}\text{O}_{43} + 21\text{H}_2\text{O}$.

Sol. in H_2O (Klein)

$2\text{K}_2\text{O}$, 12WO_3 , $\text{B}_2\text{O}_3 + 18\text{H}_2\text{O}$. Sol. in H_2O . (Klein)

Boroquatrordecitungstic acid, $\text{H}_{12}\text{B}_2\text{W}_{14}\text{O}_{51} = 6\text{H}_2\text{O}$, B_2O_3 , 14WO_3 .

Has not been obtained in the free state. (Klein, A ch. (5) 28. 353.)

Barium boroquatrordecitungstate, $\text{Ba}_3\text{B}_2\text{W}_{14}\text{O}_{48} = 3\text{BaO}$, B_2O_3 , $14\text{WO}_3 + 5\text{H}_2\text{O}$.

Sl. sol. in H_2O . (Klein.)

Barium sodium —, $3\frac{1}{2}\text{BaO}$, $1\frac{1}{2}\text{Na}_2\text{O}$, $5\text{H}_2\text{O}$, B_2O_3 , $14\text{WO}_3 + 29\text{H}_2\text{O}$.

Potassium —, $3\text{K}_2\text{O}$, H_2O , B_2O_3 , $14\text{WO}_3 + 22\text{H}_2\text{O}$.

Sol. in H_2O . (Klein.)

Silver —, $\text{Ag}_6\text{H}_2\text{B}_2\text{W}_{14}\text{O}_{49} + 7\text{H}_2\text{O}$

Nearly insol. in cold H_2O . (Klein.)

Sodium —, $\text{Na}_4\text{H}_8\text{B}_2\text{W}_{14}\text{O}_{51} + 29\text{H}_2\text{O}$.

Sol. in H_2O (Klein.)

Sodium strontium boroquatuordecitungstate, $3\frac{1}{2}\text{SrO}$, $1\frac{1}{2}\text{Na}_2\text{O}$, B_2O_3 , $14\text{WO}_3+29\text{H}_2\text{O}$.
Decomp. by H_2O (Klein)

Boroundevigintitungstic acid.

Barium boroundevigintitungstate, 4BaO , B_2O_3 , $19\text{WO}_3+30\text{H}_2\text{O}$.

Can be cryst. from H_2O . (Ebenhusen, Dissert. 1905.)

Boroquatuordevigintitungstic acid, B_2O_3 , $24\text{WO}_3+66\text{H}_2\text{O}$.

Deliquescent. Somewhat more sol. in H_2O than B_2O_3 , $28\text{WO}_3+62\text{H}_2\text{O}$. Also more stable. (Copaux, C R 1908, 147. 975)

Barium boroquatuordevigintitungstate, 5BaO , B_2O_3 , $24\text{WO}_3+54\text{H}_2\text{O}$.

100 pts. H_2O dissolve 50 pts. salt (Copaux, A. ch. 1909, (8) 17. 217.)

6BaO , B_2O_3 , $24\text{WO}_3+58\text{H}_2\text{O}$ (Copaux, l. c.)

Cadmium —, 5CdO , B_2O_3 , $24\text{WO}_3+51\text{H}_2\text{O}$.

Extremely sol. in H_2O . (Copaux, l. c.)

Calcium —, 5CaO , B_2O_3 , $24\text{WO}_3+44\text{H}_2\text{O}$.
Very sol. in H_2O . (Copaux, l. c.)

Lithium —, $15\text{Li}_2\text{O}$, B_2O_3 , $24\text{WO}_3+38\text{H}_2\text{O}$.
(Copaux, l. c.)

Magnesium —, 5MgO , B_2O_3 , $24\text{WO}_3+42\text{H}_2\text{O}$.

Very sol. in H_2O . (Copaux, l. c.)

Mercurous —, $9\text{Hg}_2\text{O}$, B_2O_3 , $24\text{WO}_3+25\text{H}_2\text{O}$.

(Copaux, l. c.)

Potassium —, $5\text{K}_2\text{O}$, B_2O_3 , $24\text{WO}_3+36\text{H}_2\text{O}$.

(Copaux, l. c.)

Sodium —, $5\text{Na}_2\text{O}$, B_2O_3 , $24\text{WO}_3+5\text{H}_2\text{O}$.

As NH_4 salt. (Copaux, l. c.)

Boroquinquavigintitungstic acid.

Potassium boroquinquavigintitungstate, $5\text{K}_2\text{O}$, B_2O_3 , $25\text{WO}_3+34\text{H}_2\text{O}$. (Ebenhusen, Dissert. 1905.)

Boroduodetrigintitungstic acid, B_2O_3 , $28\text{WO}_3+62\text{H}_2\text{O}$.

Decomp. in boiling aqueous solution. (Copaux, C. R. 1908, 147. 975.)

Potassium boroduodetrigintitungstate, $6\text{K}_2\text{O}$, B_2O_3 , $28\text{WO}_3+42\text{H}_2\text{O}$.

Decomp. by boiling alkalis. (Copaux, A. ch. 1909 (8) 17. 217.)

Borovanadic acid.

Sol. in H_2O . Easily decomp. (Guyard, Bull. Soc (2) 25. 354.)

Metabromantimonic acid, $\text{HSbBr}_6+3\text{H}_2\text{O}$.

Very hygroscopic. Loses Br_2 in the air. Decomp. by H_2O with separation of antimonic acid. (Weinland, B. 1903, 36. 256.)

Ammonium metabromantimonate,

$\text{NH}_4\text{SbBr}_6+\text{H}_2\text{O}$.

Loses Br_2 in the air. Decomp. by H_2O . (Weinland, l. c.)

Iron (ferric) metabromantimonate,

$\text{Fe}(\text{SbBr}_6)_3+14\text{H}_2\text{O}$.

Very hygroscopic. Decomp. by H_2O . (Weinland, l. c.)

Lithium metabromantimonate, $\text{LiSbBr}_6+4\text{H}_2\text{O}$.

Very hygroscopic. Loses Br_2 in the air. Decomp. by H_2O (Weinland, l. c.)

Nickel metabromantimonate, $\text{Ni}(\text{SbBr}_6)_2+12\text{H}_2\text{O}$.

Hygroscopic. Decomp. by H_2O . (Weinland, l. c.)

Potassium metabromantimonate, $\text{KSbBr}_6+\text{H}_2\text{O}$.

Loses Br_2 in the air. Decomp. by H_2O . (Weinland, l. c.)

Bromarsenious acid.

See Arsenyl bromide.

Bromauric acid, $\text{HAuBr}_4+3\text{H}_2\text{O}$.

(Lengfeld, Am. Ch. J. 1901, 26. 329.)

+ $5\text{H}_2\text{O}$. Very sol. in H_2O . (Thomsen, J. pr. (2) 13. 337.)

+ $6\text{H}_2\text{O}$. Sol. in ether and CHCl_3 without decomp (Lengfeld, Am. Ch. J. 1901, 26. 329.)

Ammonium bromaurate, NH_4AuBr_4 .

Ppt. (Gutbier, Z. anorg. 1914, 85. 358)

Barium bromaurate.

Not deliquescent. Sol. in H_2O . (v. Bonsdorff, Pogg. 17. 261.)

Cæsium bromaurate, CsAuBr_4 .

Sl. sol. in H_2O or alcohol. Insol. in ether. (Wells and Wheeler, Sill. Am. J. 144. 157)

Ppt. (Gutbier, Z. anorg. 1914, 85. 360.)

Cerium bromaurate, $\text{CeAuBr}_6+8\text{H}_2\text{O}$.

Sol. in H_2O . (Jolin, Bull. Soc. (2) 21. 533.)

Didymium bromaurate, $\text{DiAuBr}_6+9\text{H}_2\text{O}$.

Very deliquescent. Sol. in H_2O . (Cleve.)

Lanthanum bromaurate, $\text{LaAuBr}_6+9\text{H}_2\text{O}$.

Sol. in H_2O . (Cleve.)

Magnesium bromaurate.

Deliquescent in moist air. (v. Bonsdorff.)

Manganese bromaurate.

Deliquescent. (v. Bonsdorff.)

Potassium bromaurate, KAuBr_4 .

Sl. sol. in H_2O . More sol. in cold alcohol than in H_2O (v. Bonsdorff.)

+ $2\text{H}_2\text{O}$. Sol. in 5.12 pts. H_2O at 15° , 1.56 pts. at 40° , and 0.48 pt. at 67° . Decomp. by ether. Sl. sol. in $\text{KBr} + \text{Aq.}$ (Schottlander, A. 217. 314.)

+ $5\text{H}_2\text{O}$. Efflorescent. (v. Bonsdorff.)

Rubidium bromaurate, RbAuBr_4

As caesium bromaurate.

Ppt. (Gutbier, Z anorg. 1914, 85. 359.)

Samarium bromaurate, $\text{SmAuBr}_6 + 10\text{H}_2\text{O}$.

Very deliquescent. (Cleve, Bull. Soc. (2) 43. 165.)

Sodium bromaurate, NaAuBr_4 .

Slowly sol. in H_2O . (v. Bonsdorff.)

Zinc bromaurate, $\text{Zn}(\text{AuBr}_4)_2$.

Very deliquescent. (v. Bonsdorff.)

Bromauricyanhydric acid.

Not known in free state.

Barium bromauricyanide, $\text{Ba}[\text{Au}(\text{CN})_2\text{Br}_2]_2 + 10\text{H}_2\text{O}$.

Very sol. in hot or cold H_2O , also in alcohol. (Lindbom, Lund Univ. Arsk. 12. No 6.)

Cadmium bromauricyanide, $\text{Cd}[\text{Au}(\text{CN})_2\text{Br}_2]_2 + 6\text{H}_2\text{O}$.

Very sol. in hot or cold H_2O , but solution is unstable. (Lindbom.)

Calcium bromauricyanide, $\text{Ca}[\text{Au}(\text{CN})_2\text{Br}_2]_2 + 10\text{H}_2\text{O}$.

Extremely sol. in H_2O and alcohol. (Lindbom.)

Cobalt bromauricyanide, $\text{Co}[\text{Au}(\text{CN})_2\text{Br}_2]_2 + 9\text{H}_2\text{O}$.

Moderately sol. in H_2O . Less sol. than other bromauricyanides. (Lindbom.)

Potassium bromauricyanide, $\text{KAu}(\text{CN})_2\text{Br}_2 + 3\text{H}_2\text{O}$.

Sol. in H_2O and alcohol.

Sodium bromauricyanide, $\text{NaAu}(\text{CN})_2\text{Br}_2 + 2\text{H}_2\text{O}$.

Very sol. in H_2O or alcohol.

Strontium bromauricyanide, $\text{Sr}[\text{Au}(\text{CN})_2\text{Br}_2]_2 + x\text{H}_2\text{O}$.

Very sol. in H_2O or alcohol.

Zinc bromauricyanide, $\text{Zn}[\text{Au}(\text{CN})_2\text{Br}_2]_2 + 8\text{H}_2\text{O}$.

Easily sol. in cold or hot H_2O .

Bromhydric acid, HBr .

Very sol. in H_2O .

The most concentrated $\text{HBr} + \text{Aq}$ has a sp. gr. of 1.78, and contains 82.02% HBr . (Champion and Pellat, C. R. 70. 620.) This, or a weak acid on heating leaves a residue, which

distills unchanged at 125 – 125.5° under 785 mm. pressure, and contains 48.17% HBr (Topsoe); at 126° under 758 mm. pressure, and contains 46.83% HBr (Bineau); and has sp. gr. = 1.486 at 20° (Bineau); sp. gr. = 1.48 at 20° (Champion and Pellat); sp. gr. = 1.49 at 20° (Topsoe)

According to Roscoe (A. 116. 214) an acid of constant composition, obtained by boiling a stronger or a weaker acid, if distilled under 752–762 mm. pressure, contains 47.38–47.86% HBr , and boils at 126° at 760 mm. pressure; but the composition is dependent on the pressure, as, for example, under 1952 mm. pressure, the residue boils at 153° , and contains 46.3% HBr . (Roscoe.)

By conducting dry air through $\text{HBr} + \text{Aq}$ an acid is obtained containing 51.65% HBr if at 16° , and 49.35% HBr if at 100° (Roscoe).

1 vol. H_2O dissolves 600 = vols. HBr at 10° . (Berthelot, C. R. 76. 679.)

1 pt. H_2O at t° and 760 mm. pressure dissolves pts. HBr

(Biel, C. C. 1882. 148.)

Absorbed by alcohol with formation of C_2H_5Br .

The composition of the hydrates formed by HBr at different dilutions is calculated from determinations of the lowering of the fr. pt. produced by HBr and of the conductivity and sp. gr. of HBr+Aq. (Jones, Am. Ch. J. 1905, 34. 326.)

+H₂O. (Roozeboom, R. t. c. 5. 363.)+2H₂O. (Berthelot, A. ch (5) 14. 369.) (Pickering Chem. Soc. 1894, 64 (2) 232.

Mpt. -11.2°. (Pickering, l c.)

+3H₂O. Mpt. -48.0°. (Pickering.)+4H₂O. Mpt. -55.8°. (Pickering.)+5H₂O. (Pickering)

Bromhydric cyanhydric acid, 3HBr, 2HCN.

Decomp. by H₂O and alcohol.

Insol. in ether. (Gautier, A. ch. (4) 17. 141.)

Bromic acid, HBrO₃.

Known only in aqueous solution.

Solution evaporated on water bath decomposes when it contains 4.26% HBrO₃. In vacuo, an acid containing 50.59% HBrO₃ corresponding to formula HBrO₃+7H₂O can be obtained

Not decomp. by dil. HNO₃, or H₂SO₄+Aq. Conc. H₂SO₄ decomposes.

Alcohol and ether are quickly oxidized by HBrO₃.

Bromates.

Most of the bromates are very sol. in H₂O, a few are sl. sol., but none are insol., the least sol. being AgBrO₃ and Hg₂(BrO₃)₂.

Aluminum bromate, Al(BrO₃)₃.

Deliquescent. (Rammelsberg, Pogg. 55. 63.)

+9H₂O. Mpt. 62.3°. Less hygroscopic

than $\text{Al}(\text{ClO}_3)_3$. (Dobrosserdow, C. C. 1907. I, 1723.)

Ammonium bromate, NH_4BrO_3 .

Decomposes spontaneously; sol in H_2O . (Rammelsberg, Pogg. 52. 85)

Barium bromate, $\text{Ba}(\text{BrO}_3)_2$.

Solubility of $\text{Ba}(\text{BrO}_3)_2$ in H_2O . 100 g. sat. $\text{Ba}(\text{BrO}_3)_2 + \text{Aq}$ at t° contain g. anhydrous $\text{Ba}(\text{BrO}_3)_2$

t°	grams $\text{Ba}(\text{BrO}_3)_2$	t°	Grams $\text{Ba}(\text{BrO}_3)_2$

(Harkins, J. Am. Chem. Soc. 1911, 33. 1815.)

+ H_2O . Sol. in 130 pts. cold, and 24 pts. boiling H_2O . (Rammelsberg, Pogg. 52. 81.)

Decomp. by H_2SO_4 , or $\text{HCl} + \text{Aq}$. Insol. in acetone. (Eidmann, C. C. 1899, II, 1014; Naumann, B. 1904, 37. 4329)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Bismuth bromate.

Known only in solution, which decomp. on evaporation. (Rammelsberg, Pogg. 55. 76.)

Cadmium bromate, $\text{Cd}(\text{BrO}_3)_2 + \text{H}_2\text{O}$

Sol. in 0.8 pt cold H_2O . (Rammelsberg, Pogg. 55. 74.)

+ $2\text{H}_2\text{O}$ (Topsoe, J. B. 1872, 164.)

Cadmium bromate ammonia, $\text{Cd}(\text{BrO}_3)_2, 3\text{NH}_3$.

Decomp. by H_2O . (Rammelsberg, Pogg. 55. 74.)

$\text{Cd}(\text{BrO}_3)_2, 4\text{NH}_3$. Ppt. (Ephraim, B. 1915, 48. 51)

Calcium bromate, $\text{Ca}(\text{BrO}_3)_2 + \text{H}_2\text{O}$

Sol. in 1.1 pts cold H_2O . (Rammelsberg, Pogg. 52. 98)

Cerous bromate, $\text{Ce}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$.

Easily sol in H_2O . (Rammelsberg, Pogg. 55. 63)

Mpt 49° ; very sol in H_2O with decomp. (James, J. Am. Chem. Soc. 1909, 31. 914)

Cobaltous bromate, $\text{Co}(\text{BrO}_3)_2 + 6\text{H}_2\text{O}$

Sol. in 2.2 pts cold H_2O ; sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Rammelsberg, Pogg. 55. 71)

Cupric bromate, basic, $6\text{CuO}, \text{Br}_2\text{O}_5 + 10\text{H}_2\text{O}$.

Ppt (Rammelsberg, Pogg. 55. 78.)

Cupric bromate, $\text{Cu}(\text{BrO}_3)_2 + 6\text{H}_2\text{O}$.

Easily sol in H_2O . (Rammelsberg, Pogg. 52. 92)

Cupric bromate ammonia, $\text{Cu}(\text{BrO}_3)_2, 4\text{NH}_3$.

Completely sol in a little H_2O , but decomp. by dilution

Insol in alcohol. (Rammelsberg, Pogg. 52. 92.)

Didymium bromate, $\text{D}_1(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$

Sol. in H_2O (Marignac.)

Dysprosium bromate, $\text{Dy}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$.

Mpt 78° . Easily sol. in H_2O . Difficultly sol. in alcohol. (Jantsch, B. 1911, 44. 1275)

Erbium bromate, $\text{Er}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$.

Very sol in alcohol and H_2O .

Glucinum bromate.

Deliquescent.

Iron (ferrous) bromate, $\text{Fe}(\text{BrO}_3)_2$.

Sol. in H_2O , but solution decomp. very easily.

Iron (ferric) bromate, $5\text{Fe}_2\text{O}_3, \text{Br}_2\text{O}_5 + 30\text{H}_2\text{O}$.

Partially sol. in H_2O , with separation of a more basic salt. Sol in $\text{HBO}_3 + \text{Aq}$. (Rammelsberg, Pogg. 55. 68.)

Lanthanum bromate, $\text{La}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$.

Sol in $3\frac{1}{2}$ pts. H_2O at 15° . (Marignac, Ann. Min. (5) 15. 274.)

Mpt. 37.5° in its water of crystallization. 416 pts. are sol in 100 pts. H_2O at 25° .

(James, J. Am. Chem. Soc. 1909, 31. 913)

Lead bromate, basic, 3PbO , $\text{Pb}(\text{BrO}_3)_2 + 2\text{H}_2\text{O}$

Ppt. (Stromholm, Z anorg. 1904, **38**, 441)

Lead bromate, $\text{Pb}(\text{BrO}_3)_2$

Sl. sol in H_2O 13.37 x 10^{-1} g are contained in 1 liter of sat solution at 20° (Bottger, Z phys Ch 1903, **46**, 603)

+ H_2O . Sol. in 75 pts. cold H_2O (Rammelsberg, Pogg **52**, 96)

Lithium bromate, LiBrO_3 .

Very deliquescent, and sol in H_2O . (Rammelsberg, Pogg. A **55**, 63)

Not deliquescent. (Politilztzin, B **23**, 545 R)

Sp. gr. of solution sat. at $18^\circ = 1.833$, and contains 60.4% LiBrO_3 . (Mylus, B. 1897, **30**, 1718)

+ H_2O . Not deliquescent (Politilztzin)

Magnesium bromate, $\text{Mg}(\text{BrO}_3)_2 + 6\text{H}_2\text{O}$.

Efflorescent. Sol. in 1.4 pts cold H_2O at 15° Melts in its water of crystallization when heated (Rammelsberg, Pogg. **52**, 89.)

Mercurous bromate, basic, $2\text{Hg}_2\text{O}$, Br_2O_5

Insol in warm H_2O . Sol in $\text{HNO}_3 + \text{Aq}$. (Rammelsberg, Pogg. **55**, 79.)

Mercurous bromate, $\text{Hg}_2(\text{BrO}_3)_2$.

Decomp by H_2O into basic salt. Difficultly sol in $\text{HNO}_3 + \text{Aq}$; easily sol in $\text{HCl} + \text{Aq}$. (Rammelsberg)

Mercuric bromate, basic, 2HgO , $\text{Br}_2\text{O}_5 + \text{H}_2\text{O}$.

Slowly decomp. by cold, quickly by hot H_2O into oxide and an acid salt.

Easily sol in dil. acids (Topsoe, W. A. B. **66**, 2. 2.)

Mercuric bromate, $\text{HgBrO}_3 + 2\text{H}_2\text{O}$.

Sol in 650 pts. cold, and 64 pts. boiling H_2O . Sl sol. in $\text{HNO}_3 + \text{Aq}$. Easily sol. in $\text{HCl} + \text{Aq}$. (Rammelsberg, Pogg **55**, 79.)

Mercuric bromate ammonia.

Sol. with decomp. in $\text{HCl} + \text{Aq}$. (Storer's Dict.)

Neodymium bromate, $\text{Nd}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$.

Mpt 66.7° . 146 pts. are sol. in 100 pts. H_2O at 25° . (James, J. Am. Chem. Soc. 1909, **31**, 915.)

Nickel bromate, $\text{Ni}(\text{BrO}_3)_2 + 6\text{H}_2\text{O}$.

Sol. in 3 58 pts. cold H_2O . (Rammelsberg, Pogg. **55**, 69.)

Nickel bromate ammonia, $\text{Ni}(\text{BrO}_3)_2, 2\text{NH}_3$.

Sol. in H_2O , with decomposition of the major portion. Insol. in alcohol. (Rammelsberg, l. c.)

$\text{Ni}(\text{BrO}_3)_2, 6\text{NH}_3$. Ppt. (Ephraim, B. 1915, **48**, 50.)

Potassium bromate, KBrO_3 .

100 pts. H_2O dissolve 6.58 pts. KBrO_3 at 15° (Rammelsberg). 100 pts. H_2O dissolve 5.83 pts. KBrO_3 at 17.1° (Pohl, W. A. B. **6**,

595); at 0° , 3 11 pts., at 20° , 6 92 pts.; at 40° , 13 24 pts., at 60° , 22.76 pts., at 80° , 33 90 pts.: at 100° 49 75 pts. KBrO_3 . Sat. solution boils at 104° . (Kremers, Pogg **97**, 5)

1 l H_2O at 25° dissolves 0.4715 moles KBrO_3 . (Geffcken, Z phys. Ch. 1904, **49**, 296.)

1 l H_2O dissolves 0.478 mol. KBrO_3 at 25° . (Rothmund, Z. phys. Ch. 1909, **69**, 539.)

Sp. gr of $\text{KBrO}_3 + \text{Aq}$ at 19.5° .

% KBrO_3	1	2	3	4	5
Sp. gr	1.009	1.016	1.024	1.031	1.039

% KBrO_3	6	7	8	9	10
Sp. gr	1.046	1.054	1.062	1.070	1.079

(Gerlach, Z. anal **8**, 290.)

Solubility of KBrO_3 in salts + Aq at 25° .

Salt	Moles of KBrO_3 sol in 1 liter of				
	5-N solution	N solution	2-N solution	3-N solution	4-N solution
NaNO_3	0 5745	0 6497	0 7680	0 9026	1 031
NaCl	0 5220	0 5616	0 6042	0 6244	0 640

(Geffcken, Z phys. Ch. 1904, **49**, 296)

Easily sol in liqnd HF . (Franklin, Z. anorg 1905, **46**, 2.)

Sl. sol. in alcohol. (Rammelsberg.)

Insol. in absolute alcohol.

Solubility in organic compds. + Aq at 25° .

Solvent	Mol KBrO_3 sol in 1 litre

(Rothmund, Z. phys. Ch. 1909, **69**, 539.)

Insol in acetone (Eidmann, C. C. 1899, II 1014; Naumann, B. 1904, 37. 4329)

Insol in ethyl acetate. (Naumann, B. 1910, 43. 314)

Insol in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Praseodymium bromate, $\text{Pr}(\text{BrO}_3)_3 \cdot 9\text{H}_2\text{O}$.

Mpt. 56.5°. 190 pts. are sol. in 100 pts H_2O at 25°. (James, J. Am. Chem. Soc. 1909, 31. 914.)

Samarium bromate, $\text{Sm}(\text{BrO}_3)_3 \cdot 9\text{H}_2\text{O}$.

Mpt. 75°. 114 pts are sol. in 100 pts. H_2O at 25°. Very sl. sol. in alcohol. (James, J Am. Chem. Soc. 1909, 31. 915)

Scandium bromate.

(Crookes, Roy. Soc Proc. 1908, 80, A, 518)

Silver bromate, AgBrO_3 .

1 pt. H_2O dissolves 0.00810 pt. AgBrO_3 at 24.5°. (Noyes, Z. phys. Ch. 6. 246)

Sol in 595.3 pts H_2O at 25°

Sol. in 320.4 pts. $\text{HNO}_3 + \text{Aq}$ (sp. gr. 1.21) at 25°.

Sol. in 2.2 pts. $\text{NH}_4\text{OH} + \text{Aq}$ (sp. gr. 0.96) at 25°. (Longi, Gazz. ch. it. 13. 87.)

1 l H_2O dissolves 1.71 g AgBrO_3 at 27°. (Whitby, Z. anorg. 1910, 67. 108)

Sl. sol. in H_2O . 1.59×10^{-4} g are contained in 1 liter of sat. solution at 20°. (Böttger, Z. phys. Ch. 1903, 46. 603.)

Insol. in HNO_3 . (Löwig.) Easily sol. in $\text{NH}_4\text{OH} + \text{Aq}$

Silver bromate ammonia, $\text{AgBrO}_3, 2\text{NH}_3$.

Decomp. in air or by H_2O . (Rammelsberg, Pogg. 52. 94.)

Sodium bromate, NaBrO_3

Sol. in 2.7 pts. H_2O at 15°. (Rammelsberg.)

100 pts. H_2O dissolve at—
0° 20° 40° 60° 80° 100°

27.54 34.48 50.25 62.5 75.75 90.9 pts. NaBrO_3 .
(Kremers, Pogg. 94. 271)

Easily forms supersaturated solutions.

Sat. solution boils at 109°. (Kremers.)

$\text{NaBrO}_3 + \text{Aq}$ containing 10.10% NaBrO_3 has sp.gr. 20°/20° = 1.0818.

$\text{NaBrO}_3 + \text{Aq}$ containing 11.09% NaBrO_3 has sp. gr. 20°/20° = 1.0900.

(Le Blanc and Rohland, Z. phys. Ch. 1896 19. 278.)

Sp. gr. of $\text{NaBrO}_3 + \text{Aq}$ at 19.5°.

% NaBrO_3 .	5	10	15
Sp. gr. . . .	1.041	1.083	1.129
% NaBrO_3 .	20	25	30
Sp. gr. . . .	1.178	1.231	1.289

(Kremers, Pogg. 97. 5, calculated by Gerlach, Z. anal. 8. 290.)

Moderately sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 829.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in ethyl acetate (Naumann, B. 1910, 43. 314)

Sodium bromate bromide, $3\text{NaBrO}_3, 2\text{NaBr} + 3\text{H}_2\text{O}$.

Decomp. by H_2O or alcohol. (Fritzsche.)

Strontium bromate, $\text{Sr}(\text{BrO}_3)_2 + \text{H}_2\text{O}$.

Sol. in 3 pts. H_2O (Rammelsberg, Pogg. 52. 84); less sol. in H_2O than $\text{SrBr}_2 + 6\text{H}_2\text{O}$. (Löwig)

Thallous bromate, TlBrO_3 .

Sl sol in hot H_2O ; easily sol in $\text{HNO}_3 + \text{Aq}$ (Oettinger.)

Easily sol. in H_2O and dil acids. (Ditte, A. ch. (6) 21. 145)

Terbium bromate, $\text{Tb}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$.

Not deliquescent. (Potratz, C. N. 1905, 92, 3)

Thallous bromate, TlBrO_3 .

1 l. H_2O at 39.75° dissolves 2.216×10^{-2} g. mol. (Noyes and Abbott, Z. phys. Ch. 1895, 16. 130)

Sl. sol. in H_2O . 3.46×10^{-1} gram are contained in 1 liter of sat. solution at 20°. (Böttger, Z. phys. Ch. 1903, 46. 603.)

Thallic bromate, $\text{Tl}(\text{BrO}_3)_3 + 3\text{H}_2\text{O}$.

Very hygroscopic. Easily decomp. by H_2O . (Gewecke, Z. anorg. 1912, 75. 275.)

Thulium bromate, $\text{Tm}_2(\text{BrO}_3)_6 + 18\text{H}_2\text{O}$.

Pptd. from sat. aqueous solution by 95% alcohol.

NH_4OH is the best precipitant. (James, J. Am. Chem. Soc 1911, 33. 1342.)

Tin (stannous) bromate (?).

Insol in H_2O ; sol. in $\text{HCl} + \text{Aq}$.

Uranyl bromate, $4\text{UO}_3, 3\text{Br}_2\text{O}_5 + 16\text{H}_2\text{O}$.

Sol. in H_2O . (Rammelsberg.)

Yttrium bromate, $\text{Y}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$.

More easily sol in H_2O than $\text{Y}(\text{IO}_3)_3$. Sl. sol. in alcohol Insol in ether (Cleve.)

Mpt. 74°. 168 pts. are sol in 100 pts. H_2O at 25°.

Sl sol. in alcohol. (James, J. Am. Chem. Soc. 1909, 31. 916.)

Zinc bromate, $\text{Zn}(\text{BrO}_3)_2 + 6\text{H}_2\text{O}$.

Sol. in 1 pt. cold H_2O . (Rammelsberg, Pogg. 52. 90.)

Zinc bromate ammonia, $\text{Zn}(\text{BrO}_3)_2, 2\text{NH}_3 + 3\text{H}_2\text{O}$.

Decomp. by H_2O and alcohol. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Rammelsberg, Pogg. 52. 90.)

$\text{Zn}(\text{BrO}_3)_2, 4\text{NH}_3$. Ppt. (Ephraim, B. 1915, 48. 51.)

Perbromic acid.

See **Perbromic acid**.

Bromides.

Most bromides are sol in H_2O , many in alcohol, and some in ether.

AgBr and Hg_2Br_2 are insol in H_2O or acids; PbBr_2 and TlBr are sl. sol. therein. Cu_2Br_2 is insol. in H_2O , sol. in acids

See under each element.

Bromine, Br_2 .

1 pt. Br dissolves at 15° in 33 pts. H_2O . (Lowig, Pogg. 14. 485.)

1 pt. Br dissolves at 15° in 31 pts. H_2O . (Dancer, Chem. Soc. 15. 477.)

Solubility of Br in 100 pts. H_2O at t° .

t°	Pts Br	t°	Pts Br	t°	Pts Br
5	3 600	15	3 226	25	3.167
10	3 327	20	3 208	30	3 126

(Dancer, *l. c.*)

A sat. aqueous solution of Br contains 4.05% Br at 0° ; 3.80% Br at 3° ; 3.33% Br at 10° . (Roozeboom, R. t. c. 3. 29, 59, 73, 84.)

1 l. H_2O dissolves 34 g. Br at 25° . (Jakowkin, Z. phys. Ch. 1896, 20. 25.)

1 pt. is sol. in 30 pts. H_2O . (Dietze, Chem. Soc. 1899, 76 (2) 150.)

100 pts. H_2O dissolve at:

0° 10 34° 19 96° 30 17° 40 03° 49 85°
4 167 3 740 3 578 3 437 3 446 3 522
pts. bromine.

Liquid bromine as such is insol. in H_2O ; only the vapor dissolves. (Winkler, Ch. Z. 1899, 23. 688.)

1 l. H_2O dissolves 33.95 g. Br_2 at 25° . (Mc-Lauchlan, Z. phys. Ch. 1903, 44. 617.)

**Solubility of bromine vapor in H_2O at t° .
 α = coefficient of absorption.**

(The mean of many determinations)**

Temp	0°	$5\ 12^\circ$
Pts. H_2O that dissolve 1 pt. Br_2	42 39	26 26

(Winkler, Ch. Z. 1899, 23. 688-689.)

Solubility of Br_2 in H_2O at $25^\circ = 0.21$ mols. in 1 l. (Bray, J. Am. Chem. Soc. 1910, 32. 398.)

Sp. gr. of $\text{Br}_2 + \text{Aq}$ containing pts. Br in 1000 pts. solution.

Pts. Br	Sp. gr.	Pts. Br	Sp. gr.
10.72	1.00901	18.74-19.06	1.01491
10.68	1.00931	19.52-20.09	1.01585
12.05	1.00995	20.89-21.55	1.01807
12.21	1.01223	31.02-31.69	1.02367

(Slessor, N. Edin. Phil. J. 7. 287.)

Sp. gr. of $\text{Br}_2 + \text{Aq}$ at 32.5° .

% Br_2 by weight	Sp. gr.
0.7214	0.999814
1.1172	1.002520
1.6448	1.006100
1.9956	1.008870
2.5960	1.013200

(Joseph, Chem. Soc. 1915, 107. 3.)

Sol. in conc. HCl , HBr , conc. solutions of bromides, and in liquid SO_2 . (Sestini, Zeit. Chem. 1868. 718.)

Much more sol. in $\text{HCl} + \text{Aq}$ than in H_2O . 100 cem. $\text{HCl} + \text{Aq}$ of 1.153 sp. gr. dissolve 36.4 g. Br at 12° .

More sol. in SrCl_2 , and $\text{BaCl}_2 + \text{Aq}$ than in H_2O . (Berthelot, C. R. 100. 761.)

Bromine is not more sol. in KBr+Aq than in H₂O (?). (Balard.)

KBr+Aq containing 1 pt KBr to 6 pts H₂O takes up as much Br as it already contains; when this solution is heated the dissolved Br is separated 1 pt KBr+1 pt. H₂O takes up twice as much Br as it already contains, much heat being evolved This solution loses Br on exposure to the air or when heated. (Lowig.)

Solubility of Br₂ in KBr+Aq.

g. Mols KBr per l.	g at. Br dissolved per l at 18.5°	g at Br dissolved per l at 26.5°
0 00	0.4448	0 4282
0.01	0 4634	0 4490
0 02	0 4823	0 4671
0.03	0.5049	0 4925
0 04	0 5243	0 5101
0 05	0.5431	0 5301
0 06	0.5668	0 5530
0 07	0 5895	0 5636
0.08	0 6059	0 5920
0 09	0 6301	0 5981
0.1	0 6533	0 6488
0 2	0 8718	0.8591
0 3	1 0549	1 0787
0 4	1 3124	1 2704
0 5	1.5436	1 4731
0.6	1.7712	1.6717
0 7	2 0066	1.9197
0 8	2 2354	2.1029
0 9	2.4851	2 3349

The above figures indicate that below a concentration of 0.1 g. mcl. KBr per l. just enough Br is dissolved to form KBr₃, while above that concentration somewhat larger amounts of Br are dissolved, which is greater at the lower temp.

(Worley, Chem. Soc. 1905, 87. 1109.)

Solubility of Br₂ in NaBr+Aq at 25°

(McLauchlan, Z. phys. Ch. 1903, 44. 617.)

Solubility in HgBr₂+Aq at 25°.

10 ccm. of the solution contain:—

Millimols. Br ₂	Millimols. Hg
2 125	0.
2 204	0 0560
2 216	0 0793
2 226	0 1284
2 231	0.2120

(Herz and Paul, Z. anorg. 1914, 85. 215.)

1 l. N.NH₄C₂H₃O₂+Aq dissolves 340.5 g. Br₂ at 25°. (McLauchlan, Z. phys. Ch. 1903, 44. 617.)

Miscible in all proportions with liquid NO₂. (Frankland, Chem. Soc. 1901, 79. 1361.)

More sol. in alcohol than in H₂O; miscible with ether, CS₂, CHCl₃. (Sestini, Zeit. Chem. 1868. 718.)

Somewhat soluble in glycerine. (Pelouze.) Sol. in benzene (Mansfield); insol. in benzene (Moride, A. ch. (3) 39. 452). Sol. in warm chloral, bromal, and iodal. (Löwig, Pogg. 14. 485.) Sol. in SCl₂ (Solly), and SBr₂. Sol. in conc. HC₂H₃O₂+Aq. (Balard.) Sol. in aqueous solution of potassium, sodium, or calcium acetates. (Cahours.)

Solubility in CS_2
 100 g. of the sat. solution contain at
 -95° -110° -116°
 45.4 39.0 36.9 g. Br_2
 (Arctowski, Z. anorg. 1896, 11. 274.)

Cryst. from CS_2 at -90° in fine needles.
 (Arctowski, Z. anorg. 1895, 10. 25)

Sp. gr. of $\text{Br}_2 + \text{CCl}_4$ at 32.5° .

(Jakowkin, l. c.)

Partition of Br_2 between CCl_4 and Na_2SO_4 + Aq at 25° .

Na_2SO_4 + Aq	A	C
1-N	5.934	254 6
$1/2$ -N	6 838	253 4
$1/4$ -N	7 402	254 4
$1/5$ -N	7 609	252 8
$1/16$ -N	7 713	251 2

(Jakowkin, l. c.)

Crystallizes at 4° with $10\text{H}_2\text{O}$.

Bromine chloride, BrCl .

Sol. in H_2O , CS_2 , ether, etc.

Bromine fluoride, BrF_3 .

Fumes in the air. Decomp. by H_2O . (Lebeau, C. R. 1905, 141. 1019.)

Bromine oxides.

No oxides of bromine are known in the free state. See hypobromous, bromic, and perbromic acids.

Bromiridic acid.

Ammonium bromiridate, $(\text{NH}_4)_2\text{IrBr}_6$.

Less sol. in cold H_2O than the K salt. (Birnbbaum, Zeit. Chem. 1865. 22.)

Very sol. in cold H_2O . (Gutbier, B. 1909, 42. 3910.)

Cæsium bromiridate, Cs_2IrBr_6 .

Sol. in H_2O . (Gutbier, B. 1909, 42. 3911.)

Potassium bromiridate, K_2IrBr_6 .

Moderately sol. in cold, more easily in hot H_2O .

Insol in alcohol or ether.

Sol in cold H_2O and in HBr + Aq. (Gutbier, B. 1909, 42. 3910)

Rubidium bromiridate, Rb_2IrBr_6 .

Very sol. in cold H_2O . Sol in hot dl. HBr + Aq. (Gutbier, B. 1909, 42. 3911.)

Sodium bromiridate.

Deliquescent. Easily sol. in H_2O , alcohol, or ether.

Bromiridous acid, $\text{H}_6\text{Ir}_2\text{Br}_{12} + 6\text{H}_2\text{O}$.

Easily sol. in H_2O , alcohol, or ether. (Birnbbaum, 1864.)

Ammonium bromiridite, $(\text{NH}_4)_6\text{Ir}_2\text{Br}_{12} + \text{H}_2\text{O}$.

Difficultly sol. in H_2O . (Birnbbaum.)

Potassium bromiridite, $\text{K}_6\text{Ir}_2\text{Br}_{12} + 6\text{H}_2\text{O}$.

Efflorescent. Sol. in H_2C .

Silver bromiridite, $\text{Ag}_6\text{Ir}_2\text{Br}_{12}$.

Ppt. Insol. in H_2O or acids.

Sodium bromiridite, $\text{Na}_6\text{Ir}_2\text{Br}_{12} + 24\text{H}_2\text{O}$.

Efflorescent. Very sol. in H_2O .

Bromocarbonatoplatindiamine carbonate, $\text{CO}_3[\text{Pt}(\text{N}_2\text{H}_5)_2]_2(\text{CO}_3)_2 + 4\text{H}_2\text{O}$.

Ppt.

Bromocarbonatoplatindiamine carbonate bromoplatindiamine nitrate,

$\text{CO}_3[\text{Pt}(\text{N}_2\text{H}_5)_2]_2(\text{CO}_3)_2$, $2\text{Br}_2\text{Pt}(\text{N}_2\text{H}_5)_2$
 $(\text{NO}_3)_2$.

Bromochloroplatindiamine chloride,

$\text{Br Pt}(\text{N}_2\text{H}_5)_2\text{Cl}_2$.

Very sl. sol. in H_2O . (Cleve.)

— chlorobromide, $\text{Br Pt N}_2\text{H}_5\text{Cl}(\text{?})$
 $\text{Cl N}_2\text{H}_5\text{Br}(\text{?})$

Very sl. sol. in H_2O .

Bromochloroplatinic acid.

Potassium bromochloroplatinate, $\text{K}_2\text{PtCl}_5\text{Br}$
(Pitkin, J. Am. Chem. Soc. 2. 408.)

Mixture. (Herty, J. Am. Chem. Soc. 1896, 18. 130.)

$\text{K}_2\text{PtCl}_4\text{Br}_2$. Sl. sol. in cold H_2O ; much more sol. in hot H_2O . (Pitkin.)

Mixture. (Herty.)

$\text{K}_2\text{PtCl}_5\text{Br}_3$. As above.

$\text{K}_2\text{PtCl}_2\text{Br}_4$. (Pigeon, A. ch. 1894, (7) 2. 488.)

$\text{K}_2\text{PtClBr}_5$. (Pitkin.)

Bromochromic acid.

Potassium bromochromate, $\text{KCrO}_3\text{Br}_2 = \text{CrO}_2(\text{Br})\text{OK}$.

Decomp. by H_2O . (Heintze, J. pr. (2) 4. 225.)

Dibromochromium chloride,
 $[\text{Cr}(\text{H}_2\text{O})_4\text{Br}_2]\text{Cl} + 2\text{H}_2\text{O}.$

Ppt. Nearly insol. in fuming HCl. (Bjerrum, B. 1907, 40. 2918)

Bromohydroxyloplatindiamine bromide,

Very sl sol. in H_2O . (Cleve)

— **chloride,** $\begin{array}{c} \text{OH} \\ | \\ \text{Br} \end{array} \text{Pt}(\text{N}_2\text{H}_5\text{Cl})_2.$

Sol. in H_2O (Cleve.)

— **nitrate,** $\begin{array}{c} \text{OH} \\ | \\ \text{Br} \end{array} \text{Pt}(\text{N}_2\text{H}_5\text{NO}_3)_2$

Very sl. sol. in cold, moderately sol. in hot H_2O . (Cleve.)

Bromohydroxyloplatinmonodiamine

Easily sol in H_2O . (Cleve.)

Bromomercurosulphurous acid.**Ammonium bromomercurosulphite,**
 $\text{NH}_4\text{SO}_3\text{HgBr}$

Sol. in H_2O . (Barth, Z. phys Ch 9. 215.)

Potassium bromomercurosulphite,
 $\text{KSO}_3\text{HgBr}.$

As above. (B.)

Bromomolybdenum bromide,

Insol. in H_2O or acids, or even in boiling aqua regia. Easily sol in dilute, decomp. by conc. alkalis + Aq. (Blomstrand, J. pr. 82. 436.)

Bromomolybdenum chloride, $\text{Br}_4\text{Mo}_3\text{Cl}_2 + 3\text{H}_2\text{O}.$

Insol in acids (Blomstrand.)

Bromomolybdenum chromate, $\text{Br}_4\text{Mo}_3\text{CrO}_4 + 2\text{H}_2\text{O}.$

Insol. in dil. acids. Sol. in hot conc. HCl + Aq. Insol. in alkali chromates + Aq. (Atterberg.)

Bromomolybdenum fluoride, $\text{Br}_4\text{Mo}_3\text{F}_2 + 3\text{H}_2\text{O}.$

Insol. in H_2O . (Atterberg.)

Bromomolybdenum hydroxide, $\text{Br}_4\text{Mo}_3(\text{OH})_2.$

Completely sol. in alkalis if not heated over 90° . (Atterberg.)
 $+ 2\text{H}_2\text{O}.$
 $+ 8\text{H}_2\text{O}.$

Bromomolybdenum iodide hydroxide,
 $2\text{Br}_4\text{Mo}_3\text{I}_2, \text{Br}_4\text{Mo}_3(\text{OH})_2 + 8\text{H}_2\text{O}.$

Precipitate. (Blomstrand, J. pr. 77. 92.)

Bromomolybdenum molybdate, $\text{Br}_4\text{Mo}_3\text{MoO}_4$

Precipitate. (Atterberg.)

Bromomolybdenum phosphate,
 $\text{Br}_4\text{Mo}_3\text{H}_4(\text{PO}_4)_2.$

Precipitate. Insol in H_2O . (Atterberg.)

Bromomolybdenum sulphate, $\text{Br}_4\text{Mo}_3\text{SO}_4 + 3\text{H}_2\text{O}.$

Precipitate. Sl. sol. in boiling H_2SO_4 . (Atterberg.)

Dibromomolybdous acid, $\text{MoOBr}_2(\text{OH}) + 1\frac{1}{2}\text{H}_2\text{O}.$

Sol. in H_2O Very hygroscopic. (Weinland, Z. anorg 1905, 44. 86)

Tetrabromomolybdous acid, $\text{MoBr}_4(\text{OH}) + 2\text{H}_2\text{O}$

Sol. in H_2O . Hygroscopic. (Weinland, l. c.)

Diammonium pentabromomolybdite,
 $\text{MoBr}_5\text{O}(\text{NH}_4)_2.$

Hygroscopic. Sol. in H_2O . (Weinland, l. c.)

Dicassium pentabromomolybdite,
 $\text{MoBr}_5\text{OCs}_2.$

Hydroscopic. Sol. in H_2O . (Weinland, l. c.)

Calcium tetrabromomolybdite, $(\text{MoBr}_4\text{O})_2\text{Ca} + 7\text{H}_2\text{O}.$

Hydroscopic. Sol. in H_2O . (Weinland, l. c.)

Monolithium tetrabromomolybdite,
 $\text{MoBr}_4(\text{OLi}) + 4\text{H}_2\text{O}$

Hydroscopic. Sol. in H_2O (Weinland, l. c.)

Magnesium pentabromomolybdite,
 $\text{MoBr}_5(\text{OMg}) + 7\text{H}_2\text{O}.$

Hydroscopic. Sol. in H_2O . (Weinland, l. c.)

Monopotassium tetrabromomolybdite,
 $\text{MoBr}_4(\text{OK}) + 2\text{H}_2\text{O}.$

Hydroscopic. Sol. in H_2O . (Weinland, l. c.)

Dipotassium pentabromomolybdite,
 $\text{MoBr}_5\text{OK}_2.$

Hydroscopic. Sol. in H_2O . (Weinland, l. c.)

Darubidium pentabromomolybdite,
 $\text{MoBr}_5\text{ORb}_2.$

Hydroscopic. Sol. in H_2O . (Weinland, l. c.)

Bromonitratoplatindiamine nitrate,

Decomp. by H_2O . (Cleve.)

— **sulphate,** $\begin{array}{c} \text{Br} \\ | \\ \text{NO}_3 \end{array} \text{Pt}(\text{N}_2\text{H}_5)_2\text{SO}_4 + \text{H}_2\text{O}.$

Sl. sol. in H_2O .

Bromonitritoplatinsemidiamine nitrite,
 $\text{NO}_2\text{Br}_2\text{Pt}(\text{NH}_3)_2\text{NO}_2$.Sl sol. in H_2O . (Blomstrand)**Bromonitrous acid.****Platinum silver bromonitrite,** $\text{PtAg}_2\text{Br}_2(\text{NO}_2)_4$.Ppt (Miolati, Gazz. ch. it 1900, **30**. 588.)**Bromopalladic acid.****Ammonium bromopalladate,** $(\text{NH}_4)_2\text{PdBr}_6$.Difficultly sol in cold H_2O . Decomp. by hot H_2O and by hot conc. H_2SO_4 (Gutbier, B. 1905, **38**. 1907)**Cæsium bromopalladate,** Cs_2PdBr_6 Difficultly sol in cold H_2O . Decomp by hot H_2O or by hot conc H_2SO_4 . (Gutbier, l. c.)**Potassium bromopalladate,** K_2PdBr_6 .Difficultly sol. in cold H_2O . Decomp by hot H_2O or by hot conc. H_2SO_4 . (Gutbier, l. c.)**Rubidium bromopalladate,** Rb_2PdBr_6 .Insol. in cold H_2O . Decomp. by hot H_2O or by hot conc H_2SO_4 (Gutbier, l. c.)**Bromopalladious acid.****Ammonium bromopalladite,** $(\text{NH}_4)_2\text{PdBr}_4$.Very stable Sol. in H_2O . (Smith, Z. anorg 1894, **6**. 381.)Very sol. in cold H_2O .Can be cryst. from a very small amount of hot H_2O . (Gutbier, B. 1905, **38**. 2387.)**Barium bromopalladite.**Not deliquescent Sol. in H_2O . (v. Bonsdorff.)**Cæsium bromopalladite,** Cs_2PdBr_4 .Very sol. in H_2O . (Gutbier, B. 1905, **38**. 2388)**Manganese bromopalladite,** MnPdBr_4 .Sol. in H_2O and alcohol. (v. Bonsdorff.)
+ $7\text{H}_2\text{O}$. Very sol. in H_2O . (Smith, Z. anorg 1894, **6**. 382)**Potassium bromopalladite,** K_2PdBr_4 Easily sol. in H_2O . (Joannis, C. R. **95**. 295.)Very stable. Sol. in H_2O . (Smith, Z. anorg, 1894, **6**. 381.)+ $2\text{H}_2\text{O}$. Unstable in the air. (Smith, l. c.)**Rubidium bromopalladite,** Rb_2PdBr_4 .Can be cryst. from a very small amount of hot H_2O . (Gutbier, B. 1905, **38**. 2388.)**Sodium bromopalladite,** $\text{Na}_2\text{PdBr}_4 + 4\frac{1}{2}\text{H}_2\text{O}$.Very deliquescent. Sol. in H_2O . (Smith, l. c.)**Strontium bromopalladite,** $\text{SrPdBr}_4 + 6\text{H}_2\text{O}$.Stable in the air Very sol. in H_2O . (Smith, l. c.)**Zinc bromopalladite.**Sol. in H_2O (v. Bonsdorff.)**Bromophosphatoplatindiamine phosphate,** $\text{BrPt}(\text{N}_2\text{H}_5)_2 + 2\text{H}_3\text{O}$.Sl sol in H_2O (Cleve.)**Bromophosphoric acid.****Thorium bromophosphate,** ThBr_4 ,
 $3(3\text{ThO}_2, 2\text{P}_2\text{O}_5)$.Insol. in most acids and in fused alkali carbonates Decomp. by long boiling with conc. H_2SO_4 (Colani, C. R. 1909, **149**. 208)**Bromoplatinamine bromide,**Sl. sol in H_2C (Cleve, Sv. V A H **10**, **9**. 31.)— nitrite, $\text{Br}_2\text{Pt}(\text{NH}_3\text{NO}_2)_2$.Very sl. sol. in H_2O (Cleve.)**Bromoplatindiamine bromide,**Only sl. sol in hot H_2O (Cleve)— chloride, $\text{Br}_2\text{Pt}(\text{N}_2\text{H}_5)_2\text{Cl}_2$.Very sl. sol. in H_2O (Cleve.)— dichromate, $\text{Br}_2\text{Pt}(\text{N}_2\text{H}_5)_2\text{Cr}_2\text{O}_7$.Sl. sol. in H_2C .— nitrate, $\text{Br}_2\text{Pt}(\text{N}_2\text{H}_5\text{NO}_3)_2$ Sl. sol. in cold, rather easily sol. in hot H_2O . (Cleve.)— phosphate, $\text{Br}_2\text{Pt}[\text{N}_2\text{H}_5\text{PO}_2(\text{OH})_2]_2 + 2\text{H}_2\text{O}$.Rather easily sol. in hot H_2O . (Cleve.)— sulphate, $\text{Br}_2\text{Pt}(\text{N}_2\text{H}_5)_2\text{SO}_4$.Very sl. sol. in H_2O .**Bromoplatinmonodiamine nitrate,**Easily sol. in H_2O .— sulphate, $\text{Br}_2\text{Pt} \begin{array}{c} (\text{NH}_3)_2\text{SO}_4 \\ \text{NH}_3 \end{array} + \text{H}_2\text{O}$.Moderately sol. in H_2O . (Cleve.)**Bromoplatinsemidiamine bromide,**Sl. sol. in cold H_2O . (Cleve.)**Bromodiplatindiamine anhydronitrate,**Sol. in $\text{HNO}_3 + \text{Aq}$.

Bromodiplatindiamine chloride,

Ppt (Cleve.)

— **nitrate**, $\text{Br}_2\text{Pt}_2(\text{N}_2\text{H}_6)_4(\text{NO}_3)_4 + 2\text{H}_2\text{O}$.Moderately sol in hot H_2O .— **sulphate**, $\text{Br}_2\text{Pt}_2(\text{N}_2\text{H}_6)_4(\text{SO}_4)_2 + 2\text{H}_2\text{O}$

Ppt. (Cleve.)

Bromoplatinic acid, $\text{H}_2\text{PtBr}_6 + 9\text{H}_2\text{O}$.Very deliquescent, and sol. in H_2O , alcohol, ether, chloroform, or acetic acid. (Topsoe, J. B. 1868. 273)**Ammonium bromoplatinate**, $(\text{NH}_4)_2\text{PtBr}_6$ Sol. in 200 pts H_2O at 15° (Topsoe)100 pts. $(\text{NH}_4)_2\text{PtBr}_6 + \text{Aq}$ sat. at 20° contain 0.59 pt dry salt (Halberstadt, B. 17. 2965.)**Barium bromoplatinate**, $\text{BaPtBr}_6 + 10\text{H}_2\text{O}$.Sl deliquescent Very sol. in H_2O .**Cæsium bromoplatinate**, Cs_2PtBr_6 .Sl. sol in dil $\text{HBr} + \text{Aq}$ (Obermaier, Dissert.)**Calcium bromoplatinate**, $\text{CaPtBr}_6 + 12\text{H}_2\text{O}$ Sl deliquescent. Very sol. in H_2O .**Cobalt bromoplatinate**, $\text{CoPtBr}_6 + 12\text{H}_2\text{O}$.

Deliquescent.

Copper bromoplatinate, $\text{CuPtBr}_6 + 8\text{H}_2\text{O}$.Very deliquescent; sol. in H_2O .**Lead bromoplatinate**, PbPtBr_6 .Easily sol. in H_2O , but decomp. by large amount.**Lead tetrabromoplatinate**, $[\text{PtBr}_4(\text{OH})_2]\text{Pb}, \text{PbOH}$.Insol. in H_2O . (Miolati, C. C. 1900, II. 810.)**Magnesium bromoplatinate**, $\text{MgPtBr}_6 + 12\text{H}_2\text{O}$.

Not deliquescent.

Manganese bromoplatinate, $\text{MnPtBr}_6 + 6\text{H}_2\text{O}$.Sol. in H_2O $+ 12\text{H}_2\text{O}$. Sol. in H_2O .**Mercuric tetrabromoplatinate**,Insol. in H_2O . (Miolati, C. C. 1900, II. 810.)**Nickel bromoplatinate**, $\text{NiPtBr}_6 + 12\text{H}_2\text{O}$.

Deliquescent.

Potassium bromoplatinate, K_2PtBr_6 .Sl. sol. in H_2O . Insol. in alcohol. (v. Bonsdorff, Pogg. 19. 344.)Sol. in 10 pts. boiling H_2O . (Pitkin, C N 41. 218)100 pts $\text{K}_2\text{PtBr}_6 + \text{Aq}$ sat. at 20° contain 2.02 pts. dry salt (Halberstadt, B. 17. 2962)**Praseodymium bromoplatinate**, $\text{PrBr}_3.\text{PtBr}_3 + 10\text{H}_2\text{O}$ Deliquescent; very sol. in H_2O ; sol in HBr (Von Schule, Z. anorg. 1898, 18. 353.)**Rubidium bromoplatinate**, Rb_2PtBr_6 Sl. sol. in dil. $\text{HBr} + \text{Aq}$. (Obermaier, Dissert.)**Silver bromoplatinate**, Ag_2PtBr_6 Insol in H_2O . (Miolati, C C 1900, II. 810)**Silver tetrabromoplatinate**, $[\text{PtBr}_4(\text{OH})_2]\text{Ag}_2$.Ppt., insol in H_2O (Miolati, l c)**Sodium bromoplatinate**, $\text{Na}_2\text{PtBr}_6 + 6\text{H}_2\text{O}$ Easily sol in H_2O and alcohol**Strontium bromoplatinate**, $\text{SrPtBr}_6 + 10\text{H}_2\text{O}$ Sl deliquescent. Very sol. in H_2O .**Thallium tetrabromoplatinate**,Insol. in H_2O . (Miolati, C. C. 1900, II. 810)**Ytterbium bromoplatinate**, $\text{YbBr}_3.3\text{H}_2\text{PtBr}_6 + 30\text{H}_2\text{O}$.

Ppt. (Cleve, Z. anorg. 1902, 32. 138.)

Zinc bromoplatinate, $\text{ZnPtBr}_6 + 12\text{H}_2\text{O}$ Sol. in H_2O .**Bromoplatinocyanhydric acid**,

See Perbromoplatinocyanhydric acid.

Potassium bromoplatinocyanide, $5\text{K}_2\text{Pt}(\text{CN})_4, \text{K}_2\text{Pt}(\text{CN})_4\text{Br}_2 + 18\text{H}_2\text{O}$.Sol. in H_2O .**Bromoplatinous acid**.**Potassium bromoplatinite**, $\text{K}_2\text{PtBr}_4 + 2\text{H}_2\text{O}$.Extremely sol. in H_2O . (Billmann and Andersen, B. 1903, 36. 1566.)**Bromopurpureochromium bromide**,Less sol in H_2O than chloropurpureochromium chloride. (Jørgensen, J pr. (2) 25. 83.)— **bromoplatinate**, $\text{BrCr}(\text{NH}_3)_5\text{PtBr}_6$ (Jørgensen, l c)— **chloride**, $\text{BrCr}(\text{NH}_3)_5\text{Cl}_2$.More sol. in H_2O than the bromide. (Jørgensen, l. c.)

Bromopurpureochromium chromate,
 $\text{BrCr}(\text{NH}_3)_5\text{CrO}_4$.Precipitate. (Jørgensen, *l. c.*)— **nitrate**, $\text{BrCr}(\text{NH}_3)_5(\text{NO}_3)_2$.More sol than bromide and less than chloride (Jørgensen, *l. c.*)**Bromopurpureocobaltic bromide,**
 $\text{CoBr}(\text{NH}_3)_5\text{Br}_2$ Sol in 530 pts H_2O at 16° Insol in alcohol, NH_4Br , KBr , or $\text{HBr} + \text{Aq}$. More sol in hot H_2O containing a little HBr . (Jørgensen, *J. pr.* (2) 19. 49.)**Bromopurpureocobaltic mercuric bromide,**
 $\text{CoBr}(\text{NH}_3)_5\text{Br}_2, 3\text{HgBr}_2$.More sol. in H_2O than the corresponding HgCl_2 salt. (J.)— **bromoplatinate**.Very sl sol in cold H_2O . (J.)— **chloride**, $\text{CoBr}(\text{NH}_3)_5\text{Cl}_2$ Difficultly sol. in cold H_2O , but much more easily than the bromide. Insol. in dil $\text{HCl} + \text{Aq}$, and in alcohol.— **mercuric chloride**, $\text{CoBr}(\text{NH}_3)_5\text{Cl}_2, 3\text{HgCl}_2$.Sl. sol. in H_2O .— **chloroplatinate**.Nearly or quite insol. in H_2O . (J.)— **chromate**, $\text{CoBr}(\text{NH}_3)_5\text{CrO}_4$ Nearly insol in H_2O .— **dithionate**, $\text{CoBr}(\text{NH}_3)_5\text{S}_2\text{O}_8$ Nearly insol. in H_2O .— **fluosilicate**, $\text{CoBr}(\text{NH}_3)_5\text{SiF}_6$.Very sl. sol. in cold H_2O ; insol. in alcohol.— **nitrate**, $\text{CoBr}(\text{NH}_3)_5(\text{NO}_3)_2$.More sol. in H_2O than the bromide, but less than the chloride. Wholly insol. in dil. $\text{HNO}_3 + \text{Aq}$ or alcohol.— **oxalate**, $\text{CoBr}(\text{NH}_3)_5\text{C}_2\text{O}_4$.Nearly insol. in H_2O — **sulphate**, $\text{CoBr}(\text{NH}_3)_5\text{SO}_4$ Can be crystallized from very dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. Insol. in alcohol.
 $+ 6\text{H}_2\text{O}$. Efflorescent**Bromopurpureorhodium bromide,**
 $\text{BrRh}(\text{NH}_3)_5\text{Br}_2$.Much less easily sol. in H_2O than the chloro-chloride Insol. in dil. $\text{HBr} + \text{Aq}$ and alcohol. (Jørgensen, *J. pr.* (2) 27. 433.)— **bromoplatinate**, $\text{BrRh}(\text{NH}_3)_5\text{PtBr}_6$.Almost insol. in H_2O .— **fluosilicate**, $\text{BrRh}(\text{NH}_3)_5\text{SiF}_6$.Sl. sol. in H_2O . Sol. in boiling $\text{NaOH} + \text{Aq}$ as roseo salt**Bromopurpureorhodium nitrate,**
 $\text{BrRh}(\text{NH}_3)_5(\text{NO}_3)_2$.Sl. sol. in H_2O , but much more sol. than the bromide.**Bromorhodous acid.****Ammonium bromorhodite**, $(\text{NH}_4)_2\text{RhBr}_5$ Sol in H_2O . (Goloubkine, *Chem. Soc.* 1911, 100 (2) 45.)Sol. in H_2O (Gutbier, *B.* 1908, 41. 215)**Barium bromorhodite**, BaRhBr_5 .Sol. in H_2O . (Goloubkine, *l. c.*)**Cæsium bromorhodite**, Cs_2RhBr_5 Difficultly sol. in H_2O . (Gutbier, *l. c.*)**Potassium bromorhodite**, K_2RhBr_5 .Very sol. in H_2O . (Goloubkine, *l. c.*)Sol. in H_2O . (Gutbier, *l. c.*)**Rubidium bromorhodite**, Rb_2RhBr_5 .Sol. in H_2O . (Goloubkine, *l. c.*)Difficultly sol. in H_2O . (Gutbier, *l. c.*)**Sodium bromorhodite**, Na_2RhBr_5 .Very sol. in H_2O . (Goloubkine, *l. c.*)**Bromoruthenic acid.****Potassium bromoruthenate**, K_2RuBr_6 .Very sol. in H_2O . (Howe, *J. Am. Chem. Soc.* 1904, 26. 946.)**Potassium aquobromoruthenate**,
 $\text{K}_2\text{Ru}(\text{H}_2\text{O})\text{Br}_5$ Ppt. (Howe, *l. c.*)**Rubidium bromoruthenate**, Rb_2RuBr_6 .Sol. in H_2O . (Howe, *l. c.*)**Rubidium aquobromoruthenate**,
 $\text{Rb}_2\text{Ru}(\text{H}_2\text{O})\text{Br}_5$.Ppt (Howe, *l. c.*)**Bromoruthenious acid.****Cæsium bromoruthenite**, $\text{CsRuBr}_5 + \text{H}_2\text{O}$.Ppt. (Howe, *J. Am. Chem. Soc.* 1904, 26. 945.)**Potassium bromoruthenite**, K_2RuBr_5 .Very sol. in H_2O with decomp. Very sol. in dil. HBr . (Howe, *l. c.*)**Rubidium bromoruthenite**, $\text{Rb}_2\text{RuBr}_5 + \text{H}_2\text{O}$.Sol. in dil. HBr . (Howe, *l. c.*)**Bromoselenic acid.****Ammonium bromoselenate**, $(\text{NH}_4)_2\text{SeBr}_6$.Sol. in H_2O with decomp. (Muthmann and Schafer, *B.* 26. 1008.)**Cæsium bromoselenate**, Cs_2SeBr_6 .Sl. sol. in H_2O . (Lenher, *J. Am. Chem. Soc.* 1898, 20. 571.)**Potassium bromoselenate**, K_2SeBr_6 .As NH_4 salt. (M. and S.)

Rubidium bromoselenate, Rb_2SeBr_4 .

Less sol. in H_2O than K salt. (Lenher, *l. c.*)

Bromopyroselenious acid.

Ammonium bromopyroselenite, $\text{NH}_4\text{Br} \cdot 2\text{SeO}_2 + 2\text{H}_2\text{O}$

More easily sol. in H_2O than corresponding Cl compound (Muthmann and Schafer, B. 1893, 26. 1014.)

Potassium bromopyroselenite, $\text{KBr} \cdot 2\text{SeO}_2 + 2\text{H}_2\text{O}$.

Sol. in H_2O . (Muthmann and Schäfer, B. 26. 1008.)

Bromosmic acid.

Ammonium bromosmate, $(\text{NH}_4)_2\text{OsBr}_6$.

Only sl sol in H_2O (Rosenheim, Z. anorg. 1899, 21. 135.)

Cæsium bromosmate, Cs_2OsBr_6 .

Nearly insol. in H_2O and dil. HBr (Gutbier, B. 1913, 46. 2103.)

Potassium bromosmate, K_2OsBr_6

Only sl. sol. in H_2O . (Rosenheim, *l. c.*)

Rubidium bromosmate, Rb_2OsBr_6 .

Difficultly sol. in H_2O and in dil. HBr. (Gutbier, *l. c.*)

Silver bromosmate, Ag_2OsBr_6 .

Ppt, insol. in H_2O . (Rosenheim, *l. c.*)

Sodium bromosmate, $\text{Na}_2\text{OsBr}_6 + 4\text{H}_2\text{O}$.

Sol in H_2O . (Rosenheim, *l. c.*)

Bromostannic acid, $\text{H}_2\text{SnBr}_6 + 8\text{H}_2\text{O}$.

Very deliquescent. Sol. in H_2O (Seubert, B. 20. 794.)

Ammonium bromostannate, $(\text{NH}_4)_2\text{SnBr}_6$.

Very deliquescent, and sol. in H_2O . (Raymann and Preis, A. 223. 323.)

Cæsium bromostannate.

Sol in H_2O . (Raymann and Preis.)

Calcium bromostannate, $\text{CaSnBr}_6 + 6\text{H}_2\text{O}$.

Very deliquescent. Sol in H_2O . (Raymann and Preis.)

Cobalt bromostannate, $\text{CoSnBr}_6 + 10\text{H}_2\text{O}$.

Deliquescent. (Raymann and Preis.)

Ferrous bromostannate, $\text{FeSnBr}_6 + 6\text{H}_2\text{O}$.

Deliquescent. (Raymann and Preis.)

Lithium bromostannate, $\text{Li}_2\text{SnBr}_6 + 6\text{H}_2\text{O}$.

Extremely deliquescent. (Leteur, C. R. 113. 541.)

Magnesium bromostannate, $\text{MgSnBr}_6 + 10\text{H}_2\text{O}$.

Deliquescent (Raymann and Preis.)

Manganous bromostannate, $\text{MnSnBr}_6 + 6\text{H}_2\text{O}$.

Deliquescent (Raymann and Preis.)

Nickel bromostannate, $\text{NiSnBr}_6 + 8\text{H}_2\text{O}$.

Deliquescent. (Raymann and Preis.)

Potassium bromostannate, K_2SnBr_6 .

Sol in H_2O . (Topsoe.)

Rubidium bromostannate.

Sol. in H_2O . (Raymann and Preis.)

Sodium bromostannate, $\text{Na}_2\text{SnBr}_6 + 6\text{H}_2\text{O}$.

Not deliquescent, but extremely sol. in H_2O . (Seubert, B. 20. 796.)

Strontium bromostannate, $\text{SrSnBr}_6 + 6\text{H}_2\text{O}$.

Very hygroscopic, and sol. in H_2O . (Raymann and Preis.)

Bromosulphatoplatindiamine sulphate,

Rather easily sol. in hot H_2O .

Bromosulphobismuthous acid.

Cuprous bromosulphobismuthite, $2\text{Cu}_2\text{S}, \text{Bi}_2\text{S}_3, 2\text{BiSBr}$.

Stable in the air and insol in H_2O at ord. temp. Partially decomp by boiling H_2O . Decomp. by mineral acids with the evolution of H_2S . (Ducatte, C. R. 1902, 134. 1212.)

Lead bromosulphobismuthite, $\text{PbS}, \text{Bi}_2\text{S}_3, 2\text{BiSBr}$.

Insol in H_2O . Decomp. by boiling H_2O . Decomp. by dil. mineral acids with evolution of H_2S . (Ducatte, *l. c.*)

Bromotantalum bromide, $(\text{Ta}_6\text{Br}_{12})\text{Br}_2 + 7\text{H}_2\text{O}$.

Stable in the air when in the solid state. Sol. in H_2O without decomp. Sol in propyl alcohol (Chapin, J. Am. Chem. Soc. 1910, 32. 328.)

Bromotantalum chloride, $(\text{Ta}_6\text{Br}_{12})\text{Cl}_2 + 7\text{H}_2\text{O}$.

(Chapin, *l. c.*)

Bromotantalum hydroxide, $(\text{Ta}_6\text{Br}_{12})(\text{OH})_2 + 10\text{H}_2\text{O}$.

Sl. sol. in HCl. Stable in the air below 100° .

Sol. in alcohol Insol. in ether. (Chapin, *l. c.*)

Bromotantalum iodide, $(\text{Ta}_6\text{Br}_{12})\text{I}_2 + 7\text{H}_2\text{O}$.

(Chapin, *l. c.*)

Bromotelluric acid.

Ammonium bromotellurate, $(\text{NH}_4)_2\text{TeBr}_6$.

Less sol. in H_2O than K salt. (Muthmann and Schmidt, B. 1893, 26. 1011.)

Cæsium bromotellurate, Cs₂TeBr₆Decomp. by H₂O.

100 pts. HBr+Aq (sp gr 1.49) dissolve 0.02 pt. at 22°.

100 pts HBr+Aq (sp. gr. 1.08) dissolve 0.13 pt. at 22°

Insol. in alcohol. (Wheeler, Sill Am. J. 145. 267)

Potassium bromotellurate, K₂TeBr₆+3H₂O.Sol. in little, decomp by much H₂O (v. Hauer.)Contains 2H₂O. (Wheeler, Sill Am. J. 145. 267)

Efflorescent.

100 pts HBr+Aq (sp gr. 1.49) dissolve 6.57 pts. at 22°

100 pts. HBr+Aq (sp. gr. 1.08) dissolve 62.90 pts. at 22°

Anhydrous. Stable on air (Wheeler)**Rubidium bromotellurate, Rb₂TeBr₆**Sol. in a little hot H₂O, but H₂TeO₃ separates on cooling.

100 pts. HBr+Aq (sp gr. 1.49) dissolve 0.25 pt. at 22°.

100 pts HBr+Aq (sp. gr. 1.08) dissolve 3.88 pts. at 22°. (Wheeler.)

Bromotetramine chromium bromide,CrBr(NH₃)₄Br₂+H₂O.Easily sol. in H₂O. (Cleve.)— **chloride**, CrBr(NH₃)₄Cl₂+H₂O.Sol in H₂O. (Cleve.)— **sulphate**, CrBr(NH₃)₄SO₄+H₂O.Easily sol. in H₂O. (Cleve.)**Bromotetramine cobaltic sulphate,**BrCo(NH₃)₄SO₄, or Br₂Co₂(NH₃)₈(SO₄)₂.Sol. in H₂O. (Vortmann and Blasberg, B. 22. 2652)**Cadmium, Cd**Not attacked by H₂O. Sol. in HCl, or dil H₂SO₄+Aq, but more easily in HNO₃+Aq Sol in HC₂H₃O₂+Aq.Chemically pure Cd like Zn is almost insol. in dil. acids, with the exception of HNO₃ (Weeren, B. 1891, 24. 1798.)Sol. in HClO₄+Aq without evolution of H. (Hendrixson, J. Am. Chem. Soc. 1904, 26. 756.)Cadmium is sol. in molten CdCl₂ and can be recryst. therefrom. (Auerbach, Z. anorg. 1901, 23. 42.)From 4 g. Cd in 32 g molten CdCl₂ at 650°, 2.197 g. were dissolved in ½ hr (Helfenstein, Z. anorg. 1900, 23. 295.)Moderately quickly sol. in K₂S₂O₈+Aq. More slowly sol. in (NH₄)₂S₂O₈+Aq. (Levi, Gazz. ch. it. 1903, 38 (1) 583.)Sol. in (NH₃)₂S₂O₈+Aq without evolution of gas (Turrentine, J. phys. Chem. 1907, 11. 627.)

Sol in sulphostannates+Aq (Storch, B. 1883, 16. 2015.)

½ com oleic acid dissolves 0.0293 g. Cd in 6 days (Gates, J. phys. Chem. 1911, 15. 143)

Not attacked by sugar solution. (Klein and Berg, C. R. 102. 1170)

Cadmium amalgam, Cd₂Hg₇.

Stable from 0°–44°. Can be cryst. from Hg without decomp. if temp. does not exceed 44°. (Kerp. Z. anorg. 1900, 25. 68.)

Cadmium amide, Cd(NH₂)₂Decomp by H₂O. (Bohart, J. phys Chem. 1915, 19. 543)**Cadmium arsenide, Cd₂As.**

(Descamps, C. R. 86. 1022)

Cd₂As₂ Sol. in dil. cold HNO₃. Attacked by aqua regia (Granger, C. R. 1904, 138. 575)**Cadmium azoimide, Cd(N₃)₂**

Ppt (Curtius, J pr 1898, (2) 58. 294)

Cadmium subbromide, Cd₄Br₇.Decomp by H₂O. (Morse and Jones, Am. Ch. J. 1890, 12. 490.)**Cadmium bromide, CdBr₂.**Deliquescent. Very sol. in H₂O.**Solubility in H₂O at t°**

t°	% CdBr ₂	t°	% CdBr ₂

(Forchheimer, Z. phys. Ch. 1900, **34**, 29.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, **20**, 827.)

Sol. in AlBr_3 . (Isbekow, Z. anorg. 1913, **84**, 27.)

Sol. in $\text{HCl} + \text{Aq}$, $\text{HC}_2\text{H}_3\text{O}_2$, alcohol, or ether. (Berthemet, A. ch. **44**, 387.)

Sol. in 0.94 pt. H_2O , 3.4 pts. abs. alcohol, 250 pts. ether, and 16 pts. alcohol-ether (1 : 1) (Eder, Dingl. **221**, 89.)

Anhydrous CdBr_2 is sol. in acetone. (Krug and M'Elroy.)

1 g. CdBr_2 is sol. in 64.5 g. acetone at 18° . Sp. gr. of sat. solution $18^\circ/4^\circ = 0.8073$. (Naumann, B. 1904, **37**, 4337.)

Sol. in acetone. (Eidmann, C. C. 1899, **II**, 1014.)

Insol. in mustard oil. (Mathews, J. phys. Chem. 1905, **9**, 647.)

Difficultly sol. in methyl acetate. (Naumann, B. 1909, **42**, 3790.)

Insol. in ethyl acetate. (Naumann, B. 1910, **43**, 314.)

Sol. in chinoline. (Beckmann and Gabel, Z. anorg. 1906, **51**, 236.)

100 g. benzonitrile dissolve 0.857 g. CdBr_2 at 18° . (Naumann, B. 1914, **47**, 1370.)

Mol. weight determined in piperidine. (Ferchland, Z. anorg 1897, **15**, 17.)

+ H_2O . Solubility in H_2O .

100 g of the sat. solution contain at:

35°	40°	45°	60°	80°	100°
60.29	60.65	60.75	61.10	61.29	61.63 g. CdBr_2 .

(Dietz, Z. anorg. 1899, **20**, 261.)

+ $1\frac{1}{2}\text{H}_2\text{O}$. (Étard, A. ch. 1894, (7) **2**, 541.)

+ $4\text{H}_2\text{O}$. Efflorescent. (Rammelsberg, Pogg. **55**, 241.)

Solubility in H_2O

100 g. of the sat. solution contain at:

0°	18°	30°	38°
37.92	48.90	56.90	61.84 g. CdBr_2 .

Sp gr. of sat. solution at $18^\circ = 1.683$.

(Dietz, Z. anorg. 1899, **20**, 261.)

100 g. sat. solution of $\text{CdBr}_2 + 4\text{H}_2\text{O}$ in absolute alcohol contain 20.93 g. CdBr_2 at 15° .

100 g. sat. solution of $\text{CdBr}_2 + 4\text{H}_2\text{O}$ in absolute ether contain 0.4 g. CdBr_2 at 15° . (Eder, Dingl. **221**, 89.)

Cadmium hydrogen bromide.

Decomp. by H_2O . (Berthelot, C. R. **91**, 1024.)

Cadmium caesium bromide, CdBr_2 , CsBr .

Easily sol. in H_2O . (Wells and Walden, Z. anorg. **5**, 270.)

CdBr_2 , 2CsBr . Decomp. by H_2O into above comp. (W. and W.)

CdBr_2 , 3CsBr . Decomp. by H_2O into CdBr_2 , CsBr . (W. and W.)

Cadmium potassium bromide, CdBr_2 , $\text{KBr} + \frac{1}{2}\text{H}_2\text{O}$.

Sol. in 0.79 pt. H_2O at 15° ; pptd. by alcohol and ether. (Eder, Dingl. **221**, 89.)

+ H_2O . Sol. in H_2O without decomp. from $0.4^\circ - 112.5^\circ$. (Rimbach, B. 1905, **38**, 1554.)

100 pts. of the solution contain at:

0.4°	15.8°	50°	112.5°
53.75	58.68	68.25	78.10 pts. of the salt.

CdBr_2 , 4KBr . Sol. in 1.40 pts. H_2O at 15° ; pptd. by alcohol and ether. (Eder, Dingl. **221**, 89.)

Cannot be prepared in a pure state as it is decomp. by H_2O below 160° . (Rimbach, B. 1905, **38**, 1560.)

Cadmium rubidium bromide, CdBr_2 , RbBr .

Sol. in H_2O without decomp. from 0.4° to 107.5° .

100 pts. of the solution contain at:

0.4°	14.5°	49.2°	107.5°
32.65	41.87	58.54	75.77 pts. of the salt.

(Rimbach, B. 1905, **38**, 1556.)

CdBr_2 , 4RbBr . Sol. in H_2O without decomp. from 0.5° to 114.5° .

100 pts. of the solution contain at:

0.5°	13.5°	51.5°	114.5°
47.95	55.17	68.82	79.04 pts. of the salt.

(Rimbach, B. 1905, **38**, 1561.)

Cadmium sodium bromide, CdBr_2 , $\text{NaBr} + 2\frac{1}{2}\text{H}_2\text{O}$.

Sol. at 15° in 1.04 pts H_2O , 3.7 pts. abs. alcohol, and 190 pts. ether (sp. gr. 0.729). (Eder, Dingl. **221**. 89.)

3CdBr_2 , $2\text{NaBr} + 6\text{H}_2\text{O}$. Stable in conc. solutions and decomp. only by great dilution. (Jones and Knight, Am. Ch. J. 1899, **22**. 134.)

Cadmium bromide ammonia, CdBr_2 , 2NH_3 .

Can be crystallized out of warm $\text{NH}_4\text{OH} + \text{Aq}$. (Croft, Phil. Mag. **21**. 356.)

CdBr_2 , 3NH_3 . (Tassily, C. R. 1897, **124**. 1022.)

CdBr_2 , 4NH_3 . Decomp. by H_2O . (Croft.)

Cadmium bromide cupric oxide, CdBr_2 , $3\text{CuO} + 3\text{H}_2\text{O}$ (Mailhe, A. ch. 1902, (7) **27**. 383.)

Cadmium bromide hydrazine, CdBr_2 , $2\text{N}_2\text{H}_4$.

Easily sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Franzen, Z. anorg. 1908, **60**. 280.)

Cadmium bromide hydroxylamine, CdBr_2 , $2\text{NH}_2\text{OH}$.

Sol. in hot H_2O with formation of a basic salt. Sol. in dil. acids. Insol. in alcohol and ether. (Adams, Am. Ch. J. 1902, **28**. 218.)

Cadmium subchloride, Cd_4Cl_7 .

Decomp. by H_2O and by acids (Morse and Jones, Am. Ch. J. 1890, **12**. 490.)

Cadmium chloride, CdCl_2 .

Sol. at 20° 40° 60° 80° 100°
in 0.71 0.72 0.72 0.70 0.67 pts. H_2O .
(Kremers Pogg: **103**. 57.)

+5H₂O (Worobieff, Z. anorg. 1898, **18**, 386)

Cadmium hydrogen chloride, CdCl₂, 2HCl + 7H₂O.

Decomp. in air. (Berthelot, C. R. **91**, 1024)

Cadmium caesium chloride, CdCl₂, 2CsCl.

Easily sol. in H₂O and dil. HCl + Aq; insol. in conc. HCl + Aq. (Godeffroy, B. **8**, 9.)

Nearly insol. in CsCl + Aq. (Wells and Walden, Z. anorg. **5**, 266)

CdCl₂, CsCl. Sl. sol. in H₂O; nearly insol. in CdCl₂ + Aq. (Wells and Walden.)

Cadmium calcium chloride, 2CdCl₂, CaCl₂ + 7H₂O.

Rather deliquescent, and very sol. in H₂O. When ignited is only sl. sol. in H₂O with evolution of heat. (v. Hauer, J. pr. **63**, 432.)

CdCl₂, 2CaCl₂ + 12H₂O. Very deliquescent. (v. Hauer.)

Cadmium cobaltous chloride, 2CdCl₂, CoCl₂ + 12H₂O.

Deliquescent. Sol. in H₂O. (v. Hauer, W. A. B. **17**, 331)

Cadmium cupric chloride, CdCl₂, CuCl₂ + 4H₂O.

Sol in H₂O. (v. Hauer, W. A. B. **17**, 331)

Cadmium hydrazine chloride, CdCl₂, N₂H₄HCl.

Unstable in the air when moist. Very sol. in H₂O; sl. sol. in alcohol; sol. in NH₃ + Aq. (Curtius, J. pr 1894, (2) **50**, 334)

CdCl₂, 2N₂H₄HCl + 4H₂O. Very sol. in H₂O; sl. sol. in alcohol. (Curtius, J. pr 1894, (2) **50**, 335.)

Cadmium iron (ferrous) chloride, 2CdCl₂, FeCl₂ + 12H₂O.

Sol. in H₂O. (v. Hauer, W. A. B. **17**, 331.)

Cadmium lithium chloride, CdCl₂, LiCl + 3½H₂O.

Very deliquescent. Decomp. by solution in H₂O, but not in alcohol (Chassevant, A. ch. (6) **30**, 39.)

Cadmium magnesium chloride, 2CdCl₂, MgCl₂ + 12H₂O.

Deliquescent in moist, stable in dry air. Easily sol. in H₂O with absorption of heat. Much more sol. in hot than in cold H₂O (v. Hauer)

Solubility in H₂O at t°.

t°	G. Cd ₂ MgCl ₂ in 100 g solution	G. Cd ₂ MgCl ₂ in 100 g H ₂ O
2 4	45.61	83.86
20 8	49.69	98.77
45.5	53.51	115.10
67.2	58.14	138.90
121.8	65.48	189.69

(Rimbach, B. 1897, **30**, 3084.)

CdCl₂, 2MgCl₂ + 12H₂O. Very deliquescent. (v. Hauer.)

Cadmium manganese chloride, 2CdCl₂, MnCl₂ + 12H₂O.

Deliquescent in moist, efflorescent in dry air. Sol. in H₂O. (v. Hauer.)

Cadmium nickel chloride, CdCl₂, 2NiCl₂ + 12H₂O.

Sol. in H₂O. (v. Hauer, W. A. B. **20**, 40.)
2CdCl₂, NiCl₂ + 12H₂O Sol. in H₂O. (v. Hauer.)

Cadmium potassium chloride, CdCl₂, KCl + ½H₂O.

Sol. in H₂O without decomp. (v. Hauer.)

+H₂O 100 mol H₂O dissolve at:
19.3° 29.7° 40.1° 54.5°
2.65 3.21 3.72 4.33 mol. CdCl₂, KCl+H₂O.
(Sudhaus, Miner. Jahrb. Beil-Bd 1914, **37**.
26)

Solubility in H₂O at t°.

t°	G CdKCl ₃ in 100 g solution	G CdKCl ₃ in 100 g H ₂ O
2.6	21.87	27.99
15.9	26.60	36.4
41.5	35.66	55.34
60.6	40.67	68.55
105.1	51.67	106.91

(Rimbach, B. 1897, **30**. 3079.)

CdCl₂, 2KCl. 100 pts. H₂O at 15.5° dissolve 33.45 pts. Sl. sol. in alcohol (Croft, Phil. Mag. (3) **21**. 356.)

Solubility in salts+Aq at 16°.

CdCl₂, 2KCl is sol without decomp. in the following salt solutions at 16°.

Salt	Mols salt in 100 mole H ₂ O	In 1 litre of the solution mole			Sp. gr of the solution
		CdCl ₂	KCl	RCl	
LiCl	9.3	0.166	0.663	4.483	1.1380
CaCl ₂	3.8	0.270	1.080	1.887	1.2333
KCl	2.378	0.507	3.195	.	1.214

(Rimbach, B. 1905, **38**. 1568.)

CdCl₂, 4KCl. More sol. in H₂O than CdCl₂, KCl. (v. Hauer.)

100 g. H₂O dissolve at:

19.3° 29.7° 40.1° 54.5°
41.65 49.05 57.55 69.91 g. CdCl₂, 4KCl.
(Sudhaus, Miner. Jahrb. Beil-Bd. 1914, **37**.
24.)

Solubility in H₂O at t°.

t°	100 pts. solution contain pts.		
	Cd	Cl	K
4.0	3.64	9.84	8.31
23.6	5.66	14.02	11.52
50.2	9.10	18.09	13.60
108.8	11.97	23.08	17.10
109.0	11.91	23.15	17.22

(Rimbach, B. 1897, **30**. 3080)

Decomp. by H₂O.

Can be recryst. without decomp. from LiCl, CaCl₂, or MgCl₂+Aq. (Rimbach, B. 1905, **38**. 1565.)

The salt is sol. without decomp. in HCl+Aq containing 19.8 mole HCl per 100 mole H₂O at 16°.

1 l. of the solution contains 0.033 mole CdCl₂, 0.132 mole KCl and 8.828 mole HCl; sp. gr. of the solution=1.1403. (Rimbach, B. 1905, **38**. 1568.)

Cadmium rubidium chloride, CdCl₂, 2RbCl
Sol in H₂O and HCl+Aq (Godeffroy, B. 8. 9.)

CdCl₂, RbCl. Solubility in H₂O at t°
100 pts by wt. of the solution contain pts. by wt RbCl, CdCl₂

t°	Pts RbCl, CdCl ₂
1.2	12.97
14.5	16.80
41.4	25.31
57.6	30.83
103.9	46.62

CdCl₂, RbCl is sol. in H₂O without decomp. from 0-104°. (Rimbach, B 1902, **35**. 1303.)

CdCl₂, 4RbCl

Solubility of CdCl₂, 4RbCl and CdCl₂, RbCl in H₂O at t°.

t°	In 100 pts. by wt. of the solution			Composition of the solid phase	
	Pts. by wt Cd	Pts by wt Cl	Pts by wt Rb	Mol.-% mono- salt	Mol.-% tetra- salt
0.7	0.65	6.52	14.73	30	70
8.8	1.07	7.37	16.13	24	76
13.8	1.32	7.86	16.93	16	84
42.4	3.21	11.35	22.45	14	86
59.0	4.61	13.41	25.31	33	67
108.4	8.94	18.57	31.15

(Rimbach, B. 1902, **35**. 1305.)

Decomp. by H₂O between 0° and 108°. (Rimbach, B. 1905, **38**. 1571.)

Sol. in conc. HCl without decomp. (Rimbach, B. 1905, **38**. 1571.)

Not sol. in CaCl₂+Aq and LiCl+Aq without decomp. (Rimbach, B. 1905, **38**. 1571.)

Cadmium sodium chloride, CdCl₂, 2NaCl+3H₂O.

Sol. in 1.4 pts. H₂O at 16°. (Croft.)

100 mol. H₂O dissolve at:

19.3° 29.7° 40.1° 54.5°
3.93 4.29 4.73 5.18 mol. CdCl₂,
2NaCl+3H₂O.

Stable between 19° and 55°.

(Sudhaus, Miner. Jahrb. Beil-Bd. 1914, **37**.
25.)

Sl sol in alcohol or wood alcohol. (Croft.)

Cadmium strontium chloride, 2CdCl₂, SrCl₂+7H₂O.

Sol in H₂O. (v. Hauer.)

Cadmium chloride ammonia, CdCl₂, 2NH₃.

Nearly insol. in H₂O. (v. Hauer.)

CdCl₂, 3NH₃+ $\frac{1}{2}$ H₂O.

CdCl₂, 4NH₃+ $\frac{1}{2}$ H₂O.

CdCl₂, 5NH₃. (André, C. R. **104**. 908.)

CdCl₂, 6NH₃. Difficultly sol. in cold H₂O. (Schüler, A. **87**. 34.)

Cadmium chloride cupric oxide, CdCl_2 , $3\text{CuO} + 3\text{H}_2\text{O}$.

Not decomp. by H_2O (Mailhe, A. ch. 1902, (7) 27. 378 and 174.)

Cadmium chloride hydrazine, CdCl_2 , $2\text{N}_2\text{H}_4$.

Insol in H_2O

Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Franzen, Z. anorg. 1908, 60. 279.)

+ H_2O . Insol. in H_2O ; easily sol in $\text{NH}_4\text{OH} + \text{Aq}$ (Curtius, J. pr. 1894, (2) 50. 345.)

Cadmium chloride hydroxylamine, CdCl_2 , $2\text{NH}_2\text{OH}$.

Sl. sol. in cold, somewhat more in warm H_2O . Very sol. in hydroxylamine + Aq . Very sl. sol. in alcohol and other organic solvents. (Crismer, Bull. Soc. (3) 3. 116.)

Aq solution sat. at 20° contains about 1%. (Antonoff, C. C. 1905, II 810.)

Cadmium fluoride, CdF_2 .

Difficultly sol in H_2O . Easily sol. in $\text{HF} + \text{Aq}$. (Berzelius, Pogg. 1. 26.)

Very sol. in H_2O ; insol. in 95% alcohol; sol. in HCl , H_2SO_4 , or $\text{HNO}_3 + \text{Aq}$ with evolution of HF . (Poulenc, C. R. 116. 582.)

1 l. H_2O dissolves 0.289 mol CdF_2 at 25° , or 100 cc. sat. aqueous solution contains 4.36 g. CdF_2 at 25° . (Jaeger, Z. anorg. 1901, 27. 35.)

1 l. of 1.08-N HF dissolves 0.372 mol CdF_2 at 25° . (Jaeger, Z. anorg. 1901, 27. 35.) Insol in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 827.)

Cadmium ceric fluoride, $\text{CdF}_2 \cdot 2\text{CeF}_4 + 7\text{H}_2\text{O}$

Ppt. Decomp. by H_2O . (Rimbach, A. 1909, 368. 106.)

Cadmium columbium fluoride.

See Fluocolumbate, cadmium.

Cadmium molybdenyl fluoride.

See Fluoxymolybdate, cadmium.

Cadmium silicon fluoride.

See Fluosilicate, cadmium.

Cadmium stannic fluoride.

See Fluostannate, cadmium.

Cadmium titanium fluoride.

See Fluotitanate, cadmium.

Cadmium zirconium fluoride.

See Fluozirconate, cadmium.

Cadmous hydroxide, CdOH .

Insol. in H_2O . Decomp. by acids into cadmic salt. (Morse and Jones, Am. Ch. J. 12. 488.)

Cadmium hydroxide, $\text{CdO} \cdot \text{H}_2\text{O}$.

Insol in H_2O .

1 l. $\text{CdO} \cdot \text{H}_2\text{O} + \text{Aq}$ contains 0.0026 g. $\text{CdO} \cdot \text{H}_2\text{O}$

at 25° (Bodlander, Z. phys. Ch. 1898, 27. 66.)

Solubility in $\text{H}_2\text{O} = 2.6 \times 10^{-4}$ (Herz, Z. anorg. 1900, 24. 126.)

Sol. in acids, very sol. in $\text{NH}_4\text{OH} + \text{Aq}$; insol in KOH , NaOH , Na_2CO_3 , K_2CO_3 , and $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$

Easily sol in $(\text{NH}_4)_2\text{SO}_4$, NH_4Cl , NH_4NO_3 , and NH_4 succinate + Aq . (Wittstein.)

Freshly pptd $\text{CdO} \cdot \text{H}_2\text{O}$ is sol. in alkali haloids + Aq . (Bersch, Z. phys. Ch. 1891, 8. 392.)

Solubility in $\text{NH}_4\text{OH} + \text{Aq}$ increases with increase in concentration of NH_4OH (Euler, B. 1903, 36. 3401.)

Solubility in $\text{NH}_4\text{OH} + \text{Aq}$ at 25° .

NH_3 norm	g CdO per l
0.5	0.24
1.0	0.62
1.8	1.33
4.6	4.92

(Bonsdorff, Z. anorg. 1904, 41. 187.)

Insol. in ethyl, and methyl amine + Aq . (Wurtz.)

Very sl. sol. in $\text{HCN} + \text{Aq}$ even when freshly pptd (Schuler, A. 87. 48.)

Not pptd in presence of Na citrate (Spiller), and many non-volatile organic substances. (Rose.)

Cadmium iodide, CdI_2

Sol. in 1.13 pts H_2O at 15° . (Eder, Dingl. 221. 89.)

Sol. at 20° 40° 60° 80° 100°
in 1.08 1.00 0.93 0.86 0.75 pts. H_2O .

(Kremers, Pogg. 103. 57.)

Sat. $\text{CdI}_2 + \text{Aq}$ contains at:

-4°	$+2^\circ$	$+10^\circ$	13°	24°	32°
42.4	43.7	45.2	44.8	46.5	47.4% CdI_2

Solubility in benzene at $16^\circ = 0.01\%$

" $35^\circ = 0.02\%$

Solubility in ethyl ether at $0^\circ = 0.03\%$

" $15.5^\circ = 0.04\%$

" $20.3^\circ = 0.05\%$

(Linebarger, Am. J. Sci. 1895, (3) 49. 52.)

Sol. in acetone. (Eidmann, C. C. 1899, II.
 1014.)

1 g. CdI_2 is sol. in 4 g. acetone at 18° .
 Sp. gr. of sat. solution $18^\circ/4^\circ = 0.994$. (Nau-
 mann, B. 1904, 37. 4338.)

Sp. gr. of $\text{CdI}_2 + \text{acetone}$.

% CdI_2	Sp. gr. $20^\circ/20^\circ$.
0	0 7998
12 02	0 8929

(Le Blanc and Rohland, Z. phys. Ch. 1896,
 19. 284.)

Sol. in chinolin. (Beckmann and Gabel, Z. anorg. 1906, **51**, 236.)

100 g. benzonitrile dissolve 1.6295 g. CdI₂ at 18°. (Naumann, B. 1914, **47**, 1370.)

Insol. in methylene iodide (Retgers, Z. anorg. **3**, 343.)

Sl. sol. in ethylamine. (Shinn, J. phys. Chem. 1907, **11**, 538.)

Insol. in CS₂. (Arcetowski, Z. anorg. 1849, **6**, 257.)

Solubility in methyl acetate = 0.7–1.5%; 2.1% at bpt. (Schroder and Steiner, J. pr. 1909, (2) **79**, 49.)

Sol. in methyl acetate (Naumann, B. 1909, **42**, 3790.)

1 pt. is sol. in 54.3 pts. ethyl acetate at 18°.

The sat. solution has D_{18°/4°} = 0.9145. (Naumann, B. 1910, **43**, 318.)

Insol. in mustard oil. (Mathews, J. phys. Chem. 1905, **9**, 647.)

Mol. weight determined in piperidine, pyridine, methyl and ethyl sulphide. (Werner, Z. anorg. 1897, **15**, 17.)

Cadmium hydrogen iodide, CdI₂, HI + 3H₂O.

Decomp. in air. (Dobroserdow, C. C. 1900, II, 527.)

Cadmium caesium iodide, CdI₂, CsI + H₂O.

Sol. in H₂O without decomp. (Wells and Walden, Z. anorg. **5**, 271.)

CdI₂, 2CsI. As above.

CdI₂, 3CsI. Decomp. by H₂O into the above salt.

Cadmium hydrazine iodide, CdI₂·2N₂H₄·HI.

Sol. in H₂O. (Ferratini, C. A. 1912, 1612.)

Cadmium mercuric iodide.

Very sol. in H₂O. (Berthémot, J. Pharm. **14**, 613.)

CdI₂, 3HgI₂. Sol. in H₂O. Can be recrystallized in alcohol. (Clarke and Kebler, Am. Ch. J. **5**, 235.)

Cadmium potassium iodide, CdI₂, KI + H₂O.

Sol. in 0.94 pt. H₂O at 15°. (Eder, Dingl. **221**, 89.)

CdI₂, 2KI + 2H₂O. Deliquescent. Extremely sol. in H₂O. Sol. at 15° in 0.73 pt. H₂O. Sl. sol. in alcohol and wood spirit, but less than CdI₂. (Croft.)

Sol. at 15° in 1.4 pts. absolute alcohol, 24.5 pts. ether (0.729 sp. gr.), and 4.5 pts. alcohol-ether (1:1). (Eder, l. c.)

Sp. gr. of K₂CdI₄ + Aq at 18°.

	20 63	1 0061	

(Wershofen, Z. phys. Ch. 1890, **5**, 493.)

Sol. in ethyl acetate (Naumann, B. 1904, **37**, 3601.)

Cadmium sodium iodide, CdI₂, 2NaI + 6H₂O.

Deliquescent (Croft.)

Sol. at 15° in 0.63 pt. H₂O, 0.86 pt. abs. alcohol, and 10.1 pts. ether (sp. gr. 0.729). (Eder, Dingl. **221**, 89.)

Cadmium strontium iodide, CdI₂, SrI₂ + 8H₂O.

Deliquesces in moist, effloresces in dry air; sol. in H₂O. (Croft.)

Cadmium iodide ammonia, CdI₂, 2NH₃.

Decomp. by H₂O. (Rammelsberg.)

CdI₂, 4NH₃. (Dawson and McCrae, Chem. Soc. 1900, **77**, 1246.)

CdI₂, 6NH₃. Decomp. by H₂O, sol. in warm, less sol. in cold NH₄OH + Aq. (Rammelsberg.)

Cadmium iodide hydrazine, CdI₂, 2N₂H₄.

Easily sol. in warm NH₄OH + Aq. (Franzen, Z. anorg. 1908, **60**, 281.)

Cadmium iodide hydroxylamine, CdI₂, 3NH₂OH.

Sol. in H₂O and alcohol. Insol. in ether. (Adams, Am. Ch. J. 1902, **28**, 218.)

Cadmium iodide selenide, CdI₂, 3CdSe.

Easily decomp. (Fonze-Diacon, C. R. 1900, **131**, 897.)

Cadmium iodosulphide, CdI, 2CdS.

Ppt. (Naumann, B. 1904, **37**, 4338.)

Cadmium suboxide, CdO.

Decomp. by H₂O, acids and NH₄OH + Aq. (Tanatar, Z. anorg. 1901, **27**, 433.)

Cd₂O. Properties as cadmous hydroxide (Morse and Jones.)

Cadmium oxide, CdO.

Insol. in H₂O. Sol. in acids. Sol. in NH₄OH + Aq. Insol. in (NH₄)₂CO₃ + Aq. Easily sol. in NH₄Cl + Aq, less in NH₄NO₃ + Aq. (Brett, 1837.)

Insol. in KOH, NaOH, K_2CO_3 , and Na_2CO_3 + Aq

See also Cadmium hydroxide.

Solubility in (calcium succrate+sugar) + Aq

1 l solution containing 418.6 g. sugar and 34.3 g. CaO dissolves 0.22 g. CdO

1 l solution containing 174.4 g. sugar and 14.1 g. CaO dissolves 0.48 g. CdO (Bodenbender, J. B. 1865. 600.)

Insol in acetone (Naumann, B. 1904, 37. 4329)

Insol in methyl acetate (Naumann, B. 1909, 42. 3790)

Insol in ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Cadmium peroxide, Cd_3O_8 or $Cd_3O_8(?)$.

(Haas)

CdO_2 , $Cd(OH)_2$ (Kouriloff, A. ch. (6) 23. 431)

Very stable towards H_2O . Insol. in NH_4OH + Aq (Haas, B. 1884, 17. 2253.)

$4CdO_2$, $Cd(OH)_2$. Ppt Insol. in NaOH + Aq (Eykman, C. C. 1905, I 1629.)

$5CdO_2$, $CdO + 3H_2O$. Ppt (Teletow, C. A. 1912, 43.)

Cadmium oxybromide, CdO , $CdBr_2 + H_2O$.

Decomp. by H_2O . (Tassily, C. R. 1897, 124. 1023)

+ $2H_2O$. Stable in dry air; insol. in H_2O . (Tassily, C. R. 1897, 124. 1022.)

+ $3H_2O$. Slowly decomp. by H_2O (Tassily, C. R. 1897, 124. 1022.)

+ $7H_2O$ (Mailhe, C. R. 1901, 132. 1561.)

Cadmium oxychloride, $CdCl_2$, $CdO + H_2O$.

Sl sol. in hot H_2O . (Habermann, M. Ch. 5. 432)

+ $7H_2O$. (Mailhe, Bull. Soc. 1901, (3) 25. 791.)

$2CdO$, $CdCl_2$. Insol. in H_2O , but slowly decomp. thereby. (Canzoneri, Gazz. ch. it. 1897, 27. (2) 486.)

Cadmium oxyiodide, CdO , $CdI_2 + H_2O$.

Decomp. by H_2O . (Tassily, C. R. 1897, 124. 1023.)

+ $3H_2O$. Stable in dry air; insol. in H_2O . (Tassily, C. R. 1897, 124. 1022.)

Cadmium phosphide, Cd_3P_2 .

Sol. in HCl + Aq with evolution of PH_3 . (Stromeyer.)

Cd_3P Sol. in conc. HCl + Aq. (Emmerling, B. 12. 152.)

Easily decomp. by acids. (Kulisch, A. 231. 327.)

CdP_2 . Decomp. by boiling conc. HCl + Aq. (Renault, C. R. 76. 283.)

Cadmium selenide, $CdSe$.

Sol. in HCl + Aq. (Uelsmann, A. 116. 122.)

Easily decomp. by acids. (Fonzes-Diacon, C. R. 1900, 131. 897.)

Cadmium sulphide, CdS .

Insol in H_2O .

Solubility in H_2O at $16-18^\circ = 6.6 \times 10^{-6}$ mols. per l (Biltz, Z. phys. Ch. 1907, 58. 291)

1 l. H_2O dissolves 9.00×10^{-6} mols CdS (artificial greenockite) at 18°

1 l. H_2O dissolves 8.86×10^{-6} mols pptd CdS at 18° . (Weigel, Z. phys. Ch. 1907, 58. 294.)

Difficultly sol. in hot dil. HCl + Aq. Easily sol. in cold conc. HCl + Aq (Stromeyer.)

Sol in HNO_3 + Aq (Meissner), and boiling dil. H_2SO_4 + Aq (1 : 6) (A. W. Hoffmann, A. 115. 286.)

Very sl. sol. in NH_4OH + Aq. (Wackenroder, Report 46. 226.) Insol. in KOH , or $(NH_4)_2S$ + Aq. Appreciably sol. in an acid solution of NH_4Cl . (Baxter and Hines, Z. anorg. 1905, 44. 160)

Much more sol. in $(NH_4)_2S$ + Aq than usually supposed. (Ditte, C. R. 85. 402). Solubility increases by warming, and at 68° is twice that at ordinary temperatures. A sat. solution of $(NH_4)_2S$ dissolves about 2 g. CdS to a litre. Alkali sulphides dissolve much less. (Ditte.)

Fresenius (Z. anal. 20. 236) could not confirm the above. According to Fresenius, CdS is not appreciably sol. in $(NH_4)_2S$ + Aq.

Insol. in Na_2SO_3 or KCN + Aq. (Fresenius.)

Insol. in NH_4Cl or NH_4NO_3 + Aq. (Brett.)

Sol. in alkali sulpho-molybdates, -tungstates, -vanadates, -arsenates, -antimonates, -stannates + Aq. (Storch, B. 16. 2015)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 827)

Insol. in acetone. (Naumann, B. 1904, 37. 4329; Eidmann, C. C. 1899, II. 1014)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Min. *Greenockite*. Sol. in HCl + Aq.

Colloidal—Solution of 4 g. colloidal C in a litre H_2O remains transparent several days. If it contains 11 g. CdS in a litre, it is completely coagulated in 24 hours. Solutions of salts of the following concentration cause an immediate coagulation in an aqueous solution of CdS containing 3.62 g. in a litre.

(Prost, Belg. Acad. Bull. (3) 14. 312; J. B. 1887. 537.)

Cadmium pentasulphide, CdS_5 .

Insol. in H_2O . (Schiff, A. 115. 74.)

Mixture of CdS and S (Follenius, Z. anal. 13. 412)

Cadmium potassium sulphide, $\text{K}_2\text{Cd}_2\text{S}_4$

(Milbauer, Z. anorg. 1904, 42. 439.)

Cadmium sodium sulphide, $3\text{CdS}, \text{Na}_2\text{S}$.

Decomp. by H_2O . (Schneider, J. pr. (2) 8. 29.)

Cadmium sulphiodide.

See Cadmium iodosulphide.

Cadmium telluride, CdTe .

Not attacked by dil. acids. Attacked in the cold only by HNO_3 . (Tibbals, J. Am. Chem. Soc. 1909, 31. 908.)

Cadmic acid.

Potassium cadmate.

Insol. in H_2O , but gradually decomp. when in contact therewith. (Meunier, C. R. 63. 330)

Cæsium, Cs.

Decomp. H_2O with great violence. (Setterberg, A. 211. 100.)

Very sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 827.)

Cæsium acetylide acetylene, $\text{Cs}_2\text{C}_2, \text{C}_2\text{H}_2$.

Insol. in C_6H_6 and in CHCl_3 . (Moissan, C. R. 1903, 136. 1218.)

Cæsium amide, CsNH_2 .

Decomp. by H_2O . Very sol. in liquid NH_3 . (Rengade, C. R. 1905, 140. 1185.)

Cæsium ammonia, Cs, NH_3

Sol. in liquid NH_3 . (Moissan, C. R. 1903, 136. 1177.)

Cæsium azoimide, CsN_3 .

Deliquescent Stable in aq. solution
 224 2 pts. sol. in 100 pts. H_2O at 0°
 307 4 " " " 100 " H_2O " 16°
 1.0366 " " " 100 " abs. alcohol " 16°
 Insol. in pure ether. (Curtius, J. pr. 1898, (2) 58. 283.)

Cæsium bromide, CsBr

Ppt (Chabrie, C. R. 1901, 132. 679.)
 Sat. $\text{CsBr} + \text{Aq}$ at 25° contains 55.23%
 CsBr (Foote, Am. Ch. J. 1907, 37. 125)

Cæsium tribromide, CsBr_3 .

Sol. in H_2O ; decomp. by alcohols. (Wells, Sill. Am. J. 143. 17)

Cæsium pentabromide, CsBr_5 .

Very unstable. (Wells and Wheeler, Sill. Am. J. 144. 42.)

Cæsium cobalt bromide, Cs_2CoBr_4

Decomp. by H_2O . (Campbell, Z. anorg. 1894, 8. 126.)

Decomp. by H_2O and by alcohol. (Campbell, Am. J. Sci. 1894, (3) 48. 418.)

Cs_3CoBr_5 . Decomp. by H_2O . (Campbell, Z. anorg. 1894, 8. 126.)

Decomp. by H_2O and by alcohol. (Campbell, Am. J. Sci. 1894, (3) 48. 418.)

Cæsium copper bromide, $\text{CsBr}, \text{CuBr}_2$

Sol. in H_2O without decomp. (Wells and Walden, Z. anorg. 5. 304.)

2 $\text{CsBr}, \text{CuBr}_2$. (W and W.)

Cæsium iridium bromide.

See Bromiridate, cæsium.

Cæsium iron (ferric) bromide, CsFeBr_4 .

Sol. in H_2O . (Walden, Z. anorg. 1894, 7. 332)

$\text{Cs}_2\text{FeBr}_5 + \text{H}_2\text{O}$. (Walden, Z. anorg. 1894, 7. 332.)

Cæsium lead bromide, $\text{CsBr}, 2\text{PbBr}_2$.

Nearly stable in aqueous solution. (Walden, Sill. Am. J. 145. 127.)

$\text{CsBr}, \text{PbBr}_2$. Decomp. by H_2O . (Walden.)

4 $\text{CsBr}, \text{PbBr}_2$. As above.

Solubility determinations show that the double salts formed by cæsium and lead bromides at 25° are CsPb_2Br_5 , CsPbBr_3 and Cs_4PbBr_6 . (Foote, Am. Ch. J. 1907, 37. 125.)

Cæsium magnesium bromide, $\text{CsBr}, \text{MgBr}_2 + 6\text{H}_2\text{O}$.

Sol. in H_2O . (Wheeler and Campbell, Z. anorg. 5. 275.)

Cæsium mercuric bromide, CsBr, 2HgBr₂.

Not decomp by H₂O 100 pts. solution sat. at 16° contain 0.807 pt. CsBr, 2HgBr₂. Sl. sol in hot strong alcohol, from which CsBr, HgBr₂ separates on cooling. (Wells, Sill Am J. 144. 221.)

CsBr, HgBr₂. Decomp. by H₂O into above salt. Sol. in alcohol without decomp (Wells.) 2CsBr, HgBr₂. Decomp. by H₂O into CsBr, 2HgBr₂. 3CsBr, HgBr₂. As above.

Cæsium molybdenyl bromide, 2CsBr, MoOBr₃

(Weinland and Knöll, Z. anorg. 1905, 44. 107.)

Cæsium nickel bromide, CsNiBr₃.

Decomp. by H₂O. (Campbell, Z. anorg. 1894, 8. 126)

Decomp by H₂O and by alcohol (Campbell, Am. J Sci. 1894, (3) 48. 418.)

Cæsium osmium bromide.

See Bromosmate, cæsium.

Cæsium palladium bromide.

See Bromopalladate, cæsium and bromopalladite, cæsium.

Cæsium platinum bromide.

See Bromoplatinate, cæsium.

Cæsium ruthenium bromide.

See Bromoruthenite, cæsium.

Cæsium selenium bromide.

See Bromoselenate, cæsium.

Cæsium tellurium bromide.

See Bromotellurate, cæsium.

Cæsium thallic bromide, CsBr, TlBr₃.

Sol. in H₂O with decomp. (Pratt, Z. anorg. 1895, 9. 19.)

By recryst. from H₂O, forms 3CsBr, 2TlBr₃. (Pratt, Am. J. Sci. 1895, (3) 49. 403.)

3CsBr, 2TlBr₃. Can be recryst. unchanged from H₂O. (Pratt, Am. J. Sci. 1895, (3) 49. 402.)

Cæsium tin (stannic) bromide.

See Bromostannate, cæsium.

Cæsium zinc bromide, 3CsBr, ZnBr₂.

Sol. in H₂O. (Wells and Campbell, Z. anorg. 5. 275.)

2CsBr, ZnBr₂. As above.

Cæsium bromide columbium oxybromide, 2CsBr, CbOBr₃.

Unstable in moist air. Decomp. by H₂O. (Weinland, B. 1906, 39. 3059.)

Cæsium bromochloride, CsBrCl.

Properties as CsBr₃. (Wells)

CsBrCl₂. As above (Wells.)

Cæsium mercuric bromochloride, Cs₂HgCl₃Br₂.

Decomp. by H₂O finally to HgBr₂ (Wells, Sill. Am. J. 144. 121)

Cs₂HgCl₃Br. As above.

CsHgClBr₂. As above.

CsHg₂ClBr₄. As above.

CsHg₃ClBr₁₀. As above.

Cæsium bromochloriodide, CsBrClI

More sol. in H₂O than in alcohol Not decomp. at once by ether (Wells)

Cæsium bromiodide, CsBrI₂.

Decomp. by H₂O. Sol. in alcohol Decomp. by ether with residue of CsBr. (Wells, Sill. Am. J 143. 17.)

CsBr₂I. More sol. in H₂O than in alcohol. Not decomp by ether.

CsBr₂I+ Aq sat. at 20° contains about 4.45% CsBr₂I. (Wells)

Cæsium carbide, Cs₂C₂.

Decomp. by cold H₂O. (Moissan, C R. 1903, 136. 1221)

Cæsium chloride, CsCl.

Very deliquescent; sol. in H₂O and alcohol.

Solubility of CsCl at t°.

0 02	0 11	"
0 00	0 032	CsCl

(Foote and Haigh, J. Am. Ch. Soc. 1911, 33. 461.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Solubility in glycol at ord. temp. = 10.6–10.8%. (de Coninck, Belg. Acad. Bull. 1905. 359.)

Insol. in anhydrous pyridine and in 97% pyridine + Aq. Sol in 95% pyridine + Aq and in 93% pyridine + Aq. (Kahlenberg, J. Am. Chem. Soc. 1908, 30. 1107)

Cæsium chromium chloride, 2CsCl, CrCl₃ + H₂O.

Stable in the air. Sol. in H₂O. (Wells, Z. anorg. 1895, 10. 182.)

2CsCl, CrCl₃ + 4H₂O; hygroscopic; very sol. in H₂O. (Wells, l. c)

Cæsium tetra-aquochromium chloride, CrCl₂(OH₂)₄.Cl, 2CsCl.

Ppt. (Werner, B. 1901, 34. 1602)

Cæsium cobalt chloride, CsCoCl₂ + 2H₂O.

Decomp. by H₂O and alcohol. (Campbell, Z. anorg 1894, 8. 126.)

Cs₂CoCl₄. Decomp. by H₂O and by alcohol. (Campbell, Z. anorg. 1894, 8. 126.)

Cs₃CoCl₅. Decomp. by H₂O and by alcohol (Campbell, Z. anorg. 1894, 8. 126.)

Cæsium cuprous chloride, CsCl, Cu₂Cl₂.

Decomp. by H₂O into CuCl₂, CsCl. (Wells, Z. anorg. 5. 306.)

3CsCl, Cu₂Cl₂. (Wells.)

6CsCl, Cu₂Cl₂. (Wells.)

Cæsium cupric chloride, 2CsCl, CuCl₂.

Easily sol. in H₂O and dil. HCl + Aq; insol. in conc. HCl + Aq. (Godeffroy, B. 8. 9.)

Sol in small amount H_2O without decomp. (Wells and Dupee, Z. anorg. 5. 300)
 $+2H_2O$. Efflorescent (W. and D.)
 $3CsCl, 2CuCl_2 + 2H_2O$
 $CsCl, CuCl_2$. Sol. in H_2O without decomp. (W. and D.)

Cæsius gold chloride.

See Chloraurate, cæsius.

Cæsius iridium tetrachloride.

See Chloriridate, cæsius.

Cæsius iron (ferric) chloride, $CsFeCl_4 + \frac{1}{2}H_2O$.

Sol in H_2O . Decomp in the air. (Walden, Z. anorg. 1894, 7. 332)
 $Cs_2FeCl_6 + H_2O$. Sol in H_2O . (Walden.)
 $Cs_3FeCl_6 + H_2O$. Sol. in H_2O . (Walden.)

Cæsius lanthanum chloride, $Cs_3LaCl_6 + 4H_2O$.

Very hygroscopic. Easily sol. in H_2O . (R. J. Meyer, Z. anorg. 1914, 86. 273.)

Cæsius lead chloride, $CsCl, 2PbCl_2$.

Nearly stable in aqueous solution. (Campbell, Sill. Am. J. 145. 126.)
 $CsCl, PbCl_2$ Decomp by H_2O . (Campbell.)
 $4CsCl, PbCl_2$. As above. (Campbell.)

Cæsius lead tetrachloride.

See Chloroplumbate, cæsius.

Cæsius magnesium chloride, $CsCl, MgCl_2 + 6H_2O$

Sol. in H_2O . (Wells and Campbell, Z. anorg. 5. 275.)

Cæsius manganous chloride, $CsCl, MnCl_2 + 2H_2O$.

Not deliquescent; sol. in H_2O . (Saunders, Am. Ch. J. 14. 143.)
 $2CsCl, MnCl_2$. (Godeffroy)
 $+2\frac{1}{2}H_2O$. (Godeffroy)
 $+3H_2O$. Sol in H_2O . Conc. $HCl + Aq$ precipitates anhydrous salt from aqueous solution. (Godeffroy, B. 8. 9.)
The only salt which exists contains $2H_2O$. (Saunders, Am. Ch. J. 14. 143.)

Cæsius manganic chloride, $2CsCl, MnCl_3$.

Easily decomp. (Meyer and Best, Z. anorg. 1899, 22. 187.)

Cæsius mercuric chloride, $CsCl, HgCl_2$.

100 pts solution sat. at 17° contain 1.406 pts. $CsHgCl_3$. Not decomp. by H_2O . Insol. in absolute alcohol, but sol. on diluting with $\frac{1}{3}$ vol. H_2O . (Wells, Sill. Am. J. 144. 221.)
 $2CsCl, HgCl_2$. Easily sol. in H_2O and dil. $HCl + Aq$; insol. in conc. $HCl + Aq$. (Godeffroy.)

$3CsCl, HgCl_2$. Decomp by H_2O ; on recrystallizing from H_2O . $CsCl, HgCl_2$ is finally formed. (Wells, Sill. Am. J. 144. 221)

$CsCl, 5HgCl_2$ Decomp. by H_2O (Wells.)
Solubility determinations show that the only double salts of $CsCl$ and $HgCl_2$ which exist at 25° are Cs_3HgCl_5 , Cs_2HgCl_4 , $CsHgCl_3$, $CsHg_2Cl_6$, $CsHg_3Cl_{11}$. (Foote, Am. Ch. J. 1903, 30. 340)

Cæsius molybdenum chloride, $Cs_2MoCl_3 + H_2C$.

Sol. in H_2O Nearly insol in alcohol and ether (Chilesotti, C. C. 1903, II. 652)

Cæsius molybdenyl chloride, $CsCl, MoO_2Cl_2 + H_2O$.

Hygroscopic. Decomp. by H_2O (Weinland and Knöll, Z. anorg. 1905, 44. 93)
 $2CsCl, MoO_2Cl_2$. Hygroscopic Decomp. by H_2O (Weinland and Knöll, Z. anorg. 1905, 44. 92)
 $2CsCl, 6MoO_2Cl_2 + 22H_2O$ Very hygroscopic. Decomp. by H_2O . (Weinland and Knöll, Z. anorg. 1905, 44. 94)
 $2CsCl, MoOCl_3$ Only sl. sol. in H_2O . (Nordenskjöld, B. 1901, 34. 1573.)

Cæsius neodymium chloride, $Cs_3NdCl_6 + 5H_2O$

Very hygroscopic. Easily sol in H_2O . (R. J. Meyer, Z. anorg. 1914, 86. 273)

Cæsius nickel chloride, $2CsCl, NiCl_2$

As the corresponding Cu salt
 $CsNiCl_3$ Decomp by H_2O and by alcohol. (Campbell, Am. J. Sci. 1894, (3) 48. 418)

Cæsius palladium dichloride.

See Chloropalladite, cæsius.

Cæsius palladium tetrachloride.

See Chloropalladate, cæsius.

Cæsius praseodymium chloride, $Cs_3PrCl_6 + 5H_2O$

Very hygroscopic. Easily sol. in H_2O . (R. J. Meyer, Z. anorg. 1914, 86. 273)

Cæsius rhodium chloride.

See Chlororhodite, cæsius.

Cæsius ruthenium chloride.

See Chlororuthenite, cæsius and chlororuthenate, cæsius.

Cæsius oxyruthenium chloride, $Cs_2RuO_2Cl_4$.

Ppt.; decomp. by H_2O ; sol. in cold HCl . (Howe, J. Am. Chem. Soc. 1901, 23. 779.)

Cæsius samarium chloride, $Cs_2SmCl_6 + 5H_2O$.

Very hygroscopic. Easily sol. in H_2O . (R. J. Meyer, Z. anorg. 1914, 86. 273.)

Cæsium silver chloride, 2CsCl , AgCl

Easily decomp. by H_2O (Wells and Wheeler, *Sill. Am. J.* **144**, 155.)

Cæsium tellurium chloride.

See Chlorotellurate, cæsium.

Cæsium thallic chloride, 2CsCl , TiCl_3 .

By recryst. from H_2O forms 3CsCl , 2TiCl_3 (Pratt, *Am. J. Sci.* 1895, (3) **49**, 398.)

+ H_2O . Readily sol. in hot H_2O but 3CsCl , 2TiCl_3 cryst from the solution. (Pratt, *Am. J. Sci.* 1895, (3) **49**, 399.)

3CsCl , 2TiCl_3 . Can be recryst. from H_2O without change. (Pratt, *Am. J. Sci.* 1895, (3) **49**, 401.)

3CsCl , $\text{TiCl}_3 + 2\text{H}_2\text{O}$. Sol. in 36.4 pts. H_2O at 17° and 3 pts. at 100° . (Godeffroy, *Zeitsch. d. allgem. osterr. Apothekerv.* **1880**, No 9.)

Cæsium tin (stannic) chloride.

See Chlorostannate, cæsium.

Cæsium titanium chloride, TiCl_3 , $2\text{CsCl} + \text{H}_2\text{O}$.

Difficultly sol. in H_2O . (Stahler, *B.* 1904, **37**, 4409.)

Cæsium tungsten chloride, $\text{Cs}_3\text{W}_2\text{Cl}_3$

Nearly insol. in cold H_2O .

Sol. in a hot mixture of equal pts H_2O and conc. HCl .

Nearly insol. in conc HCl .

Sol. in very dil. $\text{NaOH} + \text{Aq}$.

Nearly insol. in most organic solvents. (Olsson, *B.* 1913, **46**, 574.)

Cæsium uranous chloride, Cs_2UCl_6 .

As K salt. (Aloy, *Bull. Soc.* 1899, (3) **21**, 264.)

Cæsium uranyl chloride, 2CsCl , $(\text{UO}_2)\text{Cl}_2$.

Sol. in H_2O . (Wells, *Z. anorg.* 1895, **10**, 183.)

100 pts. of the solution contain at 29.75° , 56.07 pts. UO_2Cl_2 , 2CsCl . (Rimbach, *B.* 1904, **37**, 468.)

Pptd from aq. solution by gaseous HCl . (Wells, *Am. J. Sci.* 1894, (3) **50**, 251.)

Cæsium vanadium chloride, $\text{Cs}_2\text{VdCl}_5 + \text{H}_2\text{O}$.

Difficultly sol. in H_2O and alcohol. (Stähler, *B.* 1904, **37**, 4412.)

Cæsium zinc chloride, 3CsCl , ZnCl_2 .

Sol. in H_2O . (Wells and Campbell, *Z. anorg.* **5**, 275.)

2CsCl , ZnCl_2 . Easily sol. in H_2O and dil. $\text{HCl} + \text{Aq}$. Insol. in conc. $\text{HCl} + \text{Aq}$. (Godeffroy.)

Cæsium chloride chromic oxychloride, 2CsCl , CrOCl_3

Decomp. in the air.

Sol. in conc. HCl without decomp. (Weinland, *B.* 1906, **39**, 4045.)

Cæsium chloride columbium oxychloride, 2CsCl , CbOCl_3 .

Decomp by H_2O . (Weinland, *B.* 1906, **39**, 3057.)

Cæsium chloriodide, CsCl_2I .

Properties as CsBrClI (Wells.)

CsCl_2I . Sl sol in H_2O , from which it can be recrystallized without decomp. (Wells and Wheeler.)

Cæsium mercuric chloriodide, $\text{Cs}_2\text{HgCl}_2\text{I}_2$

Decomp. instantly by H_2O to HgI_2 (Wells.)

Cæsium fluoride, CsF .

Ppt. (Chabrié, *C. R.* 1901, **132**, 680.)

+ $1\frac{1}{2}\text{H}_2\text{O}$. 100 g H_2O dissolve 366.5 g CsF at 15° (de Forcrand, *C. R.* 1911, **152**, 1210.)

Cæsium hydrogen fluoride, CsHF_2 .

Ppt. (Chabrié, *C. R.* 1901, **132**, 680.)

Cæsium tantalum fluoride.

See Fluotantalate, cæsium.

Cæsium tellurium fluoride, CsF , TeF_4

Decomp. by H_2O . (Wells, *Am. J. Sci.* 1901, (4) **12**, 190.)

Cæsium titanium fluoride.

See Fluotitanate, cæsium.

Cæsium zirconium fluoride.

See Fluozirconate, cæsium.

Cæsium hydride, CsH .

Decomp. by H_2O with evolution of H_2 . (Moissan, *C. R.* 1903, **136**, 589.)

Cæsium hydroxide, CsOH .

Very deliquescent, and sol. in H_2O . Sol. in alcohol

79.41% CsOH is contained in a sat aq solution at 15° (de Forcrand, *C. R.* 1909, **149**, 1344.)

75.08% CsOH is contained in sat. aq. solution at 30° . (Schreinemakers, *C. C.* **1909**, I, 11.)

Cæsium iodide, CsI

Sol. in H_2O .

100 pts. H_2O dissolve 44 pts. CsI at 0° ; 66.3 pts. at 14.5° ; 160 pts. at 61° .

Sp. gr of $\text{CsI} + \text{Aq}$ sat. at $14^\circ = 1.393$. (Betekoff, *Bull. Soc. Pétersb.* (4) **2**, 197.)

Cæsium periodide.

Solubility determinations show that CsI_3 and CsI_5 are the only periodides of cæsium existing between -4° and $+73^\circ$ (Foote, Am. Ch. J. 1903, **29**, 203)

Cæsium triiodide, CsI_3

1 ccm sat. $\text{CsI} + \text{Aq}$ dissolves 0.0097 g. CsI_3 , and sp. gr. of solution is 1.154 Only sl decomp. by solution in H_2O . Much more sol. in alcohol than in H_2O . Not immediately decomp. by ether. (Wells, Sill. Am. J. **143**, 17)

Cæsium pentaoidide, CsI_5 .**Cæsium cobalt iodide, Cs_2CoI_4**

Decomp by H_2O . (Campbell, Z anorg 1894, **8**, 12)

Deliquescent, decomp. by H_2O and by alcohol (Campbell, Am. J. Sci. 1894, (3) **48**, 418.)

Cæsium lead iodide, CsPbI_2 .

Sl. sol. in hot $\text{CsI} + \text{Aq}$. (Wheeler, Sill. Am. J. **145**, 129)

Cæsium mercuric iodide, CsI , 2HgI_2 .

Decomp. by H_2O finally into HgI_2 . (Wells, Sill. Am. J. **144**, 221.)

2CsI , 3HgI_2 . Decomp by H_2O finally into HgI_2 .

CsI , HgI_2 . As above.

2CsI , HgI_2 . Decomp. by H_2O ; insol. in alcohol.

3CsI , HgI_2 . As above.

Cæsium silver iodide, CsI , AgI .

(Penfield, Z. anorg. **1**, 100.)

CsI , 2AgI . More sol. in hot than in cold acetone. (Marsh, Chem. Soc. 1913, **103**, 782)

Cæsium tellurium iodide.

See Iodotellurate, cæsium.

Cæsium thallic iodide, CsI , TlI_3 .

Decomp. by H_2O . (Pratt, Am. J. Sci. 1895, (3) **49**, 403.)

Cæsium zinc iodide, 3CsI , ZnI_2 .

Sol. in H_2O . (Wells and Campbell, Z. anorg. **5**, 275.)

2CsI , ZnI_2 . As above.

Cæsium oxide, Cs_2O .

Absorbs H_2O and CO_2 from the air. Decomp. by H_2O and by liquid NH_3 . (Rengade, C. R. 1906, **143**, 593.)

Cæsium dioxide, Cs_2O_2 .

Decomp. by H_2O . (Rengade, C. R. 1905, **140**, 1537.)

Cæsium trioxide, Cs_2O_3

Decomp. by H_2O . (Rengade, C. R. 1905, **140**, 1537.)

Cæsium tetroxide, Cs_2O_4 .

Decomp by H_2O . (Rengade, C. R. 1905, **140**, 1538.)

Cæsium sulphide, $\text{Cs}_2\text{S} + 4\text{H}_2\text{O}$.

Deliquescent, very sol in H_2O . (Biltz, Z anorg 1906, **48**, 300.)

Cæsium disulphide, Cs_2S_2 .

Anhydrous. Sol in H_2O . Hydroscopic. (Biltz, Z. anorg 1906, **50**, 72)

$+ \text{H}_2\text{O}$ From $\text{Cs}_2\text{S}_2 + \text{Aq}$. Hydroscopic. (Biltz, Z. anorg 1906, **50**, 72)

Cæsium trisulphide, Cs_2S_3

Anhydrous. Sol. in H_2O Not hydroscopic (Biltz, Z. anorg. 1906, **50**, 75)

$+ \text{H}_2\text{O}$ From $\text{Cs}_2\text{S}_3 + \text{Aq}$. (Biltz, Z. anorg. 1906, **50**, 76.)

Cæsium tetrasulphide, Cs_2S_4 .

Sol in H_2O . Insol. in abs. alcohol. (Biltz, Z. anorg. 1906, **48**, 305)

Cæsium pentasulphide, Cs_2S_5 .

Mpt. 2° . Not hydroscopic Very sol in cold 70% alcohol. (Biltz, B. 1905, **38**, 129.)

Cæsium hydrogen sulphide, CsHS .

Deliquescent; very sol. in H_2O . (Biltz, Z anorg. 1906, **48**, 300)

Cæsium copper tetrasulphide, CsCuS_4 .

Sl. sol. in cold H_2O .

Decomp by conc. and dil. HCl , H_2SO_4 and HNO_3 .

Sl. sol. in alcohol. (Biltz, B. 1907, **40**, 978.)

Calcium, Ca.

Decomp. H_2O violently. Slowly attacked by cold H_2SO_4 . Dil. $\text{H}_2\text{SO}_4 + \text{Aq}$ or $\text{HCl} + \text{Aq}$ attack violently and dissolve. Dil. $\text{HNO}_3 + \text{Aq}$ oxidizes, but fuming HNO_3 scarcely attacks even on boiling. (Bunsen and Matthiessen.) Not attacked by anhydrous alcohol. (Lies-Bodart and Jobin, A. ch. (3) **54**, 364.)

Pure Ca is only very slowly decomp. by H_2O at ordinary temp., sol. in HCl , HNO_3 , H_2SO_4 . (Moissan, C. R. 1898, **129**, 589.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, **20**, 827.)

$\frac{1}{2}$ ccm. oleic acid dissolves 0.0334 g. Ca in 6 days. (Gates, J. phys. Chem. 1911, **15**, 143.)

Calcium amalgam, Ca_3Hg_4 .

Decomp. H_2O readily. (Féré, C. R. 1898, **127**, 619.)

CaHg_8 . Rapidly decomp. in moist air. (Schürger, Z. anorg. 1900, **25**, 425.)

Calcium amide, $\text{Ca}(\text{NH}_2)_2$

(Moissan, A. ch 1899, (7) 18. 326)

Calcium ammonia, $\text{Ca}, 4\text{NH}_3$.Decomp. at ordinary temp.; takes fire in contact with the air; sl. sol. in liquid NH_3 . (Moissan, C. R. 1898, 127. 691) $\text{Ca}, 6\text{NH}_3$. (Kraus, J. Am. Chem. Soc. 1908, 30. 665.)**Calcium arsenide, Ca_3As_2 .**Decomp. by cold H_2O ; insol. in cold fuming HNO_3 ; very sol. in hot HNO_3 (Lebeau, C. R. 1899, 128. 98.)**Calcium azoimide, $\text{Ca}(\text{N}_3)_2$.**

Hydroscopic; explosive.

38.1 pts. sol. in 100 pts H_2O at 0° 45.0 " " " 100 " H_2O " 15.2

0.211 " " " 100 " abs. alcohol " 16.

Sol. in H_2O , decomp. when heated and on standing in the air (Dennis, Z. anorg. 1898, 17. 21.)

Insol. in pure ether. (Curtius, J. pr 1898, (2) 58. 286.)

Calcium boride, CaB_6 .Not decomp. by H_2O at 250° ; sol. in fused oxidizing agentsInsol. in aq. acids; sl. sol. in conc H_2SO_4 ; sol. in dil. or conc. HNO_3 . (Moissan, C. R. 1897, 125. 631-32.)**Calcium bromide, CaBr_2 .**Very deliquescent. 100 pts. H_2O dissolve—at 0° 20° 40° 60° 105°125 143 213 278 312 pts. CaBr_2 .

(Kremers, Pogg 103. 65.)

Sat. $\text{CaBr}_2 + \text{Aq}$ contains at:

—22° —22° —14° —7° —5°

50 5 50 2 52 5 52 6 52 6% CaBr_2

+8° 9° 11° 20° 50°

53 1 55 1 55 7 57 1 62 6% CaBr_2

(Étard, A. ch. 1894, (7) 2. 540.)

Sp. gr. of $\text{CaBr}_2 + \text{Aq}$ at 19.5° containing:5 10 15 20 25 % CaBr_2 ,

1.044 1.089 1.139 1.194 1.252

30 35 40 45 50 % CaBr_2 .

1.315 1.385 1.461 1.549 1.641

(Kremers, Pogg. 99. 444, calculated by Gerlach, Z. anal. 8. 285.)

Sl. sol. in liquid NH_3 . (Franklin, Am. Ch. J 1898, 20. 827.)

Very sol. in alcohol. (Henry.)

Sol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4328.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Sol in ethyl acetate. (Naumann, B 1910, 43. 314)

Insol. in benzonitrile. (Naumann, B 1914, 47. 1370)

+4 H_2O . (Kuznetzov, C. A. 1911. 842.)+6 H_2O .**Calcium manganous bromide, $\text{CaMnBr}_4 + 4\text{H}_2\text{O}$.**

Sl. hydroscopic. Unstable (Ephraim, Z. anorg 1910, 67. 377)

Calcium mercuric bromide.Decomp. by H_2O . (v. Bonsdorff.)**Calcium molybdenyl bromide, $\text{CaBr}_2, 2\text{MoOBr}_3 + 7\text{H}_2\text{O}$**

(Weinland and Knoll, Z. anorg 1905, 44. 112)

Calcium stannic bromide.

See Bromostannate, calcium.

Calcium bromide ammonia, $\text{CaBr}_2, 6\text{NH}_3$.Sol in H_2O . (Rammelsberg, Pogg. 55. 239)**Calcium bromide hydrazine, $\text{CaBr}_2, 3\text{N}_2\text{H}_4$** Easily sol in H_2O . (Franzen, Z. anorg. 1908, 60. 288)**Calcium bromofluoride, $\text{CaBr}_2, \text{CaF}_2$.**Decomp by H_2O . (Defacqz, A. ch. 1904, (8) 1. 357.)**Calcium carbide, CaC_2** Sp. gr. 2.22 at 18° Insol in fuming HNO_3 and conc H_2SO_4 but readily decomp. by dil. acids and H_2O (Moissan, Bull. Soc. 1894, (3) 11. 1005.)Insol. in HCl in the cold, but decomp. at red heat. Strong min. acids do not act in the cold; sol. in glacial acetic in the cold; sol. in fused alkali (Venable, J. Am. Chem. Soc 1895, 17. 307-310.)**Calcium chloride, CaCl_2 .**Very deliquescent. Very sol. in H_2O with evolution of heat.Anhydrous CaCl_2 is sol. in 1.459 pts H_2O . (Gerlach.)Anhydrous CaCl_2 is sol. in 1.58 pts. H_2O at 10.2° . (Kremers, Pogg 103. 65)Anhydrous CaCl_2 is sol in 1.35 pts. H_2O at 20° , 0.83 pt. H_2O at 40° , 0.72 pt. H_2O at 60° $\text{CaCl}_2 + 6\text{H}_2\text{O}$ is sol in 0.5 pt H_2O at 0° , and 2.05 pt. at 16° (Gmelin.) CaCl_2 is sol. in 1.5 pts cold, and 0.8 pt. boiling H_2O . (Fourcroy.) $\text{CaCl}_2 + \text{Aq}$ sat. in the cold contains 40.7% CaCl_2 . (Fourcroy.) $\text{CaCl}_2 + \text{Aq}$ sat. at 12.5° . contains 53.8% CaCl_2 . (Hassenfratz.)100 pts. H_2O dissolve 165.7 pts. $\text{CaCl}_2 + 6\text{H}_2\text{O}$ at 0° ; 7141 pts. at 40° . (Tilden, Chem. Soc. 45. 409.)100 pts. H_2O dissolve 60.3 pts. CaCl_2 from $\text{CaCl}_2 + 6\text{H}_2\text{O}$ at 0° , and solution has sp. gr. = 1.367. (Engel, Bull. Soc. (2) 47. 318.)

Solubility of $\text{CaCl}_2 + 6\text{H}_2\text{O}$ in H_2O at t° .

t°	Sat solution contains % CaCl_2	Sat solution contains % $\text{CaCl}_2 + 6\text{H}_2\text{O}$

(Mulder, Scheik. Verhandel. 1864. 107.)

If solubility $S = \text{pts anhydrous } \text{CaCl}_2$ in 100 pts. solution, $S = 32 + 0.2148t$ from -18° to $+6^\circ$; $S = 54.5 + 0.0755t$ from 50° to 120° . (Étard, C. R. 98. 1432.)

According to Bakhuis Roozeboom, the solubility of CaCl_2 varies according to the hydrate employed, and the following data were obtained as the result of very exact experiments.

Solubility of $\text{CaCl}_2 + 6\text{H}_2\text{O}$ in 100 pts H_2O at t° .

t°	Pts CaCl_2	t°	Pts CaCl_2	t°	Pts CaCl_2

100 g. H_2O dissolve 72.6 g. $\text{CaCl}_2 + 16.0$ g. NaCl at 15° . (Rudorff.)

Sol. in sat. $\text{KNO}_3 + \text{Aq}$ (Fourcroy.)

Insol. in liquid CO_2 . (Büchner, Z. phys. Ch. 1906, 54. 674.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 827.)

Sol. in 1 pt. strong boiling alcohol. (Wenzel.)

Sol. in 8 pts. alcohol at 15° , and in 1 pt spirits of wine. (Bergman.)

Sol. in 0.7 pt. boiling absolute alcohol. (Otto.)

Sol. in 1.43 pts boiling absolute alcohol at 78.3° . (Graham.)

Solubility of CaCl_2 in methyl alcohol.

CaCl_2 forms with methyl alcohol two complexes: $\text{CaCl}_2 \cdot 4\text{CH}_3\text{OH}$ and $\text{CaCl}_2 \cdot 3\text{CH}_3\text{OH}$.

Solubility of $\text{CaCl}_2, 4\text{CH}_3\text{OH}$ in CH_3OH

70	80 8	97 mpt.	100

(Menschutkin, Z. anorg. 1907, 52. 23.)

Sp. gr. at $16^\circ/4^\circ$ of CaCl_2 + alcohol containing 5.668% $\text{CaCl}_2 = 0.83636$ (Schonrock, Z. phys. Ch. 1893, 11. 768.)

B.-pt. of an alcoholic solution of CaCl_2 .

% CaCl_2	B.-pt.
2 4	$78.43^\circ + 0.70^\circ$
5 39	$78.43 + 2.15$
8 01	$78.32 + 4.18$
9 93	$78.43 + 5.55$
15.94	$78.43 + 11.75$

(Skinner, Chem. Soc 61. 340.)

Sl. sol. in propyl alcohol. (Berthelot.)

100 g. propyl alcohol dissolve 10.75 g. CaCl_2 . (Schlamp, Z. phys Ch. 1894, 14. 276.)

Sl. sol. in amyl alcohol. (Bouis.)

Pptd. from alcoholic solution by ether. (Dobbereiner.)

Sol in wood-spirit; sol in lignone (Liebig); insol in lignone. (Gmelin.)

Insol in acetone; sol in butyl alcohol. (Wurtz)

Very sl sol. in acetone (Krug and M'Elroy, J Anal Ch. 6. 184.)

Solubility in acetone + Aq at 20°

CaCl_2 will salt out acetone from aqueous solution. The table shows the composition of the solutions at the points at which inhomogeneous solutions of CaCl_2 , acetone and H_2O just become homogeneous at 20°. 100 g of the solution contain:

g CaCl_2	g H_2O	g acetone
13 03	52 49	34 48
8 5	45.37	46 15

0.15	9 05	90.81

(Frankforter, J. Am. Chem. Soc. 1914, 36. 1125.)

Sol. in many compound ethers, as ethyl acetate (Liebig), ethyl lactate (Strecker)

Sol in considerable quantity in amyl sulphocyanide. (Medlock, Chem. Soc. 1. 374)

Sol in valyl. (Kolbe)

Very sol in conc $\text{HC}_2\text{H}_3\text{O}_2$. (Liebig)

Solubility of CaCl_2 in acetic acid.

CaCl_2 forms with acetic acid a complex, $\text{CaCl}_2 \cdot 4\text{CH}_3\text{COOH}$

Solubility of $\text{CaCl}_2 \cdot 4\text{CH}_3\text{COOH}$ in CH_3COOH at t°

t°	% by wt. $\text{CaCl}_2 \cdot 4\text{CH}_3\text{COOH}$

65	84 5
70	91 2
73	100 0

(Menschutkin, Z. anorg. 1907, 54. 95.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370)

Insol in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Sl sol in anhydrous pyridine.

Sol in 97%, 95% and 93% pyridine + Aq. (Kahlenberg, J. Am Chem. Soc 1908, 30. 1107.)

100 g. sat. solution of CaCl_2 in sat. sugar + Aq at 31.25° contain 42.84 g. sugar + 25.25 g. CaCl_2 , or 100 g H_2O dissolve 135.1 g. sugar + 79.9 g. CaCl_2 at 31.25°. (Köhler, Z Ver. Zuckerind, 1907, 47. 447)

+ H_2O (Bakhuys Roozeboom.) See above.

+ $2\text{H}_2\text{O}$. (Bakhuys Roozeboom.) See above.

+ $4\text{H}_2\text{O}$. Two modifications (Bakhuys Roozeboom.) See above.

α and β modifications (α = stable form.)

(Kuznetsov, C. A. 1911, 842.)

+ $6\text{H}_2\text{O}$. Very deliquescent. Sol. in H_2O with absorption of much heat.

250 pts. $\text{CaCl}_2 + 6\text{H}_2\text{O}$ with 100 pts. H_2O at 10.8° lower the temp. 23.2°. (Rüdorff, B. 2. 68.)

Melts in crystal H_2O at 28° (Tilden, Chem. Soc. 45. 409); at 30.2° (Bakhuys Roozeboom.)

Sat. solution in H_2O contains at:

—22°	—17°	—5°	—5°	+4°
31 5	32.4	35 1	35 2	36 5% salt,
8°	22°	29°	35°	49°
37.9	42.1	46.1	49 0	55 1% salt,
63°	80°	104°	115°	
55 9	57.5	58.5	58 6% salt.	

(Étard, A. ch. 1894, (7) 2. 532.)

Sat. solution of $\text{CaCl}_2 + 6\text{H}_2\text{O}$ contains

44.77 g. CaCl_2 at 25° . (Schreinemakers and Figgie, Chem. Weekbl 1911, 8. 685.)
See also above.

Solubility of $\text{CaCl}_2 + 6\text{H}_2\text{O}$ in ethyl alcohol + Aq under addition of increasing amounts of CaCl_2 .

Per cent of alcohol by volume	G. CaCl_2 added	Grams CaCl_2 in 5 cc of solution

"	4	1.641
"	5	1.709

(Bodtker, Z. phys. Ch 1897, 22. 510.)

Calcium hydroxylamine chloride, $\text{CaCl}_2 \cdot 3\text{NH}_2\text{OH} \cdot \text{HCl}$.

(Antonow, J. Russ. Phys. Chem. Soc 1905, 37. 479.)

Calcium iodine trichloride, $2\text{ICl}_3 \cdot \text{CaCl}_2 + 8\text{H}_2\text{O}$.

Hydroscopic. (Weinland, Z. anorg. 1902, 30. 142.)

Calcium mercuric chloride, $\text{CaCl}_2 \cdot 5\text{HgCl}_2 + 8\text{H}_2\text{O}$

Decomp. by cold H_2O , which dissolves out CaCl_2 , but all dissolves on heating. (v. Bonsdorff, 1829.)

$\text{CaCl}_2 \cdot 2\text{HgCl}_2 + 6\text{H}_2\text{O}$. Deliquescent. Very sol. in H_2O . (v. Bonsdorff.)

$\text{CaCl}_2 \cdot 6\text{HgCl}_2 + 6\text{H}_2\text{O}$. Very deliquescent. Decomp. by H_2O . (Stromholm, J. pr 1902, (2) 66. 521.)

Calcium lead chloride, basic.

See Calcium lead oxychloride.

Calcium magnesium chloride, $\text{CaCl}_2 \cdot 2\text{MgCl}_2 + 12\text{H}_2\text{O}$.

Mm. *Tachhydrite*. Deliquescent.

100 pts. H_2O dissolve 160.3 pts. at 18.75° . By dissolving 20 pts. in 80 pts. H_2O the temp. is raised 7.75° . (Bischof.)

Calcium mercuric chloride, basic, $\text{CaCl}_2 \cdot 2\text{HgO} + 4\text{H}_2\text{O}$.

See Calcium mercuric oxychloride.

Calcium thallic chloride, $2\text{TiCl}_3 \cdot \text{CaCl}_2 + 6\text{H}_2\text{O}$.

Can be cryst. from H_2O . (Gewecke A. 1909, 366. 222.)

Calcium tin (stannic) chloride.

See Chlorostannate, calcium.

Calcium uranium chloride, $\text{CaCl}_2 \cdot \text{UCl}_4$.

Decomp. by H_2O . (Aloy, Bull. Soc 1899, (3) 21. 265.)

Calcium zinc chloride.

$\text{CaZnCl}_4 + 5\frac{1}{2}\text{H}_2\text{O}$, and $\text{Ca}_2\text{ZnCl}_6 + 6\text{H}_2\text{O}$. Very hygroscopic (Ephraim, Z. anorg. 1910, 67. 379.)

Calcium chloride ammonia, $\text{CaCl}_2 \cdot 8\text{NH}_3$

Sol. in H_2O with decomp. (Faraday.)

Calcium chloride hydrazine, $\text{CaCl}_2 \cdot 2\text{N}_2\text{H}_4(?)$.

Ppt. (Franzen, Z. anorg. 1908, 60. 288.)

Calcium chloride hydroxylamine, $\text{CaCl}_2 \cdot \text{NH}_2\text{OH} + 5\text{H}_2\text{O}$.

Not hygroscopic (Antonow, J. Russ. Phys. Chem. Soc 1905, 37. 479.)

$\text{CaCl}_2 \cdot 2\text{NH}_2\text{OH} + \text{H}_2\text{O}$. Aqueous solution sat. at 20° contains 56.6 pts. salt.

$+ 2\text{H}_2\text{O}$. (Antonow, l. c.)

$2\text{CaCl}_2 \cdot 3\text{NH}_2\text{OH} + 6\text{H}_2\text{O}$ (Antonow, l. c.)

$2\text{CaCl}_2 \cdot 5\text{NH}_2\text{OH} + 4\text{H}_2\text{O}$ (Antonow, l. c.)

Calcium chloride lead oxide, $\text{CaCl}_2 \cdot 3\text{PbO} + 3\text{H}_2\text{O}$.

See Calcium lead oxychloride.

Calcium chloroferrite, $\text{CaO} \cdot \text{CaCl}_2 \cdot \text{Fe}_2\text{O}_3$.

Insol. in H_2O . (le Chatelier, C. R. 99. 276.)

Calcium chlorofluoride, $\text{CaF}_2 \cdot \text{CaCl}_2$.

Decomp. by H_2O , by very dil. HCl , HNO_3 or acetic acid, by hot dil. or conc. H_2SO_4 . Sol. in conc. HCl or HNO_3 . Insol. in, and not decomp. by cold or boiling alcohol. (Defacqz, A. ch. 1904, (8) 1. 355.)

Calcium cyanamide, basic, $\text{CN}_2(\text{CaOH})_2 + 6\text{H}_2\text{O}$.

Sl. sol. in H_2O . (Meyer, J. pr. 1878, (2) 18. 425.)

Calcium cyanamide, CaCN_2 .

Decomp. by H_2O . (Meyer, J. pr. 1878, (2) 18. 425.)

Calcium subfluoride, CaF .

Decomp. by H_2O .

Sol. in hot dil. HCl and somewhat sol. in dil. acetic acid.

Somewhat sol. in boiling absolute alcohol. (Wöhler, Z. anorg. 1909, 61. 81.)

Calcium fluoride, CaF_2 .

Sol. in 26,923 pts. H_2O at 15.5° . (Wilson, Ch. Gaz. 1850. 366.)

1 l. H_2O dissolves 16 mg. CaF_2 at 18° . (Kohlrausch, Z. phys. Ch. 1904, 60. 356.)

16.3 mg. in 1 l. of sat. solution at 18° . (Kohlrausch, Z. phys. Ch. 1908, 64. 168.)

When pptd. not completely insol. in H_2O ; scarcely sol. in dil., more sol. in conc. $HCl + Aq$; decomp. by conc. H_2SO_4 ; not decomp. by dil. alkaline solutions. (Fresenius)

Not decomp. by conc. H_2SO_4 below 40° , but forms a transparent syrup. CaF_2 is pptd. from this solution by addition of H_2O .

Sol. in conc. HCl and $HNO_3 + Aq$ in the same way, but the liquid is not viscid. Very sl. sol. in HF . Boiling $HCl + Aq$ dissolves slightly. Decomp. by boiling $HNO_3 + Aq$.

Sol. in NH_4 salts + Aq (Rose.)

Partly decomp. by boiling K_2CO_3 , and $Na_2CO_3 + Aq$ (Dulong, A. ch. 82. 278)

Insol. in liquid HF . (Franklin, Z. anorg. 1905, 46. 2.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Min. *Fluorite* (*Fluorspar*). Calculated from electrical conductivity of $CaF_2 + Aq$, 1 l. H_2O dissolves 14 mg. CaF_2 at 18° . (Kohlrausch and Rose, Z. phys. Ch. 12. 241.)

Calcium hydrogen fluoride, $CaH_2F_4 + 6H_2O$.

Decomp. by boiling H_2O . Sol. in $HF + Aq$. (Fremy, A. ch. (3) 47. 35.)

Calcium tantalum fluoride.

See Fluotantalate, calcium.

Calcium stannic fluoride.

See Fluostannate, calcium.

Calcium titanium fluoride.

See Fluotitanate, calcium.

Calcium fluoiodide, $CaF_2 \cdot CaI_2$.

Very deliquescent. Decomp. by cold H_2O , more rapidly by hot H_2O , by dil. HCl , HNO_3 , H_2SO_4 conc. H_2SO_4 , and by alcohol and by ether if these reagents are not absolute. (Defacqz, A. ch. 1904, (8) 1. 358.)

Calcium hydride, CaH .

Decomp. by $HCl + Aq$. (Winkler, B. 24. 1975. (Moldenhauer, Z. anorg. 1913, 82. 136.)

CaH_2 . Readily decomp. by H_2O and dil. acids, almost insol. in conc. acids. Insol. in benzene, turpentine and alkyl haloids. (Moissan, C. R. 1898, 127. 30-31.)

Decomp. H_2O and ether; sol. in dil. H_2SO_4 and HNO_3 ; almost insol. in conc. H_2SO_4 and HNO_3 . (von Lengyll, C. C. 1898, II. 262.)

Insol. in CCl_4 , CS_2 , alcohols and ethers. No known solvent. (Moissan, C. C. 1903, I. 863.)

Calcium hydrosulphide, CaS_2H_2 .

Cryst. with $6H_2O$. Extremely sol. in H_2O and alcohol. $\frac{1}{4}$ of its weight of H_2O at or-

dinary temp. more than suffices to hold it in solution. (Divers and Shmidzu, Chem. Soc. 45. 271.)

Sp. gr. of aqueous solution containing 32% anhydrous CaS_2H_2 (64% $CaS_2H_2 + 6H_2O$) = 1.255; 37.5% CaS_2H_2 (75.5% $CaS_2H_2 + 6H_2O$) = 1.310. (Divers and Shmidzu)

Calcium hydroxide, $CaO \cdot H_2O$.

See also Calcium oxide.

Sl. sol. in cold, and less in hot H_2O .

1 pt. CaO dissolves at t° in pts. H_2O

1926.)

Solubility of CaO in KCl and $\text{NaCl} + \text{Aq.}$
Curves are given which show that the solubility of lime in solutions of either NaCl or

KCl is a maximum for all temps. when the solution contains about 60 g. of salt per l. It is a minimum at any fixed temp when the solution is sat, the solubility then being much less than in pure H_2O of the same temp. A solution of NaCl dissolves more lime at all temps and concentrations than a corresponding solution of KCl . In all cases the maximum solubility of lime occurs when the temp. is lowest. With solutions of all concentrations the solubility decreases regularly as the temp. increases. (Cabot, J. Soc. Chem. Ind 1897, 16. 417-419.)

Solubility in $\text{KCl} + \text{Aq}$ increases with increased quantities of KCl and then diminishes, becoming less than the solubility in H_2O alone. (Kernot, Gazz ch. it. 1908, 33. (1) 532.)

KOH or $\text{NaOH} + \text{Aq}$ containing 1 pt. KOH or NaOH in 100 pts. H_2O do not dissolve more than $\frac{1}{50000}$ pt. CaO_2H_2 , but it is sol. in $\text{NH}_4\text{OH} + \text{Aq.}$ (Pelouze, A ch. (3) 33. 11.)

Solubility in $\text{NaOH} + \text{Aq}$ at t° .

+4 H_2O . (Kuznetsov, C. A. **1911**. 842)

+6 H_2O . Sat. aq solution contains at:

−22° +7° 10° 19°
 61.6 65.0 65.1 66.3% salt

51° 64° 130° 248°
 69.4 75.9 81.3 87.1% salt.

(Étard, A. ch. 1894, (7) **2**. 543.)

+7 H_2O . (Kuznetsov.)

Calcium periodide, $\text{CaI}_3 + 15\text{H}_2\text{O}$.

(Mosnier, A. ch. 1897, (7) **12**. 401.)

CaI_4 . (Herz and Bulla, Z. anorg. 1911, **71**. 255.)

Calcium mercuric iodide, $\text{CaI}_2 \cdot \text{HgI}_2 + 8\text{H}_2\text{O}$.

Very deliquescent. Sol. in H_2O , alcohols, allyl iodide, aldehyde, acetic acid, ethyl oxalate and aniline. Sl. sol. in nitrobenzene. Completely insol. in CHCl_3 , CCl_4 , ethyl iodide, ethylene bromide, C_6H_6 , monochlorobenzene and toluene. (Duboin, C. R. 1906, **142**. 573.)

3 CaI_2 , 4 $\text{HgI}_2 + 24\text{H}_2\text{O}$. Sol in H_2O with pptn. of red HgI_2 .

Very sol. in alcohols, glycerine, ethyl acetate, methyl and isobutyl propionate, allyl iodide, aldehyde, acetone, aniline and ethyl oxalate. Insol. or sl. sol. in nitrobenzene. Insol in CHCl_3 , C_6H_6 , ethyl iodide, monochlorobenzene, etc. (Duboin, C. R. 1906, **142**. 397.)

CaI_2 , 2 HgI_2 .

Decomp. by H_2O (Boullay.)

CaI_2 , 5 $\text{HgI}_2 + 8\text{H}_2\text{O}$. Decomp. by H_2O ,

alcohols, glycerine, aldehyde, and acetic acid; slowly by nitrobenzene and ethyl oxalate. Insol in monochlorobenzene, toluene, CHCl_3 and ethylene bromide (Duboin, l. c.)

Calcium silver iodide, CdI_2 , 2 $\text{AgI} + 6\text{H}_2\text{O}$.

Immediately decomp. by H_2O (Simpson, Roy. Soc. Proc. **27**. 120)

Calcium zinc iodide, CaI_2 , $\text{ZnI}_2 + 8\text{H}_2\text{O}$.

Very hygroscopic (Ephraim, Z. anorg. 1910, **67**. 384.)

Calcium iodide ammonia, CaI_2 , 6 NH_3 .

(Isambert, C. R. **66**. 1259.)

Calcium nitride, Ca_3N_2

Sol in dil. acids; insol. in conc (water free) acids. (Moissan, C. R. 1898, **127**. 499.)

Calcium oxide, CaO .

Decomp by H_2O , with evolution of much heat, to form CaO_2H_2 , which see for solubility in H_2C , etc

Calcium peroxide, CaO_2

Very sl. sol in H_2O ; easily sol. in acids, and NH_4 salts + Aq. Insol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Conroy, Chem Soc. (2) **11**, 808.)

+2 H_2O . True composition is $\text{CaO}_2\text{H}_2 + \text{H}_2\text{O}_2$. (de Forcrand, C. R. 1900, **130**. 1390.)
 +8 H_2O . Efflorescent. Difficultly sol. in H_2O with gradual decomp. Insol in alcohol or ether (Gay-Lussac and Thénard, A. ch. (2) **8**. 313)

Calcium oxybromide, 3 CaO , $\text{CaBr}_2 + 16\text{H}_2\text{O}$.

Decomp by H_2O and alcohol. Very easily sol in hydracids and dil. HNO_3 . (Tassily, C. R. 1894, **119**. 372.)

Calcium oxychloride, $\text{Ca}_4\text{O}_3\text{Cl}_2 + 15\text{H}_2\text{O} = 3\text{CaO}$, $\text{CaCl}_2 + 15\text{H}_2\text{O}$.

Decomp. by H_2O or alcohol. (Rose.)

Formula is $\text{Ca}_2\text{HO}_2\text{Cl} + 7\text{H}_2\text{O}$. (Grumshaw, C. N. **30**. 280.)

+16 H_2O . Decomp. by H_2O into CaO_2H_2 and CaCl_2 until a maximum of 85 g. CaCl_2 are dissolved per litre. (Ditte, C. R. **91**. 576.)

4 CaO , $\text{CaCl}_2 + 14\text{H}_2\text{O}$. (Schreinemakers and Figeé, Chem. Weekbl 1911, **8**. 685.)

CaO , CaCl_2 . (Schreinemakers and Figeé.)

Calcium lead oxychloride, CaCl_2 , CaO , 2 $\text{PbO} + 4\text{H}_2\text{O}$.

Sol. in H_2O with decomp. (André, C. R. **104**. 359.)

CaCl_2 , 3 $\text{PbO} + 3\text{H}_2\text{O}$. (André.)

Calcium mercuric oxychloride, CaCl_2 , 2 $\text{HgO} + 4\text{H}_2\text{O}$.

Decomp. immediately by H_2O . (Klinger, B. **16**. 997.)

Calcium oxyiodide, 3CaO , $\text{CaI}_2 + 16\text{H}_2\text{O}$.

Decomp by H_2O , alcohol, and acids. Sol. in hydrazids and in very dil HNO_3 . (Tassily, C. R. 1894, 119. 372.)

Calcium oxysulphide, $\text{Ca}_4\text{O}_3\text{S}_4 + 12\text{H}_2\text{O} = 3\text{CaO}$, $\text{CaS}_4 + 12\text{H}_2\text{O}$.

Decomp by H_2O . Not acted on by absolute alcohol. (Schone, Pogg. 117. 77.)

According to Geuther (A. 224. 178) $= \text{CaS}_3$, $2\text{CaO} + 10$, or $11\text{H}_2\text{O}$. Sol in dil. $\text{HCl} + \text{Aq}$ with separation of S.

$\text{Ca}_3\text{O}_4\text{S}_4 + 18\text{H}_2\text{O} = 4\text{CaO}$, $\text{CaS}_4 + 18\text{H}_2\text{O}$

Decomp by H_2O , but not acted on by absolute alcohol. (Schone, Pogg. 117. 82.)

According to Geuther (A. 224. 178) $= \text{CaS}_3$, $3\text{CaO} + 14$, or $15\text{H}_2\text{O}$.

$\text{Ca}_6\text{O}_5\text{S}_5 + 20\text{H}_2\text{O} = 5\text{CaO}$, $\text{CaS}_5 + 20\text{H}_2\text{O}$ (Rose, Pogg. 55. 433.)

Sol. in 400 pts cold, decomp. by boiling H_2O (Buchner), sl sol. in cold, much more in hot H_2O , but it is not deposited on cooling. Aqueous solution sat at $6^\circ\text{--}7.2^\circ$ has sp. gr. = 1.0105 (Herschel); sol. in alcohol (Gay-Lussac); insol in alcohol (Gmelin)

Calcium phosphide, CaP .

Deliquescent. Decomp. in moist air or with H_2O . Not attacked by conc. HNO_3 , but decomp. by dil. $\text{HNO}_3 + \text{Aq}$ (Thénard, A. ch. (3) 14. 14)

Ca_3P_2 Crystallized

Decomp. by H_2O .

Not attacked by conc. H_2SO_4 . Violently attacked by dil. H_2SO_4 .

Not attacked by abs. alcohol, ether, benzene or oil of turpentine. (Moissan, C. R. 1899, 128. 792.)

Ca_2P_3 . Insol in liquid CO_2 (Büchner, Z. phys. Ch. 1906, 54. 674.)

Calcium selenide, CaSe .

Sl. sol. in H_2O . Very easily decomp. (Fabre, C. R. 102. 1469.)

Calcium silicide, CaSi_2 .

Slowly decomp. by H_2O , sol. in conc. H_2SO_4 and dil. HNO_3 with evolution of H_2 . With conc. HCl it gives H_2 , Si and silicon hydride; with dil. HCl , H_2 and a yellow substance. Sol. in alkali + Aq or $\text{NH}_3 + \text{Aq}$ with evolution of H_2 . (Moissan, C. R. 1902, 134. 505.)

Two modifications

(a) Only sl. sol in HNO_3 ; decomp. H_2O to give an insol. ppt. on addition of HCl .

(b) Easily sol. in HNO_3 and acetic acid; decomp. HCl to give a ppt which is sol. in $\text{KOH} + \text{Aq}$. (de Chalmot, Am. Ch. J. 1896, 18. 320.)

Ca_3Si_2 . Slowly decomp. by H_2O , rapidly by dil. acetic acid or by $\text{H}_2\text{SO}_4 + \text{Aq}$ without evolution of spontaneously inflammable gas. (Honigschmid, M. 1909, 30. 497.)

Decomp. by dil. min. acids, with evolution

of spontaneously inflammable gas (Hack-spill, Bull. Soc. 1903, (4) 3. 619.)

$\text{Ca}_6\text{Si}_{10}$. Insol. in all solvents. Decomp. by boiling H_2O , by conc HCl and by acetic acid. Sol. in dil alkali and alkali carbonates + Aq . Hardly attacked by conc H_2SO_4 or HNO_3 . (Kolb, Z. anorg. 1909, 64. 349.)

$\text{Ca}_{11}\text{Si}_{10}$. Easily decomp. by boiling with H_2O . Decomp. by dil. acetic acid, dil or conc HCl . (Kolb, Z. anorg. 1909, 64. 349 and 356.)

Calcium siliconitride, CaSi_2N_3 .

(Kolb, Z. anorg. 1909, 64. 363.)

$\text{Ca}_2\text{Si}_3\text{N}_4$. Slowly decomp. by boiling with H_2O , somewhat more rapidly with dil $\text{NaOH} + \text{Aq}$. Slowly decomp. by conc HCl . (Kolb, l. c.)

$\text{Ca}_{11}\text{Si}_{10}\text{N}_{11}$. Completely decomp. by HCl . (Kolb, l. c.)

Calcium sulphide, CaS .

500 pts. H_2O dissolve 1 pt. CaS completely; less H_2O dissolves out CaS_2H_2 and leaves CaO_2H_2 . Very much H_2O decomposes completely into CaO_2H_2 and H_2S (Béchamp, A. ch. (4) 16. 222.)

Not decomp. by H_2O , and only sl. sol. therein at ordinary temp. (Pelouze.)

After 48 hours contact with CaS , 1 l H_2O contains at:

10°	18°	40°	60°	90°
0.15	0.23	0.30	0.48	0.33 g. CaS .

After boiling for 2 hours, 0.27 g. CaS is dissolved; addition of NaCl diminishes solubility, but Na_2SO_4 increases it. Lime-water dissolves at 14° 0.18 g CaS , the same amount which H_2O dissolves at 60° . Milk of lime dissolves 0.55 g at 60° . H_2O containing 3 to 79 g. Na_2O per litre dissolves only traces of CaS at 10° , but at $40\text{--}60^\circ$, or by boiling, a large amount of Na_2S is formed. (Kolb, A. ch. (4) 7. 126.)

Sol. in 12,500 pts. H_2O at 12.6° . (Scheurer-Kestner, Répert. chim. appl. 1862. 331.)

Sat. $\text{Na}_2\text{CO}_3 + \text{Aq}$ has scarcely any action on CaS , but a dilute solution has more action. (Kolb.)

Sol in H_2O and sulphur, forming CaS_4 .

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 827.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790.)

Insol. in ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Insol. in methylal. (Eidmann, C. C. 1899, II. 1014.)

Sol. in 10 pts. glycerine. (Cap and Garot, J. Pharm. (3) 26. 81.)

Sol. in sugar + Aq . (Stolle, C. C. 1900, I. 1044.)

Calcium tetrasulphide, CaS_4 .

Known only in solution.

Calcium pentasulphide, CaS_5 .

Sol in H_2O and alcohol (Berzelius)
Exists only in aqueous solution. (Schone, Pogg 117. 73)

Calcium hydroxyl sulphide, $\text{Ca}(\text{OH})\text{SH} + 3\text{H}_2\text{O}$.

Easily sol in H_2O with immediate decomp. and separation of $\text{Ca}(\text{OH})_2$. Insol in alcohol, but slowly decomp. thereby (Diveis and Shimidzu, Chem Soc. 45. 270)

Calcium stannic sulphide.

See Sulphostannate, calcium.

Calomel.

See Mercurous chloride.

Carbamic acid.**Ammonium carbamate acid carbonate (commercial carbonate of ammonia).**

See Carbonate carbamate, ammonium hydrogen.

(salts of hartshorn), $2\text{NH}_4\text{HCO}_3$, NH_4CONH_2

See Carbonate carbamate, ammonium hydrogen.

Carbazote silicon, C_2SiN .

Insol. in acids, even HF; also in boiling $\text{KOH} + \text{Aq.}$ (Schutzenberger and Colson, C. R. 92. 1508.)

Carbon, C.

Insol. in all solvents.

Diamond is unacted upon by $\text{KClO}_3 + \text{fum. HNO}_3$; graphite forms graphitic acid by $\text{KClO}_3 + \text{fum. HNO}_3$; amorphous carbon is sol in $\text{KClO}_3 + \text{fum. HNO}_3$. (Berthelot, A. ch. (4) 19. 399.)

Diamond is sol in molten iron at 1160° . Amorphous carbon is insol. in molten iron at 1160° , but becomes sol therein by heating to 1400° . (Hempel, B 18. 998.)

Insol. in liquid CO_2 . (Büchner, Z. phys. Ch. 1906, 54. 874.)

Charcoal is insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 830.)

The quantity of carbon dissolved by iron diminishes by increasing phosphorus, falling by about 0.5% for each additional 2.0% of phosphorus. (Fettweis, Metallurgie, 1906, 3. 60)

Solubility in iron is reduced by the presence of tin and of sulphur. (Wüst, Metallurgie, 1906, 3. 169.)

The solubility of C in iron is increased by the presence of chromium; 9.2% C dissolved when 62% Cr is present in the mixture. (Goerens, Metallurgie, 1907, 4. 18.)

Carbon boride, CB_6 .

Insol. in boiling $\text{HNO}_3 + \text{Aq}$ (Joly, C R. 97. 456)

Carbon suboxide, C_3O_2

B-pt. $+7^\circ$ at 761 mm.

Sol in H_2O with formation of malonic acid
Slowly decomp. on standing in a sealed tube (Diels, B. 1906, 39. 696.)

Carbon monoxide, CO .

Sol in 50 vols. recently boiled H_2O . (Davy)

Sol. in 16 vols. H_2O . (de Saussure)

Sol in 27 vols. H_2O (Dalton)

100 vols. H_2O dissolve 6.2 vols. CO at 18° . (de Saussure)

Solubility of CO in H_2O : 1 vol. H_2O at t° dissolves V vols. CO reduced to 0° and 760 mm.

t°	V	t°	V	t°	V
0	0 03287	7	0 02796	14	0 02466

6	0 02857	13	0 02504	20	0 02312

(Bunsen's Gasometry, pp. 287, 128, 146.)

Coefficient of absorption = $0.032874 - 0.00081632t + 0.000016421t^2$. (Bunsen and Pauli, A 93. 16.)

Solubility of CO in H_2O .

β = Vol. CO absorbed by 1 vol. H_2O at a partial pressure of 760 mm.

β^1 = Vol. CO (reduced to 0° and 760 mm.) absorbed by 1 vol. of H_2O under a total pressure of 760 mm.

q = g. CO dissolved by 100 g. H_2O at a total pressure of 760 mm.

(Cassuto, Phys. Zeit. 1904, 5. 236.)

Coefficient of absorption of CO in H₂O at 25° equals 0.0154. (Findlay and Creighton, Biochem J. 1911, 5. 294.)

■ Cuprous chloride in an hydrochloric acid or ammoniacal solution, and ammoniacal solutions of cuprous salts absorb large amounts of CO. (Leblanc, C. R. 30. 488.)

Cuprous chloride dissolved in HCl + Aq absorbs 15–20 vols. CO. (Berthelot, A. ch. (3) 51. 66.)

Absorbed by KOH, NaOH, Ba(OH)₂, and Ca(OH)₂ + Aq, more readily by ether, alcohol, and wood spirit, with formation of formic acid. (Berthelot, A. ch. (3) 61. 463.)

Sol. in HCN. (Bottinger, B. 10. 1122.)

1 vol. alcohol absorbs 0.20443 vols. CO gas at all temperatures between 0° and 25°. (Carius, A. 94. 135.)

100 vols. alcohol (0.84 sp. gr.) dissolve 14.5 vols CO at 18°, 100 vols rectified naphtha (0.784 sp. gr.), 20.0 vols CO at 18°, 100 vols. oil of lavender (0.88 sp. gr.), 15.6 vols CO at 18°, 100 vols olive oil (0.915 sp. gr.), 14.2 vols CO at 18°, 100 vols. sat. KCl + Aq (1.168 sp. gr.), 5.2 vols CO at 18° (de Saussure, 1814.)

1 vol. oil of turpentine absorbs 0.16–0.20 vol CO (de Saussure)

Sol. in ether (Regnault.)

Insol in caoutchine.

Coefficient of absorption for petroleum = 0.123 at 20°, and 0.134 at 10°. (Gniewaz and Walfisz, Zeit. phys. Ch. 1. 70.)

Carbon dioxide, CO₂.

Gas.—

H₂O dissolves about its own vol. CO₂ at the ordinary temperature (the solution obtained being of 1 0018 sp gr) and pressure, and an additional vol. for the pressure of each additional atmosphere to which it is subjected.

The power of H₂O to absorb CO₂ does not increase in precisely the same ratio as the pressure (Soubeiran) 5 vols. CO₂ dissolve in 1 vol. H₂O at 7 atmos. pressure, and much greater pressure is necessary in order to increase the amount of gas dissolved, but up to 4 or 5 atmospheres the amount of gas dissolved is very nearly proportional to the pressure (Courbe, J. Pharm. 26. 121).

100 vols. H₂O at 12.78° absorb 116 vols. CO₂ (Cavendish); at 29.44°, 84 vols. CO₂ (Henry), at 15.56°, 106 vols. CO₂ (Saussure); at 15.56°, 108 vols. CO₂ (Henry), at 15.56°, 100 vols. CO₂ (Dalton).

100 vols. H₂O at t° C. absorb V vols. of CO₂ gas reduced to 60° F. and 30 in. pressure

t°	V	t°	V
0	175.72	26.7	68.60

15.6	100.50	65.6	11.40
21.1	83.86	100	trace

(Rogers, Am. J. Sci. (2) 6. 107)

1 vol. H₂O at 5° absorbs somewhat more than 1 vol. CO₂, at 10° scarcely 1 vol., and still less at higher temp. CO₂+Aq sat. at 2° has 1 0015 sp gr, most of the CO₂ escapes upon exposing the solution to the air, the more quickly the higher the temperature. But as CO₂ diminishes, the remainder is more obstinately held, so that boiling for ½ hour is necessary to expel it completely. (Bergman)

Solubility of CO₂ in H₂O. 1 vol. H₂O at t° and 760 mm. dissolves V vols. CO₂ gas reduced to 0° and 760 mm.

Sl sol. in HCl + Aq.

100 vols H₂SO₄ of 1.840 sp. gr. absorb 45 vols CO₂. (de Saussure.)

H₂SO₄ of ordinary density at 15.56° and common pressure absorbs 94% of its vol of CO₂, fuming H₂SO₄, 125%, the absorption for pure H₂O under the same conditions being 98%. (Rogers Am. J. Sci (2) 5. 115.)

H₂SO₄ absorbs 7-10% CO₂. (Hlasiwetz, W. A. B. 20. 193.)

Coefficient of absorption by conc. H₂SO₄ = 0.932, which is the same as that by H₂O; but this diminishes on diluting, and is at its lowest limit 0.666, when the composition of the solution is H₂SO₄, H₂O; upon further dilution the coefficient of solubility gradually increases, and when 58 H₂O are present to 1 H₂SO₄, the

coefficient of absorption is 0.857. (Set-schenow, J. B. 1876. 46)

Absorption of CO₂ by H₂SO₄ + Aq.

In collecting CO₂ gas in pneumatic operations, a saturated solution of common salt is better than H₂O for filling the trough. This solution will only absorb about 1/3 of the amount of CO₂ absorbed by pure H₂O (de Saussure, l. c.)

100 vols of the following solutions at 18° and ordinary pressure absorb vols CO₂—

	Sp gr	Vols CO ₂
Sat. NaCl + Aq (containing 29% of NaCl)	1.212	32.9
Sat. NH ₄ Cl + Aq (containing 27.53% of NH ₄ Cl)		1 078 75
Sat. KCl + Aq (containing 26% of KCl)		1 168 61
Sat. CaCl ₂ + Aq (containing 40.2% of CaCl ₂)		1 402 26.1
Sat. K ₂ SO ₄ + Aq (containing 9.42% of K ₂ SO ₄)		1 077 62
Sat. Na ₂ SO ₄ + Aq (containing 11.14% of Na ₂ SO ₄)		1 105 38
Sat. K ₂ Al ₂ (SO ₄) ₄ + Aq (containing 9.14% of K ₂ Al ₂ (SO ₄) ₄ + 24H ₂ O)		1.047 70
Sat. KNO ₃ + Aq (containing 20.6% of KNO ₃)		1 139 57
Sat. NaNO ₃ + Aq (containing 26.4% of NaNO ₃)		1 206 45
Sat. H ₂ C ₄ H ₄ O ₆ + Aq (containing 53.37% of H ₂ C ₄ H ₄ O ₆)		1 288 41
(de Saussure, Gilbert's Ann. Phys. 47. 167)		

About half as sol. in NaCl + Aq (15% NaCl) as in H₂O.

Much more sol. in Na₂HPO₄ + Aq or Na₂CO₃ + Aq than in H₂O, the quantity dissolved increasing with the amount of salt in the solution. The solubility in these solutions depends on the coefficient of solubility in H₂O plus the product of a constant coefficient multiplied by the amount of salt in the solution; this constant equals 0.069 for Na₂HPO₄, and 0.088 for Na₂CO₃. (Fernet, A. ch. (3) 47. 307.)

Fernet's determinations are not accurate. (L. Meyer, A. Suppl. 2. 157.)

1 mol. Na₂HPO₄ in dil. Na₂HPO₄ + Aq absorbs 2 mols. CO₂. (Setschenow.)

Solutions of salts of similar constitution are equivalent in regard to their power of absorption of CO₂, when they contain the same percentage of crystal water. Experiments were made with solutions of alum, MgSO₄, 7H₂O, and ZnSO₄, 7H₂O, containing 10% of the salts. The MgSO₄ solution absorbed the greatest proportional amount of CO₂, and the alum the least. The further rule was deduced that with salts of similar constitution and the same amount of crystal water, the

absorptiometric equivalents are identical with the chemical equivalents (Setschenow, B. 6. 1461.)

Salts can be divided into two classes, according as CO₂ has chemical action on the salt or not. In the first case, i. e., when there is chemical combination or action of CO₂ on the salt in solution, the amount of CO₂ absorbed increases with increasing concentration of the solution; in the second case, however, the amount of CO₂ decreases with the strength of the solution. Several salts can be arranged in a series as regards their power of absorption, beginning with that which has the greatest, as follows: Na₂CO₃, Na₂B₄O₇, Na₂HPO₄, Na₂C₂H₃O₂, Na₂C₆H₅O₇, Na₂C₂O₄, Na₂C₃H₃O₃, MnO₃, MCl, M₂SO₄. The division between the two classes occurs in this series at Na₂C₂O₄.

The matter is discussed at length in the original papers (Setschenow, Mémoires Acad. St. Petersb. 22. No. 3. Also further, Setschenow, *ib.* 34. No. 3, and 35. No. 7. See also Ostwald, Allgemeine Chemie, 2^{te} Aufl. vol. 1, p. 629.)

Solubility of CO₂ in salts + Aq at 15.2°

CO₂ = cc. CO₂ (at 0° and 760 mm.) dissolved per cc. of salt solution.

(Setschenow, A. ch. 1892, (6) 25. 226.)

CO₂ is not disengaged at ordinary temp. from H₂O, in which $\frac{1}{1000}$ pt. of CaCO₃ or MgCO₃ is held in solution thereby. These solutions have a great power of retaining CO₂ even at a boiling temp. or with diminished pressure, and they also absorb CO₂ from the air in much larger quantity than pure H₂O. (Bineau.)

BaCO₃ in H₂O also retains CO₂ even after long boiling. (Storer.)

CO₂ is also absorbed from the air by Na₂CO₃, or K₂CO₃ + Aq, especially if dilute.

Absorption of CO₂ by NaCl + Aq at t°.

α = Coefficient of absorption for a 6.52% NaCl solution.

200	86.3	65.3
400	91.6	66.7
700	101.5	69.7

Solvent. Methyl acetate.

t = -78°, sp gr = 1.056		
Pressure	Coefficient of absorption	Solubility
50	304.9	224.1
100	315.0	224.3
200	337.4	223.1
400	389.3	225.6
650	498.1	231.2

t = -59°, sp gr = 1.032		
Pressure	Coefficient of absorption	Solubility
100	94.3	75.8
200	98.45	77.1
400	103.6	77.6
700	112.9	79.0

(Stern, Z. phys. Ch. 1912, 81. 468)

Solubility of CO₂ in ether at 0° = 7.33; at 10° = 6.044; at 15° = 5.46. (Christoff, Z. phys. Ch. 1912, 79. 459.)

Coefficient of absorption in chloroform is 0.20376 at 36.57 mm., and 4.43757 at 762 mm. pressure. (Woukoloff, C. R. 109. 62.)

100 vols of following liquids absorb vols CO ₂ at 18°—		
	Sp gr.	Vols. CO ₂
Ether	0.727	217
Rectified naphtha	0.784	169
Oil of turpentine	0.860	166
Oil of lavender (freshly distilled)	0.880	191
Oil of thyme	0.890	188
Linseed oil	0.940	156
Olive oil	0.915	151
Gum-arabic + Aq (containing 25% of the gum)	1.092	75
Cane-sugar + Aq (containing 25% of sugar)	1.104	72
(de Saussure, l. c)		

1 vol oil of turpentine absorbs 1.7–1.9 vols. CO₂ (Saussure.)

1 vol spirit at 10° absorbs 2 vols CO₂ (de Saussure)

1 vol. olive oil at 10° absorbs 1 + vol. CO₂ (de Saussure.)

1 vol. oil of turpentine at 10° absorbs 2 vols CO₂ (Bergman)

1 vol. caoutchine absorbs 11 vols CO₂. (Bergman)

Coefficient of absorption for petroleum is 1.17 at 20° and 1.31 at 10°. (Gniewasz and Walfisz, Zeit. phys. Ch. 1. 70.)

100 vols. petroleum absorb 70 vols. CO₂ at 10°. (Robinet, C. R. 58. 608.)

Solubility of CO₂ in $\frac{N}{2}$ solutions of various organic substances at 20°.

Substance	Sp gr. of $\frac{N}{2}$ solution	Coeff of absorption	cc CO ₂ dissolved in 1000 g. H ₂ O
Dextrose	1.0328	0.792	841
Mannite	1.03031	0.782	833
Glycerine	1.01413	0.843	864

895	0 941	1223	0 940
983	0 940	1302	0 942

(Findlay and Creighton, Chem. Soc. 1910, 97. 555.)

Solubility of CO₂ in CS₂ increases approx. proportionally with the pressure. The absorption is greater at lower temp. and less at higher temp. than is required by Dalton's law. (Woukoloff, C. R. 1889, 108. 674.)

Absorption of CO₂ by sugar + Aq.

Sugar + Aq	Grams CO ₂ absorbed by 75 cc. of solution at 15.5° and 720 mm.
$\frac{1}{10}$ -N sugar solution	0.1225
$\frac{1}{2}$ -N " "	0.1089
1-N " "	0.0931

(Christoff, Z. phys. Ch. 1905, 53. 329.)

Absorption of CO₂ in sugar + Aq at 20°.

Conc. of solution	Sp. gr.	Coefficient of absorption
$\frac{1}{8}$ mol per l.	1.01518	0 846
$\frac{1}{4}$ " " "	1.03125	0 815
$\frac{1}{2}$ " " "	1.06372	0 756
1 " " "	1.12809	0 649

(Usher, Chem. Soc. 1910, 97. 72.)

Liquid.—Not miscible with H₂O, though slightly sol. therein, or with fatty oils; miscible with alcohol, ether, CS₂, and the essential oils. (Thilorier, Mitchell.)

Unacted upon by H₂O; sol. in alcohol, ethers, petroleum, oil of turpentine, and CS₂. (Mareska and Donny.)

Petroleum dissolves 5 to 6 vols. liquid CO₂. (Cailletet, C. R. 75. 1271.)

Sl. sol. in CS₂. (Cailletet.)

Solid.—When immersed in H₂O, rapidly volatilizes and dissolves. With alcohol or ether it forms a semi-fluid mixture. (Channing, Am. J. Sci. (2) 5. 186.)

Only slightly sol. in anhydrous ether, but may be mixed therewith to a paste. (Thilorier.)

Sol. in methyl chloride below -65° to the point of sat. without decomp. (Villard, C. R. 1895, 120. 1413.)

+6H₂O. (Villard, C. R. 1894, 119. 369.)

Carbon selenide, C₄Se.

Sol. only in hot conc. H₂SO₄. (v. Bartal, Ch. Z. 1906, 30. 810.)

C₈Se. Insol. in H₂O, CS₂, and ether. Easily sol. in hot conc. H₂SO₄; sol. in conc. NaOH + Aq from which it is pptd. by HCl. (v. Bartal.)

Carbon silicide CSi.

(*Carborundum*.) Not attacked by any acids, even HF; sl. attacked by caustic alkalis or carbonates. (Acheson, C. N. 68. 179.)

Not attacked by KOH + Aq (Schutzenberger, C. R. 114. 1089.)

Carbon monosulphide, CS.

Insol. in H₂O, alcohol, oil of turpentine, or benzene; somewhat sol. in CS₂ or ether; sol. in warm HNO₃; sol. in conc. KOH + Aq. (Sidot, C. R. 81. 32.)

Readily absorbed by alcohol and aniline. (Deninger, J. pr. 1895, (2) 51. 349.)

Carbon disulphide, CS₂.

Very sl. sol. in H₂O.

1 l. H₂O dissolves 2-3 g. CS₂ (Ckiani, Bull. Soc. 43. 562); 3.5-4.52 g. (Peligot, zb. 43. 563).

30 ccm. CS₂ shaken with 8690 ccm. H₂O at 20-23° for 18 days decreased 11 ccm. in 9 days and 1 4 ccm. in the next 3 days by diffused light, and 0.6 ccm. in the last 5 days (no light). Part of the CS₂ was decomp. and 7.85 ccm. were dissolved, therefore H₂O dissolves $\frac{1}{1000}$ of its weight CS₂. (Sestini, Gazz. ch. it. 1. 473.)

Solubility of CS₂ in H₂O.

100 pts. H₂O dissolve 0.203 pts. CS₂ at 12-13°

" " 0.191 " " 15-16°

" " 0.168 " " 25-27°

" " 0.145 " " 30-33°.

(Page, C. N. 41. 195.)

Solubility of CS₂ in H₂O. a=g. CS₂ in 1000 ccm. solution at t°.

a	t°	a	t°	a	t°
2.04	0	1.79	20	1.11	40
1.99	5	1.69	25	0.70	45
1.94	10	1.55	30	0.14	49
1.87	15	1.37	35		

(Chancel and Parmentier, C. R. 100. 773.)

100 g. H₂O dissolve at t°:

t° 0 10 20 30
0.258 0.239 0.201 0.195 g. CS₂.

(Rex, Z. phys. Ch. 1906, 55. 365.)

Absorption of CS₂ vapor by H₂O at t°.

t°	Coefficient of absorption
0	3 573
10	2 189
20	1 346
30	0 799

Calc from data of Chancel and Parmentier, C. R. 100. 733.)

(Winkler, Z. phys. Ch. 1906, 55. 352.)

Vapors of CS₂ are most easily absorbed by alcoholic solution of KOH. Sl. absorbed by KOH+Aq. and very slowly by CuSO₄, Pb(C₂H₃O₂)₂+Aq. conc. H₂SO₄, or CaCl₂ in HCl+Aq. (Berthelot, A. ch. (3) 51. 74.)

Solubility in alcohol S=strength of alcohol in per cent by weight; P=pts. CS₂ which dissolve in 10 ccm. alcohol at 17°.

S	P	S	P
100	∞	91.37	5 00
98 5	18 20	84 12	3 00
98 15	13.20	76 02	2 00
96 95	10.00	48 40	0.20
93 54	7 00	47 90	0 00

(Tuchschmidt and Follenius, B. 4. 583.)

Miscible with absolute alcohol, ether, ethereal and fatty oils, and liquid CO₂.

Tricarbon disulphide, C₃S₂.

Insol. in H₂O; easily sol. in alcohol, ether, chloroform, benzene, and CS₂. The alcoholic and ethereal solutions decomp. on standing. (Lengyel, B. 26. 2960.)

Sol. in alcohol with decomp. Sol. in CS₂ and in benzene. (Stock, B. 1912, 45. 3575.)

Solid modification. Insol. in H₂O and ordinary solvents. Sol. in KOH+Aq. (Lengyel.)

Carbon sulphoselenide, CSSe.

Mpt. -85°, bpt. +84°.

Decomp. by light. Not attacked by H₂O.

Sol. in hot conc. HNO₃. Decomp. by Br₂ to an oil. Sol. in alcohol with decomp. Miscible with CS₂. (Stock, B. 1914, 47. 150.)

Carbon sulphotelluride, CSTe.

Mpt. -54°. Very unstable.

Miscible with CS₂ and benzene without decomp. (Stock, B. 1914, 47. 142.)

Carbonatochloroplatin diamine carbonate chloroplatin diamine nitrate.

CO₃ [Pt N₂H₆] (CO₃)₂, Cl₂Pt(N₂H₆NO₂)₂.

Precipitate. (Cleve, J. B. 1867. 321.)

Carbonatonitratoplatin diamine carbonate, CO₃, (NO₃)₂ [Pt(N₂H₆)₂](CO₃)₂.

Sol. in boiling H₂O. (Cleve)

Carbonatotetramine cobaltic bromide, Co(NH₃)₄CO₃Br.

Much less sol. than chloride. (Jorgensen, Z. anorg. 2. 279.)

— **carbonate,** [Co(NH₃)₄CO₃]₂CO₃+3H₂O. Very sol. in H₂O. (Jorgensen.)

— **chloraurate,** [Co(NH₃)₄CO₃]₂AuCl₄+ $\frac{1}{2}$ H₂O.

Somewhat sol. in H₂O; nearly absolutely insol. in alcohol. (Jorgensen.)

— **chloride,** Co(NH₃)₄CO₃Cl.

Easily sol. in H₂O; insol. in alcohol. (Jorgensen.)

— **chloroplatinate,** [Co(NH₃)₄CO₃]₂PtCl₆+2H₂O.

Nearly insol in H₂O and alcohol. (Jorgensen.)

— **chloroplatinite,** [Co(NH₃)₄CO₃]₂PtCl₄.

Nearly insol. in H₂O; wholly in alcohol. (Jorgensen.)

— **dithionate,** [Co(NH₃)₄CO₃]₂S₂O₈.

Ppt. (Jorgensen.)

— **iodide,** Co(NH₃)₄CO₃I.

Much less sol. than bromide or chloride. (Jorgensen.)

— **nitrate,** Co(NH₃)₄CO₃NO₃+ $\frac{1}{2}$ H₂O.

*Sol. in about 15 pts. cold H₂O; insol. in alcohol. (Jorgensen.)

— **sulphate,** [Co(NH₃)₄CO₃]₂SO₄+3H₂O.

Considerably less sol. in H₂O than the nitrate. (Jorgensen.)

Carbonic acid, H₂CO₃

See Carbon dioxide.

Carbonates.

Carbonates of Na, K, Rb, and Cs are easily sol. in H₂O; carbonates of Li and Tl are much less sol.; other carbonates are nearly or quite insol. All carbonates are sol. to some extent in H₂O containing CO₂. All carbonates, except those of NH₄, Rb, and Cs, are insol. in alcohol.

Sol. in those acids which are themselves sol. in H₂O, except HCN and H₃BO₃.

Insol. in liquid NH₃. (Franklin, Am. Ch. J. 1898, 20. 824.)

Aluminum carbonate, basic.

$5\text{Al}_2\text{O}_3, 6\text{CO}_2 + 37\text{H}_2\text{O} = 3\text{Al}(\text{OH})_3, \text{Al}_2(\text{CO}_3)_3 + 14\text{H}_2\text{O}$. (Seubert, Z. anorg. 1893, **4**, 67.)

$\text{Al}_2\text{O}_3, \text{CO}_2$. (Parkmann, Sill Am. J. (2) **34**, 324.)

$3\text{Al}_2\text{O}_3, 2\text{CO}_2 + 16\text{H}_2\text{O}$. (Muspratt and Danson, A. **72**, 120.)

$3\text{Al}_2\text{O}_3, 2\text{CO}_2 + 9\text{H}_2\text{O}$. (Wallace, Chem. Gaz. 1858, 410.)

$5\text{Al}_2\text{O}_3, 3\text{CO}_2 + 18\text{H}_2\text{O}$. (Bley, J. pr. **39**, 11.)

$2\text{Al}_2\text{O}_3, \text{CO}_2 + 6\text{H}_2\text{O} = 10\text{Al}(\text{OH})_3, \text{Al}_2(\text{CO}_3)_3 + 3\text{H}_2\text{O}$. Sol. in cold dil. acids. (Schlumberger, Bull. Soc. 1895, (3) **13**, 46.)

$+8\text{H}_2\text{O}$. (Urban and Renoul, J. Pharm. (4) **30**, 340.) $= 10\text{Al}(\text{OH})_3, \text{Al}_2(\text{CO}_3)_3 + 9\text{H}_2\text{O}$. (Seubert, Z. anorg. 1893, **4**, 87.)

$8\text{Al}_2\text{O}_3, 3\text{CO}_2 + 40\text{H}_2\text{O}$. (Langlois, A. ch. (3) **48**, 505.)

All are precipitates, insol. in H_2O , sol. in acids, and give off CO_2 at slight heat.

There are no definite carbonates of aluminum. (Cameron, J. phys. Chem. 1908, **12**, 572.)

Aluminum ammonium carbonate, $\text{Al}_2\text{O}_3, \text{CO}_2, (\text{NH}_4)_2\text{CO}_3 + 4\text{H}_2\text{O}$.

Precipitate (Rose, Pogg. **91**, 460.)

Aluminum sodium carbonate, $\text{Al}_2\text{O}_3, \text{CO}_2, 2\text{Na}_2\text{CO}_3 + 24\text{H}_2\text{O}$.

Precipitate. Sol. in cold dil. acids. (Bley, J. pr. **39**, 22.)

Ammonium carbonate, $(\text{NH}_4)_2\text{CO}_3 + \text{H}_2\text{O}$.

Sol. at 15° in its own weight H_2O . Solution in H_2O gives off gas at $70-75^\circ$, and boils at $75-80^\circ$. Sl. sol. in cold dil. $\text{NH}_4\text{OH} + \text{Aq}$, more sol. at ordinary temp. Insol. in conc. $\text{NH}_4\text{OH} + \text{Aq}$. (Divers, Chem. Soc. (2) **8**, 171, 259, and 364.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, **20**, 826.)

Insol. in alcohol.

Insol. in CS_2 . (Arctowski, Z. anorg. 1894, **6**, 257.)

Insol. in ethyl acetate. (Naumann, B. 1910, **43**, 314.)

100 g. pure glycerine dissolve 20 g. $(\text{NH}_4)_2\text{CO}_3$ at 15° . (Ossendowski, Pharm. J. 1907, **79**, 575.)

Ammonium hydrogen carbonate, NH_4HCO_3 .

Sol. at 15° in about 8 pts. H_2O . (Berthollet, J. Phys. **66**, 168.)

Sol. at 12.8° in about 6 pts. H_2O . (J. Davy, N. Edinb. J. **16**, 245.)

Solution decomp. on air or by gentle heat or by addition of the solid salt. (Berthollet.)

100 pts. H_2O dissolve at 0° , 11.9 pts.; at 10° , 15.85 pts.; at 20° , 21 pts.; at 30° , 27 pts. NH_4HCO_3 . (Dibbitts, J. pr. (2) **10**, 417.)

Solubility of NH_4HCO_3 in $\text{NH}_4\text{Cl} + \text{Aq}$, sat. with CO_2 , at t° .

t°	g per 100 g H_2O		Sp. gr. of sat. solution
	NH_4Cl	NH_4HCO_3

	231.9	12.57	...

(Fedotieff and Koltunoff, Z. anorg. 1914, **85**, 251.)

Insol. in alcohol. (J. Davy.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, **37**, 4329.)

Ammonium dihydrogen carbonate,
 $(\text{NH}_4)_2\text{H}_2(\text{CO}_3)_3 + \text{H}_2\text{O}$.

Sol. in 5 pts. H_2O at 15° ; decomp by more H_2O or by heat (Divers, Chem. Soc. (2) 8. 171, 359, and 364.)

Sl. sol. in alcohol.

Ammonium hydrogen carbonate carbamate,
 $2\text{NH}_4\text{HCO}_3, \text{NH}_4\text{CONH}_2$. (*Salts of harts-horn*)

1 pt. salt dissolves at:

13°	in 4	pts. H_2O .
$16\ 7^\circ$	" 3.3	"
$32\ 2^\circ$	" 2.7	"
$40\ 6^\circ$	" 2.4	"
49°	" 2	"

(J. Davy, N. Edinb. J. 16. 245.)

Strong alcohol dissolves out carbamate, and the carbonate remains undissolved.

$\text{NH}_4\text{HCO}_3, \text{NH}_4\text{CO}_2\text{NH}_2$. (*Commercial carbonate of ammonia*)

Sol. at 15° in 4 pts. H_2O , at 65° in $1\frac{1}{2}$ pts. H_2O . (Divers.)

30 pts. salt+100 pts. H_2O lower temp. from 15.3° to 3.2° . (Rüdorff, B. 2. 68.)

Sol in 1 667 pts cold, and 0 833 pt. hot H_2O . (Fourcroy)

100 pts H_2O at 13°	dissolve 25 pts.
" 17°	" 30 "
" 37°	" 37 "
" 41°	" 40 "
" 49°	" 50 "

(Berzelius)

100 pts H_2O at 15.5° dissolve 33 pts., at 100° , 100 pts (Ure's Dict.)

Sol in 2 pts H_2O at 15.5° , and in less than 1 pt. boiling H_2O , sat solution at 15.5° contains 33 3%, and sat. boiling solution 50% (Abl)

Sat aqueous solution at 10° contains 15 7% (Eller)

Sat aqueous solution at $(?)$ contains 6 1% (Museumbroek.)

Sat solution in the cold contains 37.5% (Fourcroy)

Does not dissolve as such in H_2O ; $(\text{NH}_4)_2\text{CO}_3$ dissolves out first, and NH_4HCO_3 later. (Scanlan)

29	1.144	44.90	0.0007

(Lunge, Chem. Ind. 1883. 2.)

Sp. gr. of aqueous solution of salt with composition 31.3% NH_3 , 56.6% CO_2 , 12.1% H_2O . 100 pts. of solution contain—

6.58 9.96 14.75 19.83 25.71 pts. salt
1.0219 1.0337 1.0497 1.0672 1.0863 sp. gr.

29.74 35.85 40.23 44.90 pts. salt.
1.0995 1.1174 1.1297 1.1414 sp. gr.

(J. H. Smith, Chem. Ind. 1883. 3.)

Conc. alcohol dissolves out carbamate and leaves carbonate. (Hünefeld, J. pr. 7. 25.)

Insol. in acetone. (Naumann, B. 1904, 37. 4328.)

Ammonium cerous carbonate, $(\text{NH}_4)_2\text{CO}_3$,
 $\text{Ce}_2(\text{CO}_3)_3 + 6\text{H}_2\text{O}$.

Ppt. Very sl. sol. in conc. $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. (Meyer, Z. anorg. 1904, 41. 104.)

Ammonium chromous carbonate, $(\text{NH}_4)_2\text{CO}_3$,
 $\text{CrCO}_3 + \text{H}_2\text{O}$.

Decomp. by moist air; sol. in dil HCl and H_2SO_4 . (Baugé, C. R. 1896, 122. 476.)

Ammonium cobaltous carbonate, $(\text{NH}_4)_2\text{CO}_3$,
 $\text{CoCO}_3 + 4\text{H}_2\text{O}$.

Permanent. Sol. in H_2O . (Deville, A. ch. (3) 35. 460)

$(\text{NH}_4)_2\text{O}, 2\text{CoO}, 4\text{CO}_2 + 9\text{H}_2\text{O}$. Quickly decomp. on air; sol. in H_2O . (Deville.)
+12 H_2O . Sol. in H_2O .

Ammonium didymium carbonate, $(\text{NH}_4)_2\text{CO}_3$,
 $\text{Di}_2(\text{CO}_3)_3 + 3\text{H}_2\text{O}$.

Insol. in H_2O . (Cleve.)

Ammonium dysprosium carbonate,
 $\text{NH}_4\text{Dy}(\text{CO}_3)_3 + \text{H}_2\text{O}$.

Only sl. sol. in H_2O . (Jantsch, B. 1911, 44. 1277.)

- Ammonium glucinum carbonate**, $2(\text{NH}_4)_2\text{CO}_3 \cdot 3\text{GlCO}_3(?)$.
 Very sol. in cold, decomp. by hot H_2O . Nearly insol. in alcohol. (Debray.)
 Composition is $(\text{NH}_4)_2\text{CO}_3 \cdot 2\text{GlCO}_3$, $\text{Gl}(\text{OH})_2 + 2\text{H}_2\text{O}$ (Humpidge, Royal Soc Proc. **39**. 1.)
- Ammonium lanthanum carbonate**, $\text{La}_2(\text{CO}_3)_3 \cdot (\text{NH}_4)_2\text{CO}_3 + 4\text{H}_2\text{O}$.
 Ppt. (Meyer, Z. anorg 1904, **41**. 102.)
- Ammonium magnesium carbonate**, $(\text{NH}_4)_2\text{Mg}(\text{CO}_3)_2 + 4\text{H}_2\text{O}$.
 Sol. in 71 pts. H_2O with decomp.; more sol. in $\text{NH}_4\text{Cl} + \text{Aq.}$ (Divers, Chem. Soc **51**. 196.)
 H_2O containing $(\text{NH}_4)_2\text{CO}_3$ dissolves very slightly; more sol. in H_2O containing NH_4Cl . (Favre, A. ch. (3) **10**. 473.)
- Ammonium magnesium hydrogen carbonate**, $(\text{NH}_4)_2\text{Mg}_2\text{H}_2(\text{CO}_3)_4 + 8\text{H}_2\text{O}$, or $12\text{H}_2\text{O}$.
 Decomp. on air. (Deville, A. ch. (3) **35**. 454.)
- Ammonium neodymium carbonate**, $(\text{NH}_4)_2\text{CO}_3 \cdot \text{Nd}_2(\text{CO}_3)_3 + 4\text{H}_2\text{O}$.
 Ppt. Sl. sol. in conc. $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$ (Meyer, Z. anorg. 1904, **41**. 106.)
- Ammonium nickel carbonate**, $\text{NH}_4\text{HCO}_3 \cdot \text{NiCO}_3 + 4\text{H}_2\text{O}$.
 Insol. in H_2O . (Deville, A. ch. (3) **35**. 452.)
- Ammonium praseodymium carbonate**, $(\text{NH}_4)_2\text{CO}_3 \cdot \text{Pr}_2(\text{CO}_3)_3 + 4\text{H}_2\text{O}$.
 Ppt. Insol. in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$ (Meyer, Z. anorg. 1904, **41**. 105)
- Ammonium samarium carbonate**, $(\text{NH}_4)_2\text{CO}_3 \cdot \text{Sm}_2(\text{CO}_3)_3 + 4\text{H}_2\text{O}$.
 Ppt.
- Ammonium scandium carbonate**, $(\text{NH}_4)_2\text{CO}_3 \cdot 2\text{Sc}_2(\text{CO}_3)_3 + 6\text{H}_2\text{O}$.
 Difficultly sol. in H_2O . Sol. in cold alkali-carbonate + Aq. less sol. in hot (R. Meyer, Z. anorg. 1910, **67**. 410.)
- Ammonium tin (stannous) carbonate**, $(\text{NH}_4)_2\text{CO}_3 \cdot 2\text{SnCO}_3 + 3\text{H}_2\text{O}$.
 Decomp by cold H_2O . (Deville, A. ch. (3) **35**. 456.)
- Ammonium uranyl carbonate**, $2(\text{NH}_4)_2\text{CO}_3 \cdot \text{UO}_2\text{CO}_3$.
 Sol. at 15° in 20 pts. H_2O , more abundantly in H_2O containing $(\text{NH}_4)_2\text{CO}_3$. (Ebelmen.)
 Insol. in pure H_2O ; sol. in H_2O containing $(\text{NH}_4)_2\text{CO}_3$. Solution is decomp. by boiling. (Berzelius.)
- Sol in $\text{SO}_2 + \text{Aq}$ (Berthier, A. ch. (3) **7**. 76)
 $3(\text{NH}_4)_2\text{CO}_3 \cdot 2(\text{UO}_2)_2\text{CO}_3 + 4\text{H}_2\text{O}$ Sol in H_2O . (Girolitti C. C **1905**, II. 227)
- Ammonium vanadyl carbonate**, $3(\text{NH}_4)_2\text{O} \cdot 7\text{VO}_2 \cdot 5\text{CO}_2 + 16\text{H}_2\text{O}$.
 Sl. sol in H_2O .
 Sol. in acids and alkalis (Koppel, Z. anorg 1905, **45**. 350.)
- Ammonium yttrium carbonate**, $(\text{NH}_4)_2\text{CO}_3 \cdot \text{Y}_2(\text{CO}_3)_3 + 2\text{H}_2\text{O}$.
 Insol in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$ (Mosander.)
- Ammonium zinc carbonate, basic**, $3\text{ZnO} \cdot \text{NH}_4\text{OH} \cdot 2\text{CO}_2 + \text{H}_2\text{O}$.
 Insol in H_2O (Kassner, Arch Pharm (3) **27**. 673.)
- Ammonium zinc carbonate**, $(\text{NH}_4)_2\text{CO}_3 \cdot \text{ZnCO}_3$.
 Insol. in H_2O (Deville)
 Quite sol. in H_2O ; more sol. than $(\text{NH}_4)_2\text{CO}_3$, MgCO_3 Tolerably permanent in the air Slowly decomp. by cold, rapidly by hot H_2O .
 Very sol. in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$ Not attacked by alcohol. (Favre, A. ch (3) **10**. 481.)
- Barium carbonate**, BaCO_3
 Sol. in 4304 pts. cold, and 2304 pts boiling H_2O (Fourcroy.)
 Sol in 47,620 pts. H_2O . (Bineau, A. ch (3) **51**. 290)
 Sol in 14,137 pts. H_2O at $16-20^\circ$, and 15,421 pts. at 100° . (Fresenius.)
 Sol. in 12,027 pts. H_2O at 15° . (Kremers, Pogg. **85**. 247.)
 Calculated from electrical conductivity of solution, 1 pt. BaCO_3 is sol. in 64,070 pts H_2O at 8.8° and 45,566 pts. at 24.2° . (Hollemann, Z. phys. Ch. **12**. 125.)

Solubility in H_2O at t° .

t°	g sol. in 100 g H_2O
14	4.32×10^{-4}
18	4.57×10^{-4}
23	4.89×10^{-4}
27	5.22×10^{-4}
32	5.69×10^{-4}
38	6.27×10^{-4}

(Weissenberger, Z. phys. Ch. 1914, **88**. 266.)

"Solubility product" = 8.1×10^{-2} mol. l. (McCoy and Smith, J. Am. Chem. Soc. 1911, **33**. 473.)

Sol. in $\text{H}_2\text{CO}_3 + \text{Aq.}$ (See *barium hydrogen carbonate*.)

Easily sol. in dil. acids. Not acted upon by conc. $\text{HNO}_3 + \text{Aq.}$

Not decomp. by 1 pt. $\text{H}_2\text{SO}_4 + 6$ pts. absolute alcohol. Slowly decomp. by 1 pt.

HNO_3 +6 pts. absolute alcohol. Slowly decomp. by 1 pt $\text{H}_2\text{C}_2\text{O}_4$ +6 pts. absolute alcohol.

Not decomp. by absolute alcoholic solutions of racemic, tartaric, citric, or glacial acetic acids. (Babington and Phillips, 1816.)

Almost completely insol in H_2O containing NH_4OH and $(\text{NH}_4)_2\text{CO}_3$, when digested in such a solution and allowed to stand. 1 pt. BaCO_3 dissolves in 141,000 pts of such a solution. (Freseus)

Not more sol. in $\text{NaCl}+\text{Aq}$ than in H_2O . (Karsten)

Sol in cold NH_4Cl , NH_4NO_3 , or NH_4 succinate+Aq (Vogel, J. pr. 7. 453.)

2 mols NH_4Cl dissolved in H_2O dissolve 1 mol. BaCO_3 by continued boiling (Smith, Phil. Mag. J. 9. 540.)

Solubility in H_2O increases by addition of NH_4Cl , at first strongly, then less strongly and finally strongly again. (D'Agustino and Pellegrino, Gazz. ch. it. 1908, 38 (1) 532)

Somewhat sol. in $\text{K}_2\text{CO}_3+\text{Aq}$ (Wackenroder, A. 24. 30.)

Solubility of BaCO_3 in $\text{KCl}+\text{Aq}$ at bpt. of solution

g KCl per 100 g solution	g. BaCO_3 per 1000 cc sat. solution
0 15	0 0847
1	0 1781
3	0 2667
10	0 4274
30	0 5550

(Cantoni and Goguelia, Bull. Soc. 1905, (3) 33. 13.)

Solubility of BaCO_3 in $\text{NaCl}+\text{Aq}$ at bpt of solution

g NaCl per 100 g solution	g BaCO_3 per 1000 cc. sat solution
0.15	0.0587
1	0 0787
3	0 1056
10	0.1575
30	0.2784

(Cantoni and Goguelia, l c)

Solubility of BaCO_3 in 10% $\text{KCl}+\text{Aq}$ at t° .

t°	g BaCO_3 per 1000 cc sat solution
10	0.2175
20	0.2408
40	0 2972
60	0 3491
80	0.4049

(Cantoni and Goguelia, l. c.)

Solubility of BaCO_3 in 10% $\text{NaCl}+\text{Aq}$ at t° .

t°	g BaCO_3 per 1000 cc sat solution
10	0.1085
20	0 1126
40	0 1231
60	0 1303
80	0 1418

(Cantoni and Goguelia, l. c.)

Slowly sol. in conc Na_2SO_4 , MgSO_4 , ZnSO_4 , $\text{Ca}(\text{NO}_3)_2$, or CaCl_2+Aq , but insol. in ZnCl_2+Aq . (Karsten)

Sl. decomp by boiling $\text{K}_2\text{SO}_4+\text{Aq}$.

Sl. decomp. in the cold by 1 pt. K_2SO_4+2 pts. $\text{Na}_2\text{SO}_4+\text{Aq}$

Decomp by salts of Al, Mn, Cr, Fe, U, Bi, Cd, Cu, Hg, Pb, Sn^{II}, Sn^{IV}, Hg₂, Rh, Ir, Au, with pptn. of oxide of metal. (Rose, Tr.)

Pptn. of BaCO_3 is hindered by presence of alkali citrates or metaphosphates.

Sol. in solutions of various salts, as in the case of calcium carbonate (see *Calcium carbonate*). The solvent power of these solutions for barium carbonate is somewhat less than for calcium carbonate.

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1904, 37. 3602.)

Insol. in acetone and in methylal. (Eidmann, C. C. 1899, II. 1014)

Min. *Witherite*.

Barium hydrogen carbonate, $\text{BaH}_2(\text{CO}_3)_2(?)$.

100 pts H_2O containing CO_2 dissolve 0.079 pt BaCO_3 . (Bineau.)

100 pts. H_2O containing CO_2 dissolve 0.17 pt. BaCO_3 . (Lassaigne.)

100 pts. H_2O sat. with CO_2 under a pressure of 4-6 atmospheres dissolve 0.725 pt. BaCO_3 . Upon evaporating, BaCO_3 is deposited. (Wagner, Z. anal. 6. 167.)

BaCO_3 is sol. in 833 pts. H_2O sat. with CO_2 at 10° . (Lassaigne.)

BaCO_3 is sol. in 830 pts. H_2O sat. with CO_2 at 10° . (Fourcroy.)

BaCO_3 is sol. in 1550 pts. H_2O sat. with CO_2 at 10° . (Bergman.)

100 cc. H_2O sat. with CO_2 dissolve 0.73 g. $\text{BaH}_2(\text{CO}_3)_2$. (McCoy and Smith, J. Am. Chem. Soc. 1911, 33. 473.)

Barium calcium carbonate, BaCO_3 , CaCO_3 .

Min. *Barytocalcite*, *Bromlite*. Sol. in dil. acids.

Barium uranyl carbonate, BaO , 2UO_3 , 2CO_2 , $+5\text{H}_2\text{O}$. Decomp by H_2O . (Blinkoff, Dissert. 1900.)

$+8\text{H}_2\text{O}$. Decomp. by H_2O . (Blinkoff.)

Bismuth carbonate, basic, $(\text{BiO})_2\text{CO}_3 + \frac{1}{2}\text{H}_2\text{O}$.

Insol. in H_2O ; sol. in acids. Insol. in $\text{CO}_2 + \text{Aq.}$ (Bergman.)

Completely sol. in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$; sl. sol. in $\text{K}_2\text{CO}_3 + \text{Aq.}$; insol. in $\text{Na}_2\text{CO}_3 + \text{Aq.}$ (Lau-gier)

Absolutely insol. in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$ unless H_3PO_4 or H_3AsO_4 are present. (Berzelius.)

Insol. in $(\text{NH}_4)_2\text{CO}_3$, K_2CO_3 , or $\text{Na}_2\text{CO}_3 + \text{Aq.}$ (Rose.)

Sol. in $\text{NH}_4\text{Cl} + \text{Aq.}$ (Wackenroder.) Insol. in $\text{NH}_4\text{NO}_3 + \text{Aq.}$ (Brett)

Sol. in $\text{CaCl}_2 + \text{Aq.}$ (Pearson)

Min. *Bismuthosphaerite*.

$3\text{Bi}_2\text{O}_3$, CO_2 . Min. *Bismuthite*. Easily sol. in acids.

$4\text{Bi}_2\text{O}_3$, $3\text{CO}_2 + 4\frac{1}{2}\text{H}_2\text{O}$. Min. *Bismuth spar*. Easily sol. in acids.

Bismuth potassium carbonate, $\text{Bi}_2\text{OK}_4(\text{CO}_3)_4 + \text{H}_2\text{O}$.

Decomp. by large quantities of H_2O . (Reynolds, Chem. Soc. 1898, 73. 266.)

Cadmium carbonate, CdCO_3 .

Insol. in H_2O ; easily sol. in acids; insol. in K_2CO_3 , and $\text{Na}_2\text{CO}_3 + \text{Aq.}$; very sl. sol. in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$ (Fresenius.)

Easily sol. in NH_4 sulphate, nitrate, and succinate + Aq. (Wittstein.)

Sol. in $\text{KCN} + \text{Aq.}$; sol. in cold $\text{NH}_4\text{Cl} + \text{Aq.}$; less sol. in $\text{NH}_4\text{NO}_3 + \text{Aq.}$ (Brett, 1837.)

Not prevented from pptn. by non-volatile organic substances. (Rose.)

Not pptd. from solutions containing sodium citrate. (Spiller.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 827.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate (Naumann, B. 1910, 43. 314.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

$+ \frac{1}{2}\text{H}_2\text{O}$. (Lefort, J. B. 1847. 346.)

(Kraut, Z. anorg. 1897, 13. 14.)

Cadmium carbonate hydrazine, $\text{CdCO}_3, 2\text{N}_2\text{H}_4$.

Easily sol. in cold $\text{NH}_4\text{OH} + \text{Aq.}$ (Franzen, Z. anorg. 1908, 60. 281.)

Cæsium carbonate, Cs_2CO_3 .

Very deliquescent, and sol. in H_2O .

100 pts. absolute alcohol dissolve 11.1 pts. Cs_2CO_3 at 19° ; 20.1 pts. Cs_2CO_3 at boiling temp. (Bunsen.)

Cæsium hydrogen carbonate, CsHCO_3 .

Not deliquescent. Sol. in H_2O .

Calcium carbonate basic, $\text{CaO}, \text{CaCO}_3 + \text{H}_2\text{O}$.

Hardened by H_2O , but not dissolved. (Raoult, C. R. 92. 189.)

Calcium carbonate, CaCO_3 .

More sol. in cold than in hot H_2O (Gmelin)

When recently pptd., sol. in 8834 pts. boiling, and 10,801 pts. cold H_2O , much less sol. in H_2O containing NH_4OH and $(\text{NH}_4)_2\text{CO}_3$, 65,246 pts. of which dissolve 1 pt. CaCO_3 (Fresenius (1846), A. 59. 122)

Sol. in 16,000 pts. pure H_2O (Brandes, 1825)

Sol. in 12,858 pts. pure H_2O at 15° . (Kremers, Pogg. 85. 247)

Sol. in 16,000–24,000 pts. pure H_2O (Buchholz)

1 l. H_2O dissolves 34 mg. CaCO_3 . (Chevalet, Z. anal. 8. 91; Hoffmann, Z. anal. 4. 414)

1 l. H_2O may contain 0.016 g. CaCO_3 i. e., 1 pt. is sol. in 62,500 pts. H_2O . (Bineau, A. ch. (3) 51. 290.)

1 l. H_2O dissolves 0.02 g. CaCO_3 , i. e., 1 pt. CaCO_3 is sol. in 50,000 pts. H_2O (Peligot.)

Solubility is much affected by CO_2 of the air.

1 l. H_2O at 16° dissolves 13.1 mg. CaCO_3 . (Schlicsing, C. R. 74. 1552)

Calculated from electrical conductivity of $\text{CaCO}_3 + \text{Aq.}$ 1 pt. CaCO_3 is sol. in 99,500 pts. H_2O at 8.7° , and 80,040 pts. at 23.8° . (Holle-mann, Z. phys. Ch. 12. 125.)

By continued boiling $\text{CaH}_2(\text{CO}_3)_2$, 36 mg. CaCO_3 remain in solution. (Weltzien, A. 136. 165.)

Solubility in H_2O at different pressures.

Pressure in atmos	Solubility
1	1079
2	1403
4	1820
6	2109

(Engel, C. R. 101. 949.)

100 pts. H_2O dissolve 0.0005 pt. (calculated as CaO) from pptd. CaCO_3 , and 0.0027 pt. from calcspar. (Lubavin, J. russ. Soc. 24. 389.)

1 l. H_2O dissolves 13 mg. CaCO_3 at 18° . (Kohlrausch, Z. phys. Ch. 1893, 12. 241.)

1 l. CO_2 free water dissolves 17.4 mg. CaO or 31.0 mg. CaCO_3 . (Gothe, Ch. Z. 1915, 39. 305.)

CaCO_3 dissolves in 9662 pts. H_2O at 12° . (Pollacci, C. C. 1896, II 946.)

1 l. H_2O free from CO_2 dissolves 9.6 mg. CaCO_3 . (McCoy and Smith, J. Am. Chem. Soc. 1911, 33. 473.)

Found dissolved in 10,000 pts. sea water. (Davy)

Pptd. amorphous CaCO_3 dissolves in 1600 pts. sea water. Pptd. crystalline CaCO_3 dissolves in 8000 pts. sea water. (Irvine and Young, Chem. Soc. 56. 344.)

Artificial sea water sat. with CO_2 dissolves CaCO_3 corresponding to 57.27 mg. of combined CO_2 per litre at 15° .

Sea water which contains 52–55 mg. neutral combined CO_2 per litre must be sat. with CaCO_3 . (Cohen, Chem. Soc. 1900, 78 (2) 725.)

For action of $\text{H}_2\text{CO}_3 + \text{Aq.}$ see *Calcium hydrogen carbonate*.

Sol in H_2SO_4 , even when native. Sol in acids generally. When treated with acids in closed vessels effervescence ceases on increase of pressure, but is renewed at once on removing it. (Link, 1814.)

Unacted upon by conc HNO_3 , even when boiling, as $\text{Ca}(\text{NC})_2$ is insol in conc. HNO_3 .

Not decomp. by mixture of 1 pt. H_2SO_4 and 6 pts absolute alcohol, but immediately by HNO_3 + absolute alcohol

Not decomp. by absolute alcoholic solutions of oxalic, racemic, tartaric, citric, or glacial acetic acids. (Babington and Phillips, 1816.)

Unacted upon by glacial $\text{HC}_2\text{H}_3\text{O}_2$, even when boiling

Freshly pptd. CaCO_3 is sol. in cold NH_4Cl + Aq; but the solution becomes cloudy on exposure to air, a portion, however, of CaCO_3 remains dissolved, which cannot be pptd. even by boiling. If ppt. is washed and allowed to stand 24 hours, it is not as sol. in NH_4Cl as at first, but natural CaCO_3 is not wholly insol in NH_4Cl + Aq; it is, however, much less sol. than MgCO_3 . (Vogel, J. pr. 7. 453.)

Sol. in boiling NH_4Cl + Aq with evolution of NH_3 . (Demarcay, 1834.)

When NH_4OH + Aq, incompletely sat. with CO_2 , is mixed with CaCl_2 + Aq, no ppt. occurs even during several days, if kept in a closed vessel, and only a slight ppt. if the mixture is exposed to the air, but CaCO_3 is pptd. if the solution is boiled.

NH_4OH + Aq wholly sat. with CO_2 produces ppt. when mixed with CaCl_2 + Aq, but pptn. is not complete until heat is applied. Also when an excess of CaCl_2 + Aq is added to a solution of crystallized carbonate of ammonia, only a portion of the CaCO_3 is pptd. until the solution is boiled. (Vogel, 1814.)

When CaCl_2 + Aq mixed with NH_4OH + Aq is exposed to an atmos. of pure CO_2 , no ppt. occurs for several hours, but CaCO_3 is completely pptd in several days. (Vogel.)

When recently pptd., readily sol. in NH_4Cl , and NH_4NO_3 + Aq. (Brett, 1837; Wackenroder, A. 41. 315.)

When recently pptd., readily sol. in $(\text{NH}_4)_2\text{CO}_3$, $(\text{NH}_4)_2\text{SO}_4$, NH_4NO_3 , NH_4Cl , and NH_4 succinate + Aq. (Wittstein.)

Sol. in $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$ + Aq. (Thomson.)

More sol. in NH_4Cl , or NH_4NO_3 + Aq, or in neutral potassium, or sodium salts + Aq than in H_2O . (Fresenius.)

From solutions in NH_4 salts, NH_4OH , and $(\text{NH}_4)_2\text{CO}_3$ + Aq precipitate CaCO_3 more completely than BaCO_3 . (Fresenius.)

When boiled with NH_4Cl + Aq, CaCO_3 is dissolved, and $(\text{NH}_4)_2\text{CO}_3$ given off. (D. Smith.)

CaCl_2 + Aq prevents pptn. of CaCO_3 in the cold, as do also NH_4Cl , KCl , or NaCl + Aq, but it is pptd. when boiled, if the latter solutions are not too conc. K_2SO_4 , KNO_3 , $(\text{NH}_4)_2\text{SO}_4$, or Na_2SO_4 + Aq have a similar effect. A large excess of $(\text{NH}_4)_2\text{CO}_3$ + Aq when quickly added to CaCl_2 + Aq produces

no ppt. in the cold. Na_2CO_3 , or K_2CO_3 + Aq act likewise. (Storer, Am. J. Sci. (2) 25. 41.)

1 g. CaCO_3 requires 13.98 g. NH_4Cl , 8.380 g. $(\text{NH}_4)_2\text{SO}_4$, or 14.438 g. NH_4NO_3 to effect solution. (Bertrand, Monit. Sci. (3) 10. 477.)

Less sol. in Na than in NH_4 salts, but more than in K salts. (Berthelot.)

When NH_4OH + Aq, partially neutralized by CO_2 , is mixed with CaO_2H_2 + Aq, no cloudiness appears until the mixture is boiled; when more CO_2 has been added to NH_4OH + Aq, a ppt. appears at first, which disappears and only reappears on addition of much CaO_2H_2 + Aq, but NH_4OH + Aq does not dissolve pptd. CaCO_3 . (Vogel.)

Solubility in NH_4 salts + Aq at 25°.

NH_4 salt	Millimols NH_4 salt per l	Millimols CaO dissolved per l

(Berju and Kosminiko, Landw. Vers. Sta. 1904, 60. 422.)

$\text{CaO}_2\text{H}_2 + \text{Aq}$ dissolves a little CaCO_3 .
(Welter and Berthollet, 1789)

$\text{CaO}_2\text{H}_2 + \text{Aq}$ retains a little CaCO_3 in solution at ordinary temperature, which is pptd. on boiling. (Eliot and Storer, Proc Am. Acad 1860, 5, 63)

$\text{CaO}_2\text{H}_2 + \text{Aq}$, mixed with dil NaOH , KOH , or $\text{NH}_4\text{OH} + \text{Aq}$, gives no immediate ppt when CO_2 is passed through it, unless boiled.

Sol. in boiling $\text{MgCl}_2 + \text{Aq}$ even when dilute. (Cousté)

Not decomp. when boiled with K_2SO_4 , Na_2SO_4 , CaSO_4 , MgSO_4 , and $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$; but partially decomp. by boiling with $(\text{NH}_4)_2\text{SO}_4$, K_2SO_4 , Na_2SO_4 , $(\text{NH}_4)_2\text{SO}_4$, Na_2HPO_4 , $(\text{NH}_4)_2\text{HPO}_4$, K_2HPO_4 , Na_2HPO_4 , $(\text{NH}_4)_2\text{HPO}_4$, K_2HAsO_4 , Na_2AsO_4 , $\text{K}_2\text{C}_2\text{O}_4$, $(\text{NH}_4)_2\text{C}_2\text{O}_4$, NaF , and $\text{K}_2\text{CrO}_4 + \text{Aq}$. With the NH_4 salts the decomposition is complete. (Dulong, A. ch. 82, 286.)

Not decomp. by alkali sulphates + Aq . (Malaguti)

Precipitation of CaCO_3 is much hindered by alkali citrates or metaphosphates.

The solubility of CaCO_3 in CO_2 -free water

is therefore increased by the addition of NaCl, NaNO₃ or Na₂SO₄, 10H₂O, but decreased by the addition of Na₂CO₃ or CaCl₂, 6H₂O.

(Gothe, Ch. Z. 1915, **39**, 306.)

Sol. in ferric chloride or nitrate + Aq with evolution of CO₂ and pptn. of Fe₂O₃H₆ (Fuchs, 1831); also in chlorides or nitrates of Al, Mn, Cr, or U, but not in FeCl₂ + Aq.

Sol. in cold SnCl₄ + Aq with pptn. of SnO₂. Insol. in conc. Na₂SO₄, MgSO₄, BaCl₂, MgCl₂, Pb(NO₃)₂, or AgNO₃ + Aq. (Karsten.)

Abundantly sol. when freshly precipitated in CaCl₂ + Aq, and MgSO₄ + Aq. (Hunt.)

Absolutely insol. at 15–19° in BaO₂H₂ + Aq; also on boiling.

1 l. H₂O containing 3–4 g MgSO₄ dissolves 1–2 g. CaCO₃, and also 1 g MgCO₃. (Hunt, Am. J. Sci (2) **26**, 109.)

100 pts. NaCl + Aq (2.525% NaCl) dissolve 0.0037 pt. (calculated as CaO) pptd. CaCO₃, and 0.0053 pt. calcspar. (Lubavin, J. russ. Soc. **24**, 389.)

Insol. in liquid NH₃ (Franklin, Am. Ch. J. 1898, **20**, 827.)

Insol. in liquid CO₂ (Buchner, Z. phys. Ch. 1906, **54**, 674.)

Alcohol dissolves traces of CaCO₃ (Grischow.)

Sol. in Na citrate + Aq (Spiller.)

Sol. in Ca succrate + Aq. (Barreswill.)

Insol. in acetone. (Naumann, B. 1904, **37**, 4329.)

Insol. in acetone and in methylal. (Eidmann, C. C. 1899, II 1014.)

Insol. in methyl acetate. (Naumann, B. 1909, **42**, 3790.)

Insol. in ethyl acetate. (Naumann, B. 1910, **43**, 314.)

Amorphous. Solubility in H₂O cannot be determined because of its instability. (Kendall, Phil. Mag. 1912, (6) **23**, 972.)

Min. Calcite. In contact with air free from CO₂, 1 l. H₂O dissolves at:

25° 50° 100°
0.01433 0.01504 0.01779 g calcite.

(Kendall, Phil. Mag. 1912, (6) **23**, 964.)

In contact with air containing 3.7 pts. CO₂ per 10,000, the solubility of calcite in H₂O was found to be 0.04608 g. per l. at 25° and 0.02925 g. per l. at 50°. (Kendall, Phil. Mag. 1912, (6) **23**, 973.)

Min. Aragonite. In contact with air free from CO₂, 1 l. H₂O dissolves at:

25° 50° 100°
0.01528 0.01617 0.01902 g. aragonite.

(Kendall, Phil. Mag. 1912, (6) **23**, 964.)

+5H₂O. Efflorescent.

+6H₂O. (Pelouze.)

Calcium hydrogen carbonate, CaH₂(CO₃)₂.

Known only in aqueous solution.

CaCO₃ dissolves in CO₂ + Aq.

CaCO₃ is sol. in 1428 pts H₂O sat. with CO₂ at 0°, and 1136 pts. at 10° (Lassaigne, J. ch. med. **4**, 312.)

Bineau could dissolve, even in large quantities of H₂O sat. with CO₂, only $\frac{1}{2}$ enough CaCO₃ to form CaH₂(CO₃)₂.

Chalk dissolves in 994.5 pts H₂O sat. with CO₂, while Iceland spar requires 3149 pts (Bischof.)

CaCO₃ is sol. in 1015 pts H₂O sat. with CO₂ at 21° and 748.3 mm. (Warington, Chem Soc **6**, 296.)

Solubility of CaCO₃ in CO₂ + Aq at p pressure in atmospheres. CaO + CO₂ = mg. CO₂ and CaC dissolved, corresponding to CaCO₃ = mg. CaCO₃.

p	CaO + CO ₂	CaCO ₃

0 4167	1500	787 5
0 5533	1846	885 5
0 7297	2270	972
0 9841	2864	1086

(Schlosing, C. R. **74**, 1522.)

With high pressure, 1 l. H₂O containing CO₂ dissolves at most 3 g. CaCO₃. This maximum is reached at 5° under 4 atmospheres' pressure; at 10–13° under 5 atmospheres; and at 20° under 7 atmospheres. (Garro, Arch. Pharm. (3) **4**, 145.)

CaCO₃ is sol. in about 1000 pts. H₂CC₂ + Aq, and solubility is considerably increased by Na₂SO₄ or MgSO₄.

1000 pts. H₂O sat. with CO₂ dissolve pts. Carrara marble at t°, and B = height of barometer in millimetres.

t°	B	Pts. CaCO ₃	t°	B	Pts. CaCO ₃
7 5	754	1 224	22 0	746	0 920
8.5	752	1 202	26 0	740	0.875

(Treadwell and Reuter, Z. anorg. 1898, 17. 185.)

1 l. H_2O sat. with carbonic acid dissolves 1.30 g. CaCO_3 at 13.2°; 1.45 g at 2.8°. (Treadwell, Z. anorg. 1898, 17. 189.)

At 30° C. in equilibrium with the air, not more than 3 per cent of the calcium present is combined as CaCO_3 . At lower temperatures and lesser concentrations the percentage of normal carbonate is even less, and practically all the calcium present is combined as $\text{Ca}(\text{HCO}_3)_2$. (Cameron and Briggs, J. phys. Chem. 1901, 5. 549.)

With pressures less than 4.5 atmospheres of CO_2 no other than normal calcium carbonate or a hydrate of the normal carbonate can exist as the solid phase at 0°. (Cameron, J. phys. Chem. 1903, 12. 566.)

(Cameron and Seidell, J. phys. Chem. 1902, 6. 53.)

Data are also given for solubility of CaCO₃ in NaCl+Na₂SO₄+Aq, and CaCO₃+CaSO₄ in NaCl+Na₂SO₄+Aq. (Cameron, Bell and Robinson.)

Calcium copper uranium carbonate, CaCO₃, 3CuCO₃, 4U(CO₃)₂+24H₂O.

Sol. in acids.

Calcium lead carbonate, xCaCO₃, yPbCO₃.

Min. *Plumbocalcite*.

Calcium magnesium carbonate, CaCO₃, MgCO₃.

Min. *Dolomite*. 1 l. H₂O sat. with CO₂ at 18° and 750 mm dissolves 0.31 g. dolomite. (Cossa, B. 2. 697.)

Not obtained by evaporating solution, but can be crystallized from CO₂+Aq between 100° and 200° (Hoppe-Seyler.)

Dolomite is dissolved by CO₂ and H₂O, but solution is prevented partially by CaCO₃, and wholly by MgCO₃. (Leather and Sen, C A. 1915. 181.)

Insol. in cold dil. acids (Dolomieu, J. Phys. 39. 1.)

Insol. in cold acetic acid. (Forchhammer.)

Calcium potassium carbonate, CaK₂(CO₃)₂.

Decomp. by H₂O. (Reynolds, Chem Soc. 1898, 73. 265; Butschli, C A. 1907. 2223) 2CaCO₃, 3K₂CO₃+6H₂O (Butschli)

Calcium sodium carbonate, CaNa₂(CO₃)₂.

Anhydrous. Decomp. by H₂O.

+2H₂O. (Butschli, C. A. 1907. 2223.)

+5H₂O. Min *Gaylussite* Sparingly sol. in H₂O.

Calcium uranyl carbonate, CaCO₃, UO₂CO₃+20H₂O.

Min *Liebigite*. Sol in HCl+Aq.

+xH₂O. Decomp. by H₂O. (Blinkoff, Dissert 1900.)

2CaO, 4UO₃, 3CO₂+24H₂O Decomp. by H₂O (Blinkoff, Dissert 1900.)

Calcium carbonate chloride, CaCO₃, CaCl₂+6H₂O.

Sol. in H₂O with immediate decomp. (Fritzsche, J. pr. 83. 213.)

Cerous carbonate, Ce₂(CO₃)₃+5, and 9H₂O.

Insol. in H₂O, and solution of CO₂ in H₂O. (Vauquelin.)

Somewhat sol. in (NH₄)₂CO₃+Aq (Jolin.)

Insol. in neutral salt solutions and neutral alkali carbonates+Aq; easily sol. in SO₂+Aq (Berthier, A. ch. (3) 7. 77.)

Ceric carbonate, Ce(CO₃)₂+½H₂O.

Precipitate. (Hisinger, A. ch. 94. 108.)

Insol in H₂O. Sol. in slight traces in Na₂CO₃+Aq; sl. sol. in NaHCO₃+Aq, and in (NH₄)₂CO₃+Aq. (Rose.)

Cerous lanthanum carbonate fluoride.

Min *Batnaesite*, *Hamartite*, *Hydrofluocerite*. Slowly decomp by HCl+Aq, easily by H₂SO₄.

Cerous potassium carbonate, Ce₂(CO₃)₃, K₂CO₃+3H₂O.

Ppt. (Jolin.)

Ce₂(CO₃)₃, K₂CO₃+12H₂O. Ppt.

Sol. in 30% K₂CO₃+Aq. (Meyer, Z. anorg. 1904, 41. 103.)

Perceic potassium carbonate, $\text{Ce}_2\text{O}_3(\text{CO}_3)_3$, $4\text{K}_2\text{CO}_3 + 12\text{H}_2\text{O}$.

Crystalline. Sl sol in H_2O containing K_2CO_3 ; sol in dil. H_2SO_4 with decomp. (Job, C. R. 1899, **128**. 1098)

Cerous sodium carbonate, $\text{Ce}_2(\text{CO}_3)_3$, $2\text{Na}_2\text{CO}_3 + 2\text{H}_2\text{O}$.

Ppt. (Jolin.) $2\text{Ce}_2(\text{CO}_3)_3$, $3\text{Na}_2\text{CO}_3 + 24\text{H}_2\text{O}(?)$ Ppt Easily decomp. (Meyer, Z. anorg 1904, **41**. 103)

Chromous carbonate, CrCO_3 .

Sol in much H_2O ; sl. sol. in $\text{KHCO}_3 + \text{Aq}$. (Moberg, J. pr. **44**. 328; Moissan, A. ch. (5) **21**. 199)

Chromic carbonate, basic, Cr_2O_3 , 2CO_2 .

Precipitate. (Parkmann, Sill. Am J. (2) **34**. 321.)

Cr_2O_3 , $\text{CO}_2 + 4\text{H}_2\text{O}$. Insol. in H_2O ; sol. in acids; when freshly pptd. is sol. in K_2CO_3 , or $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$, and still more sol in $\text{KOH} + \text{Aq}$. (Meissner.)

Insol. in ethyl acetate (Naumann, B. 1910, **43**. 314); methyl acetate. (Naumann, B. 1909, **42**. 3790)

$2\text{Cr}_2\text{O}_3$, $\text{CO}_2 + 6\text{H}_2\text{O}$. Precipitate (Langlois, A. ch. (3) **48**. 502)

Chromous potassium carbonate,

CrCO_3 , $\text{K}_2\text{CO}_3 + 1\frac{1}{2}\text{H}_2\text{O}$.

Sol in H_2O when freshly prepared; slowly polymerizes; stable in dry air, decomp in moist air; sol. in acids with decomp (Baugé, C. R. 1898, **126**. 1568.)

Chromous sodium carbonate, $\text{CrNa}_2(\text{CO}_3)_2 + \text{H}_2\text{O}$.

Decomp. when heated. In Aq. solution, passes into the hydrate containing 10 mols H_2O . (Baugé, C. R. 1897, **125**. 1179.)

+10 H_2O . Very sol. in cold H_2O ; Aq. solution decomp. below 100° ; effloresces in the air; sol. in $\text{HCl} + \text{Aq}$ and $\text{H}_2\text{SO}_4 + \text{Aq}$. (Baugé, C. R. 1897, **125**. 1178.)

Cobaltous carbonate, basic, 5CoO , $2\text{CO}_2 + 4\text{H}_2\text{O}$.

Insol. in H_2O ; sol. in $(\text{NH}_4)_2\text{SO}_4$, $(\text{NH}_4)_2\text{CO}_3$, NH_4NO_3 , and $\text{NH}_4\text{Cl} + \text{Aq}$. Sol. in cold NH_4NO_3 , and $\text{NH}_4\text{Cl} + \text{Aq}$. (Brett, **1837**.)

Sol. in $\text{CO}_2 + \text{Aq}$, and acid alkali carbonates + Aq, from which it is pptd. on boiling. Very sl. sol. in conc. Na_2CO_3 , or $\text{K}_2\text{CO}_3 + \text{Aq}$; largely sol in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$, and partly sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Berzelius.)

Not pptd. from solutions containing Na citrate. (Spiller.)

4CoO , $\text{CO}_2 + 4\text{H}_2\text{O}$. Ppt. (Beetz.)

+3 H_2O . (Meigen, C. C. **1905**, I. 1363.)

Cobaltous carbonate, basic, 3CoO , $\text{CO}_2 + 2\text{H}_2\text{O}$.

(Meigen, C. C. **1905**, I. 1363.)

3 H_2O . (Rose, Pogg. **84**. 551.)

3CoO , $2\text{CO}_2 + 4\text{H}_2\text{O}$. (Bratin, Z. anal. **6**. 76.)

2CoO , $\text{CO}_2 + 3\frac{1}{2}\text{H}_2\text{O}$. Converted into 5CoO , $2\text{CO}_2 + 4\text{H}_2\text{O}$ by H_2O (Beetz)

Cobaltous carbonate, CoCO_3 .

Anhydrous. Not attacked by cold conc. HCl , or $\text{HNO}_3 + \text{Aq}$ (Senarmont, A. ch. (3) **30**. 129)

Insol. in liquid NH_3 (Gore, Am Ch J. **1898**, **20**. 827.)

Min. *Sphaerocobaltite*. Sl. attacked by cold HNO_3 , or $\text{HCl} + \text{Aq}$

+ $\frac{2}{3}\text{H}_2\text{O}$ Sol. in acids. (Deville, A. ch. (3) **33**. 95)

+6 H_2O . (Deville)

Decomp by H_2O with formation of a basic carbonate. (Berzelius)

Cobaltous potassium carbonate, CoCO_3 , $\text{K}_2\text{CO}_3 + 4\text{H}_2\text{O}$.

Decomp. by H_2O (Deville, A. ch. (3) **33**. 90.)

Ppt. Decomp. by H_2O . (Reynolds, Chem. Soc. **1898**, **73**. 264)

CoCO_3 , $\text{KHCO}_2 + 4\text{H}_2\text{O}$. Decomp by H_2O . (Deville.)

Cobaltous sodium carbonate, CoCO_3 , $\text{Na}_2\text{CO}_3 + 4\text{H}_2\text{O}$, and $10\text{H}_2\text{O}$.

Decomp by H_2O . (Deville, A. ch. (3) **33**. 75.)

Cupric carbonate, basic.

The compounds produced by pptn of copper solutions by carbonates are unstable and possess varying solubilities in solutions of CO_2 . On treatment with solutions of CO_2 , these substances pass over into an apparently stable compound possessing a definite solubility in solutions of CO_2 of definite concentration, which solubility increases with the concentration of CO_2 . Solubility of this compound in various salts + Aq is recorded. (Free, J. Am. Chem. Soc. **1908**, **30**. 1374.)

8CuO , $\text{CO}_2 + 5\text{H}_2\text{O}$. (Deville, A. ch. (3) **33**. 75.)

6CuO , CO_2 . (Field, Chem. Soc. **14**. 70.)

3CuO , $\text{CO}_2 + 2\text{H}_2\text{O}$. (Favre, A. ch. (3) **10**. 119.)

5CuO , $2\text{CO}_2 + 6\text{H}_2\text{O}$. (Struve.)

2CuO , $\text{CO}_2 + \text{H}_2\text{O}$. Insol. in H_2O ; easily sol. in acids, even $\text{H}_2\text{SO}_4 + \text{Aq}$; sl. sol. in $\text{H}_2\text{CO}_3 + \text{Aq}$, 30,720 pts. of the solution containing 1 pt. CuO . (Jahn.) Sol. in 4690 pts. $\text{H}_2\text{CO}_3 + \text{Aq}$ sat. at 4-6 atmos. pressure. (Wagner.) Sol. in 3833 pts. sat. $\text{H}_2\text{CC}_3 + \text{Aq}$. (Lassaigne, J. ch. méd. **4**. 312.)

Sol. in NH_4 salts + Aq. Partially sol. in Na_2CO_3 , or $\text{K}_2\text{CO}_3 + \text{Aq}$, and more sol. in

NaHCO_3 , or $\text{KHCO}_3 + \text{Aq}$; sol in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ (Favre, A. ch. (3) 10. 18.)

Less sol in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ than CuO in $\text{NH}_4\text{OH} + \text{Aq}$. (Thomson, 1831.) Sol in $\text{KCN} + \text{Aq}$ (Berzelius.) Sol. in NH_4Cl , or $\text{NH}_4\text{NO}_3 + \text{Aq}$. (Brett.)

Sol. in ferric salts with pptn. of $\text{Fe}_2\text{O}_3\cdot\text{H}_2\text{O}$.

Insol in liq. NH_3 . (Franklin and Kraus, Am. Ch. J. 1898, 20. 827)

Insol in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314)

Insol in acetone (Naumann, B. 1904, 37. 4329; Eidmann, C. C. 1899, II. 1014.)

Sol. in ethyl amine carbonate + Aq. (Wurtz.)

Sol. in cane sugar + Aq. (Pescher, Repert. 1820, 6. 85)

Not pptd. from solutions containing sodium citrate. (Spiller)

Insol. in pyridine. (Schroeder, Dissert. 1901.)

Min. *Malachite*. Sol. in acids, and $\text{NH}_4\text{OH} + \text{Aq}$.

+ $2\text{H}_2\text{O}$. (Favre.)

8CuO , $5\text{CO}_2 + 7\text{H}_2\text{O}$. (Gröger, Z. anorg. 1900, 24. 137.)

3CuO , $2\text{CO}_2 + \text{H}_2\text{O}$. Insol. in H_2O . Sol. in $\text{NH}_4\text{OH} + \text{Aq}$, also in hot conc. $\text{NaHCO}_3 + \text{Aq}$.

Min. *Azurite*.

Copper potassium carbonate, basic, 8CuO , $2\text{K}_2\text{CO}_3$, $7\text{CO}_2 + 17\text{H}_2\text{O}$.

Ppt; decomp. by H_2O . (Groger, B. 1901, 34. 430.)

Mixture. (Wood and Jones, C. A. 1907. 2667.)

5CuO , 4CO_2 , $\text{K}_2\text{CO}_3 + 10\text{H}_2\text{O}$. Decomp. by H_2O . (Deville, A. ch. (3) 33. 102.)

Cupric potassium carbonate, CuCO_3 , K_2CO_3 .

Decomp. by H_2O . (Wood and Jones, C. A. 1907. 2667.)

+ H_2O . (Wood and Jones.)

+ $4\text{H}_2\text{O}$. Decomp. by H_2O . (Reynolds, Chem. Soc. 1898, 73. 263.)

Could not be obtained. (Wood and Jones.)

2CuCO_3 , $\text{K}_2\text{CO}_3 + 4\text{H}_2\text{O}$. Decomp. by H_2O . (Wood and Jones.)

Cupric sodium carbonate, CuCO_3 , Na_2CO_3 .

Not decomp. by cold H_2O . (Debray, C. R. 49. 218)

+ $3\text{H}_2\text{O}$.

Cupric zinc carbonate, 2CuO , 3ZnO , $2\text{CO}_2 + 3\text{H}_2\text{O}$, or 3CuO , 9ZnO , $4\text{CO}_2 + 8\text{H}_2\text{O}$.

Min. *Aurichalcite*. Easily sol. in $\text{HCl} + \text{Aq}$.

Cupric carbonate ammonia (cuprammonium carbonate), CuCO_3 , 2NH_3 .

Decomp. by H_2O . Insol. in alcohol and ether. Sol. in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. (Favre, A. ch. (3) 10. 116.)

Didymium carbonate, $\text{Dl}_2(\text{CO}_3)_3 + \text{H}_2\text{O}$, or $6\text{H}_2\text{O}$

Insol. in H_2O . Only traces dissolve in $\text{CO}_2 + \text{Aq}$. Insol. in solutions of alkali carbonates or bicarbonates + Aq (Marignac, A. ch. (3) 38. 166) Very sl. sol. in conc $\text{NH}_4\text{Cl} + \text{Aq}$. (Rose.)

Insol. in acetone. (Naumann, B 1904, 37. 4329.)

+ $8\text{H}_2\text{O}$ (Cleve, Bull. Soc. (2) 43. 363.)

Didymium potassium carbonate, $\text{Dl}_2(\text{CO}_3)_3$, $\text{K}_2\text{CO}_3 + 4\text{H}_2\text{O}$.

Insol. in H_2O . (Cleve, Bull. Soc. (2) 43. 363.)

+ $12\text{H}_2\text{O}$ (Cleve.)

Didymium sodium carbonate, $2\text{Dl}_2(\text{CO}_3)_3$, $3\text{Na}_2\text{CO}_3 + 9\text{H}_2\text{O}$

Ppt. (Cleve)

$\text{Dl}_2(\text{CO}_3)_3$, $2\text{Na}_2\text{CO}_3 + 8\text{H}_2\text{O}$. Ppt. (Cleve.)

Dysprosium carbonate, $\text{Dy}_2(\text{CO}_3)_3 + 4\text{H}_2\text{O}$.

Insol. in H_2O . (Jantsch, B. 1911, 44. 1277.)

Erbium carbonate, Er_2O_3 , $2\text{CO}_2 + 2\text{H}_2\text{O}$.

Insol. in H_2O . (Hoglund.)

Erbium sodium carbonate, $\text{Er}_2(\text{CO}_3)_3$, $5\text{Na}_2\text{CO}_3 + 36\text{H}_2\text{O}$.

Efflorescent. Decomp. by H_2O .

Gadolinium carbonate, basic, $\text{Gd}(\text{OH})\text{CO}_3 + \text{H}_2\text{O}$.

Ppt. (Benedicks, Z. anorg. 1900, 22. 417.)

Glucinum carbonate, basic, 3GdO , CO_2 ; 4GdO , CO_2 ; 5GdO , $\text{CO}_2 + 5\text{H}_2\text{O}$, etc.

Not perceptibly sol. in H_2O or $\text{H}_2\text{CO}_3 + \text{Aq}$. Decomp. by boiling H_2O . Easily sol. in acids.

Sol. in NH_4 salts, and KOH , or $\text{NaOH} + \text{Aq}$. Sol. in alkali carbonates, especially

$(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. (Vauquelin.) Sl. sol. in $\text{K}_2\text{CO}_3 + \text{Aq}$. When solution in $(\text{NH}_4)_2\text{CO}_3$ is boiled, a more basic carbonate is pptd.

(Rose.)

Glucinum carbonate, $\text{GdCO}_3 + 4\text{H}_2\text{O}$.

Efflorescent. Sol. in 278 pts. H_2O . (Klatzo, J. pr. 106. 242.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 828.)

No definite carbonate of glucinum exists. (Cameron, J. phys. Chem. 1908, 12. 572.)

Glucinum potassium carbonate, $3\text{GIClO}_3 \cdot 2\text{K}_2\text{CO}_3$.

Easily sol. in H_2O , but decomp. by boiling. (Debray.) Less easily sol. in alcohol.

Indium carbonate, $\text{In}_2(\text{CO}_3)_3$.

Ppt. Insol in K_2CO_3 , or $\text{Na}_2\text{CO}_3 + \text{Aq}$. Sol in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. (Winkler, J. pr. 94. 1.)

Iron (ferric) carbonate, basic.

$9\text{Fe}_2\text{O}_3 \cdot \text{CO}_2 + 12\text{H}_2\text{O}$. (Wallace, Chem Gaz. 1858. 410)

$3\text{Fe}_2\text{O}_3 \cdot \text{CO}_2 + 4\text{H}_2\text{O}$, and $8\text{H}_2\text{O}$ (Barrat, C. N. 1. 110.)

$+6\text{H}_2\text{O}$. (Wallace)

$2\text{Fe}_2\text{O}_3 \cdot \text{CO}_2 + 1\frac{1}{2}\text{H}_2\text{O}$ (Rother, Pharm. J Trans. (3) 4. 576)

$\text{Fe}_2\text{O}_3 \cdot \text{CO}_2$. (Parkmann, Sill Am. J. (2) 34. 321)

These and other similar basic salts are ppts., easily decomp. on standing into $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$.

Iron (ferrous) carbonate, FeCO_3 .

Insol. in H_2O

Sol in acids, even in $\text{H}_2\text{CO}_3 + \text{Aq}$.

See **Carbonate, ferrous hydrogen**

Min *Siderite*, *Spathic ore*. Sl. attacked by dil. acids. Sol in $\text{H}_2\text{CO}_3 + \text{Aq}$ under pressure.

Insol in NH_4Cl , or $\text{NH}_4\text{NO}_3 + \text{Aq}$. (Brett.)

$+ \text{H}_2\text{O}$. Sl. sol. in H_2O ; easily sol. in acids; sol. in $\text{H}_2\text{CO}_3 + \text{Aq}$.

Sol. in $\text{NH}_4\text{Cl} + \text{Aq}$. Sol. in ferric salts $+ \text{Aq}$ with evolution of CO_2 and pptn. of $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$.

Soluble in an aqueous solution of cane sugar.

Solubility in salts $+ \text{Aq}$ free from CO_2 .

Salt	g salt per 1000 g H_2O	1 l. of solvent dissolves g. FeCO_3
NaCl	351 2	0.35042
$\text{MgCl}_2 + 6\text{H}_2\text{O}$	2300 0	4 2049
$\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$	137 7 sat. at $+14^\circ$	0 70085 0 93444
$\text{MgSO}_4 + 7\text{H}_2\text{O}$	105 3 sat. at $+18^\circ$	1 4667 2.9334

(Ehlert, Z. Elektrochem. 1912, 18. 728.)

Iron (ferrous) hydrogen carbonate, $\text{FeH}_2(\text{CO}_3)_2(?)$.

Known only in aqueous solution.

By conducting CO_2 at ordinary pressure through H_2O , in which Fe is suspended, a solution containing 9.1 pts. FeCO_3 to 10,000 pts. H_2O is obtained. (v. Hauer, J. pr. 81. 391)

100 pts. $\text{H}_2\text{CO}_3 + \text{Aq}$ dissolve 0.72 pt. FeCO_3 . (Wagner.)

FeCO_3 dissolves in 1381 pts. H_2O saturated with CO_2 , under a pressure of 4-6 atmospheres. (Wagner, J. B. 1867. 135.)

1 l H_2O dissolves 6.1907 g FeCO_3 (pure) under a CO_2 pressure of 2 atmos (Ehlert, Z. Elektrochem. 1912, 18. 728.)

Solubility in various salts $+ \text{Aq}$ in presence of CO_2 under pressure of 2 atmos

Salt	With CO_2 of 2 atmos pressure	
	g salt per 1000 g H_2O	1 l of solvent dissolves g. FeCO_3
H_2O		6 1907

(Ehlert, Z. Elektrochem. 1912, 18. 728.)

A bicarbonate of ferrous iron is not formed under pressures of CO_2 up to 5 atmospheres at 0° . (Cameron, J. phys. Chem. 1908, 12. 571.)

Iron (ferrous) magnesium carbonate, $\text{FeCO}_3 \cdot \text{MgCO}_3$.

Min. *Pastomesite*.

$\text{FeCO}_3 \cdot 2\text{MgCO}_3$. Min. *Mesutite*.

Iron (ferrous) potassium carbonate, $\text{FeK}_2(\text{CO}_3)_2 + 4\text{H}_2\text{O}$.

Ppt. Decomp. by H_2O (Reynolds, Chem. Soc. 1898, 73. 265.)

Lanthanum carbonate, $\text{La}_2(\text{CO}_3)_3 + \text{H}_2\text{O}$, $3\text{H}_2\text{O}$, and $8\text{H}_2\text{O}$.

Insol. in H_2O . $\text{CO}_2 + \text{Aq}$ dissolves traces. Insol. in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$.

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Min. *Lanthanite*.

Lanthanum potassium carbonate, $\text{La}_2(\text{CO}_3)_3 \cdot \text{K}_2\text{CO}_3 + 12\text{H}_2\text{O}$.

Sol. in 30% $\text{K}_2\text{CO}_3 + \text{Aq}$. (Meyer, Z anorg. 1904, 41. 101.)

Lanthanum sodium carbonate, $2\text{La}_2(\text{CO}_3)_3 \cdot 3\text{Na}_2\text{CO}_3 + 20\text{H}_2\text{O}(?)$.

Ppt Easily decomp (Meyer, Z. anorg 1904, 41. 102)

Lead carbonate, basic, $2\text{PbCO}_3 \cdot \text{PbO}_2\text{H}_2$; $5\text{PbCO}_3 \cdot 3\text{PbO}_2\text{H}_2$; $3\text{PbCO}_3 \cdot \text{PbO}_2\text{H}_2$; $5\text{PbCO}_3 \cdot \text{PbO}_2\text{H}_2$.

White Lead Insol. in H_2O . Nearly insol in $\text{H}_2\text{CO}_3 + \text{Aq}$, even under pressure Sol in dil, insol. in conc. $\text{KOH} + \text{Aq}$. Insol. in normal, or acid alkali carbonates + Aq (Böttger.)

Sol in cold dil. $\text{NH}_4\text{Cl} + \text{Aq}$. (Brett)
 PbCO_3 , PbO_2H_2 . Very sl. sol. in H_2O . (Yorke.)

$2\text{PbCO}_3 \cdot \text{PbO}_2\text{H}_2$.

Solubility is less than 0.0002 millimol Pb in 1 liter H_2O at 18° (Pleissner, C. C. 1907, II. 1056.)

When not exposed to air, sol in 32,000 pts $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$ (0.2 g. per l.); 26,000 pts. $\text{KNO}_3 + \text{Aq}$ (0.2 g per l.); 23,000 pts. $\text{CaCl}_2 + \text{Aq}$ (0.2 g per l.); 4600 pts. $\text{NH}_4\text{NO}_3 + \text{Aq}$ (0.2 g per l.); 4300 pts H_2O sat. with CO_2 .

When exposed to air in beakers, sol in 43,000 pts. $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$ (0.2 g per l.), 43,000 pts. $\text{KNO}_3 + \text{Aq}$ (0.2 g per l.); 26,000 pts. $\text{CaCl}_2 + \text{Aq}$ (0.2 g. per l.); 26,000 pts. $\text{NH}_4\text{NO}_3 + \text{Aq}$ (0.2 g per l.); 4300 pts. H_2O sat with CO_2 (0.2 g per l.). (Muir, Chem. Soc 31. 664.)

Insol in methyl acetate (Naumann, B. 1909, 42. 3790.)

$3\text{PbO} \cdot 4\text{PbCO}_3 + 2\text{H}_2\text{O}$. Ppt. (Stromholm, Z. anorg. 1904, 38. 446.)

Lead carbonate, PbCO_3 .

Sol. in 50,551 pts H_2O at ordinary temp.

Sol. in 23,450 pts. H_2O with little ammonium acetate, carbonate, and free ammonia, and in somewhat less H_2O , containing much ammonium nitrate with carbonate and free ammonia (Fresenius, A. 59. 124.)

Calculated from electrical conductivity of $\text{PbCO}_3 + \text{Aq}$, 1 l. H_2O dissolves 3 mg. PbCO_3 at 10° . (Kohlrausch and Rose, Z phys Ch 12. 241)

Solubility is 0.0002 millimol Pb in 1 liter H_2O at 18° (Pleissner, C. C. 1907, II 1056.)

Sl sol in H_2O . 1.5×10^{-3} g are contained in 1 l. of sat. solution at 20° . (Böttger, Z. phys. Ch. 1903, 46. 604.)

Easily sol. in acids, even $\text{HC}_2\text{H}_3\text{O}_2$; but not decomp. by conc. $\text{HNO}_3 + \text{Aq}$ on account of insolubility of $\text{Pb}(\text{NO}_3)_2$ in $\text{HNO}_3 + \text{Aq}$. Insol. in a mixture of 1 pt. H_2SO_4 and 6 pts. absolute alcohol, or in an alcoholic solution of racemic or tartaric acids.

Insol. in $\text{H}_2\text{CO}_3 + \text{Aq}$ (Jahn, A. 28. 117.) Very sl. sol in $\text{H}_2\text{CO}_3 + \text{Aq}$, but solution is prevented by traces of various salts (Tunerman.) Sol. in 7144 pts. sat. $\text{H}_2\text{CO}_3 + \text{Aq}$ (Lassaigne, J. ch méd. 4. 312) H_2O sat. with CO_2 under 4-6 atmos pressure dissolves only traces of Pb; 1000 pts. of solution containing 0.5 pt. PbCO_3 (Wagner, Z. anal 6. 167)

Solubility of PbCO_3 in $\text{H}_2\text{CO}_3 + \text{Aq}$ at 18° .

mg per l	
CO_2	PbCO_3
0	1 75
2 8	6
5 4	7
14 4	8 2
26	9 9
43 5	10 9
106	15 4

(Pleissner, C. C. 1907, II. 1056.)

Sol. in $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$, and $\text{NH}_4\text{Cl} + \text{Aq}$. (Weppen, 1837) Sol. in $\text{KOH} + \text{Aq}$; not absolutely insol at ord temp in an excess of K_2CO_3 , or $\text{Na}_2\text{CO}_3 + \text{Aq}$, and still more sol. at 100° ; but absolutely insol. in NaHCO_3 , KHCO_3 , or $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ (Rose) Insol. in $\text{NH}_4\text{OH} + \text{Aq}$; sol. in KOH or $\text{NaOH} + \text{Aq}$; decomp. by boiling $\text{Ca}(\text{NO}_3)_2 + \text{Aq}$. (Berzelius)

Sl decomp (Persoz), not at all decomp. (Malaguti) by alkali sulphates + Aq.

Partially decomp by boiling with K_2SO_4 , Na_2SO_4 , $(\text{NH}_4)_2\text{SO}_4$, CaSO_4 , MgSO_4 , Na_2HPO_4 , $\text{NaNH}_2\text{HPO}_4$, K_2SO_3 , Na_2SO_3 , $(\text{NH}_4)_2\text{SO}_3$, Na_2HPO_3 , $\text{Na}_2\text{B}_4\text{O}_7$, K_2AsO_4 , Na_3AsO_4 , $\text{K}_2\text{C}_2\text{O}_4$, $\text{Na}_2\text{C}_2\text{O}_4$, NaF , and $\text{K}_2\text{CrO}_4 + \text{Aq}$. With the NH_4 salts, the decomp. is complete (Dulong, A. ch. 82. 290.)

Easily sol. in hot $\text{NH}_4\text{Cl} + \text{Aq}$. (Brett; Rose.)

When 1 mol. PbCO_3 is boiled with 1 mol. $\text{K}_2\text{C}_2\text{O}_4$, 15% of the PbCO_3 is decomp.; with 1 mol. K_2CO_3 , 93.28% is decomp. (Malaguti)

Not decomp. by $\text{K}_2\text{SO}_4 + \text{Aq}$. (Rose.)

Insol in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 828.)

Sol. in an aqueous solution of acetates. (Mercer, 1844.)

Insol in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Not pptd. in presence of Na citrate. (Spiller.)

Min. *Cerussite*.

Lead sodium carbonate, $4\text{PbCO}_3 \cdot \text{Na}_2\text{CO}_3$.

Insol. in H_2O . (Berzelius, Pogg. 47. 199.)

Lead carbonate bromide, $\text{PbCO}_3 \cdot \text{PbBr}_2$.

Insol. in H_2O . (Storer's Dict.)

Lead carbonate chloride, PbCO_3 , PbCl_2 .

Insol in H_2O (Miller, Chem Soc (2) 8. 37)

Min *Phosgenite* Easily sol. in acids.

Lead carbonate iodide, PbCO_3 , PbI_2

Insol in H_2O . (Poggiale)

Lead carbonate sulphate, PbCO_3 , PbSO_4

Min *Lanarkite*. Sol in $\text{HNO}_3 + \text{Aq}$ with residue of PbSO_4 .

3PbCO_3 , PbSO_4 Min. *Leadhillite* As above.

Lithium carbonate, Li_2CO_3

100 pts. H_2O dissolve 1 pt Li_2CO_3 (Vauquelin, A. ch. 7. 284)

100 pts. H_2O at 13° dissolve 0.769 pt. Li_2CO_3 ; at 102° , 0.778 pt Li_2CO_3 (Kremers, Pogg. 99. 48.)

100 pts H_2O , cold or hot, dissolve 1.2 pts. Li_2CO_3 (Troost, A. ch. (3) 51. 103)

100 pts H_2O dissolve 1.4787 pts. at 15° , 0.7162 pt. at 100° . (Draper, C. N. 55. 169.)

100 pts. H_2O dissolve pts. Li_2CO_3 at t° .

t°	Pts Li_2CO_3	t°	Pts Li_2CO_3
0	1 539	75	0 866
10	1 406	100	0 728
20	1 329	102	0 796
50	1 181	.	.

0.796 pt is dissolved at 102° in less than $\frac{1}{4}$ hour, and 0.955 in 1 hour. (Beketow, J russ Soc 1884. 591.)

Sat solution at 15° has sp. gr. 1.014, and contains 1 g. Li_2CO_3 to 70 g. H_2O , while solution sat at 0° has sp. gr. 1.0168 and contains 1 g. Li_2CO_3 in 64.6 g. H_2O . By long spontaneous evaporation at 15° a solution can be obtained of 1.0278 sp. gr containing 1 g Li_2CO_3 in 45.57 g H_2O . (Fluckiger, Arch. Pharm. (3) 25. 549.)

By boiling for an instant with H_2O a solution is obtained, which has sp. gr. 1.0074 and contains 1 g. Li_2CO_3 to 139 g. H_2O . (Fluckiger, Arch. Pharm (3) 26. 543)

0.1687 mol is sol. in 11 H_2O at 25° . (Rothmund, Z. phys. Ch 1909. 69. 531.)

Sat. $\text{Li}_2\text{CO}_3 + \text{Aq}$ contains at:

95° 75°
0.723 0.833% by wt. Li_2CO_3 .

(Tschugaeff, Z. anorg. 1914, 86. 159.)

Sat solution boils at 102° . (Kremers.)

More sol. in $\text{CO}_2 + \text{Aq}$ than in H_2O . 100

pts. sat. $\text{CO}_2 + \text{Aq}$ dissolve 5.25 pts Li_2CO_3 . (Troost.) See LiHCO_3

Sol in NH_4 salts + Aq

(Rothmund, Z. phys. Ch. 1909, 69. 531.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329; Eidmann, C. C. 1899, II. 1014.)

Lithium hydrogen carbonate, LiHCO₃.

100 pts. H₂O dissolve 5.501 pts. at 13°. (Bewad, B. 17. 406 R.)

Magnesium carbonate, basic, $\text{Mg}_2\text{C}_2\text{O}_7 + 3\text{H}_2\text{O} = 3\text{MgO}, 2\text{CO}_2 + 3\text{H}_2\text{O}$ or $2\text{MgCO}_3, \text{MgO}, \text{H}_2 + 2\text{H}_2\text{O}$. (Fritzsche, Pogg. 37. 310.)

Magnesia alba, $3\text{MgCO}_3, \text{Mg}(\text{OH})_2 + 4\text{H}_2\text{O}, 4\text{MgCO}_3, \text{Mg}(\text{OH})_2 + 5\text{H}_2\text{O}$, or $5\text{MgCO}_3, 2\text{Mg}(\text{OH})_2 + 7\text{H}_2\text{O}$.

Very sl. sol. in H_2O . Sol. in 10,000 pts. hot or cold H_2O . (Bineau.)

Sol. in 2500 pts. cold, and 9000 pts. hot H_2O . (Fyfe.)

Sol. in H_2O containing CO_2 .

Very easily sol. in acids.

Easily sol. in dil. $\text{HCl} + \text{Aq}$.

Easily sol. in NH_4 sulphate, nitrate, or succinate + Aq, also in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. (Wittstein.) Sol. in cold $\text{Na}_2\text{CO}_3, \text{K}_2\text{CO}_3, \text{K}_2\text{SO}_4, \text{KCl}$, or $\text{KNO}_3 + \text{Aq}$ (Longchamp); also in $\text{NH}_4\text{Cl} + \text{Aq}$, separating out on heating. (Vogel, J. pr. 7. 455.) Slowly sol. in conc. $\text{BaCl}_2, \text{CaCl}_2$, or $\text{ZnSO}_4 + \text{Aq}$. (Karsten.)

Sol. in $\text{MgSO}_4 + \text{Aq}$. (Dulong.)

Sol. in ferric salts + Aq with evolution of CO_2 and pptn. of $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$. (Fuchs.)

Sol. in boiling $\text{Co}, \text{Ni}, \text{Zn}, \text{Mn}$, or Cu nitrates or chlorides + Aq.

Min. *Hydromagnesite*, $4\text{MgO}, 3\text{CO}_2 + 4\text{H}_2\text{O}$.

+ $10\text{H}_2\text{O}$. Sol. in considerable amount in $\text{H}_2\text{CO}_3 + \text{Aq}$ as $\text{MgH}_2(\text{CO}_3)_2 + \text{Aq}$. (Engel, C. R. 100. 911.)

Magnesium carbonate, MgCO_3 .

A hydrous. Insol. in H_2O . 1 l. H_2O dissolves 106 mg. MgCO_3 . (Chevalet, Z. anal. 8. 91.) Sol. in 5071 pts. H_2O at 15° . (Kremers.) MgCO_3 combines with H_2O to form $\text{MgCO}_3 + 3\text{H}_2\text{O}$, and + $5\text{H}_2\text{O}$, which are less sol. in H_2O than anhydrous salt. (Engel, C. R. 101. 814.)

Very hygroscopic. About 20 g. are sol. in 1 l. H_2O . (Engel, C. R. 1899, 129. 598.)

0.7156 g. are sol. in 1 l. H_2O at 15° .

0.627 g. are sol. in 1 l. H_2O at 15° with vapour pressure of CO_2 equal to zero.

6.977 grams are sol. in 1 l. H_2O at 15° with vapour pressure CO_2 equal to 1 atmos. (Treadwell and Reuter, Z. anorg. 1898, 17. 202.)

94.4 mg. are sol. in 1 l. of CO_2 -free water. (Gothe, Ch. Z. 1915, 39. 306.)

Solubility in H_2O in equilibrium with $\text{Mg}(\text{HCO}_3)_2$ and CO_2 .

System: $\text{MgCO}_3, \text{Mg}(\text{HCO}_3)_2$ and CO_2 at 30°C .

0.7479	0.3012	40.3	0.4467	59.7

In a solution near the saturation point and in equilibrium with atmospheric air upwards of 50 per cent of the magnesium is in the form of the normal carbonate. When the solution is brought in contact with the solid phase, the proportion of the base combined as normal carbonate falls to about 34 per cent, or lower. (Cameron and Briggs, J. phys. Chem. 1901, 5. 552-3.)

For solubility in $\text{H}_2\text{CO}_3 + \text{Aq}$, see *Magnesium hydrogen carbonate*.

Scarcely acted upon by $\text{HCl} + \text{Aq}$. (Senarmont.)

The solubility of MgCO_3 in $\text{NaCl} + \text{Aq}$ when in contact with ordinary air increases with increasing concentration of NaCl up to a maximum, and then decreases. (Cameron and Seidell, J. phys. Chem. 1903, 7. 579.)

Solubility of MgCO_3 in salts + Aq in equilibrium with an atmosphere free from CO_2 .

$\text{NaCl} + \text{Aq}; t = 23^\circ$.

The solubility of MgCO_3 in CO_2 -free water is increased by the addition of NaCl , NaNO_3 or $\text{Na}_2\text{SO}_4 \cdot 10\text{H}_2\text{O}$ but decreased by the addition of Na_2CO_3 or $\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$.

(Gothe, Ch. Z. 1915, 39, 306.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20, 828.)

Insol. in acetone. (Naumann, B. 1904, 37, 4329.)

Insol. in acetone and in methylal. (Eidmann, C. C. 1899, II, 1014.)

Insol. in methyl acetate (Naumann, B. 1909, 42, 3790); ethyl acetate. (Naumann, B. 1904, 37, 3601.)

Min. *Magnesite*. Very sl. attacked by warm conc. $\text{HCl} + \text{Aq}$. 100 pts. H_2O dissolve 0.0027 pt., calculated as MgO . (Lubavin.)

Solution in H_2O contains 0.018 g. Mg and 0.065 g. CO_2 per l. at 20° . (Wells, J. Am. Chem. Soc. 1915, 37, 1705.)

Solution in H_2O containing 27.2 g. NaCl per l. contains 0.028 g. Mg and 0.086 g. CO_2 per l. at 20° . (Wells, J. Am. Chem. Soc. 1915, 37, 1705.)

 $+ \text{H}_2\text{O}$.

$+ 2\text{H}_2\text{O}$. Decomp. by suspension in H_2O into basic salt. (Engel, C. R. 100, 911.)

$+ 3\text{H}_2\text{O}$. Small quantities of this salt are wholly dissolved by much H_2O . (Bineau.)

The solution contains in 100 pts. at—

0° 6.5° 8° 16° 25°
0.15 0.153 0.155 0.179 pts. $\text{MgCO}_3 + 3\text{H}_2\text{O}$.

(Norgaard, 1850.)

Decomp. by boiling H_2O into a basic insol. salt and CO_2 . 100 pts. H_2O dissolve 0.1518 pt. at 19° . (Fritzsche, Pogg. 37, 304.)

Sol. in 48 pts. H_2O , and decomp. by large amt. (Fourcroy.)

100 pts. H_2O dissolve 0.1518 pt. at 19° , or sol. in 658 pts. H_2O at 19° . (Beckurts, J. B. 1881, 212.)

100 pts. H_2O dissolve 0.0812 pt., calculated as MgO . (Lubavin, J. russ. Soc. 24, 389.)

Solution in H_2O contains 0.36 g. Mg and 1.01 g. CO_2 per l. at 20° . (Wells, J. Am. Chem. Soc. 1915, 37, 1707.)

Solubility in H_2O sat. with CO_2 has been determined at 20° , 25° , 30° , 34° and 39° and

at CO_2 pressures corresponding with 0.5 to 30.3% CO_2 in the gas phase. (Leather and Sen, Chem. Soc. 1915, 108 (2) 13.)

Easily sol. in acids, even when dil

Not decomp. by 1 pt. H_2SC_4 + 6 pts alcohol, or by alcoholic solutions of glacial acetic, racemic or tartaric acids, but is slowly decomp. by alcoholic solution of citric acid, or HNO_3 + abs alcohol. (Butini, 1827.)

100 pts. NaCl + Aq (2.525%) dissolve 0.1250 pt., calculated as MgO . (Lubavin.)

1% Na_2CO_3 + Aq, when mixed with 1% MgSO_4 + Aq, cause no ppt., but 1.5–2% solutions ppt. this salt. (Brandes, 1825.)

More sol. in NH_4Cl + Aq than CaCO_3 . Sol. in NH_4NO_3 + Aq, but less easily than in NH_4Cl + Aq.

Solubility in KHCO_3 + Aq at t° .

Values are given in mol./litre.

The experiments were performed in such a way as to prevent, as far as possible, loss of CO_2 from the solutions.

(Auerbach, Z. Elektrochem. 1904, 10. 164.)

1 l. H_2O , containing 6% $\text{MgSO}_4 + 7\text{H}_2\text{O}$ and

a little NaCl , dissolves 5 g. MgCO_3 . (Hunt, Sil. Am. J. (2) 42, 49.)

More sol. in cold alkali borates + Aq than in hot. (Wittstein)

Sol. in Na citrate + Aq.

+ $4\text{H}_2\text{O}$. Efflorescent

+ $5\text{H}_2\text{O}$. Two modifications.

α . Plates. Sol. in 600 pts. H_2O at 0–7°; solution gradually separates out $\text{MgCO}_3 + 2\text{H}_2\text{O}$. H_2CO_3 + Aq sat. at 3–4 atmos. pressure dissolves 9% at 0–4° MgSO_4 + Aq dissolves 4% moist salt at 3–4°, and it is easily sol. in Na_2CO_3 , or NaHCO_3 + Aq. (Norgaard.)

β . Prisms. More efflorescent than α . Sol. in 600 pts. H_2O but not in MgSO_4 , or Na_2CO_3 + Aq. Both forms are decomp. by boiling H_2O . (Norgaard.)

Magnesium hydrogen carbonate,
 $\text{MgH}_2(\text{CO}_3)_2(?)$.

Known only in solution.

1 l. H_2CO_3 + Aq sat. at 1 atmos. pressure dissolves 23.5 g. MgCO_3 . (Bineau.)

1 l. carbonic acid water dissolves 0.115 g. magnesite at 18° and 0.75 m. pressure. (Cossa, B. 2. 697.)

1 pt. MgOC_3 dissolves in H_2O saturated with CO_2 at 5° and a pressure of—

1 2 3 4 5 6 atmospheres
in 161 144 134 100.7 110 76 pts. H_2O

(Merkel, Techn. J. B. 1867. 213.)

H_2CO_3 + Aq sat. at 3–4 atmos. pressure and 0–4° dissolved 9% $\text{MgCO}_3 + 5\text{H}_2\text{O}$. (Norgaard.)

$\text{MgCO}_3 + 3\text{H}_2\text{O}$ is sol. in 72.4 pts. H_2CC_3 + Aq sat. at 20° and ord. pressure; 30.5 pts. H_2CO_3 + Aq sat. at 2 atmos. pressure; 26.0 pts. H_2CO_3 + Aq sat. at 3 atmos. pressure; 21.1 pts. H_2CO_3 + Aq sat. at 4 atmos. pressure; 17.09 pts. H_2CO_3 + Aq sat. at 5 atmos. pressure. (Beckurts, J. B. 1881. 212.)

1. H_2O sat. with CO_2 at p pressure and t° dissolves g. MgCO_3 .

p atmos	t°	g. MgCO_3	p mm	t°	g. MgCO_3
1.0	19 5	27 79	751	13 4	28 45
2.1	19 5	33 11	760	19 5	25 79
3.2	19 7	37 3	762	29 3	21.95
4.7	19 0	43 5	764	46	15 7
5 6	19 2	46 2	764	62	10 4
6 2	19 2	48 51	765	70	8.1
7 5	19 5	51 2	765	82	4 9
9.0	18.7	56.59	765	91	2.4
...	765	100	0.0

(Engel and Ville, C. R. 93. 34.)

The low figures of other observers are due to their using basic carbonates. By very careful experiments it was found that 1 l. H_2O

sat. with CO_2 at 1 atmos. pressure and t° dissolved the following amts of MgCO_3 :

t°	MgCO_3	t°	MgCO_3	t°	MgCO_3
3 5	35 6	18	22 1	40	22 1
12	26 5	30	15 8	50	9 5

(Engel, C. R. 100. 444.)

1.9540 g. are sol. 1 l. H_2O at 15° . (Treadwell and Reuter, Z. anorg. 1898, 17. 202.)

$\text{MgH}_2(\text{CO}_3)_2$ is not stable except in the presence of free CO_2 .

At 15° and 760 mm., a solution having the partial pressure of $\text{CO}_2=0$, contains 1.9540 g. $\text{MgH}_2(\text{CO}_3)_2$ and 0.7156 g. MgCO_3 per liter. (Treadwell and Reuter, Z. anorg. 1898, 17. 204.)

Solubility of $\text{MgH}_2(\text{CO}_3)_2$ in H_2O containing carbonic acid, at 15° .

% carbonic acid in the gas at 0° and 760 mm	partial pressure mm Hg	mg free CO_2	mg $\text{MgH}_2(\text{CO}_3)_2$ in 100 cc of the solution	mg MgCO_3 in 100 cc of the solution	mg Mg

(Cameron and Seidell.)

Magnesium potassium carbonate,
 $\text{MgK}_2(\text{CO}_3)_2+4\text{H}_2\text{O}$.

Quickly decomp. by cold H_2O . (Deville, A. ch. (3) 33. 87.)

Ppt. Decomp. by H_2O . (Reynolds, Chem. Soc. 1898, 73, 264.)

$\text{MgKH}(\text{CO}_3)_2+4\text{H}_2\text{O}$. Insol. in H_2O , but decomp. thereby into an insol. basic Mg carbonate, and $\text{MgH}_2(\text{CO}_3)_2$ and KHCO_3 , which dissolve. (Berzelius.)

Magnesium rubidium hydrogen carbonate,
 $\text{MgRbH}(\text{CO}_3)_2+4\text{H}_2\text{O}$.

Decomp. in the air. (Erdmann, A. 1897, 294. 75.)

Magnesium sodium carbonate, MgCO_3 ,
 Na_2CO_3 .

Quickly decomp. with H_2O . (Deville, A. ch. (3) 33. 89.)

+ $15\text{H}_2\text{O}$. (Norgaard.)

Magnesium sodium carbonate/sodium chloride, MgCO_3 , Na_2CO_3 , NaCl .

Decomp. by H_2O . (de Schulten, C. R. 1896, 122. 1427.)

Manganous carbonate, MnCO_3 .

Permanent. Practically insol. in H_2O . Sol. in $\text{H}_2\text{CO}_3+\text{Aq}$ and in acids generally.

1 l. H_2O dissolves 0.065 g. at 25° . (Ageno and Valla, Att. Accad. Linc. 1911, 20, II. 706.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 828.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Min. *Rhodochrosite*.

+ $\frac{1}{2}$, or $1\text{H}_2\text{O}$. Insol. in H_2O . Sol. in acids. Sol. in $\text{H}_2\text{CO}_3+\text{Aq}$. 1 pt. MnCO_3 requires 2000 pts. $\text{H}_2\text{CO}_3+\text{Aq}$ for solution.

(Lassaigne.) Sol. in 7680 pts. H_2O , and 3840 pts. H_2O containing CO_2 . (Jahn.) When freshly precipitated is sol. in NH_4 salts + Aq. (Wittstein.) Not more sol. in H_2O containing Na_2CO_3 or K_2CO_3 than in pure H_2O (Ebelmen.) Insol. in NH_4Cl , or NH_4NO_3 + Aq. (Brett.)

Sol. in ferric salts + Aq, with evolution of CO_2 and pptn. of $Fe_2C_2H_6$. (Fuchs.)

Not pptd. in presence of Na citrate. (Spiller.)

Manganous potassium carbonate,
 $MnK_2(CO_3)_2 + 4H_2O$.

Ppt. Decomp. by H_2O alone

Sl. sol. in $Mn(C_2H_3O_2)_2$ + Aq or K_2CO_3 + Aq. (Reynolds, Chem. Soc. 1898, 73. 264.)

Manganous carbonate hydroxylamine,
 $4MnCO_3, 3NH_3O + 2H_2O$.

Ppt. Sol. in acids. (Goldschmidt and Syngros, Z. anorg. 5. 138.)

Mercurous carbonate, Hg_2CO_3 .

Ppt. Decomp. by hot H_2O . Sol. in hot or warm NH_4Cl + Aq, but less easily than mercuric carbonate; less sol. in NH_4NO_3 + Aq. (Brett, 1837.)

Sl. sol. in K_2CO_3 + Aq; partially sol. with decomp. in NH_4OH + Aq. (Wittstein.)

Mercuric carbonate, basic, $4HgO, CO_2$.

Can be washed with cold H_2O without decomp. (Millon, A. ch. (3) 19. 368.)

$3HgO, CO_2$. Insol. in cold H_2O . Sol. in CO_2 + Aq; sl. sol. in K_2CO_3 + Aq. Easily sol. in NH_4Cl + Aq. (Berzelius.)

Neodymium potassium carbonate, $Nd_2(CO_3)_2, K_2CO_3 + 12H_2O$.

Ppt. Sol. in 30% K_2CO_3 + Aq. (Meyer, Z. anorg. 1904, 41. 105.)

Neodymium sodium carbonate, $2Nd_2(CO_3)_2, 3Na_2CO_3 + 22H_2O(?)$.

Ppt. Easily decomp.
Sl. sol. in conc. Na_2CO_3 + Aq. (Meyer, Z. anorg. 1904, 41. 106.)

Nickel carbonate, basic, $3NiO, CO_2 + 5H_2O$.

Min. *Zaratite*. Easily sol. in HCl + Aq.

Pptd. nickel carbonate is a basic salt of varying composition. Insol. in H_2O or H_2CO_3 + Ac. Sol. in acids. Sol. in $(NH_4)_2CO_3$ + Aq;

very sl. sol. in Na_2CO_3 + Aq; sol. in warm NH_4Cl + Aq, and KCN + Aq. (Rose.)

Not pptd. in presence of Na citrate. (Spiller.)

Nickel carbonate, $NiCO_3$.

1 l. H_2O dissolves 0.0925 g at 25%. (Ageno and Valla, Att. Accad. Linc. 1911, 20, II. 706.)

Not attacked by cold conc. HCl , or HNO_3 + Aq. (Senarmont, A. ch. (3) 30. 138.)

+ $6H_2O$. Sol. in acids. (Deville, A. ch. (3) 35. 446.)

See also Carbonate, nickel, basic.

Nickel potassium carbonate, $NiCO_3, K_2CO_3 + 4H_2O$.

Ppt. (Deville, A. ch. (3) 33. 96.)

$NiCO_3, KHCO_3 + 4H_2O$. Decomp. by H_2O , but may be washed by $KHCO_3$ + Aq without decomp. (Rose, Pogg. 84. 566.)

Nickel sodium carbonate, $NiCO_3, Na_2CO_3 + 10H_2O$.

Ppt. (Deville.)

Nickel carbonate hydroxylamine, $2Ni(OH)_2, 4NiCO_3, 5NH_3OH + 7H_2O$.

Ppt. (Goldschmidt and Syngros, Z. anorg. 1894, 5. 143.)

$2Ni(OH)_2, 4NiCO_3, 6NH_3OH + 6H_2O$.

Ppt. (Goldschmidt and Syngros.)

Palladious carbonate, $PdCO_3, 9PdO + 10H_2O$.

Insol. in H_2O ; partly sol. in NH_4OH + Aq; sl. sol. in Na_2CO_3 + Aq; sol. in acids. (Kane, 1842.)

Potassium carbonate, K_2CO_3 .

Deliquescent. Very sol. in H_2O with evolution of heat.

Sol. in 1.05 pts. H_2O at 3°; 0.962 pt. at 6°, 0.900 pt. at 12°, 0.747 pt. at 26°; and 0.490 pt. at 70°. (Osann.)

Sol. in 0.92 pt. H_2O (M R and P)

Sol. in 0.922 pt. H_2O at 15°. (Gerlach)

Sol. in 1 pt. H_2O (Abl.)

100 pts. H_2O at 15.5° dissolve 100 pts. K_2CO_3 . (Ure's Dict)

Solubility in 100 pts. H_2O at t°.

28.43	61.57	10.00	15.73	66.38	17.90

(Cuno, W. Ann. 1909, (4) 28. 664.)

Solubility of K_2CO_3 in alcohol + Aq at 30° .

% K_2CO_3	% Alcohol	% H_2O	Solid phase
53.27	0	46.73	$K_2CO_3 \cdot 1\frac{1}{2}H_2O$
53.09	0.1	46.81	"
...	...	*	"
...	"
0.13	90.49	9.38	$K_2CO_3 \cdot 1\frac{1}{2}H_2O$
...	"
...	"
0.04	99.92	0.04	$K_2CO_3 + K_2CO_3 \cdot 1\frac{1}{2}H_2O$

* Solution separates into two layers.
(de Waal, Dissert. Leiden, 1910.)A full discussion of the solubility of K_2CO_3 in methyl, ethyl, propyl, isopropyl, and allyl alcohols is given by Frankforter and Frary (J. phys. Ch. 1913, 17. 402), and Frankforter and Temple (J. Am. Chem. Soc. 1915, 37. 2697).

K_2CO_3 will "salt out" acetone from aqueous solution. The table shows the composition of the solutions at the points at which inhomogeneous solutions of K_2CO_3 , acetone and H_2O just become homogeneous at 20°. 100 g. of the solution contain:

K_2CO_3	H_2O	acetone	K_2CO_3	H_2O	acetone
18.84	73.22	7.94	2.43	55.36	42.21
13.32	71.38	15.30	22.29	72.81	4.90
11.83	70.34	17.83	17.86	73.12	9.02
10.13	69.03	20.84	15.81	72.53	11.66
8.24	67.31	24.45	14.39	71.89	13.72
7.22	65.99	26.79	10.29	69.46	20.25
6.04	64.39	29.57	1.91	54.05	44.04
28.87	69.08	2.05	1.76	52.86	45.38
23.94	71.98	4.08	1.60	51.60	46.80
21.52	72.75	5.33	1.29	49.57	49.14
19.60	73.10	7.70	1.08	47.86	51.06
6.46	65.34	28.20	0.94	46.73	52.33
5.91	64.65	29.44	0.75	44.72	54.53
5.60	63.93	30.47	0.66	43.31	56.03
5.04	62.80	32.16	0.60	42.49	56.91
4.50	61.48	34.02	0.54	41.73	57.73
3.80	59.79	36.41	0.50	40.69	58.81
3.18	57.95	38.87	0.46	40.48	60.06
2.73	56.50	40.77

(Frankforter and Cohen, J. Am. Chem. Soc. 1914, **36**, 1121.)

Insol. in benzonitrile. (Naumann, B. 1914, **47**, 1370.)

Insol. in methyl acetate (Naumann, B. 1909, **42**, 3790); ethyl acetate. (Naumann, B. 1910, **34**, 314.)

Sol. in phenol.

Sol. in 13.5 pts. glycerine of 1.225 sp. gr. (Vogel, N. Repert. 16, 557.)

100 g. sat. K_2CO_3 + sugar + Aq contains 22.44 g. K_2CO_3 and 56 g. sugar at 31.25° (Kohler, Z. Ver. Zuckerind 1897, **47**, 447.)

+ H_2O .

+ $\frac{1}{2}H_2O$. Very deliquescent. (Pohl.)

Deliquescent only in very moist air. (Stadeler.)

Sol. in H_2O with evolution of heat. (Pohl.)

Sol. at 17.6° with absorption of heat, at 32° with evolution of heat, and at 25° with neither absorption nor evolution of heat. (Berthelot, C. R. **78**, 1722.)

Sat. solution of K_2CO_3 + $\frac{1}{2}H_2O$ in H_2O contains 53.27 g. anhydrous K_2CO_3 in 100 g. solution at 30°. (de Waal, Dissert. 1910.)

+ $2H_2O$. Salt usually given as containing $\frac{1}{2}H_2O$ contains $2H_2O$. (Gerlach, Z. anal. **26**, 460.)

Sat. solution of K_2CO_3 + $2H_2O$ contains 112 g. anhydrous K_2CO_3 in 100 g. H_2O at 25°. (Osaka, J. Tok. Ch. Soc. 1911, **32**, 870.)

+ $4H_2O$. Not deliquescent in closed vessels. (Gerlach, l. c.)

Potassium hydrogen carbonate, $KHCO_3$.

Not deliquescent

Sol in 3.5 pts. H_2O at 15° (Redwood) Sol in 4 pts. H_2O at moderate temperatures. (Bergmann) Sol in 0.833 pt. boiling H_2O (Pelletier), in 4 pts. cold, and 1.2 pts. boiling H_2O (M. R. and P.'s Pharm.) Sol in 4 pts. H_2O at 18.75° (Abl.) 100 pts. H_2O at 15.5° dissolve 30 pts. and at 100°, 83 pts. (Ure's Diet) 100 pts. H_2O at 10–11.2° dissolve 26.1 pts. $KHCO_3$; and the sp. gr. of solution is 1.1536 (Anthon, Dinkel **161**, 216.)

100 pts. H_2O dissolve at—

0°	10°	20°	30°
19.61	23.23	26.91	30.57 pts. $KHCO_3$,
40°	50°	60°	70°
34.15	37.92	41.35	45.24 pts. $KHCO_3$.

(Poggiale, A. ch. (3) **8**, 468.)

100 pts. H_2O dissolve pts. $KHCO_3$ at t°.

t°	Pts. $KHCO_3$	t°	Pts. $KHCO_3$
0	22.4	40	45.2
20	33.2	60	46.4

(Dibbitts, J. pr. (2) **10**, 417.)

Sp. gr. of $KHCO_3$ + Aq at 15° containing 5% $KHCO_3$ = 1.0328; containing 10% $KHCO_3$ = 1.0674. (Kohlrausch, Z. anal. **28**, 472.)

Sol. in 120 pts. boiling alcohol. (Berthelot.) Insol. in alcohol. (Dumas.)

100 pts. H_2O dissolve 19.3 pts. $KHCO_3$ and 8.3 pts. $NaHCO_3$; if the sat. solution of latter is sat. with former; and 26.1 pts. $KHCO_3$ and 6.0 pts. $NaHCO_3$, if the sat. solution of the former is sat. with the latter, all at 10°. (Mulder, J. B. **1866**, 67.)

Insol. in sat. K_2CO_3 + Aq. (Engel, C. R. **102**, 365.)

Solubility of $KHCO_3$ + KNO_3 in H_2O in an atmosphere of CO_2 .

1 litre of the solution contains

at 14.5°		at 25.2°	
Mol $KHCO_3$	Mol KNO_3	Mol $KHCO_3$	Mol KNO_3
0.00	2.33	0.00	3.28
0.39	2.17	0.89	2.84
0.76	2.03	1.33	2.65
1.16	1.92	1.91	2.45
1.55	1.81

This case is complicated by the fact that KNO_3 is more sol. in H_2O sat. with CO_2 than in pure H_2O .

(Touren, C. R. 1900, **131**, 261.)

Insol. in benzonitrile (Naumann, B. 1914, **47**, 1370.)

Insol. in methyl acetate (Naumann, B. 1909, **42**, 3790); ethyl acetate (Naumann, B. 1910, **43**, 314.)

Potassium praseodymium carbonate, K_2CO_3 , $Pr_2(CO_3)_3$ + $12H_2O$.

Ppt. Sol. in 20% K_2CO_3 + Aq (Meyer, Z. anorg. 1904, **41**, 104.)

- Potassium samarium carbonate**, K_2CO_3 , $Sm_2(CO_3)_3 + 12H_2O$.
(Cleve.)
- Potassium silver carbonate**, $KAgCO_3$.
Decomp. by H_2O . (de Schulten, C. R. 105. 811)
Ppt. Decomp. by H_2O . (Reynolds, Chem. Soc. 1898, 73 265.)
- Potassium sodium carbonate**, $KNaCO_3 + 6H_2O$.
Slightly efflorescent Sol. in 0.75 pt. H_2O at 12.5° ; in 0.54 pt. H_2O at 15° .
Sat. solution at 15° has sp. gr. = 1.366. (Stolba, J. pr. 94. 406.)
Decomp. by recrystallizing from H_2O , but crystallizes undecomposed from sat. $K_2CO_3 + Aq$.
Sol. in H_2O . (Osaka, C. A. 1911. 2601.)
See $K_2CO_3 + Na_2CO_3$ under Na_2CO_3 .
 $+ 3H_2O$. (Kremann and Zitelz, M. 1909. 30. 317.) Does not exist. (Osaka)
 $K_2CO_3, 2Na_2CO_3 + 18H_2O$. Sl. efflorescent.
Very sol. in H_2O . (Marignac.)
- Potassium stannous carbonate**, K_2CO_3 , $2SnCO_3 + 2H_2O$
Decomp. by H_2O . (Deville.)
- Potassium uranyl carbonate**, $2K_2CO_3$, $(UO_2)_2CO_3$.
Sol. without decomp. in 13.5 pts. H_2O at 15° , and in somewhat less warm H_2O . Sol. in boiling H_2O with decomp.
More sol. in K_2CO_3 , or $KHCO_3 + Aq$ than in H_2O . (Rose.)
Insol. in alcohol. (Ebelmen, A. ch. (3) 5. 189.)
- Potassium zinc carbonate**, $4K_2O$, $6ZnO$, $11CO_2 + 8H_2O$.
Can be washed with cold H_2O without decomp. (Deville, A. ch. (3) 33. 99.)
- Praseodymium carbonate**, $Pr_2(CO_3)_3 + 8H_2O$.
Sol. in H_2O . (von Schule, Z. anorg. 1898, 18. 362.)
- Praseodymium sodium carbonate**, $2Pr_2(CO_3)_3$, $3Na_2CO_3 + 22H_2O(?)$.
Ppt. Easily decomp. (Meyer, Z. anorg. 1904, 41. 105.)
- Radium carbonate**.
Less sol. in H_2O than corresponding Ba comp. (Curie, Dissert. 1903.)
- Rubidium carbonate**, Rb_2CO_3 .
Very deliquescent, and sol. in H_2O . 100 pts. absolute alcohol dissolve 0.74 pt. Rb_2CO_3 . (Bunsen.)
- Rubidium hydrogen carbonate**, $RbHCO_3$.
Not deliquescent. Easily sol. in H_2O (Bunsen.)
- Samarium carbonate**, $Sm_2(CO_3)_3 + 3H_2O$.
Insol. in H_2O . (Cleve, Bull. Soc. (2) 43. 168.)
- Samarium sodium carbonate**, $Sm_2(CO_3)_3$, $Na_2CO_3 + 16H_2O$.
Ppt. (Cleve.)
- Scandium carbonate**, $Sc_2(CO_3)_3 + 12H_2O$.
(Crookes, Roy. Soc. Proc. 1908, 80, A. 518.)
- Scandium sodium carbonate**, $Sc_2(CO_3)_3$, $4Na_2CO_3 + 6H_2O$.
Difficultly sol. in H_2O
Sol. in cold, less sol. in hot alkali carbonates $+ Aq$. (R. Meyer, Z. anorg. 1910, 67. 410)
- Silver carbonate**, Ag_2CO_3 .
Somewhat sol. in H_2O . Sol. in 31.978 pts. H_2O at 15° . (Kremers, Pogg. 85. 248.) 1 g. Ag_2CO_3 dissolves in 21 boiling H_2O . (Joulin, A. ch. (4) 30. 260.)
Solubility in H_2O at $25^\circ = 1.16 \times 10^{-1}$ mol./l (Spencer and Le Pla, Z. anorg. 1910, 65. 14.)
1 l. H_2O at 25° dissolves 1.2×10^{-4} gram atoms of silver. (Abegg and Cox, Z. phys. Ch. 1903, 46. 11.)
Insol. in $H_2CO_3 + Aq$. (Bergman) Sol. in 961 pts. $H_2CO_3 + Aq$. (Lassaigne.) 1 l. sat. $H_2CO_3 + Aq$ dissolves 0.846 g. Ag_2CO_3 at 15° . (Johnson, C. N. 54. 75)
Sol. in $(NH_4)_2CO_3 + Aq$ or $NH_4OH + Aq$; sl. sol. in $K_2CO_3 + Aq$. (Wittstein.) Easily sol. in $Na_2S_2O_3 + Aq$. (Herschel, 1819.) Sol. in hot $NH_4Cl + Aq$, and sl. sol. in $NH_4NO_3 + Aq$. (Brett, 1837.) Not pptd. in presence of Na citrate. (Spiller.) Decomp. by $HCl + Aq$, and chlorides $+ Aq$.
Somewhat sol. in conc. $NaNO_3 + Aq$. (de Coninck, Belg. Acad. Bull. 1909, 333.)
Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 829.)
Insol. in alcohol.
Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314.)
Insol. in acetone. (Naumann, B. 1904, 37. 4329; Eidmann, C. C. 1899, II. 1014.)
- Silver carbonate ammonia**.
Easily sol. in H_2O . Sol. in $NH_4OH + Aq$, from which it is precipitated by absolute alcohol. (Berzelius.)
 $Ag_2CO_3, 4NH_3$. Ppt. Insol. in alcohol. (Keen, C. N. 31. 231.)
- Sodium carbonate**, Na_2CO_3 .
Anhydrous. Sol. in H_2O with evolution of heat.
Sol. in 5.987 pts H_2O at 15° . (Fresenius) 100 pts H_2O at 14.6° dissolve 7.74 pts Na_2CO_3 , or 20.64 pts. $Na_2CO_3 \cdot 10H_2O$ is sol. in rather less than 1 pt. boiling H_2O (Thomson, 1831)
Sol. in 2 pts. H_2O (Bergman)
Sol. in 2 pts. H_2O at 18.75° . (Abl)

Solubility in 100 pts. H ₂ O at t°					
t°	Pts. Na ₂ CO ₃	Pts. Na ₂ CO ₃ + 10H ₂ O	t°	Pts. Na ₂ CO ₃	Pts. Na ₂ CO ₃ + 10H ₂ O

(Mulder, Scheik. Verhandel. 1864. 129.)

Liabie to form supersaturated solutions.

Supersat. Na₂CO₃+Aq (2 pts. Na₂CO₃, 10H₂O: 1 pt. H₂O) may be kept in a flask closed with cotton wool. (Schröder.)

When supersat. Na₂CO₃+Aq is exposed to low temperatures, the 10H₂O salt crystallizes out; but under other circumstances two other salts are formed, each containing 7H₂O; one is four times as sol. at 10° as the 10H₂O salt, and the other twice as sol. See above. (Lowel, A. ch. (3) 33. 337.)

See also Na₂CO₃+H₂O, 7H₂O, and 10H₂O.

(Poggiale, A. ch. (3) 8. 468)

Min. Trona, Urao. See $\text{Na}_2\text{H}(\text{CO}_3)_2 + 2\text{H}_2\text{O}$.

Trisodium hydrogen carbonate, $\text{Na}_3\text{H}(\text{CO}_3)_2 + 2\text{H}_2\text{O}$

Sol. in H_2O .

True formula of "Trona" and "Urao." Zepharovich, *Zeit. Kryst.* **13**, 135; de Mondesir, *C. R.* **104**, 1505)

Sodium thorium carbonate, $3\text{Na}_2\text{CO}_3 \cdot \text{Th}(\text{CO}_3)_2 + 12\text{H}_2\text{O}$.

Decomp. by H_2O . (Cleve)

Sodium uranyl carbonate, $2\text{Na}_2\text{CO}_3 \cdot (\text{UO}_2)\text{CO}_3$.

Slowly sol. in H_2O . Solution sat. at 15° has sp. gr. = 1.161. (Anthon, *Dingl.* **156**, 207.)

Sodium yttrium carbonate, $\text{Na}_2\text{CO}_3 \cdot \text{Y}_2(\text{CO}_3)_3 + 4\text{H}_2\text{O}$

Ppt. Not decomp. by cold H_2O . (Cleve.)

Sodium zinc carbonate, $3\text{Na}_2\text{O} \cdot 8\text{ZnO} \cdot 11\text{CO}_2 + 8\text{H}_2\text{O} = 3\text{Na}_2\text{CO}_3 \cdot 8\text{ZnCO}_3 + 8\text{H}_2\text{O}$.

Sl. decomp. by pure H_2O . (Wohler)

Less easily decomp. by H_2O than most double carbonates (Deville, *A. ch.* (3) **33**, 101.)

$\text{Na}_2\text{O} \cdot 3\text{ZnO} \cdot 4\text{CO}_2 + 3\text{H}_2\text{O}$ (Kraut, *Z. anorg.* **1897**, **13**, 13.)

Sodium carbonate sulphite, $\text{Na}_2\text{CO}_3 \cdot 2\text{Na}_2\text{SO}_3 + 2\text{H}_2\text{O}$.

Sol. in hot H_2O , sl. sol. in cold H_2O . (Johnson, *J. Soc. Chem. Ind.* **1895**, **14**, 271)

Strontium carbonate, SrCO_3 .

Sol. in 18,045 pts H_2O at ordinary temp. (Fresenius.)

Sol. in 12,522 pts. H_2O at 15° . (Kremers, *Pogg.* **85**, 247.)

Sol. in 33,000 pts. H_2O . (Bineau, *C. R.* **41**, 511.)

Less sol. in H_2O than SrSO_4 . (Dulong)

Sol. in 1536 pts. boiling H_2O . (Hcepe, *Edinb. Trans.* **4**, 5.)

Calculated from electrical conductivity of $\text{SrCO}_3 + \text{Aq}$, SrCO_3 is sol. in 121,760 pts. H_2O at 8.8° and 91,468 pts at 24.3° (Holleman, *Z. phys. Chem.* **12**, 130).

1 l. H_2O dissolves 11 mg. SrCO_3 at 18° . (Kohlrausch and Rose, *Z. phys. Chem.* **12**, 241.)

"Solubility product" = 15.67×10^{-10} mol. litre (McCoy and Smith, *J. Am. Chem. Soc.* **1911**, **33**, 473.)

Sol. in 833 pts. $\text{H}_2\text{CO}_3 + \text{Aq}$ at 10° . (Gmelin.)

Sol. in 56,545 pts. H_2O containing NH_4OH and $(\text{NH}_4)_2\text{CO}_3$.

Quite sol. in $\text{NH}_4\text{Cl} + \text{Aq}$ or $\text{NH}_4\text{NO}_3 + \text{Aq}$, but reprecipitated on addition of NH_4OH and $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ (Fresenius.)

Partially decomp. by boiling with aqueous solutions of K_2SO_4 , Na_2SO_4 , CaSO_4 , $(\text{NH}_4)_2\text{SO}_4$, MgSO_4 , Na_2HPO_4 , $(\text{NH}_4)_2\text{HPO}_4$, K_2SO_3 , Na_2SO_3 , $(\text{NH}_4)_2\text{SO}_3$, $\text{Na}_2\text{B}_4\text{O}_7$,

Na_2AsO_3 , K_2AsO_3 , $\text{K}_2\text{C}_2\text{O}_4$, $\text{Na}_2\text{C}_2\text{O}_4$, NaF , and K_2CrO_4 . Decomp. is complete with the NH_4 salts. (Dulong, *A. ch.* **82**, 286.)

Sl. decomp. by Na_2SO_4 , or $\text{K}_2\text{SO}_4 + \text{Aq}$. (Persoz)

Easily sol. in NH_4 chloride, nitrate, or succinate + Aq , but less so than BaCO_3 . (Fresenius) Sol. in ferric salts + Aq , with pptn. of $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$. Sol. in Na citrate + Aq . (Spiller) Not decomp. by a mixture of 1 pt. H_2SO_4 and 6 pts. absolute alcohol, or by alcoholic solutions of tartaric, racemic, citric, or glacial acetic acids; immediately decomp. by $\text{HNO}_3 + \text{absolute alcohol}$, or $\text{H}_2\text{C}_2\text{O}_4 + \text{abs. alcohol}$

Solubility of SrCO_3 in $\text{NH}_4\text{Cl} + \text{Aq}$.

% NH_4Cl	% SrCO_3
5 35	0 179
10	0.259
20	0 358

(Cantoni and Goguelia, *Bull. Soc.* **1905**, (3) **33**, 13.)

Insol. in liquid NH_3 . (Franklin, *Am. Ch. J.* **1898**, **20**, 829)

Insol. in methyl acetate (Naumann, *B.* **1909**, **42**, 3790); ethyl acetate. (Naumann, *B.* **1904**, **37**, 3602.)

Insol. in acetone. (Naumann, *B.* **1904**, **37**, 4329.)

Insol. in acetone and in methylal. (Eidmann, *C. C.* **1899**, **II**, 1014.)

Min. *Strontianite*.

Strontium hydrogen carbonate.

SrCO_3 is sol. in 850 pts. of a sat. solution of CO_2 in H_2O .

Strontium uranyl carbonate, $\text{SrO} \cdot 2\text{UO}_3 \cdot 2\text{CO}_2 + 16\text{H}_2\text{O}$.

As Ba comp. (Blinkoff, *Dissert.* **1900**.)

Terbium carbonate.

Ppt. Insol. in excess $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. (Potratz, *C. N.* **1905**, **92**, 3.)

Thallous carbonate, Tl_2CO_3 .

100 pts. H_2O dissolve pts Tl_2CO_3 (C=according to Crookes; L=according to Lamy) at—

15.5°	18°	62°	100°	100.8°
4.2	5.23	12.85	27.2	22.4
C	L	L	C	L

Insol. in absolute alcohol (L), and ether (C). Insol. in acetone and pyridine. (Naumann, *B.* **1904**, **37**, 4329.)

Insol. in methyl acetate. (Naumann, *B.* **1909**, **42**, 3790.)

Thallous carbonate, acid, $\text{Tl}_2\text{O} \cdot 2\text{CO}_2$.

Rather easily sol. in cold H_2O . (Carstanjen.)

TIHCO₃. (Giorgis, Gazz. ch. it. 1894, **24**, 474-479.)

Thallous carbonate platinocyanide, $\text{Ti}_2\text{CO}_3 \cdot \text{Ti}_2\text{Pt}(\text{CN})_4$

Sl. sol. in hot, insol. in cold H_2O . (Friswell, Chem. Soc. (2) **9**, 461.)

Thorium carbonate, basic, $2\text{ThO}_2 \cdot \text{CO}_2 + 3\text{H}_2\text{O}$.

Insol. in $\text{CO}_2 + \text{Aq}$, but sol. in excess of alkali carbonates + Aq , if conc.

Tin (stannous) carbonate, $2\text{SnO} \cdot \text{CO}_2$.

Easily decomp. on air; insol. in H_2O or $\text{H}_2\text{CO}_3 + \text{Aq}$. (Deville, A. ch. (3) **35**, 448.)

Uranyl carbonate, basic, $5(\text{UO}_2)(\text{OH})_2 \cdot 3(\text{UO}_2)\text{CO}_3 + 6\text{H}_2\text{O}$.

Ppt. (Seubert and Elten, Z. anorg. 1893, **4**, 80.)

Ytterbium carbonate, basic, $\text{Yb}(\text{OH})\text{CO}_3 + \text{H}_2\text{O}$.

Ppt. (Cleve, Z. anorg. 1902, **32**, 146.)

Ytterbium carbonate, $\text{Yb}_2(\text{CO}_3)_3 + 4\text{H}_2\text{O}$.

Ppt. (Cleve, Z. anorg. 1902, **32**, 146.)

Yttrium carbonate, $\text{Y}_2(\text{CO}_3)_3 + 3\text{H}_2\text{O}$.

Insol. in H_2O ; very sl. sol. in $\text{H}_2\text{CO}_3 + \text{Aq}$. Sol. in $\text{SO}_2 + \text{Aq}$ and all mineral acids. Sol. in NH_4 salts, and alkali carbonates + Aq to some extent. More sol. in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ than in $\text{K}_2\text{CO}_3 + \text{Aq}$. (Berlin.) More sol. in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ than cerium, but 5 or 6 times less sol. than glucinum carbonate. (Vauquelin.) Sol. in large excess of $\text{KHCO}_3 + \text{Aq}$. (Rose.) Slowly sol. in NH_4 salts + Aq . (Berzelius.)

Zinc carbonates, basic, $8\text{ZnO} \cdot \text{CO}_2 + 2\text{H}_2\text{O}$; $5\text{ZnO} \cdot 2\text{CO}_2 + 3$, or $7\text{H}_2\text{O}$; $3\text{ZnO} \cdot \text{CO}_2 + \text{H}_2\text{O}$; $11\text{ZnO} \cdot 4\text{CO}_2 + 14\text{H}_2\text{O}$; $14\text{ZnO} \cdot 5\text{CO}_2 + 9\text{H}_2\text{O}$; $2\text{ZnO} \cdot \text{CO}_2 + \text{H}_2\text{O}$; $8\text{ZnO} \cdot 3\text{CO}_2 + 5\text{H}_2\text{O}$, etc.

All ppts. formed from Zn salts and carbonates + Aq . Sol. in 2000-3000 pts. cold H_2O , separates out on heating and does not redisolve on cooling. (Schindler.) Sol. in 20,895 pts. H_2O at 15° . (Kremers, Pogg. **85**, 248.) Sol. in 44,600 pts. H_2O at ord. temp. (Frese-
sius.)

Sol. in 1428 pts. sat. $\text{H}_2\text{CO}_3 + \text{Aq}$. (Lassaigne.) Sol. in 189 pts. $\text{H}_2\text{CO}_3 + \text{Aq}$ sat. at 4-6 atmos. (Wagner, Z. anal. **6**, 107.) Easily sol. in KOH , NaOH , NH_4OH , $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$, and in acids. Somewhat sol. in alkali bicarbonates and NH_4 salts + Aq . (Frese-
sius.) Sol. in hot (Fuchs), also cold (Brett, 1837) $\text{NH}_4\text{Cl} + \text{Aq}$; less sol. in $\text{NH}_4\text{NO}_3 + \text{Aq}$. (Brett.)

Sol. in all NH_4 salts + Aq excepting $(\text{NH}_4)_2\text{S} + \text{Aq}$. (Terreil, Bull. Soc. (2) **9**, 441.)

Insol. in Na_2CO_3 , or $\text{K}_2\text{CO}_3 + \text{Aq}$. Sol. in ferric salts + Aq with pptn. of $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$. (Fuchs, 1831.)

The carbonates described by Boussingault, Wackenroder, Rose, and probably all salts between ZnO , CO_2 and $5\text{ZnO} \cdot 2\text{CO}_2$ are mixtures. (Kraut, Z. anorg. 1897, **13**, 1-15.)

$3\text{ZnO} \cdot \text{CO}_2 + 2\text{H}_2\text{O}$. Min. *Zinc bloom*, *Hydrozincite*.

ZnCO_3 , $3\text{ZnO} \cdot \text{H}_2\text{O}$. Min. *Auriscalcule*.

Zinc carbonate, ZnCO_3 .

1 l. H_2O at 15° dissolves 0.01 g.; 1 l. H_2O dissolves 1.64×10^{-4} mols., or 0.206 g. ZnCO_3 at 25° . (Ageno and Valla, Att. acc. Linc. 1911, **20**, II 706.)

1 l. 5.85% $\text{NaCl} + \text{Aq}$ dissolves 0.0586 g.; 1 l. 7.45% $\text{KCl} + \text{Aq}$ dissolves 0.0477 g. ZnCO_3 . (Essen, Gm.-K. **4**, 1. 680.)

Sol. in acids, $\text{KOH} + \text{Aq}$, and NH_4 salts + Aq .

Sol. in $\text{H}_2\text{CO}_3 + \text{Aq}$.

Solubility in various salts + Aq .

Solvent	g ZnCO_3 sol in 1 l of the solvent
10% $\text{NaNO}_3 + \text{Aq}$	0.058981
sat. $\text{NaNO}_3 + \text{Aq}$	0.149000
5% $\text{NaCl} + \text{Aq}$	0.021730
10% $\text{NaCl} + \text{Aq}$	0.046564
sat. $\text{NaCl} + \text{Aq}$	0.130380
10% $\text{Na}_2\text{SO}_4 + \text{Aq}$	0.009313
sat. $\text{Na}_2\text{SO}_4 + \text{Aq}$	0.015521

(Ehlert, Z. Elektrochem. 1912, **18**, 728.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, **20**, 830.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, **37**, 4329.)

Insol. in methyl acetate (Naumann, B. 1909, **42**, 3790); ethyl acetate. (Naumann, B. 1910, **43**, 314.)

Min. *Calamine*, *Smithsonite*.

Calamine is sol. in $\text{NH}_4\text{OH} + \text{Aq}$ only in the presence of NH_4 salts. (Brandhorst, Zeit. angew. Ch. 1904, **17**, 513.)

$+\frac{1}{2}\text{H}_2\text{O}$. (Mikusch, Z. anorg. 1908, **56**, 366.)

$+\text{H}_2\text{O}$. (Belar, Zeit. Kryst. 1890, **17**, 126.)

Zinc carbonate ammonia, $\text{ZnCO}_3 \cdot \text{NH}_3$.

Slowly decomp. by H_2O , but not on the air, or by boiling with alcohol (Favre, A. ch. (3) **10**, 474.)

Zinc carbonate hydroxylamine, $\text{ZnCO}_3 \cdot 2\text{NH}_2\text{OH}$.

Insol. in H_2O . Decomp. by acids. (Goldschmidt and Syngros, Z. anorg. **5**, 129.)

Zirconium carbonate, $3\text{ZrO}_2 \cdot \text{CO}_2 + 6\text{H}_2\text{O}$.

Decomp. by hot H_2O , all CO_2 being given off. (Hermann.)

Sol. in alkali carbonates + Aq .

Percarbonic acid.*See* Percarbonic acid.**Carbonic anhydride, CO₂.***See* Carbon dioxide.**Carbonophosphoric acid.****Potassium carbonophosphate, (K₂HPO₄)₂, 2CO₂, 2KHCO₃.**

Known only in solution. (Barillé, C. R. 1903, 137. 566.)

Carbonyl bromide, COBr₂.Decomp. by H₂O. (Besson, C. R. 1895, 120. 192.)**Carbonyl platinous bromide, CO, PtBr₂.**Sol. in H₂O with almost instant decomp. Sol. in absolute alcohol. (Pullinger, Chem. Soc. 59. 603.)Quite easily sol. in hot C₆H₆, insol. in ligroine, and can be crystallized from CCl₄. Very easily sol. in HBr+Aq. (Mylius and Forster, B. 24. 2432.)**Carbonyl bromochloride, COClBr.**Decomp. by H₂O. (Besson.)**Carbonyl chloride, COCl₂.***Phosgene.* Cold H₂O dissolves 1-2 vols. COCl₂ gas with slow decomposition. Alcohol decomp. immediately. Immediately absorbed by KOH, or NH₄OH+Aq. Very sol. in glacial HC₂H₃O₂, benzene, and most liquid hydrocarbons. (Berthelot, Bull. Soc. (2) 13. 14.)Sol. in SCl₂.1 vol. AsCl₃ absorbs 10 vols. COCl₂.**Dicarbonyl cuprous chloride, Cu₂Cl₂, 2CO+4H₂O.**

Decomp. by air. (Jones, Am. Ch. J. 1899, 22. 305.)

Carbonyl platinous chloride, 2COCl₂, PtCl₂.Sl. deliquescent. Easily sol. in H₂O without decomp.; sl. sol. in alcohol. Almost insol. in CCl₄. (Pullinger, Chem. Soc. 59. 600.)**Monocarbonyl platinous chloride, CO, PtCl₂.**Decomp. by H₂O and alcohol; sol. in hot CCl₄. (Schutzenberger, A. ch. (4) 15. 100.)

Sol. in conc. HCl+Aq. (Mylius and Forster.)

Dicarbonyl platinous chloride, 2CO, PtCl₂.Decomp. by H₂O and alcohol. Sol. in CCl₄. (Schutzenberger.)Decomp. by conc. HCl+Aq into CO and CO, PtCl₂. (Mylius and Forster.)**Sesquicarbonyl platinous chloride, 3CO, 2PtCl₂.**Decomp. by H₂O or alcohol. Much more sol. in CCl₄ than 2CO, PtCl₂.**Carbonyl platinous iodide, CO, PtI₂.**Not hygroscopic. Insol. in, but slowly decomp. by, H₂O. Easily sol. in benzene or ether, also in alcohol, which decomp. on warming; sol. in HI+Aq. (Mylius and Forster.)**Carbonyl platinous sulphide, CO, PtS.**

Easily decomp. Insol. in ordinary solvents (Mylius and Forster.)

Carbonyl sulphide, COS.H₂O absorbs 1 vol. COS.Absorption of COS by H₂O at t°.

t°	Coefficient of absorption
0	1 333
10	0 835
20	0 561
30	0 403

(Winkler, Z. phys. Ch. 1906, 55. 351.)

1 ccm. H₂O at 13.5° and 756 mm. pres. dissolves 0.8 ccm. COS. (Hempel, Zeit. angew. ch. 1901, 14. 867.)1 ccm. of a hydrochloric acid solution of Cu₂Cl₂ absorbs about 0.2 ccm. COS. (Hempel.)**Carbonyl ferrocyanhydric acid.**H₃Fe(CO)(CN)₅.Very sol. in H₂O; decomp. on heating. (Muller, A. ch. (6) 17. 94)**Cobalt carbonyl ferrocyanide.**Sl. sol. in H₂O; very sol. in dil. HNO₃+Aq. (M.)**Cupric carbonyl ferrocyanide,**Cu₂[Fe(CO)(CN)₅]₂.Insol. in H₂O, H₂SO₄, or dil. HNO₃+Aq. (M.)**Iron (ferric) carbonyl ferrocyanide,**FeFeCO(CN)₅.Insol. in H₂O. Sol. in H₂C₂O₄+Aq. Insol. in acetic, lactic, succinic, tartaric, and citric acids+Aq, but easily sol. in the neutral salts of those acids. Insol. in KCl, or KNO₃+Aq, but sensibly sol. in Na₂HPO₄+Aq. Insol. even on warming in very dil. H₂SO₄, or H₂PO₄+Aq. (Muller.)**Potassium carbonyl ferrocyanide,**K₃Fe(CO)(CN)₅+3½H₂O.100 pts. H₂O dissolve 148 pts. at 16°. (Müller, C. R. 104. 992.)

Silver carbonyl ferrocyanide,
 $\text{Ag}_3\text{Fe}(\text{CO})(\text{CN})_5$.

Insol. in H_2O ; sl. sol. in dil. H_2SO_4 , HCl , or HNO_3 +Aq; scarcely attacked by conc. $\text{HC}_2\text{H}_3\text{O}_2$ +Aq. (Muller.)

Sodium carbonyl ferrocyanide,
 $\text{Na}_3\text{Fe}(\text{CO})(\text{CN})_5 \cdot 6\text{H}_2\text{O}$

Sol. in H_2O . (Muller.)

Uranyl carbonyl ferrocyanide,
 $(\text{UO}_2)_2[\text{FeCO}(\text{CN})_5]_2 \cdot 5\text{H}_2\text{O}$

Sl. sol. in H_2O , but more easily if H_2O is acidified with $\text{HC}_2\text{H}_3\text{O}_2$.

Cericotungstic acid.**Ammonium cericotungstate,** $2(\text{NH}_4)_2\text{O}$,
 Ce_2O_3 , 16WO_3 + $2\text{H}_2\text{O}$.

Insol. in H_2O , but decomp. by boiling therewith. (Smith, J. Am. Chem. Soc. 1904, 26. 1481.)

Cerium, Ce.

Decomp. pure H_2O very slowly at ordinary temp. Not attacked by cold conc. H_2SO_4 or red fuming HNO_3 . Sol. in dil. H_2SO_4 +Aq, HNO_3 +Aq, and conc. or dil. HCl +Aq. (Hillebrand and Norton, Pogg. 155. 633.)

Cerous bromide, CeBr_3 .

Anhydrous. As the chloride. (Robinson, Proc. Roy. Soc. 37. 150.)

Sol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4328.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

+ $x\text{H}_2\text{O}$. Very deliquescent. (Jolin.)

Cerium gold bromide, CeBr_3 , AuBr_3 + $8\text{H}_2\text{O}$.

See Bromaurate, cerium.

Cerium carbide, CeC_2 .

Decomp. by fused alkali nitrates, chlorates, hydroxides and carbonates; and by conc. H_2SO_4 on heating. Insol. in conc. HNO_3 ; decomp. by H_2O and dil. acids. (Moissan, C. R. 1896, 122. 359.)

CeC_3 . Not attacked by hot conc. acids. (Delafontaine, J. B. 1865. 176.)

Cerous chloride, CeCl_3 .

Anhydrous. Deliquescent. Sol. in H_2O with hissing and evolution of heat; sol. in alcohol.

Sol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4328.)

Difficultly sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

+ $7\text{H}_2\text{O}$. Insol. in NH_4OH +Aq. (Den- nis, Z. anorg. 1894, 7. 260.)

+ $7\frac{1}{2}\text{H}_2\text{O}$. Deliquescent. (Berzelius.)

Decomp. by boiling with H_2O . Sol. in 1 pt. H_2O at ord. temp. and 3-4 pts. alcohol. (Dumas.)

Ceric chloride.

Known only in solution, which decomposes by slight heat. (Berzelius.)

Cerous mercuric chloride.

Not deliquescent. (v. Bonsdorff.)

CeCl_3 , 4HgCl_2 + $10\text{H}_2\text{O}$. Permanent; easily sol. in H_2O . (Jolin, Bull. Sec. (2) 21. 533.)

Cerium stannic chloride.

See Chlorostannate, cerium.

Cerous chloride zinc iodide.

Sol. in H_2O and alcohol. (Holzmann, J. pr. 84. 76.)

Cerous fluoride, CeF_3

Insol. ppt.

+ $\frac{1}{2}\text{H}_2\text{O}$.

Ceric fluoride, CeF_4 .

Insoluble precipitate. (Berzelius.)

+ H_2O . Insol. in H_2O . (Brauner, B. 14. 1944.)

Ceric cobaltous fluoride, 2CeF_4 , CoF_2 + $7\text{H}_2\text{O}$.

Ppt. Easily decomp. by H_2O . (Rimbach, A. 1909, 368. 107.)

Ceric cupric fluoride, 2CeF_4 , CuF_2 + $7\text{H}_2\text{O}$.

Ppt. Decomp. by H_2O . (Rimbach, l. c.)

Ceric nickel fluoride, 2CeF_4 , NiF_2 + $7\text{H}_2\text{O}$.

Ppt. Decomp. by H_2O . (Rimbach, l. c.)

Ceric potassium fluoride, 2CeF_4 , 3KF + $2\text{H}_2\text{O}$.

Insol. in H_2O . (Brauner, B. 14. 1944; 15. 109.)

Could not be obtained pure. (Rimbach, l. c.)

Ceric zinc fluoride, 2CeF_4 , ZnF_2 + $7\text{H}_2\text{O}$.

Ppt. Decomp. by H_2O . (Rimbach, l. c.)

Ceroceric fluoride, 2CeF_3 , CeF_4 .

Min. *Fluocerite*.

Cerium hydride, CeH_3 .

Decomp. by acids. (Winkler, B. 24. 873.)

CeH_3 . Decomp. in moist air; decomp. by hot or cold H_2O ; sol. in acids with evolution of H_2 . Decomp. by alkalis. (Muthmann, A. 1902, 325. 266.)

Cerous hydroxide, Ce_2O_3 , $x\text{H}_2\text{O}$.

Easily sol. in acids. Insol. in excess of alkali hydroxides+Aq. Sol. in $(\text{NH}_4)_2\text{CO}_3$ +Aq.

100 ccm. of a solution in glycerine+Aq containing about 60% by vol. of glycerine contain 7.9 g. Ce_2O_3 . (Müller, Z. anorg. 1905, 43. 322.)

Exists in two modifications: one insol. in

cold HCl+Aq; the other sol. in cold HCl+Aq (Brauner, C. N. 1895, **71**. 283.)

Ceric hydroxide, $2\text{CeO}_2, 3\text{H}_2\text{O}$.

Sol. in HNO_3 or H_2SO_4 ; also in HCl+Aq, forming cerous chloride and free chlorine. Insol. in hydrofluoric, acetic, or formic acids+Aq. Somewhat sol. in dil. HNO_3 , or HCl+Aq. (Ordway, Am. J. Sci. (2) **26**. 205.) Insol. in NH_4OH , KOH, and NaOH+Aq. Sl. sol. in alkali carbonates+Aq. (Dumas)

Sl. sol. in $(\text{NH}_4)_2\text{CO}_3$ +Aq. (Ordway.)

100 ccm. of a solution in glycerine+Aq containing about 60% by vol. of glycerine contain 0.08 g. CeO_2 . (Muller, Z. anorg. 1905, **43**. 232.)

Cerous iodide, CeI_2 .

Sol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, **37**. 4328.)

+9 H_2O . Very deliquescent and sol. in H_2O . (Lange, J. pr. **82**. 134.)

Sol. in alcohol.

Cerium nitride, CeN .

Decomp. by H_2O and alkali. Sol. in mineral acids with formation of cerous and ammonium salts. (Muthmann, A. 1902, **325**. 272.)

Cerous oxide, Ce_2O_3 .

When ignited, insol. in HCl+Aq; when long digested with H_2SO_4 , is sol. in HCl+Aq with addition of alcohol.

Ceric oxide, CeO_2 .

When ignited, is only dissolved in traces, even on heating, by HCl or HNO_3 +Aq. Sol. in conc. H_2SO_4 when warmed. Sol. in the cold in a solution of KI in HCl+Aq (Bunsen), in a mixture of HCl and FeCl_2 +Aq, or any reducing substance.

Cerium peroxide, Ce_4O_9 .

Insol. in boiling conc. acids. Sol. in H_2SO_4 by long digestion. (Popp, A. **131**. 361.)

Probably does not exist. (Rammelsberg, Pogg. **108**. 40.)

Ce_2O_3 . (Hermann, J. pr. **30**. 184.)

Probably does not exist. (Rammelsberg.)

$\text{CeO}_2+x\text{H}_2\text{O}$. Sol. in HCl+Aq. (Popp, A. **131**. 361); (Lecoq de Boisbaudran, C. R. **100**. 605.)

$\text{CeO}_2+\text{H}_2\text{O}_2$, according to Cleve (Bull. Soc. (2) **43**. 57.)

Cerium oxycarbide, $\text{CeC}_2, 2\text{CeO}_2$.

Stable in the air. Slowly attacked by cold H_2O . With hot H_2O and with acids, it gives unsat. hydrocarbons. (Sterba, C. R. 1902, **134**. 1058.)

Cerium oxychloride, CeOCl .

Slightly attacked by hot conc. HCl+Aq. Slowly sol. in conc. HNO_3 +Aq. (Wöhler.)

Easily sol. in dil. acids. (Didier, C. R. **101**. 882.)

Cerium oxychloride tungsten trioxide, $\text{CeOCl}, \text{WO}_3$.

(Didier, C. R. **102**. 823.)

Cerium selenide.

Insol. in H_2O ; difficultly sol. in acids. (Berzelius)

Cerium silicide, CeSi_2 .

Insol. in H_2O , by which it is acted upon only very slowly.

Sol. in HCl and HF+Aq with evolution of H_2 .

Not attacked by alkalis+Aq or NH_4OH +Aq.

Insol. in organic solvents. (Sterba, C. R. 1902, **135**. 170.)

Cerium silicide, Ce_2Si_3 .

Insol. in acids. (Ullik, W. A. B. **52**, **2**. 115.)

Cerium disulphide, Ce_2S_4 .

Not decomp. by cold H_2O .

Slowly sol. in cold dil. H_2SO_4 , HCl and acetic acid. Rapidly sol. in warm dil. H_2SO_4 , HCl and acetic acid with decomp. (Biltz, B. 1908, **41**. 3342.)

Cerium sesquisulphide, Ce_2S_3 .

Insol. in, and not decomp. by, H_2O , but easily decomp. by the weakest acids. (Mossander); (Didier, C. R. **100**. 1461.)

Monochloramine, NH_2Cl .

Easily sol. in H_2O . (Raschig, Ch. Z. 1907, **31**. 926.)

Chlorotetramine comps.

See Chlorotetramine comps.

Metachlorantimononic acid, $\text{HSbCl}_6 + 4\frac{1}{2}\text{H}_2\text{O}$.

Hydroscopic. Sol. in H_2O with decomp.; sol. in alcohol, acetone, and acetic acid. (Weinland, Z. anorg. 1905, **44**. 43.)

Metachlorantimononic acid ammonia, $\text{HSbCl}_6, 2\text{NH}_3$.

Sol. in H_2O and in alcohol. (Weinland and Schmid, Z. anorg. 1905, **44**. 59.)

Aluminum metachlorantimonate, $\text{Al}(\text{SbCl}_6), +15\text{H}_2\text{O}$.

Hydroscopic.

Sol. in dil. HCl+Aq. (Weinland, B. 1903, **36**. 254.)

Ammonium metachlorantimonate , $\text{NH}_4\text{SbCl}_6 + \text{H}_2\text{O}$. Hydroscopic. Sol. in H_2O . Solution decomp. slowly when cold, rapidly on warming. Sol. in dil. HCl . (Weinland, B. 1903, 36. 251.)	Sol. in dil. $\text{HCl} + \text{Aq}$. (Weinland, B. 1903, 36. 250)
Cadmium metachlorantimonate ammonia , $\text{Cd}(\text{SbCl}_6)_2, 7\text{NH}_3$. Ppt. (Weinland and Schmid, Z. anorg. 1905, 44. 56.)	Rubidium metachlorantimonate , RbSbCl_6 . Hydroscopic. Sol. in dil. $\text{HCl} + \text{Aq}$. (Weinland.)
Calcium metachlorantimonate , $\text{Ca}(\text{SbCl}_6)_2 + 9\text{H}_2\text{O}$. Hydroscopic. Sol. in dil. $\text{HCl} + \text{Aq}$. (Weinland, B. 1903, 36. 253.)	Silver metachlorantimonate ammonia , $\text{AgSbCl}_6, 2\text{NH}_3$. Decomp. by H_2O . (Weinland and Schmid)
Chromium metachlorantimonate , $\text{Cr}(\text{SbCl}_6)_2 + 13\text{H}_2\text{O}$. Hydroscopic. Sol. in dil. $\text{HCl} + \text{Aq}$. (Weinland.)	Zinc metachlorantimonate ammonia , $\text{Zn}(\text{SbCl}_6)_2, 4\text{NH}_3$. (Weinland and Schmid.)
Chromium orthochlorantimonate , $\text{CrSbCl}_8 + 10\text{H}_2\text{O}$. Hydroscopic. Sol. in dil. $\text{HCl} + \text{Aq}$. (Weinland.)	Chlorarsenious acid . <i>See</i> Arsenyl chloride.
Cupric metachlorantimonate ammonia , $\text{Cu}(\text{SbCl}_6)_2, 5\text{NH}_3$. (Weinland and Schmid, Z. anorg. 1905, 44. 55.)	Chlorauric acid , $\text{HAuCl}_4 + 4\text{H}_2\text{O}$. Sol. in H_2O , alcohol, and ether Sol. in POCl_3 . (Walden, Z. anorg. 1900, 25. 212.) Difficultly sol. in PCl_3 . (Walden.) Cryst. with $3\text{H}_2\text{O}$ as stated by Weber and Schettlander and not with $4\text{H}_2\text{O}$ as stated by Thomsen. (Schmidt, C. C. 1906, II. 855.)
Glucinum metachlorantimonate , $\text{Gl}(\text{SbCl}_6)_2 + 10\text{H}_2\text{O}$. Very hygroscopic. Sol. in dil. HCl . (Weinland, B. 1903, 36. 252.)	Chloraurates . All chloraurates are easily sol. in H_2O and in alcohol. (v. Bonsdorff, 1829.)
Iron (ferric) orthochlorantimonate , $\text{FeSbCl}_8 + 8\text{H}_2\text{O}$. Hydroscopic. Can easily be cryst. from dil. $\text{HCl} + \text{Aq}$. (Weinland.)	Ammonium chloraurate , $\text{NH}_4\text{AuCl}_4 + \text{H}_2\text{O}$. Very easily sol. in H_2O . $+ 2\text{H}_2\text{O}$. Very easily sol. in H_2O .
Lithium metachlorantimonate , $\text{LiSbCl}_6 + 4\text{H}_2\text{O}$. Very hygroscopic. Sol. in dil. $\text{HCl} + \text{Aq}$. (Weinland, l. c.)	Barium chloraurate , $\text{Ba}(\text{AuCl}_4)_2 + x\text{H}_2\text{O}$. Deliquescent in moist air. Sol. in H_2O and alcohol. (v. Bonsdorff, Pogg. 17. 261.)
Magnesium pyrochlorantimonate , $\text{MgSbCl}_7 + 9\text{H}_2\text{O}$. Hydroscopic. Sol. in dil. $\text{HCl} + \text{Aq}$. (Weinland.)	Cadmium chloraurate . Not deliquescent. Sol. in H_2O and alcohol. (v. Bonsdorff.)
Nickel metachlorantimonate ammonia , $\text{Ni}(\text{SbCl}_6)_2, 6\text{NH}_3$. Sol. in H_2O . (Weinland and Schmid, Z. anorg. 1905, 44. 57.)	Cæsium chloraurate , CsAuCl_4 . 100 pts. aqueous sat. solution contain at: 10° 20° 30° 40° 50° 0.5 0.8 1.7 3.2 5.4 pts. anhydrous salt, 60° 70° 80° 90° 100° 8.2 12.0 16.3 21.7 27.5 pts. anhydrous salt. (Rosenblatt, B. 19. 2538.) $+ \frac{1}{2}\text{H}_2\text{O}$. (Wells and Wheeler, Am. J. (3) 44. 157.)
Potassium metachlorantimonate , $\text{KSbCl}_6 + \text{H}_2\text{O}$. Hydroscopic. Sol. in H_2O . Solution decomp. slowly when cold, rapidly when warmed.	Calcium chloraurate , $\text{Ca}(\text{AuCl}_4)_2 + 6\text{H}_2\text{O}$. Deliquescent. Sol. in H_2O and alcohol. (v. Bonsdorff.)
	Cerium chloraurate , $\text{CeCl}_3, \text{AuCl}_3 + 10\text{H}_2\text{O}$. Extremely deliquescent. Easily sol. in H_2O and absolute alcohol. (Holzmann, C. C. 1863. 206.) $+ 13\text{H}_2\text{O}$. (Jolin, Bull. Soc. (2) 21. 534.)

Cobalt chloraurate, $\text{Co}(\text{AuCl}_4)_2 + 8\text{H}_2\text{O}$.

Sol. in H_2O and alcohol. (Topsoe.)

Didymium chloraurate, $\text{DiCl}_3, \text{AuCl}_3 + 10\text{H}_2\text{O}$.

Very deliquescent. (Cleve, Bull. Soc. (2) 43. 361.)

$2\text{DiCl}_3, 3\text{AuCl}_3 + 20\text{H}_2\text{O}$. (Cleve.)

Gadolinium chloraurate, $\text{GdCl}_3, \text{AuCl}_3 + 10\text{H}_2\text{O}$.

Sol. in H_2O . (Benedicks, Z. anorg. 1900, 22. 404.)

Lanthanum chloraurate, $\text{LaCl}_3, \text{AuCl}_3 + 5\text{H}_2\text{O}$.

Deliquescent in moist air. Sol. in H_2O . (Cleve, B. 8. 128.)

Lithium chloraurate, LiAuCl_4 .

100 pts. aqueous solution contain at:

10°	20°	30°	40°
53.1	57.7	62.5	67.3

pts. anhydrous salt,

50°	60°	70°	80°
72.0	76.4	81.0	85.7

pts. anhydrous salt. (Rosenblatt.)

+ $2\text{H}_2\text{O}$. (Antony and Lucchesi, Gazz. ch. it. 1890, 20. 601.)

+ $4\text{H}_2\text{O}$. Not stable.

Sol. in H_2O and alcohol (Fasbender, C. C. 1894, I. 409.)

Magnesium chloraurate, $\text{Mg}(\text{AuCl}_4)_2 + 8\text{H}_2\text{O}$.

Somewhat deliquescent. Sol. in H_2O and alcohol. (Topsoe.)

+ $12\text{H}_2\text{O}$.

Manganese chloraurate, $\text{Mn}(\text{AuCl}_4)_2 + 8\text{H}_2\text{O}$.

Deliquescent. Sol. in H_2O and alcohol. (Topsoe.)

+ $12\text{H}_2\text{O}$.

Nickel chloraurate, $\text{Ni}(\text{AuCl}_4)_2 + 8\text{H}_2\text{O}$.

Deliquescent. Sol. in H_2O and alcohol. (Topsoe.)

Potassium chloraurate, KAuCl_4 .

Anhydrous. Very stable. (Lainer, W. A. B. 99, 2b. 247.)

100 pts. solution in H_2O contain at:

10°	20°	30°
27.7	38.2	48.7

pts. anhydrous salt,

40°	50°	60°
59.2	70.0	80.2

pts. anhydrous salt.

(Rosenblatt, B. 19. 2538.)

Sol. in H_2O and alcohol; insol. in ether. (Fasbender, C. C. 1894, I. 409.)

1 pt. is sol. in 4 pts. 98% alcohol. (Fasbender, C. C. 1894, II. 609.)

+ $2\text{H}_2\text{O}$. Efflorescent.

+ $\frac{1}{2}\text{H}_2\text{O}$.

Praseodymium chloraurate, $\text{PrCl}_3, \text{AuCl}_3 + 10\text{H}_2\text{O}$.

Very sol. in H_2O ; sol. in conc. HCl . (von Schule Z. anorg. 1898, 18. 354.)

Rubidium chloraurate, RbAuCl_4 .

100 pts. sat. $\text{RbAuCl}_4 + \text{Aq}$ contain at:

10°	20°	30°	40°	50°
4.6	9.0	13.4	17.7	22.2

pts. anhydrous salt,

60°	70°	80°	90°	100°
26.6	31.0	35.3	39.7	44.2

pts. anhydrous salt.

(Rosenblatt.)

1 pt. sol. in 54 pts. 98% alcohol. Insol. in ether. (Fasbender, C. C. 1894, II. 609.)

Samarium chloraurate, $\text{SmCl}_3, \text{AuCl}_3 + 10\text{H}_2\text{O}$.

Deliquescent. Easily sol. in H_2O . (Cleve, Bull. Soc. (2) 43. 165.)

Scandium chloraurate, $3\text{ScCl}_3, 2\text{AuCl}_3 + 21\text{H}_2\text{O}$.

Very deliquescent. (Crookes, Phil. Trans. 1910, 210. A, 365.)

Silver chloraurate, AgAuCl_4

Decomp. in the air.

Decomp. by H_2O , HCl and NH_3 . (Herrmann, B. 1894, 27. 597.)

Sodium chloraurate, $\text{NaAuCl}_4 + 2\text{H}_2\text{O}$.

Easily sol. in H_2O and absolute alcohol.

100 pts. aqueous solution contain at:

10°	20°	30°
58.2	60.2	64.0

pts. anhydrous salt,

40°	50°	60°
69.4	77.5	90.0

pts. anhydrous salt.

(Rosenblatt.)

Easily sol. in $\text{NaCl} + \text{Aq}$.

Easily sol. in H_2O , alcohol and ether. (Fasbender, C. C. 1894, I. 409.)

Strontium chloraurate.

Sol. in H_2O . (v. Bonsdorff.)

Thallium chloraurate.

(Carstanjen.)

Ytterbium chloraurate, $\text{YbCl}_3, \text{AuCl}_3 + 9\text{H}_2\text{O}$.

Ppt. (Cleve, Z. anorg. 1902, 32. 138.)

Yttrium chloraurate, $\text{YtCl}_3, 2\text{AuCl}_3 + 16\text{H}_2\text{O}$.

Very sol. in H_2O . (Cleve.)

Zinc chloraurate, $\text{Zn}(\text{AuCl}_4)_2 + 8\text{H}_2\text{O}$.

Sol. in H_2O . (Topsoe.)

+ $12\text{H}_2\text{O}$. Sol. in H_2O and alcohol. (v. Bonsdorff.)

Chlorauricyanhydric acid.**Barium chlorauricyanide**, $\text{Ba}[\text{Au}(\text{CN})_2\text{Cl}_2]_2 + 8\text{H}_2\text{O}$.Very sol. in H_2O or alcohol. (Lindbom, Lund Univ. Arsk. 12. No. 6.)**Potassium chlorauricyanide**, $\text{KAu}(\text{CN})_2\text{Cl}_2 + \text{H}_2\text{O}$.Very sol. in H_2O or alcohol.**Strontium chlorauricyanide**, $\text{Sr}[\text{Au}(\text{CN})_2\text{Cl}_2]_2 + 8\text{H}_2\text{O}$.Sol. in H_2O .**Zinc chlorauricyanide**, $\text{Zn}[\text{Au}(\text{CN})_2\text{Cl}_2]_2 + 7\text{H}_2\text{O}$.Very sol. in H_2O .**Chlorhydric acid, HCl***Liquid.* Miscible with liquid CO_2 , and H_2S .*Gas.* Absorbed by H_2O with production of much heat. H_2O absorbs 400–500 vols. at ord. temp and pressure or a little less than 1 pt. by weight. (Dalton.)1 vol H_2O absorbs 480 vols at 0° , sp gr of sat solution is 1.2109. (Davy)1 vol H_2O absorbs 417 822 vols at 20° , the vol. increasing to 1 4138 vols, 1 vol of $\text{HCl} + \text{Aq}$ then contains 311 vols HCl , has sp gr. 1.1958 and contains 40.39% HCl by weight. (Thomson 1831)1 vol H_2O absorbs 464 vols and sat solution has 1.21 sp gr and contains 42.4% HCl by weight. (Wittstein) H_2O sat at 0° contains 480 times its vol of HCl and sp gr = 1.2109, sat at ord. temp. contains 38.3% of its weight in HCl , and sp gr = 1.192. (Berzelius.)1 vol H_2O absorbs $\frac{1}{2}$ vols HCl at t° and 760 mm pressure, and the liquid formed has the given sp gr, and contains the given per cent HCl

t°	V	Sp gr	% HCl
0	525 2	1 2257	45 148
4	494 7	1 2265	44 361
8	480 3	1 2185	43 828
12	471 3	1 2148	43 277
14	462 4	1 2074	42 829
18	451 2	1 2064	42 344
18 25	450 7	1 2056	42 283
23	435 0	1 2014	41 536

(Deicke, Pogg 119. 156)

At 760 mm. pressure 1 g. H_2O absorbs g. HCl at t° .

t°	g HCl	t°	g HCl	t°	g HCl
0	0.825	22	0.710	44	0.618
2	0.814	24	0.700	46	0.611
4	0.804	26	0.691	48	0.603
6	0.793	28	0.682	50	0.596
8	0.783	30	0.673	52	0.589
10	0.772	32	0.665	54	0.582
12	0.762	34	0.657	56	0.575
14	0.752	36	0.649	58	0.568
16	0.742	38	0.641	60	0.561
18	0.731	40	0.633
20	0.721	42	0.626

(Roscoe and Dittmar.)

Conc. $\text{HCl} + \text{Aq}$ loses HCl , and dil. $\text{HCl} + \text{Aq}$ loses H_2O on warming, until an acid of constant composition is formed, containing 20.18% HCl , with a sp gr. of 1.101 at 15° , which can be distilled unchanged at 110° . (Bineau, A. ch. (3) 7. 257.)

The above is true if barometer is at 760 mm., but the composition changes with the pressure as follows—

Mm Hg	% HCl	Mm Hg	% HCl	Mm Hg	% HCl
50	23 2	800	20 2	1700	18 8
100	22 9	900	19 9	1800	18 7
200	22 3	1000	19 7	1900	18 6
300	21 8	1100	19 5	2000	18 5
400	21 4	1200	19 4	2100	18 4
500	21 1	1300	19 3	2200	18 3
600	20 7	1400	19 1	2300	18 2
700	20 4	1500	19 0	2400	18 1
760	20 24	1600	18 9	2500	18 0

(Roscoe and Dittmar)

Conc. $\text{HCl} + \text{Aq}$ gradually gives off HCl on the air until it has a sp. gr. 1.128 at 15° , and contains 25.2% HCl . (Bineau, l. c.)According to Roscoe and Dittmar, this depends on the temperature. If a current of air is passed through $\text{HCl} + \text{Aq}$, acid or water is given off according as the acid is strong or weak, until an acid of constant composition for a given temperature is formed, as follows—

Temp.	% HCl	Temp	% HCl	Temp	% HCl
0°	25 0	35°	23 9	70°	22 6
5	24 9	40	23 8	75	22 3
10	24 7	45	23 6	80	22 0
15	24 6	50	23 4	85	21 7
20	24 4	55	23 2	90	21 4
25	24 3	60	23 0	95	21 1
30	24 1	65	22 8	100	20 7

From the above it is seen that the acid which distils unchanged at a given pressure, that is, boils at a certain constant temperature, is identical with the acid which undergoes no change in composition by a current of dry air at the same temperature, and under the ordinary pressure, thus—

Mm. Hg	B-pt.	% HCl	Temp of air current	% HCl
100	61–62°	22 8	62°	22 9
200	76–77	22 1	77	22 2
300	84–85	21 7	85	21 7
380	91	21 3	91	21.4
490	97	20 9	98	21 1
620	103	20 6

(Roscoe and Dittmar.)

Solubility of HCl in H₂O at 0° under different degrees of pressure. P=partial pressure in mm Hg, *t c.*, total pressure minus the tension of aqueous vapour at the given temp.; G=grammes of HCl dissolved in 1 g H₂O at the pressure P and 0° temp.

P	G	P	G
60	0 613	350	0 751
70	0 628	400	0 763
80	0 640	450	0 772

(Coppadoro, Gazz. ch. it. 1910, 39, II, 626.)

100 pts. alcohol of 36° B absorb 68 pts. HCl at 12.5°. (Boullay.)

Alcohol of 0.836 sp. gr. dissolves 327 vols. HCl at 17.5° and 758 mm. pressure, and the solution has sp. gr. = 1.005. (Pierre, A. ch. (3) 31. 135.)

Solubility of HCl in methyl alcohol (absolute)
at t°.

t°	% HCl	t°	% HCl
-10.3	54.6	18	46.9
0	51.3	31.7	43

(de Bruyn, R. t. c. 11. 112.)

Solubility of HCl in ethyl alcohol (absolute)
at t°.

(de Bruyn, l.c.)

Solubility of HCl in ether at t° and 760 mm. pressure.

t°	% HCl	t°	% HCl
-9.2	37.51	15	27.62
-5	37.0	20	24.9
0	35.6	25	22.18
+5	33.1	30	19.47
10	30.35		

(Schuncke, Z. phys. Ch. 1894, 14. 336.)

Sol. in glacial $\text{HC}_2\text{H}_3\text{O}_2$, ether, hexane, benzene, xylene, etc.

Oil of turpentine absorbs 50% HCl. (Thénard.)

Oil of turpentine absorbs 163 vols. HCl at 22° and 724 mm.; isoterebenthene absorbs 34% at 24° and 724 mm.; metaterebenthene absorbs 17.7% at 24° and 724 mm. (Berthelot.)

Oil of lavender absorbs 68.7 vols. at 24°. (Thénard.)

Oil of lavender absorbs 210 vols. without being saturated; oil of rosemary absorbs 218 vols. at 22°; sol. in 0.4 vol. petroleum. (Saussure.)

Absorbed by caprylic alcohol. (Bouis)

Fuming $\text{HCl} + \text{Aq}$ is sol. in glycerine and miscible with conc. $\text{HC}_2\text{H}_3\text{O}_2$.

Solubility of HCl in phenol + Aq at 12°.

Comp of H_2O layer		Ccomp of phenol layer	
% HCl	% phenol	% HCl	% phenol

(Schreinemakers, Z. phys. Ch. 1912, 79. 553.)

+ H_2O . F.-pt. -15.35°.Very sol. in H_2O but only slightly sol. in HCl. (Rupert, J. Am. Chem. Soc. 1909, 31. 866.)+ $2\text{H}_2\text{O}$. M.-pt. -17.4°.+ $3\text{H}_2\text{O}$. M.-pt. -24.8°. (Pickering, B. 1893, 26. 280.)

The composition of the hydrates formed by HCl at different dilutions is calculated

from determinations of the lowering of the f-pt. produced by HCl, and of the conductivity and sp. gr. of HCl+Aq (Jones, Am. Ch. J. 1905, **34**, 323.)

Chlorhydric cyanhydric acid, 3HCl, 2HCN.

Decomp. by H₂O or alcohol; sol. in HC₂H₃O₂. Insol. in ether, chloroform, or acetic ether. (Claisen, B. **16**, 309.)

HCl, HCN. Sol. in H₂O, absolute alcohol, HC₂H₃O₂, and CHCl₃, with decomp.; decomp. is especially rapid in H₂O. (Gautier, A. ch. (4) **17**, 130.)

Chloric acid, HClO₃.

Known only in aqueous solution, which can be concentrated in vacuo to a sp. gr. of 1.282 at 14.2°, and then contains 40.10% HClO₃, corresponding to HClO₃+7H₂O; if left longer in vacuo over H₂SO₄, an acid corresponding to HClO₃+4½H₂O is obtained. Aqueous solution of HClO₃ decomp. at 40°. (Kammerer, Pogg. **138**, 390.)

Chlorates.

All chlorates except mercurous chlorate are sol. in H₂O; most of them are deliquescent; many are sol. in alcohol.

Aluminum chlorate, Al(ClO₃)₃+6H₂O.

Very hygroscopic (Dobroserdow, G. C. **1904**, II, 177.)

+9H₂O. Very sol. in cold but much less than in hot H₂O. (Dobroserdow.)

Ammonium chlorate, NH₄ClO₃.

Easily sol. in H₂O; less sol. in alcohol.

Much less sol. in H₂O at 0° than NaClO₃. (Storer.)

Verv sl. sol. in absolute alcohol. (Wächter, J. pr **30**, 321.)

Barium chlorate, Ba(ClO₃)₂+H₂O.

Sol. in 4 pts. cold, and less hot H₂O. (Chevenix.)

100 pts. H₂O dissolve at:

0° 20° 40° 60° 80° 100°
22.8 37.0 52.1 77.5 98.0 126.4 pts. Ba(ClO₃)₂.

100 grams sat. Ba(ClO₃)₂+Aq at t° contain grams anhydrous Ba(ClO₃)₂.

t°	Grams Ba(ClO ₃) ₂	t°	Grams Ba(ClO ₃) ₂

100	113.2	1.580
105.6	120	1.600

* Bpt. of sat. solution.

(Carlson, Dissert **1910**.)

Only slight traces dissolve in absolute alcohol. (Wächter, J. pr. **30**, 334.)

Sol. in acetone. (Eidmann, C. C. **1899**, II 1014.)

Difficultly sol. in acetone. (Naumann, B. **1904**, **37**, 4328.)

Insol. in methyl acetate. (Naumann, B. **1909**, **42**, 3790); ethylacetate (Naumann, B. **1910**, **43**, 314.)

Bismuth chlorate.

Known only in solution, which decomp. on evaporation.

Cadmium chlorate, Cd(ClO₃)₂+2H₂O.

Very deliquescent; sol. in H₂O and alcohol. Melts in crystal H₂O at 80°. (Wächter, J. pr. **30**, 321.)

Solubility in H₂O.

Sat. solution contains at:

-20°	-15°	0°	+18°
72.18	72.53	74.95	76.36
49°	65°		
80.08	82.95%	Cd(ClO ₃) ₂ .	

Sp. gr. of solution containing 76.36% Cd(ClO₃)₂ at 18° = 2.284. (Meusser, B. **1902**, **35**, 1422.)

Sol. in acetone. (Naumann, B. **1904**, **37**, 4328.)

Cadmium chlorate ammonia, Cd(ClO₃)₂, 6NH₃.

Ppt. (Ephraim, B. **1915**, **48**, 49.)

Cæsium chlorate, CsClO₃.

100 g. H₂O dissolve at:

0°	8°	19.8°	30°	42.2°
2.46	3.50	6.28	9.53	14.94
50°	77°	99°		
19.40	41.65	76.5 g.	CsClO ₃ .	

(Calzolari, Acc. Sc. med. di Ferrara, **1911**, **85**, 150.)

Calcium chlorate, Ca(ClO₃)₂+2H₂O.

Deliquescent; very sol. in H₂O and alcohol. (Wächter, J. pr. **30**, 323.)

Melts in its water of crystallization at over 100°.

Sp. gr. of solution sat. at 18° = 1.729, containing 64% $\text{Ca}(\text{ClO}_3)_2$. (Mylius, B. 1897, 30. 1718.)

Sol. in acetone. (Eidmann, C. C. 1899, II 1014, Naumann, B. 1904, 37. 4328.)

Chromic chlorate.

Easily sol. in H_2O . (Prudhomme, C. C. 1890, I. 668)

Cobaltous chlorate, $\text{Co}(\text{ClO}_3)_2 + 2\text{H}_2\text{O}$.

(Meusser, B. 1902, 35. 1418.)

+4 H_2O . Solubility in H_2O .

Sat. solution contains at:

$\text{Co}(\text{ClO}_3)_2$.

Sp. gr. of solution containing 64.19% $\text{Co}(\text{ClO}_3)_2$ at 18° = 1.861. (Meusser, B. 1902, 35. 1418.)

+6 H_2O . Very deliquescent. Sol. in H_2O and alcohol. Melts in crystal H_2O at 50°.

(Wachter, J. pr. 30. 321.)

Solubility in H_2O .

Sat. solution contains at:

-21°	-19°	0°	+10.5°
53.30	53.61	57.45	61.83%

$\text{Co}(\text{ClO}_3)_2$. (Meusser, B. 1902, 35. 1418.)

Cupric chlorate, basic, $\text{Cu}(\text{ClO}_3)_2, 3\text{Cu}(\text{OH})_2$.

Insol. in H_2O . Very sol. in dil. acids. Sol. in warm conc. $\text{Cu}(\text{ClO}_3)_2 + \text{Aq}$, the solubility increasing with the conc. and temp. (Bourgeois, Bull. Soc. 1898, (3) 19. 950.)

Cupric chlorate, $\text{Cu}(\text{ClO}_3)_2 + 4\text{H}_2\text{O}$.

Solubility in H_2O .

Sat. solution contains at:

Sp. gr.	1.0844	1.12531	

(Traube, Gm.-K. 5. 1, 921.)

Sol. in acetone. (Naumann, B. 1904, 37. 4328.)

Cupric chlorate ammonia, $\text{Cu}(\text{ClO}_3)_2, 4\text{NH}_3$.

Ppt. Not hygroscopic. Insol. in alcohol.

$\text{Cu}(\text{ClO}_3)_2, 6\text{NH}_3$. Not hygroscopic. (Ephraïm, B. 1915, 48. 46.)

Erbium chlorate, $\text{Er}(\text{ClO}_3)_3 + 8\text{H}_2\text{O}$.

Deliquescent. Sol. in H_2O and alcohol.

Glucinum chlorate.

Known only in aqueous solution, which decomposes on evaporation.

Ferrous chlorate.

Known only in solution.

Ferric chlorate, $\text{Fe}(\text{ClO}_3)_3$.

Sol. in H_2O .

Basic salt. Insol. in H_2O .

Lanthanum chlorate, $\text{La}(\text{ClO}_3)_3$.

Deliquescent. (Cleve.)

Lead chlorate, $\text{Pb}(\text{ClO}_3)_2 + \text{H}_2\text{O}$.

Deliquescent; easily sol. in H_2O and alcohol. (Wachter, J. pr. 30. 321.)

Sp. gr. of solution sat. at 18° = 1.947 and contains 60.2% $\text{Pb}(\text{ClO}_3)_2$. (Mylius, B. 1897, 30. 1718.)

100 g. H_2O dissolve 440 g. $\text{Pb}(\text{ClO}_3)_2$ at 18°; sp. gr. of sat. solution = 1.63. (Carlson, Dissert. 1910.)

Lithium chlorate, $\text{LiClO}_3 + \frac{1}{2}\text{H}_2\text{O}$.

Very deliquescent and sol. in H_2O . Very easily sol. in alcohol. Melts at 50° in its crystal water. (Wachter, J. pr. 30. 321.)

$\text{LiClO}_3 + \text{Aq}$ sat. at 18° contains 75.8% LiClO_3 . Sp. gr. = 1.815. (Mylius, B. 1897, 30. 1718.)

483 g. LiClO_3 dissolve in 100 g. H_2O at 15°; sp. gr. of solution = 1.82. (Carlson, Dissert. 1910.)

Contains 3 H_2O , and is not deliquescent. (Lagorio, Zeit. f. Kryst. 15. 80.)

Salt is anhydrous. (Retgers, Z. phys. Ch. 5. 449.)

Magnesium chlorate, $\text{Mg}(\text{ClO}_3)_2$.

128.1 g. $\text{Mg}(\text{ClO}_3)_2$ dissolve in 100 g. H_2O at 19°; sp. gr. of solution = 1.59. (Carlson, Dissert. 1910.)

Sp. gr. of solution containing 56.5% $\text{Mg}(\text{ClO}_3)_2$ at 18° = 1.564. (Meusser, l.c.)

Sp. gr. of solution sat. at 18° = 1.594, containing 56.3% $\text{Mg}(\text{ClO}_3)_2$. (Mylius, B. 1897, 30. 1718.)

Sol. in acetone. (Naumann, B. 1904, 37. 4328.)

Sol. in acetone. (Eidmann, C. C. 1899, II. 1014.)

+2 H_2O . Solubility in H_2O .

Sat. solution contains at:

39.5°	61°	68°	93°
65.37	69.46	70.69	73.71%

$\text{Mg}(\text{ClO}_3)_2$. (Meusser, B. 1902, 35. 1416.)

+4H₂O. Solubility in H₂O.

Sat. solution contains at:

42° 65.5°
63.82 69.12% Mg(ClO₃)₂.
(Meusser, l.c.)

+6H₂O. Very deliquescent and sol. in H₂O. Very easily sol. in alcohol. Melts at 40° in its crystal water. (Wachter, J. pr. 30. 325.)

Solubility in H₂O.

Sat. solution contains at:

-18° 0° +18° 29° 35°
51.64 53.27 56.50 60.23 63.65% Mg(ClO₃)₂.
(Meusser)

Manganous chlorate, Mn(ClO₃)₂.

Known only in solution which decomposes on evaporation. (Wachter.)

Mercurous chlorate, Hg₂(ClO₃)₂.

α. Easily sol. in alcohol and H₂O. (Wachter, J. pr. 30. 321.)

β. Insol. in H₂O; easily sol. in HC₂H₃O₂ + Aq. (Wachter.) Decomp. by boiling H₂O.

Mercuric chlorate, 2HgO, Cl₂O₅ + H₂O.

Deliquescent. Decomp. by H₂O into oxide and an acid salt. (Wachter.)

Sol. in 4 pts. cold H₂O. (Chevenix, 1802.)

Nickel chlorate, Ni(ClO₃)₂ + 4H₂O.

Solubility in H₂O.

Sat. solution contains at:

48.5° 55° 65° 79.5°
67.60 68.78 69.05 75.50% Ni(ClO₃)₂.
(Meusser, B. 1902, 35. 1419.)

+6H₂O. Deliquescent. Easily sol. in H₂O and alcohol. Melts in crystal H₂O at 80°. (Wachter, J. pr. 30. 321.)

Solubility in H₂O.

Sat. solution contains at:

-18° -8° 0° +18° 40°
49.55 51.52 52.66 56.74 64.47% Ni(ClO₃)₂.

Sp. gr. of solution containing 56.74% Ni(ClO₃)₂ at 18° = 1.661.

Goes over into 4H₂O salt at 39°. (Meusser.)
156 g. Ni(ClO₃)₂ dissolve in 100 g. H₂O at 16°; sp. gr. of solution = 1.76. (Carlson, Dissert. 1910.)

Nickel chlorate ammonia, Ni(ClO₃)₂, 6NH₃.

Ppt. (Ephraim, B. 1915, 48. 47.)

Potassium chlorate, KClO₃.

Sol. in H₂O with absorption of heat.

Sol in about 16 pts. cold, and in much less hot H₂O. (Chevenix, 1802.)

Sol in 30.03 pts. H₂O at 0°; 17.85 pts. at 13.3°; and in 1.66 pts. at 104.78° (M. R. and P.)

Sol in 16 pts. H₂O at 18.73° (Abl.)
100 pts. H₂O at 15.5° dissolve 6.2 pts., at 100°, 40 pts. (Ure's Diet.)

Sat. KClO₃+Aq contains at:

	53°	68°	81°	86° (?)
	17.37	23.25	23.53	30.46% KClO ₃

(Tschugaeff, Z. anorg. 1914, **86**, 161.)

Sp. gr. of KClO₃+Aq, according to Kremer's experiments (Pogg. **96**, 62), and Gerlach's calculations. (Z. anal. **8**, 290.)

% KClO ₃	Sp. gr.	% KClO ₃	Sp. gr.
1	1.007	6	1.039
2	1.014	7	1.045
3	1.020	8	1.052
4	1.026	9	1.059
5	1.033	10	1.066

Sp. gr. of KClO₃+Aq at 20° containing 1 mol. KClO₃ to 100 mols. H₂O=1.04122 (Nicol, Phil. Mag. (5) **16**, 122.)

Sp. gr. of KClO₃+Aq at 15° containing 5% KClO₃=1.0316. (Kohlrausch, W. Ann. **1879**, 1.)

B.-pt. of KClO₃+Aq containing pts KClO₃ to 100 pts. H₂O.

Pts KClO ₃	B. -pt	Pts KClO ₃	B. -pt
6.5	100.5°	44.6	103.0°
13.2	101.0	53.4	103.5
20.2	101.5	62.2	104.0
27.8	102.0	69.2	104.4
35.8	102.5	..	.

(Gerlach, Z. anal. **26**, 450.)

Saturated solution boils at 105°. (Kremers.)

Saturated solution boils at 104.2°, and contains 61.5 pts. KClO₃ to 100 pts. H₂O. (Legrand.)

Saturated solution boils at 103.3°, and contains 66.6 pts. KClO₃ to 100 pts. H₂O. (Griffiths.)

Saturated solution boils at 104.4°. (Gerlach, Z. anal. **26**, 427.)

Sol. in pure HNO₃ without decomp., but decomp. at once by HNO₃ containing NO₂ (Millon, A. ch. (3) **6**, 92.)

Sol. in sat. NH₄Cl+Aq without causing pptn.

1 mol. (=129 pts.) KClO₃ dissolves in 2493 vols. H₂O; in 2208 vols. H₂O when 1 mol (=59 pts.) NaCl is added; in 2060 vols. H₂O with 2 mols. (=118 pts.) NaCl; and in 1910 vols. H₂O with 4 mols. (=236 pts.) NaCl. (Gladstone, Chem. Soc. **15**, 302.)

KClO₃ is sol. in about—

29.50 pts. H₂O.

35.50 pts. NH₄OH+Aq conc.

39.00 pts. dil. NH₄OH+Aq (1 vol. conc.: 3 vols. H₂O).

30.50 pts. HNO₃+Aq (1 vol. conc. HNO₃: 5 vols. H₂O).

33.0 pts. HCl+Aq (1 vol. conc. HCl: 4 vols. H₂O).

48.00 pts. HC₂H₃O₂+Aq (1 vol. commercial HC₂H₃O₂:1 vol. H₂O).

31.50 pts. NH₄Cl+Aq (1 pt. NH₄Cl:10 pts. H₂O).

18.00 pts. NH₄NO₃+Aq (1 pt. NH₄NO₃:10 pts. H₂O).

34.00 pts. NH₄C₂H₃O₂+Aq (dil. NH₄OH+Aq+dil. HC₂H₃O₂+Aq).

32.50 pts. Na₂C₂H₃O₂+Aq (commercial HC₂H₃O₂+Na₂CO₃, diluted with 4 vols. H₂O).

31.50 pts. Cu(C₂H₃O₂)₂+Aq. (See Stolba, Z. anal. **2**, 390.)

33.50 pts. cane-sugar (1 pt. cane-sugar: 10 pts. H₂O).

36.50 pts. grape-sugar (1 pt. grape-sugar: 10 pts. H₂O). (Pearson, Zeit. Chem. **1869**, 662.)

Addition of K salts to sat. KClO₃+Aq ppts. KClO₃ in such a way, that the sum of the

KClO₃ remaining in solution and the K in the salt added, is a constant, which constant is equal to the solubility of KClO₃, so that the following formula represents the coefficient of solubility of KClO₃ after addition of a K salt, $3.2 + 0.109t + 0.0043t^2 - K$ of salt added. (Blarez, C. R. 112. 1213)

Solubility of KClO₃ + TiClO₃.

60	29.0	155.8	326.8
70	...	161.3

(Carlson, Dissert. 1910.)

Insol. in methyl acetate. (Naumann, B.
 1909, 42. 3790); ethyl acetate. (Naumann,
 B. 1910, 43. 314.)

100 g. glycerol dissolve 20 g. NaClO_3 at
 15.5° . (Ossendowski, Pharm. J. 1907, 79.
 575.)

Strontium chlorate, $\text{Sr}(\text{ClO}_3)_2 + 5\text{H}_2\text{O}$.

Very deliquescent, and sol. in H_2O . (Topsoe, W. A. B. **66**, 2. 29.)

Sp. gr. of solution sat. at 18° containing 63.3% $\text{Sr}(\text{ClO}_3)_2 = 1.839$. (Mylius, B. 1897, **30**, 1718.)

Easily sol. in H_2O , less in alcohol, but more sol. in alcohol than SrCl_2 . (Souhay, A. **102**, 381.)

Insol. in absolute alcohol. (Wachter.)

Thallous chlorate, TlClO_3 .

Sol. in H_2O , but decomp. by heating.

100 pts. H_2O dissolve at:

0° 20° 50° 80° 100°

2.80 3.92 12.67 36.65 57.31 pts. TlClO_3 .

(Muir, Chem. Soc. **29**, 857.)

1 l. $\text{TlClO}_3 + \text{Aq}$ sat. at 10° contains 25.637 g. TlClO_3 . (Roozeboom, Z. phys. Ch. **8**, 532.)

1 l. H_2O dissolves 0.134 equivalents TlClO_3 at 20° ; or 38.51 g. in 1 l. of the solution (mean of 10 experiments). (Noyes and Farrell, J. Am. Chem. Soc. 1911, **33**, 1657.)

Solubility in $\text{Ti}_2\text{SO}_4 + \text{Aq}$ at 20° .

G equiv per l.		Solid phase
TlClO_3	Ti_2SO_4	
0 1058	0.1366	$\text{TlClO}_3 + \text{Ti}_2\text{SO}_4$

(Noyes and Farrell, *l.c.*)

Thallic chlorate, $\text{Tl}(\text{ClO}_3)_3 + 4\text{H}_2\text{O}$.

Very deliquescent; sol. in H_2O . Decomp. slowly in the air. (Gewecke, Z. anorg 1912, **75**, 273.)

Ytterbium chlorate.

Sol. in H_2O . (Popp, A. **131**, 179.)

Yttrium chlorate, $\text{Y}(\text{ClO}_3)_3 + 8\text{H}_2\text{O}$.

Deliquescent. Easily sol. in alcohol. Sol. in ether. (Cleve.)

Zinc chlorate, $\text{Zn}(\text{ClO}_3)_2 + 4\text{H}_2\text{O}$.

Solubility in H_2O .

Sat. solution contains at:

$+18^\circ$ 30° 40° 55°
66.52 67.66 69.06 75.44% $\text{Zn}(\text{ClO}_3)_2$.

Sp. gr. of solution containing 66.52% $\text{Zn}(\text{ClO}_3)_2$ at $18^\circ = 1.916$.

(Meusser, B. 1902, **35**, 1417.)

More sol. in H_2O than chlorates of Mg, Co, Ni or Cu; less sol. than chlorate of Cd; more sol. than $\text{Zn}(\text{NO}_3)_2$. (Meusser, *l.c.*)

$+6\text{H}_2\text{O}$. Very deliquescent. Easily sol. in H_2O and alcohol. Melts in crystal H_2O at 60° . (Vauquelin, A. ch. **95**, 113.)

Solubility in H_2O .

Sat. solution contains at:

-18° 0° 8° 15°
55.62 59.19 60.20 67.32% $\text{Zn}(\text{ClO}_3)_2$.
(Meusser, *l.c.*)

Sp. gr. of solution sat. at 18° containing 65% $\text{Zn}(\text{ClO}_3)_2 = 1.914$. (Mylius, B. 1897, **30**, 1718.)

Zinc chlorate ammonia, $\text{Zr}(\text{ClO}_3)_2 \cdot 4\text{NH}_3$.

$\text{Zn}(\text{ClO}_3)_2 \cdot 6\text{NH}_3$ Ppt. (Ephraim, B. 1915, **48**, 48.)

Perchloric acid

See Perchloric acid.

Chlorides.

Most chlorides are sol. in H_2O ; a few, however, are insol. or nearly so therein, the chief of which are AgCl , Hg_2Cl_2 , Cu_2Cl_2 , PtCl_2 , and AuCl . Several chlorides are decomp. into insol. basic salts or hydroxides, either by the addition of H_2O , as in the case of BiCl_3 and SbCl_3 , or on evaporating the aqueous solution, as AlCl_3 , ZnCl_2 , MgCl_2 , etc.

Some chlorides are sol. in alcohol or ether.

See under each element.

Chlorine, Cl_2 .

The maximum solubility of Cl in H_2O is at 10° (Schönfeld); at $8-10^\circ$ (Gay-Lussac); at $9-10^\circ$ (Pelouze).

Solubility decreases from $9-0^\circ$; at 100° the solubility = 0. (Gay-Lussac.)

$\text{Cl}_2 + \text{Aq}$ sat at 6° has sp. gr. = 1.003. (Berthelot.)

1 vol. H_2O at t° absorbs vols. Cl reduced to 0° and 760 mm. pressure.

t°	Vols Cl	t°	Vols Cl
10	2.5852	26	1.9099
11	2.5413	27	1.8695

(Kohn and O'Brien, J. Soc. Chem. Ind. 1898, 17. 1100.)

Sat. KCl + Aq absorbs $\frac{1}{2}$ less Cl at 15° than pure H₂O. (Detmer, A. 38. 35.)1 l. of a solution of CaCl₂ (1 pt in 15 pts. H₂O) dissolves 2.45 g. Cl at 12°.1 l. of a solution of MgCl₂ (1 pt. in 15 pts. H₂O) dissolves 2.33 g. Cl at 12°.1 l. of a solution of MnCl₂ (1 pt. in 15 pts. H₂O) dissolves 2.00 g. Cl at 12°.

Sl. sol. in KOH + Aq. (Fremy.)

Somewhat sol. in liquid NO₂. (Frankland, Chem. Soc. 1901, 79. 1361.)CCl₄ absorbs 10% of Cl₂ at 13°. (Perkins, Chem. Soc. 1894, 65. 20.)1 mol. CrOCl₂ dissolves at 0°, 0.70 atom Cl; at -14°, 1.24 atoms; at -21°, 2.31 atoms; and at -24, 3.00 atoms Cl. (Roozeboom, R. t. c. 4. 379.)

Sulphuryl chloride absorbs 71 vols. Cl or 0.136 pt. Cl by weight at 0°. (Schulze, J. pr. (2) 27. 168.)

Insol. in benzene. (Moride.)

Sl. sol. in chloral and iodal. (Dumas.)

Sol. in perchlorethylene. (Faraday.)

Sol. in a very large quantity of ether with decomp.

Coefficient of solubility of Cl₂ in organic liquids at 15°

Substance	Coefficient of Solubility
Carbon tetrachloride	51 7
Acetic anhydride	39 6
Acetic acid (99.84%)	36 7
" (90 vol. %)	25 3
" (75 vol. %)	16 43
" (65 vol. %)	13 43

(Jones, Chem. Soc. 1911, 99. 392.)

+8H₂O. Critical temp. of decomposition in open vessel = 9.6°; in closed vessel = 28.7°.Solubility in H₂O.% Cl₂ = % of Cl₂ in Cl₂ + Aq sat. at t° and 760 mm. in presence of Cl₂ + 8H₂O.

t°	% Cl ₂	t°	% Cl ₂
0	0 505	12 5	1 10
3	0 64	20	1.82
6	0 709	28 5	3.50
9	0 900		

(Roozeboom, R. t. c. 1884, 3. 57.)

Chlorine monoxide, Cl₂O.Sol. in H₂O. At 0°, H₂O absorbs at least 200 times its volume of Cl₂O gasChlorine trioxide, Cl₂O₃.

Decomp. on air at 57° with explosion.

H₂O absorbs 5-6 vols. Cl₂O₃. (Millon, A. ch. (3) 7. 298.)H₂O absorbs at 8.5° and 753 mm. press. 8.591 vols. Cl₂O₃. (Brandan.)100 g. H₂O dissolve at:

8.5°	and 752.9 mm. press.	4.7655 g. Cl ₂ O ₃ .
14°	" 756.3 "	" 5.0117 "
21°	" 754 "	" 5.4447 "
93°	" 760 "	" 5.6508 "

(Brandan, A. 151. 340)

Does not exist, and above data are for mixture of ClO₂ and Cl. (Garzarolli-Thurnlakh, A. 209. 184.)Chlorine tetroxide, ClO₂.H₂O at 4° absorbs about 20 vols. ClO₂ with formation of HClO₂ and HClO₃.H₂SO₄ at -18° absorbs about 20 vols. ClO₂. (Millon, A. ch. (3) 7. 285.)Solubility of ClO₂ in H₂O.

Entertic.

(Bray)

Chlorine oxide, Cl₂O_{1.7}.

Very easily decomp. (Millon, A. 46. 281)
Probably a mixture of ClO₂ and O

Chlorine heptoxide, Cl₂O₇.

Explosive; decomp. by H₂O, sol. in well cooled benzene with sl. decomp. (Michael, Am. Ch. J. 1909, 23. 447)

Chlorirididiamine chloride,

Sl. sol. in cold, easily in hot H₂O. (Skoblikoff, A. 84. 275.)

— **nitrate, Cl₂Ir(N₂H₆NO₃)₂.**

Sol. in H₂O.

— **sulphate, Cl₂Ir(N₂H₆)SO₄.**

Sl. sol. in cold, much more easily in hot H₂O.

Chloriridic acid.

Chloriridates.

Most of the chloriridates are very difficultly sol. in H₂O, but a little more sol. than the corresponding chloroplatinates. Insol. or nearly so in alcohol, but not so difficultly sol. as the chloroplatinates. (Rose.)

Ammonium chloriridate, (NH₄)₂IrCl₆.

Sol. in 20 pts. cold H₂O (Vauquelin); sl. sol. in cold, much more in hot H₂O (Claus); sol. in HCl + Aq (Soblewsky); insol. in cold NH₄Cl + Aq (Claus); insol. in alcohol (Berzelius).

100 pts. H₂O dissolve at:

14.4° 26.8° 39.4°
0.699 0.905 1.226 pts. (NH₄)₂IrCl₆,

52 2° 61.2° 69.3°

1.608 2.130 2.824 pts. (NH₄)₂IrCl₆.

(Rimbach and Korten, Z. anorg. 1907, 52. 407.)

Cæsium chloriridate, Cs₂IrCl₆.

Only sl. sol. in H₂O. (Delépine, C. R. 1908, 146. 1268.)

Lithium chloriridate, Li₂IrCl₆

Somewhat deliquescent; very sol. in H₂O. (Antony, Gazz. ch. it 23, 1. 190.)

Potassium chloriridate, K₂IrCl₆.

Sl. sol. in cold H₂O; sol. in 15 pts. boiling H₂O; less sol. in H₂O containing HCl, insol. in alcohol or sat. KCl and CaCl₂ + Aq.

Insol. in liquid NH₃. (Gore, Am. Ch. J. 1898, 20. 829)

Rubidium chloriridate, Rb₂IrCl₆.

Very sl sol. in H₂O. (Rimbach, Z. anorg. 1907, 52. 408)

Sodium chloriridate, Na₂IrCl₆ + 6H₂O.

Easily sol. in H₂O; sol. in alcohol of 0.837 sp gr.

Thallium chloriridate, Tl₂IrCl₆.

Decomp. by hot HCl forming Tl₃IrCl₆. (Delépine, C. R. 1909, 149. 1073.)

Chloriridium pentamine comps.

See *Iridopentamine chloro comps.*

Chloriridosulphurous acid.

Potassium chloriridosulphite, K₄Ir₂Cl₂(SO₃)₄, 4KCl + 12H₂O

Insol. in cold, decomp. by hot H₂O.

K₄Ir₂Cl₂(SO₃)₄ · 2K₂SO₃. Decomp. by H₂O.
Cl₂Ir₂(SO₃)₂ · 8KCl + 4H₂O. Sol. in H₂O; insol. in alcohol. (Claus, J. pr. 42. 354.)

Chloriridous acid.

Ammonium chloriridite, (NH₄)₃IrCl₆.

Decomp. by H₂O. (Delépine, C. R. 1908, 146. 1268.)

+ 1½H₂O. Sol. in H₂O. (Claus.)

IrCl₆(H₂O)(NH₄)₂. (Delépine.)

Cæsium chloriridite, IrCl₆(H₂O)Cs₂.

(Delépine.)

Lithium chloriridite, Li₃IrCl₆ + 12H₂O.

Deliquescent; sol. in H₂O and alcohol. (Delépine, C. R. 1914, 158. 1277.)

Lithium sodium chloriridite, Li₂NaIrCl₆ + 12H₂O.

Stable in aq. solution in the presence of excess of lithium salt. (Delépine, C. R. 1914, 158. 1278.)

LiNa₂IrCl₆ + 12H₂O. Stable in aq. solution in the presence of excess of sodium salt. (Delépine, C. R. 1914, 158. 1278.)

Potassium chloriridite, K₃IrCl₆.

Decomp. by H₂O. (Delépine.)

+ 3H₂O. Easily sol. in H₂O; insol. in alcohol; insol. in sat. KCl + Aq. (Berzelius.)
IrCl₆(H₂O)K₂. (Delépine.)

Rubidium chloriridite, $\text{IrCl}_3 \cdot (\text{H}_2\text{O})\text{Rb}_2$
(Delépine.)

Silver chloriridite, Ag_3IrCl_6 .

Insol in H_2O or acids; sl. sol in NH_4OH +
Aq
Ppt (Delépine, Bull Soc 1910, (4), 7. 55)

Sodium chloriridite, $\text{Na}_3\text{IrCl}_6 \cdot 12\text{H}_2\text{O}$.

Efflorescent; sol in $\frac{1}{2}$ pt H_2O . Insol. in alcohol. Melts in crystal H_2O at 50° .

Thallium chloriridite, Tl_3IrCl_6 .

Sol. in hot HCl ; pptd on cooling. (Delépine, C. R. 1909, 149. 1073)

Chlorotetramine chromium comps.

See Chlorotetramine chromium comps.

Chloro-azoimide, N_3Cl .

Sl. sol. in H_2O . (Raschig, B. 1908, 41. 4194.)

Chlorobromo comps:

See Bromochloro comps.

Chlorocarbonic acid.

See Carbonyl chloride.

Chlorochromic acid. $\text{CrO}_2\frac{\text{OH}}{\text{Cl}}$

Known only in its salts.
 CrO_2Cl_2 . See Chromyl chloride.

Ammonium chlorochromate, $\text{NH}_4\text{CrO}_3\text{Cl} = \text{CrO}_2\text{ONH}_4$.

More sol. in H_2O than the K salt. (Peligot, A. ch. 52. 283.)

Barium chlorochromate chloride,
 $\text{Ba}(\text{CrO}_3\text{Cl})_2$, BaCl_2 .

Deliquescent. Very sol. in H_2O . (Pratorius, A. 201. 1.)
+ H_2O . Not deliquescent.

Calcium chlorochromate, $\text{Ca}(\text{CrO}_3\text{Cl})_2$.

Deliquescent. (Peligot.)
+ $5\text{H}_2\text{O}$. Very deliquescent. (Pratorius.)

Chromous chlorochromate.

See Trichromyl chloride.

Cobalt chlorochromate, $\text{Co}(\text{CrO}_3\text{Cl})_2 \cdot 9\text{H}_2\text{O}$.

Deliquescent; melts at 40° in crystal H_2O . (Pratorius.)

Lithium chlorochromate, LiCrO_3Cl .

Sol. in H_2O acidified with HCl without decomp. (Löwenthal, Z. anorg. 1894, 6. 357.)

Magnesium chlorochromate, $\text{Mg}(\text{CrO}_3\text{Cl})_2$.

Deliquescent (Peligot.)
+ $9\text{H}_2\text{O}$. Less deliquescent than the other chlorochromates. (Pratorius, A. 201. 1.)

Very hygroscopic; sol. in H_2O acidified with HCl without decomp. (Löwenthal, Z. anorg 1894, 6. 359.)

Nickel chlorochromate, $\text{Ni}(\text{CrO}_3\text{Cl})_2 \cdot 9\text{H}_2\text{O}$.

Deliquescent; melts in its crystal H_2O at $46-48^\circ$. (Pratorius.)

Potassium chlorochromate, $\text{KCrO}_3\text{Cl} = \text{CrO}_2(\text{Cl})\text{OK}$.

Sol. in H_2O with decomp. Cryst. from H_2O containing HCl without decomp. (Peligot.)

Sol. in acetone (Naumann, B. 1904, 37. 4328)

Sodium chlorochromate, NaCrO_3Cl .

Deliquescent (Peligot)
+ $2\text{H}_2\text{O}$ Deliquescent. (Pratorius.)

Strontium chlorochromate, $\text{Sr}(\text{CrO}_3\text{Cl})_2 \cdot 4\text{H}_2\text{O}$.

Deliquescent; melts in crystal H_2O at 72° . (Pratorius.)

Thallous chlorochromate, TlCrO_3Cl .

Decomp. by H_2O . (Lachaud and Lepierre, C. R. 103. 198.)

Zinc chlorochromate, $\text{Zn}(\text{CrO}_3\text{Cl})_2 \cdot 9\text{H}_2\text{O}$

Deliquescent; melts at 37.5° in crystal H_2O . (Pratorius.)

Very hygroscopic; very sol. in H_2O and acids. (Löwenthal, Z. anorg. 1894, 6. 360.)

Dichlorochromium bromide,
 $[\text{Cr}(\text{H}_2\text{O})_4\text{Cl}_2]\text{Br}$.

Very deliquescent. Sol. in fuming HBr , in a mixture of equal volumes ether and fuming HBr , in alcohol and in acetone. (Bjerrum, B. 1907, 40. 2919.)

Chlorochromotetrammonium comps.

See Chlorotetramine chromium comps.

Chlorocolumbium bromide, $(\text{Cb}_6\text{Cl}_{12})\text{Br}_2 \cdot 7\text{H}_2\text{O}$.

Sol. in a small quantity of cold H_2O . (Harned, J. Am. Chem. Soc. 1913, 35. 1083.)

Chlorocolumbium chloride, $(\text{Cb}_6\text{Cl}_{12})\text{Cl}_2 \cdot 7\text{H}_2\text{O}$.

Insol. in cold, sol. in boiling H_2O .
Not easily decomp. by boiling with NH_4OH . Conc. HNO_3 decomp. a boiling solution of this comp. Completely sol. in conc. alkalis. (Harned, J. Am. Chem. Soc. 1913, 35. 1080.)

Chlorocolumbium hydroxide, $(\text{Cb}_2\text{Cl}_{12})(\text{OH})_2 + 8\text{H}_2\text{O}$.

Insol. in H_2O . Sol. in acids and alkalis (Harned, J. Am. Chem. Soc. 1913, **35**, 1082.)

Chloroctamine cobaltic carbonate,

Very sol. in H_2O . (Vortmann and Blasberg, B. **22**, 2651.)

$\text{Cl}_2\text{Co}_2(\text{NH}_3)_3(\text{CO}_3)_2 + \text{H}_2\text{O}$ (Vortmann and Blasberg.)

Chloroferrous acid.

Calcium chloroferrite, CaO , CaCl_2 , Fe_2O_3

Insol. in H_2O (Le Chatelier, C. R. **99**, 276.)

Dichlorofulminoplatinum,

Insol. in H_2O (v. Meyer, J. pr. (2) **18**, 305.)

Trichlorofulminoplatinum,

Insol. in H_2O ; sol. in $\text{HCl} + \text{Aq}$ (v. Meyer.)

Tetrachlorofulminoplatinum,

Insol. in H_2O (v. Meyer.)

Chlorohydroxylonitritoplatinsemi-diamine nitrite, $(\text{OH})\text{ClNO}_2\text{Pt}(\text{NH}_3)_2\text{NO}_2$.

Easily sol. in hot H_2O (Cleve.)

Chlorohydroxyoplatin/diamine bromide,

Sl. sol. in H_2O .

— **carbonate**, $\frac{\text{OH}}{\text{Cl}}\text{Pt}(\text{N}_2\text{H}_5)_2\text{CO}_3$.

Insol. in H_2O . (Cleve.)

— **chloride**, $\frac{\text{OH}}{\text{Cl}}\text{Pt}(\text{N}_2\text{H}_5\text{Cl})_2$.

Sl. sol. in H_2O . (Cleve.)

— **chromate**, $\frac{\text{OH}}{\text{Cl}}\text{Pt}(\text{N}_2\text{H}_5)_2\text{CrO}_4$.

Nearly insol. in H_2O .

— **dichromate**, $\frac{\text{OH}}{\text{Cl}}\text{Pt}(\text{N}_2\text{H}_5)_2\text{Cr}_2\text{O}_7$.

Ppt. (Cleve.)

— **nitrate** (Raewsky's nitrate),

Sl. sol. in cold, more easily in hot H_2O . (Gerhardt.)

Chlorohyposulphuric acid, $\text{S}_2\text{O}_3\text{Cl}_4$

See Sulphur oxytetrachloride.

Chloromanganic acid.

See Manganic hydrogen chloride.

Chloromercurosulphrous acid.

Ammonium chloromercurosulphite,

Sol. in H_2O . (Barth, Z. phys. Ch. **9**, 205.)

Barium chloromercurosulphite,

Insol. in H_2O . (Barth.)

Potassium chloromercurosulphite, KSO_3HgCl

Sol. in H_2O . (Barth.)

Sodium chloromercurosulphite, $\text{NaSO}_3\text{HgCl} + \text{H}_2\text{O}$

Very sol. in H_2O . (Barth.)

Chloromolybdenum bromide,

Insol. in H_2O and dil. acids; sol. in alcohol. $+6\text{H}_2\text{O}$. At first easily sol. in H_2O , but a precipitate soon forms. Can be crystallized from dil. $\text{HBr} + \text{Aq}$. Sol. in alcohol and ether. (Blomstrand.)

Chloromolybdenum potassium bromide,

Decomp. by H_2O . Can be cryst. from $\text{HBr} + \text{Aq}$ (Blomstrand.)

Chloromolybdenum chloride, $\text{Cl}_4\text{Mo}_3\text{Cl}_2 =$ molybdenum dichloride, MoCl_2

Insol. in H_2O ; easily sol. in $\text{HCl} + \text{Aq}$ or $\text{H}_2\text{SO}_4 + \text{Aq}$; sl. sol. in HNO_3 ; sol. in $\text{NH}_4\text{OH} + \text{Aq}$, $\text{NaOH} + \text{Aq}$, or $\text{KOH} + \text{Aq}$, with separation of precipitate on boiling; sol. in alcohol and ether. (Blomstrand, J. pr. **77**, 96.)

Very sol. in conc. HCl . (Rosenheim and Kohn, Z. anorg. 1910, **66**, 2.)

$+3\text{H}_2\text{O}$. Insol. in H_2O .

$+4\frac{1}{2}\text{H}_2\text{O}$. Insol. in H_2O . (Liechti and Kempe, A. **170**, 351.)

$+6\text{H}_2\text{O}$. Sol. in H_2O , alcohol, or ether. (Blomstrand.)

Chloromolybdenum hydrogen chloride,

Sol. in H_2O , but ppt. forms after a few minutes. (Rosenheim and Kohn, Z. anorg. 1910, **66**, 5.)

Chloromolybdenum potassium chloride,

Decomp. by pure H_2O ; can be recrystallized from $\text{HCl} + \text{Aq}$. (Blomstrand, J. pr. **77**, 108.)

- Chloromolybdenum hydroxide**, $\text{Cl}_1\text{Mo}_3(\text{OH})_2 + 2\text{H}_2\text{O}$
 Insol in H_2O or alcohol. Easily sol. in strong acids if fresh, and washed only with cold H_2O . If washed with warm H_2O , it is less sol. in acids. If precipitated hot, is insol in acids, even H_2SO_4 or fuming HNO_3 . (Blomstrand, J. pr. 77. 100.)
 $+8\text{H}_2\text{O}$.
- Chloromolybdenum iodide**, $\text{Cl}_4\text{Mo}_3\text{I}_2 + 3\text{H}_2\text{O}$.
 Precipitate.
 $+6\text{H}_2\text{C}$. Sol in H_2O and alcohol.
- Chloromolybdenum potassium iodide**,
 $\text{Cl}_1\text{Mo}_3\text{I}_2, 2\text{KI} + 2\text{H}_2\text{O}$.
 Decomp. by H_2O . Recryst. from $\text{HI} + \text{Aq}$. (Blomstrand.)
- Chloromolybdenum oxybromide**, $\text{Cl}_4\text{Mo}_3 \begin{smallmatrix} \text{OH} \\ \text{Br} \end{smallmatrix}$
 $+2\text{H}_2\text{O}$.
 Insol. in alcohol (Blomstrand, J. pr. 77. 116.)
- Chloromolybdic acid**,
 $\text{MoOCl}_3(\text{OH}) + 7\text{H}_2\text{O}$.
 Very hygroscopic. (Weinland, B. 1904, 37. 572.)
- Diammonium tetrachloromolybdate**,
 $\text{MoCl}_4(\text{ONH}_4)_2 + 2\text{H}_2\text{O}$.
 Hygroscopic. Decomp. by H_2O Sol. in dilute acids, alkalies and ammonia. (Weinland, Z. anorg. 1905, 44. 83.)
- Cæsium chlorotrimolybdate, acid**,
 $\text{Mo}_3\text{O}_{11}\text{Cl}_{14}(\text{Cs}_2\text{O}) + 22\text{H}_2\text{O}$.
 Hygroscopic. Decomp. by H_2O . Sol. in dilute acids, alkalies, and ammonia. (Weinland, l. c.)
- Monocæsium trichloromolybdate**,
 $\text{MoOCl}_3(\text{OCs}) + \text{H}_2\text{O}$.
 Hygroscopic. Decomp. by H_2O . Sol. in dilute acids, alkalies and ammonia. (Weinland.)
- Dicæsium tetrachloromolybdate**,
 $\text{MoCl}_4(\text{OCs})_2$.
 Hygroscopic. Sol in H_2O with decomp. Sol. in dilute acids, alkalies, and ammonia. (Weinland, Z. anorg. 1905, 44. 83.)
- Monopotassium trichloromolybdate**,
 $\text{MoOCl}_3(\text{OK}) + \text{H}_2\text{O}$.
 Hygroscopic. Decomp. by H_2O . Sol. in dilute acids, alkalies, and ammonia. (Weinland.)
- Dipotassium tetrachloromolybdate**,
 $\text{M} \cdot \text{Cl}_4(\text{OK})_2 + 2\text{H}_2\text{O}$.
 Hygroscopic. Decomp. by H_2O . Sol. in dilute acids, alkalies, and ammonia. (Weinland.)
- Potassium hydrogen chlorotrimolybdate**,
 $\text{Mo}_3\text{Cl}_{11}\text{Cl}_{11}, \text{K}_2\text{O} + 6\text{H}_2\text{O}$.
 Hygroscopic. Decomp. by H_2O Sol. in dilute acids, alkalies, and ammonia. (Weinland.)
- Monorubidium tetrachloromolybdate**,
 $\text{MoOCl}_3(\text{ORb}) + \text{H}_2\text{C}$.
 Hygroscopic. Decomp. by H_2O . Sol. in dilute acids, alkalies, and ammonia. (Weinland.)
- Rubidium tetrachloromolybdate**,
 $\text{MoCl}_4(\text{ORb})_2$.
 Hygroscopic. Decomp. by H_2O . Sol. in dilute acid, alkalies, and ammonia. (Weinland.)
- Chloronitratoplatinamine nitrite**,
 $\begin{smallmatrix} \text{Cl} \\ \text{NO}_3 \end{smallmatrix} \text{Pt}(\text{NH}_3\text{NO}_2)_2$.
 Easily sol. in H_2O .
- Chloronitratoplatin diamine nitrate**,
 $\begin{smallmatrix} \text{Cl} \\ \text{NO}_3 \end{smallmatrix} \text{Pt}(\text{N}_2\text{H}_5\text{NO}_2)_2$.
 Decomp. by H_2O with formation of
 $\begin{smallmatrix} \text{Cl} \\ \text{OH} \end{smallmatrix} \text{Pt}[(\text{NH}_3)_2\text{NO}_3]_2$.
- sulphate, $\begin{smallmatrix} \text{Cl} \\ \text{NO}_3 \end{smallmatrix} \text{Pt}(\text{N}_2\text{H}_5)_2\text{SO}_4 + \text{H}_2\text{O}$.
 Sl sol in cold, more easily in hot H_2O .
- Chloronitritotetramine cobaltic chloride**,
 $\text{Cl}(\text{NO}_2)\text{Co}(\text{NH}_3)_4\text{Cl}$.
 Not very sol. in cold H_2O . (Jørgensen, Z. anorg. 5. 195.)
- Chloronitritoplatin semidiamine chloride**,
 $\text{Cl}_2(\text{NO}_2)\text{Pt}(\text{NH}_3)_2\text{Cl}$.
 100 pts. solution in H_2O sat. at 18° contain 1.8 pts. salt; sat. at 100° , 6 pts.
 Insol. in abs. alcohol or ether. Not decomp. by conc. HNO_3 , HCl , or $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$, and by H_2SO_4 only at a high heat.
 Formula given was $\text{PtN}_6\text{H}_{12}\text{Cl}_6\text{O}_5$. (Peyrone, J. B. 1855. 421.)
- nitrite, $\text{Cl}_2(\text{NO}_2)\text{Pt}(\text{NH}_3)_2\text{NO}_2$.
 Sol. in H_2O . (Blomstrand.)
- Chlorophosphatoplatin diamine phosphate**,
 $\begin{smallmatrix} \text{ClPt}(\text{N}_2\text{H}_5)_2 \\ \text{PO}_4 \end{smallmatrix} + 2\text{H}_2\text{O}$.
 Nearly insol. in cold, and only very sl. sol. in hot H_2O . (Raewsky.)
- Chloronitrous acid**.
Iridium potassium chloronitrite, $\text{Ir}_2\text{Cl}_2(\text{NO}_2)_4, 6\text{KCl}$.
 Ppt.; decomp. by boiling H_2O . Sol. in cold H_2O . (Leidié, C. R. 1902, 134. 1583.)

$\text{Ir}_2\text{K}_{12}\text{Cl}_{16}(\text{NO}_2)_8 + 4\text{H}_2\text{O}$. Ppt. (Quen-
nessen, C. R. 1905, 141. 258.)

Chloropalladic acid.

Chloropalladates.

The chloropalladates are generally very sol in H_2O , and sol. in alcohol. (v. Bonsdorff, Pogg. 17. 264.)

Ammonium chloropalladate, $(\text{NH}_4)_2\text{PdCl}_6$.

Sl. sol. in H_2O . (Berzelius.)

Barium chloropalladate.

Sol. in H_2O and alcohol. (v. Bonsdorff.)

Cadmium chloropalladate.

As above.

Cæsium chloropalladate, Cs_2PdCl_6 .

Nearly insol. in cold H_2O . Decomp. by boiling with H_2O or by hot conc. H_2SO_4 . (Guthier, B. 1905, 38. 2386.)

Calcium chloropalladate.

Deliquescent; sol. in H_2O and alcohol. (v. Bonsdorff, 1829.)

Glucinum chloropalladate, $\text{GlPdCl}_6 + 8\text{H}_2\text{O}$.

Very hygroscopic, and sol. in H_2O .

Magnesium chloropalladate, $\text{MgPdCl}_6 + 6\text{H}_2\text{O}$.

Deliquescent; sol. in H_2O .

Nickel chloropalladate, $\text{NiPdCl}_6 + 6\text{H}_2\text{O}$.

Extremely deliquescent.

Potassium chloropalladate, K_2PdCl_6 .

Sl. sol. in cold H_2O . Decomp. by long boiling with H_2O . Sl. sol. in dil. $\text{HCl} + \text{Aq}$ without decomp. Insol. in NH_4Cl , KCl , or $\text{NaCl} + \text{Aq}$. Insol. in alcohol. (Berzelius.)

Rubidium chloropalladate, Rb_2PdCl_6 .

Insol. in cold H_2O . Decomp. by boiling with H_2O or by hot conc. H_2SO_4 . (Guthier, B. 1905, 38. 2387.)

Zinc chloropalladate, $\text{ZnPdCl}_6 + 6\text{H}_2\text{O}$.

Very deliquescent. (v. Bonsdorff.)

Chloropalladous acid

Aluminum chloropalladite, $\text{Al}_2\text{Pd}_2\text{Cl}_{10} + 20\text{H}_2\text{O}$.

Deliquescent. Sol. in H_2O , alcohol, or ether. (Welkow, B. 7. 804.)

Ammonium chloropalladite, $(\text{NH}_4)_2\text{PdCl}_4 + \text{H}_2\text{O}$.

Easily sol. in H_2O . Insol. in alcohol. Sol. in $\text{NH}_4\text{Cl} + \text{Aq}$. (Claus.)

Easily sol. in H_2O . (Guthier, B. 1905, 38. 2386.)

Barium chloropalladite.

Easily sol. in H_2O or alcohol

Cadmium chloropalladite.

Not deliquescent.

Cæsium chloropalladite, Cs_2PdCl_6 .

Can be cryst. from hot H_2O . (Guthier, B. 1905, 38. 2386.)

Calcium chloropalladite.

Deliquescent. Sol. in H_2O or alcohol.

Glucinum chloropalladite, $\text{GlPdCl}_4 + 6\text{H}_2\text{O}$.

Very hygroscopic; very sol. in H_2O , alcohol, or ether. (Welkow.)

Magnesium chloropalladite.

Deliquescent. Easily sol. in H_2O . (v. Bonsdorff.)

Manganese chloropalladite.

Sol. in H_2O and alcohol.

Nickel chloropalladite.

Sol. in H_2O .

Potassium chloropalladite, K_2PdCl_6 .

Much more sol. in hot than cold H_2O . (Joannis, C. R. 95. 295.) Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Berzelius.) Sol. in cold sat. $\text{KCl} + \text{Aq}$. (Gibbs, Sill. Am. J. (2) 31. 70.) Insol. in alcohol. (Wollaston.) Somewhat sol. in alcohol of 0.84 sp. gr., but insol. in absolute alcohol; decomp. on boiling (Berzelius.)

Rubidium chloropalladite, Rb_2PdCl_6 .

Can be cryst. from hot H_2O . (Guthier, B. 1905, 38. 2387.)

Sodium chloropalladite.

Deliquescent. Sol. in H_2O and alcohol.

Zinc chloropalladite.

Very deliquescent. Sol. in H_2O and alcohol. (v. Bonsdorff.)

Chlorophosphoarsenoiiridic acid, $2\text{IrCl}_3, 3\text{H}_3\text{PO}_3, 3\text{H}_3\text{PO}_4, 5\text{H}_3\text{AsO}_4(?)$.

Very sol. in H_2O . (Geisenheimer.)

Lead chlorophosphoarsenoiiridate, $4\text{IrCl}_3, 3\text{Pb}_2\text{H}_2(\text{PO}_3)_2, 3\text{Pb}_3(\text{PO}_4)_2, 5\text{Pb}_3\text{H}_2(\text{AsO}_4)_2$.

Insol. in H_2O .

Chlorophosphoiridic acid, $2\text{IrCl}_3, 3\text{H}_3\text{PO}_4, 3\text{H}_3\text{PO}_3$.

Very sol. in H_2O . Insol. in alcohol. (Geisenheimer, A. ch. (6) 23. 254.) $2\text{IrCl}_3, 3\text{H}_3\text{PO}_4$. Sol. in H_2O and alcohol.

Ammonium chlorophosphoiridate, $2\text{IrCl}_2 \cdot 3(\text{NH}_4)_3\text{PO}_4 \cdot 3(\text{NH}_4)_2\text{HPO}_3$.

Very deliquescent. Very sol. in H_2O . (Geisenheimer.)

Lead chlorophosphoiridate, $\frac{1}{2}\text{IrCl}_2 \cdot 3\text{Pb}_3(\text{PO}_4)_2 \cdot 3\text{PbH}_2(\text{PO}_3)_2$.

Insol. in H_2O or acetic acid; very sol. in dl. $\text{HNO}_3 + \text{Aq}$. (Geisenheimer.)

Silver chlorophosphoiridate, $2\text{IrCl}_2 \cdot 3\text{AgH}_2\text{PO}_4 \cdot 3\text{AgH}_2\text{PO}_3$.

Insol. in H_2O . Sol. in $\text{HNO}_3 + \text{Aq}$, and $\text{NH}_4\text{OH} + \text{Aq}$. (Geisenheimer.)

Chlorophosphoplatinic acid.

See Chloroplatinophosphoric acid.

Chlorophosphoric acid.

Thorium chlorophosphate, $3\text{ThO}_2 \cdot \text{ThCl}_4 \cdot 2\text{P}_2\text{O}_5$.

Insol. in H_2O and acids; decomp. by boiling with H_2SO_4 and fusing with alkali carbonates. (Colani, C. R. 1909, 149. 208)

Chloroplatinamine chloride, $\text{Cl}_2\text{Pt} \cdot \frac{\text{NH}_3\text{Cl}}{\text{NH}_3\text{Cl}}$.

Sol. in about 700 pts. H_2O at 0° , and 33–34 pts. at 100° . Not attacked by boiling conc. HNO_3 or H_2SO_4 . Sol. in boiling $\text{KOH} + \text{Aq}$ with decomp. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$ (Cleve, Sv. V. A. H. 10, 9. 30.)

— **nitrite**, $\text{Cl}_2\text{Pt}(\text{NH}_3\text{NO}_2)_2$

Sl. sol. in cold, easily in hot H_2O .

— **nitrite silver nitrite**, $\text{Cl}_2\text{Pt}(\text{NH}_3\text{NC}_2)_2 \cdot \text{AgNO}_2$.

Easily sol. in hot, sl. sol. in cold H_2O . (Cleve.)

— **nitritochloride**, $\text{Cl}_2\text{Pt} \cdot \frac{\text{NH}_3\text{NO}_2}{\text{NH}_3\text{Cl}}$

Sol. in H_2O . (Cleve.)

Chloroplatinidamine bromide,

$\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_5\text{Br})_2$.

Sl. sol. in hot H_2O . (Cleve.)

— **chloride** (Gros' chloride), $\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_5\text{Cl})_2$.

Nearly insol. in cold, and only sl. sol. in hot H_2O . Sol. in hot conc. $\text{KOH} + \text{Aq}$, with decomp. (Grimm.)

Sol. in cold $\text{KOH} + \text{Aq}$ without decomp. Nearly insol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Buckton.) $+ \text{H}_2\text{O}$. (Raewsky.)

— **chloroplatinate**, $\text{NCl}_2\text{Pt}(\text{N}_2\text{H}_5\text{Cl})_2$, PtCl_4 .

Easily sol. in hot H_2O .

— **chloroplatinite**, $\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_5\text{Cl})_2$, PtCl_2 .

Sl. sol. in H_2O . (Cleve.)

Chloroplatinidamine chromate, $\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_5)_2\text{CrO}_4$.

Nearly insol. in H_2O (Cleve.)

— **chromate**, $\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_5)_2\text{Cr}_2\text{O}_7$.

Sl. sol. in cold, more sol. in hot H_2O . (Cleve.)

— **nitrate** (Gros' nitrate), $\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_5\text{NO}_3)_2$

Much more easily sol. in hot than in cold H_2O . Sol. in hot $\text{KOH} + \text{Aq}$ with decomp. Nearly insol. in conc. $\text{HNO}_3 + \text{Aq}$.

— **nitritochloride**, $\text{Cl}_2\text{Pt} \cdot \frac{\text{N}_2\text{H}_5\text{NO}_2}{\text{N}_2\text{H}_5\text{Cl}}$

Ppt. (Jørgensen.)

— **phosphate**.

See Chlorophosphatoplatinidamine phosphate.

— **sulphate**, $\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_5)_2\text{SO}_4$.

Sl. sol. in both cold or hot H_2O . (Cleve.) $+ x\text{H}_2\text{O}$. Sl. sol. in cold, easily in hot H_2O . (Grimm.)

— **sulphocyanide**, $\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_5)_2(\text{CNS})_2 + \text{H}_2\text{O}$.

Ppt. (Cleve.)

Chloroplatinmonodiamine chloride,

$\text{Cl}_2\text{Pt} \cdot \frac{(\text{NH}_3)_2\text{Cl}}{\text{NH}_3\text{Cl}}$

Quite easily sol. in H_2O . (Cleve)

Chloroplatinsemidiamine carbonate chloride, $2\text{Pt}(\text{NH}_3)_2\text{Cl}_2 \cdot \text{Pt}_2(\text{NH}_3)_4\text{Cl}_2(\text{CO}_3)_2$.

Sl. sol. in H_2O ; insol. in alcohol and ether. Decomp. by cold $\text{HCl} + \text{Aq}$. (Schon, Z. anorg. 1897, 13. 37.)

Chloroplatinsemidiamine chloride, $\text{Cl}_3\text{Pt}(\text{NH}_3)_2\text{Cl}$.

Sol. in 300 pts. H_2O at 0° , and 65 pts. at 100° . Not decomp. by conc. H_2SO_4 . Sol. in $\text{KOH} + \text{Aq}$ without decomp. (Cleve.)

Chloroplatinic acid, $\text{H}_2\text{PtCl}_6 + 6\text{H}_2\text{O}$.

Deliquescent. Sol. in H_2O , alcohol, or ether. $+ 4\text{H}_2\text{O}$. Deliquescent. (Pigeon, C. R. 112. 1218.)

PtCl_4 , $\text{HCl} + 2\text{H}_2\text{O}$. (Pigeon.)

Aluminum chloroplatinate, AlCl_3 , $\text{PtCl}_4 + 15\text{H}_2\text{O}$.

Very sol. in H_2O and alcohol. (Welkow, B. 7. 304.)

Insol. in ether.

Ammonium chloroplatinate, $(\text{NH}_4)_2\text{PtCl}_6$.

Sl. sol. in cold, more easily in hot H_2O . (Fresenius.)

100 pts. H_2O dissolve 0.666 pt. at ord. temp. and 12.5 pts. at 100° . (Crookes, C. N. 9. 37.)

Insol in cold HCl + Aq. Separates out on cooling from solution in hot HCl, HNO₃, or H₂SO₄. (Fischer.)

Very sl sol. in cold, easily in hot NH₄OH + Aq. (Fresenius.)

Conc. NH₄Cl + Aq ppts. it almost completely from aqueous solution. (Böttger.)

Sol. in NH₄ succinate + Aq. (Döpping.)

Less sol. in H₂PtCl₆ + Aq than in H₂O (Rogojski, A. ch. (3) **41**. 452.)

Sol. in SnCl₂ + Aq (Fischer.)

Very sol with decomp. in KCNS + Aq (Claus.)

At 15–20°, sol in 26,535 pts. 97.5% alcohol, in 1476 pts. 76% alcohol, and in 665 pts. 55% alcohol. If free HCl is present, it is sol. in 672 pts. 76% alcohol. (Fresenius, A. **59**. 118.)

Insol in absolute alcohol or ether.

Barium chloroplatinate, BaPtCl₆ + 6H₂O.

Permanent; sol. in H₂O; decomp. by alcohol. (v. Bonsdorff, Pogg. **17**. 250.)

Barium monochloroplatinate, PtCl(OH)₂Ba + H₂O.

Insol. in H₂O and in org. solvents. (Bellucci, C. C. **1903**, I. 131.)

Barium pentachloroplatinate, OH PtCl₅Ba + H₂O.

(Miolati, Chem. Soc. 1900, **78**. (2) 732.)

Cadmium chloroplatinate, CdPtCl₆ + 6H₂O

Deliquescent, and easily sol. in H₂O (v. Bonsdorff.)

Cesium chloroplatinate, Cs₂PtCl₆:

100 pts. H₂O dissolve at.

0°	10°	20°	30°
0.024	0.050	0.079	0.110
40°	50°	60°	70°
0.142	0.177	0.213	0.251
80°	90°	100°	
0.291	0.332	0.377	pts. Cs ₂ PtCl ₆ .

(Bunsen, Pogg. **113**. 337.)

Sol. in 1308 pts. H₂O at 15°, and 261 pts. at 100°. (Crookes, C. N. **9**. 205.)

Calcium chloroplatinate, CaPtCl₆ + 8H₂O.

Deliquescent; easily sol. in H₂O. (v. Bonsdorff.)

Calcium monochloroplatinate, PtCl(OH)₂Ca + H₂O.

Insol. in H₂O and in org. solvents. (Bellucci, C. C. **1903**, I. 131.)

Cerium chloroplatinate, CeCl₃, PtCl₄ + 13H₂O.

Deliquescent; very sol. in H₂O or alcohol; insol. in ether. (Marignac.)

4CeCl₃, 3PtCl₄ + 8H₂O. Deliquescent; easily sol. in H₂O or alcohol; insol. in ether. (Holzmann, J. pr. **84**. 80.)

Chromium chloroplatinate, CrCl₃, PtCl₄ + 10½H₂O.

Deliquescent. (Nilson, B. **9**. 1056.)

+10H₂O. Very sol. in H₂O and alcohol. Nearly insol. in acetone. (Higley, J. Am. Chem. Soc. 1904, **26**. 617.)

Cobalt chloroplatinate, CoPtCl₆ + 6H₂O.

Very deliquescent. (Jorgensen.)

Copper chloroplatinate, CuPtCl₆ + 6H₂O.

Deliquescent in moist air. (v. Bonsdorff.)

Didymium chloroplatinate, D₂Cl₃, PtCl₄ + 13H₂O.

Less deliquescent than the cerium salt. (Marignac.)

+10½H₂O. Deliquescent. (Cleve, Bull. Soc. (2) **43**. 361.)

Erbium chloroplatinate, ErCl₃, PtCl₄ + 11H₂O.

Very deliquescent. (Cleve.)

Gadolinium chloroplatinate, GdCl₃, PtCl₄ + 10H₂O.

Ppt. (Benedicko, Z. anorg. 1900, **22**. 204.)

Glucinum chloroplatinate, GlPtCl₆ + 8H₂O.

Deliquescent in moist air. Very sol. in H₂O, moderately in alcohol. Insol. in ether. (Welkow, B. **6**. 1288.)

Indium chloroplatinate, 2InCl₃, 5PtCl₄ + 36H₂O.

Deliquescent. (Nilson.)

Iron (ferrous) chloroplatinate, FePtCl₆ + 6H₂O.

Deliquescent. (Topsoe.)

Iron (ferric) chloroplatinate, FeCl₃, PtCl₄ + 10½H₂O.

Deliquescent. (Nilson.)

Lanthanum chloroplatinate, LaCl₃, PtCl₄ + 13H₂O.

Deliquescent; extremely sol. in H₂O. (Cleve.)

Lead chloroplatinate, PbPtCl₆ + 3H₂O.

Easily sol. in H₂O and alcohol (Topsoe), with decomp. (Birnbbaum, Zeit. Ch. **1867**. 520.)

Lead monochloroplatinate, [PtCl(OH)₂]₂Pb, Pb(OH)₂.

Ppt. (Bellucci, Chem. Soc. 1902, **82**, II. 155.)

Lead pentachloroplatinate, basic, PtCl₅(OH)Pb, Pb(OH)₂.

(Miolati, Chem. Soc. 1900, **78**. (2) 732.)

Lithium chloroplatinate, Li₂PtCl₆ + 6H₂O.

Extremely deliquescent (Jorgensen); efflorescent. Easily sol. in H₂O, alcohol, or ether-alcohol; insol. in ether. (Scheibler.)

Lithium pentachloroplatinate, OH.PtCl₅Li₂.

Very hygroscopic. (Miolati, Chem. Soc. 1900, **78** (2) **732**.)

Magnesium chloroplatinate, $\text{MgPtCl}_6 \cdot 6\text{H}_2\text{O}$.
Sol. in H_2O and abs. alcohol
+ $12\text{H}_2\text{O}$. Sol. in H_2O .

Manganese chloroplatinate, $\text{MnPtCl}_6 \cdot 6\text{H}_2\text{O}$
Not deliquescent; sol. in H_2O .
+ $12\text{H}_2\text{O}$. Sl. efflorescent.

Nickel chloroplatinate, $\text{NiPtCl}_6 \cdot 6\text{H}_2\text{O}$.
Sol. in H_2O .

Potassium chloroplatinate, K_2PtCl_6 .

100 pts. H_2O dissolve at:
0° 10° 20° 30° 40° 50°
0.74 0.90 1.12 1.41 1.76 2.17 pts. K_2PtCl_6 ,
60° 70° 80° 90° 100°
2.64 3.19 3.79 4.45 5.18 pts. K_2PtCl_6 .
(Bunsen, Pogg. 113. 337.)

100 pts. H_2O dissolve 0.926 pt. at 15°, and
5.26 pts. at 100°. (Crookes, C. N. 9. 205.)

100 g. H_2O dissolve at:
2° 16° 25° 35° 48°
0.4812 0.6718 0.8641 1.132 1.745 g. K_2PtCl_6 ,
59° 68° 78° 92°
2.396 2.913 3.589 4.484 g. K_2PtCl_6 .
(Archibald, J. Am. Chem. Soc. 1908, 30. 752.)

Not attacked by cold conc. H_2SO_4 . (Las-
saigne.)

Sl. sol. in cold, more easily in hot dil. acids.
Less sol. in $\text{KCl} + \text{Aq}$ than in H_2O , and nearly
insol. in sat. $\text{KCl} + \text{Aq}$. (Schrötter, W. A. B.
50, 2. 268.)

Solubility in $\text{KCl} + \text{Aq}$ at 20°.

G. mol. KCl per l. of $\text{KCl} + \text{Aq}$.	G. K_2PtCl_6 in 100 g. of solution.

2.00	0.834

(Archibald, J. Am. Chem. Soc. 1908, 30. 757.)

Sol. in $\text{KOH} + \text{Aq}$. Insol. in cold or hot
alkali carbonates or bicarbonates + Aq . (Rose.
Easily sol. in warm $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ (Himly.)
Sol. in $\text{NH}_4\text{Cl} + \text{Aq}$ (Brett.)

Sol. in NH_4 succinate + Aq . (Döpping.)

At 15–20°, sol. in 12,083 pts. absolute al-
cohol, in 3775 pts. 76% absolute alcohol, and
in 1053 pts. 55% absolute alcohol. (Fresen-
ius.)

Sol. in 1835 pts. 76% alcohol containing
 HCl at 15–20°. (Fresenius.)

Nearly absolutely insol. in alcohol con-
taining ether.

Sol. in 42,600 pts. absolute alcohol (Precht,
Z. anal. 18. 509.)

1 l. methyl alcohol dissolves 0.072 g. at 20°.
(Peligot, Monit. Sci. 1892, (4) 6. I, 873.)

90°	100°	
0.521	0.634	pts. Rb_2PtCl_6 .

(Bunsen, Pogg. 113. 337.)

Sol. in 740 pts. H_2O at 15°, and 157 pts. at 100°. (Crookes, C N. 9. 205.)

Insol. in alcohol.

Samarium chloroplatinate, $SmCl_3, PtCl_4 + 10\frac{1}{2}H_2O$.Deliquescent. Very sol. in H_2O . (Cleve, Bull. Soc. (2) 43. 165.)**Silver chloroplatinate**, Ag_2PtCl_6 .Ppt. Gradually decomp. by H_2O into $AgCl$ and $PtCl_4$. (Jørgensen, J. pr. (2) 16. 345)
 $Ag_2PtCl_6(OH)_2$. Ppt.**Silver monochloroplatinate**, $[PtCl(OH)_5]Ag_2$.

Ppt. (Bellucci, Chem. Soc. 1902, 82. (2) 155.)

Silver pentachloroplatinate, $(OH)PtCl_5Ag_2$.Ppt.; stable in boiling H_2O . (Miolati, Chem. Soc. 1900, 78 (2). 732.)**Silver chloroplatinate ammonia**, $Ag_2PtCl_6, 2NH_3$.Insol. in H_2O . (Burnbaum.)**Sodium chloroplatinate**, $Na_2PtCl_6 + 6H_2O$.Easily sol. in H_2O . Sat solution at 15° contains 39.77 g. Na_2PtCl_6 and has sp. gr. of 1.368. Sol. in $NaCl + Aq$. More sol. in absolute alcohol than in 95% alcohol. Sat. solution in abs. alcohol contains 11.90%; 95% alcohol, 6.34%. Mixture of equal parts of alcohol and ether dissolve 2.43%. Insol. in ether. (Precht, Z. anal. 18. 502.)**Sodium pentachloroplatinate**, $(OH)PtCl_5Na_2$.

Exists only in solution. (Miolati, l.c.)

Strontium chloroplatinate, $SrPtCl_6 + 8H_2O$.Very sol. in H_2O .**Strontium monochloroplatinate**, $PtCl(OH)_5Sr + 11H_2O$.Insol. in H_2O and org solvents. (Bellucci, C C. 1903, I. 131.)**Thallium chloroplatinate**, Tl_2PtCl_6 .Very sl sol in H_2O . Sol. in 15,585 pts. H_2O at 15°, and 1948 pts. at 100°. (Crookes.)**Thallium monochloroplatinate**, $[PtCl(OH)_5]Tl$.

Ppt. (Bellucci, Chem. Soc. 1902, 82. (2) 155.)

Thallium pentachloroplatinate, $(OH)PtCl_5Tl_2$.

(Miolati, Chem. Soc. 1900, 78 (2). 732.)

Thorium chloroplatinate, $ThCl_4, PtCl_4 + 12H_2O$.

Very deliquescent. (Cleve, Bull. Soc. (2). 21. 118.)

Tin (stannic) chloroplatinate, $SnCl_4, PtCl_4 + 12H_2O$.

(Nilson, B. 9. 1142.)

Ytterbium chloroplatinate, $2YbCl_3, PtCl_4 + 22H_2O$, and $+35H_2O$.

Ppt. (Cleve, Z. anorg. 1902, 32. 137.)

Vanadyl chloroplatinate, $(VO)PtCl_4 + 10\frac{1}{2}H_2O$.Sol. in H_2O ; cryst. from $PtCl_4 + Aq$. (Brauner, M. 3. 58.)**Yttrium chloroplatinate**, $4YCl_3, 5PtCl_4 + 52H_2O$.

Very deliquescent. (Cleve.)

 $2YCl_3, 3PtCl_4 + 30H_2O$. (Nilson, B. 9. 1059.) $2YCl_3, PtCl_4 + 21H_2O$. (Nilson.)**Zinc chloroplatinate**, $ZnPtCl_6 + 6H_2O$.Deliquescent; sol. in H_2O and alcohol.**Zinc tetrachloroplatinate**, $ZnPt(OH)_2Cl_4 + 5H_2O$.Extremely sol. in H_2O and alcohol. (Miolati, Z. anorg. 1900, 22. 458.)**Zirconyl chloroplatinate**, $(ZrO)PtCl_6 + 12H_2O$. (Nilson.)**Chloroplatinooxyphosphoric**Not deliquescent. Sol. in H_2O . (Schützenberger, Bull. Soc. (2) 18. 154.)**Chloroplatinocyanhydric acid**,

See Perchloroplatinocyanhydric acid.

Potassium chloroplatinocyanide, $5K_2Pt(CN)_4$,
 $K_2Pt(CN)_4Cl_2 + 21H_2O$.

Sol. in H_2O ; insol. in alcohol.

Silver chloroplatinocyanide,

$Ag_2(PtCl_2(CN)_4)_2$.

Ppt. (Miolati, C. C. 1901, I. 500.)

Chloroplatinophosphoric acid,

$Cl_2PtP(OH)_3$.

Very deliquescent, and sol. in H_2O .
(Schutzenberger, Bull. Soc. (2) 17. 493.)

Lead chloroplatinophosphate, $Pb_3(Cl_2PtPO_3)_2$
 $+ 8H_2O$.

Ppt.

$Pb_3(Cl_2PtPO_3)_2$, $2PbO + 4H_2O$. Ppt.
(Schutzenberger, Bull. Soc. (2) 17. 494.)

Silver chloroplatinophosphate, Ag_2HPO_3 ,
 $PtCl_2$.

Ppt. (Schutzenberger, Bull. Soc. (2) 17.
494.)

Chloroplatinodiphosphoric acid, $PtCl_2$,
 $P_2(OH)_6$.

Very deliquescent, and easily sol. in H_2O .
(Schutzenberger, Bull. Soc. (2) 18. 153.)

Chloroplatinopyrophosphoric acid,

Less deliquescent than chloroplatinodiphosphoric acid.

Chloroplatinous acid, H_2PtCl_4 .

Known only in solution.

Aluminum chloroplatinite, $AlPtCl_3 + 10\frac{1}{2}H_2O$.

Very deliquescent; sol. in H_2O . (Nilson,
J. pr. (2) 15. 260.)

Ammonium chloroplatinite, $(NH_4)_2PtCl_4$.

Sl. sol in cold, easily in hot H_2O . Insol.
in alcohol. (Peyrone, A. 55. 206.)

Barium chloroplatinite, $BaPtCl_4 + 3H_2O$.

Not deliquescent; sol. in H_2O . Very sl.
sol. in 93% alcohol.

Cadmium chloroplatinite ammonia, $CdPtCl_4$,
 $4NH_3$.

Insol. in H_2O or $NH_4OH + Aq$. Sol. in
 $HCl + Aq$. (Thomsen, B. 2. 668.)

Cæsium chloroplatinite, Cs_2PtCl_4 .

Sl. sol. in cold, easily in hot H_2O .

100 pts. H_2O dissolve 3.4 pts. salt at 20°

" " 6.73 " " 40°

" " 8.68 " " 60°

" " 10.92 " " 80°

" " 12.10 " " 100°.

(Godeffroy, A. 181. 176.)

Cs_2PtCl_4 . Ppt. Very sensitive to sun-
light. Decomp. by H_2O into the higher and
lower chlorides (Wohler, B. 1909, 42. 4104.)

Calcium chloroplatinite, $CaPtCl_4 + 8H_2O$.

Deliquescent; sol. in H_2O .

Cerium chloroplatinite, $CeCl_3$, $2PtCl_2 +$
 $10\frac{1}{2}H_2O$.

Deliquescent; easily sol. in H_2O . (Nilson,
B. 9. 1847.)

Chromium chloroplatinite, $Cr_2Pt_3Cl_{12} +$
 $18H_2O$.

Deliquescent

Cobalt chloroplatinite, $CoPtCl_4 + 6H_2O$.

Sl. deliquescent in moist, efflorescent in dry
air.

Copper chloroplatinite, $CuPtCl_4 + 6H_2O$.

Extremely deliquescent. (Topsøe.)

Copper chloroplatinite ammonia (cupram-
monium chloroplatinite),
 $Cu(NH_3)_4PtCl_4$.

Insol. in H_2O or $NH_4OH + Aq$; easily sol.
in $H_2SO_4 + Aq$. (Millon and Commaille, C. R.
57. 822.)

Didymium chloroplatinite, $DiCl_3$, $2PtCl_2 +$
 $10H_2O$.

Deliquescent; very sol. in H_2O . (Nilson.)
 $2DiCl_3$, $3PtCl_2 + 18H_2O$. As above. (Nil-
son.)

Erbium chloroplatinite, $ErPtCl_3 + 13\frac{1}{2}H_2O$.

Deliquescent.

$Er_2Pt_3Cl_{12} + 24H_2O$. Deliquescent in moist
air.

Glucinum chloroplatinite, $GIPtCl_4 + 5H_2O$.

Deliquescent in moist air. Sol. in H_2O in
all proportions.

Iron (ferrous) chloroplatinite, $FePtCl_4 +$
 $7H_2O$.

Deliquescent. Rather sl. sol. in cold, very
sol. in hot H_2O . (Nilson.)

Lanthanum chloroplatinite, $La_2Pt_3Cl_{12} + 18$,
and $27H_2O$.

Deliquescent.

Lead chloroplatinite, $PbPtCl_4$.

Insol. in cold H_2O .

Lithium chloroplatinite, $Li_3PtCl_4 + 6H_2O$.

Sol. in H_2O .

Magnesium chloroplatinite, $MgPtCl_4 + 6H_2O$.

Not very deliquescent; very sol. in H_2O .

Manganese chloroplatinite, $MnPtCl_4 \cdot 6H_2O$.

As the Mg salt.

Mercurous chloroplatinite.

Ppt.

Nickel chloroplatinite, $NiPtCl_4 \cdot 6H_2O$.

As the Co salt.

Potassium chloroplatinite, K_2PtCl_4 .Moderately sol. in H_2O ; insol. in alcohol.**Rubidium chloroplatinite, Rb_2PtCl_4** Sl. sol. in cold; easily in hot H_2O .**Silver chloroplatinite, Ag_2PtCl_4 .**Insol. in H_2O . $NH_4OH + Aq$ dissolves out $AgCl$. (Lang.) $AgCl$, $PtCl_2(?)$. As above. (Commaulle, Bull. Soc. (2) 6. 262.)**Silver chloroplatinite ammonia, $Ag_2PtCl_4 \cdot 4NH_3$.**

(Thomsen.)

Sodium chloroplatinite, $Na_2PtCl_4 \cdot 4H_2O$.Deliquescent; very sol. in H_2O .**Strontium chloroplatinite, $SrPtCl_4 \cdot 6H_2O$.**Deliquescent. Very sol. in H_2O .**Thallium chloroplatinite, Tl_2PtCl_4 .**Very sl. sol. even in boiling H_2O .**Thorium chloroplatinite, $Th_2Pt_2Cl_{14} \cdot 24H_2O$.**

Very deliquescent.

Yttrium chloroplatinite, $Y_2Pt_2Cl_{12} \cdot 24H_2O$.

Deliquescent.

Zinc chloroplatinite, $ZnPtCl_4 \cdot 6H_2O$.Sl. sol. in cold, more easily in hot H_2O ; insol. in alcohol.**Zinc chloroplatinite ammonia, $ZnPtCl_4 \cdot 4NH_3$.**Sl. sol. in H_2O ; easily sol. in $HCl + Aq$. Insol. in alcohol. (Thomsen, J. B. 1868. 278.)**Zirconyl chloroplatinite, $(ZrO)PtCl_4 \cdot 8H_2O$.**

(Nilson.)

Trichloroplatinous acid, $H_2Pt(OH)Cl_3$.Sol. in H_2O . (Miolati, Z. anorg. 1902, 33. 265.) $+H_2O$. (Nilson, J. pr. (2) 15. 260.)**Lead trichloroplatinite, $PbPt(OH)Cl_3$.**

Ppt. (Miolati.)

Silver trichloroplatinite, $Ag_2Pt(OH)Cl_3$.

Ppt. (Miolati.)

Chloroplatosulphurous acid.**Ammonium chloroplatosulphite, acid, $NH_4PtClSO_3 \cdot H_2SO_3 \cdot 4H_2O$** Sol. in H_2O . (Birnbbaum, A. 152. 149.)**Ammonium chloroplatosulphite chloride sulphite, $NH_4PtClSO_3 \cdot (NH_4)_2SO_3 \cdot NH_4Cl$.**

Very deliquescent (Birnbbaum.)

Ammonium chloroplatosulphite sulphite, $NH_4ClPtSO_3 \cdot (NH_4)_2SO_3 \cdot 3H_2O$.Sol. in H_2O . (Birnbbaum.)**Barium chloroplatosulphite chloride ammonium chloride, $Ba_2(ClPtSO_3)_2 \cdot Ba(PtClSO_3)Cl \cdot 6NH_4Cl \cdot 3H_2O$.**Sol. in H_2O . (Birnbbaum.)**Potassium chloroplatosulphite ammonium chloride, $KPtClSO_3 \cdot 2NH_4Cl$.**

Very deliquescent. (Birnbbaum, A. 152. 142.)

Potassium chloroplatosulphite chloride, $KPtClSO_3 \cdot 2KCl$.Deliquescent; sol. in H_2O . (Birnbbaum, A. 152. 145.)**Potassium chloroplatosulphite ammonium potassium sulphite, $KPtClSO_3 \cdot (NH_4)KSO_3 \cdot 3H_2O$.**

Very deliquescent. (Birnbbaum, A. 159. 120.)

Sodium chloroplatosulphite ammonium chloride, $NaPtClSO_3 \cdot 2NH_4Cl$.

Very deliquescent. (Birnbbaum, A. 159. 117.)

Chloroplumbic acid, H_2PbCl_3 .

Decomp. in solution on standing. (Gutbier, J. pr. 1914, (2) 90. 497.)

Ammonium chloroplumbate, $(NH_4)_2PbCl_6$.Ppt. Difficultly sol. in a small amount of H_2O . Solution decomp. slowly when cold, more rapidly when warmed.Decomp. by a large amount of H_2O . Sol. without decomp. in 20% HCl . Decomp. by dil. acids and alkalis. (Elbs, Z. Elektrochem. 1903, 9. 778.)Difficultly sol. in small amount of H_2O and solution decomp. slowly in the cold, more rapidly when warmed. Decomp. by a large amount of H_2O . (Gutbier, J. pr. 1914, (2) 90. 498.)Sol. in cold HNO_3 without decomp. (Friedrich, M. 1893, 14. 511.)Insol. in conc. $NH_4Cl + Aq$. (Nikoljukin, B. 18. 370 R.) $5NH_4Cl \cdot 2PbCl_4$. Not hygroscopic. Decomp. by H_2O with pptn. of PbO_2 . Sol. in $HCl + Aq$ and in cold $HNO_3 + Aq$ without

decomp. (Classen and Zahorski, Z. anorg. 4. 100)

Composition is $2\text{NH}_4\text{Cl}$, PbCl_4 (Friedrich, W. A. B. 102, 2b. 527.)

Cæsium chloroplumbate, Cs_2PbCl_6

Nearly absolutely insol. in conc. $\text{CsCl} + \text{Aq}$ in presence of Cl_2 . (Wells, Z. anorg. 4. 335.)

1 ccm. conc. $\text{HCl} + \text{Aq}$ containing PbCl_4 dissolves 0.00049 g. Cs_2PbCl_6 . (Wells, Z. anorg. 4. 341.)

Reacts with H_2O as the corresponding ammonium salt. (Gutbier, J. pr. 1914, (2) 90. 506.)

Potassium chloroplumbate, K_2PbCl_6

Decomp. by H_2O ; sol. in $\text{KCl} + \text{Aq}$. (Wells, Z. anorg. 4. 335.)

Readily decomp. in the air. (Gutbier, J. pr. 1914, (2) 90. 499.)

Rubidium chloroplumbate, Rb_2PbCl_6

Decomp. by H_2O ; sl. sol. in conc. $\text{RbCl} + \text{Aq}$. (Wells, Z. anorg. 4. 335.)

1 ccm. conc. $\text{HCl} + \text{Aq}$ containing PbCl_4 dissolves 0.003 g. Rb_2PbCl_6 . (Wells, Z. anorg. 4. 341.)

Reacts with H_2O as the corresponding ammonium salt. (Gutbier, J. pr. 1914, (2) 90. 499.)

Decomp. by conc. H_2SO_4 . Insol. in 96% alcohol. (Erdmann, A. 1896, 294. 76.)

Chloropurpureochromium bromide,

Somewhat more easily sol. in H_2O than the chloride. (Jørgensen, J. pr. (2) 20. 105.)

— chloride, $\text{CrCl}(\text{NH}_3)_5\text{Cl}_2$.

Difficultly sol. in cold, and decomp. by hot H_2O .

1 pt. dissolves in 154 pts. H_2O at 16° . Insol. in conc. $\text{HCl} + \text{Aq}$. More sol. in dil. $\text{H}_2\text{SO}_4 + \text{Aq}$ than in H_2O . Sol. in $\text{NH}_4\text{OH} + \text{Aq}$ without decomp. (Jørgensen, J. pr. (2) 20. 105.)

— mercuric chloride, $\text{CrCl}(\text{NH}_3)_5\text{Cl}_2$, 3HgCl_2 .

Very difficultly sol. in H_2O . (Jørgensen.)

— chloroplatinate, $\text{CrCl}(\text{NH}_3)_5(\text{PtCl}_6)$.

Extremely difficultly sol. in H_2O . (Jørgensen.)

— chromate, $\text{CrCl}(\text{NH}_3)_5(\text{CrO}_4)$.

Sl. sol. in H_2O ; sl. more sol. than chloropurpureocobalt chromate. (Jørgensen.)

— dithionate, $\text{CrCl}(\text{NH}_3)_5(\text{S}_2\text{O}_6)$.

Very sl. sol. in cold, but much more easily in hot H_2O . (Jørgensen.)

Chloropurpureochromium ferrocyanide,

Very difficultly sol. in cold H_2O (Jørgensen.)

— fluosilicate, $\text{CrCl}(\text{NH}_3)_5(\text{SiF}_6)$.

Very difficultly sol. in H_2O . Insol. in $\text{H}_2\text{SiF}_6 + \text{Aq}$ (Jørgensen, J. pr. (2) 20. 105.)

— mercuric iodide, $\text{CrCl}(\text{NH}_3)_5\text{I}_2$, 2HgI_2 .

Decomp. by H_2O ; sol. in alcohol and warm $\text{KCN} + \text{Aq}$.

$\text{CrCl}(\text{NH}_3)_5\text{I}_2$, HgI_2 . Very difficultly sol. in cold H_2O ; easily sol. in $\text{KCN} + \text{Aq}$. (Jørgensen, l.c.)

— nitrate, $\text{CrCl}(\text{NH}_3)_5(\text{NO}_3)_2$.

Sol. in 71 pts. H_2O at 17.5° . Insol. in $\text{HNO}_3 + \text{Aq}$. (Jørgensen.)

— oxalate, $\text{CrCl}(\text{NH}_3)_5\text{C}_2\text{O}_4$.

Very sl. sol. in cold H_2O . (Jørgensen, l.c.)

— sulphate, $\text{CrCl}(\text{NH}_3)_5\text{SO}_4 + 2\text{H}_2\text{O}$.

Sol. in H_2O ; precipitated by alcohol (Jørgensen.)

— sulphate, acid, $[\text{CrCl}(\text{NH}_3)_5]_2\text{SO}_4(\text{HSO}_4)_6$

Quite sol. in H_2O . (Jørgensen, J. pr. (2) 20. 185.)

— pentasulphide, $\text{CrCl}(\text{NH}_3)_5\text{S}_5$.

Very sl. sol. in cold, easily sol. in warm H_2O . Decomp. by dil. $\text{HCl} + \text{Aq}$. Insol. in alcohol. (Jørgensen.)

Chloropurpureocobaltic bromide,

Properties resemble the chloride very closely. Sol. in 214 pts. H_2O at 14.3° (Jørgensen, J. pr. (2) 18. 205.)

— mercuric bromide, $4\text{CoCl}(\text{NH}_3)_5\text{Br}_2$, 9HgBr_2 .

Ppt. (J.)

— bromoplatinate, $\text{CoCl}(\text{NH}_3)_5\text{Br}_2$, PtBr_4 .

Very sl. sol. in H_2O . (J.)

— carbonate, $\text{CoCl}(\text{NH}_3)_5\text{CO}_3 + 4\frac{1}{2}\text{H}_2\text{O}$.

Efflorescent; very easily sol. in H_2O . (J.)

— chloride, $\text{CoCl}(\text{NH}_3)_5\text{Cl}_2$.

Very sl. sol. in cold, more easily in hot H_2O . Sol. in 244 pts. H_2O at 15.5° . (Claudet, Phil. Mag. J. (4) 2. 253.) In 287 pts. H_2O at 10.2° and 255 pts. at 11.5° . (Rose, Pogg. 20. 152.) 100 pts. H_2O dissolve 0.232 pt. CoCl_2 , 5NH_3 , at 0° , and 1.031 pts. at 46.6° . (Kurnakoff, J. Russ. Soc. 24. 629.)

Sl. decomp. by cold, completely by boiling H_2O ; decomp. prevented by a little HCl . Pptd. from aqueous solution by alcohol, HCl ,

or sat. KCl or NaCl + Aq; not decomp. by boiling HCl + Aq. (Claudet, *l.c.*) Nearly insol. in cold, but sol. in hot H₂O, to which a few drops of HCl have been added. Less sol. in dil HCl + Aq than luteocobaltic chloride. (Rogowski, A. ch. (3) 41. 447.)

Insol. in alcohol. (Gibbs and Genth.)

Chloropurpureocobaltic antimony chloride,
2CoCl(NH₃)₅Cl₂, SbCl₃.

Ppt. Decomp. by H₂O. (Gibbs.)

— **bismuth chloride.**

Insol. in conc HCl. Easily decomp. by H₂O. (Gibbs.)

— **mercuric chloride,** CoCl(NH₃)₅Cl₂, 3HgCl₂.

Insol. in cold, less sol. in hot H₂O than chloropurpureocobaltic chloride. Insol. in cold fuming HCl + Aq; sl. sol. in hot HCl + Aq, separating on cooling; sl. sol. in hot aqua regia; moderately sol. in hot HNO₃ + Aq; partly sol. in cold conc. H₂SO₄, wholly on warming. Easily sol. in warm H₂C₂O₄ + Aq. Insol. in HgCl₂ + Aq.

Moderately sol. in NH₄OH + Aq or (NH₄)₂CO₃ + Aq. (Carstanjen.)

CoCl(NH₃)₅Cl₂, 2HgCl₂. Sl. sol. in cold, but much more easily in hot H₂O. (Gibbs, Proc. Am. Acad. 10. 33.)

— **chloropalladite,** CoCl(NH₃)₅Cl₂, PdCl₂.

Sl. sol. in cold, moderately sol. in hot H₂O. (Carstanjen.)

— **chloroplatinate,** CoCl(NH₃)₅Cl₂, PtCl₄.

Nearly insol. in cold. Very sl. sol. in hot H₂O. (Gibbs and Genth, Sill. Am. J. (2) 23. 319.)

— **chromate,** CoCl(NH₃)₅CrO₄.

Very sl. sol. in H₂O. (J.)

— **dichromate,** CoCl(NH₃)₅Cr₂O₇.

Much more easily sol. in H₂O than the neutral salt. (J.)

— **dithionate,** CoCl(NH₃)₅S₂O₆.

Very sl. sol. in cold, more easily in hot H₂O. (J.)

— **manganic fluoride.**

Ppt. Sl. sol. in dil. HF + Aq. (Christensen, J. pr. (2) 35. 161.)

— **fluosilicate,** CoCl(NH₃)₅SiF₆.

Very sl. sol. in HF + Aq.

— **iodide,** CoCl(NH₃)₅I₂.

Much more sol. in H₂O than bromide or chloride. Sol. in 54.5 pts. H₂O at 15.6°, and 50 pts. at 19.3°. (J.)

Chloropurpureocobaltic mercuric iodide,
CoCl(NH₃)₅I₂, 2HgI₂.

Sl. sol. in H₂O. (J.)

CoCl(NH₃)₅I₂, HgI₂. Very sl. sol. in cold H₂O. (J.)

— **nitrate,** CoCl(NH₃)₅(NO₃)₂.

Sol. in 80 pts. H₂O at 15°. Rather easily sol. in hot H₂O. (Jorgensen, J. pr. (2) 18. 209)

— **oxalate,** CoCl(NH₃)₅C₂O₄.

Sl. sol. in H₂O. (J.)

— **pyrophosphate,** CoCl(NH₃)₅(H₂P₂O₇).

Sl. and very slowly sol. in cold, much more easily in warm H₂O. (J.)

[CoCl(NH₃)₅]₂P₂O₇ + xH₂O. Quite easily sol. in H₂O.

— **diphosphopentamolybdate,**

[CoCl(NH₃)₅]₂(5MoO₃, 2HPO₄).

Ppt. Nearly insol. in pure H₂O; more sol. in dil. H₂SO₄ + Aq without decomp. (J.)

[CoCl(NH₃)₅]₂(5MoO₃, 2NH₄PO₄). Ppt. As above.

— **sulphate,** CoCl(NH₃)₅SO₄.

Anhydrous. Slowly sol. in 128–131.9 pts. H₂O at 16°.

+ 2H₂O. Sol. in 133.4 pts. H₂O at 17.3°. Rather easily sol. in hot H₂O, and much more rapidly than the anhydrous salt. (J.)

[CoCl(NH₃)₅]₂SO₄(SO₄H)₆. Decomp. by H₂O into neutral sulphate. Sol. in H₂SO₄.

— **tartrate,** CoCl(NH₃)₅(C₄H₅O₆)₂ + 2½H₂O.

Moderately sol. in H₂O; insol. in alcohol.

— **thiosulphate,** CoCl(NH₃)₅S₂O₃.

Nearly insol. in cold H₂O; very sl. sol. in boiling H₂O with partial decomp. (J.)

Chloropurpureoiridium comps.

See Iridopentamine comps.

Chloropurpureorhodium carbonate,

CiRh(NH₃)₅CO₃ + H₂O.

Easily sol. in H₂O. (Jorgensen.)

— **chloride,** CiRh(NH₃)₅Cl₂.

Sol. in 179 pts. H₂O at 17°, and more easily in hot H₂O. Sol. in conc. H₂SO₄ or boiling NaOH + Aq without decomp. Very sl. sol. in cold dil. HCl + Aq (1 : 1). Sl. sol. in hot HCl + Aq. Insol. in alcohol. (Jorgensen, J. pr. (2) 27. 433; 34. 394.)

— **rhodium chloride,**

3CiRh(NH₃)₅Cl₂, 2RhCl₃.

Ppt. (Jorgensen, Z. anorg. 5. 75.)

Chloropurpleorhodium chloroplatinate,
 $\text{ClRh}(\text{NH}_3)_5\text{PtCl}_6$.Insol. in cold H_2O . (J.)— **fluosilicate**, $\text{ClRh}(\text{NH}_3)_5\text{SiF}_6$.Very sl. sol. in cold H_2O . Sol. in $\text{NaOH} + \text{Aq}$ as roseo salt. (J.)— **hydroxide**, $\text{ClRh}(\text{NH}_3)_5(\text{OH})_2$.

Known only in solution. (J.)

— **nitrate**, $\text{ClRh}(\text{NH}_3)_5(\text{NO}_3)_2$.Sl. sol. in cold H_2O , but more easily than the chloride. Sol. in boiling $\text{NaOH} + \text{Aq}$ as roseo salt. (J.)— **sulphate**, $\text{ClRh}(\text{NH}_3)_5\text{SO}_4 + 2\text{H}_2\text{O}$.Sl. sol. in cold, more easily in hot H_2O . (J.)
 $4\text{ClRh}(\text{NH}_3)_5\text{SO}_4, 3\text{H}_2\text{SO}_4$. Sl. sol. in cold, more easily in hot H_2O . (J.)**Chlororhodous acid.****Ammonium chlororhodite**, $(\text{NH}_4)_2\text{RhCl}_5 + \text{H}_2\text{O}$.

(Gutbier, B. 1908, 41. 213.)

Sol. in H_2O ; insol. in alcohol. (Wollaston.)
Not obtainable. (Leidié, A. ch. (6) 17. 275.) $(\text{NH}_4)_2\text{RhCl}_5 + 1\frac{1}{2}\text{H}_2\text{O}$. Sol. in H_2O , but less easily than Na salt; insol. in alcohol. Sol. in dil. $\text{NH}_4\text{Cl} + \text{Aq}$. (Claus, J. B. 1855. 423.) (Gutbier, *l. c.*)**Ammonium chlororhodite nitrate**,
 $(\text{NH}_4)_2\text{Rh}_2\text{Cl}_6, 2\text{NH}_4\text{NO}_3$.Very sol. in H_2O . Decomp. by boiling with H_2O . Sl. sol. in $\text{HNO}_3 + \text{Aq}$. (Leidié, C. R. 107. 234.)**Barium chlororhodite**, $\text{Ba}_3(\text{RhCl}_6)_2$.

Resembles the Na salt. (Bunsen, A. 146. 276.)

Cæsium chlororhodite, $\text{Cs}_2\text{RhCl}_5 + \text{H}_2\text{O}$.Difficulty sol. in H_2O . (Gutbier, B. 1908, 41. 214.)**Lead chlororhodite**, $\text{Pb}_3(\text{RhCl}_6)_2$.Ppt. Insol. in H_2O . (Claus.) Not obtainable. (Leidié.)**Mercurous chlororhodite**, Hg_3RhCl_6 .Ppt. Insol. in H_2O . (Claus.) Not obtainable. (Leidié.)**Potassium chlororhodite**, $\text{K}_2\text{RhCl}_5 + \text{H}_2\text{O}$.Not efflorescent. Sl. sol. in H_2O . Sl. sol. in $\text{KCl} + \text{Aq}$. (Gibbs.) Insol. or sl. sol. in alcohol. (Berzelius.)

Salt is anhydrous. (Leidié.)

Contains $1\text{H}_2\text{O}$. (Seubert and Kobbé, B. 23. 2556.)Can be cryst. from H_2O containing a little HCl . (Gutbier, B. 1908, 41. 212.) $\text{K}_2\text{RhCl}_5 + 3\text{H}_2\text{O}$. Efflorescent. Sl. sol. in H_2O . Aqueous solution decomp. to above on standing. (Claus.)

Not obtainable. (Leidié.)

Also obtained by Seubert and Kobbé. (B. 23. 2556.)

 $+1\frac{1}{2}\text{H}_2\text{O}$. (Leidié, C. R. 111. 106.)**Rubidium chlororhodite**, $\text{Rb}_2\text{RhCl}_5 + \text{H}_2\text{O}$.Difficulty sol. in H_2O . (Gutbier, B. 1908, 41. 214.)**Silver chlororhodite**, Ag_2RhCl_6 .Ppt. Insol. in H_2O . (Claus.)

Not obtainable. (Leidié.)

Sodium chlororhodite, $\text{Na}_6\text{Rh}_2\text{Cl}_{12} + 18\text{H}_2\text{O}$.
 $\text{Na}_3\text{RhCl}_5 + 9\text{H}_2\text{O}$.Efflorescent. Sol. in 1.5 pts. H_2O . Melts in crystal H_2O at 50° . Insol. in alcohol. (Claus.) $+12\text{H}_2\text{O}$. (Gutbier, B. 1908, 41. 213.)**Chlororuthenic acid.****Ammonium chlororuthenate**, $(\text{NH}_4)_2\text{RuCl}_6$.Easily sol. in H_2O . (Claus.)Formula is $(\text{NH}_4)_2\text{Ru}(\text{NO})\text{Cl}_5$. (Joly, C. R. 107. 994.)Sol. in H_2O with decomp. Sol. in HCl . (Howe, J. Am. Chem. Soc. 1904, 26. 549.)**Ammonium aquochlororuthenate**,
 $(\text{NH}_4)_2\text{Ru}(\text{H}_2\text{O})\text{Cl}_5$.

Ppt. (Howe, J. Am. Chem. Soc. 1904, 26. 548.)

Cæsium chlororuthenate, Cs_2RuCl_6 .Sl. sol. in H_2O . Sol. in hot dil. $\text{HCl} + \text{Aq}$. (Howe, J. Am. Chem. Soc. 1901, 23. 784.)**Potassium chlororuthenate**, K_2RuCl_6 .Very sol. in H_2O . Very sl. sol. in conc. $\text{NH}_4\text{Cl} + \text{Aq}$. Insol. in 70% alcohol. (Claus.)Formula is $\text{K}_2\text{Ru}(\text{NO})\text{Cl}_5$. (Joly.)Very sl. sol. in cold H_2O . Insol. in presence of KCl .

Partially decomp. in hot aqueous solution. (Antony, Gazz. ch. it. 1899, 29. (2), 82.)

Easily sol. in H_2O with rapid decomp. Sol. in HCl . (Howe, J. Am. Chem. Soc. 1904, 26. 548.)**Potassium aquochlororuthenate**,
 $\text{K}_2\text{Ru}(\text{OH}_2)\text{Cl}_5$.Sol. in H_2O . (Howe, J. Am. Chem. Soc. 1904, 26. 547.)**Rubidium chlororuthenate**, Rb_2RuCl_6 .Sl. sol. in H_2O ; sol. in hot dil. $\text{HCl} + \text{Aq}$. (Howe, J. Am. Chem. Soc. 1901, 23. 784.)

Chlororuthenious acid.

Ammonium chlororuthenite, $(\text{NH}_4)_4\text{Ru}_2\text{Cl}_{10}$.
Sl. sol. in H_2O . Insol. in $\text{NH}_4\text{Cl} + \text{Aq}$ or alcohol. (Claus, J. pr. 80. 282.)

Cæsium chlororuthenite, $\text{Cs}_2\text{RuCl}_5 + \text{H}_2\text{O}$.
Sl. sol. in H_2O ; sol. in $\text{HCl} + \text{Aq}$. (Howe, J. Am. Chem. Soc. 1901, 23. 785.)

Potassium chlororuthenite, $\text{K}_4\text{Ru}_2\text{Cl}_{10}$
Moderately sol. in cold, more easily in hot H_2O . Decomp. easily by heating. Insol. in conc. $\text{NH}_4\text{Cl} + \text{Aq}$. Insol. in 80% alcohol.

Rubidium chlororuthenite, $\text{Rb}_2\text{RuCl}_5 + \text{H}_2\text{O}$.
Sl. sol. in H_2O ; sol. in $\text{HCl} + \text{Aq}$. (Howe, J. Am. Chem. Soc. 1901, 23. 786.)

Sodium chlororuthenite, $\text{Na}_4\text{Ru}_2\text{Cl}_{10}$.
Deliquescent. Sol. in H_2O or alcohol.

Trichlorosilicomercaptane.

See Silicon chlorohydrosulphide.

Chlorosmic acid.

Ammonium chlorosmate, $(\text{NH}_4)_2\text{OsCl}_6$.
Sl. sol. in H_2O . Insol. in alcohol and H_2O containing HCl .

Potassium chlorosmate, K_2OsCl_6 .
Properties as the NH_4 salt.

Potassium amino chlorosmate,
 $(\text{NH}_2)\text{OsCl}_5 \cdot 2\text{KCl}$.
Ppt. (Brizard, A. ch. 1900, (7) 21. 375.)

Potassium amino chlorosmate hydrogen chloride, $(\text{NH}_2)\text{OsCl}_5 \cdot 2\text{KCl} \cdot \text{HCl}$.
Ppt. (Brizard, A. ch. 1900, (7) 21. 378.)

Silver chlorosmate, Ag_2OsCl_6 .
Insol. in H_2O or $\text{HNO}_3 + \text{Aq}$. (Claus and Jacoby.)

Silver chlorosmate ammonia, $\text{Ag}_2\text{OsCl}_6 \cdot 2\text{NH}_3$.
Sol. in much H_2O . Sl. sol. in $\text{KOH} + \text{Aq}$. Easily sol. in $\text{KCN} + \text{Aq}$. (C. and J.)

Sodium chlorosmate, $\text{Na}_2\text{OsCl}_6 + 2\text{H}_2\text{O}$.
Easily sol. in H_2O or alcohol.

Chlorosmious acid.

Ammonium chlorosmite,
 $(\text{NH}_4)_4\text{Os}_2\text{Cl}_{10} + 3\text{H}_2\text{O}$.
Easily sol. in H_2O and alcohol; insol. in ether. (Claus and Jacoby, J. pr. 90. 65.)

Potassium chlorosmite, $\text{K}_4\text{Os}_2\text{Cl}_{12} + 6\text{H}_2\text{O}$.
Very easily sol. in H_2O or alcohol. Insol. in ether. (C. and J.)

Chlorosmisulphurous acid.

Potassium hydrogen chlorosmisulphite,
 $\text{OsCl}_4(\text{SO}_3)_2 \cdot \text{K}_2\text{H}_2$.
Ppt. (Rosenheim, Z. anorg. 1900, 24. 422.)

Sodium chlorosmisulphite,
 $\text{OsCl}_2(\text{SO}_3)_4 \cdot \text{Na}_6 + 10\text{H}_2\text{O}$.
Ppt. (Rosenheim, Z. anorg. 1900, 24. 420.)

Chloropyroselenious acid.

Ammonium chloropyroselenite, NH_4Cl ,
 $2\text{SeO}_2 + 2\text{H}_2\text{O}$.
Sol. in H_2O . (Muthmann and Schafer, B. 26. 1008.)

Potassium chloropyroselenite, KCl , $2\text{SeO}_2 + \text{H}_2\text{O}$.
As NH_4 salt. (M. and S.)

Rubidium chloropyroselenite, RbCl ,
 $2\text{SeO}_2 + 2\text{H}_2\text{O}$.
As NH_4 salt. (M. and S.)

Chlorostannic acid, $\text{SnO}(\text{OH})\text{Cl}$.
(Mallet, Chem. Soc. 35. 524.)
 $\text{H}_2\text{SnCl}_6 + 6\text{H}_2\text{O}$. Extremely deliquescent; sol. in H_2O . (Seubert, B. 20. 793.)

Ammonium chlorostannate, $(\text{NH}_4)_2\text{SnCl}_6$
(pink salt).
Sol. in 3 pts. H_2O at 14.5° . Solution decomp. on boiling when dilute, but not when conc. (Bolley.)

Barium chlorostannate, $\text{BaSnCl}_6 + 5\text{H}_2\text{O}$.
Sol. in H_2O . (Lewy, A. ch. (3) 16. 308.)

Cæsium chlorostannate, Cs_2SnCl_6 .
Nearly insol. in conc. $\text{HCl} + \text{Aq}$. (Sharples, Sil. Am. J. (2) 47. 178.)

Calcium chlorostannate, $\text{CaSnCl}_6 + 5\text{H}_2\text{O}$.
Very deliquescent. (Lewy, A. ch. (3) 16. 308.)

Cerium chlorostannate, $\text{CeSnCl}_7 + 9\text{H}_2\text{O}$.
Deliquescent. Sol. in H_2O . (Cleve, Bull. Soc. (2) 31. 197.)

Cobalt chlorostannate, $\text{CoSnCl}_6 + 6\text{H}_2\text{O}$.
Sol. in H_2O . (Jørgensen.)

Didymium chlorostannate, DiCl_3 , $\text{SnCl}_4 + 10\frac{1}{2}\text{H}_2\text{O}$.
Sol. in H_2O . (Cleve.)

Glucinum chlorostannate, $\text{GlSnCl}_6 + 8\text{H}_2\text{O}$.
Deliquescent. Sol. in H_2O . (Atterberg, Sv. V. A. Handl. 12. No. 4. 14.)

Lanthanum chlorostannate, $4\text{LaCl}_3 \cdot 5\text{SnCl}_4 + 45\text{H}_2\text{O}$.

Deliquescent. Sol. in H_2O . (Cleve.)

Lithium chlorostannate, $\text{Li}_2\text{SnCl}_6 \cdot 8\text{H}_2\text{O}$.

Sol. in little H_2O without decomp., but decomp. by dilution (Chassevant, A. ch. (6) 30. 42.)

Magnesium chlorostannate, $\text{MgSnCl}_6 \cdot 6\text{H}_2\text{O}$.

Very deliquescent. (Lewy.)

Manganous chlorostannate, $\text{MnSnCl}_6 \cdot 6\text{H}_2\text{O}$.

Deliquescent in moist, efflorescent in dry air. (Jorgensen.)

Nickel chlorostannate, $\text{NiSnCl}_6 \cdot 6\text{H}_2\text{O}$.

Sol. in H_2O . (Jorgensen.)

Potassium chlorostannate, K_2SnCl_6 .

Sol. in H_2O .

Sodium chlorostannate, $\text{Na}_2\text{SnCl}_6 \cdot 6\text{H}_2\text{O}$.

Easily sol. in H_2O . (Topsoe, Gm. K. Handb. 6te aufl. III. 149.)

Strontium chlorostannate, $\text{SrSnCl}_6 \cdot 8\text{H}_2\text{O}$.

Sl. deliquescent, and easily sol. in H_2O . (Topsoe.)

Yttrium chlorostannate, $\text{YCl}_3 \cdot \text{SnCl}_4 \cdot 8\text{H}_2\text{O}$.

Sol. in H_2O . (Cleve, Bull. Soc. (2) 31.197.)

Zinc chlorostannate, $\text{ZnSnCl}_6 \cdot 6\text{H}_2\text{O}$.

(Biron, C. C. 1904, II. 410.)

Chlorosulphobismuthous acid.

Cuprous chlorosulphobismuthite, $2\text{Cu}_3\text{S} \cdot \text{Bi}_2\text{S}_3 \cdot 2\text{BiSCl}$.

Stable in air and insol. in H_2O at ord. temp.

Decomp. by boiling H_2O .

Decomp. by mineral acids with evolution of H_2S . (Ducatte, C. R. 1902, 134. 1212.)

Lead chlorosulphobismuthite, $\text{PbS} \cdot \text{Bi}_2\text{S}_3 \cdot 2\text{BiSCl}$.

Stable in the air. Insol. in H_2O ; decomp. by boiling H_2O ; sol. in dil. acids with decomp. and evolution of H_2S . (Ducatte.)

Chlorosulphonic acid, HClSO_3 .

See Sulphuryl hydroxyl chloride.

Chloropyrosulphonic acid.

Ammonium chloropyrosulphonate, $\text{ClS}_2\text{O}_6\text{NH}_4$.

Fumes in the air.

Decomp. by H_2O and alcohol. (Traube, B. 1913, 46. 2519.)

Sodium chloropyrosulphonate, $\text{ClS}_2\text{O}_6\text{Na}$.

Fumes in the air.

Decomp. by H_2O and alcohol (Traube.)

Chlorosulphuric acid, HSO_3Cl .

See Sulphuryl hydroxyl chloride.

SO_2Cl_2 . See Sulphuryl chloride.

Aluminum chlorosulphate, $\text{Al}(\text{SO}_4)\text{Cl} \cdot 6\text{H}_2\text{O}$.

Very sol. in H_2O . Nearly insol. in abs. alcohol. (Recoura, Bull. Soc. 1902, (3) 27. 1155.)

Chromium chlorosulphate, $\text{CrClSO}_4 \cdot 5\text{H}_2\text{O}$.

Green. (Weinland, Z. anorg. 1905, 48. 253.) (Recoura, C. R. 1902, 135. 164.)

Violet. (Weinland, Z. anorg. 1905, 48. 254.)

Very sol. in H_2O . Insol. in a mixture of alcohol and acetone (Recoura, C. R. 1902, 135. 164.)

+ $8\text{H}_2\text{O}$. Two isomeric modifications:

(a) *Green needles*. Easily sol. in H_2O . (Weinland, Z. anorg. 1906, 48. 251.)

(b) *Violet plates*. Easily sol. in H_2O . (Weinland.)

Chlorosulphurous acid.

Ammonium palladious trichlorosulphite, $(\text{NH}_4)_3\text{PdCl}_2\text{SO}_3 \cdot \text{H}_2\text{O}$.

Easily sol. in H_2O . (Rosenheim, Z. anorg. 1900, 23. 30.)

Chlorotelluric acid.

Ammonium chlorotellurate, $(\text{NH}_4)_2\text{TeCl}_6$.

Sol. without decomp. in a small amt. of H_2O , but decomp. by much H_2O or alcohol

Cæsium chlorotellurate, Cs_2TeCl_6 .

Decomp. by H_2O . Sol. in dil. $\text{HCl} + \text{Aq}$.

100 pts. $\text{HCl} + \text{Aq}$ (sp. gr. 1.2) dissolve 0.05 pt. at 22° .

100 pts. $\text{HCl} + \text{Aq}$ (sp. gr. 1.05) dissolve 0.78 pt. at 22° .

Insol. in alcohol. (Wheeler, Sill. Am. J. 145. 267.)

Potassium chlorotellurate, K_2TeCl_6 .

Deliquescent; decomp. by H_2O and absolute alcohol. (Berzelius.)

The most sol. in H_2O of the chloro- or bromo-tellurates. Easily sol. in dil. $\text{HCl} + \text{Aq}$; conc. $\text{HCl} + \text{Aq}$ ppts. KCl . (Wheeler, Sill. Am. J. 145. 267.)

Rubidium chlorotellurate, Rb_2TeCl_6 .

Decomp. by H_2O . Much more sol. in dil. $\text{HCl} + \text{Aq}$ than Cs_2TeCl_6 .

100 pts. $\text{HCl} + \text{Aq}$ (sp. gr. 1.2) dissolve 0.34 pt. at 22° .

100 pts. $\text{HCl} + \text{Aq}$ (sp. gr. 1.05) dissolve, 13.99 pts. at 22° .

Sl. sol. in alcohol. (Wheeler.)

Chlorotetramine chromium bromide,
 $\text{ClCr}(\text{NH}_3)_4(\text{OH}_2)\text{Br}_2$.

Very easily sol. in H_2O . (Cleve, 1861, Jørgensen, J. pr. (2) 42. 210.)

— **chloride,** $\text{ClCr}(\text{NH}_3)_4(\text{OH}_2)\text{Cl}_2$.

Sol. in H_2O , but decomp. by boiling. Sol. in $\text{HCl} + \text{Aq.}$ and this solution may be boiled without decomp. (Cleve.)

Sol. in 15.7 pts H_2O at 15° . (Jørgensen, J. pr. 42. 208.)

— **chromate,** $\text{ClCr}(\text{NH}_3)_4(\text{OH}_2)\text{CrO}_4$.
 Precipitate (Cleve)

— **fluosilicate,** $\text{ClCr}(\text{NH}_3)_4(\text{OH}_2)\text{SiF}_6$.

Sl. sol. in H_2O . (Jørgensen, J. pr. (2) 42. 218.)

— **hydroxide,** $\text{ClCr}(\text{NH}_3)_4(\text{OH})_2$.

Known only in solution. (Cleve.)

— **iodide,** $\text{ClCr}(\text{NH}_3)_4(\text{OH}_2)\text{I}_2$.

Easily sol. in H_2O . (Cleve.)

— **nitrate,** $\text{ClCr}(\text{NH}_3)_4(\text{OH}_2)(\text{NO}_3)_2$.

Very easily sol. in H_2O . (Cleve); (Jørgensen, J. pr. (2) 42. 209.)

— **sulphate,** $\text{ClCr}(\text{NH}_3)_4(\text{OH}_2)\text{SO}_4$.

Very difficulty sol. in cold, more easily in hot H_2O . (Cleve)

Chlorotetramine cobaltic bromide,
 $\text{ClCo}(\text{NH}_3)_4(\text{OH}_2)\text{Br}_2$.

More sol. in H_2O than chloride. Nearly insol. in $\text{HBr} + \text{Aq.}$ (1:1). (Jørgensen, J. pr. (2) 42. 215.)

— **chloride,** $\text{ClCo}(\text{NH}_3)_4(\text{OH}_2)\text{Cl}_2$.

Sol. in about 40 pts. H_2O , and is identical with octamine cobaltic purpureochloride of Vortmann. (Jørgensen, J. pr. (2) 42. 211.)

— **chloroplatinate,** $\text{ClCo}(\text{NH}_3)_4(\text{OH}_2)\text{PtCl}_5 + 2\text{H}_2\text{O}$.

Sl. sol. in H_2O . (Jørgensen.)

— **chromate,** $\text{ClCo}(\text{NH}_3)_4(\text{OH}_2)\text{CrO}_4$.

Easily sol. in cold H_2O . (Jørgensen, J. pr. (2) 42. 216.)

— **fluosilicate,** $\text{ClCo}(\text{NH}_3)_4(\text{OH}_2)\text{SiF}_6$.

Sl. sol. in H_2O . Nearly insol. in $\text{H}_2\text{SiF}_6 + \text{Aq.}$ (Jørgensen, J. pr. (2) 42. 219.)

— **sulphate,** $\text{ClCo}(\text{NH}_3)_4(\text{OH}_2)\text{SO}_4$.

Sol. in H_2O . (Jørgensen, J. pr. (2) 42. 214.)

Chlorotitanic acid, $\text{TiCl}_4 \cdot 2\text{HCl} = \text{H}_2\text{TiCl}_6$.

Known only in solution. (Kowalewsky, Z. anorg. 1900, 25. 192.)

Chlorous acid, HClO_2 .

Known only in aqueous solution. 100 g. H_2O at 8.5° and 753 mm. pressure dissolve ± 7 g. Cl_2O_2 . Hydrate with 50.07–67.43% H_2O , perhaps $\text{HClO}_2 + \text{H}_2\text{O}$, separates out at 0° . (Brandan, A. 161. 340)

Pure HClO_2 is not known even in solution. (Garzarolli-Thurnlakh, A. 209. 184.)

Chlorites.

All chlorites are easily sol. in H_2O and alcohol, with gradual decomp.

Ammonium chlorite.

Known only in aqueous solution, which decomposes on evaporation or long standing.

Barium chlorite, $\text{Ba}(\text{ClO}_2)_2$.

Deliquescent; easily sol. in H_2O . Solution decomp. on evaporation. Easily sol. in alcohol. (Millon, A. ch. (3) 7. 298.)

Lead chlorite, $\text{Pb}(\text{ClO}_2)_2$.

Nearly insol. in cold H_2O . and only sl. sol. in hot H_2O . Sol. in $\text{KOH} + \text{Aq.}$ (Garzarolli and Hayn, A. 209. 203.)

Lead chlorite chloride, $6\text{Pb}(\text{ClO}_2)_2 \cdot 4\text{PbCl}_2$, PbO .

Rather difficulty sol. in H_2O . (Schiel, A. 109. 317.)

Potassium chlorite, KClO_2 .

Very deliquescent and sol. in H_2O . Sol. in alcohol of 35° . (Millon, A. ch. (3) 7. 323.) Sol. in $\text{HClO}_2 + \text{Aq.}$

Silver chlorite, AgClO_2 .

Sol. in hot, less in cold H_2O . Easily decomp. by heating above 100° . Decomp. by weakest acids. (Millon, A. ch. (3) 7. 329.)

Sodium chlorite, NaClO_2 .

Very deliquescent, and sol. in H_2O .

Strontium chlorite, $\text{Sr}(\text{ClO}_2)_2$.

Deliquescent and sol. in H_2O . Decomp. by slow evaporation. (Millon, A. ch. (3) 7. 327.)

Chloroxyfulminoplatinum,

Insol. in H_2O ; sol. in $\text{HCl} + \text{Aq.}$ (v. Meyer, J. pr. (2) 18. 305.)

Chloruranic acid, $\text{H}_2\text{UO}_2\text{Cl} + 2\text{H}_2\text{O}$.

Sol. in H_2O ; sl. sol. in alcohol. (Mylius, B. 1901, 34. 2776.)

Chromacichloride, CrO_2Cl_2 .

See Chromyl chloride.

Chromatiodic acid.

See Chromiodic acid.

Chromic acid, H_2CrO_4

Very sol. in H_2O (Moissan, C. R. 98. 1851.)

Does not exist except in solution. (Field, Chem Soc. 61. 405.)

The composition of the hydrates formed by H_2CrO_4 at different dilutions is calculated from determinations of the lowering of the fr-pt. produced by H_2CrO_4 and of the conductivity and sp. gr. of $\text{H}_2\text{CrO}_4 + \text{Aq.}$ (Jones, Am. Ch. J. 1905, 34. 333.)

See also **Chromium trioxide.**

Chromates.

Chromates of the alkali metals and of Ca, Mg, and Sr are sol. in H_2C ; the others are generally insol. or sl. sol. in H_2O , but sol. in $\text{HNO}_3 + \text{Aq.}$

Aluminum chromate, basic, $\text{Al}_2\text{O}_3, \text{CrO}_3 + 7\text{H}_2\text{O}$.

Easily sol. in $\text{NH}_4\text{OH} + \text{Aq.}$ alum, or acetic acid + Aq. Insol. in $\text{NH}_4\text{Cl} + \text{Aq.}$ (Farrie, Chem. Soc. 4. 300.)

Insol. as such as H_2O , but easily decomp. into H_2CrO_4 and a basic insol. comp. Sol. in alkaline solutions and acids. Decomp. by many salts. (Eliot and Storer, Proc. Am. Acad. 5. 214.)

Aluminum sodium chromate silicate, $4\text{Al}_2\text{O}_3, 5\text{Na}_2\text{O}, \text{CrO}_3, 7\text{SiO}_2$.

(Weyberg, C. B. Miner, 1904. 727.)

Ammonium chromate, basic, $5(\text{NH}_4)_2\text{O}, 4\text{CrO}_3(?)$.

Easily sol. in cold H_2O . (Pohl, W. A. B. 6. 592.)

Ammonium chromate, $(\text{NH}_4)_2\text{CrO}_4$.

Very sol. in H_2O ; pptd. from aqueous solution by alcohol. (Malaguti and Sarzeau.)

100 g. H_2O dissolve 40.46 g. at 30° . (Schreinemakers, Chem. Weekbl. 1905, 1. 395.)

Sol. in H_2O without decomp. (Schreinemakers, C. C. 1905, II 1067.)

Sp. gr. of $(\text{NH}_4)_2\text{CrO}_4 + \text{Aq}$ at $t^\circ/4^\circ$.

t°	13°	13.7°	19.6°
% $(\text{NH}_4)_2\text{CrO}_4$	10.52	19.75	28.04
Sp. gr.	1.0633	1.1197	1.1727

(Slotte, W. Ann. 1881, 14. 18.)

Sl. sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 826.)

Difficulty sol. in acetone. (Naumann, B. 1904, 37. 4328.)

Ammonium dichromate, $(\text{NH}_4)_2\text{Cr}_2\text{O}_7$.

Less sol. in H_2O than $(\text{NH}_4)_2\text{CrO}_4$. (Moser.)

100 g. H_2O dissolve 47.17g at 30° .

(Schreinemakers, Chem. Weekbl. 1905, 1. 395.)

Sp. gr. of $(\text{NH}_4)_2\text{Cr}_2\text{O}_7 + \text{Aq}$ at $t^\circ/4^\circ$.

t°	12°	10.5°	12°
% $(\text{NH}_4)_2\text{Cr}_2\text{O}_7$	6.85	13.00	19.93
Sp. gr.	1.0393	1.0782	1.1258

(Slotte, W. Ann. 1881, 14. 18.)

Sol. in alcohol (Ranitzer, Zeit. angew. ch. 1913, 26. 456.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Insol. in acetone. (Naumann, B. 1904, 37. 4328.)

Ammonium trichromate, $(\text{NH}_4)_2\text{Cr}_3\text{O}_{10}$.

Not deliquescent, but very sol. in H_2O . (Siewert.)

Decomp. by H_2O into chromic acid and dichromate. (Jager and Kruss, B. 22. 2036.)

Sol. in acetone. (Naumann, B. 1904, 37. 4328.)

Ammonium tetrachromate, $(\text{NH}_4)_2\text{Cr}_4\text{O}_{13}$.

Deliquescent. Decomp. by H_2O . (Jager and Kruss, B. 22. 2037.)

Ammonium hexachromate, $(\text{NH}_4)_2\text{Cr}_6\text{O}_{19} + 10\text{H}_2\text{O} (?)$

Very efflorescent. (Rammelsberg, Pogg. 94. 516.)

Ammonium barium chromate,

$\text{BaCrO}_4, (\text{NH}_4)_2\text{CrO}_4$.

Ppt. Decomp. by H_2O . (Gröger, Z. anorg. 1908, 58. 414.)

Ammonium cadmium chromate, $(\text{NH}_4)_2\text{O}, 4\text{CdO}, 4\text{CrO}_3 + 3\text{H}_2\text{O}$.

Ppt. Decomp. by boiling H_2O . (Gröger, M. 1904, 25. 533)

Ammonium cadmium chromate ammonia, $(\text{NH}_4)_2\text{CrO}_4, \text{CdCrO}_4, \frac{1}{2}\text{NH}_3 + 1\frac{1}{2}\text{H}_2\text{O}$.

Decomp. by H_2O . (Gröger, Z. anorg. 1908, 58. 418.)

$(\text{NH}_4)_2\text{Cd}(\text{CrO}_4)_2, 2\text{NH}_3$. Insol. in cold, decomp. by hot H_2O .

Sol. in dil. acids or in $\text{NH}_4\text{OH} + \text{Aq.}$ (Briggs, Chem. Soc. 1903, 83. 395.)

Ammonium chromous chromate(?).

$(\text{NH}_4)_2\text{CrO}_4, \text{CrCrO}_4 = (\text{NH}_4)_2\text{Cr}(\text{CrO}_4)_2$.

Difficultly sol. in H_2O . Insol. in alcohol, ether, chloroform, or glacial acetic acid. Easily sol. in conc. acids, from which it is separated on dilution. Decomp. by $\text{NaOH} + \text{Aq.}$ (Heintze, J. pr. (2) 4. 220.)

Ammonium chromyl chromate, $(3(\text{NH}_4)_2\text{O}, 2\text{CrO}_2, 3\text{CrO}_3$.

Nearly insol. in H_2O . (Pascal, C. R. 1909, 148. 1465.)

Ammonium cobaltous chromate.

Ppt. Easily decomp. (Briggs, Z. anorg. 1907, **56**, 247.)

$(\text{NH}_4)_2\text{O}$, 4CoO , $4\text{CrO}_3 + 3\text{H}_2\text{O}$. Insol. in H_2O . Sol. in cold dil. H_2SO_4 . (Groger, Z. anorg. 1906, **49**, 202.)

Ammonium cobaltous dichromate,

Sl. hygroscopic; sol. in H_2O , insol. in alcohol. (Kruss, Z. anorg. 1895, **8**, 454.)

Ammonium cobaltous chromate ammonia,

Ppt.; decomp. by H_2O . (Groger, Z. anorg. 1908, **58**, 422.)

Ammonium cupric dichromate,

Sol. in H_2O . (Kruss, Z. anorg. 1895, **8**, 455.)

Ammonium cupric chromate ammonia,

Decomp. by H_2O . (Gröger, Z. anorg. 1908, **58**, 420.)

Insol. in cold, decomp. by hot H_2O . Sol. in dil. acids or in $\text{NH}_4\text{OH} + \text{Aq.}$ (Briggs, Chem. Soc. 1903, **83**, 394.)

Ammonium iron (ferric) chromate,

More easily decomp. by H_2O than K_2CrO_4 , $\text{Fe}_2(\text{CrO}_4)_3 + 4\text{H}_2\text{O}$. (Hensgen, B. **12**, 1300.)

6CrO_3 , $5\text{Fe}_2\text{O}_3$, $6(\text{NH}_4)_2\text{O}$, and 4CrO_3 , $\text{Fe}_2\text{O}_3, (\text{NH}_4)_2\text{O} + 4\text{H}_2\text{O}$. Ppts. (Lepierre, C. R. 1894, **119**, 1217.)

Ammonium lithium chromate, $\text{NH}_4\text{LiCrO}_4 + 2\text{H}_2\text{O}$.

Not deliquescent. (Rammelsberg.)

Ammonium lead chromate, $(\text{NH}_4)_2\text{CrO}_4$, PbCrO_4 .

Ppt. Decomp. by H_2O . (Gröger, Z. anorg. 1908, **58**, 424.)

Ammonium magnesium chromate,

Much more sol. in H_2O than the corresponding sulphate. (v. Hauer.)

Sol. in H_2O . (Gröger, Z. anorg. 1908, **58**, 416.)

Ammonium manganous chromate,

Sol. in H_2O . (Hensgen, R. t. c. **3**, 433.)

Ammonium nickel chromate, $(\text{NH}_4)_2\text{CrO}_4$, $\text{NiCrO}_4 + 6\text{H}_2\text{O}$.

Sol. in H_2O . (Gröger, Z. anorg. 1906, **51**, 353.)

Can be cryst. from H_2O under 40° (Briggs, Chem. Soc. 1903, **83**, 392.)

Ammonium nickel chromate ammonia,

Decomp. by H_2O . (Gröger, Z. anorg. 1906, **51**, 354.)

$(\text{NH}_4)_2\text{Ni}(\text{CrO}_4)_2$, 2NH_3 . Insol. in cold H_2O . Decomp. by hot H_2O . Sol. in dil. acids or in $\text{NH}_4\text{OH} + \text{Aq.}$ (Briggs, Chem. Soc. 1903, **83**, 393.)

$+6\text{H}_2\text{O}$. (Briggs, Proc. Chem. Soc. 1902, **18**, 254.)

Ammonium potassium chromate, NH_4KCrO_4 .

Sol. in H_2O . (E. Kopp, C. N. **11**, 16.)

$+ \text{H}_2\text{O}$. (Étard, C. R. **85**, 443.)

$2(\text{NH}_4)_2\text{CrO}_4$, $3\text{K}_2\text{CrO}_4$. Very sol. in H_2O . (Zehenter, M. 1897, **18**, 51.)

Ammonium silver chromate, $(\text{NH}_4)_2\text{CrO}_4$, $3\text{Ag}_2\text{CrO}_4$.

Decomp. by H_2O . (Gröger, Z. anorg. 1908, **58**, 423.)

Ammonium sodium chromate, $\text{NH}_4\text{NaCrO}_4 + 2\text{H}_2\text{O}$.

Very sol. in H_2O . (Zehenter, M. 1897, **18**, 54.)

Ammonium strontium chromate, $(\text{NH}_4)_2\text{CrO}_4$, SrCrO_4 .

Ppt. Decomp. by H_2O . (Gröger, Z. anorg. 1908, **58**, 415.)

Ammonium uranyl chromate, $(\text{NH}_4)_2\text{CrO}_4$, $2(\text{UO}_2)\text{CrO}_4 + 6\text{H}_2\text{O}$.

Decomp. by boiling with H_2O . Sol. in acidulated H_2O . (Formánek, A. **257**, 106.) $+3\text{H}_2\text{O}$. (Formánek.)

Ammonium zinc chromate, $(\text{NH}_4)_2\text{O}$, 2ZnO , $2\text{CrO}_3 + \text{H}_2\text{O}$.

Decomp. by hot H_2O . (Gröger, M. 1904, **25**, 520.)

Ammonium zinc chromate ammonia,

Insol. in cold, decomp. by hot H_2O . Sol. in dil. acids or in $\text{NH}_4\text{OH} + \text{Aq.}$ (Briggs, Chem. Soc. 1903, **83**, 394.)

4ZnCrO_4 , $2(\text{NH}_4)_2\text{CrO}_4$, $3\text{NH}_3 + 3\text{H}_2\text{O}$.

Ppt. Decomp. by H_2O . (Gröger, Z. anorg. 1908, **58**, 416.)

Ammonium dichromate chloride mercuric chloride, $(\text{NH}_4)_2\text{Cr}_2\text{O}_7, 2\text{NH}_4\text{Cl}, 4\text{HgCl}_2 + 2\text{H}_2\text{O}$.

Ppt. Sol. in cold, more sol. in warm H_2O . (Strömholm, Z. anorg. 1912, **75**, 280.)

Ammonium dichromate chloride mercuric cyanide, $(\text{NH}_4)_2\text{Cr}_2\text{O}_7$, $4\text{NH}_4\text{Cl}$, $6\text{Hg}(\text{CN})_2 + 4\text{H}_2\text{O}$.

(Strömholm, Z. anorg. 1913, **80**, 157.)

Ammonium chromate chromyl fluoride,
(NH_4)₂CrO₄, CrO₂F₂.Sol. in H₂O. (Varenne, C. R. 91. 989)**Ammonium chromate iodate.**

See Chromoiodate, ammonium.

Ammonium dichromate mercuric chloride,
(NH_4)₂Cr₂O₇, HgCl₂.Cannot be recryst. from H₂O or HgCl₂+Aq, but from (NH_4)₂Cr₂O₇+Aq. (Jager and Kruss, B. 22. 2044.)+H₂O. (Richmond and Abel, Chem. Soc. Q. J. 3. 199.)Cannot be made to crystallize with H₂O. (Jager and Kruss.)3(NH_4)₂Cr₂O₇, HgCl₂. Decomp. by H₂O. (J. and K.)4(NH_4)₂Cr₂O₇, HgCl₂. Decomp. by H₂O. (J. and K.)(NH₄)₂Cr₂O₇, 3HgCl₂. (J. and K.)(NH₄)₂Cr₂O₇, 4HgCl₂ (J. and K.)**Ammonium chromate phosphate.**

See Phosphochromate, ammonium.

Ammonium chromate tellurate.

See Chromotellurate, ammonium.

Barium chromate, BaCrO₄Extremely sl. sol. in H₂O.Calculated from electrical conductivity of BaCrO₄+Aq, 1 l. H₂O dissolves 3.8 mg. BaCrO₄ at 18°. (Kohlrausch and Rose, Z. phys. Ch. 12. 241.)When not ignited, BaCrO₄ is sol. in 86,957 pts. H₂O; 22,988 pts. NH₄Cl+Aq (0.5% NH₄Cl); 3670 pts. HC₂H₃O₂+Aq (5% HC₂H₃O₂); 1986 pts. HC₂H₃O₂+Aq (10% HC₂H₃O₂); 1813 pts. H₂CrO₄+Aq (10% Cr₂). When ignited, 160,000 pts. H₂O are necessary for solution. (Schweitzer, by Fresenius, Z. anal. 29. 414.)Sol. in 23,000 pts. boiling H₂O. (Mescherski, Z. anal. 21. 399.)3.5 mg. BaCrO₄ are dissolved in 1 l. of sat. solution at 18° (Kohlrausch, Z. phys. Ch. 1908, 64. 168.)Easily sol. in HNO₃, HCl, or chromic acid + Aq, from which it is precipitated by NH₄OH, or by dilution with H₂O. (Bahr.)Insol. in K₂Cr₂O₇+Aq. (Schweitzer.)Sol. in 49,381 pts. NH₄C₂H₃O₂+Aq (0.75 % salt) at 15°; in 23,355 pts. NH₄C₂H₃O₂+Aq (1.5% salt) at 15°; in 45,162 pts. NH₄NO₃+Aq (0.5% salt) at 15°. (Fresenius, Z. anal. 29. 418.)

Easily sol. in alkali tartrates, or citrates + Aq. (Fleischer, J. pr. (2) 5. 326.)

0.22×10⁻⁴ g. equiv. BaCrO₄ are dissolved in 1 l. of 45% alcohol at ord. temp. (Guerini, Dissert, 1912.)Insol. in acetic acid and in M₂Cr₂O₇+Aq.

Partly sol. in a mixture of the two, except

in presence of MC₂H₃O₂. (Caron and Raquet, Bull. Soc. 1906, (3) 35. 1064.)

Not completely insol. in acetic acid. (Baubigny, Bull. Soc. 1907, (4) 1. 58.)

Insol. in acetone (Naumann, B. 1904, 37. 4329.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790.)

Barium dichromate, BaCr₂O₇·2H₂O.Decomp. by H₂O with separation of BaCrO₄. Sol. in H₂CrO₄+Aq (Bahr, J. B. 1853. 358.)Sol. in cold H₂O with formation of BaCrO₄ and CrO₃.

Insol. in glacial acetic acid. (Mayer, B. 1903, 36. 1742.)

Barium calcium chromate, BaCa(CrO₄)₂

(Bourgeois Bull. Soc. Min. 1879, 2. 124.)

Barium potassium chromate, BaK₂(CrO₄)₂Decomp. by H₂O. (Groger, Z. anorg. 1907, 54. 186.)Decomp. by H₂O. Stable in K₂CrO₄+Aq, containing:

2.181 pts.	K ₂ CrO ₄	per 100 pts. H ₂ O at	11.5°
3.395 "	"	"	"
5.120 "	"	"	"
7.119 "	"	"	"
9.036 "	"	"	"
			27.5°
			50.0°
			76.0°
			100.0°

(Barre, C. R. 1914, 158. 497.)

Barium potassium trichromate,Ba₂K₂(Cr₂O₇)₃·3H₂O.

Extremely deliquescent. (Bahr.)

Bismuth chromates, basic.These comps. are insol. in H₂O even in presence of H₂CrO₄; sol. in HCl or HNO₃+Aq. (Lowe, J. pr. 67. 288.)100 pts. H₂O dissolve 0.00008 pt. "bismuth chromate"; 100 pts. acetic acid dissolve 0.00021 pt. "bismuth chromate"; 100 pts. HNO₃+Aq (sp. gr.=1.038) dissolve 0.00024 pt. "bismuth chromate"; 100 pts. KOH+Aq (sp. gr.=1.33) dissolve 0.00016 pt. "bismuth chromate." (Pearson, Phil. Mag. (4) 11. 206.)Not insol. in dil. HNO₃+Aq unless K₂CrO₄ is present. Less sol. in hot NaOH+Aq than PbCrO₄ (Storer.)

"Bismuth chromate" is insol. in acetone. (Naumann, B. 1904, 37. 4329.)

3Bi₂O₃, 2CrO₃=2(BiO)₂CrO₄, Bi₂O₃. Insol. in H₂O; sol. in HNO₃+Aq.Bi₂O₃, CrO₃=(BiO)₂CrO₄. Insol. in H₂O; easily sol. in dil. HCl+Aq, less in dil. HNO₃ or H₂SO₄+Aq. (Muir.)Bi₂O₃, 2CrO₃=(BiO)₂Cr₂O₇. Insol. in H₂O.+H₂O.5Bi₂O₃, 11CrO₃+6H₂O. (Muir, Chem. Soc. 31. 24.)

- 3Bi₂O₃, 7CrO₃.** Insol. in H₂O; easily sol. in mineral acids, especially HCl + Aq. Partly sol. in KOH + Aq.
- Bismuth chromate, acid, Bi₂O₃, 4CrO₃ + H₂O.**
 Insol. in hot or cold H₂O. Sol. in dil. HCl or HNO₃ + Aq. (Muir, Chem. Soc. 30. 17.)
- Bismuth potassium chromate, Bi₂(CrO₄)₃, K₂CrO₄.**
 Insol. in H₂O. Decomp. with hot H₂O. Bi₂O₃, K₂O, 6CrO₃ + H₂O. (Preis and Raymann, J. B. 1880. 336.)
- Bromomolybdenum chromate.**
 (Atterberg.)
- Cadmium chromate, basic, 2CdO, CrO₃ + H₂O**
 Very sl. sol in H₂O; very slowly sol. in NH₄OH + Aq with combination (Malaguti and Sarzeau, A. ch. (3) 9. 431.)
 Composition as above. (Freese, B. 2. 478.)
- Cadmium chromate, CdCrO₄**
 Insol. in H₂O; sol. in acids; decomp by heating with H₂O. (Schulz, Z. anorg. 1895, 10. 153.)
 Sol. in hot conc. CdSO₄ + Aq. (Briggs, Z. anorg. 1907, 56. 253.)
 + 2H₂O Decomp. by boiling H₂O. (Schulz, Z. anorg. 1895, 10. 153.)
- Cadmium dichromate, CdO, 2CrO₃ + H₂O.**
 Easily sol. in H₂O without decomp; hygroscopic. (Schulz, Z. anorg. 1895, 10. 152.)
 Easily sol. in H₂O but decomp on evaporation. (Gröger, Z. anorg. 1910, 66. 11.)
- Cadmium trichromate, CdCr₃O₁₉ + H₂O.**
 Deliquescent. (Gröger, Z. anorg. 1910, 66. 12.)
- Cadmium chromate ammonia, CdCrO₄, 4NH₃ + 3H₂O.**
 Efflorescent. Decomp. by H₂O. Sol. in NH₄OH + Aq; insol in alcohol and ether. (Malaguti and Sarzeau)
- Cadmium potassium chromate, CdK₂(CrO₄)₂ + 2H₂O**
 Ppt. Decomp. by H₂O. (Gröger, Z. anorg. 1907, 54. 189.)
 3CdO, K₂O, 3CrO₃ + 3H₂O. Ppt. (Preis and Raymann, Sitzungsber. böhm. Gesell. 1880.)
 4CdO, K₂O, 4CrO₃ + 3H₂O. Ppt. Slowly decomp by H₂O. (Gröger, M. 1904, 25. 533.)
- Cadmium potassium dichromate, CdCr₂O₇, K₂Cr₂O₇ + 2H₂O.**
 Sol. in H₂O; sl. hygroscopic (Kruss, Z. anorg. 1895, 8. 454.)
- Cadmium dichromate mercuric cyanide, CdCr₂O₇, 2Hg(CN)₂ + 7H₂O**
 Sol. in H₂O without decomp (Kruss, Z. anorg. 1895, 8. 460.)
- Cæsium chromate, Cs₂CrO₄.**
 (Chabrié, C. R. 1901, 132. 680)
 Aq. solution sat. at 30° contains 47%. (Schreinemakers, C. C. 1909, I. 11.)
- Cæsium dichromate, Cs₂Cr₂O₇.**
 (Chabrié, C. R. 1901, 132. 680.)
 Much more sol. in hot H₂O, than in cold. (Fraprie, Am. J. Sci. 1906, (4) 21. 309.)
 Aq. solution sat. at 30° contains 5.2%. (Schreinemakers, C. C. 1909, I. 11.)
- Cæsium trichromate, Cs₂Cr₃O₁₉.**
 Decomp by H₂O. (Schreinemakers, Chem. Weekbl. 1908, 5. 811.)
 Sol. in H₂O. (Fraprie, Am. J. Sci. 1906, (4) 21. 315.)
- Cæsium tetrachromate, Cs₂Cr₄O₁₈.**
 Sol. in H₂O with decomp. (Schreinemakers, Chem. Weekbl. 1908, 5. 811.)
- Cæsium cobaltous chromate, Cs₂Co(CrO₄)₂ + 6H₂O.**
 (Briggs, Z. anorg. 1907, 56. 248.)
- Cæsium magnesium chromate, Cs₂Mg(CrO₄)₂ + 6H₂O.**
 (Briggs, Chem. Soc. 1904, 85. 680.)
- Cæsium nickel chromate, Cs₂Ni(CrO₄)₂ + 6H₂O.**
 Sol. in cold H₂O without much change, but decomp. by warm H₂O. (Briggs, Chem. Soc. 1904, 85. 679.)
- Calcium chromate basic, Ca₂CrO₅ + 3H₂O.**
 Sol. in 230 pts. H₂O without decomp. (Mylius and Wrochem, Gm. K. 3. I, 1385.)
- Calcium chromate, CaCrO₄**
Anhydrous. Very sl. sol. in H₂O. (Sievert, J. B. 1862. 148.)
 Aq. solution sat. at 18° contains 2.3% CaCrO₄; sp. gr. = 1.023. (Mylius and Wrochem, B. 1900, 33. 3688.)
 Insol. in acetone. (Naumann, B. 1904, 37. 4329.)
 + $\frac{1}{2}$ H₂O. Aq. solution sat. at 18° contains 4.4% CaCrO₄; sp. gr. = 1.044. (Mylius and Wrochem, B. 1900, 33. 3688.)
 + H₂O. Solubility in H₂O at t°.
- | t° | 0° | 8° | 13° | 18° | 25° |
|----------------------|------|------|------|-----|-----|
| % CaCrO ₄ | 11.5 | 10.8 | 10.3 | 9.6 | 9.1 |
-
- | t° | 40° | 60° | 75° | 90° | 100° |
|----------------------|-----|-----|-----|-----|------|
| % CaCrO ₄ | 7.8 | 5.7 | 4.6 | 3.6 | 3.1 |
- (Mylius and Wrochem, Gm.-K. 3. I, 1386.)

Sp. gr. of solution containing 9.6% by wt. CaCrO_4 at $18^\circ = 1.096$. (Mylius and Wrochem, B. 1900, **33**, 3688.)
 $+2\text{H}_2\text{O}$. Sol. in 241.3 pts. H_2O at 14° . (Siewert.)
 Sol. in 3½ pts. H_2O . (Schwarz, Dingl. **198**, 159)

Solubility of two modifications in H_2O at t° .

α modification				
t°	0°	20°	30°	45°
% CaCrO_4	14.75	14.22	13.89	12.53

β modification.						
t°	0°	14°	18°	19.5°	30°	40°
% CaCrO_4	9.8	10	10.3	10.4	10.4	10.4

(Mylius and Wrochem Gm.-K. **3**, I, 1387)

α modification. Sp. gr. of the solution containing 14.3% by wt. CaCrO_4 at $18^\circ = 1.149$. (Mylius and Wrochem, B. 1900, **33**, 3688.)

β modification. Sp. gr. of the solution containing 10.3% by wt. CaCrO_4 at $18^\circ = 1.105$. (Mylius and Wrochem, B. 1900, **33**, 3688.)

Easily sol. in H_2O containing CrO_3
 Insol. in absolute alcohol
 50 cc. of alcohol (29%) dissolve 0.608 g. CaCrO_4 ; 50 cc. of alcohol (53%) dissolve 0.44 g. CaCrO_4 . (Fresenius, Z. anal. **30**, 672.)
 Sol. in acids and in dilute alcohol. (Caron and Raquet, Bull. Soc. 1906, (3) **35**, 1064.)

Calcium dichromate, $\text{CaCr}_2\text{O}_7 + 3\text{H}_2\text{O}$.

Very deliquescent (Bahr, J. pr. **60**, 60.)
 In sat. solution at 18° , 61% CaCr_2O_7 is present. (Mylius and Wrochem, Gm.-K. **3**, I, 1387.)
 Sol. in acetone. (Naumann, B. 1904, **37**, 4328.)

Calcium potassium chromate, CaCrO_4 , K_2CrO_4

(Barre, C. R. 1914, **158**, 495.)
 $+ \text{H}_2\text{O}$. Easily sol. in H_2O . (Duncan.)
 Insol. in H_2O when ignited.
 $+ 2\text{H}_2\text{O}$. Easily sol. in H_2O , even after ignition. Insol. in alcohol (Duncan, J. B. **1850**, 313.)
 Formed below 45° . (Barre, C. R. 1914, **158**, 495.)

Sol. in cold H_2O . Sl. sol. in sat. $\text{K}_2\text{CrO}_4 + \text{Aq}$. (Groger, Z. anorg. 1907, **54**, 187.)

Two modifications. Solubility of α modification is somewhat less than that of the β modification. (Wyrouboff, Bull. Soc. Min. 1891, **14**, 255.)

Solubility of two modifications in H_2O at t° .

t°	0°	15°
Solubility of α	23.06	25.06
" β	23.01	24.45

(Rakowski, C. C. **1909**, I, 133.)

4CaCrO_4 , K_2CrO_4
 5CaCrO_4 , K_2CrO_4 Sol in much H_2O . (Bahr.)

Calcium chromate potassium sulphate, CaCrO_4 , $\text{K}_2\text{SO}_4 + \text{H}_2\text{O}$.

Decomp. by H_2O . (Hannay, Chem. Soc. **32**, 399.)
 CaCrO_4 , K_2SO_4 , K_2CrO_4 As above. (H.)

Cerous chromate.

Insol. in H_2O .

Calcium strontium chromate, $\text{CaSr}(\text{CrO}_4)_2$.

(Bourgeois, Bull. Soc. Min. 1879, **2**, 123)

Ceric dichromate, CeO_2 , $2\text{CrO}_3 + 2\text{H}_2\text{O}$.

Insol. in H_2O ; sol. in acids; decomp. completely by boiling H_2O . (Bricout, C. R. 1894, **118**, 145.)

Chromic chromate, $\text{CrO}_2 = \text{Cr}_2\text{O}_3$, CrO_3 .

Insol. as such in H_2O , but decomp. thereby into CrO_3 and Cr_2O_3 ; decomp. by alkaline and many saline solutions. Easily sol. in dil. acids if recently pptd, but with difficulty if dried at a high temp. (Eliot and Storer, Proc. Am. Acad. **5**, 207.)

$\text{Cr}_2\text{O}_{12} = \text{Cr}_2\text{O}_3$, 3CrO_3 . Sol. in $\text{HCl} + \text{Aq}$. Very slowly sol. in $\text{HNO}_3 + \text{Aq}$. Slowly decomp. by H_2SO_4 or $\text{NH}_4\text{OH} + \text{Aq}$. Easily decomp. by $\text{KOH} + \text{Aq}$.

Does not exist. (Eliot and Storer, *l.c.*)
 $\text{Cr}_2\text{O}_{15} = 3\text{Cr}_2\text{O}_3$, 2CrO_3 . Easily sol. in HCl or $\text{HNO}_3 + \text{Aq}$; difficulty sol. in acetic acid. Easily sol. in $\text{KOH} + \text{Aq}$. (Traube, A. **66**, 108.)

Existence doubtful.

$\text{Cr}_2\text{O}_5 = 2\text{Cr}_2\text{O}_3$, CrO_3 . Insol. in all acids, even aqua regia; slowly attacked by a boiling conc. solution of alkali hydroxides. (Geuther and Merz, A. **118**, 62.) Cr_2O_5 , according to Wöhler.

Chromic cupric chromate, CuCr_4O_9 , $\text{Cr}_2\text{O}_3 + 12\text{H}_2\text{O}$.

Insol in H_2O and H_2SO_4 . Sol. in HCl and HNO_3 . (Rosenfeld, B. 1879, **12**, 957.)
 6CuO , Cr_2O_3 , $\text{CrO}_3 + 9\text{H}_2\text{O}$. Insol. in H_2O . Sol. in acids. (Rosenfeld, B. 1879, **12**, 958.)

Chromic potassium chromate, $\text{Cr}_2\text{H}_2(\text{CrO}_4)_2$, $\text{K}_2\text{CrO}_4(?)$.

Insol. in H_2O , alcohol, or acetic acid. Not attacked by cold $\text{HNO}_3 + \text{Aq}$; sl. oxidized when hot. Insol. in cold, easily sol. in hot H_2SO_4 . Sl. sol. in $\text{SO}_2 + \text{Aq}$. Sol. in conc. $\text{HCl} + \text{Aq}$. (Tommasi, Bull. Soc. (2) **17**, 396.)

Chromous potassium chromate,

$\text{K}_2\text{CrO}_4(\text{CrO}_2)_2 = \text{K}_2\text{Cr}(\text{CrO}_4)_2(?)$.

Sat. cold solution in H_2O contains 9% of the salt. Insol. in alcohol and ether. (Heintze, J. pr. (2) **4**, 212.)

Cobaltous chromate, basic, 3CoO , $\text{CrO}_3 + 4\text{H}_2\text{O}$

Ppt. Decomp. by H_2O . (Malaguti and Sarzeau, A. ch. (3) 9. 431.)

True formula is 2CoO , $\text{CrO}_3 + 2\text{H}_2\text{O}$. (Freese, Pogg. 140. 252.)

4CoO , $3\text{CrO}_3 + 2\text{H}_2\text{O}$.

Decomp. by H_2O . (Gröger, Z. anorg. 1906, 49. 203.)

Cobaltous chromate, CoCrO_4 .

Much more sol. in H_2O than NiCrO_4 . Easily sol. in hot dil. $\text{HNO}_3 + \text{Aq}$. (Briggs, Z. anorg. 1909, 63. 327.)

$+ 2\text{H}_2\text{O}$. Ppt. (Briggs, Z. anorg. 1909, 63. 328.)

Cobaltous dichromate, $\text{CoCr}_2\text{O}_7 + \text{H}_2\text{O}$.

Deliquescent. Very sol. in H_2O . (Briggs, Z. anorg. 1907, 56. 247.)

Cobaltous potassium chromate, basic.

K_2O , 4CoO , $4\text{CrO}_3 + 3\text{H}_2\text{O}$.

Sol. in cold dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. (Gröger, Z. anorg. 1906, 49. 199.)

Cobaltous potassium chromate, $\text{K}_2\text{Co}(\text{CrO}_4)_2 + 2\text{H}_2\text{O}$.

Decomp. by H_2O . (Gröger, Z. anorg. 1906, 49. 200.)

Cupric chromate, basic, 3CuO , $\text{CrO}_3 + 2\text{H}_2\text{O}$.

Insol. in H_2O . Easily sol. in dil. $\text{HNO}_3 + \text{Aq}$ and in $\text{NH}_4\text{OH} + \text{Aq}$. Decomp. by $\text{KOH} + \text{Aq}$. (Malaguti and Sarzeau, A. ch. (3) 9. 434.)

7CuO , $2\text{CrO}_3 + 5\text{H}_2\text{O}$. Ppt. (Rosenfeld, B. 13. 1469.)

7CuO , $\text{CrO}_3 + 5\text{H}_2\text{O}$. Ppt. (R.)

Cobaltous dichromate mercuric cyanide, CoCr_2O_7 , $2\text{Hg}(\text{CN})_2 + 7\text{H}_2\text{O}$.

Very stable. Sol. in H_2O . (Kruss, Z. anorg. 1895, 8. 458.)

Cupric chromate, CuCrO_4

Insol. in H_2O ; very sol. in chromic acid and in other acids; decomp. by boiling with H_2O . (Schulz, Z. anorg. 1895, 10. 152.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 827.)

Cupric dichromate, basic, CuCr_2O_7 , 2CuO . (Stanley, C. N. 54. 194.)

Cupric dichromate, $\text{CuCr}_2\text{O}_7 + 2\text{H}_2\text{O}$.

Deliquescent. Very easily sol. in H_2O , $\text{NH}_4\text{OH} + \text{Aq}$, and alcohol. (Dröge, A. 101. 39.)

Aqueous solution is decomp. by boiling. (Malaguti and Sarzeau, A. ch. (3) 9. 456.)

Very hygroscopic. Very sol. in H_2O without decomp. (Schulz, Z. anorg. 1895, 10. 150.)

Cupric tetrachromate, $\text{CuCl}_2\text{O}_4 + 2\text{H}_2\text{O}$.

Deliquescent. Decomp. when its solution in H_2O is concentrated. (Gröger, Z. anorg. 1910, 66. 15.)

Cupric lead chromate, $2(\text{PbCrO}_4, \text{PbO})$, $(2\text{CuCrO}_4, \text{CuO})$.

Min. *Vauquelinite*. Sol. in acids.

Cupric potassium chromate, basic,

$\text{KCu}_2(\text{OH})(\text{CrO}_4)_2 + \text{H}_2\text{O}$.

Ppt. (Gröger, M. 1903, 24. 485.)

3CuO , K_2O , $3\text{CrO}_3 + 2\text{H}_2\text{O}$. Nearly insol. in H_2O . Sol. in NH_4OH or $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. (Knop, A. 70. 52.)

Does not exist. (Rosenfeld, B. 13. 1472.)

4CuO , K_2O , $4\text{CrO}_3 + \text{H}_2\text{O}$. Decomp. by boiling H_2O . (Gerhardt.)

$+ 3\text{H}_2\text{O}$. Decomp. by boiling H_2O . (Gröger, Dissert. 1880.)

Cupric potassium chromate ammonia,

$\text{K}_2\text{Cu}(\text{CrO}_4)_2, 2\text{NH}_3$.

Very sol. in dil. $\text{NH}_3 + \text{Aq}$; decomp. by H_2O . (Briggs, Chem. Soc. 1904, 85. 672.)

Cupric chromate ammonia, $\text{CuCrO}_4, 4\text{NH}_3$.

Decomp. by H_2O . Sol. in dil. $\text{NH}_4\text{OH} + \text{Aq}$. (Parravano and Pasta, Gazz. ch. it. 1907, 37. (2), 255.)

$4\text{CuCrO}_4, 3\text{NH}_3 + 5\text{H}_2\text{O}$. Sol. in HCl and $\text{NH}_4\text{OH} + \text{Aq}$; insol. in organic solvents; easily sol. in $\text{AgNO}_3 + \text{Aq}$. (Schuyten, C. C. 1900, I 399.)

$2\text{CuCrO}_4, 7\text{NH}_3 + \text{H}_2\text{O}$. Decomp. by H_2O . Very sol. in dil. $\text{NH}_4\text{OH} + \text{Aq}$. (Briggs, Chem. Soc. 1904, 85. 673.)

3CuO , 2CrO_3 , $10\text{NH}_3 + 2\text{H}_2\text{O}$. Decomp. by H_2O ; sl. sol. or insol. in alcohol, ether, or $\text{NH}_4\text{OH} + \text{Aq}$. (Malaguti and Sarzeau.)

Decomp. by hot H_2O ; insol. in alcohol. (Böttger.)

Cupric dichromate ammonia, $\text{CuCr}_2\text{O}_7, 4\text{NH}_3 + 2\text{H}_2\text{O}$.

Decomp. by H_2O . Sol. in dil. $\text{NH}_4\text{OH} + \text{Aq}$. (Parravano and Pasta, Gazz. ch. it. 1907, 37. (2) 255.)

Cupric dichromate mercuric cyanide,

$\text{CuCr}_2\text{O}_7, \text{Hg}(\text{CN})_2 + 5\text{H}_2\text{O}$.

Not hygroscopic. Sol. in H_2O . (Kruss, Z. anorg. 1895, 8. 461.)

Didymium chromate, $\text{Di}_2(\text{CrO}_4)_3$.

Sl. sol. in H_2O , easily in dil. acids. (Friedrichs and Smith, A. 191. 353.)

$+ 7\text{H}_2\text{O}$. (Cleve.)

Didymium potassium chromate,

$\text{Di}_2(\text{CrO}_4)_3, \text{K}_2\text{CrO}_4$.

Precipitate. Decomp. by H_2O . (Cleve.)

Dysprosium chromate, $Dy_2(CrO_4)_3 \cdot 10H_2O$.

Very sl sol in H_2O . 1.0002 pts. is sol in 100 pts H_2O at 25° . (Jantsch, B. 1911, **44**, 1276.)

Glucinum chromate, basic, $GhCrO_4 \cdot 13GhO + 23H_2O$

Ppt Insol. in H_2O . (Creuzberg, Dingl. **163**, 449.)

$GhCrO_4 \cdot 6Gh(OH_2)$ Ppt Insol. in H_2O (Glassmann, B 1907, **40**, 2603.)

Glucinum chromate, $GhCrO_4 + H_2O$.

Decomp. by H_2O with separation of the basic chromate (Glassmann, B 1907, **40**, 2603.)

Gold (auric) chromate, $Au_2(CrO_4)_3 \cdot CrO_3$.

Ppt. (Orloff, Ch Z 1907, **31**, 1182.)

Indium chromate.

Ppt (Meyer.)

Indium dichromate.

Very sol. in H_2O . Known only in solution.

Iron (ferric) chromate, basic.

Decomp. by H_2O . (Maus)
 $Fe_2O_3 \cdot CrO_3$ Insol. in H_2O , but decomp. thereby, or by saline solutions, easily sol. in acids. Sol. in $H_2CrO_4 + Aq$. (Eliot and Storer, Proc Am Acad. **5**, 216.)

Iron (ferric) dichromate.

Sol in H_2O and alcohol. (Maus, Pogg. **9**, 132.)

Iron (ferric) potassium chromate, basic,

$2CrO_3 \cdot 6Fe_2O_3 \cdot 3K_2O$.

$4CrO_3 \cdot 3Fe_2O_3 \cdot 4K_2O$.

$10CrO_3 \cdot 6Fe_2O_3 \cdot 7K_2O$.

$11CrO_3 \cdot 3Fe_2O_3 \cdot 4K_2O + 9H_2O$

$9CrO_3 \cdot 2Fe_2O_3 \cdot 6K_2O + 6H_2O$.

$9CrO_3 \cdot 2Fe_2O_3 \cdot 6K_2O + 10H_2O$.

$10CrO_3 \cdot 3Fe_2O_3 \cdot 6K_2O + 5H_2O$.

$7CrO_3 \cdot 2Fe_2O_3 \cdot 2K_2O + 7H_2O$.

$4CrO_3 \cdot Fe_2O_3 \cdot K_2O + 4H_2O$.

$6CrO_3 \cdot 2Fe_2O_3 \cdot 3K_2O$.

$16CrO_3 \cdot 4Fe_2O_3 \cdot 5K_2O + 8H_2O$.

Above compounds are ppts., insol. in H_2O , alcohol and ether. (Lepierre, C. R. 1894, **119**, 1215-18.)

Iron (ferric) potassium chromate,

$Fe_2(CrO_4)_3 \cdot K_2CrO_4 + 4H_2O$.

Decomp. by much H_2O , conc. HCl , or $NH_4OH + Aq$. Not decomp. by alcohol. (Hensgen, B. **12**, 1300.)

Iron (ferric) sodium chromate, basic,

$5CrO_3 \cdot 7Fe_2O_3 \cdot 4Na_2O$.

Ppt. (Lepierre, C. R. 1894, **119**, 1217.)

Lanthanum chromate, $La_2(CrO_4)_3$.

Sl. sol in cold, more easily in hot H_2O ; easily sol in acids (Freichs and Smith, A. **191**, 355)
 $+ 8H_2O$. Ppt. (Cleve)

Lanthanum potassium chromate.

(Cleve)

Lead chromate, basic, $2PbO \cdot CrO_3$ (*chrome red*)

Insol. in H_2O , acetic acid dissolves out $\frac{1}{2}$ the PbO . Sol. in $KOH + Aq$ (Badams, Pogg **3**, 221.)

Insol. in acetone. (Naumann, B. 1904, **37**, 4329.)

$3PbO \cdot CrO_3$ (Hermann, Pogg. **28**, 162.)

$+ H_2O$. Ppt (Stromholm, Z. anorg. 1904, **38**, 443.)

Min. *Melanochroite*, *Phænicochroite*. Sol. in acids.

PbO , $PbCrO_4$. Ppt. (S)

Lead chromate, $PbCrO_4$.

Insol. in H_2O . Pptd. from $Pb(NO_3)_2$ in presence of 70,000 pts. H_2O . (Harting.)

Calculated from electrical conductivity of $PbCrO_4 + Aq$, 1 l H_2O dissolves 0.2 mg. $PbCrO_4$ at 18° . (Kohlrausch and Rose, Z. phys. Ch. **12**, 241.)

1 l. H_2O dissolves 1.2×10^{-3} g. $PbCrO_4$ at 25° . (Hevesy, Z. anorg. 1913, **82**, 328.)

Sol. in dil. $H_2SO_4 + Aq$ (Storer); sl. sol. in dil. $HNO_3 + Aq$.

Sol. in 560 pts. $HNO_3 + Aq$ of 1.12 sp. gr.; in 150 pts. $HNO_3 + Aq$ of 1.225 sp. gr.; in 130 pts. $HNO_3 + Aq$ of 1.265 sp. gr.; in 80 pts. $HNO_3 + Aq$ of 1.395 sp. gr. (Storer's Dict.)

Solubility of $PbCrO_4$ in $HNO_3 + Aq$. at 18° .

(Millimols. per l.)

0.1N	0.2N	0.3N	0.4N
0.506	0.844	1.13	1.44

(Beck and Stegmüller, l.c.)

Easily decomp. by hot $HCl + Aq$. (Fresenius.)

Solubility of $PbCrO_4$ in $HCl + Aq$.

(Millimols. per l.)

t°	0.1N	0.2N	0.3N	0.4N	0.5N	0.6N
18	0.186	0.393	0.654	1.07	1.56	2.25
25	0.239	0.485	0.839	1.32	4.06	2.95
37	0.357	0.744	1.31	2.10	3.28	4.69

(Beck and Stegmüller, Arb. K. Gesund. Amt. 1910, **34**, 446.)

Insol. in $HC_2H_3O_2 + Aq$.

Easily sol. in KOH , or $NaOH + Aq$. 1 l. $KOH + Aq$ ($\frac{1}{2}$ normal) dissolves 11.9 g. $PbCrO_4$ at 15° ; 16.2 g. at 60° ; 26.1 g. at 80° ;

38.5 g. at 102. (Lachaud and Lepierre, Bull. Soc. (3) 6. 230.)

Insol. in $\text{NH}_4\text{Cl} + \text{Aq.}$ (Brett, 1837.)

Sol. in $\text{K}_2\text{Cr}_2\text{O}_7 + \text{Aq.}$; almost completely insol. in $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$, or $\text{NH}_4\text{NO}_3 + \text{Aq.}$

Not pptd. in presence of Na citrate. (Spiller.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 828.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Min. *Crocoite*. Sol. in hot $\text{HCl} + \text{Aq.}$; difficultly sol. in $\text{HNO}_3 + \text{Aq.}$; sol. in $\text{KOH} + \text{Aq.}$

Lead dichromate, PbCr_2O_7 .

Decomp. by H_2O .

+ $2\text{H}_2\text{O}$. As above. (Preis and Raymann, B. 13. 340.)

Lead lithium chromate, PbCrO_4 , Li_2CrO_4 .

(Lachaud and Lepierre, C. R. 110. 1035.)

Lead potassium chromate, PbCrO_4 , K_2CrO_4

Insol. in hot or cold H_2O or in alcohol. Dil. acids dissolve out K_2CrO_4 . (Lachaud and Lepierre, C. R. 110. 1035.)

Decomp. by H_2O . Stable in contact with solutions containing:

8.950	pts.	K_2CrO_4	per	100	pts.	H_2O	at	10°
8.077	"	"	"	"	"	"	"	27.5°
7.629	"	"	"	"	"	"	"	37.5°
7.150	"	"	"	"	"	"	"	50.0°
6.145	"	"	"	"	"	"	"	76.0°
4.940	"	"	"	"	"	"	"	100.0°

(Barre, C. R. 1914, 158. 497.)

Lead sodium chromate, PbCrO_4 , NaCrO_4 .

Sol. in $\text{H}_2\text{O} (?)$. (Lachaud and Lepierre.)

PbCrO_4 , 2PbO , Na_2CrO_4 . (L. and L.)

Lithium chromate, Li_2CrO_4 .

100 cc. of solution sat. at 18° contain 85 g. anhydrous salt. (Kohlrausch, B. A. B. 1897. 90.)

99.94 pts. are sol. in 100 pts. H_2O at 30°. (Schreinemakers, C. C. 1905. II, 1486.)

+ $2\text{H}_2\text{O}$. Very easily sol. in H_2O . (Rammelsberg, Pogg. 128. 323.)

100 g. H_2O dissolve 111 g. salt at 20°. (Von Weimarn, C. C. 1911. II, 1300.)

Sp. gr. of solution sat. at 18° = 1.574, and contains 52.6% LiCrO_4 . (Mylius and Wrochem, B. 1897, 30. 1718.)

Lithium dichromate, $\text{Li}_2\text{Cr}_2\text{O}_7$.

130.4 pts. are sol. in 100 pts. H_2O at 30°. (Schreinemakers, C. C. 1905. II, 1486.)

+ $2\text{H}_2\text{O}$. Deliquescent. Sol. in H_2O . (Rammelsberg.)

Lithium potassium chromate, K_2CrO_4 ,

$\text{Li}_2\text{CrO}_4 + \frac{1}{2}\text{H}_2\text{O}$.

Hydroscopic. (Zehenter, M. 1897, 18. 54.)

Magnesium chromate, MgCrO_4 .

Sol. in H_2SO_4 , and HCl ; insol. in HNO_3 . (Dufau, C. R. 1896, 123. 888.)

Sp. gr. of $\text{MgCrO}_4 + \text{Aq}$ sat. at $t^\circ/4^\circ$.

t°	13 6°	14.5°	13.6°
$\% \text{ MgCrO}_4$	12.31	21.86	27.71
Sp. gr.	1.0886	1.1641	1.2170

(Slotte, W. Ann. 1881, 14. 19.)

Sol. in acetone. (Naumann, B. 1904, 37. 4328.)

+ $7\text{H}_2\text{O}$. Easily sol. in H_2O . (Vauquelin.) 100 cm. of solution sat. at 18° contain 60 g. MgCrO_4 . (Kohlrausch, B. A. B. 1897. 90.)

Sp. gr. of solution sat. at 18° = 1.422, and contains 42% MgCrO_4 . (Mylius and Wrochem, B. 1897, 30. 1718.)

+ $5\text{H}_2\text{O}$. Very sol. in H_2O (Wyrouboff, Bull. Soc. Min. 12. 60.)

Magnesium dichromate, $\text{Mg}_2\text{Cr}_2\text{O}_7$.

Sol. in H_2O .

Sl. sol. in alcohol. (Reintzer, Zeit. angew. 1913, 26. 456.)

Magnesium potassium chromate, MgCrO_4 , $\text{K}_2\text{CrO}_4 + 2\text{H}_2\text{O}$.

100 pts. H_2O dissolve 28.2 pts. at 20°; 34.3 pts. at 60° (Schweitzer.)

Sol. in H_2O . Sl. sol. in sat. $\text{K}_2\text{CrO}_4 + \text{Aq.}$ (Gröger, Z. anorg. 1907, 54. 188.)

Insol. in alcohol.

+ $6\text{H}_2\text{O}$. Efflorescent. (Briggs, Chem. Soc. 1904, 85. 679.)

Magnesium rubidium chromate,

$\text{MgRb}_2(\text{CrO}_4)_2 + 6\text{H}_2\text{O}$.

(Briggs, Chem. Soc. 1904, 85. 679.) (Barker, Chem. Soc. 1911, 99. 1327.)

Magnesium sodium chromate.

(Stanley, C. N. 54. 194.)

Manganous chromate, 2MnO , $\text{CrO}_3 + \text{H}_2\text{O}$.

Ppt. Sol. in dil. H_2SO_4 , or $\text{HNO}_3 + \text{Aq.}$ (Warrington and Reinsch, Schw. J. 3. 378.)

Manganous potassium chromate, MnCrO_4 , $\text{K}_2\text{CrO}_4 + 2\text{H}_2\text{O}$.

Decomp. by H_2O . Sol. in dil. H_2SO_4 . (Gröger, Z. anorg. 1905, 44. 459.)

2MnCrO_4 , $\text{K}_2\text{CrO}_4 + 4\text{H}_2\text{O}$. Sol. in H_2O . (Hensgen, R. t. c. 3. 433.)

Mercurous chromate, basic, $4\text{Hg}_2\text{O}$, 3CrO_3 .

Very sl. sol. in cold, more in boiling H_2O . Sl. sol. in $\text{HNO}_3 + \text{Aq.}$ Decomp. by $\text{HCl} + \text{Aq.}$ Sl. sol. in $\text{NH}_4\text{Cl} + \text{Aq.}$ or $\text{NH}_4\text{NO}_3 + \text{Aq.}$ (Brett.)

Does not exist. (Richter, B. 15. 1489.)

$3\text{Hg}_2\text{O}$, CrO_3 . Sol. in $\text{HNO}_3 + \text{Aq.}$ (Richter.)

$3\text{Hg}_2\text{O}$, $2\text{Cr}_2\text{O}_3$. Ppt. (Fichter, Z anorg. 1912, **76**, 350.)

Mercurous chromate, Hg_2CrO_4 .

Very sl sol. in cold, more readily in hot H_2O . Sl sol in dil HNO_3 +Aq, sol in conc HNO_3 ; sol in KCN +Aq; insol. in $\text{Hg}_2(\text{NO}_3)_2$ +Aq. (Rose, Pogg **53**, 124.)

Less sol in K_2CrO_4 +Aq than in H_2O . (Fichter, Z. anorg. 1912, **76**, 349.)

Insol. in acetone. (Naumann, B 1904, **37**, 4329.)

Mercuric chromate, basic, 2HgO , CrO_3 .

Sol in HCl , and in HNO_3 +Aq. (Geuther) 3HgO , CrO_3 . Sl. sol. in H_2O (Millon)

The only true compound. All others are mixtures of HgO or HgCrO_4 with this compound. (Cox, Z. anorg. 1904, **40**, 155.)

4HgO , CrO_3 . Sl. sol in H_2O . (Millon, A. ch. (3) **18**, 365.)

7HgO , 2CrO_3 . Easily sol. in warm HNO_3 , when freshly precipitated. Easily sol in HCl +Aq. (Geuther, A. **106**, 247.)

Does not exist. (Freese, B. **2**, 477.)

5HgO , CrO_3 . Easily sol. in HCl +Aq. Very sl. sol. in HNO_3 +Aq. Decomp. by H_2O into—

6HgO , CrO_3 . Insol in H_2O . (Jager and Krüss, B. **22**, 2049.)

Mercuric chromate, HgCrO_4 .

Decomp. by H_2O and acids into basic salt. (Geuther.)

Sol. in acids. Sol. in warm NH_4Cl , or NH_4NO_3 +Aq. Sol. in $\text{Hg}(\text{NO}_3)_2$, or HgCl_2 +Aq.

Insol. in ethyl acetate. (Naumann, B. 1910, **43**, 314.)

Insol. in acetone. (Naumann, B. 1904, **37**, 4329.)

Mercuric dichromate, HgCr_2O_7 .

Ppt. (Gawalowski, C. C. 1906, II, 1307.)

Mercurous potassium chromate,

$\text{Hg}_2\text{K}_2(\text{CrO}_4)_2$.

Ppt; decomp. by H_2O . (Gröger, Z. anorg. 1907, **54**, 191.)

Mercuric chromate, basic, ammonia, 12HgO , 3CrO_3 , 2NH_3 + $3\text{H}_2\text{O}$.

(Gröger, Z. anorg. 1908, **58**, 420.)

Mercuric chromate ammonia, HgCrO_4 , 2NH_3 + H_2O .

(Gröger, Z. anorg. 1908, **58**, 419.)

Mercuric chromate sulphide, 2HgCrO_4 , HgS .

Not attacked by weak acids. (Palm, C. C. **1863**, 121.)

Nickel chromate, basic, 4NiO , CrO_3 + $6\text{H}_2\text{O}$.

Insol. in H_2O ; easily sol. in NH_4OH +Aq. (Malaguti and Sarzeau, A. ch. (3) **9**, 451.)

3NiO , CrO_3 + $6\text{H}_2\text{O}$ Insol. in H_2O , sol. in NH_4OH +Aq (Freese, J. B. **1869**, 271.)

2NiO , CrO_3 + $6\text{H}_2\text{O}$ As above (Schmidt, A. **156**, 19.)

5NiO , 2CrO_3 + $12\text{H}_2\text{O}$ As above (Schmidt)

Nickel chromate, NiCrO_4 .

Not attacked by boiling H_2O .

Nearly insol. in hot dil HNO_3 . Slowly sol. in conc. HNO_3 and aqua regia.

Somewhat sol. in NH_3 +Aq. (Briggs, Z. anorg. 1909, **63**, 326.)

Nickel dichromate, $2\text{NiCr}_2\text{O}_7$ + $3\text{H}_2\text{O}$.

Slowly sol. in cold, rapidly sol. in hot H_2O .

Deliquescent. (Briggs, Z. anorg. 1907, **56**, 246.)

Nickel potassium chromate, NiCrO_4 , K_2CrO_4 + $2\text{H}_2\text{O}$.

Decomp. by H_2O . (Gröger, Z. anorg. 1906, **51**, 353.)

+ $6\text{H}_2\text{O}$. Efflorescent (Briggs, Chem. Soc. 1904, **85**, 678.)

Nickel rubidium chromate, $\text{NiRb}(\text{CrO}_4)_2$ + $6\text{H}_2\text{O}$.

Sl. efflorescent at ord. temp. (Briggs, Chem. Soc. 1904, **85**, 678.)

Nickel chromate ammonia, NiCrO_4 , 6NH_3 + $4\text{H}_2\text{O}$.

Decomp. by H_2O . Quite easily sol. in NH_4OH +Aq of 0.96 sp. gr. (Schmidt.) Insol. in alcohol or ether.

Potassium chromate, K_2CrO_4 , $\text{K}_2\text{Cr}_2\text{O}_7$, etc.

(Koppel and Blumenthal, Z. anorg. 1907, **53**, 255.)**Potassium chromate, K_2CrO_4 .**Easily sol. in H_2O .

Sol. in 2 pts. H_2O at 18.75° (Ahl.)
 100 pts. H_2O at 15° dissolve 43.857 pts. K_2CrO_4 and solution has sp. gr. of 1.3032. (Michel and Krafft, A. ch. (3) **41**, 478.)

1 pt. dissolves in 2.07 pts. H_2O at 15.5° . (Thomson.)1 pt. dissolves in 1.75 pts. H_2O at 17.5° , and in 1.67 pts. H_2O at 100° . (Moser.)100 pts. H_2O dissolve at—

0°	10°	20°	30°
58.90	60.92	62.94	64.96 pts. K_2CrO_4
40°	50°	60°	70°
66.98	69.00	71.02	73.04 pts. K_2CrO_4
80°	90°	100°	
75.06	77.08	79.10	pts. K_2CrO_4

(Alluard, C. R. **59**, 500.)100 pts. H_2O dissolve at—

0°	10°	27.37°	42.1°
61.5	62.1	66.3	70.3 pts. K_2CrO_4
63.6°	93.6°	106.1°	
74.9	79.7	81.8	pts. K_2CrO_4

(Nordenskjöld and Lindström, Pogg. **136**, 314.)100 pts. $K_2CrO_4 + Aq$ sat. at $10-12^\circ$ contain 37.14 pts. salt. (v. Hauer, J. pr. **103**, 114.)100 pts. H_2O at 19.5° dissolve 62.3 pts. K_2CrO_4 , and solution has sp. gr. of 1.3787. (Schiff, A. **109**, 326.)Sat. $K_2CrO_4 + Aq$ contains at—

34°	53°	79°
39.7	40.3	41.8% K_2CrO_4

96°	120°	157°
42.6	44.0	45.4% K_2CrO_4

(Étard, A. ch. 1894, (7) **2**, 550.)100 cc. sat. $K_2CrO_4 + Aq$. contain 53 g. K_2CrO_4 at 18° . (Kohlrausch, B. A. B. **1897**, 90.)100 pts. H_2O dissolve 64.91 pts. K_2CrO_4 at 30° , or 100 g. of solution contain 39.36 g. K_2CrO_4 . (Schreinemakers, Chem. Weekbl. 1905, **1**, 837.)100 g. H_2O dissolve:

54.57 g. K_2CrO_4	at -11.37° (cryohydric pt.)
57.11 g.	" " 0°
65.13 g.	" " 30°
74.60 g.	" " 60°
88.80 g.	" " 105.8° (b-pt. of sat. sol.)

(Koppel, Z. anorg. 1907, **53**, 262.)64.62 g. K_2CrO_4 are sol. in 100 g. H_2O at 25° . (Amadori, Real. Att. Line. 1912, (5) **21**, I. 667.)

Sp gr of $K_2CrO_4 + Aq$ at 19.5° .

40.93	3 33	1 94	10.86
27.36	4 82	.	.

(Amadori, Real. Att. Linc. 1912, (5) 21, I. 667.)

Insol in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 829.)

100 g. sat. solution in glycol at 15.4° contain 1.7 g K_2CrO_4 (de Coninck, C. C 1905, II. 183.)

Insol in benzonitrile (Naumann, B. 1914, 47. 1370.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Insol in acetone (Naumann, B. 1904, 37. 4329; Eidmann, C. C. 1899. II, 1014.)

+4 H_2O . Easily sol. in H_2O and in $NH_4OH + Aq$. (Wesch, Dissert. 1909.)

Potassium dichromate, $K_2Cr_2O_7$.

Sol. in H_2O , with slight absorption of heat. Less sol in H_2O than K_2CrO_4 .

Sol in 96 pts H_2O at 17° . (Thompson)
 10 " " " 18° . (Moser.)

100 pts. H_2O at 15° dissolve 9.126 pts. $K_2Cr_2O_7$, and solution has sp. gr. = 1.0618. (Michel and Krafft, A. ch. (3) 41. 478.)

100 pts. H_2O dissolve pts. $K_2Cr_2O_7$. A = according to Alluard (C. R. 59. 500); K = according to Kremers (Pogg. 92. 497).

t°	A	K	t°	A	K

(Étard, A. ch. 1894, (7) 2. 550.)

100 g. H₂O dissolve 10.1 g. K₂Cr₂O₇ at 15.5°. (Greenish and Smith, Pharm. J. 1901, 66. 774.)

100 pts. H₂O at 30° dissolve 18.12 pts K₂Cr₂O₇. (Schreinemakers, Chem. Weekbl. 1905 1. 837)

100 g H₂O dissolve

4.50 g. K₂Cr₂O₇ at -0.63° (cryohydric pt.)
4.64 g. " " 0°
18.13 g. " " 30°
45.44 g. " " 60°
108.2 g. " " 104.8° (b-pt of sat. sol.)
(Koppel, Z anorg 1907, 53. 263.)

100 c.c. sat solution contain 11.43 g. K₂Cr₂O₇ at 20°. (Sherrill and Eaton, J. Am. Chem. Soc 1907, 29. 1643.)

100 g. sat. K₂Cr₂O₇ contain:

5.52 g. K₂Cr₂O₇ at 4.81°
15.17 " " 30.10°
17.77 " " 35.33°

(Le Blanc and Schmandt, Z. phys. Ch. 1911, 77. 614)

100 g. sat. K₂Cr₂O₇+Aq. at 35.03° contains 17.72 g. K₂Cr₂O₇. (Le Blanc, Z. phys. Ch. 1913, 86. 335.)

K₂Cr₂O₇+Aq sat. at S° has sp. gr 1.065 (Anthon, 1837.)

Sp. gr. of K₂Cr₂O₇+Aq at 19.5°.

% K ₂ Cr ₂ O ₇	Sp. gr.	% K ₂ Cr ₂ O ₇	Sp. gr.
1	1.007	9	1.065
2	1.015	10	1.073
3	1.022	11	1.080
4	1.030	12	1.085
5	1.037	13	1.097
6	1.043	14	1.102
7	1.050	15	1.110
8	1.056	.	.

(Kremers, calculated by Gerlach, Z. anal. 8. 288.)

Sp. gr of K₂Cr₂O₇+Aq containing 4.71% K₂Cr₂O₇=1.0325 at 11°/4°; containing 6.97% K₂Cr₂O₇=1.0493 at 10.6°/4°. (Slotte, W. Ann 1881, 14. 18.)

Sat. K₂Cr₂O₇+Aq boils at 104° (Kremers); 103.4°. (Alluard.)

Insol. in alcohol.

Sl. sol. in liquid NH₃. (Franklin, Am. Ch. J. 1898, 20. 829.)

Insol. in alcohol. (Reinitzer, Zeit. angew. Ch. 1913, 26. 456.)

100 g. sat. solution in glycol contain 6 g. K₂Cr₂O₇. (de Coninck, Bull. acad. roy. Belg. 1905, 257.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Insol in acetone and in methylal. (Eidmann, C. C 1899. II, 1014.)

Potassium trichromate, K₂Cr₃O₁₀

Easily sol. in H₂O and alcohol. (Bothe, J. pr. 46. 184.)

Not deliquescent; decomp. by H₂O in chromic acid and K₂Cr₂O₇. (Jäger and Kruss, B 22. 2041.)

Potassium tetrachromate, K₂Cr₄O₁₃.

Very deliquescent, and easily sol. in H₂O. (Schwarz, Dingl. 186. 31.)

Not deliquescent. Decomp. by H₂O. (Jäger and Kruss, B 22. 2042.)

Potassium samarium chromate,

K₂Sm₂(CrO₄)₄+6H₂O.

Precipitate. (Cleve.)

Insol. in ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Potassium sodium chromate, 3K₂CrO₄, Na₂CrO₄.

Sol. in H₂O. (v. Hauer, J. pr. 83. 359.)

64.2 pts. are sol in 100 pts H₂O at 14° (Zehenter, M. 1897, 18. 49.)

Potassium strontium chromate, K₂Sr(CrO₄)₂.

Ppt. Decomp. by H₂O. (Groger, Z. anorg. 1907, 54. 187.)

Decomp. by H₂O. Stable in contact with solutions containing:

at 11.5°, 2.914 pts. K₂CrO₄ per 100 pts. H₂O.
at 27.5°, 4.123 " " " " "
at 50°, 5.942 " " " " "
at 76°, 7.920 " " " " "
at 100°, 9.784 " " " " "

(Barre, C. R 1914, 158. 496.)

Potassium thallium chromate, K₂CrO₄, Tl₂CrO₄.

(Lachaud and Lepierre, Bull. Soc. (3) 6. 232.)

+2H₂O. Rapidly hydrolyzed by H₂O unless a large excess of the CrO₄ ion is present.

Readily sol. in dil. mineral acids.

Difficulty sol. in K₂Cr₂O₇+Aq. (Hawley, J. Am. Chem. Soc. 1907, 29. 304.)

Potassium uranyl chromate, K₂CrO₄,

2(UO₂)CrO₄+6H₂O.

Decomp. by boiling with H₂O. Sol. in acidified H₂O. (Formánek, A. 257. 103.)

K₂CrO₄, (UO₂)CrO₄+H₂O; 2K₂CrO₄, 3(UO₂)CrO₄+7H₂O; 3K₂CrO₄, 4(UO₂)CrO₄+7H₂O; and K₂CrO₄, 3(UO₂)CrO₄+14H₂O. Precipitates. (Wiesner, C. C. 1882. 777.)

Potassium ytterbium chromate, basic, 2KYb(CrO₄)₂+Yb(OH)₃+15½H₂O.

Ppt. (Cleve, Z. anorg. 1902, 32. 151.)

Potassium yttrium chromate, K_2CrO_4 ,

Ppt. (Cleve)

Potassium zinc chromate, basic, $K_2O \cdot 5ZnO$, $4CrO_3 + 6H_2O$, or $K_2O \cdot 4ZnO \cdot 3CrO_3 + 3H_2O$.Slightly sol. in cold, decomp. by hot H_2O (Wöhler) $K_2O \cdot 4ZnO \cdot 3CrO_3 + 3H_2O$. Insol. in cold, decomp. by hot H_2O . (Gröger, M. 1904, 25. 520.)**Potassium zinc chromate, $K_2Zn(CrO_4)_2 + 2H_2O$.**Ppt. Decomp. by H_2O (Gröger, Z. anorg. 1907, 54. 189.)**Potassium dichromate chloride mercuric chloride, $K_2Cr_2O_7 \cdot 2KCl \cdot 4HgCl_2 + 2H_2O$.**Solution in H_2O sat. at 20.5° contains 6.78% salt. Salt is much more sol. in hot H_2O . (Strömholm, Z. anorg. 1912. 75. 278.)**Potassium chromate iodate.**

See Chromoiodate, potassium.

Potassium chromate magnesium sulphate, $K_2CrO_4 \cdot MgSO_4 + 9H_2O$ Sol. in H_2O . (Étard, C. R. 85. 443.)**Potassium chromate mercuric chloride, $K_2CrO_4 \cdot 2HgCl_2$.**Easily sol. in H_2O . Sol. in dil. $HCl + Aq$. (Darby.)**Potassium dichromate mercuric chloride, $K_2Cr_2O_7 \cdot HgCl_2$.**Ether or absolute alcohol dissolves out $HgCl_2$. (Millon, A. ch. (3) 18. 388.)Can be crystallized from H_2O . (Jager and Krüss, B. 22. 2046.)**Potassium chromate mercuric cyanide, $2K_2CrO_4 \cdot 3Hg(CN)_2$.**Easily sol. in H_2O . $+H_2O$ (Dexter.)Formula is $K_2CrO_4 \cdot 2Hg(CN)_2$. (Clarke and Sterne, Am. Ch. J. 3. 352.)**Potassium dichromate mercuric cyanide, $K_2Cr_2O_7 \cdot Hg(CN)_2 + 2H_2O$.**Sol. in H_2O . (Wyrouboff, J. B. 1880. 309.)**Potassium chromate phosphate.**

See Phosphochromate, potassium.

Potassium chromate sulphate, $K_2CrO_4 \cdot 6K_2SO_4$.Easily sol. in H_2O . (Boutron-Chalard.)**Potassium chromate tellurate.**

See Chromotellurate, potassium.

Rubidium chromate, Rb_2CrO_4 .Sol. in H_2O . (Piccard, J. pr. 86. 455.)Solubility in H_2O at t° .

t°	% Rb_2CrO_4

(Stortenbeker, C. C. 1907, II. 1588.)

Rubidium dichromate chloride mercuric chloride, $Rb_2Cr_2O_7 \cdot 2RbCl \cdot 4HgCl_2 + 2H_2O$.Sol. in H_2O .Solution sat. at 20.5° contains 5.35% salt. (Strömholm, Z. anorg. 1912, 75. 284.)**Silver (argentous) chromate, Ag_2CrO_4 .**

Sol. in dil. acids. (Wöhler and Rautenberg.)

Existence very doubtful.

Silver chromate, Ag_2CrO_4 .Absolutely insol. in H_2O . Sol. in acids, ammonia, and alkali chromates + Aq . (Warrington, A. 27. 12.)Appreciably sol. in cold, and still more in hot H_2O . (Meineke, A. 261. 341.)100 ccm. H_2O dissolve 0.064 grain Ag_2CrO_4 at 100° ; 100 ccm. H_2O containing 50 grains

of the following salts dissolve the given amts of Ag_2CrO_4 at 100° : NaNO_3 , 0.064 grain; KNO_3 , 0.192 grain; NH_4NO_3 , 0.320 grain, $\text{Mg}(\text{NO}_3)_2$, 0.256 grain. (Carpenter J S C. I 5. 286.)

According to electrical conductivity of $\text{Ag}_2\text{CrO}_4 + \text{Aq}$, 1 l. H_2O dissolves 28 mg. Ag_2CrO_4 at 18° (Kohlrausch and Rose, Z. phys. Ch 12. 241.)

1 l. H_2O dissolves 25 mg. Ag_2CrO_4 at 18° . (Kohlrausch, Z. phys. Ch. 1904, 50. 356.)

25 mg. are contained in 1 l of sat solution at 18° . Solubility increases unusually rapidly with temp (Kohlrausch, Z. phys. Ch 1908, 64. 168.)

Sol. in 26,378 pts cold H_2O and 9116 pts. H_2O at 100° (Koninck and Nihoul, Zeit. angew. Ch. 1891, 5. 295.)

1 l. H_2O dissolves 1.2×10^{-4} gram. atoms of silver at 25° (Abegg and Cox, Z. phys. Ch. 1903, 46. 11.)

1 l. H_2O dissolves 0.029 g. Ag_2CrO_4 at 25° (Schafer, Z. anorg. 1905, 45. 310.)

1 l. H_2O dissolves 0.0256 g. Ag_2CrO_4 at 18° ; 0.0341 g at 27° ; 0.0534 g. at 50° (Whitby Z. anorg. 1910, 67. 108.)

Sol. in hot $\text{NH}_4\text{OH} + \text{Aq}$ of sp gr 0.94 (15.63% NH_3); sl sol in cold $\text{NH}_4\text{OH} + \text{Aq}$ of sp. gr. 0.91 (24.99% NH_3). (Margosches, Z. anorg. 1904, 41. 73.)

Solubility of Ag_2CrO_4 in $\text{NH}_4\text{OH} + \text{Aq}$ at 25°

(Sherrill and Russ, J. Am. Chem. Soc. 1907, 29. 1663.)

Insol. in liquid NH_3 . (Gore, Am. Ch J 1898, 20. 829.)

1 l. 65% alcohol dissolves 0.0129 g. Ag_2CrO_4 at ord. temp. (Guerini, Dissert 1912.)

Insol in H_2O containing acetic acid in presence of large excess of AgNO_3 . (Gooch and Weed, Am. J. Sci. 1908, (4) 26. 85.)

Practically insol. in glacial acetic acid but somewhat sol. in dil. acetic acid. It behaves in a similar manner toward propionic, lactic and other organic acids. The red modification is more sol. than the greenish-black (Margosches, Z. anorg. 1906, 51. 233.)

Silver dichromate, $\text{Ag}_2\text{Cr}_2\text{O}_7$.

Sl. sol. in H_2O . Easily sol. in HNO_3 , or $\text{NH}_4\text{OH} + \text{Aq}$. (Warington.)

Decomp. by boiling with H_2O into CrO_3 and Ag_2CrO_4 . (Jager and Kruss, B. 22. 2050.)

Decomp. by cold H_2O . (Autenrieth, B. 1902, 35. 2061.)

1 pt. is sol in 12,000 pts. H_2O at 15° . (Mayer, B. 1903, 36. 1741.)

Solubility in H_2O at $25^\circ = 7.3 \times 10^{-3}$ atoms Ag per l. Decomp. by $\text{HNO}_3 + \text{Aq}$ (less than 0.06 N) with separation of Ag_2CrO_4 . (Sherrill and Russ, J. Am. Chem Soc 1907, 29. 1674.)

Solubility of $\text{Ag}_2\text{Cr}_2\text{O}_7$ in $\text{HNO}_3 + \text{Aq}$ at 25°

Mols. HNO_3 per l.	Milhat per l		Solid Phase
	Cr	Ag	
0	32.20	5.390	$\text{Ag}_2\text{CrO}_4 + \text{Ag}_2\text{Cr}_2\text{O}_7$

0.08	11.10	11.10	"
0.08 + 0.1 AgNO ₃	6.624		"

(Sherrill and Russ, J. Am. Chem. Soc. 1907, 29. 1664.)

Silver uranyl chromate, $2\text{Ag}_2\text{CrO}_4, \text{UO}_2\text{CrO}_4$.

Ppt. (Formánek, A. 257. 110.)

Silver chromate ammonia, $\text{Ag}_2\text{CrO}_4, 4\text{NH}_3$.

Decomp. by H_2O . Sol. in warm conc. $\text{NH}_4\text{OH} + \text{Aq}$. (Mitscherlich, Pogg. 12. 141.)

Silver dichromate mercuric cyanide, $\text{Ag}_2\text{Cr}_2\text{O}_7, \text{Hg}(\text{CN})_2$.

Sol. in cold H_2O ; very sol. in hot H_2O without decomp. (Kruss, Z. anorg. 1895, 8. 456.)

$\text{Ag}_2\text{Cr}_2\text{O}_7, 2\text{Hg}(\text{CN})_2$. Scarcely sol. in cold, more readily in hot H_2O . Sol. in hot $\text{HNO}_3 + \text{Aq}$, separating on cooling. (Darby, Chem. Soc. 1. 24.)

Sodium chromate, basic, $\text{Na}_4\text{CrO}_5 + 13\text{H}_2\text{O}$.

Sol. without decomp. in H_2O .

Sat. solution at 30° contains 41.3%

Na_2CrO_3 . (Schreinemakers, Z phys. Ch. 1906, **55**, 93.)

Deliquescent.

Solubility in H_2O at t°

0	61.98
17	63.82
34.5	67.36
52	71.76
72	76.90
81	79.80

(Mylus and Funk, Gm.-K. **3**. I, 1380.)

100 g. H₂O at 30° dissolve 197.6 g Na₂Cr₂O₇, or sat solution at 30° contains 66.4% Na₂Cr₂O₇. (Schreinemakers, Z. phys. Ch. 1906, **55**. 97.)

100 ccm. of a solution of sodium dichromate in alcohol contain 5.133 g Na₂Cr₂O₇ + 2H₂O at 19.4°. The solution decomp rapidly (Reintzer, Zeit. angew. Ch 1913, **26**. 456.)

The composition of the hydrates formed by Na₂Cr₂O₇ at different dilutions is calculated from determinations of the lowering of the fr=pt. produced by Na₂Cr₂O₇ and of the conductivity and sp. gr. of Na₂Cr₂O₇+Aq. (Jones, Am. ch. J. 1905, **34**. 317.)

Sodium trichromate, NaCr₃O₁₀

Deliquescent. Very sol. in H₂O. (Stanley, C. N **54**. 194.)

+H₂O. Sat. solution at 30° contains 80% Na₂Cr₃O₁₀. (Schreinemakers, Z. phys. Ch. 1906, **55**. 94.)

Solubility in H₂O at t°.

t°	0°	15°	55°	99°
% Na ₂ Cr ₃ O ₁₀	80.03	80.44	82.68	85.78

(Mylus and Funk, Gm.-K. **3**. I, 1380.)

Sp. gr. of sat. solution containing 80.6% Na₂Cr₃O₁₀ at 18° = 2.059. (Mylus and Funk, B. 1900, **33**. 3688.)

Sodium tetrachromate, Na₂Cr₄O₁₃+4H₂O.

Solubility in H₂O at t°.

t°	0°	16°	22°
% Na ₂ Cr ₄ O ₁₃	72.19	74.19	76.01

(Mylus and Funk, Gm.-K. **3**. I, 1380.)

Deliquescent.

Sat. solution at 18° contains 74.6% Na₂Cr₄O₁₃ and has sp. gr. = 1.926 (Mylus and Funk, B. 1900, **33**. 3688.)

Sodium uranyl chromate, Na₂CrO₄. 2(UO₂)CrO₄+10H₂O.

Easily sol. in H₂O. (Formánek, A **257**. 108.)

100 pts of the solution in H₂O contain 52.52 pts of the anhydrous salt at 20° (Rumbach, B 1904, **37**. 482.)

Sodium chromate silicate, Na₂O, Cr₂O₃, 2SiO₂+14H₂O.

Not decomp. by HCl+Aq (Singer, Dissert **1910**.)

2Na₂O, 3Cr₂O₃, 6SiO₂. Not decomp. by boiling conc acids except HF. (Weyberg, C B Miner, **1908**. 519.)

5Na₂O, 2Cr₂O₃, 11SiO₂ (Weyberg.)

3Na₂O, 2Cr₂O₃, 9.5SiO₂. (Weyberg.)

Strontium chromate, SrCrO₄

Somewhat sol in H₂O. Sol. in 840 pts. H₂O (Meschevski, Z anal. **21**. 399); sol. in 831.8 pts. H₂O at 15° (Fresenius, Z. anal. **29**. 419.)

100 cc H₂O dissolve 0.4651% at 10°; 1% at 20°; 2.417% at 50°; 3% at 100°. (Reichard, Ch. Z. 1903, **27**. 877.)

Easily sol. in HCl, HNO₃, or H₂CrO₄+Aq.

Sol. in 512 pts. 0.5% NH₄Cl+Aq at 15°.

Sol. in 63.7 pts. 1% HC₂H₃O₂+Aq at 15°.

Sol. in 348.8 pts. solution containing 0.75% NH₄C₂H₃O₂, 4 drops HC₂H₃O₂, and 6 drops (NH₄)₂CrO₄+Aq. (Fresenius.)

100 ccm NH₄Cl+Aq sat. at bpt dissolve 1 g. SrCrO₄. (Dumesnil, A. ch. 1900, (7) **20**. 125.)

50 ccm. alcohol (29%) dissolve 0.0066 g. SrCrO₄.

50 ccm. alcohol (53%) dissolve 0.001 g. SrCrO₄ (Fresenius, Z. anal. **30**. 672.)

Strontium dichromate, SrCr₂O₇.

Easily sol. in H₂O.

Strontium trichromate, SrCr₃O₁₀+3H₂O.

Very deliquescent, and sol. in H₂O. (Preis and Raymann, B. **13**. 340.)

Strontium chromate mercuric hydrogen chloride, SrCrO₄, 2HgCl₂, HCl.

According to Stromholm is SrCl₂, SrCr₂O₇, 4HgCl₂+H₂O.

Recryst from H₂O. (Imbert and Belugon, Bull. Soc., 1897, (3) **17**. 471.)

2SrCrO₄, 6HgCl₂, HCl. (Imbert and Belugon.)

Thallous chromate, TlCrO₄.

100 pts. H₂O dissolve 0.03 pt. at 60°. (Rupp and Zimmer, Z. anorg. 1902, **33**. 157.)

Ppt. Insol. in cold moderately conc. HC₂H₃O₂+Aq, or in very dil. HNO₃+Aq, and very sl. sol. on boiling therewith. Dil. NH₄OH, and Na₂CO₃+Aq have the same action. Attacked by very dil. HCl+Aq. Sol. in hot conc. HCl+Aq. Decomp. by dil. H₂SO₄+Aq. (Carstansen.)

1 l. KOH + Aq (112 g. per l.) dissolves about 3.5 g. Ti_2CrO_4 on boiling, which separates out on cooling.

Boiling conc. KOH + Aq (31% KOH) dissolves 18 g. Ti_2CrO_4 per litre. (Lepierre and Lachaud, C. R. **113**, 196.)

Thalious dichromate, $\text{Ti}_2\text{Cr}_2\text{O}_7$.

Insol. in H_2O , etc. Has the same properties as Ti_2CrO_4 .

Thalious trichromate, $\text{Ti}_2\text{Cr}_3\text{O}_{10}$.

Sol. in 2814 pts. H_2O at 15° , and 438.7 pts at 100° (Crookes.)

Thallic chromate.

Ppt.

Thorium chromate, basic, $\text{Th}(\text{OH})_2\text{CrO}_4$.

Ppt.; unstable in solution. (Palmer, Am. Ch. J. **1895**, **17**, 278.)

Thorium chromate, $\text{Th}(\text{CrO}_4)_2 + \text{H}_2\text{O}$.

Ppt. Sol. in HCl and NH_4Cl + Aq. 1 pt. is sol. in 284 pts. H_2O at 22° . (Palmer, Am. Ch. J. **1895**, **17**, 375 and 278.)

+ $3\text{H}_2\text{O}$. Ppt. (Haber, M. **1897**, **18**, 689.)
+ $8\text{H}_2\text{O}$. Insol. in H_2O . (Chydenius, Pogg. **119**, 54.)

Tin (stannous) chromate.

Ppt. Sol. in dil. acids. (Berzelius.)

Tin (stannic) chromate.

Ppt. (Leykauf, J. pr. **19**, 127.)

Uranyl chromate, basic, $\text{UO}_3 \cdot 2(\text{UO}_2)\text{CrO}_4 + 8\text{H}_2\text{O}$.

Ppt. (Orloff, Ch. Z. **1907**, **31**, 375.)

$\text{UO}_3 \cdot (\text{UO}_2)\text{CrO}_4 + 6\text{H}_2\text{O}$. (Orloff.)

Uranyl chromate, $(\text{UO}_2)\text{CrO}_4 + 3\text{H}_2\text{O}$.

1 pt. is sol. in 13.3 pts. H_2O at 15° , slowly sol. in alcohol to give a solution which is decomp. on boiling (Orloff, Ch. Z. **1907**, **31**, 375.)

+ $11\text{H}_2\text{O}$. Very sol. in H_2O (Formánek, A. **257**, 108.)

Yttrium chromate.

Deliquescent. Easily sol. in H_2O . (Berlin.)

Zinc chromate, basic, $4\text{ZnO} \cdot \text{CrO}_3 + 3\text{H}_2\text{O}$. (Gröger, Z. anorg. **1911**, **70**, 135.)

+ $5\text{H}_2\text{O}$. Insol. in H_2O ; sol. in hot H_2CrO_4 + Aq; slowly sol. in NH_4OH + Aq. (Malaguti and Sarzeau, A. ch. (3) **9**, 431.)

$3\text{ZnO} \cdot \text{CrO}_3 + 2\text{H}_2\text{O}$. (Gröger.)
 $2\text{ZnO} \cdot \text{CrO}_3 + \text{H}_2\text{O}$. (Briggs, Z. anorg. **1907**, **56**, 254.)

+ $1\frac{1}{2}\text{H}_2\text{O}$. Ppt. Insol. in H_2O . Sol. in hot H_2CrO_4 + Aq. (Prussen and Philippa, A. **149**, 92.)

+ $2\text{H}_2\text{O}$. Ppt. Not wholly insol. in H_2O . (Prussen and Philippa.)

$3\text{ZnO} \cdot 2\text{CrO}_3 + \text{H}_2\text{O}$ (Gröger.)

Zinc chromate, ZnCrO_4 .

Insol. in H_2O ; very sol. in acids; decomp. by boiling with H_2O . (Schulze, Z. anorg. **1895**, **10**, 154.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. **1898**, **20**, 830.)

Insol. in acetone (Naumann, B. **1904**, **37**, 4329.)

+ H_2O (Gröger, Z. anorg. **1911**, **70**, 135.)

Zinc dichromate, $\text{ZnCr}_2\text{O}_7 + 3\text{H}_2\text{O}$.

Hygroscopic.

Very sol. in H_2O and sl. decomp. by boiling. (Schulze, Z. anorg. **1895**, **10**, 153.)

Zinc trichromate, $\text{ZnCr}_3\text{O}_{10} + 3\text{H}_2\text{O}$.

Deliquescent; very sol. in H_2O . (Gröger, Z. anorg. **1910**, **66**, 10.)

Zinc chromate ammonia, $\text{ZnCrO}_4 \cdot \text{NH}_3 + \text{H}_2\text{O}$.

Decomp. by H_2O . (Gröger, Z. anorg. **1908**, **58**, 417.)

$\text{ZnCrO}_4 \cdot 4\text{NH}_3 + 5\text{H}_2\text{O}$. Decomp. by H_2O . Sol. in NH_4OH + Aq. Insol. in alcohol and ether. (Malaguti and Sarzeau, A. ch. (3) **9**, 431.)

+ $3\text{H}_2\text{O}$. Efflorescent. Decomp. by H_2O . Easily sol. in dil. acids and NH_4OH + Aq. (Bieler, A. **151**, 223.)

$2\text{ZnO} \cdot 3\text{CrO}_3 \cdot 10\text{NH}_3 + 10\text{H}_2\text{O}$. Ppt. (Malaguti and Sarzeau.)

Zinc dichromate mercuric cyanide, $\text{ZnCr}_2\text{O}_7 \cdot 2\text{Hg}(\text{CN})_2 + 7\text{H}_2\text{O}$.

Very sol. in H_2O . Stable in aqueous solution at 100° . (Kruss, Z. anorg. **1895**, **8**, 460.)

Perchromic acid

See **Perchromic acid**.

Chromicomolybdic acid, $\text{Cr}_2\text{O}_3 \cdot 12\text{MoO}_3 + 28\text{H}_2\text{O}$.

Slowly sol. in H_2O . (Hall, J. Am. Chem. Soc. **1907**, **29**, 708.)

Ammonium chromicomolybdate, $3(\text{NH}_4)_2\text{O} \cdot \text{Cr}_2\text{O}_3 \cdot 12\text{MoO}_3 + 20\text{H}_2\text{O}$.

Sol. in H_2O . (Strüve, J. pr. **61**, 457; Hall, J. Am. Chem. Soc. **1907**, **29**, 695.)

+ $26\text{H}_2\text{O}$. (Marckwald, Dissert, **1895**.)

Ammonium barium chromicomolybdate, $(\text{NH}_4)_2\text{O} \cdot 22\text{BaO} \cdot \text{Cr}_2\text{O}_3 \cdot 12\text{MoO}_3 + 20\text{H}_2\text{O}$.

(Hall, J. Am. Chem. Soc. **1907**, **29**, 707.)

Barium chromicomolybdate, 4BaO , Cr_2O_3 , $12\text{MoO}_3 + 15\text{H}_2\text{O}$; 4BaO , Cr_2O_3 , $12\text{MoO}_3 + 18\text{H}_2\text{O}$; 5BaO , Cr_2O_3 , $12\text{MoO}_3 + 16\text{H}_2\text{O}$.

Ppts. (Hall, J. Am. Chem. Soc. 1907, 29, 705.)

Lead chromicomolybdate, 4PbO , Cr_2O_3 , $12\text{MoO}_3 + 22\text{H}_2\text{O}$, and $+24\text{H}_2\text{O}$.

Ppts. (Hall, J. Am. Chem. Soc. 1907, 29, 706.)

Mercurous chromicomolybdate, $8\text{Hg}_2\text{O}$, Cr_2O_3 , $12\text{MoO}_3 + 16\text{H}_2\text{O}$.

Ppt. (Hall, J. Am. Chem. Soc. 1907, 29, 707.)

Potassium chromicomolybdate, K_2O , Cr_2O_3 , 3MoO_3 .

Sol. in $\text{HCl} + \text{Aq}$ with evolution of Cl . (Bradbury, Z. anorg. 1894, 7, 46.)

$3\text{K}_2\text{O}$, Cr_2O_3 , $12\text{MoO}_3 + 20\text{H}_2\text{O}$. Sol. in 38.51 pts. H_2O at 17° . (Struve; Hall.)

$+24\text{H}_2\text{O}$. (Hall.)

$4\text{K}_2\text{O}$, Cr_2O_3 , $12\text{MoO}_3 + 15\text{H}_2\text{O}$. (Hall, J. Am. Chem. Soc. 1907, 29, 709.)

$7\text{K}_2\text{O}$, $2\text{Cr}_2\text{O}_3$, $24\text{MoO}_3 + 32\text{H}_2\text{O}$. (Hall.)

Silver chromicomolybdate, $5\text{Ag}_2\text{O}$, Cr_2O_3 , $12\text{MoO}_3 + 17\text{H}_2\text{O}$

Ppt. (Hall.)

Sodium chromicomolybdate, $3\text{Na}_2\text{O}$, Cr_2O_3 , $12\text{MoO}_3 + 21\text{H}_2\text{O}$.

Efflorescent. Easily sol in H_2O . (Struve)

Chromic sulphuric acid.

See Sulphochromic acid.

Chromicyanhydric acid, $\text{H}_2\text{Cr}(\text{CN})_2(?)$.

Insol. in H_2O . (Kaiser, A. Suppl. 3, 163.)

Ammonium chromicyanide, $(\text{NH}_4)_3\text{Cr}(\text{CN})_6$

Easily sol. in H_2O . (Kaiser, A. Suppl. 3, 163.)

Cupric chromicyanide, $\text{Cu}_2[\text{Cr}(\text{CN})_6]$.

Ppt. Insol. in dil. or conc. acids, except on heating. Insol. in NH_4OH , or $\text{KOH} + \text{Aq}$. (Kaiser.)

Lead chromicyanide, basic, $3\text{Pb}(\text{CN})_2$, $2\text{Cr}(\text{CN})_6$, $\text{Pb}(\text{OH})_2$.

Ppt. Sol. in HNO_3 , $\text{NaOH} + \text{Aq}$, or Pb salts $+ \text{Aq}$. (Kaiser.)

Potassium chromicyanide, $\text{K}_3\text{Cr}(\text{CN})_6$.

Very sol. in H_2O . 100 pts. cold H_2O dissolve 30.9 pts. salt. Insol. in absolute alcohol, but somewhat sol. in dil. alcohol.

Sol. in conc. H_2SO_4 without decomp (Kaiser, A. Suppl. 3, 170.)

Silver chromicyanide, $\text{Ag}_3\text{Cr}(\text{CN})_6$

Insol. in all solvents, excepting $\text{KCN} + \text{Aq}$ (Kaiser.)

Sol. in large excess of $\text{HCl} + \text{Aq}$. Sl. sol in cold, easily sol. in hot conc. HNO_3 . Very sol. in conc. H_2SO_4 . Insol. in hot or cold acetic acid. (Cruser, Dissert. 1896.)

Chromisulphocyanhydric acid.

$\text{H}_2\text{Cr}(\text{SCN})_6$.

Known only in aqueous solution.

Ammonium chromisulphocyanide, $(\text{NH}_4)_3\text{Cr}(\text{SCN})_6 + 4\text{H}_2\text{O}$.

Easily sol. in H_2O . (Rössler, A. 141, 185.)

Barium chromisulphocyanide, $\text{Ba}_2[\text{Cr}(\text{SCN})_6]_2 + 16\text{H}_2\text{O}$.

Deliquescent, and sol. in H_2O . (R.)

Lead chromisulphocyanide, $\text{Pb}_3[\text{Cr}(\text{SCN})_6]_3$, $4\text{PbO}_2\text{H}_2 + 8\text{H}_2\text{O}$.

Insol. in H_2O , but decomp. thereby into— $\text{Pb}_2[\text{Cr}(\text{SCN})_6]_2$, $4\text{PbO}_2\text{H}_2 + 5\text{H}_2\text{O}$. Insol. in H_2O .

Potassium chromisulphocyanide, $\text{K}_3\text{Cr}(\text{SCN})_6 + 4\text{H}_2\text{O}$

Sol. in 0.72 pt. H_2O . and 0.91 pt. alcohol.

Silver chromisulphocyanide, $\text{Ag}_3\text{Cr}(\text{SCN})_6$.

Insol. in H_2O or conc. $\text{HNO}_3 + \text{Aq}$. Insol. in $\text{NH}_4\text{OH} + \text{Aq}$. Sol. in $\text{KCN} + \text{Aq}$.

Sodium chromisulphocyanide, $\text{Na}_3\text{Cr}(\text{SCN})_6 + 7\text{H}_2\text{O}$.

Deliquescent; sol. in H_2O .

Chromium,

Two modifications—(a) Not attacked by H_2O . Easily sol. in cold $\text{HCl} + \text{Aq}$. Sl. sol. in dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. (Deville.) Easily sol. in a hot mixture of 1 pt H_2SO_4 and 20 pts. H_2O . (Regnault, A. ch. 62, 357.) Easily sol. in warm conc. H_2SO_4 . (Gmelin.) Very slowly sol. in hot $\text{HNO}_3 + \text{Aq}$. (Vauquelin.)

Insol. in dil. or conc. $\text{HNO}_3 + \text{Aq}$. (Deville.) Very slowly (Richter), not at all (Berzelius) sol. in hot aqua regia. Easily sol. in $\text{HF} + \text{Aq}$.

(b) Insol. in all acids, even aqua regia (Fremy); probably contains Si.

Pure Cr is sol. in conc. H_2SO_4 , HCl and dil. HNO_3 ; sol. in $\text{HgCl}_2 + \text{Aq}$.

Insol. in fuming HNO_3 and aqua regia. (Moissan, C. R. 1894, 119, 187.)

Cr prepared by aluminothermic method is sol. in haloid acids to form chromic and chromous salts, even in absence of air. (Doring, J. pr. 1902, (2) 66, 65; 1906, (2) 73, 393.)

Aluminothermic Cr is active in contact

with HCl, HBr, HI, HF, H_2SO_4 , $\text{H}_2\text{C}_2\text{O}_4$, i. e., sol in cold conc or warm dil. acids. Is inactive in contact with conc HNO_3 , $\text{H}_2\text{Cr}_2\text{O}_4$, HClO_3 , HClO_4 , H_3PO_4 , KOH, citric, formic, acetic and tartaric acids. Cause attributed to a different electric state (Hittorff, Z. phys. Ch. 1898, 25, 729.)

Chromium ammonia compounds.

See—

Bromotetramine chromium compounds,
 $\text{BrCr}(\text{NH}_3)_4\text{X}_2$.

Rhodochromium compounds,
 $(\text{HO})\text{Cr}_2(\text{NH}_3)_{10}\text{X}_5$.

Rhodosechromium compounds,
 $(\text{HO})_3\text{Cr}_2(\text{NH}_3)_8\text{X}_3$.

Roseochromium compounds,
 $\text{Cr}(\text{NH}_3)_5(\text{OH})_2\text{X}_4$.

Xanthochromium compounds,
 $(\text{HO}_2)\text{Cr}(\text{NH}_3)_5\text{X}_2$.

Chromium arsenide, CrAs .

Insol in mineral acids. (Dieckmann, Z. anorg. 1914, 86, 294.)

Cr_2As_3 Insol. in mineral acids (Dieckmann.)

Chromium azoimide, CrN_3 .

Pptd. by addition of alcohol and ether.
Insol. in H_2O . (Curtius, J. pr. 1900, (2) 61, 410.)

Chromium boride, CrB .

Insol. in HCl, dil. H_2SO_4 , HF, HF + HNO_3 .
Sl. sol. in HNO_3 and in aqua regia. (Wedekind, B. 1907, 40, 299.)

Sol. in cold dil. or conc. HCl, HF, and H_2SO_4 . (Jassonneix, C. R. 1906, 143, 1151.)
 Cr_3B_2 . Sol. in conc. or dil. HF, HCl, H_2SO_4 ; insol. in HNO_3 or alkalis + Aq. (Jassonneix.)

Chromous bromide, CrBr_2 .

Sol. in H_2O . Not deliquescent in dry air. (Moissan, C. R. 92, 1051.)

Chromic bromide, CrBr_3 .

Anhydrous Insol. in H_2O , but dissolves at once in presence of the least trace of CrBr_2 . (Bauca, A. 111, 382.)

+ $6\text{H}_2\text{O}$. Deliquescent. Very sol. in H_2O . H_2O dissolves more than 2 pts. crystals at ord. temp. Very sol. in alcohol. Insol. in ether. (Recoura, C. R. 110, 1029.)

Blue modification. Insol. in alcohol. (Recoura, C. R. 110, 1193.)

Very hygroscopic. Easily sol in alcohol and acetone. Insol in ether (Werner, A. 1902, 322, 343.)

+ $8\text{H}_2\text{O}$. Sol. in H_2O . (Varenne, C. R. 93, 727.)

Chromium molybdenyl bromide, $\text{CrMo}_3\text{O}_4\text{Br}_4$.

Apparently wholly insol in dil. acids. Sol. in hot conc HCl + Aq with decomp. Insol in M_2CrO_4 + Aq. (Atterberg.)

+ $2\text{H}_2\text{O}$. Apparently wholly insol. in dil acids.

Sol. in hot conc. HCl + Aq with decomp. Insol. in M_2CrO_4 + Aq (Atterberg.)

Chromic rubidium bromide, CrBr_3 , 2RbBr + H_2O .

Sol. in H_2O with decomp (Werner, A. 1902, 322, 345.)

Chromic bromide ammonia.

See Bromotetramine chromium bromide.

Chromous bromide hydrazine, CrBr_2 , $2\text{N}_2\text{H}_4$.

Insol. in H_2O . Sol. in acids. Insol in alcohol, ether and similar solvents. (Traube, B. 1913, 46, 1507.)

Chromium carbide, Cr_4C .

(Moissan, C. R. 1894, 119, 187.)
 Cr_3C_2 . Does not decomp. H_2O at ordinary temp. or at 100° ; insol. in conc. HCl, HNO_3 and aqua regia; sol. in dil. HCl (slowly); insol. in fused KOH; sol. in fused KNO_3 . (Moissan, Bull. Soc. 1894, (3) 117, 1016.)

Chromium iron carbide, $3\text{Fe}_3\text{C}$, $2\text{Cr}_3\text{C}_2$.

Decomp. by H_2O ; sol. in gaseous hydrocarbons; insol. in HNO_3 and aqua regia. (Williams, C. R. 1898, 127, 484.)

Chromium tungsten carbide, CW_2 , $3\text{Cr}_3\text{C}_2$.

Not attacked by acids.
Slowly attacked by fused KOH or alkali carbonates. Rapidly decomp. by fused alkali nitrates or KClO_3 . (Moissan, C. R. 1903, 137, 294.)

Chromous chloride, CrCl_2 .

Deliquescent. Very sol. in H_2O with evolution of much heat. (Moberg, J. pr. 29, 175.)

Practically insol in ether. Moderately sol. in absolute alcohol, methyl alcohol, and acetaldehyde (Rohland, Z. anorg. 1899, 21. 39.)

+1½H₂O. (Moissan, A. ch. (5) 25. 40.)
+2H₂O (Knight and Rich, Chem. Soc. 1911, 99. 89.)
+3H₂O. (Knight and Rich.)

Chromous hydrogen chloride, 3CrCl₂, 2HCl + 13H₂O

Decomp. by H₂O. (Recoura, C. R. 100. 1227.)

Sl. sol. in liquid NH₃. (Gore, Am. Ch. J. 1898, 20. 827.)

Chromic chloride, CrCl₃.

Anhydrous.—*Peach-blossom-colored modification.* Insol. in pure H₂O (Peligot), but by long continued boiling of the finely divided salt with H₂O, traces are dissolved with decomp. Not decomp. by boiling conc. H₂SO₄, or other acids, even aqua regia.

Easily sol. with evolution of heat in H₂O containing only 1/40,000 pt. CrCl₂ (Peligot, J. pr. 36. 150). Also sol. in presence of traces of SnCl₂ (5 mg. SnCl₂ cause 1 g. CrCl₃ to dissolve), FeCl₂, Cu₂Cl₂, Na₂S₂O₃, and other reducing substances; chlorides without reducing properties have no effect. (Pelouze, A. ch. (3) 14. 251). TiCl₃ and SO₂ have similar solvent action. (Ebelmen, A. ch. (3) 20. 390); also Zn + dil. acids. (Moberg.)

Insol. in dil. alkalis + Aq; very slowly decomp. by boiling conc. alkalis or alkali carbonates + Aq. (Fellenberg, Pogg. 50. 76.)

Difficulty sol. in methyl acetate. (Nau-mann, B. 1909, 42. 3790.)

Insol. in CS₂. (Arctowski, Z. anorg. 1894, 6. 257.)

Insol. in acetone. (Eidmann, C. C. 1899. II, 1014.)

Practically insol. in absolute ethyl alcohol, methyl alcohol, acetaldehyde and ether. (Rohland, Z. anorg. 1899, 21. 39.)

Yellow. Sl. sol. in benzonitrile. (Nau-mann, B. 1914, 47. 1369.)

Violet modification. Very sol. in H₂O to form a green solution. (Moberg, J. pr. 44. 325.)

The violet mod. is almost insol. in H₂O but if 1/20,000 pt. chromous chloride is present, it is readily sol. (Rohland, Z. anorg. 1899, 21. 39.)

+4H₂O. Sl. deliquescent. Very sol. in H₂O, alcohol, and ethyl acetate. (Godeffroy, Bull. Soc. (2) 43. 229.)

+6H₂O. Deliquescent. Sol. in H₂O, but probably decomp. to CrOCl₂.

Practically insol. in ether. Moderately sol. in absolute ethyl alcohol, methyl alcohol and acetaldehyde. (Rohland, Z. anorg. 1899, 21. 39.)

"Monochlorochromic chloride" is sol. in ether and fuming HCl(1:1). (Bjerrum, B. 1906, 39. 1599.)

Green modification.

Solubility in H₂O at 25°.

25 g. green CrCl₃ + 6H₂O and 10 g. H₂O.

Time	Total Solu-bility in %	Composition of the sat solution	
		% violet salt	% green salt
¼ hr.	58 36	8 30	91 70
½ hr.		12 57	87 43
4 hrs	63 27	24 80	75 20
1 day	68 50	37 64	62 36
2 days		40 90	59 10
3 "	68 95	42 78	57 22
11 "		42 84	57 16
13 "		42 39	57.61
19 "	68 58	42 62	57 38

(Olie, Z. anorg. 1906, 51. 55.)

Solubility of green CrCl₃ + 6H₂O in H₂O at 32°.

10 g. CrCl₃ + 6H₂O and 4 g. H₂O

Time	Total solubility in %	Composition of the dissolved substance		Solid phase
		% violet salt	% green salt	
7'	63 69	12.87	87.13	Almost all dissolved
45'	66 24	21 43	78 57	
2h 5'	69 53	34 53	65 47	
48h	69 33	45 27	54 73	
* 11 dys.	70 81	45 27	54 73	

* First 8 days at 35°.

(Olie, Z. anorg. 1907, 53. 276.)

Solubility of green CrCl₃ + 6H₂O in H₂O at 35°.

10 g. CrCl₃ + 6H₂O and 3.3 g. H₂O.

Time	Total solubility in %	Composition of the dissolved substance	
		% violet salt	% green salt
8'	65.85	16 47	83.53
38'	66.74	25 02	74 98
1h	66 21	25.45	74.55
2h 10'	68 90	31.47	68.53
4h	70.79	36.28	63.72
23h	71.34	42.95	57.05
72h	70.79	42.88	57.12

(Olie, l. c.)

If a solution saturated with the green hexahydrate below 32° is cooled, the decahydrate separates out; if the solution is saturated above 32°, both the decahydrate and hexahydrate separate out on cooling. (Olie, l. c.)

*Violet modification.*Solubility in H_2O at 25° 25 g violet $CrCl_3 \cdot 6H_2O$ and 10 cem of a 35% solution of green $CrCl_3 \cdot 6H_2O$.

Time	Total Solubility in %	Composition of the sat solution	
		% violet salt	% green salt
1 $\frac{1}{6}$ hr.	65 49	84 05	15 95
5 "		84 47	15 53

(Olie, l. c.)

+ $6\frac{1}{2}H_2O$. *Green modification.* 100 pts. H_2O dissolve 130 pts. salt at 15° . Sol. in alcohol. (Recoura, C. R. 102. 518.)

Grayish-blue modification. Very sol. in H_2O . (Recoura, C. R. 102. 548.)

+ $10H_2O$. Very deliquescent; melts in crystal H_2O at $6-7^\circ$. Very sol. in H_2O , alcohol, and ethyl acetate. (Godeffroy.)

Easily sol. in H_2O ; can be recryst. from H_2O . Sol. in alcohol and ether. (Werner, B. 1906, 39. 1827.)

*Green modification.*Solubility of green $CrCl_3 \cdot 10H_2O$ in H_2O at 29° .14.2 g. $CrCl_3 \cdot 10H_2O$ and 2.5 g. H_2O .

Time	Total solubility in %	Composition of the dissolved substance		Solid phase
		% violet salt	% green salt	
7'	61 35	8 71	91 29	$CrCl_3 \cdot 10H_2O$

1 $\frac{1}{2}$ 55'	65 04	25 05	74 95	"
4 $\frac{1}{2}$ 30'	67 41	32 90	67 10	$CrCl_3 \cdot 6H_2O$
24 $\frac{1}{2}$	69 44	42 93	57 07	all dissolved
28 $\frac{1}{2}$		31 78	68 22	$CrCl_3 \cdot 10H_2O$
29 $\frac{1}{2}$	67 59	33 65	66 36	$CrCl_3 \cdot 6H_2O$
48 $\frac{1}{2}$	69 42	42 17	57 83	"
72 $\frac{1}{2}$	68 69	43 80	56 20	"

(Olie, Z. anorg. 1907, 53. 275.)

The composition of the hydrates formed by $CrCl_3$ at different dilutions is calculated from determinations of the lowering of the fr. pt. produced by $CrCl_3$ and of the conductivity and sp gr. of $CrCl_3 + Aq.$ (Jones, Am. Ch. J. 1905, 34. 310)

Chromic glucinum chloride, $CrCl_3$, $GICl_2 + H_2O$.

Sol. in H_2O with decomp. (Neumann, A. 244. 329.)

Chromic lithium chloride, $CrCl_3$, $2LiCl + 4H_2O$.

Very hygroscopic.

Sol in ice water but solution soon decomp.

Easily sol. in alcohol. (Werner, B. 1901, 34. 1603.)

$[Cr(OH_2)Cl_3]Li_2 + 4H_2O$.

Very hygroscopic. Sol. in ice cold H_2O and in alcohol. (Werner, B 1901, 34. 1604.)

Chromic magnesium chloride, $CrCl_3$, $MgCl_2 + H_2O$.

Decomp. by H_2O . (Neumann.)

Chromic phosphoric chloride, $CrCl_3$, PCl_5 .

Decomp. by H_2O . (Cronander.)

Chromium platinum chloride.

See chloroplatinate, chromium.

Chromic potassium chloride, $CrCl_3$, KCl .

Decomp. by H_2O .

$CrCl_3$, $2KCl + H_2O$. (Neumann, A. 244. 329.)

$CrCl_3$, $3KCl$. Easily sol. in H_2O with decomp. (Freym, A. ch. (3) 12. 361.)

Chromic rubidium chloride, $\text{CrCl}_3 \cdot 2\text{RbCl} + \text{H}_2\text{O}$.

Decomp by H_2O . (Neumann, A 244. 329.)

Slowly sol. in cold, rapidly sol. in hot H_2O with decomp (Werner, B. 1901, 34. 1603.)

$\text{CrCl}_3 \cdot 3\text{RbCl} + 8\text{H}_2\text{O}$. Unstable. Decomp. by alcohol. (Werner, B 1906, 39. 1830.)

Chromic sodium chloride, $\text{CrCl}_3 \cdot \text{NaCl}$.

Sol. in H_2O . (Berzelus.)

$\text{CrCl}_3 \cdot 3\text{NaCl}$. Sol. in H_2O . (Berzelus.)

Chromic thallium chloride, $\text{CrCl}_3 \cdot 3\text{TlCl}$.

Sol. with decomp. in H_2O . (Neumann, A 244. 329.)

Chromic chloride ammonia.

See Chlorotetramine chromium chloride.

Chromous chloride hydrazine, $\text{CrCl}_2 \cdot 2\text{N}_2\text{H}_4$.

Insol. in H_2O . Sol. in acids. Insol. in alcohol, ether and similar solvents. (Traube, B. 1913, 46. 1506.)

Chromic chloride ferric oxide.

Fe_2O_3 is easily sol. in dil., difficultly sol. in conc $\text{CrCl}_3 + \text{Aq}$ (Béchamp. A, ch. (3) 57. 311)

Chromous fluoride, CrF_2 .

Sl. sol. in H_2O , hot H_2SO_4 or dil. HNO_3 .

Sol. in boiling HCl . Insol. in alcohol. (Poulenc, C. R. 1893, 116. 254.)

Chromic fluoride, CrF_3 .

Perfectly sol. in H_2O . (Berzelus.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 827.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314.)

+ $3\text{H}_2\text{O}$. Insol. in H_2O . (Werner and Costachescu, B. 1908, 41. 4243.)

+ $3\frac{1}{2}\text{H}_2\text{O}$. Sol. in H_2O . (Poulenc, C. R. 1893, 116. 255.)

+ $6\text{H}_2\text{O}$. Sl. sol. in H_2O . (Werner and Costachescu, B. 1908, 41. 4242.)

+ $9\text{H}_2\text{O}$. *Violet modification*. Very sl. sol. in H_2O . Insol. in alcohol. Sol. in HCl , and $\text{KOH} + \text{Aq}$. (Fabris, Gazz. ch. it. 20. 582.)

Chromium hexafluoride, CrF_6 .

Decomp. by H_2O with evolution of heat. (Berzelus.)

Correct composition is CrO_2F_2 . (Oliveri, Gazz. ch. it. 16. 218.)

Chromic cobaltous fluoride, $\text{CrF}_3 \cdot \text{CoF}_2 + 7\text{H}_2\text{O}$.

Easily sol. in H_2O . (Petersen, J. pr. (2) 40. 60.)

Chromic cupric fluoride, $\text{CrCuF}_3 \cdot 5\text{H}_2\text{O}$.

Can be cryst. from $\text{HF} + \text{Aq}$. (Higley, J. Am. Chem. Soc. 1904, 26. 630)

Chromic nickel fluoride, $\text{CrF}_3 \cdot \text{NiF}_2 + 7\text{H}_2\text{O}$.

Somewhat more sol. in H_2O than CrF_3 , $\text{CoF}_2 + 7\text{H}_2\text{O}$. (Petersen, J. pr. (2) 40. 61.)

Chromic potassium fluoride, $\text{CrF}_3 \cdot 3\text{KF}$.

Nearly insol. in H_2O . (Christensen, J. pr. (2) 35. 161.)

$\text{CrF}_3 \cdot 2\text{KF} + \text{H}_2\text{O}$. Nearly insol. in H_2O . Sol in conc. $\text{HCl} + \text{Aq}$. (Christensen.)

Chromic sodium fluoride, $\text{CrF}_3 \cdot 2\text{NaF} + \text{H}_2\text{O}$.

(Wagner, B. 19. 896.)

Chromic thallous fluoride, $2\text{CrF}_3 \cdot 3\text{TlF}$.

Sol. in hot H_2O , less sol. in cold. Sl. sol. in HF . (Ephraim, Z. anorg. 1909, 61. 242)

Chromic zinc fluoride, $\text{CrF}_3 \cdot \text{ZnF}_2 + 7\text{H}_2\text{O}$.

Can be cryst. from $\text{HF} + \text{Aq}$ (Higley, J. Am. Chem. Soc. 1904, 26. 630.)

Colloidal solution is perfectly clear. (Biltz, B. 1902, 35. 4433.)

Chromous hydroxide, CrO_2H_2 .

Decomp. by H_2O , especially if hot. (Feligot, A. ch. (3) 12. 539.)

Slowly sol. in cold conc. acids, even aqua regia; almost insol. in dil. acids (Moberg, J. pr. 43. 119.)

Chromic hydroxide, $\text{Cr}_2\text{O}_3 \cdot x\text{H}_2\text{O}$, probably $\text{Cr}_2\text{O}_3\text{H}_6$.

Insol. in H_2O . Easily sol. in acids. Easily sol. in cold KOH , or $\text{NaOH} + \text{Aq}$; much less sol. in cold $\text{NH}_4\text{OH} + \text{Aq}$; the presence of NH_4Cl has no influence upon solubility in $\text{NH}_4\text{OH} + \text{Aq}$. (Fresenius.) Insol. in $\text{NH}_4\text{OH} + \text{Aq}$ if it has been thoroughly washed.

Insol. in $\text{KCN} + \text{Aq}$, but sl. sol. in $\text{KCN} + \text{HCN} + \text{Aq}$. (Rodgers, 1834.)

Gradually sol. in dil. $\text{FeCl}_3 + \text{Aq}$; after three months, 2 mols. $\text{Cr}_2\text{O}_3\text{H}_6$ are dissolved by 1 mol FeCl_3 without pptn. of $\text{Fe}_2\text{O}_3\text{H}_6$. (Béchamp, A. ch. (3) 57. 296.)

Also sol. in $\text{CrCl}_3 + \text{Aq}$; in four months, $1\frac{1}{2}$ mols. $\text{Cr}_2\text{O}_3\text{H}_6$ are dissolved by 1 mol. CrCl_3 . (Béchamp.)

Sol. in $\text{Cr}(\text{NO}_3)_3 + \text{Aq}$, and clear solution formed as long as 3 mols. HNO_3 are present for 8 mols. Cr_2O_3 . (Ordway, Sill. Am. J. (2) 27. 197.)

Chromic hydroxide, pptd. by alkalis is easily sol. in excess of the reagent; after being dried in a vacuum, however, it is insol. in alkalis. (Herz, Z. anorg. 1901, 28. 344.)

Freshly pptd. it is sol. in aq. alkali, but it is readily changed into a modification which is insol. (Herz, Z. anorg. 1902, 31. 352.)

The solubility of chromic hydroxide in an

aqueous solution of red chromic chloride is not directly proportional to the concentration of the latter—a basic chloride is probably formed. (Fischer, *Z anorg* 1904, **40**, 43.)

Not pptd in presence of Na citrate (Spiller.)

Insol. in amylamine + Aq; not pptd. in presence of alkali tartrates, sugar, etc.

$\text{Cr}_2\text{O}_3\text{H}_6 + 4\text{H}_2\text{O}$. Difficultly sol in acids.

$\text{Cr}_2\text{O}_3\text{H}_6 + \text{H}_2\text{O}$. Extremely hygroscopic.

Exists in a soluble modification, obtained by dialysis, solution can be diluted with pure H_2O , but gelatinizes with traces of salts (Graham, *Roy. Soc. Trans.* 1861, 183.)

$\text{Cr}_2\text{O}_2(\text{OH})_2$. Insol. in boiling dil. HCl + Aq.

$\text{Cr}_2\text{O}(\text{OH})_4$ (Guignet's green). Scarcely sol. in boiling HCl + Aq (Salvétat, *C. R.* 48, 295.)

Guignet gave formula as $2\text{Cr}_2\text{O}_3 + 3\text{H}_2\text{O}$.

Chromochromic hydroxide, Cr_3O_4 , $\text{H}_2\text{O}(\text{?})$.

Slightly attacked by acids. (Peligot, *A. ch.* (3) 12, 539.)

Chromous iodide, CrI_2 .

Easily sol. in H_2O (Moissan, *A. ch.* (5) 25, 401.)

Chromic iodide, $\text{CrI}_3(\text{?})$.

Insol. in cold, sol in hot H_2O , but no separation occurs on cooling. (Berlin.)

+ $9\text{H}_2\text{O}$ Hygroscopic. Sol in alcohol and acetone. Insol in CHCl_3 (Higley, *J. Am. Chem Soc* 1904, **26**, 628.)

Chromous iodide hydrazine, CrI_2 , $2\text{N}_2\text{H}_4$ (Traube, *B* 1913, **46**, 1507.)

Chromium nitride, CrN .

Insol. in dil. acids and alkalis, conc. HNO_3 , HCl, or HF + Aq, even on heating. Slowly sol. in hot aqua regia or cold H_2SO_4 . Sol. in cold solutions of alkali hypochlorites. (Ufer, *A.* 112, 281.)

Insol. in HCl, HNO_3 , and aqua regia (Férée, *Bull. Soc.* 1901, (3) 25, 618.)

Unacted upon by acids at ordinary temperatures. (Smits, *Chem. Soc.* 1897, **72**, (2) 33.)

Cr_3N_2 . Slowly attacked by conc. HNO_3 and by $\text{HNO}_3 + \text{HCl}$. All other reagents are without action. (Henderson and Galletly, *J. Soc. Chem. Ind.* 1908, **27**, 387.)

CrN_3 . See Chromium azoimide.

Chromous oxide, CrO .

Insol. in HNO_3 and dil H_2SO_4 + Aq.

Sol. in HCl. (Férée, *Bull. Soc.* 1901, (3) 25, 619.)

Chromic oxide, Cr_2O_3

When ignited is nearly insol in acids, but dissolves in H_2SO_4 by long boiling. Insol in liquid HCl. (Gore.)

Insol in acetone. (Fidmann, *C. C.* 1899, II, 1014.)

Solubility in (calcium succate + sugar) + Aq.

1 l solution containing 418.6 g sugar and 34.3 g CaO dissolves 1.07 g. Cr_2O_3 ; 1 l. solution containing 296.5 g sugar and 24.2 g. CaO dissolves 0.56 g Cr_2O_3 ; 1 l solution containing 174.4 g. sugar and 14.1 g. CaO dissolves 0.20 g. Cr_2O_3 . (Bodenbender, *J. B.* 1865, 600.)

See also Chromic hydroxide.

+ H_2O The compound to which Bunsen gave the formula Cr_3O_8 . Insol. in acids, but easily attacked by HNO_3 (Férée, *Bull. Soc.* 1901, (3) 25, 620.)

Chromochromic oxide, $\text{Cr}_3\text{O}_4 = \text{CrO}$, Cr_2O_3

Known only in form of hydroxide, which see

+ $3\text{H}_2\text{O}$. Stable in dry air. Decomp. in moist air (Baugé, *C. R.* 1898, **127**, 552.)

Cr_4O_8 , or Cr_5O_8 (?). Insol. in acids or in aqua regia. (Bunsen, *Pogg.* 91, 622.)

Not obtainable. (Geuther, *A.* 118, 66.)

Formula is $\text{Cr}_2\text{O}_3 + \text{H}_2\text{O}$. (Férée.)

Chromium trioxide, CrO_3 .

Deliquescent, and very sol. in H_2O , to form solution of H_2CrO_4 or $\text{H}_2\text{Cr}_2\text{O}_7$.

Solubility in H_2O at t° .

t°	0°	15°	50°	99°
% CrO_3	62.08	62.38	64.55	67.39

(Mylius and Funk, *Gm. K.* 3, 1, 1332.)

Sat. CrO_3 + Aq contains at

0°	20°	60°
61.54	62.52	65.12% CrO_3

(Koppel and Blumenthal, *Z. anorg.* 1907, **53**, 228.)

The system $\text{CrO}_3 - \text{H}_2\text{O}$ has been studied at temp. from 0° to -74° . In the limits of concentration investigated, from 0—71.2% CrO_3 , no hydrate of CrO_3 cryst. from the aq. solution. (Kremann, *M.* 1911, **32**, 622.)

Sat. CrO_3 + Aq contains at:

82°	100°	115°
66	67.4	68.4% CrO_3

(Kremann, *M.* 1911, **32**, 620.)

(Koppel and Blumenthal, Z. anorg. 1907, **53**, 254.)

Sol. in H₂SO₄, the solubility is least when the acid contains 66% H₂SO₄ (Schrotter); 84.5% H₂SO₄ (Bolley)

Very sol. in H₂SO₄ of 1.85 sp gr. Sl sol in cold KHSO₄+Aq (Fritzsche.)

The statement that CrO₃ is insol in acids is incorrect. 2.85 g. (ignited) are sol. in HNO₃ to the extent of 2.53 g. 0.51 g. (ignited) are sol in HNO₃ to the extent of 0.77 g. (Jovitschitsch, M. 1909, **30**. 48.)

Practically insol. in POCl₃ (Walden, Z. anorg. 1910, **68**. 312.)

Sl. sol. in liquid NH₃. (Franklin, Am. Ch. J. 1898, **20**. 827.)

Sol. in alcohol with decomp

Sol. in anhydrous ether.

Sol. in acetic anhydride. (Fry, J. Am. Chem. Soc. 1911, **33**. 702.)

Sol. in acetone (Naumann, B. 1904, 4328.)

Sol. in benzonitrile (Naumann, B. 1914, **47**, 1369.)

Sol. in methyl acetate (Naumann, B. 1909, **42**. 3790.)

Difficultly sol in ethyl acetate (Naumann, B. 1910, **43**. 314.)

Chromium oxide, Cr₂O₃=2Cr₂O₃, CrO₃.

Cr₂O₁₅=3Cr₂O₃, 2CrO₃

Cr₂O₈=Cr₂O₃, CrO₃.

Cr₆O₁₂=Cr₂O₃, 3CrO₃.

Cr₆O₁₅=Cr₂O₃, 4CrO₃.

See **Chromate**, **chromium**.

Chromium peroxide, Cr₂O₇(?)

More sol. in ether than in H₂O. Ether solution is somewhat more stable than aqueous solution (Aschoff, J. pr. **81**. 401.)

Formula is CrO₃, H₂O₂ (Moissan, C. R. **97**. 96.)

Chromium peroxide ammonia, CrO₄, 3NH₃.

Sol. in H₂O with partial decomp.

Sl. sol. in NH₄OH+Aq

Sol. with decomp. in 20% acetic acid. (Hofmann, B. 1905, **38**. 3060.)

Chromium tetroxide potassium cyanide,

CrO₄, 3KCN.

Sol. in H₂O. Insol. in other ordinary solvents. (Wiede, B. 1899, **32**, 381.)

Chromic oxychloride.

From Cr_2O_3 . Sol. in H_2O as long as 1 mol. CrCl_3 is present for $2\frac{1}{2}$ mols $\text{Cr}_2\text{O}_3\cdot\text{H}_2\text{O}$. (Ordway, Sill. Am. J. (2) 27. 197.)

$\text{Cr}_2\text{O}_3, 2\text{CrCl}_3$. Sol. in H_2O . (Kletzensky, Zeit. Ch. 1866. 277.)

$\text{Cr}_2\text{O}_3, \text{CrCl}_3 = \text{CrOCl}$. Anhydrous. Only partly sol. in H_2O .

+ $3\text{H}_2\text{O}$. Very deliquescent, and sol. in H_2O . (Peligot.)

$\text{Cr}_2\text{O}_3, 4\text{CrCl}_3 + 6\text{H}_2\text{O} = \text{Cr}_2\text{OCl}_4 + 2\text{H}_2\text{O}$. (Peligot, J. pr. 37. 38.)

+ $9\text{H}_2\text{O} = \text{Cr}_2\text{OCl}_4 + 3\text{H}_2\text{O}$. Sol. in H_2O (Moberg); = $\text{Cr}_2(\text{OH})_2\text{Cl}_4 + 2\text{H}_2\text{O}$. (Schiff, A. 124. 157.)

$\text{Cr}_2\text{O}_3, 7\text{CrCl}_3 = \text{Cr}_2\text{OCl}_7$. Very sol. in H_2O with decomp. (Besson and Fournier, C R 1909, 148. 1194.)

$\text{Cr}_2\text{O}_3, 8\text{CrCl}_3 + 24\text{H}_2\text{O}$. Sol. in H_2O (Moberg); = $\text{Cr}_2(\text{OH})_2\text{Cl}_8 + 4\text{H}_2\text{O}$. (Schiff, l. c.)

$(\text{CrO}_2)_3\text{Cl}_2$. (Pascal, C. R. 1909, 148. 1464.)

$\text{Cr}_6\text{O}_{13}\text{Cl}_4$. Insol. in H_2O . (Pascal, C. R. 1909, 148. 1464.)

From CrO_3 .

See Chromyl chloride.

Chromic oxychloride potassium chloride, $\text{CrOCl}_3, 2\text{KCl}$.

Decomp. in the air.

Sol. in conc. HCl without decomp. (Weinland, B. 1906, 39. 4043.)

Chromic oxychloride rubidium chloride, $\text{CrOCl}_3, 2\text{RbCl}$.

Decomp. in the air.

Sol. in conc. HCl without decomp. (Weinland, B. 1906, 39. 4045.)

Chromium oxyfluoride, CrO_2F_2 .

See Chromyl fluoride.

Chromium phosphide, CrP .

Insol. in acids, but a trace dissolves in aqua regia. Insol. in $\text{HF} + \text{Aq}$. (Berzelius.)

Not attacked by acids or by aqua regia. (Granger, C. N. 1898, 77. 228.)

Insol. in all acids except a mixture of HNO_3 and HF . (Maronneau, C. R. 1900, 130. 658.)

Insol. in mineral acids. (Dieckmann, Z. anorg. 1914, 86. 295.)

Insol. in aqua regia. (Granger, C. R. 1897, 124. 191.)

Cr_2P_3 . Insol. in mineral acids. (Dieckmann, Z. anorg. 1914, 86. 295.)

Chromous selenide, CrSe .

(Moissan, C R. 90. 817.)

Chromic selenide, Cr_2Se_3 .

Insol. in H_2O . (Moissan, C. R. 90. 817.)

Chromic potassium selenide, $\text{K}_2\text{Cr}_2\text{Se}_4$.

Insol. in HCl . Easily sol. in conc. HNO_3 . (Milbauer, Z. anorg 1904, 42. 451.)

Chromium silicide, Cr_2Si .

Sol. in fused KNO_3 ; insol. in cold HCl and aqua regia.

Insol. in $\text{HF} + \text{Aq}$. (Moissan, C R. 1895, 121. 625.)

CrSi_2 . Sol. in HF . Insol. in HCl and aqua regia. (Chalmot, Am Ch J 1897, 19. 69.)

Cr_3Si_2 . Insol. in dil. HCl , sol. in warm conc. HCl and in HF ; insol. in HNO_3 and H_2SO_4 . (Lebeau, C. R. 1903, 136. 1330.)

Cr_3Si . Sol. in HF ; insol. in other acids; sol. in fused KOH and fused alkali nitrates and carbonates. (Zettell, C. R. 1898, 126. 834.)

Chromous sulphide, CrS .

Insol. in H_2O or $\text{K}_2\text{S} + \text{Aq}$. (Peligot.)

Easily sol. in acids. (Moissan, C. R. 90. 817.)

Sol. in cold conc. acids.

Sol. in molten alkalis. (Mourlot, C R. 1895, 121. 944.)

Min. *Daubrehte*.

Chromic sulphide, Cr_2S_3 .

Insol. in H_2O or alkali sulphides + Aq . Sol. attacked by $\text{HCl} + \text{Aq}$. (W. Muller, Pogg. 127. 404.)

$\text{HNO}_3 + \text{Aq}$ decomposes or not according to method of preparation. Easily decomp. by aqua regia.

Insol. in caustic alkalis + Aq .

Insol. in $\text{K}_2\text{S} + \text{Aq}$. (Berzelius.)

Chromochromic sulphide, $\text{Cr}_3\text{S}_4 = \text{CrS}, \text{Cr}_2\text{S}_3$.

Insol. in H_2O , HCl , or dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. Easily sol. in $\text{HNO}_3 + \text{Aq}$. (Groger, W. A. B. 81. (2) 531.)

Chromic zinc sulphide, Cr_3ZnS_4 .

(Gröger, W. A. B. 1880, 81. 534.)

Chromicyanhydric acid.**Cadmium chromicyanide, $\text{Cd}_3[\text{Cr}(\text{CN})_6]_2$.**

Readily sol. in an excess of KCN and in $\text{NH}_4\text{OH} + \text{Aq}$. Decomp. by conc. HCl , HNO_3 or H_2SO_4 . Slowly decomp. by cold, rapidly by hot dil. HCl , HNO_3 , or H_2SO_4 . Quickly dissolved by aqua regia. Decomp. by boiling with Na_2O_2 , by $\text{NaOH} + \text{Aq}$ and by $\text{Na}_2\text{CO}_3 + \text{Aq}$. Slowly decomp. by boiling acetic acid. (Cruser and Miller, J. Am. Chem. Soc. 1906, 28. 1136.)

Cobaltous chromicyanide, $\text{Co}_3[\text{Cr}(\text{CN})_6]_2$.

Sol. in cold, readily sol. in hot conc. HCl or H_2SO_4 . Sol. sol. even in boiling conc.

IINO₃. Slowly sol. in cold dil. H₂SO₄, HCl or HNO₃. Readily sol. in boiling dil. HCl or H₂SO₄. Decomp. but not entirely dissolved by aqua regia. Readily sol. in an excess of KCN. Decomp. by NH₄OH, NaOH or Na₂CO₃+Aq. Decomp. by boiling with Na₂O₂. Insol. in cold or boiling acetic acid (Cruser and Miller)

Cuprous chromicyanide, Cu₂Cr(CN)₆.

Sol. in KCN, cold conc. or boiling dil. HNO₃+Aq. Slowly sol. in cold conc. H₂SO₄, still more slowly sol. in dil. H₂SO₄ but rapidly sol. in hot dil. and conc. H₂SO₄. Readily decomp. by aqua regia. Decomp. by dil. or conc. HCl, slowly going into solution in the cold, but quickly on boiling. (Cruser and Miller)

Cupric chromicyanide, Cu₂[Cr(CN)₆]₂

Slowly sol. in cold dil. HCl, HNO₃ or H₂SO₄; on boiling the first two readily dissolve it, but the H₂SO₄ dissolves it only slowly. Sol. in aqua regia or cold conc. H₂SO₄. Readily sol. in cold or hot conc. HCl. Decomp. by cold, dissolved by boiling HNO₃. Decomp. by boiling Na₂O₂+Aq. Decomp. by NH₄OH, NaOH or Na₂CO₃+Aq. Readily sol. in an excess of KCN+Aq. Insol. in cold acetic acid. (Cruser and Miller.)

Nickel chromicyanide, Ni₂[Cr(CN)₆]₂.

Slowly sol. in cold, readily sol. in hot dil. HCl, HNO₃ or H₂SO₄. Slowly sol. in cold, readily sol. in hot conc. H₂SO₄, HCl or HNO₃. Slowly decomp. by cold, rapidly by boiling aqua regia. Readily sol. in excess of KCN. Sol. in NH₄OH+Aq. Decomp. by NaOH, Na₂CO₃+Aq or Na₂O₂+Aq. Insol. in cold, sl sol. in boiling acetic acid. (Cruser and Miller.)

Potassium thalious chromicyanide,

(Fischer and Benzian, Ch. Z. 1902, 26. 50.)

Thalious chromicyanide, Tl₂Cr(CN)₆

Easily sol. in H₂O. (Fischer and Benzian, Ch. Z. 1902, 26. 50.)

Zinc chromicyanide, Zn₂[Cr(CN)₆]₂.

Insol. in H₂O. Sol. in excess of NH₄OH, NaOH and KCN+Aq. Decomp. by Na₂CO₃+Aq. Sol. in cold dil. HCl. Slowly sol. in dil. H₂SO₄ and in dil. HNO₃. By boiling with dil. acids a clear solution is quickly obtained. (Cruser, Dissert. 1906.)

Chromisulphocyanhydric acid.

Cæsium chromisulphocyanide,

Less sol. in H₂O than K salt. (Osann, Dissert. 1907.)

Lithium chromisulphocyanide,

$$Li_2Cr(SCN)_6+H_2O.$$

Extremely deliquescent. (Osann.)

Rubidium chromisulphocyanide,

$$Rb_2Cr(SCN)_6+4H_2O.$$

Appreciably less sol. in H₂O and alcohol than the K salt. (Osann.)

Chromocyanidric acid, H₂Cr(CN)₆.

Decomp. rapidly on air. Sol. in H₂O (Moissan, A. ch. (6) 4. 144.)

Potassium chromocyanide, K₂Cr(CN)₆.

Very sol. in H₂O; 100 pts. H₂O dissolve 32.33 pts. at 20°. Much more sol. in hot H₂O. Insol. in alcohol, ether, benzene, or chloroform. (Moissan, A. ch. (6) 4. 136.)

Above salt was K₃Cr(CN)₆. (Christensen.) +3H₂O. (Christensen, J. pr. (2) 31. 166.)

Chromoiodic acid, CrO₃, HIO₃+2H₂O.

Deliquescent. (Berg, C. R. 104. 1514.)

Ammonium chromiodate, CrO₃, NH₄IO₃+H₂O.

Moderately sol. in H₂O. (Berg.)

Lithium chromiodate, CrO₃, LiIO₃+H₂O.

Very sol. in H₂O. (Berg.)

Magnesium chromiodate.

Sol. in H₂O. (Berg.)

Potassium chromiodate, CrO₃, KIO₃.

Sol. in H₂O. (Berg.)

+H₂O=KCrI₂H₂O₇. Sl. decomp. by H₂O. (Blomstrand, J. pr. (2) 40. 331.)

Silver chromiodate, CrO₃, AgIO₃.

Sl. attacked by cold, rapidly decomp. by hot H₂O. (Berg, C. R. 111. 42.)

Sodium chromiodate, CrO₃, NaIO₃+H₂O.

Very sol. in H₂O. (Berg.)

Chromosulphocyanhydric acid.

Sodium chromosulphocyanide,

Unstable.

Decomp. by H₂O. (Koppel, Z. anorg. 1905, 45. 360.)

Chromosulphuric acid, H₂Cr₂(SO₄)₄.

Sol. in H₂O in all proportions, but solution is easily decomp. on standing or boiling. (Recours, Bull. Soc. (3) 9. 586.)

H₄Cr₂(SO₄)₅. As above.

H₆Cr₂(SO₄)₆. As above.

Ammonium chromosulphate,
 $(\text{NH}_4)_2\text{Cr}_2(\text{SO}_4)_3 \cdot 5\text{H}_2\text{O}$.Sol. in H_2O after a few minutes. (Recoura.)**Chromium potassium chromosulphate,**
 $[\text{Cr}_2(\text{SO}_4)_3\text{CrO}_4]\text{K}_2$, $[\text{Cr}_2(\text{SO}_4)_3(\text{CrO}_4)_2]\text{K}_4$,
and $[\text{Cr}_2(\text{NO}_3)_3(\text{CrO}_4)_2]\text{K}_6$.Sol. in H_2O (Recoura, Bull. Soc. 1897, (3) 17. 934.)**Potassium chromosulphate,** $\text{K}_2\text{Cr}_2(\text{SO}_4)_3 \cdot 4\text{H}_2\text{O}$.Sol. in H_2O in a few minutes (Recoura, Bull. Soc. (3) 9. 590.)**Sodium chromosulphate,** $\text{Na}_2\text{Cr}_2(\text{SO}_4)_3 \cdot 10\text{H}_2\text{O}$.

As K salt (Recoura.)

Chromotelluric acid.**Ammonium chromotellurate,**
 $2(\text{NH}_4)_2\text{O} \cdot 4\text{CrO}_3 \cdot \text{TeO}_3$.Sol. in H_2O (Berg, C. R. 1911, 152. 1588.)**Potassium chromotellurate,**
 $2\text{K}_2\text{O} \cdot 4\text{CrO}_3 \cdot \text{TeO}_3$.Sl. sol. in cold H_2O without decompSol. in boiling H_2O (Berg, Bull. Soc. 1911, (4) 9. 583.)**Chromous acid,** $\text{H}_2\text{Cr}_2\text{O}_4 = \text{Cr}_2\text{O}_3, \text{H}_2\text{O}$.

Chromic hydroxide shows slightly acid properties, and salts corresponding to the above acid are known.

Aluminum ferrous magnesium chromite
(chrome iron ore), $(\text{Fe}, \text{Mg})\text{O}$,
 $(\text{Cr}_2, \text{Al}_2)\text{O}_3$.Insol. in H_2O or acids, even a mixture of H_2SO_4 and HF (Ebelmen.)**Barium chromite,** BaCr_2O_4 .Insol. in H_2O . (Gerber, Bull. Soc. (2) 27. 436.)**Barium tetrachromite,** $\text{BaO} \cdot 4\text{Cr}_2\text{O}_3$.Decomp. by steam at red heat; insol in HCl , H_2SO_4 , HNO_3 ; sol in fused $\text{KOH} + \text{KNO}_3$; decomp. in the air. (Dufau, C. R. 1896, 122. 1126.)**Cadmium chromite,** CdCr_2O_4 .

Not attacked by acids. (Viard, C. R. 109. 142.)

Calcium chromite, CaCr_2O_4 .Insol. in H_2O . (Gerber, Bull. Soc. (2) 27. 436.)Insol. in HCl , HF , HNO_3 , H_2SO_4 , sol. in gaseous HCl and HF at red heat; sol in fused KOH , KNO_3 , KClO_3 , K_2CO_3 . (Dufau, C. R. 1895, 121. 690.) $2\text{CaO} \cdot \text{Cr}_2\text{O}_3$. Insol in H_2O , KOH , or $\text{NH}_4\text{OH} + \text{Aq}$, slowly decomp by H_2CO_3 , or $\text{M}_2\text{CO}_3 + \text{Aq}$; insol. in sugar solution. (Pelouze, A. ch. (3) 33. 9.) $4\text{CaO} \cdot \text{Cr}_2\text{O}_3$. Attacked by H_2O . (Moissan, C. R. 1894, 119. 188.)**Cobaltous chromite,** CoCr_2O_4 .

(Elliot, Dissert, Gottingen, 1862.)

Cuprous chromite, $\text{Cu}_2\text{O} \cdot \text{Cr}_2\text{O}_3$.Insol in $\text{HNO}_3 + \text{Aq}$ (sp. gr 1.4) (Wöhler, Z. phys. Ch. 1908, 62. 445.)**Cupric chromite basic,** $5\text{CuO} \cdot 4\text{Cr}_2\text{O}_3$.

(Wöhler, Z. phys. Ch. 1908, 62. 445.)

Cupric chromite, CuCr_2O_4 .Not attacked by $\text{HNO}_3 + \text{Aq}$. (Persoz, A. ch. (3) 25. 283.)Not attacked by conc HCl .

Insol. in dil. acids (Wöhler, Z. phys. Ch. 1908, 62. 446.)

 $\text{CuO} \cdot 3\text{Cr}_2\text{O}_3$ (Rosenfeld, B. 1879, 12. 958.)**Glucinum chromite,** GlCr_2O_4 .Insol in H_2O (Mallard, C. R. 105. 1260.)**Iron (ferrous) chromite (chrome iron ore).**

See Chromite, aluminum ferrous magnesium.

Iron (ferroferrie) chromite, $\text{FeO} \cdot \text{Fe}_2\text{O}_3 \cdot \text{Cr}_2\text{O}_3$.Not attacked by $\text{HCl} + \text{Aq}$ (Ebelmen.)**Iron (ferrous) magnesium chromite.**Insol. in $\text{HCl} + \text{Aq}$. Scarcely attacked by H_2SO_4 .**Lead chromite,** PbCr_2O_4 .Ppt. Insol. in $\text{KOH} + \text{Aq}$ (Chancel, C. R. 43. 927.)**Lithium chromite,** $\text{Li}_2\text{Cr}_2\text{O}_4$.

Very sl sol in acids. (Weyberg, C. C. 1906, II. 1659.)

Magnesium chromite, $\text{MgO} \cdot 2\text{Cr}_2\text{O}_3$.Insol. in H_2O . (Nichols, Sill. Am. J. (2) 47. 16.) MgCr_2O_4 . Insol. in acids or alkalies, except boiling H_2SO_4 . (Schweitzer, J. pr. 39. 259.)

Could not be obtained. (Viard, Bull. Soc. (3) 5. 934.)

Easily attacked by boiling $\text{H}_2\text{SO}_4 + \text{Aq}$ Less easily by HCl or $\text{HF} + \text{Aq}$ not attacked by boiling HNO_3 . (Dufau, C. R. 1896, 123. 886.) $2\text{MgO} \cdot \text{Cr}_2\text{O}_3$. Insol in H_2O or acids. (Nichols.) $5\text{MgO} \cdot 4\text{Cr}_2\text{O}_3$. Insol in acids. (Viard, C. R. 112. 1003.) $3\text{MgO} \cdot 2\text{Cr}_2\text{O}_3$. As above. (V.)

Manganese chromite, MnCr_2O_4

Entirely insol in acids (Ebelmen, A. ch. (3) 33. 44.)

Zinc chromite, ZnCr_2O_4

Insol in acids and alkalis. (Viard, C. R. 109. 142.)

+ $x\text{H}_2\text{O}$. (Chancel, C. R. 43. 927.)
 3ZnO , $2\text{Cr}_2\text{O}_3$ As above. (Viard, C. R. 112. 1003.)

6ZnO , $5\text{Cr}_2\text{O}_3$ As above (V.)
 8ZnO , $3\text{Cr}_2\text{O}_3$ (Groger, M. 1904, 25, 520.)

Chromovanadic acid.

Ammonium chromovanadate, $2(\text{NH}_4)_2\text{O}$,
 2CrO_3 , $\text{V}_2\text{O}_5 + 7\text{H}_2\text{O}$.

Sol in H_2O . (Ditte, C. R. 102. 1105.)

Chromyl amide, $\text{CrO}_2(\text{NH}_2)_2$

Sol. in H_2O . (Ohly, C. N. 1899, 80. 134.)

Chromyl subchloride, $(\text{CrO}_2)_3\text{Cl}_6$

Deliquescent, sol. in H_2O with decomp., insol. in dry ether (Pascal, C. R. 1909, 148, 1463.)

Chromyl chloride (chlorochromic acid). CrO_2Cl_2

Decomp. by H_2O with evolution of much heat. Sol in glacial acetic acid without decomposition.

Sol. in CCl_4 , C_6H_6 , (mol. wt. det.). (Oddo, Gazz. ch. it. 1899, 29. (2) 318; Chem. Soc. 1900, 78. (2) 75.)

Trichromyl chloride, $\text{Cr}_3\text{O}_6\text{Cl}_2$

Deliquescent. Sol. in H_2O with gradual decomposition. Sol. in conc. $\text{HCl} + \text{Aq}$ (Thorpe, Chem. Soc. (2) 8. 31.)

Scarcely sol. in CS_2 .

Sol. in alcohol and ether. (Rawson, C. N. 1889, 59. 185.)

Chromyl chlorides.

From Cr_2O_3 .

See Chromium oxychlorides.

Chromyl chloride nitrogen tetroxide,

$\text{Cr}_2\text{Cl}_5\text{O}_7$, 2NO_2 .

Sol. in H_2O with decomp. (Thomas, C. R. 1899, 129. 828.)

Chromyl fluoride, CrO_2F_2

Decomp. by H_2O with evolution of heat. (Oliveri, Gazz. ch. it. 16. 218.)

Clay.

See Silicate, aluminum, Al_2O_3 , $\text{SiO}_2 + 2\text{H}_2\text{O}$

Cobalt, Co

Not attacked by H_2O

Sol in dil. HCl , or H_2SO_4 , or $\text{HNO}_3 + \text{Aq}$.
 Conc. hot H_2SO_4 , and HNO_3 decomp. with evolution of SO_2 or NO gas.

Exists also in passive state. See Iron. (Nickles, J. pr. 61. 186.)

Sol in conc. $\text{KOH} + \text{Aq}$ when in finely divided state. (Winkler, J. pr. 91. 211.)

Sol. in $\text{NH}_4\text{OH} + \text{Aq}$ in presence of an (Hodgkinson and Bellairs, C. N. 1895, 71. 73.)

Cobalt ammonia compounds.

See—

Anhydrooxycobaltamine compounds,

$[\text{Co}(\text{NH}_3)_5]_2 \left[\begin{smallmatrix} \text{Cl} \\ \text{O}(\text{OH}) \end{smallmatrix} \right] \text{X}_4$.

Oxycobaltamine compounds,
 $\text{Co}_2(\text{NH}_3)_{10}(\text{OOH})\text{X}_4$.

Praseocobaltic compounds, $\text{Co}(\text{NH}_3)_4\text{X}_3$.

Purpleocobaltic compounds,
 $\text{Co}(\text{NH}_3)_5\text{X}_3$.

Roseocobaltic compounds,
 $\text{Co}(\text{NH}_3)_5(\text{OH}_2)\text{X}_3$.

Sulphatotetramine cobaltic compounds,
 $(\text{SO}_4)\text{Co}(\text{NH}_3)_4\text{X}$.

Sulphatopurpleocobaltic compounds,
 $(\text{SO}_4)\text{Co}(\text{NH}_3)_5\text{X}$.

"Tetramine cobaltic" compounds,
 $\text{Co}(\text{NH}_3)_2\text{X}_3$.

Xanthocobaltic compounds,
 $(\text{NO}_2)\text{Co}(\text{NH}_3)_2\text{X}_2$.

Cobalt arsenide, CoAs .

As Co_3As_2 . Ducelliez, C. R. 1908, 147. 425.)

CoAs_2 . As Co_3As_2 . (Ducelliez, C. R. 1908, 147. 425.)

Co_2As_2 . As Co_3As_2 . (Ducelliez, C. R. 1908, 147. 425.)

Co_3As_2 . Very sl. attacked by hot conc. HCl , less by H_2SO_4 . Easily sol. in HNO_3 and aqua regia. Sl. attacked by fused alkalis and alkali carbonates. (Ducelliez, C. R. 1908, 147. 425.)

CoAs_2 . Min. *Skutterudite*. Sol. in HNO_3 + Aq, with separation of As_2O_3 .

Cobalt arsenide sulphide, CoAs_2 , CoS_2 .

Min. *Cobaltite*. Sol. in HNO_3 + Aq, with separation of S and As_2O_3 .

Glauco-dote. Completely sol. in HNO_3 + Aq.

Cobalt azoimide, basic, $\text{Co}(\text{OH})\text{N}_3$.

Insol. in H_2O .

Sol. in HN_3 + Aq. (Curtius, J. pr 1898, (2) 58. 300.)

Cobalt potassium azoimide, KN_3 , $\text{Co}(\text{N}_3)_2$.

Sol. in H_2O ; Aq. solution decomp. on boiling. (Curtius, J. pr 1898, (2) 58. 301.)

Cobalt boride, Co_2B .

Attacked by HNO_3 . (Jassonneix, C. R. 1907, 145. 240.)

CoB . Decomp. by moist air and by alkali nitrates, chlorates, hydroxides and carbonates; decomp. by steam at red heat and by acids. (Moissan, C. R. 1896, 122. 425.)

Not attacked by HCl ; rapidly attacked by HNO_3 . Not attacked by dil. but decomp. by conc. H_2SO_4 . Rapidly attacked by aqua regia. (Moissan, A. ch. 1896, (7) 9. 272.)

CoB_2 . (Jassonneix, C. R. 1907, 145. 241.)

Cobaltous bromide, CoBr_2 .

Deliquescent. Sol. in H_2O , alcohol, and ether.

Sat. CoBr_2 + Aq contains at:

59° 75° 97°
 66.7 66.8 68.1% CoBr_2 .

(Étard, A. ch. 1894, (7) 2. 542.)

Nearly insol. in AsBr_3 . (Walden, Z. anorg. 1902, 29. 374.)

Sol. in $\text{SO}_2\text{Cl}(\text{OH})$. (Walden.)

Sol. in quinoline. (Beckmann and Gabel, Z. anorg. 1906, 51. 236.)

1g. CoBr_2 is sol. in 9.74g. methyl acetate at 18°. Sp. gr. 18°/4° of sat. solution = 1.013. (Naumann, B. 1909, 42. 3792.)

Difficultly sol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Sol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4328.)

Mol. weight determined in pyridine (Werner, Z. anorg 1897, 15. 24.)

+2, and 6 H_2O (Hartley, Chem Soc (2) 12. 214.)

Cobaltous hydrazine bromide hydrazine, 2CoBr_2 , $4\text{N}_2\text{H}_4\text{HBr}$, N_2H_4 (?).

Sol. in H_2O with decomp. (Ferratini, C. A 1912. 1613.)

Cobaltous mercuric bromide, basic, CoBr_2 , HgBr_2 , $6\text{CoO} + 20\text{H}_2\text{O}$.

(Mailhe, A. ch. 1902, (7) 27. 369.)

Cobalt stannic bromide.

See Bromostannate, cobalt.

Cobaltous bromide ammonia, CoBr_2 , 6NH_3 .

Sol. in H_2O with residue of cobalt hydroxide. (Rammelsberg, Pogg 55. 245.)

Cobaltous bromide hydrazine, CoBr_2 , $2\text{N}_2\text{H}_4$.

Decomp. by boiling with H_2O . (Franzen, Z. anorg. 1908, 60. 270.)

Cobalt carbonyl, $\text{Co}(\text{CO})_4$.

Insol. in H_2O . More or less sol. in CS_2 , ether, alcohol and $\text{Ni}(\text{CO})_4$. Relatively stable with non-oxidizing acids. Quickly decomp. by oxidizing acids. (Mond, Hirtz and Cowap, C. N. 1908, 98. 165.)

Cobaltous chloride, CoCl_2 .

Deliquescent. Sol. in H_2O with evolution of heat. 100 pts. H_2O dissolve 43.3 pts. CoCl_2 at 0°. (Engel, A. ch. (6) 17. 355.)

100 pts. sat. CoCl_2 + Aq at t° contain pts. CoCl_2 .

t°	Pts CoCl_2	t°	Pts CoCl_2	t°	Pts CoCl_2

(Engel, A. ch. (6) **17**, 355.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, **20**, 827.)

Sol. in alcohol.

Sat. solution in alcohol (0.792 sp. gr.) contains 23.66% CoCl_2 and has sp. gr. = 1.0107. (Winkler, J. pr. **91**, 209.)

Very sol. in ether.

100 pts. absolute ether dissolve only 0.021 g. CoCl_2 . (Bödtker, Z. phys. Ch. 1897, **22**, 511.)

100 g. formic acid (95%) dissolve 6.2 g. CoCl_2 at 20° . (Aschan, Ch. Z. 1913, **37**, 1117.)

1g. CoCl_2 is sol. in 271g. methyl acetate at 18° . Sp. gr. $18^\circ/4^\circ$ of sat. solution = 0.938. (Naumann, B. 1909, **42**, 3791.)

Difficultly sol. in ethyl acetate. (Naumann, B. 1910, **43**, 314.)

100 pts. acetone dissolve 8.62 pts. anhydrous CoCl_2 . (Krug and M'Elroy, J. Anal. Ch. **6**, 184.)

0.08 pts. sol. in 100 pts. ethyl acetate at 14° .

0.26 " " " 100 " " " 79°.

9.11 " " " 100 " acetone " 0°.

9.28 " " " 100 " " " 22.5°.

(Laszczynski, B. 1894, **27**, 2286.)

Sol. in acetone. (Eidmann, C. C. 1899, II 1014.)

1 g. CoCl_2 is sol. in 36.4 g. acetone at 18° . Sp. gr. of sat. solution $18^\circ/4^\circ$ = 0.825. (Naumann, B. 1904, **37**, 4334.)

100 g. acetonitrile dissolve 4.08 g. CoCl_2 at 18° . (Naumann and Schier, B. 1914, **97**, 249.)

Sol. in quinoline. (Beckmann and Gabel, Z. anorg. 1906, **51**, 236.)

(Pearce and Moore, Am. Ch. J. 1913, **50**, 226.)

Mol. weight determined in piperidine, and pyridine. (Werner Z. anorg. 1897, **15**, 18 and 23.)

Sol. in urethane. (Castoro, Z. anorg. 1899, **20**, 61.)

+ H_2O .

+2H₂O. Very deliquescent (Bersch, J. B. 1867, 291.)
 17 16 pts sol in 100 pts. acetone at 0°
 17.06 " " 100 " " 25°

(Laszczynski, B. 1894, 27, 2287)

+4H₂O Deliquescent (Bersch)

+6H₂O. Not deliquescent Easily sol in H₂O.

Solubility of CoCl₂+6H₂O in ethyl alcohol +Aq at 11.5° under addition of increasing amounts of CoCl₂.

P = Percent of alcohol by volume

G = Grams of CoCl₂ added.

C₅ = Grams of CoCl₂ in 5 cc. of the solution.

C_w = Grams of water in 5 cc. of the solution, calculated from

(1) the water content of the alcohol

(2) the water of crystallization which had gone into solution.

(3) the water held mechanically in CoCl₂+6H₂O

P	G	C _w	C ₅

"	0 650	0 500	2 186

(Bodtker, Z. phys. Ch 1897, 22, 508.)

Easily soluble in absolute ethyl alcohol. 100 pts absolute alcohol dissolve at room temperature 56.20 pts. CoCl₂. Water precipitates CoCl₂+6H₂O from a solution of CoCl₂ in absolute alcohol. (Bodtker)

100 pts. absolute ether dissolve 0.291g CoCl₂+6H₂O (Bodtker, Z. phys. Ch 1897, 22, 511)

Anhydrous ethylene glycol dissolves 10.6% CoCl₂+6H₂O at 16.4° (de Comack, Chem Soc. 1904, 86, (2) 741.)

Cobaltous hydrazine chloride,
 CoCl₂, 2N₂H₄HCl+2½H₂O.

Sol. in H₂O. (Ferratini, C. A. 1912, 1613.)

Cobaltous iodine chloride, CoCl₂, 2ICl₃+8H₂O.

Hygroscopic. Decomp. by H₂O. CCl₄ separates ICl₃. (Weinland and Schlegelmilch, Z. anorg. 1902, 30, 137.)

Cobalt lithium chloride, CoCl₂, LiCl+3H₂O.

Very deliquescent. Sol in H₂O with decomp. Sol. in LiCl+Aq without decomp. Sol. in alcohol without decomp. (Chassevant, A. ch. (6) 30, 27)

Cobaltous mercuric chloride basic, CoCl₂, HgCl₂, 6CoO+20H₂O
 (Mailhe, A. ch 1902, (7) 27, 369.)

Cobaltous mercuric chloride, CoCl₂, HgCl₂.
 Very deliquescent. (v Bonsdorff.)

Cobaltous thallic chloride, 2TiCl₃, CoCl₂+8H₂O

Hydroscopic, can be cryst from H₂O. (Gewecke, A. 1909, 366, 222)

Cobaltous tin (stannic) chloride, CoCl₂, SnCl₄+6H₂O.

See Chlorostannate, cobaltous.

Cobaltous chloride ammonia, CoCl₂, 2NH₃.

Decomp by H₂O. (F. Rose)

CoCl₂, 4NH₃ Decomp by H₂O (H. Rose)

CoCl₂, 6NH₃. Decomp. by H₂O. Sol. in dil NH₄OH+Aq with ease, but difficultly in conc. NH₄OH+Aq. Insol in absolute alcohol. (Fremy.)

Cobaltous chloride hydrazine, CoCl₂, 2N₂H₄.

Insol in cold H₂O.

Slowly decomp. by cold, rapidly by hot H₂O.

Easily sol in dil. acids and NH₄OH+Aq. (Franzen, Z. anorg. 1908, 60, 270)

Cobaltous chloride hydroxylamine,
 CoCl₂, 2NH₂OH.

Decomp. in the air; sol. in H₂O. (Feldt, B 1894, 27, 403.)

Cobaltic chloride hydroxylamine,
 CoCl₃, 6NH₂OH

Insol. in alcohol

Sol. in acidified H₂O without decomp; sol. in conc. H₂SO₄ without decomp. (Feldt, B 1894, 27, 404.)

Cobaltous fluoride, CoF₂.

Sl. sol in H₂O; insol. in alcohol and ether, slowly attacked by cold HCl, H₂SO₄, or HNO₃+Aq. (Poulenc, C. R. 114, 1429.)

Insol. in liquid NH₃. (Gore, Am. Ch. J. 1898, 29, 827.)

+2H₂O. Sol. in a little H₂O without decomp. Decomp. into oxyfluoride by boiling with much H₂O. Sol. in HF+Aq. (Berzelius.)

+4H₂O. Two modifications.

Solubility of α mod. at 7° = 2.2328 %

" " β " " " = 2.3203 %.

(Costachescu, Ann. Sci. Univ. Jassy, 1912, 7, 1, 10)

Cobaltic fluoride, CoF₃.

Sol. in conc. H₂SO₄. (Barbieri, Chem. Soc. 1905, 88, (2) 393.)

Cobaltous hydrogen fluoride, $\text{CoF}_2 \cdot 5\text{HF} + 6\text{H}_2\text{O}$.

Easily sol. in H_2O and dil. acids.
Sol. in $\text{NH}_4\text{OH} + \text{Aq}$ with decomp. (Bohm, Z. anorg. 1905, 43. 330.)

Cobalt columbium fluoride.

See Fluocolumbate, cobalt.

Cobaltous iron (ferric) fluoride,
 $\text{CoF}_2 \cdot \text{FeF}_3 + 7\text{H}_2\text{O}$

Sol. in dil. $\text{HF} + \text{Aq}$ (Weinland, Z. anorg. 1899, 22. 269.)

Cobaltous manganic fluoride, $2\text{CoF}_2 \cdot \text{Mn}_2\text{F}_7 + 8\text{H}_2\text{O}$

(Christensen, J. pr. (2) 34. 41.)

Cobalt molybdenyl fluoride.

See Fluoxymolybdate, cobalt.

Cobaltous potassium fluoride, $\text{CoF}_2 \cdot \text{KF}$.

Sl. sol. in H_2O ; less in ethyl or methyl alcohol; insol. in amyl alcohol or benzene. Decomp. by hot H_2SO_4 (Poulenc, C. R. 114. 747.)

$+ \text{H}_2\text{O}$. Sl. sol. in H_2O . (Wagner, B. 19. 896.)

$\text{CoF}_2 \cdot 2\text{KF}$.

Cobaltous sodium fluoride, $\text{CoF}_2 \cdot \text{NaF} + \text{H}_2\text{O}$.
Sol. in H_2O . (Wagner, B. 19. 896.)

Cobaltous stannic fluoride.

See Fluostannate, cobaltous.

Cobalt vanadium fluoride.

See Fluovanadate, cobalt.

Cobaltous hydroxide, $\text{CoO} \cdot \text{H}_2\text{O}$.

Insol. in H_2O . Sol. in acids. Insol. in $\text{KOH} + \text{Aq}$. Sol. in ammonium sulphate, chloride, nitrate, or succinate $+ \text{Aq}$. (Brett.)

Sol. in warm acetic acid; insol. in $\text{NH}_4\text{OH} + \text{Aq}$ and cold $\text{NH}_4\text{Cl} + \text{Aq}$, but sol. in warm $\text{NH}_4\text{Cl} + \text{Aq}$. (de Schulten, C. R. 109. 266.)

Insol. in H_2O and dil. $\text{KOH} + \text{Aq}$; somewhat sol. in conc. $\text{KOH} + \text{Aq}$; easily sol. in NH_4 salts $+ \text{Aq}$ (Fresenius.)

Easily sol. in $\text{KCN} + \text{Aq}$. (Rodgers, 1834.)
Sol. in conc. $\text{K}_2\text{CO}_3 + \text{Aq}$. (Gmelin.)

Not pptd. by $\text{KOH} + \text{Aq}$ in presence of $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$ or NH_4 citrate. (Spiller.)

Sol. in large amt. in boiling $\text{NH}_4\text{SCN} + \text{Aq}$ (Grossmann, Z. anorg. 1908, 58. 269.)

Insol. in methyl, or amyl amine $+ \text{Aq}$. (Wurtz.)

Many non-volatile organic substances prevent its pptn.

Cobaltic hydroxide, $3\text{Co}_2\text{O}_3 \cdot 2\text{H}_2\text{O}$.

(Mills, Phil. Mag. (4) 35. 257.)

$\text{Co}_2\text{O}_3 \cdot 2\text{H}_2\text{O}$. Decomp. by $\text{HCl} + \text{Aq}$;

gives brown solutions with cold HNO_3 or $\text{H}_2\text{SO}_4 + \text{Aq}$, which soon decomp. (Wernicke, Pogg. 141. 120.)

$\text{Co}_2\text{O}_3 \cdot \text{H}_2\text{O} = \text{Co}_2\text{O}_3 \cdot 3\text{H}_2\text{O}$. Sol. in warm HCl , HNO_3 , and H_2SO_4 , with decomp. (Proust.)

Sol. in cold H_3PO_4 , H_2SO_4 , HNO_3 , or $\text{HCl} + \text{Aq}$, but decomp. on standing or warming (Winkelblech.)

Sol. in racemic, tartaric, oxalic, or citric acid as cobaltous salt.

Sol. in conc. acetic acid without immediate decomp. (Remele). Solution is not decomp. by boiling. Sol. in warm sat. $(\text{NH}_4)_2\text{C}_2\text{O}_4 + \text{Aq}$ with decomp.

Not attacked by cold or hot $\text{NH}_4\text{OH} + \text{Aq}$. Insol. in boiling $\text{NH}_4\text{Cl} + \text{Aq}$

Sol. when freshly pptd. in $(\text{NH}_4)_2\text{SO}_3 + \text{Aq}$ (Geuther, A. 128. 157.)

Cobaltocobaltic hydroxide, $\text{Co}_3\text{O}_4 \cdot 3\text{H}_2\text{O}$.

Insol. in H_2O . Sol. in oxalic acid; solution decomp. by heat. Sol. in $\text{HCl} + \text{Aq}$ with evolution of Cl . (Gibbs and Genth, Sill. Am. J. (2) 23. 257.)

$\text{Co}_3\text{O}_4 \cdot 7\text{H}_2\text{O}$. Sol. in weak acids, especially $\text{HC}_2\text{H}_3\text{O}_2$, without decomp. (Fremy.)

$\text{Co}_3\text{O}_7 \cdot 6\text{H}_2\text{O}$. Min. *Heterogenite*. Sol. in dil. $\text{HCl} + \text{Aq}$ with evolution of Cl .

Cobaltous iodide, CoI_2 .

Deliquescent, and very sol. in H_2O .

100 pts. sat. $\text{CoI}_2 + \text{Aq}$ at t° contain
pts. CoI_2

t°	Pts CoI_2	t°	Pts CoI_2	t°	Pts CoI_2
—22	52.4	14	61.6	60	79.2
—8	56.7	25	66.4	82	80.7
—2	58.7	34	73.0	111	80.9
+9	61.4	46	79.0	156	83.1

(Étard, C. R. 113. 699.)

Sol. in $\text{SO}_2(\text{OCH}_3)_2$. (Walden, Z. anorg. 1902, 29. 388.)

Sol. in SOCl_2 . (Walden, Z. anorg. 1900, 25. 216.)

Sol. in POCl_3 . (Walden, Z. anorg. 1900, 25. 212.)

Sol. in S_2Cl_2 . (Walden, Z. anorg. 1900, 25. 217.)

Nearly insol. in AsBr_3 . (Walden, Z. anorg. 1902, 29. 374.)

Sol. in AsCl_3 . (Walden, Z. anorg. 1900, 25. 214.)

Easily sol. in alcohol.

Sol. in acetone. (Eidmann, C. C. 1899, II. 1014.) (Naumann, B. 1904, 37. 4328.)

Sol. in quinoline. (Beckmann and Gabel, Z. anorg. 1906, 51. 236.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

$+ 2\text{H}_2\text{O}$.

$+ 4\text{H}_2\text{O}$. Very deliquescent. (Étard.)

+6H₂O. (Hartley, Chem. Soc. (2) 12. 214.)

+9H₂O Very hygroscopic (Bolschakoff, C. C. 1898, II. 660.)

Cobaltous lead iodide, 2 CoI₂, PbI₂+3H₂O

Decomp. by H₂O (Mosnier, A. ch. 1897, 7) 12. 412.)

Cobaltous mercuric iodide, CoI₂, HgI₂+6H₂O.

Partially decomp. by H₂O.

Sol. in alcohol and acetone. (Dobroserdoff, C. C. 1901, II. 332.)

CoI₂, 2HgI₂+6H₂O. Decomp. by H₂O; sol. in alcohol and acetone (Dobroserdoff, C. C. 1901, II. 332.)

Cobaltous iodide ammonia, CoI₂, 4NH₃.

Decomp. by H₂O. Sol. in NH₄OH+Aq. (Rammelsberg, Pogg. 48. 155.)

CoI₂, 6NH₃. Insol. in NH₄OH+Aq. (Rammelsberg.)

Cobaltous iodide hydrazine, CoI₂, 2N₂H₄.

Sl. sol in H₂O. Easily sol. in acids (Franzen, Z. anorg. 1911, 70. 147.)

Cobaltic octamine compounds.

See Octamine cobaltic compounds.

Cobaltous oxide, CoO.

Insol. in H₂O. Easily sol. in dil. or conc. HCl or HNO₃+Aq. Slowly sol. in cold, but easily in hot dil. H₂SO₄+Aq, acetic, or tartaric acid+Aq. Insol. in NH₄OH+Aq. Sol. in hot NH₄Cl+Aq, KOH, or NaOH+Aq. (Rose.)

Insol. in NH₄Cl or NH₄NO₃+Aq. (Brett, 1834.)

Insol. in K₂CO₃+Aq. Sol. in boiling Ce and Ni nitrates+Aq, with pptn of the oxides. (Persoz.)

Easily sol. in dil. acids, even tartaric, acetic, and oxalic acids. Not attacked by NH₄OH+Aq. Sol. in 13% NH₄Cl+Aq with evolution of NH₃; also in NH₄SCN+Aq. Sol. in warm conc. NaOH, and KOH+Aq (Zimmerman, A. 232. 324.)

Solubility in (calcium sucrate+sugar)+Aq. 1 l. solution containing 418.6 g. sugar and 34.3 g. CaO dissolves 1.56 g. CoO; 1 l. solution containing 296.5 g. sugar and 24.2 g. CaO dissolves 0.29 g. CoO. (Bodenbender, J. B. 1865. 600.)

Insol. in liquid NH₃. (Franklin, Am. Ch. J. 1898, 20. 827.)

See also Cobaltous hydroxide.

Cobaltic oxide, Co₂O₃.

Decomp. by most acids, even in the cold, with formation of cobaltous salts. Sol. in acetic acid without immediate decomp.

See also Cobaltic hydroxide.

Cobaltocobaltic oxide, Co₃O₄=CoO, Co₂O₃.

Insol. in boiling conc HCl, HNO₃, or aqua regia. Sol. by long standing with H₂SO₄. (Gibbs and Genth, Sil. Am. J. (2) 23. 257.)

See also Cobaltocobaltic hydroxide.

Co₃O₄=2CoO, Co₂O₃.

Co₃O₄=4CoO, Co₂O₃. Not attacked by boiling dil HNO₃ or H₂SO₄+Aq. (Beetz.)

Co₃O₄=6CoO, Co₂O₃+20H₂O Sol. in dil. acids, with residue of Co₂O₃, which dissolves on warming. (Gentele, J. pr. 69. 131.)

+8H₂O As above. (Gentele.)

Cobaltous oxychloride, CoCl₂, 3CoO+3 $\frac{1}{2}$ H₂O.

Ppt. Very sl. sol in H₂O. (Habermann, M. 5. 432.)

Cobaltous oxychloride hydroxylamine, CoOCl, 2NH₂OH.

Insol. in H₂O; unstable; insol in alcohol. (Feldt, B. 1894, 27. 404.)

Cobaltous oxyfluoride, CoO, CoF₂+H₂O.

Ppt. (Berzelius, Pogg. 1. 26.)

Cobaltous oxyiodide, CoO, CoI₂.

Insol. in H₂O. (Rammelsberg.)

Cobaltous oxysulphide, CoO, CoS.

Cold HCl+Aq dissolves out CoO; hot HCl+Aq decomp with evolution of H₂S. (Arfvedson, Pogg. 1. 64.)

Cobalt phosphide, Co₂P.

Sol. in conc. HNO₃. Slowly attacked by HCl and H₂SO₄. (Maronneau, C. R. 1900, 130. 658.)

Sol. in HNO₃, aqua regia, and in fused alkalis. (Granger, Bull. Soc. 1896, (3) 15. 1089.)

Co₂P₂. Insol. in HNO₃ and aqua regia. stable in the air even when heated (Granger, Bull. Soc. 1896, (3) 15. 1087)

Co₃P₂. Insol. in conc. HCl+Aq. Sol. in HNO₃+Aq. (Rose, Pogg. 24. 332.)

Cobalt subselenide, Co₃Se.

Sol. in bromine water.

Only sl. attacked by boiling fuming HCl. (Fonze-Diacon, C. R. 1900, 131. 704.)

Cobalt monoselenide, CoSe.

(Little, A. 112. 211.)

Cobalt diselenide CoSe₂.

Sol. in Br₂+Aq.

Only sl. attacked by boiling fuming HCl. (Fonze-Diacon, C. R. 1900, 131. 705.)

Cobalt sesquiselenide, Co_3Se_2 .Sol in $\text{Br}_2 + \text{Aq}$.Only sl. attacked by boiling fuming HCl . (Fonzes-Diacon, C. R. 1900, **131**. 704.)**Cobalt selenide, Co_3Se_4 .**Sol in $\text{Br}_2 + \text{Aq}$.Only sl. attacked by boiling fuming HCl . (Fonzes-Diacon, C. R. 190, **131**. 704.)**Cobalt silicide, Co_2Si .**Sol. in HF and aqua regia. Insol. in cold H_2O . Decomp. by steam at red heat. Sol. in fused alkali carbonates. (Vigouroux, C. R. 1895, **121**. 687.) CoSi . Insol. in HNO_3 and H_2SO_4 . Sol. in aqua regia and HCl , and in fused KOH . (Lebeau, C. R. 1901, **132**. 557.)Not attacked by dil or conc HNO_3 , or conc. H_2SO_4 . Sol. in aqua regia and in conc. HCl .Not attacked by dil. alkali hydroxides + Aq ; attacked by fused alkali (Lebau, Bull. Soc. 1901, (3), **25**. 540.) CoSi_2 . Sl. sol. in hot conc HCl and hot conc. alkali + Aq . Sol. in HF ; insol. in HNO_3 and H_2SO_4 . (Lebeau, C. R. 1902, **135**. 476.)**Cobaltous sulphide, CoS .***Anhydrous*. Easily sol. in acids, even $\text{HC}_2\text{H}_3\text{O}_2$, but only slowly in the latter case (Hjortdahl, C. R. **65**. 75.)Not attacked by cold dil. $\text{HCl} + \text{Aq}$. (Ebelmen, A. ch. (3) **25**. 94.)Min. *Seypoorte*.+ $x\text{H}_2\text{O}$. 1 l. H_2O dissolve $41.62 + 10^{-6}$ moles CoS at 18° . (Weigel, Z. phys. Ch. 1907, **58**. 294.)

Sol. in conc mineral acids; very sl. sol. in cold dil. acids; scarcely sol. in acetic acid (Wackenroder.)

Sol. when still moist in $\text{SO}_2 + \text{Aq}$. (Berthier.)Easily sol. in HNO_3 , but only very sl. sol. in $\text{HCl} + \text{Aq}$. Not pptd. from very dil. acid solutions by H_2S .Insol. in H_2O , alkalies, and alkali carbonates, or sulphides + Aq (Fresenius.)Insol. in NH_4Cl , and $\text{NH}_4\text{NO}_3 + \text{Aq}$. (Brett.)When pptd. by $(\text{NH}_4)_2\text{S} + \text{Aq}$, shows a brown colour in presence of 200,000 pts. H_2O . (Pfaff.)Tartaric acid, etc. does not hinder the pptn. by $(\text{NH}_4)_2\text{S} + \text{Aq}$. (Rose.)Sol. in potassium thiocarbonate + Aq . (Rosenblatt, Z. anal. **26**. 15.)Sol. in Na_2S_x or $\text{K}_2\text{S}_x + \text{Aq}$. (de Koninck, Zeit. angew. Ch. **1891**. 202.)**Cobaltic sulphide, Co_2S_3 .**Partially decomp. by $\text{HCl} + \text{Aq}$; sol. in $\text{HNO}_3 + \text{Aq}$ with decomposition.Sl. attacked by $\text{HCl} + \text{Aq}$; and slowly even by aqua regia. (Schneider, J. pr. (2) **9**. 209.)Min. *Cobalt pyrite*.+ $x\text{H}_2\text{O}$. Insol. in $\text{KCN} + \text{Aq}$ (Fleck. J. pr. **97**. 303.) More sol. in $\text{HCl} + \text{Aq}$ than CoS_2 . (Dingler, Berz, J. B. **10**. 139.)**Cobaltocobaltic sulphide, Co_3S_4 .**Min. *Lunnante*. Sol. in warm $\text{HNO}_3 + \text{Aq}$, with residue of S .**Cobalt disulphide, CoS_2 .**Not attacked by alkalies or acids except HNO_3 and aqua regia. (Setterberg, Pogg. **7**. 40.)**Cobalt sulphide, Co_3S_3 .**Easily sol. in hot HCl with evolution of H_2S (and H_2 ?). (Proust.)**Cobalt potassium sulphide, $\text{K}_2\text{Co}_{11}\text{S}_{14}$.**Slowly sol. in cold HCl and aqua regia.

Quickly sol. in warm aqua regia.

Sol. in HF and H_2SO_4 only on warming.Insol. in $(\text{NH}_4)_2\text{S}$, organic acids, alkalies, 12% $\text{HCl} + \text{Aq}$ and $\text{KCN} + \text{Aq}$ (Milbauer, Z. anorg. **1904**, **42**. 447.)**Cobalt telluride, CoTe .**(Fabre, C. R. **105**. 673.)**Cobalt decamine sulphurous acid.**

See Decamine cobaltisulphurous acid.

Cobaltic acid.**Potassium cobaltate, $\text{K}_2\text{Co}_3\text{O}_{16} + 2\text{H}_2\text{O}$, or $3\text{H}_2\text{O}$.**Insol. in H_2O (Pebal, A. **100**. 262), but decomp. by long boiling. Sol. in conc. acids. K_2O , $x\text{CoO}_3$. Sol. in H_2O . (Winkler, J. pr. **91**. 351.)Does not exist. (Donath, W. A. B. **102**, 2b. 71.)**Cobalticyanhydric acid, $\text{H}_3\text{Co}(\text{CN})_6 + \frac{1}{2}\text{H}_2\text{O}$.**Deliquescent. Very sol. in H_2O and only sl. decomp. on boiling.Sol. in $\text{HCl} + \text{Aq}$ without decomp. even on boiling. Sl. sol. in conc., more sol. in dil. $\text{HNO}_3 + \text{Aq}$. Not decomp. by boiling conc. $\text{HNO}_3 + \text{Aq}$ or aqua regia. Insol. in conc., sl. sol. in dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. Sol. in alcohol. Insol. in ether. (Zwenger, A. **162**. 157.)**Ammonium cobalticyanide, $(\text{NH}_4)_3\text{Co}(\text{CN})_6 + \frac{1}{2}\text{H}_2\text{O}$.**Very sol. in H_2O ; sl. sol. in alcohol.**Ammonium barium cobalticyanide,** $\text{NH}_4\text{BaCo}(\text{CN})_6 + \text{H}_2\text{O}$.Sol. in H_2O . (Weselsky.)**Ammonium calcium cobalticyanide,** $\text{NH}_4\text{CaCo}(\text{CN})_6 + 10\text{H}_2\text{O}$.Sol. in H_2O .

Ammonium lead cobalticyanide,
 $\text{NH}_4\text{PbCo}(\text{CN})_6 + 3\text{H}_2\text{O}$.Sol. in 831 pts. H_2O at 18° , and sl. sol in 93% alcohol (Schuler)**Ammonium mercuric cobalticyanide,**
 $(\text{NH}_4)_6\text{Co}_2\text{Hg}(\text{CN})_{11} + \text{H}_2\text{O}$.Sol. in H_2O with decomp

Insol. in alcohol (Soenderop, Dissert 1899.)

Ammonium sodium cobalticyanide,
 $\text{NH}_4\text{Na}_5\text{Co}(\text{CN})_6$ Only sl. sol in H_2O (Weselsky, B 2. 598.)**Ammonium strontium cobalticyanide,**
 $\text{NH}_4\text{SrCo}(\text{CN})_6 + 9\text{H}_2\text{O}$.Sol. in H_2O (W.)**Barium cobalticyanide, basic,** $\text{Ba}_3[\text{Co}(\text{CN})_6]_2$, BaO_2H_2 .

Not very stable Cannot be recryst. without partial decomp (W.)

Barium cobalticyanide, $\text{Ba}_3[\text{Co}(\text{CN})_6]_2 + 10\text{H}_2\text{O}$.Sl. efflorescent Very sol in H_2O Insol in alcohol**Barium cobalticyanide chloride,**
 $\text{Ba}_3[\text{Co}(\text{CN})_6]_2$, $\text{BaCl}_2 + 16\text{H}_2\text{O}$ Sol. in H_2O without decomp (W.)**Barium lithium cobalticyanide,** $\text{Ba}_3\text{LiCo}(\text{CN})_6 + 15\text{H}_2\text{O}$

The most sol. of the double cobalticyanides. (Weselsky)

Barium potassium cobalticyanide,
 $\text{BaKCo}(\text{CN})_6 + 11\text{H}_2\text{O}$.Sol. in H_2O . (W.)**Bismuth cobalticyanide** $\text{BiCo}(\text{CN})_6$.

Ppt. (Mathews, J. Am. Chem. Soc. 1900, 22. 275.)

+ $5\text{H}_2\text{O}$. Moderately stable with dil. min. acids; more stable with conc. acids than Cd or Zn compDecomp. by NH_3 and alkalis. (Fischer and Cuntze, Ch. Z. 1902, 26. 872.)**Cadmium cobalticyanide,** $\text{Cd}_3[\text{Co}(\text{CN})_6]_2 + 7\frac{1}{2}\text{H}_2\text{O}$ Attacked by strong min. acids only when hot. Behaves as Zn salt, toward conc. H_2SO_4 and dil. and conc. HCl .Insol. in $\text{K}_3\text{Co}(\text{CN})_6 + \text{Aq}$ Sol. in NH_4OH and $\text{NH}_4\text{Cl} + \text{Aq}$ (Fischer and Cuntze, Ch. Z. 1902, 26. 873.)**Cadmium potassium cobalticyanide,**
 $\text{KCdCo}(\text{CN})_6$.Not attacked by H_2O . (Fischer and Cuntze, Ch. Z. 1902. 26. 873.)**Cadmium sodium cobalticyanide,**
 $\text{NaCdCo}(\text{CN})_6$.

(Fischer and Cuntze, Ch. Z. 1902. 26. 873.)

Cadmium cobalticyanide ammonia,
 $\text{Cd}_3[\text{Co}(\text{CN})_6]_2$, $4\text{NH}_3 + 2\text{H}_2\text{O}$

(Fischer and Cuntze, Ch. Z. 1902, 26. 873.)

 $\text{Cd}_3[\text{Co}(\text{CN})_6]_2$, $5\text{NH}_3 + 3\text{H}_2\text{O}$ (Fischer and Cuntze, Ch. Z. 1902, 26. 873.) $\text{Cd}_3[\text{Co}(\text{CN})_6]_2$, 7NH_3 (Fischer and Cuntze, Ch. Z. 1902, 26. 873.) $\text{Cd}_3[\text{Co}(\text{CN})_6]_2$, $9\text{NH}_3 + 2\text{H}_2\text{O}$ (Fischer and Cuntze, Ch. Z. 1902, 26. 873.)**Calcium potassium cobalticyanide,**
 $\text{CaKCo}(\text{CN})_6 + 9\text{H}_2\text{O}$ Sol. in H_2O (W.)**Cobaltous cobalticyanide,** $\text{Co}_3[\text{Co}(\text{CN})_6]_2 + 14\text{H}_2\text{O}$ Insol. in H_2O and acids Sl. sol in $\text{NH}_4\text{OH} + \text{Aq}$. Decomp. by $\text{KOH} + \text{Aq}$ **Cupric cobalticyanide,** $\text{Cu}_3[\text{Co}(\text{CN})_6]_2 + 7\text{H}_2\text{O}$ Insol. in H_2O and acids Sol. in $\text{NH}_4\text{OH} + \text{Aq}$ **Cupric cobalticyanide ammonia,**
 $\text{Cu}_3[\text{Co}(\text{CN})_6]_2$, $4\text{NH}_3 + 7\text{H}_2\text{O}$.Sol. in H_2O (Zwenger)**Lead cobalticyanide, basic,** $\text{Pb}_3[\text{Co}(\text{CN})_6]_2$, $3\text{PbO}_2\text{H}_2 + 11\text{H}_2\text{O}$.Insol. in H_2O or alcohol; somewhat sol. in hot $\text{Pb}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$. (Schuler.)**Lead cobalticyanide,** $\text{Pb}_3[\text{Co}(\text{CN})_6]_2 + 4\text{H}_2\text{O}$.Very sol. in H_2O . Insol. in alcohol.(Zwenger)
+ $7\text{H}_2\text{O}$. Sol. in 1.77 pts. H_2O at 18° , and 1.63 pts. at 19° . Insol. in absolute alcohol. Sl. sol. in 93% alcohol. (Schuler, W. A. B. 79. 302.)**Lead potassium cobalticyanide,** $\text{PbKCo}(\text{CN})_6 + 3\text{H}_2\text{O}$.Sol. in 6.74 pts. H_2O at 18° and much more easily in hot H_2O . Insol. in absolute, sl. sol. in 93% alcohol (Schuler)**Lead cobalticyanide nitrate,** $\text{Pb}_3[\text{Co}(\text{CN})_6]_2$, $\text{Pb}(\text{NO}_3)_2 + 12\text{H}_2\text{O}$.Sol. in 16.91 pts. H_2O at 18° , 16.79 pts. at 19° , and much less hot H_2O .

Nearly insol. in 93% alcohol. (Schuler.)

Mercurous cobalticyanide, $\text{Hg}_3\text{Co}(\text{CN})_6$.Ppt. Decomp. by HCl . Not attacked by cold, but by hot conc. H_2SO_4 . Not attacked by HNO_3 , acetic or oxalic acid. Decomp. by alkalis + Aq . (Miller and Mathews, J. Am. Chem. Soc. 1900, 22. 64.)

- Mercuric cobalticyanide**, $\text{Hg}_2[\text{Co}(\text{CN})_6]_2$
 Sl sol in H_2O , decomp by boiling
 Insol. in alcohol and ether Not attacked
 by HCl . (Soenderop, Dissert, 1899.)
- Mercuric potassium cobalticyanide**,
 $\text{K}_6\text{HgCo}_2(\text{CN})_{11}$
 Sol in H_2O with decomp Insol in al-
 cohol. Sl. sol. in ether (Soenderop, Dissert,
 1899.)
 $\text{K}_6\text{Hg}_2\text{Co}_4(\text{CN})_{21}$ (Soenderop, Dissert
 1899.)
- Mercuric sodium cobalticyanide**,
 $\text{Na}_6\text{Hg}_2\text{Co}_4(\text{CN})_{24} + 4\text{H}_2\text{O}$.
 Extremely deliquescent (Soenderop,
 Dissert, 1899.)
- Nickel cobalticyanide**, $\text{Ni}_3[\text{Co}(\text{CN})_6]_2 + 12\text{H}_2\text{O}$.
 Insol. in H_2O and acids. Not attacked by
 boiling $\text{HCl} + \text{Aq}$ Sol in $\text{NH}_4\text{OH} + \text{Aq}$
 Decomp. by $\text{KOH} + \text{Aq}$
- Nickel cobalticyanide ammonia**,
 $\text{Ni}_3[\text{Co}(\text{CN})_6]_2 \cdot 4\text{NH}_3 + 7\text{H}_2\text{O}$
 Insol. in H_2O
- Potassium cobalticyanide**, $\text{K}_3\text{Co}(\text{CN})_6$.
 Easily sol. in H_2O . Insol. in alcohol
- Potassium strontium cobalticyanide**,
 $\text{KSrCo}(\text{CN})_6 + 9\text{H}_2\text{O}$.
 Sol in H_2O . (Weselsky.)
- Potassium thallium cobalticyanide**,
 $\text{K}_3\text{Tl}_3[\text{Co}(\text{CN})_6]_2$
 More sol. in H_2O than corresponding
 K salt. (Fischer and Benzian, Ch. Z. 1902,
 26. 49.)
- Potassium zinc cobalticyanide**,
 $\text{KZnCo}(\text{CN})_6 + 3\text{H}_2\text{O}$.
 (Fischer and Cuntze, Ch. Z. 1902, 26. 873.)
- Potassium cobalticyanide mercuric chloride**,
 $2\text{K}_3\text{Co}(\text{CN})_6 \cdot 3\text{HgCl}_2$.
 (Soenderop, Dissert. 1899.)
- Potassium cobalticyanide mercuric iodide**,
 $4\text{K}_3\text{Co}(\text{CN})_6 \cdot \text{HgI}_2$.
 Sol. in H_2O with subsequent decomp.
 Sol. in alcohol and ether with decomp.
 (Soenderop, Dissert, 1899.)
- Silver cobalticyanide**, $\text{Ag}_3\text{Co}(\text{CN})_6$.
 Insol. in H_2O and acids. Sol. in $\text{NH}_4\text{OH} +$
 Aq.
- Silver cobalticyanide ammonia**, $\text{Ag}_3\text{Co}(\text{CN})_6$,
 $\text{NH}_3 + \frac{1}{2}\text{H}_2\text{O}$.
 Insol. in H_2O . (Zwenger.)
- Sodium cobalticyanide**, $\text{Na}_3\text{Co}(\text{CN})_6 + 2\text{H}_2\text{O}$
 Easily sol in H_2O . insol in alcohol.
- Sodium zinc cobalticyanide**, $\text{NaZnCo}(\text{CN})_6$,
 $+ \text{H}_2\text{O}$.
 (Fischer and Cuntze, Ch. Z. 1902, 26. 873.)
- Strontium cobalticyanide**, $\text{Sr}_3[\text{Co}(\text{CN})_6]_2 + 10\text{H}_2\text{O}$
 Very sol in H_2O . (Weselsky.)
- Thallium cobalticyanide**, $\text{Tl}_3\text{Co}(\text{CN})_6$.
 100 pts. H_2O dissolve 3.6 pts. at 0° , 5.86 pts.
 at 9.5° , 10.04 pts. at 19.5° (Fronmuller, B.
 11. 91.)
- Yttrium cobalticyanide**, $\text{YCo}(\text{CN})_6 + 2\text{H}_2\text{O}$
 Nearly insol in H_2O (Cleve.)
- Zinc cobalticyanide**, $\text{Zn}_3[\text{Co}(\text{CN})_6]_2 + 12\text{H}_2\text{O}$.
 Sol. in $\text{HCl} + \text{Aq}$ and salt is pptd. by dilu-
 tion with H_2O . Decomp by H_2SO_4 . Insol.
 in $\text{K}_2\text{Co}(\text{CN})_6 + \text{Aq}$. Sol. in NH_4OH and
 $\text{NH}_4\text{Cl} + \text{Aq}$. (Fischer and Cuntze, Ch. Z.
 1902, 26. 873.)
- Zinc cobalticyanide ammonia**,
 $\text{Zn}_3[\text{Co}(\text{CN})_6]_2 \cdot 5\text{NH}_3$.
 Decomp by H_2O and acids (Fischer and
 Cuntze, Ch. Z. 1902, 26. 873.)
 $\text{Zn}_3[\text{Co}(\text{CN})_6]_2 \cdot 6\text{NH}_3$. (Fischer and
 Cuntze.)
 $+ 3\text{H}_2\text{O}$ (Fischer and Cuntze.)
 $\text{Zn}_3[\text{Co}(\text{CN})_6]_2 \cdot 10\text{NH}_3 + 9\text{H}_2\text{O}$. Decomp
 by H_2O . (Fischer and Cuntze.)
- Cobaltimolybdic acid**.
- Ammonium barium cobaltous cobaltimolyb-
 date**, $\frac{1}{2}(\text{NH}_4)_2\text{O}$, $1\frac{1}{2}\text{BaO}$, CoO , CoO_2 ,
 $10\text{MoO}_3 + 18\frac{1}{2}\text{H}_2\text{O}$.
 Difficultly sol. in H_2O . (Friedheim and
 Keller, B. 1906, 39. 4306.)
- Ammonium cobaltous cobaltimolybdate**,
 $2(\text{NH}_4)_2\text{O}$, CoO , CoO_2 , $10\text{MoO}_3 + 12\text{H}_2\text{O}$.
 Much more sol. in H_2O than $3(\text{NH}_4)_2\text{O}$,
 CoO , CoO_2 , $12\text{MoO}_3 + 20\text{H}_2\text{O}$. Sp gr. of
 cold sat. solution = 1.096. (Friedheim and
 Keller.)
 $3(\text{NH}_4)_2\text{O}$, CoO , CoO_2 , $12\text{MoO}_3 + 20\text{H}_2\text{O}$.
 100 cc. cold sat. aqueous solution contain
 3 g. of the salt. Sp.gr. of the solution = 1.0234.
 Sol. in conc. HCl .
 Decomp. by conc. H_2SO_4 , by $\text{KOH} + \text{Aq}$
 and by $\text{NaOH} + \text{Aq}$. (Friedheim and Keller.)
- Barium cobaltous cobaltimolybdate**,
 3BaO , CoO , CoO_2 , $9\text{MoO}_3 + 25\text{H}_2\text{O}$.
 Sl. sol. in H_2O . (Friedheim and Keller.)

Cobaltous potassium cobaltimolybdate,
 $\text{CoO}, 3\text{K}_2\text{O}, \text{CoO}_2, 10\text{MoO}_3 + 10\text{H}_2\text{O}$.
 (Kurnakoff, Ch. Z. 1890, 14. 113.)

+ $11\text{H}_2\text{O}$. Sol. in conc. HCl. Decomp. by $\text{KOH} + \text{Aq}$ and by $\text{NaOH} + \text{Aq}$. (Friedheim and Keller.)

$3\text{K}_2\text{O}, \text{CoO}, \text{CoO}_2, 12\text{MoO}_3 + 15\text{H}_2\text{O}$ Sol. in H_2O . Sol. in conc. HCl. Decomp. by $\text{KOH} + \text{Aq}$ and by $\text{NaOH} + \text{Aq}$. (Friedheim and Keller.)
 + $20\text{H}_2\text{O}$. (Kurnakoff, Ch. Z. 1890, 14. 113.)

Potassium cobaltimolybdate,
 $3\text{K}_2\text{O}, \text{CoO}_2, 9\text{MoO}_3 + 6\frac{1}{2}\text{H}_2\text{O}$.
 Ppt. (Hall, J. Am. Chem. Soc. 1907, 29. 703.)

Cobaltinitrocyanhidric acid.

Potassium cobaltinitrocyanide,
 $\text{K}_4\text{Co}_2(\text{CN})_8\text{NO}_2 + 3\text{H}_2\text{O}$.
 Very sol. in H_2O but quickly decomp. Insol. in alcohol. (Rosenheim and Koppel, Z. anorg. 1898, 17. 68.)

Silver cobaltinitrocyanide,
 $\text{Co}_2\text{Ag}_2\text{NO}_2(\text{CN})_{10} + 6\text{H}_2\text{O}$, and + $21\text{H}_2\text{O}$.
 (Rosenheim and Koppel.)

Sodium cobaltinitrocyanide,
 $\text{Na}_6\text{Co}_4(\text{NO}_2)(\text{CN})_{10} + 11\text{H}_2\text{O}$.
 Very deliquescent. Sol. in H_2O . (Rosenheim and Koppel.)

Cobaltisulphurous acid, $\text{H}_3\text{Co}_2(\text{SO}_3)_3$.
 Not obtained in a solid state. (Berglund, Acta Lund. 1872.)

Cobaltisulphites.

The cobaltisulphites are insol. or at least very sl. sol. in H_2O . (Berglund, Acta Lund. 1872. 23.)

Ammonium cobaltous cobaltisulphite,
 $(\text{NH}_4)_2\text{SO}_3, 2\text{CoSO}_3, \text{Co}_2(\text{SO}_3)_3 + 14\text{H}_2\text{O} =$
 $(\text{NH}_4)_4\text{Co}_2\text{Co}_2(\text{SO}_3)_6 + 14\text{H}_2\text{O}$.

Scarcely sol. in H_2O , but decomp. thereby. Easily sol. in acids, when finely divided; also in $\text{H}_2\text{SO}_3 + \text{Aq}$. (Berglund.)

$2(\text{NH}_4)_2\text{SO}_3, \text{CoSO}_3, \text{Co}_2(\text{SO}_3)_3 + 8\text{H}_2\text{O} =$
 $(\text{NH}_4)_4\text{CoCo}_2(\text{SO}_3)_6 + 8\text{H}_2\text{O}$ As above. (Berglund.)

Barium cobaltisulphite, $3\text{BaSO}_3, \text{Co}_2(\text{SO}_3)_3 + 12\text{H}_2\text{O} = \text{Ba}_3\text{Co}_2(\text{SO}_3)_6 + 12\text{H}_2\text{O}$.

Ppt. Insol. in H_2O . Not attacked by cold acids even H_2SO_4 , but is decomp. by boiling therewith. (Berglund, Acta Lund. 1872.)

Bismuth cobaltisulphite, $\text{Bi}_2\text{Co}_2(\text{SO}_3)_6$.
 Insol. in H_2O , dil. HNO_3 , or $\text{HCl} + \text{Aq}$. (Berglund, Acta Lund. 1872. 31.)

Calcium cobaltisulphite, $\text{Ca}_3\text{Co}_2(\text{SO}_3)_6$.
 Ppt. Insol. in H_2O or $\text{HCl} + \text{Aq}$. (Berglund, Acta Lund. 1872. 30.)

Cobaltous cobaltisulphite, $\text{Co}_2\text{Co}_2(\text{SO}_3)_6 = 3\text{CoSO}_3, \text{Co}_2(\text{SO}_3)_3$.
 Ppt. (Berglund, B. 7. 470.)

Cobaltous potassium cobaltisulphite,
 $\text{CoK}_4\text{Co}_2(\text{SO}_3)_6$.
 Insol. in H_2O . (Berglund.)

Silver cobaltisulphite, $\text{Co}_2(\text{SO}_3)_3, 3\text{Ag}_2\text{SO}_3$.
 Properties as the following comp. (Berglund.)

Silver cobaltous cobaltisulphite, $\text{CoSO}_3, \text{Co}_2(\text{SO}_3)_3, 2\text{Ag}_2\text{SO}_3 + 9\text{H}_2\text{O}$.
 Insol. in H_2O . Insol. in $\text{HNO}_3 + \text{Aq}$. Decomp. by HCl or $\text{H}_2\text{S} + \text{Aq}$ (Berglund.)

Sodium cobaltous cobaltisulphite.
 Decomp. by H_2O , so that it has not been obtained pure. (Berglund, Acta Lund. 1872, 29.)

Cobaltoctamine sulphurous acid.
See Octamine cobaltisulphurous acid.

Cobaltocobalticyanhidric acid,
 $\text{H}_3\text{Co}_3(\text{CN})_{11}$.
 Unstable. (Jackson and Comey, Am. Ch. J. 1897. 19, 277.)

Barium cobaltocobalticyanide,
 $\text{BaHCo}_3(\text{CN})_{11} + 1\frac{1}{2}\text{H}_2\text{O}$.
 Somewhat sol. in H_2O when pure. The crude salt is insol. even in hot H_2O . (Jackson and Comey.)

Cupric cobaltocobalticyanide, $\text{Cu}_2\text{Co}_6(\text{CN})_{22} + 4\text{H}_2\text{O}$.
 Ppt. (Jackson and Comey.)

Potassium hydrogen cobaltocobalticyanide,
 $\text{K}_2\text{HCo}_3(\text{CN})_{11} + 2\text{H}_2\text{O}$.

Sl. sol. in cold, easily sol. in hot H_2O . Insol. in alcohol. (Jackson and Comey.)
 $\text{KH}_2\text{Co}_3(\text{CN})_{11} + \text{H}_2\text{O}$. Insol. in cold or hot H_2O when impure.

The pure salt is slowly sol. in cold H_2O . More sol. in warm H_2O . (Jackson and Comey.)

Silver cobaltocobalticyanide, $\text{Ag}_3\text{Co}_3(\text{CN})_{11} + \text{H}_2\text{O}$.

Ppt. (Jackson and Comey, B. 1896, 29. 1021.)

Zinc cobaltocobalticyanide, $\text{ZnHCo}_3(\text{CN})_{11} + 3\text{H}_2\text{O}$.
 Ppt. (Jackson and Comey.)

Cobaltocyanhydric acid, $H_4Co(CN)_6$.

Very unstable. Sol. in H_2O . Insol. in alcohol.

Cuprous potassium cobaltocyanide, $K_3CuCo(CN)_6$.

(Straus, Z. anorg. 1895, 9. 17)

Potassium cobaltocyanide, $K_4Co(CN)_6$.

Decomp. on air. Very deliquescent, and sol. in H_2O . Insol. in alcohol and ether. (Descamps, Zeit. Ch. 1868. 952.)

Cobaltous acid.**Barium cobaltite, $BaCoO_3$.**

Insol. in H_2O or dil. HCl . Sol. in $HCl + Aq.$ (Rousseau, C. R. 109. 64.)
 $BaCo_2O_5$. As above. (Rousseau.)

Cobaltous potassium cobaltite, $3CoO_2, CoO, K_2O$.

Rapidly hydrolysed by H_2O .
Sol. in conc. HCl . (Bellucci, Chem. Soc. 1907, 92, (2) 354.)

Magnesium cobaltite, $MgCoO_3$.

Insol. in H_2O, NH_4OH , or $(NH_4)_2CO_3 + Aq.$
Easily sol. in $NH_4Cl + Aq.$ from which it is pptd. by $KOH + Aq.$ (Berzelius, Pogg. 33. 126.)

Sol. in $HF, HCl, HNO_3 + H_2SO_4$; decomp. and partially dissolved by $NH_4OH + Aq.$; quite stable when heated. (Dufau, C. R. 1896, 123. 240.)

Potassium cobaltite.

According to Bellucci and Dominici the compounds formerly described are more or less decomp. by hydrolysis. (C. C. 1907. I, 1530.)

Sodium cobaltite.

Sol. in $NaOH + Aq.$ but pptd. by diluting the solution.

Columbic acid (Niobic acid), $3Cb_2O_5, 4H_2O$, or $3Cb_2O_5, 7H_2O$.

Easily sol. in HF ; very sl. sol. in $HCl + Aq.$ but is sol. in H_2O after being treated with $HCl + Aq.$ Sol. in conc. H_2SO_4 . Sol. in $KOH + Aq.$ Insol. in $NaOH + Aq.$ but becomes sol. in H_2O by being treated with $NaOH + Aq.$ Sol. in boiling $Na_2CO_3 + Aq.$ (Rose, Pogg. 113. 109.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 830.)

$Cb_2O_5, 4H_2O$.

$Cb_2O_5, 7H_2O$. (Santesson, Bull. Soc. (2) 24. 52.)

Aluminum columbate, $Al_2O_3, 3Cb_2O_5 + 12H_2O$.

Ppt. (E. F. Smith, J. Am. Chem. Soc. 1908, 30. 1652.)

Barium columbate, $7BaO, 6Cb_2O_5 + 18H_2O$.
Ppt. (Bedford, J. Am. Chem. Soc. 1905, 27. 1218.)**Cadmium columbate, CdO, Cb_2O_5 .**

Sol. in boiling conc. H_2SO_4 ; insol. in most acids; decomp. by $HKSO_4$ at red heat. (Larsson, Z. anorg. 1896, 12. 199.)
 $+ 3\frac{1}{2}H_2O$. Ppt. (E. F. Smith, J. Am. Chem. Soc. 1908, 30. 1652.)

Cæsium columbate, $4Cs_2O, 3Cb_2O_5 + 14H_2O$.

Very sol. in H_2O . (E. F. Smith, J. Am. Chem. Soc. 1908, 30. 1654.)
 $7Cs_2O, 6Cb_2O_5 + 30H_2O$. Ppt. (E. F. Smith, J. Am. Chem. Soc. 1908, 30. 1655.)

Calcium columbate, $2CaO, Cb_2O_5$.

Insol. in H_2O . (Joly, C. R. 81. 266.)
 CaO, Cb_2O_5 . Sol. in boiling conc. H_2SO_4 ; insol. in most acids; decomp. by $HKSO_4$ at red heat. (Larsson, Z. anorg. 1896, 12. 198.)

Cobalt columbate, CoO, Cb_2O_5 .

Sol. in conc. boiling H_2SO_4 ; insol. in most acids; decomp. by $HKSO_4$ at red heat. (Larsson.)

Copper columbate, CuO, Cb_2O_5 .

Sol. in boiling conc. H_2SO_4 ; insol. in most acids; decomp. by $HKSO_4$ at red heat. (Larsson.)
 $+ 3\frac{1}{2}H_2O$. Ppt. (E. F. Smith, J. Am. Chem. Soc. 1908, 30. 1652.)

Iron (ferrous) columbate, $Fe(CbO_3)_2$.

Min. *Columbite*. Insol. in acids.

Iron (ferrous) columbate tantalate,

$xFe(TaO_3)_2, yFe(CbO_3)_2$.

Min. *Tantalite*. Not attacked by acids.
 $Fe(CbO_3)_2, 4Fe(TaO_3)_2$. Min. *Tapiolite*.

Lithium columbate, $7Li_2O, 6Cb_2O_5 + 26H_2O$.

Ppt. (E. F. Smith, J. Am. Chem. Soc. 1908, 30. 1655.)

Magnesium columbate, MgO, Cb_2O_5 .

Sol. in boiling conc. H_2SO_4 ; insol. in most acids; decomp. by $HKSO_4$ at red heat. (Larsson, Z. anorg. 1896, 12. 196.)

$+ 4H_2O$. Precipitate. (Rammelsberg.)

$+ 7H_2O$. Ppt. (E. F. Smith, J. Am. Chem. Soc. 1908, 30. 1651.)

$4MgO, Cb_2O_5$. Insol. in H_2O . (Joly, C. R. 81. 266.)

$3MgO, Cb_2O_5$. As above.

Manganous columbate.

Insol. in H_2O . (Joly, C. R. 81. 266.)

$3MnO, 5Cb_2O_5$. Sol. in boiling conc. H_2SO_4 ; insol. in most acids; decomp. by $HKSO_4$ at red heat. (Larsson, Z. anorg. 1896, 12. 201.)

Potassium columbate, KCbO_3 .

Sol. in H_2O . (Joly, in Fremy's Encyc. Ch.)
 $\text{K}_2\text{Cb}_2\text{O}_7 + 5\frac{1}{2}\text{H}_2\text{O}$. Insol. in H_2O . (Santesson.)

$\text{K}_2\text{Cb}_4\text{O}_{15} + 5\text{H}_2\text{O}$. Nearly insol. in H_2O .
 $\text{K}_4\text{Cb}_2\text{O}_7 + 11\text{H}_2\text{O}$. Insol. in H_2O . (Santesson, Bull. Soc. (2) 24. 53.)

$\text{K}_4\text{Cb}_3\text{O}_{22} + 11\text{H}_2\text{O}$. (Santesson.)
 $\text{K}_6\text{Cb}_4\text{O}_{13} + 13\text{H}_2\text{O}$. Sol. in H_2O .
 $\text{K}_8\text{Cb}_5\text{O}_{10} + 16\text{H}_2\text{O}$. Efflorescent. Sol. in H_2O . (Marignac, A. ch. (4) 8. 20.)

Very sol. in H_2O . (E. F. Smith, J. Am. Chem. Soc. 1908, 30. 1652.)

$\text{K}_{14}\text{Cb}_{12}\text{O}_{37} + 27\text{H}_2\text{O}$. Sol. in H_2O . Insol. in alcohol. (E. F. Smith.)

$\text{K}_{16}\text{Cb}_{14}\text{O}_{43} + 32\text{H}_2\text{O}$. Sol. in H_2O .

Potassium sodium columbate, $3\text{K}_2\text{O}$, Na_2O , $3\text{Cb}_2\text{O}_5 + 9\text{H}_2\text{O}$.

Very slightly sol. in H_2O . Insol. in alkalies. (Marignac.)

Rubidium columbate, $3\text{Rb}_2\text{O}$, $4\text{Cb}_2\text{O}_5 + 9\frac{1}{2}\text{H}_2\text{O}$.

(E. F. Smith, J. Am. Chem. Soc. 1908, 30. 1655.)

$4\text{Rb}_2\text{O}$, $3\text{Cb}_2\text{O}_5 + 14\text{H}_2\text{O}$. Very sol. in H_2O . (E. F. Smith.)

Silver columbate, Ag_2O , $\text{Cb}_2\text{O}_5 + 2\text{H}_2\text{O}$.

Ppt. (E. F. Smith.)

$7\text{Ag}_2\text{O}$, $6\text{Cb}_2\text{O}_5 + 5\text{H}_2\text{O}$. Insol. in H_2O . (Bedford, J. Am. Chem. Soc. 1905, 27. 1218.)

Sodium columbate, $\text{NaCbO}_3 + 3\frac{1}{2}\text{H}_2\text{O}$.

Completely sol. in H_2O . (Rose.)

Ppt. (E. F. Smith, J. Am. Chem. Soc. 1908, 30. 1651.)

$+ 2\frac{1}{2}\text{H}_2\text{O}$. Sl. sol. in cold H_2O . Insol. in $\text{NaOH} + \text{Aq}$. (Santesson.)

$2\text{Na}_2\text{O}$, $3\text{Cb}_2\text{O}_5 + 9\text{H}_2\text{O}$. Insol. in H_2O or $\text{NaOH} + \text{Aq}$. (Santesson.)

$8\text{Na}_2\text{O}$, $7\text{Cb}_2\text{O}_5$. 1 pt. is sol. in 195–200 pts. H_2O at $14-20^\circ$; in ether 75–80 pts. or in 103 pts. boiling water. (Rose.)

$7\text{Na}_2\text{O}$, $6\text{Cb}_2\text{O}_5 + 32\text{H}_2\text{O}$. Very stable. Sol. in H_2O . (Bedford, J. Am. Chem. Soc. 1905, 27. 1217.)

Thorium columbate, $5\text{Th}_2\text{O}_3$, $16\text{Cb}_2\text{O}_5$.

Sol. in boiling conc. H_2SO_4 ; insol. in most acids; decomp. by H_2SO_4 at red heat. (Larsen, Z. anorg. 1896, 12. 202.)

Yttrium columbate, Y_2O_3 , Cb_2O_5 .

Insol. in H_2O . (Joly, C. R. 81. 1261.)

Sol. in boiling conc. H_2SO_4 ; insol. in most acids; decomp. by H_2SO_4 at red heat. (Larsen.)

Zinc columbate, ZnO , Cb_2O_5 .

Sol. in boiling conc. H_2SO_4 ; insol. in most acids; decomp. by H_2SO_4 at red heat. (Larsen.)

7ZnO , $6\text{Cb}_2\text{O}_5 + 25\text{H}_2\text{O}$. Insol. in H_2O . (Bedford, J. Am. Chem. Soc. 1905, 27. 1218.)

Zirconium columbate, ZrO_2 , $5\text{Cb}_2\text{O}_5$.

Sol. in boiling conc. H_2SO_4 ; insol. in most acids; decomp. by H_2SO_4 at red heat. (Larsen.)

Percolumbic acid.

See Percolumbic acid.

Columbium (Niobium), Cb .

Scarcely attacked by HCl , HNO_3 , or aqua regia. Conc. H_2SO_4 dissolves easily on warming.

Sol. in fused oxidizing agents; sol. in hot conc. H_2SO_4 and in HF ; also in $\text{HF} + \text{HNO}_3$; insol. in other acids. (Moissan, C. R. 1901, 133. 24.)

Columbium pentabromide, CbBr_5 .

(Rose, Pogg. 104. 422.)

Columbium carbide nitride, 3CbC , 2CbN .

(Joly, Bull. Soc. (2) 25. 506.)

Columbium trichloride, CbCl_3 .

Not deliquescent; not attacked by H_2O , but easily oxidised by $\text{HNO}_3 + \text{Aq}$. Insol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Rose, C. N. 37. 25.)

Columbium pentachloride, CbCl_5 .

Decomp. by H_2O with separation of a hydrate of Cb_2O_5 . Sol. in cold $\text{HCl} + \text{Aq}$, forming a solution which soon gelatinises, and separates out Cb_2O_5 by heat or dilution; with hot $\text{HCl} + \text{Aq}$, forms a cloudy solution which does not gelatinise. Sol. in H_2SO_4 to form a clear liquid which gelatinises on heating. Sol. in $\text{KOH} + \text{Aq}$. Sol. in alcohol with slight residue. (Rose, Pogg. 104. 432.)

Columbium pentafluoride, CbF_5 .

Very hygroscopic; sol. in H_2O without separation of columbic acid. (Ruff, B. 1909, 42. 492.)

Columbium fluoride with MF .

See Fluocolumbate, M .

Columbium hydride, $\text{CbH}(\text{?})$.

Insol. in HCl , HNO_3 , and dil. $\text{H}_2\text{SO}_4 + \text{Aq}$, even on boiling. Sol. in boiling conc. H_2SO_4 and in fused KHSO_4 . Sol. in cold $\text{HF} + \text{Aq}$ if not too dilute. Also attacked by $\text{KOH} + \text{Aq}$. (Marignac, N. Arch. Phys. Nat. 31. 89.)

Not attacked by boiling H_2O , or boiling HCl .

Oxidized by hot H_2SO_4 . Insol. in boiling HNO_3 . (Muthmann, A. 1907, 355. 90.)

Columbium hydroxide Cb_2O_5 , $x\text{H}_2\text{O}$.

See Columbic acid.

Columbium nitride.

Not attacked by boiling nitric acid or aqua regia, but sol in a cold mixture of HNO_3 and HF . (Rose, Pogg. 111. 426.)

Cb_2N_5 . Not attacked by boiling H_2O or HCl . Insol in conc. HNO_3 and H_2SO_4 .

Decomp. by fused KOH . Not attacked by boiling with $\text{KOH} + \text{Aq}$. (Muthmann, A. 1907, 355. 94.)

Columbium dioxide, Cb_2O_3 .

Sol. when still moist in boiling dil $\text{HCl} + \text{Aq}$. Insol in hot HNO_3 ; less sol in aqua regia than in $\text{HCl} + \text{Aq}$. Sol. in conc. H_2SO_4 after long heating (Rose)

Insol. in H_2O , KOH , or conc. acids, even when boiling. (Delafontaine.)

Columbium trioxide, Cb_2O_3 .

Insol. in acids except HF . (Smith, Z. anorg. 1894, 7. 28.)

Columbium tetroxide, Cb_2O_4 .

Not attacked by cold or hot H_2O , HCl , HNO_3 , H_2SO_4 , or aqua regia. Slightly attacked by boiling $\text{KOH} + \text{Aq}$. (Delafontaine.)

Columbium pentoxide, Cb_2O_5 .

When ignited insol. in hot conc. H_2SO_4 . When it has not been ignited it forms a clear solution with H_2SO_4 , which can be diluted without forming any precipitate. (Rose, Pogg. 112. 549.)

Sol. in fused KHSO_4 , which can be diluted with H_2O without causing pptn. Insol. in HF .

Columbium oxybromide, CbOBr_3 .

Decomp. by H_2O into Cb_2O_5 and HBr . Sol. in hot H_2SO_4 and conc. $\text{HCl} + \text{Aq}$. (Rose, Pogg. 104. 442.)

$3\text{H}_2\text{O}$, Cb_2O_4 , $\text{HBr}(\text{?})$. Easily sublimed. (Smith, Z anorg. 1894, 7. 97.)

Columbium oxybromide rubidium bromide, CbOBr_3 , 2RbBr .

Unstable in moist air. Decomp by H_2O . (Weinland, B 1906, 39. 3059.)

Columbium oxychloride, CbOCl_3 .

Attracts H_2O from air without deliquescing and decomposed. Decomp. with H_2O with evolution of heat. Insol. in hot or cold $\text{HCl} + \text{Aq}$. Sol. by long contact with H_2SO_4 to a cloudy liquid, which clears up on warming, but soon separates out Cb_2O_5 . Sol. in cold $\text{KOH} + \text{Aq}$ and hot $\text{K}_2\text{CO}_3 + \text{Aq}$. (Rose)

Sol. in alcohol, from which it is precipitated by ether. (Blomstrand.)

$3\text{H}_2\text{O}$, Cb_2O_4 , HCl . Sublimate. (Smith, Z. anorg. 1894, 7. 97.)

Columbium oxychloride rubidium chloride, CbOCl_3 , 2RbCl .

Decomp. by H_2O . (Weinland, B. 1906, 39. 3057.)

Columbium oxyfluoride, CbOF_3 .

(Joly, C. R. 81. 1266)

Columbium oxyfluoride with MF.

See Fluoxycolumbate, and Fluoxyhypocolumbate, M.

Columbium oxysulphide, Cb_2OS_3 .

Insol in boiling $\text{HCl} + \text{Aq}$. Slowly decomp. into Cb_2O_5 by boiling with HNO_3 or aqua regia. Insol. in boiling dil $\text{H}_2\text{SO}_4 + \text{Aq}$. Converted into columbic sulphate, sol in H_2O , by boiling conc. H_2SO_4 . Sl. sol. in hot HF . Insol in boiling $\text{K}_2\text{S} + \text{Aq}$. (Rose, Pogg. 111. 193.)

Copper, Cu.

Copper is not attacked by distilled H_2O , or by NH_4NO_3 , KNO_3 , or $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$, or by a mixture of those salts in solution. (Murr, cited by Carnelly, Chem. Soc. 30. 1.)

Distilled H_2O has slight action on Cu. 100 ccm H_2O dissolved from 2 sq. dem. Cu from 0.035 mg. Cu in one hour up to 0.280 mg. in 72 hours. 100 ccm. H_2O dissolved 0.44 mg. from 6 sq. dem. in 48 hours. Presence of solder diminishes solubility about one-half. At 90–100° the amount dissolved is about one-half that at ord. temp. (Carnelly, Chem. Soc. 30. 1.)

100 ccm. distilled H_2O dissolved only 1 mg. Cu from 11.8 sq. cm. during a week, while air free from CO_2 was conducted through the solution. When the air contained CO_2 , 3 mg. were dissolved. (Wagner, Dingl. 221. 259)

100 l. sea water dissolved 12.96 g. Cu from 1 sq. m. (Calvert and Johnson, C. N. 11. 171.)

Solubility in H_2SO_4 .

Not attacked by dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. (Vogel, Schw. J. 32. 301.)

Action of H_2SO_4 at ordinary temp. is very slight even after a long time. (Barruel, J. Pharm. 20. 13 [1834].)

H_2SO_4 has no action below 130°. (Calvert and Johnson, Chem. Soc. 19. 438.)

H_2SO_4 acts slightly even at 20°. 16.3 g. H_2SO_4 (1.843 sp. gr.) dissolved the following amts. from 3 g. Cu, having a surface of 65 sq. cm. at the given temp.

Temp.	Time	% Cu dissolved
19°	14 days	About 6
60	120 min.	2 5
80	30 "	1.5
100	30 "	3 1
124	30 "	22.7
130	30 "	32.6
137	30 "	35 0
150	30 "	69 2
170	10 "	51 92
195	2 "	53 5
220	½ "	70 57
270	few seconds	nearly 100

With dilute acid the action was much less violent, as is seen in the following table—

Tem.	Time	Acid	Sp. gr.	% Cu dissolved
100°	30 min.	H ₂ SO ₄	1.843	2.380
100	30 "	2H ₂ SO ₄ , H ₂ O	1.8295	0.585
100	30 "	H ₂ SO ₄ , H ₂ O	1.780	0
100	30 "	H ₂ SCl ₄ , 2H ₂ O	1.620	0
130	30 "	H ₂ SO ₄	1.843	32.6
130	30 "	H ₂ SO ₄ , H ₂ O	1.780	1.18
130	30 "	H ₂ SO ₄ , 2H ₂ O	1.620	0
165	15 "	H ₂ SO ₄	1.843	70
165	30 "	H ₂ SO ₄ , H ₂ O	1.780	16.5
165	30 "	H ₂ SO ₄ , 2H ₂ O	1.620	2.7

(Pickering, Chem. Soc. **33**. 112.)

Cu is very sl. attacked by cold HCl + Aq. of 1.12 sp. gr., but somewhat more on warming. Even less sol. in dil. HCl + Aq. (Löwe, Z. anal. **4**. 361.)

Sol. in warm conc. HI + Aq. (Rose.)

Slowly attacked by H₂SO₃ + Aq. (Causse, Bull. Soc. (2) **45**. 3.)

More or less sol. in all dil. mineral acids and also in organic acids, as acetic, tartaric, etc., when supply of air is afforded; but absolutely insol. in the latter acids when air is wholly excluded. The importance of this fact in the use of Cu cooking utensils is manifest.

Easily attacked by ord. HNO₃ + Aq.

With very conc. HNO₃ + Aq. (sp. gr. 1.52) it becomes passive, as in the case of Fe.

Pure dil. HNO₃ + Aq. of 1.07 sp. gr. or less does not attack Cu at 20°, but if NO₂ or KNO₃ is added the action begins at once. If HNO₃ + Aq. is more conc. the Cu is attacked. HNO₃ + Aq. of 1.108 sp. gr. begins to act at -2°, and of 1.217 sp. gr. at -10°.

HNO₃ + Aq. of 1.512 sp. gr. attacks Cu violently at 20°, but action soon ceases on account of formation of a crust of Cu(NO₃)₂, insol. in pure HNO₃. (Millon, A. ch. (3) **6**. 95.)

Easily sol. in 2N-HClO₃ + Aq. at 50°. (Hendrixson, J. Am. Chem. Soc. 1904, **26**. 756.)

Not appreciably sol. in anhydrous HF. (Poulenc, A. ch. 1894, (7) **2**. 12.)

When in contact with the air, Cu is soon oxidised by acids, alkalies (especially NH₄OH + Aq.), and many fatty bodies.

Sol. in (NH₄)₂CO₃ + Aq. (Traube, B. **18**. 1887.)

Slowly sol. in NH₄OH + Aq. (Schönbein, B. A. B. **1856**. 580.)

Sol. in KI + Aq. when warm and conc. (Rose.)

When finely divided, Cu is easily sol. in hot FeCl₃ + Aq.

Action of dilute solutions of salts on solubility of Cu in H₂O.

100 ccm. solution of the following salts dissolve the amts. of Cu given below, from a surface of 1 sq. decm in 48 hours.

Salts	G salt dissolved in 100 ccm H ₂ O	Mg Cu dissolved
H ₂ O		0.11
KNO ₃	0.01	0.07
	0.05	0.13
	5.00	0.16
NaNO ₃	0.05	0.18
	5.00	0.19
CaSO ₄	0.05	0.11
K ₂ SO ₄	0.05	0.12
	5.00	0.28
MgSO ₄	0.05	0.16
	5.00	0.34
Na ₂ CO ₃	0.01	0.05
	0.05	0.11
	5.00	2.80
K ₂ CO ₃	0.05	0.14
	5.00	2.35
NaCl	0.01	0.05
	0.05	0.18
	5.00	7.50
KCl	5.00	8.17
(NH ₄) ₂ SO ₄	0.05	0.66
	5.00	28.50
NH ₄ NO ₃	0.01	0.17
	0.05	0.66
	5.00	60.00
NH ₄ Cl	0.05	0.92
	5.00	158.75

At 100° the action of KNO₃, K₂SO₄, and NH₄NO₃ is diminished, while that of (NH₄)₂SO₄, Na₂CO₃, and NaCl is increased.

Tables are also given for mixtures of the above salts. (Carnelley, Chem. Soc. **30**. 1.)

Solubility of Cu in dilute salt solutions.

11.8 sq. cm. Cu were used, and the action continued one week, while air with or without CO₂ was passed through the solution continually.

100 ccm. solution of the following salts dissolved the given amts. Cu.

Salt	G salt dissolved in 100 ccm H ₂ O	Mg Cu dissolved without CO ₂	Mg Cu dissolved with CO ₂
NaCl	0 50	4	115
KCl	0 50	4	115
MgCl ₂	0 83	5	112
NH ₄ Cl	1 00	904	138
K ₂ SO ₄	1 00	0	4
KNO ₃	1 00	0	3
Na ₂ CO ₃	1 00	0	..
NaOH	0 923	0	..
CaO ₂ H ₂	sat.	0	..

(Wagner, Dingl. 221. 260.)

Distilled H₂O dissolved no Cu from 420 sq. mm. in 150 hours at ord temp.

NH₄NO₃+Aq with less than 0.4 g. per litre showed the same result.

KNO₃+Aq or (NH₄)₂SO₄+Aq containing 0.1 to 0.2 g. per litre dissolved no Cu.

H₂O containing carbonates+nitrates, carbonates+sulphates, or chlorides+nitrates also dissolved no Cu.

NH₄NO₃+Aq containing 0.4 g. per litre dissolved 3 mg. per litre after 150 hours contact.

From a surface of 2100 sq. m. of Cu, H₂O charged with CO₂ at ord. pressure, and containing the following salts in solution, dissolved the given amts. Cu. in 120 hours.

Salt	G salt dissolved in 1 l H ₂ O	Mg Cu dissolved
H ₂ O	.. .	1 0
K ₂ CO ₃	0 2	0 2
CaCl ₂	0 2	1 80
NH ₄ NO ₃	0 02	1 40
NH ₄ NO ₃	0 04	1 40
K ₂ CO ₃ + NH ₄ NO ₃	0 1	1 00
NH ₄ NO ₃ + K ₂ CO ₃	0 02	
K ₂ CO ₃ + NH ₄ NO ₃	0 2	
NH ₄ NO ₃ + K ₂ CO ₃	0 04	0 1
NH ₄ NO ₃ + CaCl ₂	0 2	3 6
	0 2	

From a surface of 2100 sq. m., H₂O charged with CO₂ at pressure of 6 atmos. dissolved 0.6 mg. in 48 hours.

H₂O when charged with CO₂ at 6 atmos. and containing:

16 mg. NH₄NO₃ per litre, dissolved 0.8 mg. in 48 hours.

80 mg. NH₄NO₃ per litre, dissolved 1.4 mg. in 48 hours.

40 mg. K₂CO₃ per litre, dissolved 1.2 mg in 48 hours. (Muir, Proc. Soc. Manchester, 15. 31.)

Sol. in KCN+Aq. (Goyder, C. N. 1894, 69. 262.)

A solution of (NH₄)₂S₂O₈ containing 0.829 g.

in 110 cc. dissolves 0.2050-0.2279 g. Cu. (Turrentine, J phys. Chem. 1907, 11. 625.)

Sl. attacked by liquid NH₃. (Franklin, Am. Ch. J. 1898, 20. 827.)

Amts Cu dissolved by action of various oils on 8 sq. in. Cu by 10 days' exposure and subsequent 67 days—

	Amt Cu dissolved in 10 days	Amt Cu dissolved in subsequent 67 days
Linseed oil .	0 3000 grain	0 2435 grain
Olive oil . .	0 2200 "	0 0200 "
Colza oil . .	0 0170 "	0 1230 "
Almond oil .	0 1030 "	0 1170 "
Seal oil . . .	0 0485 "	0 0315 "
Sperm oil . .	0 0030 "	0 0575 "
Castor oil . .	0 0065 "	0 0035 "
Neatsfoot oil	0 1100 "
Sesame oil . .	0 1700 "	0 0015 "
Paraffine oil .	0 0015 "

(Watson, C. N. 36. 200.)

Qualitative results of the action of various oils on Cu are also given by Thompson. (C. N. 34. 176, 200, 219.)

½ ccm. oleic acid dissolves 0.0157 g. Cu in 6 days. (Gates, J. phys. Chem. 1911, 15. 143.)

Sol. in an alkaline solution of gelatine (3 54 %) copper gauze dissolved in 48 hours. (Lidoff, C. C. 1899, II. 471.)

Cuprous acetylide, Cu₂C₂.

Decomp. by heating with H₂O or KCN+Aq. Decomp. by HNO₃. (Keiser, Am. Ch. J. 1892, 14. 289.)

Not decomp. by H₂SO₄, NH₄OH, KOH + Aq or acetic acid, even on warming. The dry salt is sol. in very dil. HCl+Aq without evolution of gas. Sol. in conc. KCN+Aq. (Böttger, A. 1859, 109. 356.)

Cupric acetylide, CuC₂.

Easily sol. in HCl. Turns brown in the air, and becomes insol. in acids. (Phillips, Z. anorg. 1894, 6. 241.)

3Cu₂C₂O+2H₂O. Solubility as that of Cu₃C₁₇H₄O₃. (Söderbaum, B. 1897, 30. 764.)

Cu₃C₁₇H₄O₃. Insol. in H₂O.

When dry is violently decomp. by conc. H₂SO₄ or not too dil. HNO₃. Rapidly decomp. by warming with dil. acids, especially HCl.

Insol. in NH₄OH+Aq in absence of air, partially sol. in presence of air.

Insol. in organic solvents. (Söderbaum, B. 1897, 30. 762.)

Cuprous acetylide iodide, Cu₂C₂I, CuI.

Ppt. (Berthelot and Delépine, A. ch. 1900, (7) 19. 54.)

Cupric arsenide, Cu_5As_2 .

(Reinsch, J. pr. **24**. 244.)
 Cu_4As_2 . (Gehlen.)
 Cu_3As_2 . Ppt Decomp. by acids. (Kane, Pogg. **44**. 471)
 Cu_3As . Min *Domeykite*. Insol. in HCl + Aq; sol in HNO_3 .
 Cu_6As . Min *Algodonite*.
 Cu_9As . Min. *Darwinite*.

Cuprous azoimide, CuN_3 .

Insol in H_2O . (Curtius.)
 Sensitive to sunlight. (Wöhler, B. 1913, **46**. 2053.)

Cupric azoimide, basic, CuO , CuN_6 .

Insol. in H_2O . (Wöhler, B. 1913, **46**. 2055.)

Cupric azoimide, CuN_6 .

Very explosive.
 Very sl sol. in H_2O . Decomp. by boiling with H_2O . (Curtius, J. pr. 1893, (2) **58**. 296.)

Copper azoimide ammonia, CuN_3 , 2NH_3 .

Ppt Insol in H_2O . Easily sol. in dil. acids. (Deans, J. Am. Chem. Soc. **1907**. 29, 19)

Copper boride, Cu_3B_2 .

(Marsden, J. B., **1880**. 330.)

Cuprous bromide, Cu_2Br_2 .

1 l. H_2O dissolves at 18° – 20° .

0.4320 millimols bromine.

0.3157 " cupric copper.

0.1061 " cuprous copper.

(Bodländer, Z. anorg. **1902**, **31**. 460.)

Sol. in HBr , HCl without decomp., or HNO_3 + Aq with decomp., also in NH_4OH + Aq. Insol. in boiling conc. H_2SO_4 or $\text{HCl}_2\text{H}_3\text{O}_2$ + Aq. (Berthelot, A. ch. **44**. 385.)

Sol. in H_2SO_3 + Aq. (Lean and Whatmough, Chem. Soc. **1898**, **73**. 151.)

Sol. in NaCl and $\text{Na}_2\text{S}_2\text{O}_3$ + Aq. (Renault, C. R. **59**. 319.)

Solubility of Cu_2Br_2 in KBr + Aq.

All values recorded in millimols per litre.

KBr	Total copper	Cupric copper	Cuprous copper
25	0.119	0.012	0.107

(Bodländer and Storbeck, Z. anorg. **1902**, **31**. 462)

Difficultly sol. in methyl acetate. (Naumann, B. **1909**, **42**. 3790)

Sol in ethyl acetate (Naumann, B. **1910**, **43**. 314)

Insol in acetone. (Naumann, B. **1904**, **37**. 4329; Eidmann, C. C. **1897**, II. 1014.)

100 g acetonitrile dissolve 3.86 g Cu_2Br_2 at 18° (Naumann and Schier, B. **1914**, **47**. 249)

Sol. in pyridine. (Naumann, B. **1904**, **37**. 4609.)

Mol. weight determined in pyridine, methyl and ethyl sulphides. (Werner, Z. anorg. **1897**, **15**. 19, 26, and 28.)

Cupric bromide, CuBr_2 .

Deliquescent. Very sol. in H_2O . Insol. in benzene. (Franchimont, B. **16**. 387.)

Very sl attacked by cold or even hot H_2SO_4 . (Viard, C. R. **1902**, **135**. 169.)

Moderately sol. in liquid NH_3 . (Horn, Am. Ch. J. **1908**, **39**. 219.)

100 g. 95% formic acid dissolve 0.16 g. at 21° (Aschan, Ch. Z. **1913**, **37**. 1117.)

100 g. acetonitrile dissolve 24.43 g CuBr_2 at 18° . (Naumann and Schier, B. **1914**, **47**. 249.)

Sol. in benzonitrile. (Naumann, B. **1914**, **47**. 1369.)

Sol. in methyl acetate (Naumann, B. **1909**, **42**. 3790.)

Sol. in acetone. (Naumann, B. **1904**, **37**. 4328.)

Sol. in acetone with a brown color. (Eidmann, C. C. **1899**, II. 1014.)

+ $2\text{H}_2\text{O}$ (?). (Berthelot, A. ch. **1830**, **44**. 385.)

+ $4\text{H}_2\text{O}$. Very sol in H_2O . (Sabatier, Bull. Soc. **1894**, (3) **11**. 677)

Cupric hydrogen bromide, CuBr_2 , HBr + $2\text{H}_2\text{O}$

Decomp. by H_2O . (Sabatier, Bull. Soc. **1894**, (3) **11**. 681.)

+ $10\text{H}_2\text{O}$. (Weinland and Knöll, Z. anorg. **1905**, **44**. 116.)

Cupric lithium bromide, CuBr_2 , 2LiBr + $6\text{H}_2\text{O}$.

Very hygroscopic. (Sementschenko, Z. anorg. **1899**, **19**. 336.)

Very hygroscopic; decomp. by H_2O . (Kurnakoff, C. C. **1899**, I. 16.)

Cupric potassium bromide, CuBr_2 , KBr .

Decomp. by H_2O . (Sabatier, Bull. Soc. **1894**, (3) **11**. 683.)

Cuprous bromide ammonia, Cu_2Br_2 , 2NH_3 .

Stable when dry.

Easily sol. in HNO_3 and NH_4OH + Aq. Other mineral acids and acetic acid separate Cu_2Br_2 . (Richards, Z. anorg. **1898**, **17**. 245.)

Cu_2Br_2 , 6NH_3 . (Lloyd.)

Cu_2Br_2 , 3NH_3 . (Lloyd, J. phys. Chem. **1908**, **12**. 399.)

Cupric bromide ammonia, $\text{CuBr}_2 \cdot 2\text{NH}_3$.

Sol. in $\text{NH}_4\text{Br} + \text{Aq}$ without decomp. (Richards, B. 23. 3790.)

$3\text{CuBr}_2 \cdot 10\text{NH}_3$. Decomp. by H_2O . (Richards, Am. Ch. J. 15. 651.)

$\text{CuBr}_2 \cdot 3\text{NH}_3$. Completely sol. in a little H_2O , but is decomp. by dilution. Insol. in alcohol. (Rammelsberg, Pogg. 55. 246.)

$\text{CuBr}_2 \cdot 4\text{NH}_3 + \text{H}_2\text{O}$. 100 pts. H_2O dissolve 69.03 pts. $\text{CuBr}_2 \cdot 4\text{NH}_3$ at 25° . (Pudschies, Dissert.)

$\text{CuBr}_2 \cdot 5\text{NH}_3$. As above. (Rammelsberg.)

$\text{CuBr}_2 \cdot 6\text{NH}_3$. Sol. in small amts. of H_2O , but decomp. on dilution. (Richards.)

Cupric bromide nitric oxide, $\text{CuBr}_2 \cdot \text{NO}$.

Decomp. by H_2O . (Manchot, B. 1914, 47. 1607.)

Cuprous chloride, Cu_2Cl_2 .

1.53 g. Cu_2Cl_2 dissolve in 100 g. H_2O at 21.5° ; 1.55 g. at 26.5° . (Kremann and Noss, M. 1912, 33. 1206.)

Solubility of Cu_2Cl_2 in H_2O in an atmosphere of hydrogen.

Solubility is recorded in mg-atoms per l.

t°	Total Cu	CuCl_2 by analysis	Cl	Cu_2Cl_2 calc.	Cu_2Cl_2 by analysis
20.2	2 752	2 124	5.672	0 628	0 420

19.7	2 805	2 138	5.390	0.336	0.667

(Bodlander, l. c.)

Sol. in conc. $\text{HCl} + \text{Aq}$; insol. in dil. HNO_3 , or $\text{H}_2\text{SO}_4 + \text{Aq}$. Not attacked by cold conc. H_2SO_4 , and only sl. on warming. (Rosenfeld, B. 12. 954.) Sol. in $\text{NH}_4\text{OH} + \text{Aq}$; sol. in hot NaCl , KCl , FeCl_3 , ZnCl_2 , MnCl_2 , etc. + Aq . 1 mol. $\text{Na}_2\text{S}_2\text{O}_3$ in aqueous solution dissolves 1 mol. Cu_2Cl_2 . (Winkler, J. pr. 88. 428.) Sol. in KI , I_2 , KCN , or $(\text{NH}_4)_2\text{S}_2\text{O}_4 + \text{Aq}$. (Renault, C. R. 59. 558.)

Solubility in $\text{HCl} + \text{Aq}$ at 17° . $\frac{\text{Cu}_2\text{Cl}_2}{2} =$
 $\frac{1}{2}$ mols. CuCl_2 in mgs. in 10 ccm. solution. $\text{HCl} =$ mols. HCl in ditto.

(Chatelier, calc. by Engel, A. ch. (6) 17. 377.)

Solubility of Cu_2Cl_2 in $\text{HCl} + \text{Aq}$ at 0° .

$\frac{\text{Cu}_2\text{Cl}_2}{2}$	HCl	Sp gr.
1.5	17.5	1.049
2.9	26.0	1.065
8.25	44.75	1.132
15.5	68.5	1.261
33.0	104.0	1.345

(Engel, l. c.)

Freshly pptd. Cu_2Cl_2 is sol. in $\text{H}_2\text{SO}_4 + \text{Aq}$. (Lean and Whatmough, Chem. Soc. 1898, 73. 150.)

Sl. sol. in normal $\text{NH}_4\text{OH} + \text{Aq}$ only by shaking several hours, a 0.02 normal solution of cuprous copper being obtained. (Gaus, Z. anorg. 1900, 25. 258.)

Insol. in $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$. (Siewert, Gm. K. 5. 1, 893.)

Sol. in alkyl triphosphites. (Arbusoff, C. C. 1906, II. 750.)

Solubility in FeCl_3 , $4\text{H}_2\text{O} + \text{Aq}$ at 21.5° .

(Bodlander and Storbeck, Z. anorg. 1902, **31**, 22.)

Insol. in SbCl_3 . (Klemensiewicz, Bull. Acad. Crac. 1908, **6**, 485.)

Sl. sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, **20**, 827.)

Insol. in alcohol.

Sl. sol. in ether. (Gehlen.)

Sol. in quinoline. (Beckmann and Gabel, Z. anorg. 1906, **51**, 236.)

Sol. in pyridine. (Schroeder, Dissert. 1901.)

Insol. in phosgene (Eidmann, Dissert. 1899.)

Insol. in acetone. (Naumann, B. 1904, **37**, 4329.)

Insol. in acetone and in methylal. (Eidmann, C. C. 1899, II. 1014.)

Difficultly sol. in methyl acetate. (Naumann, B. 1909, **42**, 3790.)

Insol. in ethyl acetate. (Alexander, Dissert. 1899.) (Naumann, B. 1904, **37**, 3601.)

Difficultly sol. in ethyl acetate. (Naumann, B. 1910, **43**, 314.)

100 g. acetonitrile dissolve 13.33 g. Cu_2Cl_2 at 18° . (Naumann and Schier, B. 1914, **47**, 249.)

Sol. in benzonitrile. (Naumann, B. 1914, **47**, 1369.)

Sol. in hot benzonitrile and other aromatic nitriles. (Werner, Z. anorg. 1897, **15**, 7.)

Mol. weight determined in pyridine methyl and ethyl sulphides. (Werner, Z. anorg. 1897, **15**, 19, 25 and 28.)

Min. *Nantokite*. Sol. in HCl , HNO_3 , or $\text{NH}_4\text{OH} + \text{Aq}$.

Cupric chloride, CuCl_2 .

Deliquescent. 100 pts. H_2O dissolve 70.6 pts. CuCl_2 at 0° ; 100 pts. $\text{CuCl}_2 + \text{Aq}$ contain 41.4 pts. CuCl_2 . (Engel, A. ch. (6) **17**, 350.)

100 pts. H_2O dissolve 76.2 pts. CuCl_2 at 16.1° , or 100 pts. $\text{CuCl}_2 + \text{Aq}$ sat. at 16.1° contain 43.25 pts. CuCl_2 . (Rudorff, B. **6**, 484.)

100 pts. $\text{CuCl}_2 + \text{Aq}$ sat. at 17° contain 43.06 pts. CuCl_2 ; at 31.5° , contain 44.7 pts. CuCl_2 . Coefficient of solubility = $41.4 + 0.105t$. (Reicher and Deventer, Z. phys. Ch. **5**, 560.)

Sat. $\text{CuCl}_2 + \text{Aq}$. contains at:

-20°	-5°	$+12^\circ$	17°	32°
37	38.8	39.3	41.7	43.2% CuCl_2 ,

(de Coninck, C. R. 1900, 131. 59)

Solubility in organic solvents.

Sol. in propyl alcohol, hot glycol, hot glycerine, hot paraldehyde, hot crys. acetic acid, pure acetone, 30% methylamine+Aq, pure pyridine, pure α-picoline, acetonitrile; sl. sol. in isobutyl and amyl alcohols, crystallizable formic acid, ethyl acetate; insol. in cold glycol, cold glycerine, cold paraldehyde, benzaldehyde, cold crystallizable acetic acid, ord. ether, abs. ether, hot and cold CS₂, cold aniline, cold orthotoluidine, methylene chloride, ethyl iodide, propyl iodide, ethylene bromide, benzene, toluene, xylene, ligroin, nitrobenzene, cold piperidine and essence of terebenthine. (de Coninck, C. R. 1900, 131. 59.)

+5H₂O.Aq. sol. at 35° contains 2.921 Mol. % CuCl₂.
15° " 1.11

(Schreinemakers, C. C. 1911, II. 349.)

Cuprous hydrogen chloride, CuCl.HCl.

Sol. in H₂O. (Neumann, M. 1894, 15. 493.)Cupric hydrogen chloride, CuCl₂.HCl+3H₂ODecomp. by H₂O. Sol. in HCl+Aq below 0° (Engel, C. R. 106. 273.)CuCl₂.2HCl Deliquescent. Very sol. in H₂O. (Alexander, Dissert 1899.)+5H₂O. Properties as above. (Sabbatier, C. R. 106. 1724.)CuCl₂.3HCl. Sol. in H₂O. (Neumann M. 1894, 15. 493.)Cupric gold (auric) chloride, CuCl₂.2AuCl₃+6H₂O.10% is sol in H₂O at 18°. (Mylius, Z. anorg 1911, 70. 210)Cupric lithium chloride, CuCl₂.LiCl+2½H₂O.Decomp. on air. Decomp. by dissolving in H₂O. Sol. in conc. LiCl+Aq without decomp. Decomp by alcohol. (Chassevant, A. ch. (6) 30. 33.)+2H₂O. (Meyerhoffer, W. A. B. 100, 2b. 621.)

Cupric mercuric chloride.

Easily sol. in H₂O. (v. Bonsdorff.)Cupric mercuric potassium chloride, CuCl₂.3HgCl₂.6KCl+2H₂O.Deliquescent in moist air. Sol. in boiling H₂O without decomp, and recrystallises if cooled slowly. Insol. in absolute alcohol. (v. Bonsdorff, Pogg 33. 81.)Cuprous nitrosyl chloride, Cu₂Cl₂.2NOCl.Very deliquescent and sol. in H₂O with immediate decomp. (Sudborough, Chem. Soc. 59. 658.)Cuprous potassium chloride, Cu₂Cl₂.4KCl.Sol. in H₂O. (Mitscherlich, A. ch. 73. 384.)For solubility data, see Cu₂Cl₂+KCl under cuprous chloride.

Cupric potassium chloride.

CuCl₂.KCl. (Meyerhoffer, Z. phys. Ch. 3. 336.)Sol. in H₂O; only sl. sol. in conc. HCl+Aq. (Gröger, Z. anorg. 1899, 19. 330.)CuCl₂.2KCl+2H₂O. Sol. in H₂O and alcohol (Berzelius, Pogg. 13. 458.)

The composition of the hydrates formed by this salt at different dilutions is calculated from determinations of the lowering of the fr. pt. produced by the salt and of the conductivity and sp. gr. of its aqueous solutions. (Jones, Am. Ch. J. 1905, 34. 322.)

For solubility data, see CuCl₂+KCl under cupric chloride.Cupric rubidium chloride, CuCl₂.2RbCl.Easily sol. in H₂O and HCl+Aq. (Godefroy, B. 8. 9.)+2H₂O. Sol. in H₂O. (Wyruboff, J. B. 1887. 538.)

Cuprous sodium chloride.

Very sol. in H₂O.

Cupric sodium chloride.

Easily sol. in conc. NaCl + Aq. Sol. in alcohol of 0.837 sp. gr.

No double salt exists. (Schreinemakers and de Baat, Z. phys. Ch. 1909, 65. 586.)

Cupric thallic chloride, CuCl_2 , 2TiCl_3 .

Sol in H_2O . (Willm, A. ch. (4) 5. 55.)
+ $6\text{H}_2\text{O}$. Can be cryst. from H_2O .
(Gewecke, A. 1909, 366. 225.)

Cuprous chloride ammonia, Cu_2Cl_2 , NH_3 .

(Lloyd, J. phys. Chem. 1908, 12. 399.)

Cu_2Cl_2 , 2NH_3 . Decomp. by H_2O or acids, not by alcohol. (Ritthausen, J. pr 59. 369.)

Cu_2Cl_2 , 3NH_3 . (Lloyd, J. phys. Chem. 1908, 12. 399.)

Cu_2Cl_2 , 6NH_3 . (Lloyd, J. phys. Chem. 1908, 12. 399.)

Cupric chloride ammonia, CuCl_2 , 2NH_3 .

Decomp. by H_2O . (Kane, A. ch. 72. 273.)

CuCl_2 , 4NH_3 . Sol. in H_2O . (Bouzat, C. R. 1902, 135. 294.)

+ H_2O (*Cuprammonium chloride*). Sol. in H_2O and hot NH_4OH + Aq.

+ $2\text{H}_2\text{O}$. Sol. in small amt. of H_2O . $\text{Cu}(\text{OH})_2$ is pptd. by dilution. (Bouzat, A. ch. 1903, (7) 29. 350.)

CuCl_2 , 5NH_3 . (Bouzat, A. ch. 1903, (7) 29. 350.)

+ $1\frac{1}{2}\text{H}_2\text{O}$. Sol. in H_2O . On dilution $\text{Cu}(\text{OH})_2$ is pptd. Sol. in NH_4OH + Aq;

solubility decreases as NH_3 concentration increases. (Bouzat, A. ch. 1903, (7) 29. 350.)

CuCl_2 , 6NH_3 . Completely sol. in H_2O . (Rose, Pogg. 20. 55.)

Sol. in H_2O but decomp. by great dilution with pptn. of $\text{Cu}(\text{OH})_2$.

Insol. in liquid NH_3 . (Bouzat, A. ch. 1903, (7) 29. 350.)

Cuprocupric chloride ammonia, Cu_2Cl_2 , CuCl_2 , 4NH_3 + H_2O .

Decomp. by H_2O or alcohol. Abundantly sol. in NH_4Cl + Aq, but with partial decomposition. (Ritthausen.)

Cupric chloride ammonia platinous chloride, CuCl_2 , 4NH_3 , PtCl_2 .

See Platodiamine cupric chloride.

Cuprous chloride carbon monoxide,

Cu_2Cl_2 , 2CO + $4\text{H}_2\text{O}$.

Very sol. in HCl (sp. gr. 1.19) with evolution of CO. Sol. in NH_4OH + Aq. (Manchot and Friend, A. 1908, 359. 110.)

$2\text{Cu}_2\text{Cl}_2$, CO + $2\text{H}_2\text{O}$. Insol. in H_2O . (Berthelot, A. ch. 1856, (3) 46. 488.)

$4\text{Cu}_2\text{Cl}_2$, 3CO + $7\text{H}_2\text{O}$. Insol. in H_2O , but decomp. therewith very quickly. Sol. in Cu_2Cl_2 + HCl.

Cupric chloride hydrazine, CuCl_2 , $2\text{N}_2\text{H}_4$.

Easily decomp. (Hofmann and Marburg, A. 1899, 305. 222.)

Cuprous chloride mercuric sulphide, Cu_2Cl_2 , 2HgS .

Insol. in H_2O ; sol. in conc. hot HCl + Aq; not decomp. by boiling dil. H_2SO_4 + Aq, but decomp. by conc. H_2SO_4 . (Heumann, B. 7. 1390.)

Cuprous fluoride, Cu_2F_2 .

Insol. in H_2O or HF. Sol. in conc. HCl + Aq, from which it is precipitated by H_2O .

Insol. in alcohol. (Berzelius, Pogg. 1. 28.)

Decomp. by H_2O into sol. CuF_2 . Sol. in boiling HCl + Aq and in HNO_3 + Aq. Only sl. attacked by warm H_2SO_4 . (Poulenc, C. R. 116. 1447.)

Cupric fluoride, CuF_2 .

Easily takes up H_2O to form $\text{CuF}_2 \cdot 2\text{H}_2\text{O}$. Sol. in HCl, HNO_3 , or HF + Aq. (Poulenc, C. R. 116. 1448.)

Solubility at 25° in HF + Aq.

Normality of HF + Aq	g atoms Cu in 1000 c c of solution
0 12	0.0307
0 28	0.1164
0.57	0.2494
1 08	0.388
2.28	0.463

Solubility is decreased by presence of KF.

(Jaeger, Z. anorg. 1901, 27. 29.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 827.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate (Naumann, B. 1910, 43. 314.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329.)

+ $2\text{H}_2\text{O}$. Sl. sol. in cold, decomp. by hot H_2O . (Berzelius.)

Cupric hydrogen fluoride, CuF_2 , 5HF + $5\text{H}_2\text{O}$.

Deliquescent.

Easily sol. in H_2O and dil. acids.

Sol. in NH_4OH + Aq with decomp (Böhm, Z. anorg. 1905, 43, 329.)

Cupric potassium fluoride, CuF_2 , 2KF .

Easily sol. in H_2O .

CuF_2 , KF. Very sl. sol. in H_2O ; sl. sol. in dil. acids. (Helmholt, Z. anorg. 3. 115.)

Cupric rubidium fluoride, CuF_2 , RbF .

As the K salt. (Helmholt.)

Cupric silicon fluoride.

See Fluosilicate, cupric.

Copper stannic fluoride.
See Fluostannate, copper.

Copper tantalum fluoride.
See Fluotantalate, copper.

Copper titanium fluoride.
See Fluotitanate, copper.

Copper tungstyl fluoride.
See Fluoxytungstate, copper.

Copper zirconium fluoride.
See Fluozirconate, copper.

Cupric fluoride ammonia, $\text{CuF}_2 \cdot 4\text{NH}_3 + 5\text{H}_2\text{O}$.

Decomp. rapidly in the air.

Easily sol. in H_2O .

Decomp. by boiling with H_2O with evolution of NH_3 .

Easily sol. in dil. acids. (Bohm, Z. anorg. 1905, 43. 333.)

Cuprous hydride, CuH .

Insol. in H_2O . Sol. in $\text{HCl} + \text{Aq}$. (Wurtz, C. R. 18. 102.)

Sol in warm conc. HCl with decomp. (Bartlett, Am. Ch. J. 1895, 17. 187.)

Cupric hydride, CuH_2 .

Sol. in HCl with decomp. (Bartlett, Am. Ch. J. 1895, 17. 187.)

Copper hydrosulphide, $7\text{CuS} \cdot \text{H}_2\text{S}$.
(Linder and Picton, Chem. Soc. 1892, 61. 120.)

$9\text{CuS} \cdot \text{H}_2\text{S}$. (Linder and Picton.)

$22\text{CuS} \cdot \text{H}_2\text{S}$. (Linder and Picton.)

Cuprous hydroxide, $\text{Cu}_2\text{O} \cdot x\text{H}_2\text{O}$.

Sol. in acids as cupric salt. Insol. in NaOH , or $\text{KOH} + \text{Aq}$.

Sol. in NH_4OH , and $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$; sol. in $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$.

Cuprocupric hydroxide, $\text{CuOH} \cdot 3\text{Cu}(\text{OH})_2 + 3\text{H}_2\text{O}$.

Sol. in acids. (Francke, Dissert. 1907.)

Cupric hydroxide, $3\text{CuO} \cdot \text{H}_2\text{O}$.

Insol. in H_2O or dil. alkalies. Easily sol. in warm $\text{NH}_4\text{Cl} + \text{Aq}$. (Rose.)

Much more difficultly sol. than CuO_2H_2 in $\text{KOH} + \text{Aq}$. (Chodnew, J. pr. 28. 220.)

True composition is $6\text{CuO} \cdot \text{H}_2\text{O}$.

See also Cupric oxide.

CuO_2H_2 . Insol. in H_2O , but decomp. into $6\text{CuO} \cdot \text{H}_2\text{O}$ by being boiled therewith.

Extremely easily sol. in acids.

Sol. in NH_4OH , and NH_4 salts + Aq .

Solubility in $\text{NH}_4\text{OH} + \text{Aq}$ at 25° .

NH_3 n.c.m.	g Cu per l	equiv. CuO_2H_2 per l

9 96	0.1787

(Dawson, Z. phys. Ch. 1909, 69. 111.)

Sol. in cold NaOH , or $\text{KOH} + \text{Aq}$ (Proust); but CuO is pptd. on boiling (Berthollet); is not pptd. (Chodnew, J. pr. 28. 220.)

Insol. in NaOH or $\text{KOH} + \text{Aq}$ unless they contain organic matter (Berzelius). This is contradicted by Volcker (A. 59. 34).

Entirely sol. in conc. $\text{KOH} + \text{Aq}$, but solution is decomp. by heating. (Fremy, A. ch. (3) 12. 510.)

Sol. in $\text{NaOH} + \text{Aq}$ (70% NaOH). (Löw, Z. anal. 9. 463.)

The solubility in NaOH of CuO_2H_2 , prepared either from CuSO_4 or $\text{Cu}(\text{NO}_3)_2$, decreases with decrease in concentration of the base. The solubility of CuO_2H_2 in NaOH is only very slightly affected by the addition of sodium or potassium carbonate. (Fischer, Z. anorg. 1904, 40. 41.)

(Dawson, Chem. Soc. 1909, 95. 373.)

Sl. sol. in alkali carbonates+Aq, especially KHCO_3 and NaHCO_3 . (Berzelius.)

Sol. in cold $\text{Na}_2\text{S}_2\text{O}_3$ +Aq, but pptd. on warming. (Field, Chem. Soc. (2) 1. 28.)

Partially sol. when freshly pptd. in KCN +Aq. (Rogers, 1834.)

Sol. in $(\text{NH}_4)_2\text{S}_2\text{O}_8$ +Aq. (Moreau, Apoth. Ztg. 1901, 16. 383.)

Sol. in MSCN +Aq.; more difficultly sol. in NH_4SCN +Aq than ZnO_2H_2 . (Grossmann, Z. anorg. 1903, 58. 269.)

Very sol. in hydroxylamine. (Jannasch and Cohen, J. pr. 1905, (2), 72. 14.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014)

Sol. in large amt. in $\text{NaC}_2\text{H}_3\text{O}_2$ +Aq. (Mercer, 1844.)

Not pptd. in presence of Na citrate. (Spiller.)

Insol. in cane sugar+Aq, unless an alkali or alkaline earth is present (Pescher.)

Recently pptd. CuO_2H_2 is easily sol. in cane sugar with NaOH , KOH , or CaO_2H_2 +Aq; less sol. in presence of SrO_2H_2 or BaO_2H_2 . (Becquerel.)

Not pptd. by KOH +Aq in solutions containing tartaric acid, cane sugar, and many other non-volatile organic substances.

Sol. in Ca, Ba, Sr, K or Na sucates+Aq, and ppts. of double sucates form when solutions of the first three bases are heated, but no

ppt. forms in the last two cases even at 100°. (Hunton.)

Insol. in simple Ca, Ba, or K sucrates + Aq, but immediately sol. when an excess of cane sugar + Aq is present. (Peligot.)

Moderately sol. in amyl amine, easily sol. in methyl, less in ethyl amine. (Wurtz.)

Sol. in sorbine + Aq. (Pelouze.)

Not pptd. in presence of aromatic oxyacids or phenols of the ortho series. Thus in presence of salicylic acid, pyrocatechin, gallic acid, pyrogallol acid, etc., NaOH + Aq does not ppt. CuO_2H_2 from Cu solutions, but pptn. is not prevented by benzoic acid, resorcin, hydroquinone, etc. (Weith, B. 9. 342.)

Sol. in solutions of alkali salts of "spaltungsprodukte" of albumen. (Kalle and Co. Pat. 1901.)

Sol. in starch emulsion which has become thin liquid in an alternating magnetic field. (Rosenthal, C. C. 1908, I. 593.)

CuO , $2\text{H}_2\text{O}$. (Rubénovitch, C. R. 1899, 129. 336.)

CuO , $3\text{H}_2\text{O}$. (Kosmann, Z. anorg. 1893, 3. 373.)

2CuO , $3\text{H}_2\text{O}$. (Cross, Gm.—K. 5. 1, 753.)

4CuO , H_2O . Insol. in NH_4OH + Aq. (Mailhe, A. ch. 1902, (7) 27. 393.)

Cupric hydroxide ammonia, CuO_2H_2 , 4NH_3 .

Present in ammoniacal solution of CuO_2H_2 . (Dawson, Z. phys. Ch. 1909, 69. 110.)

Cuprous imide, Cu_2NH .

Decomp. at 160° forming Cu_3N .

Readily hydrolysed by H_2O .

Sol. in liquid NH_3 solutions of NH_4NO_3 . (Franklin, J. Am. Chem. Soc. 1912, 34. 1502.)

Cuprous iodide, Cu_2I_2 .

Insol. in H_2O , or dil. acids.

Calculated from electrical conductivity of Cu_2I_2 + Aq. 1 l. H_2O dissolves about 8 mg. Cu_2I_2 at 18°. (Kohlrausch and Rose, Z. phys. Ch. 12. 241.)

Sol. in conc. H_2SO_4 . (Vitali, Gm.—K. 5. 1, 947.)

Sol. with difficulty in conc. HCl + Aq.

Decomp. by conc. HNO_3 , or H_2SO_4 . Insol. in NaCl , KNO_3 , Na_2SO_3 , KBr , or NH_4Cl + Aq. Sol. in NH_4OH , $\text{Na}_2\text{S}_2\text{O}_3$, KCN , or KI + Aq. (Renault, C. R. 59. 558.)

Appreciably sol. in N/10 HCl . Practically insol. in N/10 H_2SO_4 . (Moser, Z. anal. 1904, 43. 604.)

Results of experiments on solubility of Cu_2I_2 in I_2 + Aq in presence of acids and salts are given by Bray and MacKay.

Cu_2I_2 was found to be sl. sol. in H_2O but a considerable amt. dissolves in presence of I_2 , owing to formation of CuI_2 and CuI_3 . (J. Am. Chem. Soc. 1910, 32. 1207.)

Solubility of Cu_2I_2 in I_2 + Aq at 20°.

NH_4Br + Aq.	g. Cu_2I_2 in 1 l. of the solution
2-N	1 9068
3-N	3.6540
4-N	6 0588

(Kohn and Klein, Z. anorg. 1912, 77. 254.)

Sol. in FeCl_3 + Aq. (Fleischer, C. N. 1869, 19. 206.)

Solubility in KBr + Aq at t°.

t°	KBr + Aq.	g. Cu_2I_2 in 1 l. of the solution
19.5	2-N	1.4666
24.0	2-N	1.5576
19.5	3-N	3 4094
23.0	3-N	3.5949
22.0	4-N	7.1263
22.0	4-N	6.9768

The solutions undergo change in the course of a few days, iodine being set free; the solubility of the cuprous iodide is not markedly affected thereby.

(Kohn, Z. anorg. 1909, 63. 337.)

1 l. of a 0.2N solution of KI dissolves 0.000157 g. mol. Cu_2I_2 . (Bodländer, Z. anorg. 1902, 31. 475.)

Very sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 827.)

Insol. in CS_2 . (Arctowski, Z. anorg. 1894, 6. 257.)

Practically insol. in methylene iodide. (Retgers, Z. anorg. 1893, 3. 347.)

Sol. in methyl acetate (Naumann, B. 1909, 42. 3790.)

Insol. in acetone (Naumann, B. 1904, 37. 4329); (Eidmann, C. C. 1899, II. 1014.)

100 g acetonitrile dissolve 3.52 g. Cu_2I_2 at 18° . (Naumann and Schier, B. 1914, 47. 249.)

Min. *Marshite*. (Gm.—K. 5. 1, 945.)

Cupric iodide, CuI_2 .

Exists in very dil. aqueous solution. (Traube, B. 17. 1064.)

Copper periodide, CuI_4 .

Sol. in H_2O . (Walker and Dover, Chem. Soc. 1905, 87. 1588.)

Copper ammonium iodide ammonia.

See Cupriammonium iodide ammonia.

Cuprous mercuric iodide, $\text{Cu}_2\text{I}_2, \text{HgI}_2$.

$\text{KI} + \text{Aq}$ dissolves out HgI_2 .

Cuprous mercuric iodide ammonia, $\text{CuI}_2, 2\text{HgI}_2, 4\text{NH}_3$.

Decomp. by H_2O or acids. Sol. in a mixture of acetic acid and alcohol.

$\text{CuI}_2, \text{HgI}_2, 4\text{NH}_3$. As above. (Jørgensen, J. pr. (2) 2. 347.)

Cupric nitrogen iodide, $\text{CuI}_2, \text{N}_2\text{H}_4\text{I}_2$.

Decomp. by H_2O ; or $\text{NH}_4\text{OH} + \text{Aq}$. (Guyard, C. R. 97. 526.)

Cupric thallic iodide ammonia, $\text{CuI}_2, 2\text{TlI}_3, 4\text{NH}_3$.

Decomp. slowly by H_2O . Sol. in $\text{NH}_4\text{OH} + \text{Aq}$ with decomp. Sol. in alcohol.

Cuprous iodide ammonia, $\text{Cu}_2\text{I}_2, \text{NH}_3$.

Ppt. (Anderline, Gazz. ch. it. 1912, 42. I, 321.)

$+4\text{H}_2\text{O}$. Insol. in H_2O . Very sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Silberrad, Chem. Soc. 1905, 87. 67.)

$\text{Cu}_2\text{I}_2, 3\text{NH}_3$. (Lloyd, J. phys. Chem. 1908, 12. 399.)

$\text{Cu}_2\text{I}_2, 4\text{NH}_3$. (Levol, J. Pharm. 4. 328.)

$+ \text{H}_2\text{O}$. (Saglier, C. R. 104. 1440.)

$\text{Cu}_2\text{I}_2, 6\text{NH}_3$. (Lloyd.)

Cupric iodide ammonia, $\text{CuI}_2, 4\text{NH}_3 + \text{H}_2\text{O}$.

Decomp. by H_2O . Sol. in $\text{NH}_4\text{OH} + \text{Aq}$ without decomp. Not attacked by cold

alcohol or ether. (Berthelmont, J. Pharm. 15. 445.) (Pozzi-Escot, C. R. 1900, 130. 90.)

$\text{CuI}_2, 6\text{NH}_3$. Sol. in liquid NH_3 . (Horn, Am. Ch. J. 1908, 39. 205.)

$3\text{CuI}_2, 10\text{NH}_3$. Decomp. by H_2O . (Richards, Am. Ch. J. 1895, 17. 302.)

Sol. in liq. NH_3 . (Horn, Am. Ch. J. 1908, 39. 204.)

Cupriammonium iodide ammonia,

$3\text{Cu}(\text{NH}_3)_2\text{I}_2, 4\text{NH}_3$.

Decomp. by air and by H_2O . (Richards, Am. Ch. J. 1895, 17. 302.)

Copper periodide ammonia, $2\text{CuI}, \text{I}_4, 5\text{NH}_3 + \text{H}_2\text{O}$.

Because of its insolubility it cannot be recryst. from any solvent (Silberrad, Chem. Soc. 1905, 87. 66.)

Copper tetraiodide, ammonia, $\text{CuI}_4, 4\text{NH}_3$.

(Jørgensen, J. pr. (2) 2. 353.)

Copper hexaiodide ammonia, $\text{CuI}_6, 4\text{NH}_3$.

Not decomp. in H_2O in closed vessels. (Jørgensen.)

Copper mercuric iodide ammonia,

$\text{CuHg}_2\text{I}_6, 5\text{NH}_3$.

$\text{CuHgI}_3, 2\text{NH}_3$. Ppt. Decomp. by H_2O and by alcohol.

$\text{CuHg}_2\text{I}_5, 3\text{NH}_3$. Ppt. Decomp. by long washing with H_2O .

$\text{CuHg}_2\text{I}_5, 4\text{NH}_3$. Ppt. Decomp. by H_2O . Sl. attacked by abs. alcohol.

$\text{CuI}_2, \text{HgI}_2, 4\text{NH}_3$. Ppt. (Anderline, Gazz. ch. it. 1912, 42, (1) 321; C. C. 1912, II. 95.)

Copper nitride, Cu_3N_2 .

Decomp. by dil. or conc. acids.

Easily decomp. by H_2O when finely powdered. (Rossel, C. R. 1895, 121. 942.)

Copper suboxide, Cu_4O .

Not attacked by H_2O . Decomp. by dil. $\text{H}_2\text{SO}_4 + \text{Aq}$ into Cu and CuSO_4 ; dil. $\text{HCl} + \text{Aq}$ has similar action. Not attacked by $\text{NH}_4\text{OH} + \text{Aq}$ or $\text{NH}_4\text{OH} + (\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. (Rose, Pogg. 120. 1.)

Cu_3O . Not attacked by dil. or conc. min. acids, even aqua regia. Slowly sol. in $\text{HF} + \text{Aq}$. (Bailey and Hopkins, Chem. Soc. 1890, 57. 272.)

Is a solution of oxide in Cu . (Jordis, Zeit. angew. Ch. 1908, 21. 51.)

Cuprous oxide, Cu_2O .

Insol. in H_2O . Decomp. by $\text{H}_2\text{SO}_4 + \text{Aq}$, $\text{H}_3\text{PO}_4 + \text{Aq}$, or cold very dil. $\text{HNO}_3 + \text{Aq}$ into a cupric salt and Cu . Converted by $\text{HCl} + \text{Aq}$ into cuprous chloride.

Solubility of Cu_2O in $\text{NH}_4\text{OH} + \text{Aq}$ at 25° .

Conc. of total Cu		Conc. of total NH_3

(Donnan and Thomas, Chem. Soc 1911, 99. 1791.)

Sol. in boiling $\text{NH}_4\text{Cl} + \text{Aq}$. (Rose)

Sl. sol. in excess of $\text{KOH} + \text{Aq}$. (Chodnew.)

Sol. in conc. MgCl_2 , and $\text{FeCl}_2 + \text{Aq}$. (Hunt, C. R. 69. 1357.)

Sl. attacked by liquid NH_3 . (Gore, Am Ch. J. 1898, 20. 827.)

Min. *Cuprite*. Sol. in HCl , HNO_3 , and $\text{NH}_4\text{OH} + \text{Aq}$.

Cupric oxide, CuO .

Insol. in H_2O . Easily sol. in acids. Sol. in $\text{H}_2\text{SO}_4 + \text{Aq}$. Insol in $\text{NH}_4\text{OH} + \text{Aq}$, but dissolves on addition of a few drops of acid or $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. Insol. in dil., but sol. in warm conc. NaOH , and $\text{KOH} + \text{Aq}$. (Low, Z. anal. 9. 463.)

CuO prepared at a low temp. is easily sol. in dil. acids, but when ignited is slowly sol. in boiling conc. acids, but moderately rapidly in a cold mixture of $\text{NH}_4\text{I} + \text{HCl}$. (Joannis, C. R. 1886, 102. 1161.)

Solubility in N-HNO_3 . 1 l. of the solution contains 0.4802 g. atoms Cu at 25° . (Jaeger, Z. anorg. 1901, 27, 33.)

Solubility of CuO in $\text{HF} + \text{Aq}$ at 25° .

	Time	G CuO in 10 ccm of the solution

(Deussen, Z. anorg 1905, 44. 421)

Solubility of CuO in HF at 25° .

$\text{Cu} = \text{g-atoms Cu}$ in 1 l. of the solution.

HF normality	Cu
0.12	0 0307
0 28	0 1164
0.57	0 2494
1.08	0.388
2 28	0.463

(Jaeger, Z. anorg. 1901, 27. 29.)

Solubility of CuO in $\text{HF} + \text{KF}$ at 25° .

$\text{Cu} = \text{g-atoms Cu}$ in 1 l. of the solution.

HF normality	Cu
0.12	0.0356
0.28	0.06437
0.57	0.1442
1.11(1.08)	0 2451
2 17(2.28)	0.2517

(Jaeger, l. c.)

Sl. sol. in large excess of $\text{KOH} + \text{Aq}$. (de Coninck, C. C. 1904, II, 65.)

Slowly sol. in boiling $\text{NH}_4\text{Cl} + \text{Aq}$. and less easily in $\text{NH}_4\text{NO}_3 + \text{Aq}$. (Rose)

Sol. in boiling H_2O solutions of Al_2 , Gl , U , Cr_2 , Fe_2 , or Bi nitrates and chlorides, $\text{Hg}(\text{NO}_3)_2$, $\text{Hg}_2(\text{NO}_3)_2$, SbCl_3 , SnCl_2 , and SnCl_4 , with pptn. of oxides of the bases of those salts. Unacted upon by boiling H_2O solutions of Mn , Mg , Ni , Co , Zn , Ce , or

Fe nitrates or chlorides, AgNO_3 , $\text{Pb}(\text{NO}_3)_2$, $\text{Cd}(\text{NO}_3)_2$, and HgCl_2 . (Persoz.)

Pure CuO is very sl. sol. in $\text{NH}_4\text{OH} + \text{Aq}$ but the solution is greatly increased by the addition of NH_4 salts (Muthmann, C. C. 1904, II, 410.)

Sol. in hot $(\text{NH}_4)_2\text{SO}_4$ or $(\text{NH}_4)_2\text{SO}_3 + \text{Aq}$. (Jumau, Electrochem. Ind. 1908, 6, 258.)

15% dissolves in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ in 24 hrs (Schnabel, Z. B. H. Sal 1880, 28, 282.)

Sl. attacked by liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20, 827.)

Solubility in N-acetic acid. 1 l. of the solution contains 0.1677 g-atoms Cu at 25°. (Jaeger, Z. anorg. 1902, 27, 33.)

Insol. in acetone (Naumann, B. 1904, 37, 4329; Eidmann, C. C. 1899, II, 1014.)

Sl. sol. in benzamide. (Dessaignes, A. ch. 1852, (3), 34, 146.)

Insol. in piperidine. (Cahours, C. R. 1852, 34, 481.)

Sol in acid amines as asparagin. (Piria, A. ch. 1848, (3), 22, 160.)

Sol. in amines alone or mixed with NH_3 . (Lance, Dissert. 1905.)

Slowly sol. in Ca or any other alkali succate + Aq, but not in cane sugar + Aq. (Hunton.)

Solubility in (calcium succate + sugar) + Aq. 1 l. solution containing 418.6 g. sugar and 34.3 g. CaO dissolves 10.26 g. CuO.

1 l. solution containing 296.5 g. sugar and 24.2 g. CaO dissolves 5.68 g. CuO.

1 l. solution containing 174.4 g. sugar and 14.1 g. CaO dissolves 3.47 g. CuO. (Bodenbender, J. B. 1865, 600.)

Polypeptides in aqueous solution dissolve CuO by short boiling. (Fischer, B. 1906, 39, 576.)

$+1/6\text{H}_2\text{O} = 6\text{CuO} + \text{H}_2\text{O}$. Insol. in dil., but sol. in conc. KOH or NaOH + Aq.

Sol. in volatile oils.

See also Cupric hydroxide.

Min. *Melacomite*. Sol. in HCl, or $\text{HNO}_3 + \text{Aq}$.

Cuprocupric oxide, $\text{Cu}_5\text{O}_3 = 2\text{Cu}_2\text{O}$, CuO.

(Favre and Maumené.)

$\text{Cu}_5\text{O}_3 + \text{H}_2\text{O} = \text{Cu}_2\text{O}$, $\text{CuO} + \text{H}_2\text{O}$. When freshly pptd., sol. in HCl + Aq, but insol. after drying. (Siewert, J. B. 1866, 257.)

$\text{Cu}_5\text{O}_3 = \text{Cu}_2\text{O}$, 2CuO . (Siewert.)

All oxides of Cu except Cu_2O , Cu_3O , CuO, and CuO_2 are mixtures. (Osborne, Sill. Am. J. (3) 32, 33; Debray, C. R. 99, 583.)

Copper dioxide, $\text{CuO}_2 + \text{H}_2\text{O}$.

Insol. in H_2O . Decomp. by acids with formation of cupric salt and H_2O_2 . (Weltzien, A. 140, 207.)

Cuprous oxide ammonia (cuprosammonium oxide).

Known only in solution. (Wagner, C. C. 1863, 239.)

Cupric oxide ammonia (cuprammonium hydroxide), 3CuO , $4\text{NH}_3 + 6\text{H}_2\text{O}$.

Insol. in H_2O . (Kane, A. ch. 72, 283.)

CuO , $4\text{NH}_3 + 4\text{H}_2\text{O}$. Very deliquescent. Decomp. in the air and by H_2O . (Malaguti and Sarzeau, A. ch. (3) 9, 438.)

Cuprous oxybromide, Cu_2Br_2 , $\text{CuO} + \text{H}_2\text{O}$.

(Spring and Lucion, Bull. Ac. Belg. (3) 24, 21.)

Cupric oxybromide, CuBr_2 , $3\text{CuO} + 3\text{H}_2\text{O}$.

Insol. in H_2O . Easily sol. in dil. acids or $\text{NH}_4\text{OH} + \text{Aq}$ (Brun, C. R. 109, 66.)

Insol. in H_2O but decomp. by continued boiling. Sol. in conc. acetic acid, sl. sol. in conc. $\text{CuBr}_2 + \text{Aq}$. Insol. in dil. KBr + Aq. (Richards, Proc. Am. Acad. 1890, 25, 215.)

Cupric oxybromide ammonia, 2CuO , CuBr_2 , $2\text{NH}_3 + 3\text{H}_2\text{O}$.

(Kohlschutter and Pudschies, B. 1904, 37, 1159.)

Cuprous oxychloride, Cu_2Cl_2 , $\text{CuO} + 3\text{H}_2\text{O}$.

(Spring and Lucion, Bull. Ac. Belg. (3) 24, 21.)

Cupric oxychloride, CuO , $\text{CuCl}_2 + \text{H}_2\text{O}$.

Decomp. by H_2O . (Rousseau, C. R. 1890, 110, 1263.)

2CuO , CuCl_2 . Insol. in H_2O . Sol. in HCl + Aq, from which it is reprecipitated by dilution with H_2O .

+ H_2O . (Kane, A. ch. 72, 277.)

+ $4\text{H}_2\text{O}$. (Gladstone, Chem. Soc. 8, 211.)

3CuO , $\text{CuCl}_2 + 2\text{H}_2\text{O}$. (Miller and Kenrick, Trans. Roy. Soc. Can. 1901, (2) 8, III, 35.)

+ $3\text{H}_2\text{O}$. (Dupont and Jansen, Bull. Soc. 1893, (3), 9, 193.)

+ $3\frac{1}{2}\text{H}_2\text{O}$. Insol. in cold H_2O , sl. decomp. by boiling. (Reindel, J. pr. 106, 378.)

Insol. in boiling H_2O . (Habermann, W. A. B. 90, 2, 268.)

+ $4\text{H}_2\text{O}$. Sol. in alkaline solution of KNa tartrate. (Gröger, Z. anorg. 1902, 31, 327.) (*Brunswick green*). Insol. in H_2O . Easily sol. in acids.

Min. *Atacamite*. Sol. in acids, and $\text{NH}_4\text{OH} + \text{Aq}$.

Sol. in cold sat. citric acid + Aq. (Bolton, B. 1880, 13, 732.)

4CuO , $\text{CuCl}_2 + 6\text{H}_2\text{O}$. (Kane, Gm.—K. 5, 1, 919.)

+ $8\text{H}_2\text{O}$. Min. *Tallingtonite*. (Church, Gm.—K. 5, 1, 919.)

$5\text{Cu}(\text{OH})_2$, $\text{Cu}_2\text{Cl}_2\text{Cl}(\text{OH})$. Insol. in H_2O . Decomp. by hot H_2O . (Kühling, B. 1901, 34, 2852.)

7CuO , $2\text{CuCl}_2 + 9\text{H}_2\text{O}$. (Reindel.)

6CuO , $\text{CuCl}_2 + 9\text{H}_2\text{O}$. Insol. in H_2O . Sol. in acetic acid. (Neumann, Repert, 37, 304.)

8CuO , $\text{CuCl}_2 + 12\text{H}_2\text{O}$. Min. *Footelite*. (König, Zeit. Kryst. 1891, 19, 601.)

Cupric zinc oxychloride, ZnO , 2ZnCl_2 , $5\text{CuO} + 6\text{H}_2\text{O}$.

(André, C. R. 1888, 106. 855.)

Cupric oxychloride ammonia, 2CuO , CuCl_2 , $2\text{NH}_3 + 3\text{H}_2\text{O}$.

(Dehérain, Gm.—K. 5. 1, 932.)

Cupric oxyfluoride, CuO , $\text{CuF}_2 + \text{H}_2\text{O}$.

Insol. in H_2O . (Berzelius.) (Balbiano, Gazz. ch. it. 14. 74.)

Cupric oxyfluoride ammonia (cuprammonium oxyfluoride), $\text{Cu}(\text{OH})\text{F}$, 2NH_3 .

(Balbiano, Gazz. ch. it. 14. 74.)

3CuO , $\text{CuI}_2 + x\text{H}_2\text{O}$. (Tschiriwinski, Gm.—K, 5. 1, 1584.)

Cuprous oxyiodide, Cu_2I_2 , $\text{CuO} + \text{H}_2\text{O}$.

(Spring and Lucion, Bull. Ac. Belg. (3) 24. 21.)

Cupric oxyiodide, 2CuI_2 , $\text{CuO} + 4\text{H}_2\text{O}$.

Easily decomp. by H_2O . (Carnegie, Watts' Diet. II, 257.)

Copper oxysulphide, $2\text{Cu}_2\text{S}$, CuO .

Insol. in H_2O . (Maumené, A. ch. (3) 18. 311.)

5CuS , CuO . Ppt. (Pelouze.)

2CuS , CuO . Insol. in H_2O .

CuS , CuO . Insol. in H_2O .

Above comps. do not exist. (Pickering, Chem. Soc. 33. 136.)

Copper phosphide, Cu_3P_2 .

Easily sol. in HNO_3 or aqua regia; insol. in $\text{HCl} + \text{Aq}$. (Rose, Pogg. 6. 209.)

Sol. in HNO_3 and $\text{Br}_2 + \text{Aq}$. Decomp. by hot conc. H_2SO_4 . (Rubénovitch, C. R. 1899, 128. 1399.)

Cu_2P . Sol. in $\text{HNO}_3 + \text{Aq}$. (Granger, A. ch. 1898, (7), 14. 64.)

Crystallized. Completely sol. in hot HNO_3 , aqua regia and $\text{HF} + \text{HNO}_3$. Slowly sol. in hot HCl or H_2SO_4 . Not attacked by hot or cold HF or acetic acid. (Maronneau, C. R. 1899, 128. 939.)

Cu_3P_2 . Easily sol. in HNO_3 . Sol. in hot conc. H_2SO_4 . Sol. in conc. $\text{HCl} + \text{Aq}$ before the phosphide has been heated. (Rose, Pogg. 4. 110.)

Cu_2P_2 . Easily sol. in HNO_3 , or $\text{HCl} + \text{Aq}$. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Granger, Bull. Soc. (3) 9. 661.)

CuP_2 . Decomp. by HNO_3 ; not readily sol. in HCl . Easily attacked by Cl_2 or $\text{Br}_2 + \text{Aq}$. (Granger, C. R. 1895, 120. 924.)

Cu_5P_2 . (Granger, C. N. 1898, 77. 229.)

Very sol. in HNO_3 and $\text{Br}_2 + \text{Aq}$. Decomp. by hot conc. H_2SO_4 . (Rubénovitch, C. R. 1899, 129. 333.)

Cupric zinc phosphide, $10\text{Cu}_3\text{P}_2$, $\text{Zn}_3\text{P}_2(?)$.

(Hvoslef, A. 100. 99.)

Copper phosphoselenide, CuSe , P_2Se .

Insol. in H_2O or $\text{HCl} + \text{Aq}$; sol. in $\text{HNO}_3 + \text{Aq}$. Insol. in cold alkalies, but decomp. slowly when heated therewith. (Hahn, J. pr. 93. 436.)

2CuSe , P_2Se_3 . Attacked only by fuming HNO_3 . (Hahn.)

2CuSe , P_2Se_5 . Sol. only in $\text{HNO}_3 + \text{Aq}$. (Hahn.)

Copper phosphosulphide, $2\text{Cu}_2\text{S}$, P_2S .

Cu_2S , P_2S . (Berzelius.)

$2\text{Cu}_2\text{S}$, P_2S_3 . (Berzelius.)

CuS , P_2S . Insol. in H_2O and dil. $\text{HCl} + \text{Aq}$. Sol. in conc. $\text{HCl} + \text{Aq}$, from which it is precipitated by H_2O . (Berzelius, A. 46. 252.)

8CuS , P_2S_5 . (Berzelius.)

Cu_4PS_3 . Sol. in conc. HNO_3 and in aqua regia. Insol. in HCl . Not attacked by hot H_2SO_4 or conc. $\text{NaOH} + \text{Aq}$. (Ferrand, A. ch. 1899, (7), 17. 407.)

Cuprous selenide, Cu_3Se .

Ppt. Sol. in HCl and in H_2SO_4 .

Decomp. by HNO_3 . Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Fonzes-Diacon, C. R. 1900, 131. 1207.)

Sol. in $\text{KCN} + \text{Aq}$. (Heyn and Bauer, Metall 1903, 3. 84.)

Min. *Berzelianite*.

Cupric selenide, CuSe .

(Little, A. 112. 211.)

Ppt. Sol. in HCl and in H_2SO_4 . Decomp. by HNO_3 . (Fonzes-Diacon, C. R. 1900, 131. 1207.)

Cuprocupric selenide, Cu_3Se_2 .

Min. *Umangite*. Sol. in HNO_3 . (Klockmann, Zeit. Kryst. 1891. 19, 270.)

Cuprous lead selenide, $3\text{Cu}_2\text{Se}$, PbSe .

Min. *Zorgite*. Sol. in cold conc. $\text{HNO}_3 + \text{Aq}$ with separation of Se .

Cupric lead selenide, CuSe , PbSe .

Sol. in cold conc. HNO_3 with separation of Se . (Karsten.)

CuSe , 2PbSe . As above.

CuSe , 4PbSe . As above.

Cuprous silver selenide, Cu_3Se , Ag_2Se .

Min. *Eucainite*. Sol. in hot HNO_3 with decomp. (Berzelius.)

Cuprous silicide, Cu_4Si .

Sol. in warm dil. or conc. HNO_3 . Only sl sol. in HCl , H_2SO_4 and HF . Sol. in a mixture of HNO_3 and HF . Not attacked by solutions of alkalies. (Vigouroux, C. R. 1906, 142. 88.)

Cu_2S_3 . Sol. in aqua regia and fused sodium potassium carbonate. (de Chalmot, Am. Ch. J. 1896, 18, 95.)

Cu_2S . Decomp. by water and moist air, and by acids and fused alkali. (Vigouroux, C. R. 1896, 122, 319.)

Cuprous sulphide, Cu_2S .

More sol. in H_2O than Ag_2S , but much less than PbS . (Bodlander, Z. phys. Ch. 1898, 27, 64.)

1 l. H_2O dissolves 3.1×10^{-6} moles Cu_2S at 18° . (Weigel, Z. phys. Ch. 1907, 53, 294.)

Very slowly decomp. by dil. H_2SO_4 in presence of oxygen. (Thompson, Electrochem. Ind. 1904, 2, 225.)

Decomp. by conc. H_2SO_4 . (Pickering, C N 1878, 37, 37.)

Cold $\text{HNO}_3 + \text{Aq}$ dissolves out Cu and leaves CuS ; hot HNO_2 dissolves with separation of S. Sl. sol. in boiling conc. $\text{HCl} + \text{Aq}$. Insol. in $(\text{NH}_4)_2\text{S} + \text{Aq}$.

5N- HCl dissolves Cu_2S very slightly (0.0038 g. Cu in $7\frac{1}{2}$ hrs.) but it is more sol. in presence of Cl, when 0.672 g. are dissolved in $7\frac{1}{2}$ hours. (Egl, Z. anorg. 1902, 30, 46.)

Sol. with exclusion of air in $\text{NH}_4\text{OH} + \text{Aq}$. (Malzac, Pat. 1904.)

Insol. in acetone. (Naumann, B. 1904, 37, 4329; Eidmann, C. C. 1899, II, 1014.)

Min. *Chalcocite*. Completely sol. in warm HNO_3 with separation of S

Cupric sulphide, CuS .

Almost absolutely insol. in H_2O ; sol. in 950,000 pts. H_2O . When exposed to the air, dissolves in H_2O as CuSO_4 . Easily sol. in boiling HNO_3 with separation of S. Difficultly sol. in hot conc. $\text{HCl} + \text{Aq}$. Insol. in dil. $\text{H}_2\text{SO}_4 + \text{Aq}$ (1:6). (Hoffmann, A. 115, 286.)

Pptd. by H_2S or $(\text{NH}_4)_2\text{S} + \text{Aq}$ in presence of 100,000 pts. H_2O (Pfaff), 200,000 pts. H_2O (Lassaigne), 15,000 pts. H_2O and 7500 pts. HCl , but with 40,000 pts. H_2O and 20,000 pts. HCl no colour is visible (Reinsch).

1 l. H_2O dissolves 3.51×10^{-6} moles CuS at 18° . (Weigel, Z. phys. Ch. 1907, 53, 294.)

Insol. in $\text{H}_2\text{SO}_4 + \text{Aq}$. (Guerout, C. R. 1872, 75, 1276.)

Decomp. by conc. H_2SO_4 . (Kliche, J. B. 1890, 593.)

Sol. in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. (Berzelius.) Sol. in alkali bicarbonates + Aq .

Insol. in NH_4NO_3 or $\text{NH}_4\text{Cl} + \text{Aq}$ (Brett.)

Insol. in acidified conc. alkali chlorides + Aq . (Cushman, Am. Ch. J. 1895, 17, 382.)

Sol. in $\text{FeCl}_3 + \text{Aq}$ with separation of S. (Cumenge and Wimmer, Dingl. 1883, 250, 123.)

Decomp. by boiling $\text{CuCl}_2 + \text{Aq}$ in presence of HCl or NaCl . (Raschig, Gm.—K. 5, 1, 819.)

Sol. in $\text{Fe}_2(\text{SO}_4)_3 + \text{Aq}$ in presence of large excess of air. (Thompson, Electrochem. Ind. 1904, 2, 228.)

Insol. in KOH , or $\text{K}_2\text{S} + \text{Aq}$, especially if boiling; appreciably sol. in colourless and even more readily in hot yellow $(\text{NH}_4)_2\text{S} + \text{Aq}$.

Sl. sol. in $\text{Na}_2\text{S} + \text{Aq}$, more easily in $\text{NaSH} + \text{Aq}$. (Becker, Sill. Am. J. (3) 33, 199.)

100 cc sat. $\text{Na}_2\text{S} + \text{Aq}$ (sp gr = 1.225) dissolve 0.0032 g. CuS (Holland, Ann. Chim. Anal 1897, 2, 243.)

Sol. in K polysulphides (3-64%). (Prost, Bull. Soc. Belg. Chim. 1897, 103.)

Appreciably sol. in alkali polysulphides + Aq . (Rössing, Z. anal. 1902, 41, 1.)

Sol. in considerable quantity in alkali sulpharsenates, sulphantimonates, and sulphostannates + Aq . Therefore when a mixed ppt. of CuS and As_2S_3 , Sb_2S_3 , or SnS is treated with K_2S , a portion of the CuS is dissolved. (Wähler, A. 34, 236.)

Sol. in alkali sulphovanadates, or sulphotungstates + Aq . (Storch, B. 16, 2015.)

Sol. in alkali sulphomolybdates + Aq . (Debray, C. R. 96, 1616.)

Insol. in K thiocarbonate + Aq . (Rosenblatt, Z. anal. 26, 15.)

Sol. in $\text{KCN} + \text{Aq}$.

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20, 827.)

Insol. in methyl acetate (Naumann, B. 1909, 42, 3790), ethyl acetate (Naumann, B. 1910, 43, 314.)

Insol. in acetone. (Naumann, B. 1904, 37, 4329; Eidmann, C. C. 1899, II, 1014.)

Insol. in Na xanthogenate. (Ragg, Ch. Z. 1908, 32, 677.)

Solubility of CuS in sugar + Aq at t° .
g CuS per l of solution.

t°	10% sugar	30% sugar	50% sugar
17 5	0 5672	0 8632	0 9076
45	0 3659	0 7220	1 0589
75	1 1345	1 2033	1 2809

(Stolle, Z. Ver. Zuckerind. 1900, 50, 331.)

Min. *Covellite*.

Colloidal. Aqueous solution is stable when it contains 5 g. CuS in a litre; when it contains 4 or 5 times that amount it is decomposed in an hour.

Solutions of salts of the following concentration cause a precipitate in the above solution. Salts of univalent elements—

Salts of univalent elements—

$\text{K}_3\text{Fe}(\text{CN})_6$	1 : 62

(Spring and de Boeck, Bull. Soc. (2) 58. 165.)

Copper polysulphide, Cu_2S_3 .*Amorphous.* Ppt. Decomp. by boiling alcohol. (Rössing, Z. anorg. 1900, 25. 413.) Cu_2S_3 . *Amorphous.* Ppt. can be boiled with H_2O without decomposition (Rössing, Z. anorg. 1900, 25. 4, 11.) Cu_2S_3 . Ppt.; insol. in alkali sulphides; decomp. by conc. HNO_3 . (Bodroux, C. R. 1900, 130. 1398.)

Could not be obtained. (Rössing, Z. anorg. 1900, 25. 414.)

 Cu_2S_3 . Ppt. Decomp. by H_2O . Sol. in alkali and barium polysulphides + Aq. Decomp. by colorless alkali sulphides + Aq. (Rössing, Z. anorg. 1900, 25. 407.)Cuprous iron (ferric) sulphide, Cu_2S , Fe_2S_3 .Decomp. by conc. HCl + Aq. Sol. in boiling HNO_3 + Aq. of 1.2 sp. gr. (Schneider, J. pr. (2) 38. 569.)Min. *Chalcopyrite*. Insol. in HCl + Aq. When heated in a sealed tube with H_2S + Aq, a portion of it dissolves with difficulty and subsequent deposition of S. (Senarmont, A. ch. (3) 32. 168.)Cuprocupric iron (ferric) sulphide, Cu_2S , CuS , FeS .Min. *Bornite*. Sol. in HCl + Aq with a residue of S.Cupric iron (ferric) sulphide, CuS , Fe_2S_3 .Min. *Cubanite*.Copper iron potassium sulphide, $\text{K}_2\text{FeCu}_3\text{S}_4$.Sl. attacked by cold dil. HCl + Aq. Decomp. by warming. (Schneider, Pogg. 138. 318.)Copper iron sodium sulphide, $\text{Na}_2\text{FeCu}_3\text{S}_4$.Sl. attacked by cold dil., easily decomp. by hot HCl + Aq. (Schneider, Pogg. 138. 318.)Cuprous lead sulphide, $9\text{Cu}_2\text{S}$, 2PbS . $3\text{Cu}_2\text{S}$, 2PbS . $2\text{Cu}_2\text{S}$, 2PbS . Min. *Cuproplumbite*.

Copper phosphorus sulphide.

See Copper phosphosulphide.

Cupric platinum sulphide.

See Sulphoplatinate, cupric.

Cuprous potassium sulphide, $4\text{Cu}_2\text{S}$, K_2S .

(Ditte, C. R. 98. 1429.)

Cuprocupric potassium sulphide, $3\text{Cu}_2\text{S}$, 2CuS , K_2S .Not decomp. by very dil. HCl + Aq, but easily by conc. HCl + Aq on warming. (Schneider, Pogg. 138. 311.)Copper potassium polysulphide, KCuS_4 .Sl. sol. in cold H_2O . Decomp. by hot H_2O . Decomp. by conc. and dil. HCl , H_2SO_4 and HNO_3 . Sl. sol. in alcohol. (Biltz and Herms, B. 1907, 40. 977.) 2CuS_3 , K_2S . Decomp. by H_2O , NH_4OH , or NH_4SH + Aq. (Priwoznuk, B. 5. 1291.) $\text{K}_2\text{Cu}_3\text{S}_{10}$. Easily sol. in H_2O . 1 g. is sol. in less than 5 ccm. H_2O . Rapidly decomp. by dil. acids, slowly by conc. acids. Sl. sol. in alcohol. (Biltz and Herms, B. 1907, 40. 983.)Cupric rubidium polysulphide, RbCuS_4 .

As K salt. (Biltz and Herms, B. 1907, 40. 978.)

 $\text{Rb}_2\text{Cu}_3\text{S}_{10}$. Easily sol. in H_2O . Decomp. by acids. Sl. sol. in alcohol. (Biltz and Herms, B. 1907, 40. 985.)Cuprous silver sulphide, Cu_2S , Ag_2S .Min. *Stromeyerite*. Sol. in HNO_3 + Aq with separation of S. Cu_2S , $3\text{Ag}_2\text{S}$. Min. *Jalpaite*. As above.Cuprous sodium sulphide, Na_2S , Cu_2S .

(Bodlander, Z. Elektrochem. 1905, 11. 181.)

 Na_2S , $2\text{Cu}_2\text{S}$. (Bodlander, Z. Elektrochem. 1905, 11. 181.)

Cuprocupric sodium sulphide, Cu_2S , CuS , Na_2S .

Scarcely decomp. by cold dil. $\text{HCl} + \text{Aq}$; conc. $\text{HCl} + \text{Aq}$ decomp. easily on warming, without, however, dissolving all the Cu_2S . Completely decomp. by warm $\text{HNO}_3 + \text{Aq}$. (Schneider, Pogg. 138. 315.)

Copper zinc sulphide, CuS , 3ZnS .

Copper sulphophosphide.

See Copper phosphosulphide.

Cupric telluride, CuTe .

Cu_2Te_3 . Insol. in H_2O . (Parkmann, Sill. Am. J. (2) 3. 335.)

Cu_3Te . (Brauner, M. 1889. 423.)

Croceocobaltic bromide,

$\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2\text{Br}$.

Very sl. sol. in cold, easily in hot H_2O . (Gibbs, Proc. Am. Acad. 10. 1.)

— **chloraurate**, $2\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2\text{Cl}$, AuCl_3 .
Difficultly sol. in H_2O .

— **chloride**, $\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2\text{Cl}$.

Very sl. sol. in cold easily in hot H_2O , but more sol. than the sulphate. (Gibbs.)

— **chloroplatinate**, $2\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2\text{Cl}$, PtCl_4 .

Can be recrystallised without decomp. with difficulty. (Gibbs and Genth, Sill. Am. J. (2) 24. 91.)

— **chromate**, $[\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2]\text{CrO}_4$.
Sl. sol. in H_2O . (Gibbs.)

— **dichromate**, $[\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2]_2\text{Cr}_2\text{O}_7$.
Sl. sol. in H_2O . (Gibbs.)

— **periodide**, $\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2\text{I}$, I_2 .

Difficultly sol. in cold H_2O and alcohol. Decomp. by hot H_2O . (Gibbs.)

— **nitrate**, $\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2\text{NO}_3$.

Sl. sol. in cold, easily sol. in hot H_2O or dil. acids. Much more sol. than the sulphate. (Gibbs.)

Sol. in about 400 pts. cold H_2O . (Jørgensen, Z. anorg. 5. 163.)

— **nitrite cobaltic nitrite**, $3\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2$, $\text{Co}(\text{NO}_2)_2$.

Somewhat sol. in H_2O . (Jørgensen, Z. anorg. 5. 178.)

— **nitrite diamine cobaltic nitrite**, $\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2$, $(\text{NO}_2)_2(\text{NH}_2)_2\text{Co}(\text{NO}_2)_2$.

Nearly insol. in cold, very sl. sol. in boiling H_2O . (Jørgensen.)

Croceocobaltic phosphomolybdate,
 $[\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2]_3\text{O}$, 24MoO_3 , P_2O_5 .

Sl. sol. in cold, easily in hot H_2O . (Gibbs, Am. Ch. J. 3. 317.)

— **sulphate**, $[\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2]_3\text{SO}_4$.

Very sl. sol. in cold or hot H_2O ; more easily in hot dil. $\text{H}_2\text{SO}_4 + \text{Aq}$.

Cuprammonium compounds.

See Copper compounds, ammonia.

Cuprotetrammonium tetraiodide.

See Cupric tetraiodide ammonia.

Cupric acid.

Known only in solution. (Kruger, Pogg. 62. 445.)

Calcium cuprate.

Decomp. by H_2O with evolution of oxygen. (Kruger and Crum, A. 55. 213.)

Cyanhydric acid, HCN .

Miscible with H_2O , alcohol, and ether with absorption of heat.

Sp. gr. of $\text{HCN} + \text{Aq}$.

% HCN	Sp gr	% HCN	Sp gr
1.60	0.9979	4.0	0.9940
1.68	0.9978	4.6	0.9930
1.77	0.9975	5.0	0.9923
2.0	0.9974	5.3	0.9914
2.1	0.9973	5.8	0.9900
2.3	0.9970	6.4	0.9890
2.5	0.9967	7.3	0.9870
2.7	0.9964	8.0	0.9840
3.0	0.9958	9.1	0.9815
3.2	0.9952	10.6	0.9768
3.6	0.9945	16.0	0.9570

(Ure, Quar. J. Sci. 13. 321.)

2HCN mixed with $3\text{H}_2\text{O}$ causes a diminution of temp. of 9.75° . (Bussy and Buignet, A. ch. (4) 3. 231.)

Miscible with volatile oils and other organic compounds.

Cyanhydric iodhydric acid, HI , HCN .

Easily sol. in H_2O or alcohol, with rapid decomp. Sl. sol. in ether. (Gal, A. 138. 38.)

Cyanides.

The alkali cyanides are easily sol. in H_2O ; those of the alkali-earths are less sol., while all others are insol. with the exception of $\text{Hg}(\text{CN})_2$. All cyanides are sol. in $\text{KCN} + \text{Aq}$.

Ammonium cyanide, NH_4CN .

Unstable; easily sol. in H_2O and alcohol.

Ammonium cobaltic mercuric cyanide.*See* Cobalticyanide, ammonium mercuric.**Ammonium cuprous cyanide, NH_4CN , $\text{Cu}_2(\text{CN})_2$.**

Ppt. Decomp. by acids.

+ H_2O . Sol. in H_2O , less sol. in alcohol. Decomp. by acids and alkalis. (Treadwell and Girsewald, Z. anorg. 1904, 39. 90.) $2\text{NH}_4\text{CN}$, $\text{Cu}_2(\text{CN})_2$. Sl. sol. in H_2O , but decomp. by long boiling therewith. Sol. in $\text{HCN} + \text{Aq}$. (Dufau, A. 88. 278.)**Ammonium cuprous cyanide ammonia,** NH_4CN , $2\text{Cu}_2(\text{CN})_2$, NH_3 .

Easily decomp. (Treadwell and Girsewald, Z. anorg. 1904, 39. 90.)

+ $2\text{H}_2\text{O}$. Insol. in cold, decomp. by boiling H_2O . Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Fleurent, C. R. 1893, 116. 191.) NH_4CN , $\text{Cu}_2(\text{CN})_2$, 3NH_3 . Insol. in cold, sl. sol. in boiling H_2O without decomp. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$ (Fleurent, C. R. 1891, 113. 1046) NH_4CN , $2\text{Cu}_2(\text{CN})_2$, $2\text{NH}_3 + 2\text{H}_2\text{O}$. (Fleurent, B. 25. 498R.)**Ammonium gold (aurous) cyanide NH_4CN , AuCN .**Easily sol. in cold or warm H_2O or in alcohol. Insol. in ether.**Ammonium gold (auric) mercuric cyanide,**basic, $3\text{NH}_4\text{CN}$, $2\text{Au}_2\text{O}$, $\text{Hg}(\text{CN})_2$, HgO .

(Schmidt, Ch. Z. 1896, 20. 633.)

Ammonium mercuric silver cyanide, basic, NH_4CN , $2\text{Ag}_2\text{O}$, 3AgCN , $4\text{Hg}(\text{OH})\text{CN} + \frac{1}{2}\text{H}_2\text{O}$.

(Schmidt, Z. anorg. 1895, 9. 431.)

Ammonium nickel cyanide, $2\text{NH}_4\text{CN}$, $\text{Ni}(\text{CN})_2$.

Easily decomposed.

Ammonium tungsten cyanide.*See* Tungstocyanide, ammonium.**Ammonium zinc cyanide, $2\text{NH}_4\text{CN}$, $\text{Zn}(\text{CN})_2$.**Sol. in H_2O .**Ammonium cyanide mercuric nitrate silver cyanide basic, $2\text{Hg}(\text{OH})\text{NO}_3$, $3\text{NH}_4\text{CN}$, 4AgCN .**

(Schmidt, Z. anorg. 1895, 9. 431.)

Arsenic tricyanide, $\text{As}(\text{CN})_3$.Decomp. by H_2O . Not attacked by cold conc. H_2SO_4 . Decomp. on heating. (Guenez, C. R. 1892, 114. 1188.)**Barium cyanide, $\text{Ba}(\text{CN})_2$.**Rather sl. sol. in H_2O , more easily in $\text{KCN} + \text{Aq}$. (Schulz, J. pr. 68. 257.)10 pts. H_2O dissolve 8 pts., and 10 pts. 70% alcohol dissolve 1.8 pts. $\text{Ba}(\text{CN})_2$ at 14.° (Joannis, A. ch. (5) 26. 489.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

+ $2\text{H}_2\text{O}$. Very deliquescent. $\text{Ba}(\text{CN})_2$, BaO . (Drechsel, J. pr. (2) 21. 84.)**Barium cadmium cyanide, $\text{Ba}(\text{CN})_2$,** $\text{Cd}(\text{CN})_2 + \text{H}_2\text{O}$.Easily sol. in H_2O and in $\text{NH}_4\text{OH} + \text{Aq}$.

Sl. sol. in alcohol. (Loebe, Dissert, 1902.)

 $2\text{Ba}(\text{CN})_2$, $3\text{Cd}(\text{CN})_2 + 10\text{H}_2\text{O}$. Sol in H_2O . (Weselsky, B. 2. 590)**Barium cobaltous cobaltic cyanide.***See* Cobaltocobalticyanide, barium.**Barium cuprous cyanide, $\text{Ba}(\text{CN})_2$, $\text{Cu}_2(\text{CN})_2$.**Sol. in H_2O without decomp. (Traube, Z. anorg. 1894, 8. 21.)+ H_2O . (Weselsky, B. 2. 590.)

Could not be obtained. (Grossmann, Z. anorg. 1905, 43. 101.)

+ $4\text{H}_2\text{O}$. Decomp. by H_2O . (Grossmann, Z. anorg. 1905, 43. 101.) $2\text{Ba}(\text{CN})_2$, $\text{Cu}_2(\text{CN})_2 + 6\text{H}_2\text{O}$. Decomp. by H_2O . (Grossmann, Z. anorg. 1905, 43. 105.)**Barium gold (aurous) cyanide, $\text{Ba}(\text{CN})_2$, $2\text{AuCN} + 2\text{H}_2\text{O}$.**Sl. sol. in cold but easily sol. in hot H_2O . Sl. sol. in alcohol. (Lindbom, Lund Univ. Arsk. 12. No. 6)**Barium iridium cyanide.***See* Iridicyanide, barium.**Barium manganous cyanide, $\text{Ba}(\text{CN})_2$, $2\text{Mn}(\text{CN})_2$.**

Ppt. (Descamps.)

See also Manganocyanide and Manganicyanide, barium.**Barium mercuric cyanide, $(\text{Ba}(\text{CN})_2$, $\text{Hg}(\text{CN})_2 + 3\text{H}_2\text{O}$.**Very hygroscopic. Very sol. in H_2O . (Grossmann, B. 1904, 37. 4142.)**Barium mercuric cyanide iodide, $\text{Ba}(\text{CN})_2$, $\text{HgI}_2 + 6\text{H}_2\text{O}$.**

(Varet, C. R. 1895, 121. 499.)

Barium palladium cyanide, $\text{Ba}(\text{CN})_2$, $\text{Pd}(\text{CN})_2 + 4\text{H}_2\text{O}$.*See* Palladocyanide, barium.**Barium nickel cyanide, $\text{Ba}(\text{CN})_2$, $\text{Ni}(\text{CN})_2 + 3\text{H}_2\text{O}$.**Sol. in H_2O ; decomp. by acids with pptn. of $\text{Ni}(\text{CN})_2$. (Weselsky, B. 2. 590.)

- Barium silver cyanide**, Ba(CN)_2 , $2\text{AgCN} + \text{H}_2\text{O}$.
Sol. in H_2O . (Weselsky, B. 2. 589.)
- Barium zinc cyanide**, Ba(CN)_2 , $\text{Zn(CN)}_2 + 2\text{H}_2\text{O}$.
Sol. in H_2O .
- Cadmium cyanide, basic**, CdO_2H_2 , $2\text{Cd(CN)}_2 + 4\text{H}_2\text{O}$.
Sl. sol. in H_2O ; insol. in alcohol. (Loebe, Dissert, 1902.)
- Cadmium cyanide**, Cd(CN)_2 .
Sl sol. in H_2O . 100 pts. H_2O dissolve 1.7 pts. Cd(CN)_2 at 15° . (Joannis.)
Easily sol. in acids; sol. in $\text{KCN} + \text{Aq}$.
Sol. in warm $\text{NH}_4\text{OH} + \text{Aq}$, but insol. in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. (Wittstein.)
Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)
- Cadmium calcium cyanide**, Cd(CN)_2 , $4\text{Ca(CN)}_2 + 20\text{H}_2\text{O}$.
Sol. in H_2O and in alcohol. (Loebe, Dissert, 1902.)
- Cadmium chromic cyanide**.
See Chromicyanide, cadmium.
- Cadmium cobaltic cyanide**.
See Cobalticyanide, cadmium.
- Cadmium cuprous cyanide**, 2Cd(CN)_2 , $\text{Cu}_2(\text{CN})_2$.
Permanent. Insol. in H_2O . Sl. sol. in cold, easily in warm $\text{HCl} + \text{Aq}$ without decomp., except by long boiling. Insol. in NH_4OH , or NH_4 salts + Aq . (Schuler.)
- Cadmium cupric cyanide**, Cd(CN)_2 , Cu(CN)_2 .
Very unstable.
- Cadmium gold (aurous) cyanide**, Cd(CN)_2 , 2AuCN .
Nearly insol. in cold H_2O . Sl sol. in boiling H_2O . Insol. in alcohol. (Lindbom.)
- Cadmium mercuric cyanide**, 2Cd(CN)_2 , 3Hg(CN)_2 .
Permanent. Readily sol. in cold H_2O . (Schuler.)
- Cadmium mercuric cyanide mercuric iodide**, Cd(CN)_2 , Hg(CN)_2 , $\text{HgI}_2 + 8\text{H}_2\text{O}$.
Very sol. in H_2O . (Varet, Bull. Soc. (3) 5. 8.)
 $+ 7\text{H}_2\text{O}$. Sol. in H_2O and in $\text{NH}_4\text{OH} + \text{Aq}$. (Varet, C. R. 1890, 111, 679.)
- Cadmium mercuric cyanide mercuric iodide**, Cd(CN)_2 , Hg(CN)_2 , $\text{HgI}_2 + 8\text{H}_2\text{O}$.
Very sol. in H_2O . (Varet, Bull. Soc. (3) 5. 8.)
- $+ 7\text{H}_2\text{O}$. Sol. in H_2O and in $\text{NH}_4\text{OH} + \text{Aq}$. (Varet, C. R. 1890, 111, 679.)
- Cadmium mercuric cyanide mercuric iodide ammonia**, Cd(CN)_2 , Hg(CN)_2 , HgI_2 , 4NH_3 .
Very easily decomp. (Varet, Bull. Soc. (3) 6. 22.)
- Cadmium molybdenum cyanide**.
See Molybdocyanide, cadmium.
- Cadmium potassium cyanide**, Cd(CN)_2 , 2KCN .
Sol. in 3 pts. cold, and 1 pt. boiling H_2O . Insol. in absolute alcohol. (Rammelsberg.)
- Cadmium sodium cyanide**, $\text{Na}_2\text{Cd}_2(\text{CN})_6 + 3\text{H}_2\text{O}$.
Sol. in H_2O and in alcohol. (Loebe, Dissert, 1902.)
- Cadmium strontium cyanide**, Cd(CN)_2 , $2\text{Sr(CN)}_2 + 3\text{H}_2\text{O}$.
Sol. in H_2O and in alcohol. (Loebe, Dissert. 1902.)
- Cadmium tungsten cyanide**, $\text{Cd}_2\text{W(CN)}_8 + 8\text{H}_2\text{O}$.
Nearly insol. in H_2O .
Sl. sol. in dil HCl . Sol in conc. $\text{NH}_4\text{OH} + \text{Aq}$.
Insol. in organic solvents. (Olsson, Z. anorg. 1914, 88. 68.)
- Cadmium cyanide dihydrazine**, Cd(CN)_2 , $(\text{N}_2\text{H}_4)_2$.
Easily sol. in dil. acids. (Franzen, Z. anorg. 1911, 70. 152.)
- Cæsium cuprous cyanide**, CsCN , $\text{CuCN} + 1\frac{1}{2}\text{H}_2\text{O}$.
 H_2O separates CuCN . (Grossmann, Z. anorg. 1905, 43. 98.)
 2CsCN , $\text{CuCN} + \text{H}_2\text{O}$ Sol. in H_2O . (Grossmann, Z. anorg. 1905, 43. 98.)
 2CsCN , 3CuCN . Insol. in, and not decomp. by H_2O . (Grossmann, Z. anorg 1905, 43. 98.)
- Cæsium tungsten cyanide**.
See Tungstocyanide, cæsium.
- Calcium cyanide**, Ca(CN)_2 .
Sol. in H_2O , but the solution is very unstable. (Schulz.)
 Ca(CN)_2 , $3\text{CaO} + 15\text{H}_2\text{O}$. Decomp. by H_2O . (Joannis, A. ch. (5) 26. 496.)
- Calcium cuprous cyanide**, Ca(CN)_2 , $\text{CuCN} + 4\text{H}_2\text{O}$.
Easily decomp. by H_2O . (Grossmann, Z. anorg. 1905, 43. 106.)
 Ca(CN)_2 , $3\text{CuCN} + 8\text{H}_2\text{O}$. Immediately

decomp. by H_2O . (Grossmann, Z. anorg. 1905, **43**. 99.)

Calcium gold (aurous) cyanide, $\text{Ca}(\text{CN})_2$, $2\text{AuCN} + 3\text{H}_2\text{O}$.

Easily sol. in hot or cold H_2O or in alcohol. (Lindbom.)

Calcium manganous cyanide, $\text{Ca}(\text{CN})_2$, $2\text{Mn}(\text{CN})_2$.

Ppt. (Descamps.)

See also Manganocyanide, calcium.

Calcium mercuric cyanide, $\text{Ca}(\text{CN})_2$, $2\text{Hg}(\text{CN})_2 + 8\text{H}_2\text{O}$.

Very deliquescent. (Grossmann, B. 1904, **37**. 4143.)

$2\text{Ca}(\text{CN})_2$, $3\text{Hg}(\text{CN})_2 + 6\text{H}_2\text{O}$. Very sol. in H_2O . (Grossmann, B. 1904, **37**. 4143.)

Calcium mercuric cyanide iodide, $\text{Ca}(\text{CN})_2$, HgI_2 , $\text{Hg}(\text{CN})_2 + 7\text{H}_2\text{O}$.

(Varet, C. R. 1895, **121**. 499.)

Calcium nickel cyanide, $\text{Ca}(\text{CN})_2$, $\text{Ni}(\text{CN})_2 + x\text{H}_2\text{O}$.

Sol. in H_2O .

Calcium tungsten cyanide.

See Tungstocyanide, calcium.

Calcium zinc cyanide, $(\text{Ca}(\text{CN})_2, \text{Zn}(\text{CN})_2 + 3\frac{1}{2}\text{H}_2\text{O}$.

Sol. in H_2O and in alcohol. (Loebe, Dissert. 1902.)

Cerous cyanide (?).

Ppt. Very easily decomp. (Behringer, A. **42**. 139.)

Chromic cyanide, with MCN.

See Chromicyanide, M.

Chromous potassium cyanide.

See Chromocyanide, potassium.

Cobaltous cyanide, $\text{Co}(\text{CN})_2 + \text{H}_2\text{O}$.

Insol. in H_2O . Easily sol. in $\text{NH}_4\text{OH} + \text{Aq}$, and $\text{KCN} + \text{Aq}$; also in $(\text{NH}_4)_2\text{CO}_3$, or NH_4 succinate + Aq ; insol. in NH_4NO_3 , or $\text{NH}_4\text{Cl} + \text{Aq}$. (Wittstein.)

Cobaltous cyanide with 4MCN.

See Cobaltocyanide, M.

Cobaltic cyanide with 3MCN.

See Cobaltocyanide, M.

Cobalt gold (aurous) cyanide, $\text{Co}(\text{CN})_2$, 2AuCN .

Insol. in H_2O or cold $\text{HCl} + \text{Aq}$.

Cobalt hydrazine cyanide, $(\text{N}_2\text{H}_4)_4\text{Co}(\text{CN})_6$.
Deliquescent. (Franzen, Z. anorg. 1911, **70**. 155.)

Cobaltous cyanide ammonia, $\text{Co}(\text{CN})_2$, 2NH_3 .

Unstable. (Peters, B. 1908, **41**. 3178.)

Cuprous cyanide, $\text{Cu}_2(\text{CN})_2$.

Insol. in H_2O and dil. acids. Sol. in NH_4OH , $(\text{NH}_4)_2\text{SO}_4$, or NH_4 succinate + Aq , and in hot NH_4Cl , or $\text{NH}_4\text{NO}_3 + \text{Aq}$. Sol. in conc. $\text{HCl} + \text{Aq}$. Sol. in $\text{KCN} + \text{Aq}$.

Easily sol. in conc. NH_4SCN or $\text{KSCN} + \text{Aq}$. Sl. sol. in $\text{NaSCN} + \text{Aq}$. (Grossmann, Z. anorg. 1903, **37**. 408.)

Sl. sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, **20**. 827.)

Very sl. sol. in pyridine. (Schroeder, Dissert. 1902.)

Mol. weight determined in pyridine. (Werner, Z. anorg. 1897, **15**. 20)

Cupric cyanide, $\text{Cu}(\text{CN})_2$.

Easily decomp. Insol. in H_2O .

Sol. in pyridine. (Schroeder, Dissert. 1901.)

Insol. in methyl acetate. (Naumann, B. 1909, **42**. 3790.)

Cuprocupric cyanide, $\text{Cu}(\text{CN})_2$, $\text{Cu}_2(\text{CN})_2 + 5\text{H}_2\text{O}$.

Insol. in H_2O , but decomp. by boiling. Sol. in cold conc. $\text{HCl} + \text{Aq}$. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$, and in hot NH_4 salts + Aq . Easily sol. in $\text{KCN} + \text{Aq}$.

+ H_2O . Ppt. (Dufau.)

+ $\text{Cu}(\text{CN})_2$, $2\text{Cu}_2(\text{CN})_2 + \text{H}_2\text{O}$. Ppt.

Cuprous hydrazine cyanide, $\text{Cu}_2(\text{CN})_2$, $\text{N}_2\text{H}_5\text{CN}$.

Insol. in alcohol and H_2O . (Ferratini, C. C. 1912, **I**. 1281.)

Cupric iridium cyanide.

See Iridicyanide, cupric.

Cuprous lithium cyanide, $\text{Cu}_2(\text{CN})_2$, $\text{LiCN} + \text{H}_2\text{O}$.

Gradually decomp. by H_2O . (Grossmann, Z. anorg. 1905, **43**. 97.)

Cuprous magnesium cyanide, $\text{Cu}_2(\text{CN})_2$, $\text{Mg}(\text{CN})_2 + 11\text{H}_2\text{O}$.

Decomp. by H_2O . (Grossmann, Z. anorg. 1905, **43**. 103.)

Cuprous mercuric cyanide bromide, $\text{Cu}(\text{CN})_2$, $2\text{Hg}(\text{CN})_2$, HgBr_2 .

Sol. in H_2O . (Varet, C. R. 1890, **110**. 148.)

Cupric molybdenum cyanide ammonia.

See Molybdocyanide ammonia, cupric.

Cuprous potassium cyanide, $\text{Cu}_2(\text{CN})_2$, 2KCN .

Sl. sol. in H_2O , with partial decomp. Decomp. by acids, but not by alkalis.

Decomp. by boiling H_2O . Sol. in $\text{NH}_4\text{OH} + \text{Aq.}$ (Fleurent, C. R. 1893, 116. 191.)

Sol. without decomp. in conc. KSCN . (Grossmann, Z. anorg. 1903, 37. 407.)

Sol. without decomp. in $\text{KCN} + \text{Aq.}$ (Treadwell and Girsawald, Z. anorg. 1904, 38. 94.)

$\text{Cu}_2(\text{CN})_2$, $\text{KCN} + \text{H}_2\text{O}$. Almost insol. in cold H_2O . 100 cc. H_2O dissolve 0.0594 g. at 15° . Decomp. by much hot H_2O with separation of $\text{Cu}_2(\text{CN})_2$. Sol. in $\text{KCN} + \text{Aq.}$ or in $\text{NH}_4\text{OH} + \text{Aq.}$ (Treadwell and Girsawald, Z. anorg. 1904, 38. 93.)

$3\text{Cu}_2(\text{CN})_2$, 4KCN . Sol. in H_2O .

$\text{Cu}_2(\text{CN})_2$, 6KCN . Sol. in H_2O .

Cuprous potassium cyanide ammonia,

$\text{Cu}_2(\text{CN})_2$, KCN , NH_3 .

(Treadwell and Girsawald, Z. anorg. 1904, 39. 88.)

Cuprous potassium cyanide potassium sulphocyanide, $\text{Cu}_2(\text{CN})_2$, 4KCN , 2KSCN , H_2O .

Easily sol. in cold H_2O . (Itzig, B. 1902, 35. 108.)

Cupric potassium cyanide, $\text{Cu}(\text{CN})_2$, 2KCN .

Sol. in $\frac{3}{4}$ pt. H_2O at 15° and $\frac{1}{3}$ pt. at 100° . (Buignet, J. Pharm. 1859, (3), 35. 168.)

Cuprocupric potassium cyanide, $\text{Cu}_2(\text{CN})_2$, $\text{Cu}(\text{CN})_2$, 2KCN .

(Straus, Z. anorg. 1895, 9. 15.)

Cuprous rubidium cyanide, $\text{Cu}_2(\text{CN})_2$, 2RbCN .

Sl. sol. in H_2O . Pure H_2O separates CuCN . (Grossmann, Z. anorg. 1905, 43. 100.)

$3\text{Cu}_2(\text{CN})_2$, 4RbCN . Sl. sol. in H_2O . Pure H_2O separates CuCN . (Grossmann, Z. anorg. 1905, 43. 98.)

Cuprous silver cyanide, $\text{Cu}_2(\text{CN})_2$, 2AgCN .

Ppt.

$\text{Cu}_2(\text{CN})_2$, 6AgCN . Sol. in excess of $\text{Cu}_2(\text{CN})_2$, $\text{KCN} + \text{Aq.}$ (Rammelsberg.)

Cuprous sodium cyanide, $\text{Cu}_2(\text{CN})_2$, 2NaCN .

(Traube, Z. anorg. 1894, 8. 21.)

$+4\text{H}_2\text{O}$. Decomp. by H_2O . Sol. in excess of $\text{NaCN} + \text{Aq.}$ (Grossmann, Z. anorg. 1905, 43. 96.)

$\text{Cu}_2(\text{CN})_2$, $\text{NaCN} + 2\text{H}_2\text{O}$. Decomp. by H_2O . (Grossmann, Z. anorg. 1905, 43. 96.)

$\text{Cu}_2(\text{CN})_2$, $4\text{NaCN} + 6\text{H}_2\text{O}$. Very sol. in H_2O without decomp. (Grossmann, Z. anorg. 1905, 43. 96.)

$\text{Cu}_2(\text{CN})_2$, $6\text{NaCN} + 6\text{H}_2\text{O}$. Very sol. in

H_2O without decomp. (Grossmann, Z. anorg. 1905, 43. 96.)

Cuprous strontium cyanide, $\text{Cu}_2(\text{CN})_2$, $\text{Sr}(\text{CN})_2 + 8\text{H}_2\text{O}$

H_2O separates $\text{Cu}_2(\text{CN})_2$. (Grossmann, Z. anorg. 1905, 43. 103.)

Cuprous cyanide ammonia, $\text{Cu}_2(\text{CN})_2$, 2NH_3 .

Nearly insol. in cold H_2O . Easily sol. in $\text{NH}_4\text{OH} + \text{Aq.}$ in absence of oxygen. Insol. in alcohol and ether. Decomp. by hot H_2O and acids. (Treadwell and Girsawald, Z. anorg. 1904, 39. 87.)

Cuprocupric cyanide ammonia, $\text{Cu}_2(\text{CN})_2$, $\text{Cu}(\text{CN})_2$, 2NH_3 .

(Malmberg, Arch. Pharm. 1898, 236. 256.) $+ \text{H}_2\text{O}$. Sl. sol. in cold, decomp. by boiling H_2O . Sol. in $\text{NH}_4\text{OH} + \text{Aq.}$ (Dufau, A. 88. 278.)

$\text{Cu}(\text{CN})_2$, $\text{Cu}_2(\text{CN})_2$, 3NH_3 . (Mills, Z. Ch. 1867. 545.)

Sl. decomp. by boiling H_2O . Sol. in $\text{NH}_4\text{OH} + \text{Aq.}$ and can be recryst. therefrom. Insol. in alcohol and ether. Decomp. by alkalis and acids. (Treadwell and Girsawald, Z. anorg. 1904, 39. 96.)

$\text{Cu}(\text{CN})_2$, $\text{Cu}_2(\text{CN})_2$, 4NH_3 . Insol. in cold, decomp. by hot H_2O . Sol. in NH_4OH , or $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$ (Treadwell and Girsawald, Z. anorg. 1904, 39. 92.)

$2\text{Cu}_2(\text{CN})_2$, $\text{Cu}(\text{CN})_2$, 2NH_3 . Insol. in H_2O , alcohol and ether. Sol. in $\text{NH}_4\text{OH} + \text{Aq.}$ Decomp. by boiling acids and alkalis. (Treadwell and Girsawald, Z. anorg. 1904, 39. 92.)

$+ \text{H}_2\text{O}$. (Monthier, J. Pharm. 11. 257.)

$\text{Cu}(\text{CN})_2$, $2\text{Cu}_2(\text{CN})_2$, 4NH_3 . (Hillenkamp, A. 97. 218.)

$\text{Cu}(\text{CN})_2$, $2\text{Cu}_2(\text{CN})_2$, 6NH_3 . (Schiff and Becchi, A. 134. 33.)

$2\text{Cu}(\text{CN})_2$, $\text{Cu}_2(\text{CN})_2$, $2\text{NH}_3 + 3\text{H}_2\text{O}$.

(Fleurent, C. R. 114. 1060.)

$2\text{Cu}(\text{CN})_2$, $\text{Cu}_2(\text{CN})_2$, $4\text{NH}_3 + \text{H}_2\text{O}$. Correct formula for $\text{Cu}(\text{CN})_2$, $\text{Cu}_2(\text{CN})_2$, 4NH_3 . (Bouveault, Bull. Soc. (3) 4. 641.)

Cuprous cyanide ammonium sulphocyanide, $\text{Cu}_2(\text{CN})_2$, $3\text{NH}_4\text{SCN}$.

Decomp. by H_2O . (Grossmann, Z. anorg. 1903, 37. 409.)

Cupric cyanide hydrazine, $\text{Cu}(\text{CN})_2(\text{N}_2\text{H}_4)$.

Insol. in H_2O and cold dil. acids.

Sol. in warm dil. acids. (Franzen, Z. anorg. 1911, 70. 154.)

Cuprous cyanide mercuric iodide, $\text{Cu}_2(\text{CN})_2$, HgI_2 .

Sol. in H_2O . (Varet, Bull. Soc. (3) 4. 484.)

Cuprous cyanide potassium sulphocyanide, $\text{Cu}_2(\text{CN})_2, 3\text{KSCN}$.

Decomp. by H_2O . (Grossmann, Z. anorg. 1903, 37. 409.)

Gold (aurous) cyanide, AuCN .

Insol. in H_2O , alcohol, or ether. Not attacked by dil. or conc. acids, even boiling aqua regia.

Sol. in $\text{NH}_4\text{OH} + \text{Aq}$, also in soluble cyanides + Aq .

Slowly decomp. by boiling $\text{KOH} + \text{Aq}$, also by $(\text{NH}_4)_2\text{S} + \text{Aq}$.

Sol. in $\text{K}_4\text{Fe}(\text{CN})_6 + \text{Aq}$. (Bentel, Z. anorg. 1912, 78. 152.)

Gold (auric) cyanide with MCN .

See Auricyanide, M.

Gold (auroauric) mercuric cyanide auric mercuric chloride, $4\text{AuCN}, \text{Au}(\text{CN})_3, 5\text{Hg}(\text{CN})_2, 7\text{AuCl}_3, 5\text{HgCl}_2$.

(Schmidt, Ch. Z. 1896, 20. 633.)

Gold (aurous) potassium cyanide, AuCN, KCN .

Sol. in 7 pts. cold, and less than 0.5 pt. boiling H_2O . Sl. sol. in cold, and somewhat more sol. in boiling alcohol. Insol. in ether. (Himly, A. 42. 160.)

Decomp. by warm acids, even tartaric, and acetic acids.

Gold (aurous) sodium cyanide, AuCN, NaCN .

Sl. sol. in cold, more easily in hot H_2O . Sl. sol. in alcohol. (Lindbom.)

Gold (aurous) strontium cyanide, $2\text{AuCN}, \text{Sr}(\text{CN})_2 + 3\text{H}_2\text{O}$.

As the Na salt.

Gold (aurous) zinc cyanide, $2\text{AuCN}, \text{Zn}(\text{CN})_2$.

Nearly insol. in hot or cold H_2O .

Insol. in cold $\text{HCl} + \text{Aq}$.

Gold (auric) cyanide auric mercuric chloride, $\text{Au}(\text{CN})_3, \text{AuCl}_3, 2\text{HgCl}_2$.

(Schmidt, Ch. Z. 1896, 20. 633.)

Gold (auroauric) cyanide auroous mercuric chloride, $12\text{AuCN}, 3\text{Au}(\text{CN})_3, 4\text{AuCl}, 2\text{HgCl}_2$.

(Schmidt, Ch. Z. 1896, 20. 633.)

Gold (auroauric) cyanide mercuric chloride.

$15\text{AuCN}, 2\text{Au}(\text{CN})_3, 5\text{HgCl}_2$.

(Schmidt, Ch. Z. 1896, 20. 633.)

Iridium cyanide, $\text{Ir}(\text{CN})_3$.

Insol. in H_2O . Sol. in $\text{HCN} + \text{Aq}$.

Iridium cyanide with MCN .

See Iridicyanide, M

Lanthanum cyanide, $\text{La}(\text{CN})_3$.

Ppt. (Frerichs and Smith, B. 11. 910, 1151.)

Lead cyanide, $\text{Pb}(\text{CN})_2$.

Sl. sol in cold, more in hot H_2O . Sol. in $\text{HNO}_3 + \text{Aq}$, and $\text{KCN} + \text{Aq}$. Partially sol. in $\text{NH}_4\text{OH} + \text{Aq}$, and NH_4 salts + Aq . Not pptd. in presence of Na citrate.

Above compound is $2\text{PbO}, \text{Pb}(\text{CN})_2 + \text{H}_2\text{O}$. (Joannis, A. ch. (5) 26. 204.)

$2\text{PbO}, \text{Pb}(\text{CN})_2 + \text{H}_2\text{O}$. Insol. in H_2O .

Lead tungsten cyanide.

See Tungstocyanide, lead.

Lead zinc cyanide, $\text{Pb}(\text{CN})_2, 2\text{Zn}(\text{CN})_2$.

Ppt. (Rammelsberg.)

Lead cyanide chloride, $2\text{Pb}(\text{CN})_2, \text{PbCl}_2$.

Insol. in H_2O . (Grissom and Thorp, Am. Ch. J. 10. 229.)

Lithium mercuric cyanide mercuric iodide, $2\text{Li}(\text{CN})_2, \text{Hg}(\text{CN})_2, \text{HgI}_2 + 7\text{H}_2\text{O}$.

Deliquescent; sol. in H_2O . (Varet, C. R. 111. 526.)

Magnesium cyanide, $\text{Mg}(\text{CN})_2$.

Known only in aqueous solution which decomposes on evaporation. (Schulz.)

Magnesium mercuric cyanide, $2\text{Mg}(\text{CN})_2, 3\text{Hg}(\text{CN})_2 + 5\text{H}_2\text{O}$.

(Grossmann, B. 1904, 37. 4143)

Magnesium mercuric cyanide mercuric bromide, $\text{Mg}(\text{CN})_2, \text{Hg}(\text{CN})_2, \text{HgBr}_2 + 8\text{H}_2\text{O}$.

Very sol. in H_2O . (Varet, Bull. Soc. (3) 7. 170.)

Magnesium mercuric cyanide mercuric iodide, $\text{Mg}(\text{CN})_2, \text{Hg}(\text{CN})_2, \text{HgI}_2 + 8\text{H}_2\text{O}$.

Sol. in H_2O . (Varet, Bull. Soc. (3) 7. 170.)

Magnesium platinum cyanide.

See Platinocyanide, magnesium.

Magnesium tungsten cyanide.

See Tungstocyanide, magnesium.

Manganous and manganic cyanides.

See Manganocyanhydric, and Mangani-cyanhydric acids.

Manganous strontium cyanide, $2\text{Mn}(\text{CN})_2, \text{Sr}(\text{CN})_2$.

Ppt. (Descamps.)

See also Manganocyanide, strontium.

Manganous tungsten cyanide.

See Tungstocyanide, manganous.

Manganic cyanide, with MCN.

See Manganicyanide, M.

Manganous cyanide with MCN.

See Manganocyanide, M.

Mercuric cyanide, basic, $\text{Hg}(\text{CN})_2$, HgO .

Sl. sol. in cold, moderately sol. in hot H_2O . Sol. with decomp. in KOH , KCN , or $\text{KCl} + \text{Aq.}$ (Johnston.)

Decomp. by H_2O over 80° . (Holdermann, Arch. Pharm. 1906, 244. 135.)

Cold H_2O dissolves about 1%, boiling H_2O about 5%. (Borelli, Gazz. ch. it. 1908, 38. (1), 361.)

1.1% dissolves in H_2O at ord. temp (Richard, J. Chim. Phys. (6) 18. 555.)

At 0° 1/100 mol. dissolve in 1 l. H_2O .

At 25° 1/32 " " " " "

At 90° 1/10 " " " " "

(Borelli, Gazz. ch. it. 1908, 38. (1), 361.)

1000 cc. cold H_2O dissolve 1.35g. (Holdermann, Arch. Pharm. 1906, 244. 135.)

Less sol. in cold H_2O than $\text{Hg}(\text{CN})_2$. (Pieverling, J. B. 1899, 783.)

Somewhat sol. in dil. alcohol.

Practically insol. in alcohol, ether, C_6H_6 and all organic solvents. (Borelli, Gazz. ch. it. 1908, 38. (1), 361.)

Sol. in 110 pt. alcohol of 90° Bé. (Richard, J. Chim. Phys. (6), 18. 555.)

$3\text{Hg}(\text{CN})_2$, HgO . (Joannis, A. ch. (5) 26. 469.)

Moderately sol. in H_2O . (Barthe, J. Pharm. 1896, (6), 3. 186.)

Very sol. in hot, less sol. in cold H_2O . (Holdermann, Arch. Pharm. 1904, 242. 32.)

Easily sol. in HCl . (Joannis, A. ch. 1882, (5) 26. 511.)

$\text{Hg}(\text{CN})_2$, 3HgO . More sol. in H_2O than $\text{Hg}(\text{CN})_2$, HgO .

Mercuric cyanide, $\text{Hg}(\text{CN})_2$.

Moderately sol. in H_2O .

100 pts. $\text{Hg}(\text{CN})_2 + \text{Aq}$ sat. at 101.1° contain 35 pts. $\text{Hg}(\text{CN})_2$, or 100 pts. H_2O dissolve 53.85 pts. $\text{Hg}(\text{CN})_2$ at 101.1° . (Griffiths.)

Sol. in 8 pts. H_2O at 15° . (Abl.)

Sol. in 11 pts. cold, and 2.5 pts. boiling H_2O . (Wittstein.)

8 g. are sol. in 100 g. H_2O at -0.45° . (Guthrie, Phil. Mag. 1878, (5) 6. 40.)

100 g. H_2O dissolve 9.3 g. at 13.5° . (Timofeiev, Dissert. 1894.)

100 cc. sat. solution contain 9.3 g. at 20° (Konowalow, J. russ. Soc. 1898, (4) 30. 367.)

Solubility in H_2O at $25^\circ = 0.44$ mol. l. (Sherrill, Z. phys. Ch. 1903, 43. 735.)

1 l. H_2O dissolves 0.3956 mol. (Hofmann and Wagner, Z. Elektrochem. 1909, 15. 444.)

100 g. H_2O dissolve 12.5 g. at 15° (Marsh and Struthers, Chem. Soc. 1905, 87. 1879.)

100 g. H_2O dissolve 11.27 g. at 25° . Sp. gr. of solution = 1.0813 (Herz and Anders, Z. anorg. 1907, 52. 164.)

$\text{Hg}(\text{CN})_2 + \text{Aq}$ containing 7.23% $\text{Hg}(\text{CN})_2$ has sp. gr. $20^\circ/20^\circ = 1.0572$.

$\text{Hg}(\text{CN})_2 + \text{Aq}$ containing 9.07% $\text{Hg}(\text{CN})_2$ has sp. gr. $20^\circ/20^\circ = 1.0743$.

(Le Blanc and Rohland, Z. phys. Ch. 1896, 19. 282.)

Sp. gr. at $16^\circ/4^\circ$ of $\text{Hg}(\text{CN})_2 + \text{Aq}$ containing 7.8921% $\text{Hg}(\text{CN})_2 = 1.06376$; containing 5.4037% = 1.04246; containing 7.5009% = 1.06049. (Schonrock, Z. phys. Ch. 1893, 11. 770.)

Not decomp. by acids except hot conc. H_2SO_4 .

Sol. without decomp. in $\text{HNO}_3 + \text{Aq.}$ (Bertzelius.)

1 l. $\text{NH}_4\text{OH} + \text{Aq}$ (5.2% NH_3) dissolves 204.3 g. at about 25° (Konowalow.)

Solubility in bases.

1 l. H_2O containing 0.3286 mols. KOH dissolves 0.5179 mols. $\text{Hg}(\text{CN})_2$.

1 l. H_2O containing 0.2350 mols. NaOH dissolves 0.4840 mols. $\text{Hg}(\text{CN})_2$.

1 l. H_2O containing 0.4775 mols. NaOH dissolves 0.5977 mols. $\text{Hg}(\text{CN})_2$.

1 l. H_2O containing 0.9475 mols. NaOH dissolves 0.79603 mols. $\text{Hg}(\text{CN})_2$.

1 l. H_2O containing 0.970 mols. LiOH dissolves 0.6543 mols. $\text{Hg}(\text{CN})_2$.

1 l. H_2O containing 0.480 mols. LiOH dissolves 0.5500 mols. $\text{Hg}(\text{CN})_2$.

1 l. H_2O containing 0.243 mols. LiOH dissolves 0.4840 mols. $\text{Hg}(\text{CN})_2$.

(Hofmann and Wagner, Z. Elektrochem. 1909, 15. 444.)

Solubility in $\text{KCN} + \text{Aq}$ at 25° .

Concentration of KCN Mols per litre	Solubility of $\text{Hg}(\text{CN})_2$ Mols per litre
0.0493	0.4855
0.0985	0.5350
0.1970	0.627.

(Sherrill, Z. phys. Ch. 1903, 43. 719.)

Solubility in $\text{Na}_2\text{CO}_3 + \text{Aq}$.

1 l. H_2O containing 0.4923 mols. Na_2CO_3 dissolves 0.4956 mols. $\text{Hg}(\text{CN})_2$.

1 l. H_2O containing 0.2443 mols. Na_2CO_3 dissolves 0.4464 mols. $\text{Hg}(\text{CN})_2$.

1 l. H_2O containing 0.1250 mols. Na_2CO_3 dissolves 0.4147 mols. $\text{Hg}(\text{CN})_2$.

1 l. H_2O containing 0.0000 mols. Na_2CO_3 dissolves 0.3952 mols. $\text{Hg}(\text{CN})_2$.

(Hofmann and Wagner, Z. Elektrochem. 1909, 15. 444.)

Solubility in $\text{KNO}_3 + \text{Aq}$ at 25° .

1 l. H_2O containing 0.9574 mols KNO_3 dissolves 0.5383 mols. $\text{Hg}(\text{CN})_2$.

1 l. H_2O containing 0.4614 mols. KNO_3 dissolves 0.4619 mols. $\text{Hg}(\text{CN})_2$.

1 l. H_2O containing 0.0000 mols KNO_3 dissolves 0.3956 mols. $\text{Hg}(\text{CN})_2$.

(Hofmann and Wagner, Z. Elektrochem 1909, 15. 444.)

Insol. in liquid CO_2 . (Buchner, Z. phys. Ch. 1906, 54. 674.)

Very easily sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 829.)

Solubility of $\text{Hg}(\text{CN})_2$ in ethyl alcohol at t° .

t°	% HgCl_2
0	8 3
10	8 8
20	9 25
30	9 8
40	10 3

(Timofeiev, Dissert 1894.)

Solubility of $\text{Hg}(\text{CN})_2$ in methyl alcohol at t° .

$\text{Hg}(\text{CN})_2 = \text{g}$. $\text{Hg}(\text{CN})_2$ in 100 g. of the solution.

t°	$\text{Hg}(\text{CN})_2$
0 0	26 10
14 7	29.17
23 4	32 01
27 4	31.77
31.7	32 53
38.1	33 29
44.5	34 05

(Dukelski, Z. anorg. 1907, 53. 337.)

100 pts. methyl alcohol dissolve 44.2 pts. $\text{Hg}(\text{CN})_2$ at 19.5° ; 100 pts. ethyl alcohol dissolve 2.09 pts. at 19.5° . (de Bruyn, Z. phys. Ch. 1892, 10. 784.)

Sol. in 2.5 pts. methyl alcohol at 14° ; in 20 pts. ethyl alcohol at 15° . (Marsh, Chem. Soc. 1905, 87. 1878.)

Solubility of $\text{Hg}(\text{CN})_2$ in methyl alcohol + Aq at 25° .

$P = \text{g}$. alcohol in 100 g. alcohol + Aq.

$\text{Hg}(\text{CN})_2 = \text{millimols}$. $\text{Hg}(\text{CN})_2$ in 10 cc. of the solution.

P	$\text{Hg}(\text{CN})_2$	Sp gr.
0	4.34	1.0813
10.60	4.37	1.0642
30.77	4 94	1.0484
37.21	5.40	1.0430
47.06	6 49	1.0426
64 00	8.13	1.0441
78.05	9.75	1.0484
100	13.60	1.0762

(Herz and Anders, Z. anorg. 1907, 52. 165.)

Solubility of $\text{Hg}(\text{CN})_2$ in ethyl alcohol + Aq at 25° .

$P = \text{g}$. alcohol in 100 g. alcohol + Aq.

$\text{Hg}(\text{CN})_2 = \text{millimols}$ $\text{Hg}(\text{CN})_2$ in 10 cc of the solution.

P	$\text{Hg}(\text{CN})_2$	Sp gr
0	4 34	1.0813

91.2	0.384	0.8306
95.2	0.364	0.8293
100	0.344	0.8283

(Herz and Kuhn, l. c.)

Sp. gr. at 16°/4° of $\text{Hg}(\text{CN})_2$ + alcohol, containing 8.2206 % $\text{Hg}(\text{CN})_2$ = 0.85273; containing 5.8652% = 0.8348 +.

Sp. gr. of 16°/4° of $\text{Hg}(\text{CN})_2$ + pyridine containing 29.6018% $\text{Hg}(\text{CN})_2$ = 1.28155; containing 23.2275% = 1.20198.

(Schönrock, Z. phys. Ch 1893, 11. 771.)

1 l. ether dissolves 0.01 mol. at 25°. (Sherrill, Z. phys. Ch. 1903, 43. 735.)

Easily sol. in acetone. (Krug and M'Elroy, J. Anal. Ch. 6. 84.)

100 g. glycerol dissolve 27 g. $\text{Hg}(\text{CN})_2$ at 15.5° (Ossendowski, Pharm. J. 1907, 79. 575.)

Nearly insol. in C_6H_6 . (Sherrill, Z. phys. Ch. 1903, 43. 735.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

100 g. boiling methyl acetate dissolve 3.2 g. (Steiner, Dissert, 1906.)

Solubility of $\text{Hg}(\text{CN})_2$ in ethyl acetate + Aq at 25°.

P = g. ethyl acetate in 100 g. ethyl acetate + Aq.

$\text{Hg}(\text{CN})_2$ = millimols $\text{Hg}(\text{CN})_2$ in 10 cc. of the solution.

P	$\text{Hg}(\text{CN})_2$	Sp. gr.
0	4.34	1.0810
4.39	4.295	1.0797
96.76	1.056	1.9374
100	0.714	0.09097

(Herz and Anders, Z. anorg. 1907, 52. 165.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Solubility in organic solvents at 18-20°.

100 g. tetrachlormethane dissolve 0.001 g. $\text{Hg}(\text{CN})_2$.

100 g. bromoform dissolve 0.005 g. $\text{Hg}(\text{CN})_2$.

100 g. ethyl bromide dissolve 0.013 g. $\text{Hg}(\text{CN})_2$.

100 g. ethylene dibromide dissolve 0.001 g. $\text{Hg}(\text{CN})_2$.

(Sulc, Z. anorg. 1900, 25. 401.)

100 g. acetonitrile dissolve 9.58 g. $\text{Hg}(\text{CN})_2$ at 18° (Naumann and Schier, B. 1914, 47. 249.)

Solubility in benzonitrile at 18° = 1.093 g. in 100 g. (Naumann, B. 1914, 47. 1370.)

Sl. sol. in ethyl amine. (Shinn, J. phys. Chem. 1907, 11. 538.)

Very sol. in liquid methyl amine. (Gibbs, J. Am. Chem. Soc. 1906, 28. 1419.)

Sol. in paratoluidine. (Werner, Z. anorg. 1897, 15. 7.)

Mol. weight determined in pyridine and benzonitrile. (Werner, Z. anorg. 1897, 15. 20 and 32.)

100 g. pyridine dissolve 64.8 g. $\text{Hg}(\text{CN})_2$ at 18°. (Schroeder, Z. anorg. 1905, 44. 6.)

Solubility in pyridine.

Mols per 100 $\text{Hg}(\text{CN})_2$	Temp. of Solidification	Mols per 100 $\text{Hg}(\text{CN})_2$	Temp. of Solidification

(Staronka, l. c.)

Mercuric nickel cyanide ammonia, $2\text{Hg}(\text{CN})_2$, $4\text{Ni}(\text{CN})_2$, $5\text{NH}_3 + 2\text{H}_2\text{O}$.

(Papiermeister, Dissert. 1898.)

$5\text{Hg}(\text{CN})_2$, $18\text{Ni}(\text{CN})_2$, $8\text{NH}_3 + 15\text{H}_2\text{O}$. (Papiermeister, Dissert. 1898.)

Mercuric potassium cyanide, $\text{Hg}(\text{CN})_2$, 2KCN .

Sol in 4.4 pts. cold H_2O ; sl. sol. in alcohol; decomp. by acids.

100 g. H_2O dissolve 22.7 g (Fronmüller, B 1878, 11. 92.)

Abundantly sol. in liquid NH_3 (Franklin, Z. phys. Ch. 1909, 69. 295.)

Mercuric silver cyanide, basic, $\text{Hg}(\text{CN})_2$, HgO , 7AgCN .

Ppt. (Bloxam, B. 16. 2669.)

Mercuric silver cyanide mercuric sulphate, $\text{Hg}(\text{CN})_2$, 2AgCN , $\text{HgSO}_4 + \text{H}_2\text{O}$.

Mercuric sodium cyanide, $\text{Hg}(\text{CN})_2$, $\text{NaCN} + 1\frac{1}{2}\text{H}_2\text{O}$.

Sol. in H_2O (Grossmann, B. 1904, 37. 4141.)

Mercuric strontium cyanide, $\text{Hg}(\text{CN})_2$, $\text{Sr}(\text{CN})_2 + 5\text{H}_2\text{O}$.

Very hygroscopic. Sol in H_2O . (Grossmann, B 1904, 37. 4142.)

Mercuric strontium cyanide iodide, $\text{Sr}(\text{CN})_2$, HgI_2 , $\text{Hg}(\text{CN})_2 + 7\text{H}_2\text{O}$

(Varet, C. R. 1895, 121. 499.)

Mercuric thallium cyanide, $\text{Hg}(\text{CN})_2$, 2TlCN .

Easily sol. in H_2O . 100 pts. H_2O dissolve 7.9 pts. at 1° , and 10.3 pts. at 10° . (Fronmüller, B. 11. 92.)

Mercuric zinc cyanide, $4\text{Zn}(\text{CN})_2$, $\text{Hg}(\text{CN})_2$.

Insol. in H_2O . (Dunstan, Chem Soc. 6. 666.)

Mercuric zinc cyanide mercuric bromide ammonia, $\text{Hg}(\text{CN})_2$, $\text{Zn}(\text{CN})_2$, HgBr_2 , 4NH_3 .

Decomp. by H_2O . Sl. sol. in cold $\text{NH}_4\text{OH} + \text{Aq}$. (Varet, C. R. 1889, 109. 810.)

Mercuric cyanide ammonia, $\text{Hg}(\text{CN})_2$, NH_3 .

Very sol. in H_2O , $\text{NH}_4\text{OH} + \text{Aq}$, and alcohol. (Varet, C. R. 1889, 109. 903.)

Sl. sol. in H_2O . (Schmidt, B. 1894, 27. 232.)

$8\text{Hg}(\text{CN})_2$, $2\text{NH}_3 + \frac{1}{2}\text{H}_2\text{O}$. Easily decomp. (Varet, Bull. Soc. (3) 6. 221.)

Mercuric cyanide bromide, $\text{Hg}(\text{CN})_2$, HgBr_2 .

Very sl. sol. even in boiling H_2O . (Prussia, Gazz. ch. it. 1898, 28, (2), 114.)

Mercuric cyanide barium bromide, $2\text{Hg}(\text{CN})_2$, $\text{BaBr}_2 + 6\text{H}_2\text{O}$.

Easily sol. especially in hot H_2O and alcohol. (Varet, C. R. 1895, 121. 398.)

Mercuric cyanide cadmium bromide, $\text{Hg}(\text{CN})_2$, $\text{CdBr}_2 + 3\text{H}_2\text{O}$.

Sol. in H_2O and $\text{NH}_4\text{OH} + \text{Aq}$. (Varet, Bull. Soc. (3) 5. 8.)

$2\text{Hg}(\text{CN})_2$, $\text{CdBr}_2 + 4.5 \text{H}_2\text{O}$. Sol. in H_2O and in $\text{NH}_4\text{OH} + \text{Aq}$ (Varet, C. R. 1890, 111. 680.)

Mercuric cyanide cadmium bromide ammonia, $2\text{Hg}(\text{CN})_2$, CdBr_2 , $4\text{NH}_3 + 2\text{H}_2\text{O}$.

Decomp. by H_2O .

Sl. sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Varet, C. R. 1891, 112. 535.)

Mercuric cyanide calcium bromide, $2\text{Hg}(\text{CN})_2$, $\text{CaBr}_2 + 5\text{H}_2\text{O}$.

Sol. in 1 pt. cold, and 0.25 pt. boiling H_2O ; also in 2 pts. cold, and 1 pt. boiling 90% alcohol. (Custer) $+ 7\text{H}_2\text{O}$. (Varet, C. R. 1895, 121. 399.)

Mercuric cyanide cupric bromide ammonia, $2\text{Hg}(\text{CN})_2$, CuBr_2 , 4NH_3 .

Decomp. by H_2O ; sl. sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Varet, Bull. Soc. (3) 6. 221.)

Mercuric cyanide lithium bromide, $2\text{Hg}(\text{CN})_2$, $2\text{LiBr} + 7\text{H}_2\text{O}$.

Deliquescent. (Varet, C. R. 111. 526.)

Mercuric cyanide magnesium bromide.

See Magnesium mercuric cyanide mercuric bromide.

$\text{Hg}(\text{CN})_2$, 2KBr . Very sol. in H_2O . (Harth, Z. anorg. 1897, 14. 351.)

Mercuric cyanide potassium bromide, $\text{Hg}(\text{CN})_2$, $\text{KBr} + 2\text{H}_2\text{O}$.

Sol. in 13.34 pts. H_2O at 18° , and less than 1 pt. boiling H_2O . (Brett.)

Sol. without decomp. in hot dil. H_2SO_4 , HNO_3 , or $\text{HCl} + \text{Aq}$. (Brett.)

Contains $1\frac{1}{2}\text{H}_2\text{O}$. (Berthelot, A. ch. (5) 29. 226.)

Mercuric cyanide sodium bromide, $\text{Hg}(\text{CN})_2$, $\text{NaBr} + 1\frac{1}{2}\text{H}_2\text{O}$.

Sol. in H_2O and alcohol.

Mercuric cyanide strontium bromide, $2\text{Hg}(\text{CN})_2$, $\text{SrBr}_2 + 6\text{H}_2\text{O}$.

Sol. in H_2O and in alcohol. (Varet, C. R. 1895, 121. 399.)

Mercuric cyanide zinc bromide, HgBr_2 , $\text{Hg}(\text{CN})_2$, $\text{Zn}(\text{CN})_2 + 8\text{H}_2\text{O}$.

Sol. in H_2O and $\text{NH}_4\text{OH} + \text{Aq}$. (Varet, Bull. Soc. (3) 5. 8.)

Mercuric cyanide zinc bromide ammonia, HgBr_2 , $\text{Hg}(\text{CN})_2$, $\text{Zn}(\text{CN})_2$, 4NH_3 .

As the corresponding chloride. (Varet.)

Mercuric cyanide chloride, $\text{Hg}(\text{CN})_2$, HgCl_2 .
Sol. in H_2O . Decomp. by alcohol, which dissolves out HgCl_2 .

Mercuric cyanide ammonium chloride,
 $\text{Hg}(\text{CN})_2$, NH_4Cl .
Sol. in H_2O and alcohol. (Poggiale.)
 $\text{Hg}(\text{CN})_2$, $4\text{NH}_4\text{Cl}$.

Mercuric cyanide barium chloride, $2\text{Hg}(\text{CN})_2$,
 $\text{BaCl}_2 + 4\text{H}_2\text{O}$.
Efflorescent. Easily sol. in H_2O and alcohol
+ $6\text{H}_2\text{O}$. (Dexter.)

Mercuric cyanide barium chloride ammonia,
 $2\text{Hg}(\text{CN})_2$, BaCl_2 , 4NH_3 .
Decomp. by H_2O . Sl. sol. in $\text{NH}_4\text{OH} + \text{Aq}$.
(Varet, Bull. Soc. (3) 6. 221.)

Mercuric cyanide cadmium chloride,
 $\text{Hg}(\text{CN})_2$, $\text{CdCl}_2 + 2\text{H}_2\text{O}$.
Sol. in H_2O and $\text{NH}_4\text{OH} + \text{Aq}$. (Varet,
Bull. Soc. (3) 5. 8.)

Mercuric cyanide calcium chloride,
 $2\text{Hg}(\text{CN})_2$, $\text{CaCl}_2 + 6\text{H}_2\text{O}$.
Efflorescent. Very sol. in H_2O . (Varet,
C. R. 1895, 121. 349.)

Mercuric cyanide cerium chloride, $3\text{Hg}(\text{CN})_2$,
 $\text{CeCl}_3 + 8\text{H}_2\text{O}$.
Very sol. in H_2O . (Ahlén, Bull. Soc. (2)
27. 365.)

Mercuric cyanide cobaltous chloride,
 $\text{Hg}(\text{CN})_2$, $2\text{CoCl}_2 + 4\text{H}_2\text{O}$.
Sol. in H_2O . (Poggiale.)
 $2\text{Hg}(\text{CN})_2$, $\text{CoCl}_2 + 7\text{H}_2\text{O}$. (Dexter.)

Mercuric cyanide cupric chloride, $\text{Hg}(\text{CN})_2$,
 $\text{CuCl}_2 + 6\text{H}_2\text{O}$.

Efflorescent.
Sol. in H_2O and in $\text{NH}_4\text{OH} + \text{Aq}$. (Varet,
C. R. 1888, 107. 1002.)

$2\text{Hg}(\text{CN})_2$, $\text{CuCl}_2 + 6\text{H}_2\text{O}$. Efflorescent.
Very sol. in H_2O and in $\text{NH}_4\text{OH} + \text{Aq}$.
(Varet, C. R. 1888, 107. 1002.)

Mercuric cyanide cupric chloride ammonia,
 $2\text{Hg}(\text{CN})_2$, CuCl_2 , 4NH_3 .

Decomp. by H_2O . Sl. sol. in cold NH_4OH
+ Aq . (Varet, Bull. Soc. (3) 6. 221.)

Mercuric cyanide didymium chloride,
 $3\text{Hg}(\text{CN})_2$, $\text{DiCl}_3 + 8\text{H}_2\text{O}$.
Very sol. in H_2O . (Ahlén.)

Mercuric cyanide erbium chloride, $3\text{Hg}(\text{CN})_2$,
 $\text{ErCl}_3 + 8\text{H}_2\text{O}$.

Easily sol. in H_2O . (Ahlén.)

Mercuric cyanide hydrazine chloride,
 $\text{Hg}(\text{CN})_2$, N_2H_4 , HCl .

Very sol. in H_2O .

Nearly insol. in alcohol and ether. (Fer-
ratini, Gazz. ch. it. 1912, 42. (1), 154.)

Mercuric cyanide ferric chloride, $2\text{Hg}(\text{CN})_2$,
 $\text{FeCl}_3 + 3\frac{1}{2}\text{H}_2\text{O}$.
(Dexter.)

Mercuric cyanide lanthanum chloride,
 $3\text{Hg}(\text{CN})_2$, $\text{LaCl}_3 + 8\text{H}_2\text{O}$.
Very sol. in H_2O . (Ahlén.)

Mercuric cyanide magnesium chloride,
 $2\text{Hg}(\text{CN})_2$, $\text{MgCl}_2 + 2\text{H}_2\text{O}$.
Easily sol. in H_2O and dil. alcohol. (Pog-
giale.)

Mercuric cyanide manganous chloride,
 $\text{Hg}(\text{CN})_2$, $\text{MnCl}_2 + 3\text{H}_2\text{O}$.
Efflorescent. Very sol. in H_2O . (Poggiale.)

Mercuric cyanide nickel chloride, $\text{Hg}(\text{CN})_2$,
 $\text{NiCl}_2 + 6\text{H}_2\text{O}$.
Deliquescent. Sol. in H_2O . (Poggiale.)
 $2\text{Hg}(\text{CN})_2$, $\text{NiCl}_2 + 7\text{H}_2\text{O}$. (Dexter.)

Mercuric cyanide chloride nickel chloride
oxychloride, $11\text{Hg}(\text{CN})_2$, 8HgCl_2 , 2NiCl_2 ,
 $8\text{Ni}(\text{OH})\text{Cl} + 76\text{H}_2\text{O}$.
(Papiermeister, Dissert. 1898.)

Mercuric cyanide potassium chloride,
 $\text{Hg}(\text{CN})_2$, $\text{KCl} + \text{H}_2\text{O}$.
Sol. in 6.75 pts. H_2O at 18° . (Brett.)
Sol. in alcohol.

Mercuric cyanide sodium chloride, $\text{Hg}(\text{CN})_2$,
 NaCl .
Easily sol. especially in hot H_2O ; insol. in
alcohol. (Poggiale.)

Mercuric cyanide strontium chloride,
 $2\text{Hg}(\text{CN})_2$, $\text{SrCl}_2 + 6\text{H}_2\text{O}$.
Easily sol. in H_2O and dil. alcohol. (Varet,
C. R. 1895, 121. 349.)

Mercuric cyanide yttrium chloride, $3\text{Hg}(\text{CN})_2$,
 $\text{YCl}_3 + 8\text{H}_2\text{O}$.
Easily sol. in H_2O . (Ahlén, Bull. Soc. (2)
27. 365.)

Mercuric cyanide zinc chloride, $2\text{Hg}(\text{CN})_2$,
 $\text{ZnCl}_2 + 6\text{H}_2\text{O}$.
Efflorescent. Sol. in H_2O . (Kane.)
 HgCl_2 , $\text{Hg}(\text{CN})_2$, $\text{Zn}(\text{CN})_2 + 7\text{H}_2\text{O}$. Ef-
florescent. Very sol. in H_2O . (Varet, Bull.
Soc. (3) 5. 8.)

Mercuric cyanide zinc chloride ammonia,
 HgCl_2 , $\text{Hg}(\text{CN})_2$, ZnCl_2 , 4NH_3 .
Decomp. by H_2O . Sol. in $\text{NH}_4\text{OH} + \text{Aq}$.
(Varet, Bull. Soc. (3) 6. 221.)
 $\text{Hg}(\text{CN})_2$, $\text{Zn}(\text{CN})_2$, HgCl_2 , 6NH_3 . (Varet,
C. R. 106. 1080.)

Mercuric cyanide potassium chromate.*See Chromate mercuric cyanide, potassium.***Mercuric cyanide potassium ferrocyanide,**
 $3\text{Hg}(\text{CN})_2, \text{K}_4\text{Fe}(\text{CN})_6 + 4\text{H}_2\text{O}.$ Readily sol. in H_2O .**Mercuric cyanide hydrazine, $\text{Hg}(\text{CN})_2,$**
 $\text{N}_2\text{H}_4.$ Very sol. in H_2O with partial decomp. (Hofmann and Marburg, A. 1899, 305. 215.)
 $\text{Hg}(\text{CN})_2, \text{N}_2\text{H}_4$. Ppt. (Franzen, Z. anorg. 1911, 70. 154.)**Mercuric cyanide potassium hydroxide,**
 $\text{Hg}(\text{CN})_2, \text{KOH}.$ (Hofmann and Wagner, B. 1908, 41. 321.)
 $+1\frac{1}{2}\text{H}_2\text{O}$. (Hofmann and Wagner, B. 1908, 41. 1630.)
 $2\text{Hg}(\text{CN})_2, \text{KOH} + \text{H}_2\text{O}$. Very sol. in H_2O . (Hofmann and Wagner, B. 1908, 41. 320.)**Mercuric cyanide sodium hydroxide,**
 $\text{Hg}(\text{CN})_2, \text{NaOH} + 1\frac{1}{2}\text{H}_2\text{O}$ or H_2O .

(Hofmann and Wagner, B. 1908, 41. 1631.)

Mercuric cyanide barium iodide, $2\text{Hg}(\text{CN})_2,$
 $\text{BaI}_2 + 4\text{H}_2\text{O}.$ Slowly deliquescent. Sol. in 16.5 pts. cold, and 0.4 pt. boiling H_2O . Sol. in 22.5 pts. cold, and 1.6 pts. hot 90% alcohol. Solution is decomp. on boiling. (Custer.)**Mercuric cyanide cadmium iodide, $\text{Hg}(\text{CN})_2,$**
 $\text{Cd}(\text{CN})_2, \text{HgI}_2 + 8\text{H}_2\text{O}.$ *See Cadmium mercuric cyanide mercuric iodide.***Mercuric cyanide caesium iodide, $\text{Hg}(\text{CN})_2,$**
 $\text{CsI}.$ Recryst. from H_2O without decomp. Decomp. by acids. (Mathewson and Wells, Am. Ch. J. 1903, 30. 433.)**Mercuric cyanide calcium iodide, $2\text{Hg}(\text{CN})_2,$**
 $\text{CaI}_2 + 6\text{H}_2\text{O}.$ Sl. efflorescent. More sol. in H_2O than corresponding Sr. comp. (Custer.)**Mercuric cyanide lithium iodide, $\text{Hg}(\text{CN})_2,$**
 $2\text{Li}(\text{CN})_2, \text{HgI}_2 + 7\text{H}_2\text{O}.$ *See Cyanide, lithium mercuric mercuric iodide.***Mercuric cyanide magnesium iodide,**
 $\text{Hg}(\text{CN})_2, \text{Mg}(\text{CN})_2, \text{HgI}_2 + 8\text{H}_2\text{O}.$ *See Cyanide, magnesium mercuric mercuric iodide.***Mercuric cyanide potassium iodide, $\text{Hg}(\text{CN})_2,$**
 $\text{KI}.$ Sol. in 16 pts. cold, and less hot H_2O . Sol. in 96 pts. cold alcohol of 34° Baumé. (Caillet.) Sl. sol. in ether. Decomp. by acids.
 $3\text{Hg}(\text{CN})_2, 2\text{KI} + \frac{1}{2}\text{H}_2\text{O}$. (Berthelot.)**Mercuric cyanide sodium iodide, $\text{Hg}(\text{CN})_2,$**
 $\text{NaI} + 2\text{H}_2\text{O}.$ Sol. in $4\frac{1}{2}$ pts. H_2O at 18° , and $\frac{6}{10}$ pt. boiling H_2O Sol. in 2 pts. boiling, and $6\frac{1}{2}$ pts. cold 90% alcohol. (Custer.)**Mercuric cyanide strontium iodide,**
 $2\text{Hg}(\text{CN})_2, \text{SrI}_2 + 6\text{H}_2\text{O}.$ Sol. in 7 pts. H_2O at 18° , and $\frac{1}{2}$ pt. at b.-pt. Sol. in 4 pts. 90% alcohol at 18° , and $\frac{1}{2}$ pt. at b.-pt. (Custer.)**Mercuric cyanide zinc iodide, $2\text{Hg}(\text{CN})_2,$**
 $\text{ZnI}_2 + 6\text{H}_2\text{O}.$ Efflorescent; sol. in H_2O .**Mercuric cyanide iodide potassium cyanide,**
 $\text{HgI}_2, \text{Hg}(\text{CN})_2, 2\text{KCN}.$

Easily decomp. by dil. acids. (Rupp. Apoth. Ztg., 23. 374.)

Mercuric cyanide cadmium nitrate,
 $2\text{Hg}(\text{CN})_2, \text{Cd}(\text{NO}_3)_2 + 7\text{H}_2\text{O}.$ Decomp. by H_2O , not by alcohol. (Nylander, J. B. 1859 271.)**Mercuric cyanide cobalt nitrate, $2\text{Hg}(\text{CN})_2,$**
 $\text{Co}(\text{NO}_3)_2 + 7\text{H}_2\text{O}.$ Decomp. by H_2O , not by alcohol. (Nylander.)**Mercuric cyanide copper nitrate, $\text{Hg}(\text{CN})_2,$**
 $\text{Cu}(\text{NO}_3)_2 + 5\text{H}_2\text{O}.$ Decomp. by H_2O , not by alcohol. (Nylander.)**Mercuric cyanide ferrous nitrate, $2\text{Hg}(\text{CN})_2,$**
 $\text{Fe}(\text{NO}_3)_2 + 7\text{H}_2\text{O}.$ Decomp. by H_2O , not by alcohol. (Nylander.)**Mercuric cyanide manganous nitrate,**
 $\text{Hg}(\text{CN})_2, \text{Mn}(\text{NO}_3)_2 + 5\text{H}_2\text{O}.$ Decomp. by H_2O , not by alcohol. (Nylander.) $2\text{Hg}(\text{CN})_2, \text{Mn}(\text{NO}_3)_2 + 7\text{H}_2\text{O}$. As above.**Mercuric cyanide nickel nitrate, $2\text{Hg}(\text{CN})_2,$**
 $\text{Ni}(\text{NO}_3)_2 + 7\text{H}_2\text{O}.$ Decomp. by H_2O , not by alcohol. (Nylander.)**Mercuric cyanide silver nitrate, $2\text{Hg}(\text{CN})_2,$**
 $\text{AgNO}_3 + 2\text{H}_2\text{O}.$ Sl. sol. in cold, more readily in hot H_2O . Sol. with decomp. in $\text{HNO}_3 + \text{Aq}$.As sol. in alcohol as in H_2O .**Mercuric cyanide zinc nitrate, $2\text{Hg}(\text{CN})_2,$**
 $\text{Zn}(\text{NO}_3)_2 + 7\text{H}_2\text{O}.$ Sol. in H_2O with decomp. Not decomp. by alcohol. (Nylander, J. B. 1859. 271.)

- Mercuric cyanide nitrate silver cyanide, basic,**
 $\text{Hg}(\text{N}_2\text{O}_3)_2\text{CN}$, 10AgCN , $\text{Hg}(\text{OH})\text{NO}_3$.
 (Schmidt; Z. anorg. 1895, 9. 431)
- Mercuric cyanide potassium selenocyanide,**
 $\text{Hg}(\text{CN})_2$, KSeCN .
 Sl. sol. in cold, much more easily sol. in hot H_2O or alcohol. Traces dissolve in ether.
 (Cameron and Davy, C. N. 44. 63)
- Mercuric cyanide nickel sulphate,**
 $\text{Hg}(\text{CN})_2$, $\text{NiSO}_4 + 9\text{H}_2\text{O}$.
 (Papiermeister, Dissert. 1898.)
- Mercuric cyanide ammonium sulphocyanide,**
 $\text{Hg}(\text{CN})_2$, NH_4SCN .
 Easily sol. in hot H_2O . (Cleve, Bull. Soc. (2) 23. 71.)
- Mercuric cyanide barium sulphocyanide,**
 $2\text{Hg}(\text{CN})_2$, $\text{Ba}(\text{SCN})_2 + 4\text{H}_2\text{O}$.
 Permanent. Sol. in hot H_2O . (Cleve)
- Mercuric cyanide cadmium sulphocyanide,**
 $2\text{Hg}(\text{CN})_2$, $\text{Cd}(\text{SCN})_2 + 4\text{H}_2\text{O}$.
 Permanent. Sol. in hot H_2O . (Cleve.)
- Mercuric cyanide calcium sulphocyanide,**
 $2\text{Hg}(\text{CN})_2$, $\text{Ca}(\text{SCN})_2 + 5\text{H}_2\text{O}$.
 Sol. in H_2O . (Cleve)
- Mercuric cyanide cerium sulphocyanide,**
 $3\text{Hg}(\text{CN})_2$, $\text{Ce}(\text{SCN})_3 + 12\text{H}_2\text{O}$.
 Easily sol. in hot H_2O (John.)
- Mercuric cyanide didymium sulphocyanide,**
 $3\text{Hg}(\text{CN})_2$, $\text{Dy}(\text{SCN})_3 + 6\text{H}_2\text{O}$.
 Sl. sol. in cold, easily in hot H_2O . (Cleve.)
- Mercuric cyanide erbium sulphocyanide,**
 $3\text{Hg}(\text{CN})_2$, $2\text{Er}(\text{SCN})_3 + 12\text{H}_2\text{O}$.
 Sl. sol. in cold, easily in hot H_2O . (Cleve.)
- Mercuric cyanide lanthanum sulphocyanide,**
 $3\text{Hg}(\text{CN})_2$, $\text{La}(\text{SCN})_3 + 12\text{H}_2\text{O}$.
 Very sol. in H_2O . (Cleve.)
- Mercuric cyanide magnesium sulphocyanide,**
 $2\text{Hg}(\text{CN})_2$, $\text{Mg}(\text{SCN})_2 + 4\text{H}_2\text{O}$.
 Permanent. Easily sol. in hot H_2O . (Cleve.)
- Mercuric cyanide potassium sulphocyanide,**
 $\text{Hg}(\text{CN})_2$, KSCN .
 Permanent. Easily sol. in hot H_2O . (Cleve.)
 $+ 2\text{H}_2\text{O}$. (Philip, Z. Ch. 1867. 552)
- Mercuric cyanide rubidium sulphocyanide,**
 $\text{Hg}(\text{CN})_2$, $\text{Rb}(\text{SCN})$.
 Sol. in hot H_2O without decomp. (Grossmann, B. 1904, 37. 1259.)
- Mercuric cyanide samarium sulphocyanide,**
 $3\text{Hg}(\text{CN})_2$, $\text{Sm}(\text{SCN})_2 + 12\text{H}_2\text{O}$.
 Easily sol. in H_2O . (Cleve)
- Mercuric cyanide sodium sulphocyanide,**
 $\text{Hg}(\text{CN})_2$, $\text{NaSCN} + 2\text{H}_2\text{O}$.
 Efflorescent. Sol. in H_2O . (Cleve, Bull. Soc. (2) 23. 71.)
- Mercuric cyanide strontium sulphocyanide,**
 $2\text{Hg}(\text{CN})_2$, $\text{Sr}(\text{SCN})_2 + 4\text{H}_2\text{O}$.
 Efflorescent (Cleve.)
- Mercuric cyanide yttrium sulphocyanide,**
 $3\text{Hg}(\text{CN})_2$, $\text{Y}(\text{SCN})_3 + 12\text{H}_2\text{O}$.
 Sl. sol. in warm, much less in cold H_2O . (Cleve.)
- Mercuric cyanide zinc sulphocyanide,**
 $2\text{Hg}(\text{CN})_2$, $\text{Zn}(\text{SCN})_2 + 4\text{H}_2\text{O}$.
 Sl. sol. in H_2O . (Cleve.)
- Mercuric cyanide zinc sulphocyanide ammonia,**
 $2\text{Hg}(\text{CN})_2$, $\text{Zn}(\text{SCN})_2$, 3NH_3 .
 Not efflorescent. Decomp. by H_2O .
- Mercuric cyanide potassium thiosulphate,**
 $\text{Hg}(\text{CN})_2$, $\text{K}_2\text{S}_2\text{O}_3$.
 Permanent. Sol. in H_2O . (Kessler.)
 $+ \text{H}_2\text{O}$. (Fock and Kluss, B. 24. 1355.)
- Molybdenum hydroxyl potassium cyanide,**
 $\text{K}_3\text{Mo}(\text{OH})_2(\text{CN})_5$.
 (Rosenheim and Koss, Z. anorg 1906, 49. 155)
 $\text{K}_3\text{Mo}(\text{OH})_2(\text{CN})_3$. Very sol. in H_2O . (Rosenheim and Koss.)
- Molybdenum cyanide with MCN.**
 See Molybdocyanide M.
- Molybdenyl potassium cyanide,**
 $\text{MoO}_2(\text{CN})_2$, 2KCN .
 Very sol. in H_2O . Aqueous solution is stable in presence of alkalis.
 Insol. in alcohol. (Péchar, C. R. 1894, 118. 805.)
 $\text{MoO}_2(\text{CN})_2$, 3KCN . Sol. in H_2O . Insol. in alcohol. (Hofmann, Z. anorg. 1896, 12. 287.)
 $+ \text{H}_2\text{O}$. Sol. in H_2O . Insol. in alcohol. (Hofmann.)
 $+ 4\text{H}_2\text{O}$. Sol. in H_2O . Insol. in alcohol. (Hofmann.)
- Nickel cyanide, $\text{Ni}(\text{CN})_2 + x\text{H}_2\text{O}$.**
 Insol. in H_2O . Insol. in conc. HCl , H_2SO_4 , or $\text{HNO}_3 + \text{Aq}$, but decomp. by heating therewith. Sol. in NH_4OH , warm $(\text{NH}_4)_2\text{SO}_4$, or NH_4 succinate + Aq ; also in $\text{KCN} + \text{Aq}$. Sl. sol. in NH_4Cl , or $\text{NH}_4\text{NO}_3 + \text{Aq}$. (Wittstein.)
 Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

+3H₂O, +3½H₂O, +3¼H₂O, +4¼H₂O, and +5¼H₂O. (Papiermeister, Dissert. 1898.)

+4H₂O. (Hofmann and Höchtlen, B. 1903, 36. 1149.)

Nickel potassium cyanide, Ni(CN)₂, 2KCN + H₂O.

Sol. in H₂O. Decomp. by acids with residue of insol. Ni(CN)₂.

+½H₂O. (Rammelsberg.)

Nickel sodium cyanide, Ni(CN)₂, 2NaCN + 3H₂O.

Sol. in H₂O; decomp. by acids with residue of Ni(CN)₂.

Nickel strontium cyanide, Ni(CN)₂, Sr(CN)₂ + xH₂O.

Sol. in H₂O. (Handl, J. B. 1859. 273.)

Nickel cyanide ammonia, Ni(CN)₂, NH₃ + ½H₂O.

Scarcely attacked by H₂O or dil. acids.

Sol. in conc. H₂SO₄. Sol. in (NH₄)₂CO₃ + Aq. conc. NH₄OH + Aq. (NH₄)₂C₂O₄ + Aq, (NH₄)₂S + Aq, and KCN + Aq. Decomp. by boiling with NaOH or KOH. (Bernoulli and Grether, Ch. Z. 1901, 25. 436.)

Nickel cyanide trihydrazine, Ni(CN)₂, (N₂H₄)₃.

Ppt. (Franzen, Z. anorg 1911, 70. 155.)

Osmium cyanide, Os(CN)₂(?).

Insol. in H₂O; not attacked by acids.

See also Osmocyanhydric acid.

Osmium potassium cyanide.

See Osmocyanide, potassium.

Palladous cyanide, Pd(CN)₂.

Insol. in H₂O. Insol. in dil. acids. Sol. in KCN or NH₄OH + Aq, also in conc. HCN + Aq.

Platinous cyanide, Pt(CN)₂.

Insol. in H₂O, alkalis, or acids. Sol. in KCN + Aq. When freshly pptd., sol. in NH₄OH + Aq.

Platinous cyanide with MCN.

See Platinocyanide, M.

Potassium cyanide, KCN.

Deliquescent. Very sol. in H₂O.

100 pts. KCN + Aq, sat. at b.-pt. 103.3°, contain 55 pts. KCN, i. e. 100 pts. H₂O dissolve 122.2 pts. KCN at 103.3°. (Griffiths.)

KCN + Aq containing 3.25% KCN has sp. gr. = 1.0154; 6.5% KCN, 1.0316. (Kohlrausch, W. Ann. 1879. 1.)

KCN + Aq containing 9.64% KCN has sp. gr. 20°/20° = 1.0514.

KCN + Aq containing 14.42% KCN has sp. gr. 20°/20° = 1.0768. (Le Blanc and Rohland, Z. phys. ch. 1896. 19. 278.)

Moderately sol. in liquid NH₃. (Franklin, Am. Ch. J. 1898, 20. 829.)

Almost insol. in absolute alcohol.

Sol. in 80 pts. 95% alcohol when boiling, and easily sol. in 35% alcohol. (Geiger, A. 1. 50.)

100 pts. absolute methyl alcohol dissolve 4.91 pts. at 19.5°; 100 pts. absolute ethyl alcohol dissolve 0.87 pt at 19.5°. (de Bruyn, Z. phys. Ch. 10. 783.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1904, 37. 3601.)

100 g. glycerol dissolve 32 g KCN at 15.5°. (Ossendowski, Pharm. J. 1907, 79. 575.)

Sol. in CS₂ when pure. (Loughlin, J. B. 1875. 234.)

Wholly insol. in CS₂. (Moldenhauer, Z. anal. 16. 199.)

Sl. sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Potassium chromium tetroxide pentacyanide, K₃[(CrO₄)₂(CN)₅] + 5H₂O.

Very hygroscopic.

Sol. in H₂O. (Riesenfeld, B. 1908, 41. 3548.)

Potassium chromium tetroxide dicyanide ammonia, K₂[CrO₄(CN)₂.NH₃] + 5H₂O.

Hygroscopic in the air.

Easily sol. in H₂O and in NH₄OH + Aq. (Riesenfeld, B. 1908, 41. 3545.)

Potassium rhodium cyanide.

See Rhodocyanide, potassium.

Potassium ruthenium cyanide.

See Ruthenocyanide, potassium.

Potassium silver cyanide, KCN, AgCN.

Sol. in 4.7 pts. H₂O at 15°, 4 pts. at 20°, and in much less at higher temp. Sol. in 25 pts. 85% alcohol. (Baup, A. ch. (3) 53. 464.)

Potassium silver sodium cyanide, 2KCN, NaCN, 3AgCN.

Sol. in 4.4 pts. H₂O at 15°, and 22 pts. 85% alcohol at 17°. (Baup.)

Potassium tungsten cyanide.

See Tungstocyanide, potassium.

Potassium uranyl cyanide,

(UO₂)(CN)₂, 2KCN.

Ppt. Sol. in H₂O. Sl. sol. in presence of large excess of KCN. (Aloy, A. ch. 1901, (7) 24. 417.)

Potassium vanadium cyanide, K₃V(CN)₆.

Readily sol. in H₂O; decomp. slowly in neutral aq. solution, rapidly in acid aq. solution;

insol. in alcohol. (Locke, Am. Ch. J. 1898, 20. 601.)

$K_4V(CN)_6 \cdot 3H_2O$. Sol. in H_2O .

Insol. in alcohol and ether. (Petersen, Z. anorg. 1904, 38. 345.)

Potassium zinc cyanide, $2KCN, Zn(CN)_2$.

100 pts. H_2O dissolve 11 pts. at 20° . (Sharwood, Eng. Min. J. 1904, 77. 845.)

Potassium cyanide molybdenum dioxide, $4KCN, MoO_3 \cdot 5H_2O$

Sol. in H_2O . Insol. in alcohol. (Hofmann, Z. anorg. 1896, 12. 287.)

+ $6H_2O$. "Potassium dixotetracyan-omolybdate."

Very sol. in H_2O . (Winkler, Dissert. 1909.)

+ $8H_2O$. (Rosenheim, Kohn and Garfunkel, Z. anorg. 1910, 65. 174.)

+ $10H_2O$. Decomp. by conc. HCl, HNO_3 and H_2SO_4 .

Not acted upon by cold dil. acids. (v. der Heide and Hofmann, Z. anorg. 1896, 12. 285.)

$5KCN, MoO_3 \cdot 8H_2O$. Sol. in H_2O . Insol. in alcohol. (Kalischer, Dissert. 1902.)

Potassium cyanide molybdenum dioxide hydroxylamine, $4KCN, MoO_3, NH_2OH + H_2O$.

Sol. in H_2O .

Decomp. by dil. acids. (v. der Heide and Hofmann, Z. anorg. 1896, 12. 282.)

Potassium cyanide molybdenum sulphide, $6KCN, Mo_2S_3 \cdot 5H_2O$.

Easily sol. in H_2O . Decomp. by dil. acids. (Hofmann, Z. anorg. 1896, 12. 289.)

Very sol. in H_2O . Slowly decomp. in the cold by dil. mineral acids. (v. der Heide and Hofmann, Z. anorg. 1896, 12. 289.)

Potassium cyanide molybdenum sulphocyanide, $2KCN, MoS_2(CN)_2$.

(Péchar, C. R. 1894, 118. 806.)

$5KCN, Mo_2S_4(CN)_3 \cdot 7H_2O$. Sol. in H_2O . Stable toward dil. acids and alkalis. (Hofmann, Z. anorg. 1896, 12. 289.)

Potassium cyanide molybdenum sulphonycyanide, $4KCN, Mo_2SO(CN)_2 \cdot 4H_2O$.

Sol. in H_2O . Stable toward dil. acids. (Hofmann, Z. anorg. 1896, 12. 289.)

Potassium cyanide nitrite, $KCN, KNO_2 + \frac{1}{2}H_2O$.

Sol. in H_2O ; decomp. slowly by H_2O ; explosive. (Hofmann, Z. anorg. 1895, 10. 260-261.)

Potassium cyanide sulphur dioxide, $KCN, SO_2 + H_2O$.

Much more sol. in hot than cold H_2O . (Étard, C. R. 88. 649.)

$KCN, HCN, 2SO_2 + 3H_2O$. Very sl. sol. in cold H_2O ; decomp. by hot H_2O . (Étard.)

Rubidium tungsten cyanide.

See Tungstocyanide, rubidium.

Rhodium cyanide, $Rh(CN)_3$.

Ppt. Not decomp. by acids. Sol. in $KCN + Aq$. (Martius, A. 117. 361.)

Rhodium cyanide with $3KCN$.

See Rhodicyanide, potassium.

Ruthenium cyanide with $4MCN$.

See Ruthenocyanide, M.

Silver cyanide, $AgCN$.

Sl. sol. in H_2O .

$2.2 + 10^{-4}$ g. sol. in 1 liter of H_2O at 19.96° (Böttger, Z. phys. ch. 1903, 46. 603.)

1 l. solution in H_2O contains 0.000043 g. $AgCN$ at 17.5° (Abegg and Cox, Z. phys. Ch. 1903, 46. 11.)

Solubility in H_2O at $25^\circ = 2.22 + 10^{-6}$ mol. per l. (Lucas, Z. anorg. 1904, 41. 198.)

Insol. in dil. acids. Decomp. by conc. acids. Not sol. to any extent in $HCN + Aq$.

Freshly pptd. $AgCN$ is not dissolved by cold dil. HNO_3 , but is attacked by very dil. HNO_3 on boiling. From dry $AgCN$ is dissolved 5% by boiling 1 hour with 1% $HNO_3 + Aq$. Conc. HNO_3 dissolves more. (Brunck, B. 1901, 34. 1605.)

Sol. in $NH_4OH + Aq$. Sol. in boiling $KCl, NaCl, CaCl_2, BaCl_2$, or $MgCl_2 + Aq$, but very slowly sol. therein at ord. temp. Sol. in $Na_2S_2O_3, K_4Fe(CN)_6, (NH_4)_2CO_3, (NH_4)_2SO_4, NH_4NO_3$, and NH_4 succinate + Aq , and in large amt. of hot $NH_4Cl + Aq$. (Wittstein.)

Sol. in $KCN, NaCN, Ba(CN)_2, Ca(CN)_2$, or $Sr(CN)_2 + Aq$. Insol. in KOH , or $NaOH + Aq$. Sol. in conc. boiling $AgNO_3 + Aq$. (Wöhler.)

Sol. in 431.7 pts. 5% $NH_4OH + Aq$ (sp. gr. 0.998) at 12° ; in 184.5 pts. 10% $NH_4OH + Aq$ (sp. gr. 0.96) at 18° . (Longi, Gazz. ch. it. 13. 87.)

Sl. sol. in Na citrate + Aq .

Sol. in $Hg(NO_3)_2 + Aq$.

1 l. of a 3-N solution of $AgNO_3$ dissolves 1.216 g. $AgCN$ at 25° . (Hellwig, Z. anorg. 1900, 25. 177.)

Very sol. in $(NH_4)_2S_2O_3 + Aq$. (Rosenheim and Steinhäuser, Z. anorg. 1900, 25. 105.)

Moderately sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 829.)

Sl. sol. in liquid HF . (Franklin, Z. anorg. 1905, 46. 2.)

Abundantly sol. in quinoline at 60° . (Varet, C. R. 1893, 116. 60.)

Sl. sol. in ethyl amine. (Shinn, J. phys. Chem. 1907, 11. 538.)

Insol. in methyl acetate. (Bezold, Dissert. 1906; Naumann, B. 1909, 42. 3790); ethyl

acetate. (Hamers, Dissert. 1906; Naumann, B 1910, 43. 314.)

Silver hydrogen cyanide, AgCN , HCN .
(Euler, B. 1903, 36. 1859.)

Silver sodium cyanide, AgCN , NaCN .

Sol. in 5 pts. H_2O at 20° and in much less hot H_2O . Sol. in 24 pts. 85% alcohol at 20° . (Baup, A. ch. (3) 53. 468.)

Silver thalious cyanide, AgCN , TlCN .

Easily sol. in H_2O . 100 pts. H_2O dissolve 4.7 pts. at 0° , and 7.4 pts. at 16° . (Fronmüller, B. 11. 92.)

Silver tungsten cyanide.

See Tungstocyanide, silver.

Silver cyanide ammonia, AgCN , NH_3 .

Efflorescent. Decomp. on air.

Very sol. in ammonia at -10° . (Joannis, C. R. 1894, 118. 1151.)

Silver cyanide hydrazine, AgCN , N_2H_4 .

Decomp. in the air.

Decomp. by H_2O . (Franzen, Z. anorg. 1911, 70. 153.)

Silver cyanide nitrate, 2AgCN , AgNO_3 .

Decomp. by H_2O .

Sodium cyanide, NaCN .

Sol. in H_2O and 75% alcohol.

+ $\frac{1}{2}\text{H}_2\text{O}$, and $2\text{H}_2\text{O}$. Very sol. in H_2O ; sl. sol. in alcohol. (Joannis, A. ch. (5) 26. 484.)

Sodium tungsten cyanide.

See Tungstocyanide, sodium.

Sodium zinc cyanide, NaCN , $\text{Zn}(\text{CN})_2 + 2\frac{1}{2}\text{H}_2\text{O}$.

Much more sol. in H_2O than the corresponding K Zn salt. (Rammelsberg.)

+ $8\text{H}_2\text{O}$. (Loebe, Dissert. 1902.)

Sodium cyanide molybdenum dioxide, 4NaCN , $\text{MoO}_3 + 6\text{H}_2\text{O}$.

(Winkler, Dissert. 1909.)

+ $14\text{H}_2\text{O}$. Sol. in H_2O . (Rosenheim, Garfunkel and Kohn, Z. anorg. 1910, 65. 174.)

Sodium cyanide molybdenum dioxide hydroxylamine, 4NaCN , MoO_3 , $\text{NH}_2\text{OH} + \text{H}_2\text{O}$.

As K comp. (Winkler, Dissert. 1909.)

Strontium cyanide, $\text{Sr}(\text{CN})_2 + 4\text{H}_2\text{O}$.

Very unstable; very deliquescent, and sol. in H_2O . (Joannis, A. ch. (5) 26. 496.)

Strontium tungsten cyanide.

See Tungstocyanide, strontium.

Strontium zinc cyanide, $2\text{Sr}(\text{CN})_2$, $3\text{Zn}(\text{CN})_2 + \text{H}_2\text{O}$.

Sol. in H_2O and alcohol. (Loebe, Dissert. 1902.)

Thalious cyanide, TlCN .

100 pts. H_2O dissolve 16.8 pts. at 28.5° . (Fronmüller, B. 6. 1178.)

Thallothallic cyanide, $\text{Tl}_2(\text{CN})_4 = \text{TlCN}$, $\text{Ti}(\text{CN})_3$.

Easily sol. in H_2O .

100 pts. H_2O dissolve 27.3 pts. at 30° , 15.3 pts. at 12° , 9.7 pts. at 0° . (Fronmüller, B. 11. 92.)

Thalious tungsten cyanide.

See Tungstocyanide, thalious.

Thalious zinc cyanide, 2TlCN , $\text{Zn}(\text{CN})_2$.

Easily sol. in H_2O . 100 pts. H_2O dissolve 8.7 pts. at 0° ; 15.2 pts. at 14° ; and 29.6 pts. at 31° . (Fronmüller, B. 11. 92.)

Tungsten cyanide with MCN.

See Tungstocyanide, M.

Zinc cyanide, $\text{Zn}(\text{CN})_2$.

Insol. in H_2O and alcohol. Sol. in alkalis. Easily sol. in $\text{KCN} + \text{Aq}$. Sol. in hot NH_4 salts + Aq . (Wittstein.)

Easily sol. in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. (Gore.)

Sol. in $\text{KOH} + \text{Aq}$. Solution is stable when less than 1 mol. $\text{Zn}(\text{CN})_2$ to 2 mols. KOH is present. When proportion is 1:1, ZnO_2H_2 soon separates.

Sol. in dil. $\text{KCN} + \text{Aq}$. (Sharwood, J. Am. Chem. Soc. 1903, 25. 587.)

Sl. sol. in conc. Zn salts + Aq . 1 l. conc. $\text{Zn}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$ dissolves 4 g., and 1 l. conc. $\text{ZnSO}_4 + \text{Aq}$ dissolves 2 g. $\text{Zn}(\text{CN})_2$. Insol. in $\text{HCN} + \text{Aq}$. Easily sol. in dil. acids. (Joannis.)

Very sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 830.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314.)

Zinc cyanide ammonia, $\text{Zn}(\text{CN})_2$, 2NH_3 .

Decomp. on air. (Varet, C. R. 105. 1070.)

+ H_2O . Decomp. on air. Decomp. by H_2O . Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Varet.)

Zinc cyanide dihydrazine, $\text{Zn}(\text{CN})_2$, $2\text{N}_2\text{H}_4$.

Decomp. by H_2O . (Franzen, Z. anorg. 1911, 70. 153.)

Cyanogen, CN .

H_2O absorbs $4\frac{1}{2}$ vols. CN gas at 20° . Alcohol absorbs 23 vols., and ether 5 vols. at the same temperature. (Gay-Lussac.)

The solution gradually decomposes, but this is prevented by traces of acids.

0.221 mol litre are dissolved in H_2O at 0° . (Naumann, Z. Electrochem. 1910, 16. 177.)

Oil of turpentine absorbs 5 vols. (Gay-Lussac.) Absorbed by many essential oils. Very sol. in $\text{CuCl}_2 + \text{Aq}$.

Absorbed with decomp. by $\text{NH}_4\text{OH} + \text{Aq}$ and other alkaline liquids.

Absorbed by aniline. (Jacquemain, C. R. 100. 1006.)

Cyclotriborene, B_3H_3 .

Insol. in H_2O . (Ramsay and Hatfield, Proc. Chem. Soc. 1901, 17. 152.)

Decamine cobaltic sulphite,

Sol. in H_2O . (Vortmann and Magdeburg, B. 22. 2636.)

Decamine cobaltisulphurous acid.

Cobaltic decamine cobaltisulphite,

Ppt. (Vortmann and Magdeburg, B. 22. 2635.)

Sodium decamine cobaltisulphite,

Sol. in H_2O . (Vortmann and Magdeburg, B. 22. 2635.)

Diamide, N_2H_4 .

See Hydrazine.

Diamine chromium sulphocyanhydric acid, $\text{Cr}(\text{NH}_3)_{12}(\text{SCN})_3$, $\text{HSCN} + \text{H}_2\text{O}$.

Sol. in H_2O . (Nordenskiöld, Z. anorg. 1. 130.)

Diamine chromium diaquo sulphocyanide, $\text{Cr}(\text{NH}_3)_2(\text{SCN})_3 + 2\text{H}_2\text{O}$.

Sol. in H_2O , from which it is pptd. by con $\text{HCl} + \text{Aq}$. (Nordenskiöld, Z. anorg. 1. 137.)

Ammonium diamine chromium sulphocyanide, $\text{Cr}(\text{NH}_3)_2(\text{SCN})_3$, NH_4SCN .

(Reinecke's salt.) Quite easily sol. in H_2O , less in alcohol, and insol. in benzene. Slowly decomp. by boiling H_2O or dil. acids. (Nordenskiöld, Z. anorg. 1. 130.)

$+ \text{H}_2\text{O}$. Insol. in absolute ether. (Christensen, J. pr. (2) 45. 218.)

Ammonium diamine chromium sulphocyanide iodide, $\text{Cr}(\text{NH}_3)_2(\text{SCN})_3$, NH_4SCN , I.

Barium ———, $[\text{Cr}(\text{NH}_3)_2(\text{SCN})_3]_2$, $\text{Ba}(\text{SCN})_2$.

Sol. in H_2O and alcohol. (N.)

Cadmium diamine chromium sulphocyanide, $\text{Cd}(\text{SCN})_2$, $[\text{Cr}(\text{NH}_3)_2(\text{SCN})_3]_2 + \text{H}_2\text{O}$.

Nearly insol. in cold, sl. sol. in hot H_2O . Sl. sol. in boiling alcohol. (Christensen, J. pr. (2) 45. 371.)

Cupric ———, $\text{Cu}(\text{SCN})_2$, $[\text{Cr}(\text{NH}_3)_2(\text{SCN})_3]_2$.

Insol. in H_2O or dil. acids. (Reinecke, A. 126. 116.)

Ferric ———, $[\text{Cr}(\text{NH}_3)_2(\text{SCN})_3]_3$, $\text{Fe}(\text{SCN})_3$. (N.)

Luteocobaltic ———, $\text{Co}(\text{NH}_3)_6(\text{SCN})_3[\text{Cr}(\text{NH}_3)_2(\text{SCN})_3]_3$.

As good as insol. in cold H_2O . Sl. sol. in hot H_2O and alcohol. (Christensen, J. pr. (2) 45. 370.)

Mercuric ———, $[\text{Cr}(\text{NH}_3)_2(\text{SCN})_3]_2$, $\text{Hg}(\text{SCN})_2$.

Insol. in H_2O . (N.)

Insol. in H_2O and dil. acids. (Reinecke.)

Potassium ———, $\text{Cr}(\text{NH}_3)_2(\text{SCN})_3$, KSCN .

Properties as the NH_4 salt. (N.)

$\text{Cr}(\text{NH}_3)_2(\text{SCN})_3$, KSCN , I. As the NH_4 salt. (N.)

Sodium ———, NaSCN , $\text{Cr}(\text{NH}_3)_2(\text{SCN})_3$.

Sol. in H_2O , alcohol, and ether. (Reinecke.)

Diamine cobaltic nitrite ammonium nitrite, $\text{Co}(\text{NH}_3)_2(\text{NO}_2)_3$, NH_4NO_2 .

Sol. in H_2O . (Erdmann.)

——— nitrite lead nitrite, $2\text{Co}(\text{NH}_3)_2(\text{NO}_2)_3$, $\text{Pb}(\text{NO}_2)_2$.

Sol. in hot H_2O with partial decomp.

——— nitrite mercurous nitrite, $2\text{Co}(\text{NH}_3)_2(\text{NO}_2)_3$, $\text{Hg}_2(\text{NO}_2)_2$.

Ppt. Not sol. in hot H_2O without decomp.

——— nitrite potassium nitrite, $\text{Co}(\text{NH}_3)_2(\text{NO}_2)_3$, KNO_2 .

Sol. in H_2O . (Erdmann, J. pr. 97. 385.)

——— nitrite silver nitrite, $\text{Co}(\text{NH}_3)_2(\text{NO}_2)_3$, AgNO_2 .

Ppt. Crystallises out of hot H_2O . (Erdmann.)

——— nitrite thallium nitrite, $\text{Co}(\text{NH}_3)_2(\text{NO}_2)_3$, TlNO_2 .

Crystallises out of hot H_2O without decomp.

Dichrocobaltic carbonate,

Sol in H_2O . (Vortmann, B. 15. 1901.)

Dichrocobaltic chloride, $\text{Co}(\text{NH}_3)_3\text{Cl}_3 + \text{H}_2\text{O}$.

Quite sol. in cold H_2O , dil. acids, conc. H_2SO_4 , or dil alcohol.

From solution in conc. H_2SO_4 , the salt is precipitated by much $\text{HCl} + \text{Aq}$. Composition is $\text{Co}(\text{NH}_3)_3(\text{OH}_2)\text{Cl}_3$. (Jorgensen, Z. anorg. 5. 189.)

— **nitrate, $\text{Co}(\text{NH}_3)_3(\text{NO}_3)_3 + 4\text{H}_2\text{O}$.**

Deliquescent. Sol. in H_2O . More sol. in dil. $\text{HNO}_3 + \text{Aq}$ than praseocobaltic nitrate. (Vortmann, B. 15. 1897.)

Anhydrous. Insol in H_2O as such, but converted into above salt thereby. (Jorgensen, Z. anorg. 5. 186.)

— **nitrite, $\text{Co}(\text{NH}_3)_3(\text{NO}_2)_3$.**

Difficultly sol. in cold, but rather easily sol. in hot H_2O .

— **sulphate, $[\text{Co}(\text{NH}_3)_3]_2(\text{SO}_4)_3 + 6\text{H}_2\text{O}$.**

Easily sol. in H_2O . (Vortmann, B. 15. 1900.)

— **sulphite, $[\text{Co}(\text{NH}_3)_3]_2(\text{SO}_3)_3 + \text{H}_2\text{O}$.**

Nearly insol. in cold, slowly decomp. by hot H_2O . Decomp. by acids or $\text{KOH} + \text{Aq}$. Insol. in cold, sol. in warm $\text{NH}_4\text{OH} + \text{Aq}$. (Kunzel, J. pr. (1) 72. 209.) According to Geuther (A. 128. 157), is a double salt—

**Didymium, Di.**

Slowly decomp. by H_2O . Insol. in cold conc. H_2SO_4 . Sol. in dil. acids.

Compound of two elements, neodmium and praseodymium. (v. Welsbach, W. A. B. 92. 317.)

Didymium bromide, $\text{DiBr}_3 + 6\text{H}_2\text{O}$.

Very deliquescent, and sol. in H_2O . (Cleve.)

Didymium nickel bromide, $2\text{DiBr}_3, 3\text{NiBr}_2 + 18\text{H}_2\text{O}$.

Deliquescent. Very sol. in H_2O . (Frerichs and Smith, A. 191. 342.)

Didymium zinc bromide, $\text{DiBr}_3, 3\text{ZnBr}_2 + 12\text{H}_2\text{O}$.

Extremely deliquescent. (Cleve, Bull. Soc. (3) 43. 361.)

**Didymium chloride, DiCl_3 .**

Anhydrous. Deliquescent. Sol. in H_2O and alcohol. (Marignac.)

+ $6\text{H}_2\text{O}$. Deliquescent. Easily sol. in H_2O and alcohol. (Marignac.)

Didymium mercuric chloride, 2DiCl_3 .

More sol. in H_2O than the corresponding La salt. (Marignac.)

$\text{DiCl}_3, 4\text{HgCl}_2 + 11\text{H}_2\text{O}$. Not deliquescent. Easily sol. in H_2O .

Didymium stannic chloride.

See Chlorostannate, didymium.

Didymium fluoride, $\text{DiF}_3 + \frac{1}{2}\text{H}_2\text{O}$.

Precipitate. (Cleve.)

Didymium hydrogen fluoride, $2\text{DiF}_3, 3\text{HF}$.

Precipitate. (Smith.)

Does not exist (Cleve.)

Didymium potassium fluoride, $\text{DiF}_3, \text{KF} + \text{H}_2\text{O}$.

Sol. in H_2O . (Brauner, B. 15. 114.)

+ $\frac{1}{3}\text{H}_2\text{O}$. As above. (B.)

$2\text{DiF}_3, 3\text{KF} + \text{H}_2\text{O}$. As above. (B.)

Didymium hydroxide, $\text{Di}_2\text{O}_6\text{H}_6$.

Insol. in KOH , or $\text{NaOH} + \text{Aq}$. but is sl. sol. in $\text{NH}_4\text{Cl} + \text{Aq}$. (Rose.)

See also Di_2O_3 .

Didymium penthydroxide, $\text{DiO}_4\text{H}_3 = \text{Di}_2\text{O}_5, 3\text{H}_2\text{O}$.

Precipitate. (Brauner, B. 15. 113.)

Didymium zinc iodide, $2\text{DiI}_3, 3\text{ZnI}_2 + 24\text{H}_2\text{O}$.

Very deliquescent. (Frerichs and Smith.)

Didymium oxide, Di_2O_3 .

With H_2O slowly forms $\text{Di}_2\text{O}_6\text{H}_6$.

Sol. in conc., or dil. mineral acids (Marignac), and in acetic acid (Hermann). Sol. in ammonium salts + Aq .

Slightly more slowly sol. in conc. $\text{NH}_4\text{NO}_3 + \text{Aq}$ than La_2O_3 . (Damour and Deville.)

A solution of NH_4NO_3 in H_2O that can dissolve 2.9 mols. La_2O_3 dissolves 1 mol. Di_2O_3 . (Brauner, B. 15. 114.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Didymium peroxide, Di_4O_9 .

Sol. in acids with decomp. (Frerichs, B. 7. 799.)

Not obtained by Cleve. (B. 11. 910.)

The contradictory statements concerning the composition of Di peroxide are owing to the fact that praseodidymium is the only one of the constituents of Di which easily forms a peroxide. (v. Welsbach.)

Didymium pentoxide, Di_2O_5 .

Sol. in dil. HNO_3 , or $\text{H}_2\text{SO}_4 + \text{Aq}$ in the cold without evolution of gas, but gas is evolved if treated with conc. acids. Insol. in $\text{HF} + \text{Aq}$. Sl. sol. in cold $\text{NH}_4\text{NO}_3 + \text{Aq}$. = Di_4O_9 . (Cleve.)

Didymium oxybromide , DiOBr . (Frerichs and Smith.)	Ammonium ferrous dithionate , $3(\text{NH}_4)_2\text{S}_2\text{O}_6$, $\text{Fe}_2\text{S}_2\text{O}_6 + 6\text{H}_2\text{O}$. Sol. in H_2O . (Kluss, A. 246. 300.) $9(\text{NH}_4)_2\text{S}_2\text{O}_6$, $2\text{Fe}_2\text{S}_2\text{O}_6 + 16\frac{1}{2}\text{H}_2\text{O}$. Sol. in H_2O . (Kluss.)
Didymium oxychloride , DiOCl . <i>Anhydrous</i> . Insol. in H_2O . (Smith.) $+3\text{H}_2\text{O}$. Sol. in cold dil. $\text{HNO}_3 + \text{Aq}$. (Marignac.) Sl. sol. in $\text{HCl} + \text{Aq}$. (Hermann.)	Ammonium manganous dithionate , $9(\text{NH}_4)_2\text{S}_2\text{O}_6$, $2\text{MnS}_2\text{O}_6$. Sol. in H_2O . (Kluss, A. 246. 301.)
Didymium oxysulphide , $\text{Di}_2\text{O}_2\text{S}$. Insol. in H_2O . Sol. in $\text{HCl} + \text{Aq}$ without residue. (Marignac.)	Ammonium nickel dithionate , $9(\text{NH}_4)_2\text{S}_2\text{O}_6$, $2\text{NiS}_2\text{O}_6 + 16\frac{1}{2}\text{H}_2\text{O}$. Sol. in H_2O . (Kluss.)
Didymium sulphide , Di_2S_3 . Insol. in H_2O . Decomp. by dil. acids (Marignac, A. ch. (3) 38. 159.) Insol. in acetone. (Naumann, B. 1904, 37. 4329.)	Ammonium zinc dithionate , $5(\text{NH}_4)_2\text{S}_2\text{O}_6$, $\text{ZnS}_2\text{O}_6 + 9\text{H}_2\text{O}$. Easily sol. in H_2O . (Kluss, A. 246. 296.) $9(\text{NH}_4)_2\text{S}_2\text{O}_6$, $2\text{ZnS}_2\text{O}_6 + 16\frac{1}{2}\text{H}_2\text{O}$. Easily sol. in H_2O . (Kluss.)
Disulphuric acid , $\text{H}_2\text{S}_2\text{O}_7$. <i>See Disulphuric acid</i> .	Ammonium dithionate chloride , $(\text{NH}_4)_2\text{S}_2\text{O}_6$, NH_4Cl . Sol. in H_2O . (Fock and Kluss, B. 24. 3017.)
Dithionic acid (Hyposulphuric acid) , $\text{H}_2\text{S}_2\text{O}_6$. Known only in aqueous solution, which is stable only when dil. Can be evaporated in vacuo until sp. gr. = 1.347, but decomp. upon further evaporation. (Welter and Gay- Lussac, A. ch. 10. 312.)	Barium dithionate , $\text{BaS}_2\text{O}_6 + 2\text{H}_2\text{O}$. Not efflorescent. Sol. in 7.17 pts. H_2O at 8° , 4.04 pts. at 18° , and 1.1 pts. H_2O at 100° . Insol. in alcohol. (Gay-Lussac, Heeren.) Sol. in 0.994 pt. H_2O at 102° , the boiling- point of the sat. solution. (Baker, Bull. Soc. (2) 44. 166.) Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.) $+4\text{H}_2\text{O}$. Very efflorescent. (Heeren.)
Dithionates . All dithionates are sol. in H_2O .	Barium magnesium dithionate , $\text{BaMg}(\text{S}_2\text{O}_6)_2$ $+4\text{H}_2\text{O}$. Sol. in H_2O . (Schiff, A. 118. 97.)
Aluminum dithionate , $\text{Al}_2(\text{S}_2\text{O}_6)_3 + 18\text{H}_2\text{O}$. Extremely deliquescent. Easily sol. in H_2O or absolute alcohol. (Kluss, A. 246. 218.)	Barium rubidium dithionate , $\text{BaRb}_4(\text{S}_2\text{O}_6)_3$ $+ \text{H}_2\text{O}$. Sol. in H_2O . Solubility is diminished by presence of excess of Rb_2SO_4 , but increased by BaS_2O_6 . (Bodlander, Chem. Ztg. 14. 1140.)
Aluminum ammonium dithionate , $\text{Al}_2(\text{S}_2\text{O}_6)_3$, $(\text{NH}_4)_2\text{S}_2\text{O}_6 + 27\text{H}_2\text{O}$. Sl. deliquescent. Sol. in H_2O . (Kluss, A. 246. 303.)	Barium sodium dithionate , $\text{BaNa}_4(\text{S}_2\text{O}_6)_3 +$ $4\text{H}_2\text{O}$. Sol. in H_2O . Decomp. by recrystallisation. (Kraut, A. 118. 95.) $+6\text{H}_2\text{O}$. (Schiff.)
Ammonium dithionate , $(\text{NH}_4)_2\text{S}_2\text{O}_6$. Very sol. in H_2O . Sol. in 0.79 pt. H_2O at 16° with reduction of temp. Not decomp. on boiling. Insol. in absolute alcohol. (Heeren, Pogg. 7. 172.) Contains $\frac{1}{2}\text{H}_2\text{O}$. Sol. in 0.56 pt. H_2O at 19° . (Kluss, A. 246. 194.)	Barium dithionate chloride , BaS_2O_6 , $\text{BaCl}_2 +$ $4\text{H}_2\text{O}$. (Fock and Kluss, B. 23. 3001.)
Ammonium cadmium dithionate , $2(\text{NH}_4)_2\text{S}_2\text{O}_6$, $\text{CdS}_2\text{O}_6 + 4\frac{1}{2}\text{H}_2\text{O}$. Sol. in H_2O . (Kluss, A. 246. 298.)	Bismuth dithionate, basic , Bi_2O_3 , $\text{S}_2\text{O}_6 +$ $+5\text{H}_2\text{O}$. Efflorescent. Insol. in H_2O , but decomp. thereby into the following salt. Easily sol. in dil. acids, especially $\text{HCl} + \text{Aq}$. (Kluss, A. 246. 183.) $4\text{Bi}_2\text{O}_3$, $3\text{S}_2\text{O}_6 + 5\text{H}_2\text{O}$. Insol. in H_2O . Sol. in dil. acids. (Kluss.)
Ammonium cobalt dithionate , $9(\text{NH}_4)_2\text{S}_2\text{O}_6$, $2\text{CoS}_2\text{O}_6 + 16\frac{1}{2}\text{H}_2\text{O}$. Sol. in H_2O . (Kluss.)	
Ammonium cupric dithionate , $(\text{NH}_4)_2\text{S}_2\text{O}_6$, $2\text{CuS}_2\text{O}_6 + 8\text{H}_2\text{O}$. Sol. in H_2O .	

Cadmium dithionate.

Deliquescent in moist air; very sol. in H_2O . (Heeren, Pogg. 7. 183.)

Cadmium dithionate ammonia, $\text{CdS}_2\text{O}_6, 4\text{NH}_3$.

Decomp. by alcohol; sol. in $\text{NH}_4\text{OH} + \text{Aq}$, but decomp. on heating. (Rammelsberg, Pogg. 58. 298.)

Cæsium dithionate, $\text{Cs}_2\text{S}_2\text{O}_6$.

Easily sol. in H_2O . (Chabrié, C. R. 1901, 133. 297.)

Calcium dithionate, $\text{CaS}_2\text{O}_6 + 4\text{H}_2\text{O}$.

Sol. in 2.46 pts. H_2O at 19° ; 0.8 pt. at 100° . Insol. in alcohol. (Heeren, Pogg. 7. 178.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Cerous dithionate, $\text{Ce}_2(\text{S}_2\text{O}_6)_3 + 24\text{H}_2\text{O}$.

Very sol. in H_2O . (Jolin.)
+3, and $5\text{H}_2\text{O}$. (Wyrouboff.)

Chromic dithionate, $\text{Cr}_2(\text{S}_2\text{O}_6)_3 + 18\text{H}_2\text{O}$.

Sol. in H_2O and alcohol. (Kluss, A. 246. 189.)

$3\text{Cr}_2\text{O}_3, 4\text{S}_2\text{O}_5 + 24\text{H}_2\text{O}$. Easily sol. in H_2O or alcohol. Insol. in ether. (Kluss.)

Cobaltous dithionate, $\text{CoS}_2\text{O}_6 + 6\text{H}_2\text{O}$.

Not deliquescent. Very sol. in H_2O . (Heeren.)

+ $8\text{H}_2\text{O}$. Sol. in 0.49 pt. H_2O at 19° . Sol. in absolute alcohol. (Kluss, A. 246. 203.)

Cupric dithionate basic, $4\text{CuO}, \text{S}_2\text{O}_5 + 4\text{H}_2\text{O}$.

Very sl. sol. in H_2O . (Heeren, Pogg. 7. 18.)

Insol. in H_2O ; easily sol. in dil. acids. (Kluss, A. 246. 208.)

+ $3\text{H}_2\text{O}$. Insol. in H_2O and $\text{NaC}_2\text{H}_3\text{O}_2 + \text{Aq}$; sol. in traces in conc. $\text{CuS}_2\text{O}_6 + \text{Aq}$. Easily sol. in dil. acids, even $\text{HC}_2\text{H}_3\text{O}_2$, or $\text{H}_2\text{S}_2\text{O}_6 + \text{Aq}$. (Kluss.)

Cupric dithionate, $\text{CuS}_2\text{O}_6 + 4\text{H}_2\text{O}$.

Not efflorescent. Very sol. in H_2O . Insol. in alcohol. (Heeren.)

+ $5\text{H}_2\text{O}$. (Efflorescent. Sol. in 0.64 pt. H_2O at 18.5° . (Kluss, A. 246. 204.)

Cupric dithionate ammonia, $\text{CuS}_2\text{O}_6, 4\text{NH}_3$.

Difficultly sol. in cold H_2O , moderately sol. in H_2O at 40° . Decomp. by much H_2O or by heating the solution above 60° . Decomp. by $\text{HCl} + \text{Aq}$. (Heeren.)

Can be recryst. from $\text{NH}_4\text{OH} + \text{Aq}$. Sol. in liquid NH_3 . (Horn, Am. Ch. J. 1908, 39. 213.)

$\text{CuS}_2\text{O}_6, 9\text{NH}_3$. Decomp. at ord. temp. in the air.

Insol. in liquid NH_3 . (Horn, Am. Ch. J. 1908, 39. 213.)

Didymium dithionate, $\text{Di}_2(\text{S}_2\text{O}_6)_3 + 24\text{H}_2\text{O}$.

Extremely sol. in H_2O . (Cleve.)

Erbium dithionate, $\text{Er}_2(\text{S}_2\text{O}_6)_3 + 18\text{H}_2\text{O}$.

Very sol. in H_2O or alcohol; insol. in ether. (Höglund.)

Glucinum dithionate, basic, $5\text{GfO}, 2\text{S}_2\text{O}_5 + 14\text{H}_2\text{O}$.

Easily sol. in H_2O and absolute alcohol. (Kluss, A. 246. 196.)

Iron (ferrous) dithionate, $\text{FeS}_2\text{O}_6 + 5\text{H}_2\text{O}$.

Very sol. in H_2O . Insol. in alcohol. Decomp. in aqueous solution into FeSO_4 by boiling. (Heeren, Pogg. 7. 181.)

+ $7\text{H}_2\text{O}$. Sol. in 0.59 pt. H_2O at 18.5° . (Kluss, A. 246. 198.)

Iron (ferric) dithionate, basic, $8\text{Fe}_2\text{O}_3, \text{S}_2\text{O}_5 + 20\text{H}_2\text{O}$.

Insol. in H_2O or alcohol. Very sl. sol. in $\text{H}_2\text{S}_2\text{O}_6 + \text{Aq}$; easily sol. in $\text{HCl} + \text{Aq}$. (Heeren.)

Contains $14\text{H}_2\text{O}$. (Kluss, A. 246. 200.)

$3\text{Fe}_2\text{O}_3, \text{S}_2\text{O}_5 + 8\text{H}_2\text{O}$. Insol. in H_2O . Easily sol. in acids. (Kluss, A. 246. 201.)

Lanthanum dithionate, $\text{La}_2(\text{S}_2\text{O}_6)_3 + 16\text{H}_2\text{O}$, and $24\text{H}_2\text{O}$.

Sol. in H_2O . (Cleve.)

Lead dithionate, basic, $2\text{PbO}, \text{S}_2\text{O}_5 + 2\text{H}_2\text{O}$.

Very difficultly sol. in H_2O . (Heeren, Pogg. 7. 171.)

$10\text{PbO}, \text{S}_2\text{O}_5 + 2\text{H}_2\text{O}$. Sl. sol. in H_2O . (Heeren.)

Lead dithionate, $\text{PbS}_2\text{O}_6 + 4\text{H}_2\text{O}$.

Easily sol. in H_2O . (Heern.)
Sol. in 0.869 pt. H_2O at 20.5° . (Baker, C. N. 36. 203.)

Lead strontium dithionate, $(\text{Pb}, \text{Sr})\text{S}_2\text{O}_6 + 4\text{H}_2\text{O}$.

(Rammelsberg.)

Lithium dithionate, $\text{Li}_2\text{S}_2\text{O}_6 + 2\text{H}_2\text{O}$.

Sl. deliquescent, and easily sol. in H_2O . Insol. in alcohol. (Rammelsberg.)

Magnesium dithionate, $\text{MgS}_2\text{O}_6 + 6\text{H}_2\text{O}$.

Sol. in 0.85 pt. H_2O at 13° . Solution can be boiled without decomp. (Heeren, Pogg. 7. 179.)

Sol. in 0.692 pt. H_2O at 17° . (Baker, C. N. 36. 203.)

Manganous dithionate, $\text{MnS}_2\text{O}_6 + 3\text{H}_2\text{O}$.

Sol. in H_2O . (Kraut, A. 118. 98.)
+ $6\text{H}_2\text{O}$. Efflorescent. Sol. in H_2O . (Maignac, J. B. 1855. 380.)

Mercurous dithionate, $\text{Hg}_2\text{S}_2\text{O}_6$.

Sl sol in cold, decomp by hot H_2O . (Rammelsberg.)

Mercuric dithionate, basic, 5HgO , $2\text{S}_2\text{O}_6$.

Sl sol. in cold, decomp by hot H_2O . Easily sol in HNO_3 + Aq. (Rammelsberg, Pogg. 59. 472.)

Mercuric dithionate, HgS_2O_6 + $6\text{H}_2\text{O}$.

Decomp. by H_2O or on standing. (Kluss, A. 246. 216.)

Nickel dithionate, NiS_2O_6 + $6\text{H}_2\text{O}$.

Sol. in H_2O . (Topsøe.)
Sol. in 0.897 pt. H_2O at 12° . (Baker, C. N. 36. 203.)

Nickel dithionate ammonia, NiS_2O_6 , 6NH_3 .

Can be recryst. from warm NH_4OH + Aq. Decomp. by H_2O . (Rammelsberg, Pogg. 58. 295.)

Nickel dithionate hydrazine, NiS_2O_6 , $3\text{N}_2\text{H}_4$.

Unstable.
Sol. in NH_4OH + Aq. (Frauzen, Z anorg 1908, 60. 267.)

Potassium dithionate, $\text{K}_2\text{S}_2\text{O}_6$.

Not deliquescent Sol in 16.5 pts H_2O at 16° , and 1.58 pts at 100° . Insol in alcohol. (Heeren.)

Sol. in 2.65 pts. H_2O at 16° . (Dumas)
Sol. in 16.5 pts. H_2O at 16° ; in 1.58 pts. boiling H_2O .
Insol. in alcohol. (Heeren, Pogg. 1826, 7. 72.)

Praseodymium dithionate, $\text{Pr}_2(\text{S}_2\text{O}_6)_3$ + $12\text{H}_2\text{O}$.

Deliquescent; very sol. in H_2O . (von Schule, Z. anorg 1898, 18. 361.)

Rubidium dithionate, $\text{Rb}_2\text{S}_2\text{O}_6$.

Sol. in H_2O . (Topsøe and Christiansen.)

Ruthenium dithionate, RuS_2O_6 .

Ppt. from aq. sol. by alcohol. (Antony, Gazz. ch. it. 1898, 28. 139-142.)

Silver dithionate, $\text{Ag}_2\text{S}_2\text{O}_6$ + $2\text{H}_2\text{O}$.

Sol. in 2 pts. H_2O at 16° . Sol. in NH_4OH + Aq. (Heeren, Pogg. 7. 191.)

Silver sodium dithionate, AgS_2O_6 , $\text{Na}_2\text{S}_2\text{O}_6$ + $4\text{H}_2\text{O}$.

Sol. in H_2O . (Kraut, A. 118. 96.)

Silver dithionate ammonia, $\text{Ag}_2\text{S}_2\text{O}_6$, 4NH_3 .

Sol. in H_2O without decomp. (Rammelsberg, Pogg. 58. 298.)

Sodium dithionate, $\text{Na}_2\text{S}_2\text{O}_6$ + $2\text{H}_2\text{O}$.

Sol. in 2.1 pts H_2O at 16° , and in 1.1 pts. boiling H_2O . Insol. in alcohol.

Fuming HCl + Aq precipitates the salt from aqueous solution. (Heeren, Pogg. 7. 76.)
+ $6\text{H}_2\text{O}$. (Kraut, A. 117. 97.)

Strontium dithionate, SrS_2O_6 + $4\text{H}_2\text{O}$.

Sol. in 4.5 pts. H_2O at 16° , 1.5 pts. boiling H_2O . Insol. in alcohol (Heeren, Pogg. 7. 177.)

Thalious dithionate, $\text{Tl}_2\text{S}_2\text{O}_6$.

Very easily sol. in H_2O . (Werther.)

Thalious dithionate sulphate, $3\text{Tl}_2\text{S}_2\text{O}_6$, Tl_2SO_4 .

Sol. in H_2O . (Wyrouboff, Ann. Phys. Beibl. 8. 802.)

Thorium dithionate, $\text{Th}(\text{S}_2\text{O}_6)_2$ + $4\text{H}_2\text{O}$ (?).

Very unstable. (Kluss, A. 246. 188.)

Tin (stannous) dithionate, SnS_2O_6 .

Known only in solution.
 3SnO , S_2O_6 + $9\text{H}_2\text{O}$. Insol. in H_2O . Sol. in dil. acids, even dithionic acid + Aq. (Kluss, A. 246. 186.)

Uranous dithionate, 6UO_2 , S_2O_6 + $10\text{H}_2\text{O}$.

Insol. in H_2O ; sol. in warm HCl + Aq. (Kluss, A. 246. 191.)

7UO_2 , S_2O_6 + $8\text{H}_2\text{O}$. As above.
 8UO_2 , S_2O_6 + $21\text{H}_2\text{O}$. As above.

Divanadyl dithionate, $(\text{VO})_2\text{S}_2\text{O}_6$.

Sol. in H_2O . (Bevan, C. N. 38. 294.)

Yttrium dithionate, $\text{Y}_2(\text{S}_2\text{O}_6)_3$ + $18\text{H}_2\text{O}$.

Not deliquescent. Easily sol. in H_2O , but difficultly sol. in alcohol. Insol. in ether. (Cleve, Bull. Soc. (2) 21. 344.)

Zinc dithionate, ZnS_2O_6 + $6\text{H}_2\text{O}$.

Very sol. in H_2O ; decomp. on boiling. (Heeren, Pogg. 7. 183.)

Zinc dithionate ammonia, ZnS_2O_6 , 4NH_3 .

Decomp. with H_2O ; sol. in warm, less sol. in cold NH_4OH + Aq. (Rammelsberg, Pogg. 58. 297.)
+ H_2O . Ppt. (Ephraim, B. 1915, 48. 640.)

Dysprosium, Dy.

(Lecoq de Boisbaudran, C. R. 102. 1005.)

Dysprosium chloride, DyCl_3 + $6\text{H}_2\text{O}$.

Deliquescent, sol. in H_2O . (Urban, C. R. 1908, 146. 129.)

Europium.**Europium chloride, EuCl_2**

Sol. in H_2O . Stable in very dil. aqueous solution, but decomp. when the solution is concentrated at 100° . (Urban, C. R. 1911, 153. 1157.)

Erbium, Er.

Decomposes H_2O . (Hoglund.)

The so-called element "erbium" can be further decomp. into simple substances. (Kruss, Z. anorg. 3. 353.)

Erbium bromide, $\text{ErBr}_3 + 9\text{H}_2\text{O}$.

Very deliquescent.

Erbium chloride, $\text{ErCl}_3 + 6\text{H}_2\text{O}$.

Deliquescent. Sol. in H_2O and alcohol. (Hoglund.)

Erbium mercuric chloride, $\text{ErCl}_3, 5\text{HgCl}_2 + x\text{H}_2\text{O}$.

Deliquescent. (Cleve.)

Erbium fluoride, ErF_3 .

Insol. in H_2O . Very sl. sol. in $\text{HF} + \text{Aq}$. (Hoglund, Bull. Soc. (2) 18. 193.)

Erbium hydroxide, $\text{Er}_2\text{O}(\text{OH})_4$.

Insol. in KOH , or $\text{NaOH} + \text{Aq}$.

Easily sol. in acids. Decomp. ammonium salts by boiling therewith.

Erbium iodide, ErI_3 .

Very deliquescent. Very sol. in H_2O and alcohol. Insol. in ether. (Hoglund.)

Erbium oxide, Er_2O_3 .

Difficultly but completely sol. in warm HNO_3 , H_2SO_4 , or $\text{HCl} + \text{Aq}$. Decomp. NH_4 salts by boiling therewith.

Erbium peroxide, Er_2O_5 .

Precipitate. (Cleve, Bull. Soc. (2) 43. 53.)

Erbium sulphide.

Decomp. in moist air and with acids.

Erythrochromium bromide,

Very easily sol. in H_2O . Insol. in $\text{HBr} + \text{Aq}$. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Jørgensen, J. pr. (2) 25. 398.)

— **bromide, basic, $\text{HOCr}_2(\text{NH}_3)_{10}(\text{OH})\text{Br}_4 + \text{H}_2\text{O}$.**

Very sol. in H_2O . (Jørgensen.)

— **chloriodide, $\text{HOCr}_2(\text{NH}_3)_{10}\text{ClI}_4 + \text{H}_2\text{O}$.**

Sol. in H_2O and in alcohol. (Jørgensen.)

Erythrochromium chloroplatinate,

Nearly insol. in H_2O . (Jørgensen.)

— **dithionate, basic,**

Insol. in H_2O . Easily sol. in very dil. HNO_3 , HBr , $\text{HCl} + \text{Aq}$. Sol. in conc. $\text{NH}_4\text{Cl} + \text{Aq}$. (Jørgensen.)

— **nitrate, $\text{HOCr}_2(\text{NH}_3)_{10}(\text{NO}_3)_5 + \text{H}_2\text{O}$.**

Easily sol. in H_2O . Insol. in dil. $\text{HNO}_3 + \text{Aq}$. Sol. in conc. HNO_3 with decomp. Very sol. in dil. $\text{NH}_4\text{OH} + \text{Aq}$. Insol. in alcohol. (Jørgensen.)

— **nitrate, basic, $\text{HOCr}_2(\text{NH}_3)_{10}(\text{NO}_3)_4\text{OH} + 3\frac{1}{2}\text{H}_2\text{O}$.**

Sol. in cold H_2O . (Jørgensen.)

— **sulphate, $[\text{HOCr}_2(\text{NH}_3)_{10}]_2(\text{SO}_4)_5$.**

Nearly insol. in H_2O . (Jørgensen.)

Tetraferriammonium, Fe_2N .

See Iron nitride.

Ferric acid.**Barium ferrate, $\text{BaFeO}_4 + \text{H}_2\text{O}$.**

Ppt. Can be boiled for some time with H_2O without decomp. Decomp. by mineral acids. Sol. in dil. acetic acid. (Freymy, A. ch. (3) 12. 373.)

Insol. in H_2O , not readily acted upon by acids when dry. (Rosen, J. Am. Chem. Soc. 1895, 17. 766.)

Ppt. Easily decomp. by acids. (Moeser, Arch. Pharm. 1895, 233. 526.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Calcium ferrate, CaFe_2O_4 .

Sol. in H_2O . (Rosell, J. Am. Chem. Soc. 1895, 17. 760-69.)

Potassium ferrate, K_2FeO_4 .

Very deliquescent. Easily sol. in cold H_2O with evolution of much heat. Decomp. by standing or warming. Decomp. by acids or alkalis. (Freymy, A. ch. (3) 12. 369.)

Sol. in H_2O ; insol. in alcohol. (Moeser, Arch. Pharm. 1895, 233. 524.)

Quickly decomp. by potassium tartrate or racemate, sugar, or albumen without separation of $\text{Fe}_2\text{O}_3\cdot\text{H}_2\text{O}$, by alcohol with separation of $\text{Fe}_2\text{O}_3\cdot\text{H}_2\text{O}$. Potassium oxalate, acetate, formate, and benzoate, also citrate decomp. much more slowly. Insol. in conc. $\text{KOH} + \text{Aq}$. (Wackenroder, A. 33. 41.)

Sodium ferrate, Na_2FeO_4 .

Sol. in H_2O and in conc. $\text{NaOH} + \text{Aq}$. (Freymy, l. c.)

Strontium ferrate, SrFeO₄.

Sl. sol. in H₂O by which it is decomp.

Decomp. by acids.

Sol. in aqueous solutions of Na and K salts with partial decomp.

Insol. in sat. SrBr₂ + Aq., alcohol and ether. (Eidmann, B. 1903, 36, 2290.)

Ferricomolybdic acid.

Ammonium ferricomolybdate, 3(NH₄)₂O, Fe₂O₃, 12MoO₃ + 19H₂O.

Ppt. (Hall, J. Am. Chem. Soc. 1907, 29, 697.)

Ferricyanhydric acid,

H₃Fe(CN)₃, (or H₂Fe₂(CN)₁₂).

Easily sol. in H₂O or alcohol. Solution decomposes slowly by standing, more rapidly by heating. Insol. in ether.

Ferricyanides.

The alkali, and alkaline-earth ferricyanides are sol. in H₂O; the others are insol. The ferricyanides of metals, the oxides of which are sol. in NH₄OH, or KOH + Aq., are themselves sol. in those reagents.

Ammonium ferricyanide, (NH₄)₃Fe(CN)₆ + 3H₂O.

Permanent. Readily sol. in H₂O (and alcohol?).

Ammonium ferrous ferricyanide, NH₄FeFe(CN)₆ + 1½H₂O.

Sol. in H₂O and not pptd. by alcohol from aqueous solution. More stable than the corresponding K salt.

Ammonium lead ferricyanide, NH₄PbFe(CN)₆ + 3H₂O.

Ammonium potassium ferricyanide, (NH₄)₂KFe(CN)₆.

Sol. in H₂O. (Schaller, Bull. Soc. (2) 1, 275.)

Barium ferricyanide, Ba₃[Fe(CN)₆]₂ + 20H₂O.

Easily sol. in H₂O; insol. in alcohol. (Schuler, W. A. B. 77, 692.)

Barium potassium ferricyanide, BaKFe(CN)₆ + 3H₂O.

Permanent. Easily sol. in H₂O, less in alcohol.

Barium ferricyanide bromide, Ba₃[Fe(CN)₆]₂, 2BaBr₂ + 20H₂O.

Easily sol. in H₂O. Boiling alcohol does not dissolve out BaBr₂. (Rammelsberg, J. pr. (2) 39, 463.)

Bismuth ferricyanide, Bi₃[Fe(CN)₆]₃.

Insol. in H₂O, but decomp. by boiling therewith. (Muir, Chem. Soc. 32, 40)

Cadmium ferricyanide ammonia, Cd₃[Fe(CN)₆]₂, 6NH₃ + 3H₂O.

Effloresces to form—

Cd₃[Fe(CN)₆]₂, 4NH₃ + 2H₂O. Insol. in H₂O. (Wyruboff, A. hc. (5) 10, 413.)

Calcium ferricyanide, Ca₃[Fe(CN)₆]₂ + 10, or 12H₂O.

Deliquescent. Sol. in H₂O and dil. alcohol.

Calcium potassium ferricyanide, CaKFe(CN)₆.

Sol. in H₂O.

Cerous ferricyanide, CeFe(CN)₆ + 4H₂O.

Sol. in H₂O; easily decomp. (Jolin.)

Chromic ferricyanide (?).

Ppt.

Cobaltous ferricyanide, Co₃[Fe(CN)₆]₂.

Insol. in H₂O and HCl + Aq. Sol. in NH₄OH + Aq.

Cobaltous ferricyanide ammonia, Co₃[Fe(CN)₆]₂, 4NH₃ + 6H₂O.

Cobaltic ferricyanide ammonia.

See LISTEO, — purpureo, — etc. cobaltic ferricyanide.

Cuprous ferricyanide, (Cu₂)₃[Fe(CN)₆]₂.

Sol. in NH₄OH + Aq; insol. in NH₄ salts + Aq. (Wittstein.)

Cupric ferricyanide, Cu₃[Fe(CN)₆]₂.

Insol. in H₂O or NH₄ salts + Aq. Sol. in NH₄OH, and (NH₄)₂CO₃ + Aq. (Wittstein) Insol. in HCl + Aq.

Iron (ferrous) ferricyanide, Fe₃[Fe(CN)₆]₂ + xH₂O.

(Turnbull's blue.) Properties as ferric ferrocyanide (Prussian blue), with which it is perhaps identical. (Gintl, Z. anal. 21, 110.)

Iron (ferrosoferric) ferricyanide, Fe₁₃(CN)₃₈ = Fe⁴⁺Fe³⁺[Fe(CN)₆]₃.

(Prussian green.) Insol. in H₂O or conc. HCl + Aq, but slowly decomp. by boiling therewith.

Fe₃(CN)₈ + 4H₂O = Fe⁴⁺Fe³⁺[Fe(CN)₆]₂ + 12H₂O. Properties as above. (Reynolds, Chem. Soc. 54, 767.)

Iron (ferrous) potassium ferricyanide,

KFe₂(CN)₆ = KFeFe(CN)₆ + 4, or 3H₂O.

(Soluble Prussian blue.) Sol. in H₂O, but insol. in salts + Aq or alcohol.

Salt of the same composition, called "Williamson's blue," is insol. in H_2O .

Lead ferricyanide, basic, $\text{Pb}_3[\text{Fe}(\text{CN})_6]_2 \cdot 3\text{PbO}_2\text{H}_2 + 11\text{H}_2\text{O}$.
(Schuler.)

Lead ferricyanide, $\text{Pb}_3[\text{Fe}(\text{CN})_6]_2 + 16\text{H}_2\text{O}$.

Sl. sol. in H_2O ; more sol. in hot, than cold H_2O , but decomp. on boiling. (Gmelin.)
+ $4\text{H}_2\text{O}$. Easily sol. in H_2O ; sl. sol. in alcohol. (Schuler, W. A. B. 77. 692.)

Lead potassium ferricyanide, $\text{PbKFe}(\text{CN})_6 + 3\text{H}_2\text{O}$.

Sol. in 4.75 pts. H_2O at 16° , and the solution decomp. on standing. (Schuler.)
+ $1\frac{1}{2}\text{H}_2\text{O}$. Efflorescent. Much more sol. in H_2O than the Pb salt. Insol. in alcohol. (Wyrouboff.)

Lead ferricyanide nitrate, $\text{Pb}_3[\text{Fe}(\text{CN})_6]_2 \cdot \text{Pb}(\text{NO}_3)_2 + 12\text{H}_2\text{O}$.

Sol. in 13.31 pts. H_2O at 16° . (Schuler.)
+ $11\text{H}_2\text{O}$. (Joannis, A. ch. (5) 26. 528.)

Magnesium ferricyanide, $\text{Mg}_3[\text{Fe}(\text{CN})_6]_2$.

Sol in H_2O .

Magnesium potassium ferricyanide, $\text{MgKFe}(\text{CN})_6$.

(Reindel, J. pr. 103. 166.)

Manganous ferricyanide, $\text{Mn}_3[\text{Fe}(\text{CN})_6]_2$.

Insol. in H_2O , acids, NH_4OH , or NH_4 salts + Aq.

Mercurous ferricyanide, $\text{Hg}_2\text{Fe}(\text{CN})_6$.

Ppt. (Fernekes, J. Am. Chem. Soc. 1906, 28. 604.)

Mercuric ferricyanide, $\text{Hg}_2[\text{Fe}(\text{CN})_6]_2$.

Very sol. in H_2O . Solution quickly decomp. (Fernekes, J. Am. Chem. Soc. 1906, 28. 603.)

Nickel ferricyanide ammonia, $\text{Ni}_3[\text{Fe}(\text{CN})_6]_2 \cdot 4\text{NH}_3 + \text{H}_2\text{O}$.

Sol. in NH_4OH + Aq. (Reynoso, A. ch. (3) 30. 254.)

Nickel ferricyanide, $\text{Ni}_3[\text{Fe}(\text{CN})_6]_2(?)$.

Ppt. Insol. in HCl + Aq.

Potassium ferricyanide, $\text{K}_3\text{Fe}(\text{CN})_6$, (or $\text{K}_4\text{Fe}_2(\text{CN})_{12}$).

Permanent. Easily sol. in H_2O .

100 pts. H_2O dissolve pts. $\text{K}_3\text{Fe}(\text{CN})_6$ at t° .

t°	Pts. salt	t°	Pts. salt	t°	Pts. salt
4.4	33.0	15.6	40.8	100	77.5
10	36.6	37.8	58.8	104.4	82.6

(Wallace, Chem. Soc. 7. 80.)

100 pts. H_2O at 13° dissolve 38 pts., and the solution has sp. gr. = 1.1630. (Schiff, A. 113. 350.)

1 l sat solution in H_2O at 25° contains 385.5 g. $\text{K}_3\text{Fe}(\text{CN})_6$. (Grube, Z. Electrochem. 1914, 20. 342.)

Sp. gr. of $\text{K}_3\text{Fe}(\text{CN})_6$ + Aq at 13° .

$\frac{\%}{\text{salt}}$	Sp gr.	$\frac{\%}{\text{salt}}$	Sp gr.	$\frac{\%}{\text{salt}}$	Sp gr.
1	1.0051	11	1.0595	21	1.1202
2	1.0103	12	1.0653	22	1.1266
3	1.0155	13	1.0712	23	1.1331
4	1.0208	14	1.0771	24	1.1396
5	1.0261	15	1.0831	25	1.1462

9	1.0482	19	1.1076	29	1.1732
10	1.0538	20	1.1039	30	1.1802

(Schiff.)

Sp. gr. of $\text{K}_3\text{Fe}(\text{CN})_6$ + Aq at 25° .

Concentration of $\text{K}_3\text{Fe}(\text{CN})_6$ + Aq	Sp gr
1—normal	1.0574
$\frac{1}{2}$ —"	1.0289
$\frac{1}{4}$ —"	1.0143
$\frac{1}{8}$ —"	1.0092

(Wagner, Z. phys. Ch. 1890, 5. 37.)

Sat. $\text{K}_3\text{Fe}(\text{CN})_6$ + Aq boils at 104.4° . (Wallace.)

1 l. sat. solution at 25° of $\text{K}_3\text{Fe}(\text{CN})_6$ + $\text{K}_4\text{Fe}(\text{CN})_6$ contains 338.1 g $\text{K}_3\text{Fe}(\text{CN})_6$ and 79.02 g. $\text{K}_4\text{Fe}(\text{CN})_6$. (Grube.)

Solubility of $\text{K}_3\text{Fe}(\text{CN})_6$ + $\text{K}_4\text{Fe}(\text{CN})_6$ in KOH + Aq at 25° .

KOH Normalty	g per l	
	$\text{K}_3\text{Fe}(\text{CN})_6$	$\text{K}_4\text{Fe}(\text{CN})_6$
0.4687	309	66.64
0.9628	275.3	55.19
1.949	200.8	35.95

(Grube.)

Solubility in KOH + Aq at 25° .

KOH Normalty	g. $\text{K}_3\text{Fe}(\text{CN})_6$ per l.
0.4687	342.7
0.9628	302.3
1.949	215.1

(Grube, Z. Electrochem, 1914, 20. 342.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 828.)

Insol in absolute alcohol, and only sl. sol. in dil. alcohol.

Sol. in acetone. (Naumann, B. 1904, 37. 432S.)

Insol in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate (Naumann, B. 1910, 43. 314.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Potassium sodium ferricyanide,
 $\text{KN}_2\text{Fe}(\text{CN})_6$.

Sol. in H_2O .

$\text{K}_2\text{NaFe}(\text{CN})_6$. Sol. in H_2O .

$\text{K}_3\text{Na}_3[\text{Fe}(\text{CN})_6]_2$. Sol. in H_2O .
+ $3\text{H}_2\text{O}$.

Potassium ferricyanide iodide, $\text{K}_3\text{Fe}(\text{CN})_6$,
KI.

Very unstable.

Silver ferricyanide, $\text{Ag}_3\text{Fe}(\text{CN})_6$

1 l. H_2O dissolves 0.00066 g. $\text{Ag}_3\text{Fe}(\text{CN})_6$ at 20° . (Whitby, Z. anorg. 1910, 67. 108.)

Sol. in NH_4OH , and hot $(\text{NH}_4)_2\text{CO}_3$ + Aq, but insol. in NH_4 salts + Aq.

Insol. in $\text{Hg}(\text{NO}_3)_2$ + Aq. (Wackenroder, A. 41. 317.)

Silver ferricyanide ammonia, $2\text{Ag}_3\text{Fe}(\text{CN})_6$,
 3NH_3 + $\frac{1}{2}\text{H}_2\text{O}$.

Insol. in H_2O . Sol. in NH_4OH + Aq. (Gintl.)

$2\text{Ag}_3\text{Fe}(\text{CN})_6$, 5NH_3 . (Carlo, Gazz. ch. it. 1910, 40. (2) 477.)

Sodium ferricyanide, $\text{Na}_3\text{Fe}(\text{CN})_6$ + H_2O

Deliquescent. Sol. in 53 pts. cold, and 1.5 pts. boiling H_2O . Insol in alcohol, but not pptd. thereby from aqueous solution (Bette.)

Ferrinitrososulphydic acid.

See *Ferroheptanitrososulphydic acid*.

Ferrocyanhydric acid, $\text{H}_4\text{Fe}(\text{CN})_6$.

Sol. in H_2O and alcohol.

100 pts. H_2O dissolve 15 pts. acid at 14° . (Joannis, A. ch. (5) 26. 514.)

Insol. in ether, and much less sol. in ether-alcohol than in alcohol. Insol. in conc. HCl + Aq.

Ferrocyanides.

The ferrocyanides of the alkali and alkaline-earth metals are sol. in H_2O ; the others are insol., but sol. in alkalis + Aq in case the base is sol. therein

Aluminum ferrocyanide, $\text{Al}_4[\text{Fe}(\text{CN})_6]_3$ + $17\text{H}_2\text{O}$.

Sl. sol. in H_2O .

Sl. sol. in HCl + Aq with partial decomp. (Wyrouboff, A. ch. (5) 8. 446.)

Ammonium ferrocyanide, $(\text{NH}_4)_4\text{Fe}(\text{CN})_6$ + $3\text{H}_2\text{O}$.

Very sol. in H_2O ; insol. in alcohol.

+ H_2O . (Berzelus.)

Ammonium cadmium ferrocyanide ammonia,
 $(\text{NH}_4)_2\text{Cd}_2[\text{Fe}(\text{CN})_6]_2$, 2NH_3 + H_2O .

Sol. in H_2O . (Wyrouboff, A. ch. (5) 10. 413.)

Ammonium calcium ferrocyanide,
 $(\text{NH}_4)_2\text{CaFe}(\text{CN})_6$.

Sl. sol. in H_2O . (Kunheim and Zimmerman, Dingl. 252. 478.)

100 g. sat. solution in H_2O contain 0.258 g. at 16° (Brown, J. phys. Ch. 1898, 2. 51.)

Ammonium cuprous ferro cyanide,
 $(\text{NH}_4)_2\text{Cu}_2\text{Fe}(\text{CN})_6$.

Insol. in H_2O and alcohol.

Decomp. in the air. (Messner, Z. anorg. 1895, 8. 382.)

Ammonium cupric ferrocyanide,
 $(\text{NH}_4)_2\text{CuFe}(\text{CN})_6$.

Ppt.

+ $x\text{H}_2\text{O}$ Very unstable. Insol. in H_2O ; decomp. by boiling H_2O . (Messner, Z. anorg. 1895, 8. 384.)

Ammonium lithium ferrocyanide,
 $(\text{NH}_4)_2\text{Li}_2\text{Fe}(\text{CN})_6$ + $3\text{H}_2\text{O}$

Sol. in H_2O . (Wyrouboff, A. ch. (4) 21. 270.)

Ammonium magnesium ferrocyanide,
 $(\text{NH}_4)_2\text{MgFe}(\text{CN})_6$.

1 l. sat. solution at 17° contains 2.48 g. $(\text{NH}_4)_2\text{MgFe}(\text{CN})_6$ (Robinson, Chem. Soc. 1909, 95. 1353.)

Ammonium manganous ferrocyanide,
 $(\text{NH}_4)_2\text{MnFe}(\text{CN})_6$.

Ppt. (Blum, Z. anal. 30. 284.)

Ammonium potassium ferrocyanide,
 $\text{NH}_4\text{K}_3\text{Fe}(\text{CN})_6$ + $3\text{H}_2\text{O}$.

Easily sol. in cold, more easily in hot H_2O .

Insol. in alcohol.

$(\text{NH}_4)_2\text{K}_2\text{Fe}(\text{CN})_6$ + $3\text{H}_2\text{O}$. Sol. in H_2O .

Ammonium potassium ferrocyanide ammonium chloride, $(\text{NH}_4)_3\text{KFe}(\text{CN})_6$,
 $2\text{NH}_4\text{Cl}$

Sol. in H_2O . (Étard, J. pr. (2) 31. 430.)

Ammonium ferrocyanide bromide,
 $(\text{NH}_4)_4\text{Fe}(\text{CN})_6$, $2\text{NH}_4\text{Br}$.

Permanent. Very sol. in H_2O .

Ammonium ferrocyanide chloride,
 $(\text{NH}_4)_4\text{Fe}(\text{CN})_6$, $2\text{NH}_4\text{Cl}$ + $3\text{H}_2\text{O}$.

Permanent. Very sol. in H_2O , but less so than NH_4Cl . (Bunsen.)

Antimony ferrocyanide, $\text{Sb}_4[\text{Fe}(\text{CN})_6]_3 + 25\text{H}_2\text{O}$.

Ppt. (Atterberg.)

Barium ferrocyanide, $\text{Ba}_2\text{Fe}(\text{CN})_6 + 6\text{H}_2\text{O}$.

Permanent. Sl. sol. in H_2O .

Sol. in 584 pts. cold, and 116 pts. boiling H_2O (Duflos, 1832); sol. in 1800 pts. cold H_2O (Porrett, 1814); sol. in 1920 pts. cold, and about 100 pts. boiling H_2O (Thomson); sol. in 2000 pts. cold, and 100 pts. boiling H_2O . (Ure's Dict.)

Sol. in 1000 pts. H_2O at 15° , and 100 pts. at 75° . (Wyruboff, A. ch. (4) 16. 292.)

Sol. in HNO_3 , HCl , or conc. $\text{H}_2\text{SO}_4 + \text{Aq}$.

Barium cupric ferrocyanide, $\text{BaCuFe}(\text{CN})_6$.

Insol. in H_2O . (Messner, Z. anorg. 1895, 8. 389.)

Barium potassium ferrocyanide,

$\text{BaK}_2\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$.

Sol. in 38 pts. cold, and 9.5 pts. boiling H_2O (Duflos, 1832); in 36.4 pts. H_2O at 14° , and 11.9 pts. at b.-pt. (Mosander.)

Not more sol. in $\text{NH}_4\text{Cl} + \text{Aq}$ than in H_2O . Sol. in dil., insol. in conc. $\text{HCl} + \text{Aq}$. (Rose.) $+ 5\text{H}_2\text{O}$. Sol. in 300 pts. H_2O at ord. temp. (Wyruboff.)

Bismuth ferrocyanide, $\text{Bi}_2\text{Fe}(\text{CN})_6 + 5\text{H}_2\text{O} (?)$.

Sl. sol. in pure H_2O . (Wyruboff.)

$\text{Bi}_4[\text{Fe}(\text{CN})_6]_3$. Ppt. (Muir, Chem. Soc. 31. 657.)

Bismuth potassium ferrocyanide, $\text{BiKFe}(\text{CN})_6 + 7\text{H}_2\text{O}$, or $4\text{H}_2\text{O}$.

Ppt.

Cadmium potassium ferrocyanide, $\text{CdK}_2\text{Fe}(\text{CN})_6 + \text{H}_2\text{O}$.

Insol. in H_2O .

Formula given by Wyruboff is $\text{Cd}_5\text{K}_5[\text{Fe}(\text{CN})_6]_4 + 11\text{H}_2\text{O} (?)$.

Calcium ferrocyanide, $\text{Ca}_2\text{Fe}(\text{CN})_6 + 12\text{H}_2\text{O}$.

Very sol. in H_2O . Sol. in 0.66 pt. H_2O at 90° and not pptd. by cooling, and is apparently less sol. in warm than cold H_2O . (Wyruboff, A. ch. (4) 16. 280.)

Calcium cuprous ferrocyanide,

$\text{CaCu}_2\text{Fe}(\text{CN})_6$. (Messner, Z. anorg. 1894, 8. 387.)

Calcium cupric ferrocyanide, $\text{CaCuFe}(\text{CN})_6$.

Insol. in H_2O . (Messner, Z. anorg. 1895 8. 388.)

Calcium potassium ferrocyanide,

$\text{CaK}_2\text{Fe}(\text{CN})_6$.

Sl. sol. in H_2O . (Kunheim and Zimmerman, Dingl. 252. 478.)

$+ 3\text{H}_2\text{O}$. Sol. in 795 pts. H_2O at 15° , and 145 pts. at b.-pt., with decomp. in the latter case.

Sol. in dil., insol. in conc. $\text{HCl} + \text{Aq}$. Sol. in HNO_3 of 1.2 sp. gr. (Mosander.)

Insol. in $\text{NH}_4\text{Cl} + \text{Aq}$.

Calcium sodium ferrocyanide,

$\text{CaNa}_6[\text{Fe}(\text{CN})_6]_2$.

Sol. in H_2O .

Calcium strontium ferrocyanide,

$\text{CaSrFe}(\text{CN})_6 + 10\text{H}_2\text{O}$.

Efflorescent. Sol. in about 3 pts. H_2O . (Wyruboff, A. ch. (4) 21. 278.)

Cerium ferrocyanide, $\text{Ce}_4[\text{Fe}(\text{CN})_6]_3 + 30\text{H}_2\text{O}$.

Ppt. (Wyruboff.)

Cerium potassium ferrocyanide,

$\text{CeKFe}(\text{CN})_6 + 3\text{H}_2\text{O}$.

Ppt. (Jolin.)

$+ 4\text{H}_2\text{O}$. (Wyruboff.)

Chromic ferrocyanide, $\text{Cr}_2[\text{Fe}(\text{CN})_6]_3 + 20\text{H}_2\text{O}$.

Ppt.

Cobaltous ferrocyanide, $\text{Co}_2\text{Fe}(\text{CN})_6 + 7\text{H}_2\text{O}$.

Wholly insol. in H_2O .

Sol. in H_2SO_4 with decomp. Insol. in $\text{HCl} + \text{Aq}$. Sl. sol. in $\text{NH}_4\text{OH} + \text{Aq}$. Sol. in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. Insol. in $\text{NH}_4\text{Cl} + \text{Aq}$. Sol. in $\text{KCN} + \text{Aq}$.

Cobaltous ferrocyanide ammonia,

$\text{Co}_2\text{Fe}(\text{CN})_6, 8\text{NH}_3 + 10\text{H}_2\text{O}$.

Ppt. Decomp. on standing. (Curda, Z. Ch. 1869. 369.)

$\text{Co}_2\text{Fe}(\text{CN})_6, 12\text{NH}_3 + 9\text{H}_2\text{O}$. As above. (Curda.)

Cobaltous potassium ferrocyanide,

$\text{CoK}_2\text{Fe}(\text{CN})_6$.

Ppt. (Wyruboff.)

$\text{Co}_5\text{K}_5[\text{Fe}(\text{CN})_6]_4 (?)$. Ppt. Insol. only in presence of an excess of $\text{K}_4\text{Fe}(\text{CN})_6$. (Wyruboff.)

Columbium potassium ferrocyanide,

$\text{Cb}_{12}\text{K}_6[\text{Fe}(\text{CN})_6]_2 + 67\text{H}_2\text{O} (?)$.

Sol. in H_2O . (Wyruboff.)

$\text{Cb}_{12}\text{K}_2\text{Fe}(\text{CN})_6 + 39\text{H}_2\text{O} (?)$. Sol. in H_2O . (W.)

$(\text{CbO})_3\text{K}_9[\text{Fe}(\text{CN})_6]_3 + 10\text{H}_2\text{O} (?)$. Ppt. (Atterberg.)

Cuprous ferrocyanide, $\text{Cu}_4\text{Fe}(\text{CN})_6$.

Insol. in H_2O ; sol. in $\text{NH}_4\text{OH} + \text{Aq}$; insol. in $\text{NH}_4\text{Cl} + \text{Aq}$.

Cupric ferrocyanide, basic, $\text{CuFe}(\text{OH})_4(\text{CN})_4$.
Ppt. (Bong, Bull. Soc. 23. 231.)

Cupric ferrocyanide, $\text{Cu}_2\text{Fe}(\text{CN})_6 + 7\text{H}_2\text{O}$.

Insol. in H_2O or acids. Insol. in NH_4 salts + Aq. Sol. in NH_4OH + Aq. Sol. in $(\text{NH}_4)_2\text{C}_2\text{O}_4$ + Aq. and in KCN + Aq.

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 827.)

+ $10\text{H}_2\text{O}$. Sol. in excess of $\text{K}_4\text{Fe}(\text{CN})_6$ + Aq, especially if hot. (Wyruboff.)

Cupric ferrocyanide ammonia (cuprammonium ferrocyanide), $\text{Cu}_2\text{Fe}(\text{CN})_6 \cdot 4\text{NH}_3 + \text{H}_2\text{O}$.

Insol. in H_2O or alcohol. Sol. in NH_4OH + Aq. (Bunsen.)

$\text{Cu}_2\text{Fe}(\text{CN})_6 \cdot 8\text{NH}_3 + \text{H}_2\text{O}$.

Cuprous magnesium ferrocyanide,
 $\text{Cu}_2\text{MgFe}(\text{CN})_6$.

Very unstable. Decomp. in air.

Insol. in H_2O . (Messner, Z. anorg. 1895, 8. 385.)

Cupric magnesium ferrocyanide,
 $\text{CuMgFe}(\text{CN})_6$.

Insol. in H_2O . Decomp. by boiling H_2O . Very unstable. (Messner, Z. anorg. 1895, 8. 387.)

Cuprous potassium ferrocyanide,
 $\text{Cu}_2\text{K}_2\text{Fe}(\text{CN})_6$.

Insol. in H_2O . Decomp. by boiling H_2O . Decomp. by acids. Insol. in alcohol. (Messner, Z. anorg. 1895, 8. 378.)

+ $1\frac{1}{2}\text{H}_2\text{O}$. Insol. in H_2O , alcohol, or ether. Decomp. by acids. Sol. in KCN + Aq.

$\text{K}_3\text{Cu}_2\text{Fe}(\text{CN})_6 + 4\text{H}_2\text{O}$.

+ $5\text{H}_2\text{O}$. (Wonfor.)

+ $6\text{H}_2\text{O}$. (Wyruboff.)

Cupric potassium ferrocyanide, $\text{K}_2\text{CuFe}(\text{CN})_6 + \text{H}_2\text{O}$.

Insol. in cold. sl. decomp. by boiling H_2O . $\text{K}_2\text{Cu}_3[\text{Fe}(\text{CN})_6]_2 + 12\text{H}_2\text{O}$. Ppt.

Cuprous sodium ferrocyanide,
 $\text{Cu}_2\text{Na}_2\text{Fe}(\text{CN})_6$.

Decomp. by boiling H_2O ; insol. in alcohol; insol. in H_2O ; decomp. by acids. (Messner, Z. anorg. 1895, 8. 373.)

Cupric sodium ferrocyanide,
 $\text{CuNa}_2\text{Fe}(\text{CN})_6$.

Insol. in cold H_2O . Decomp. by boiling H_2O . (Moissan, Z. anorg. 1895, 8. 376.)

Cupric strontium ferrocyanide,
 $\text{CuSrFe}(\text{CN})_6$.

Insol. in H_2O . (Messner, Z. anorg. 1895, 8. 389.)

Didymium potassium ferrocyanide,
 $\text{DiKFe}(\text{CN})_6 + 4\text{H}_2\text{O}$

Ppt. (Cleve.)

+ $2\text{H}_2\text{O}$. (Wyruboff.)

Erbium potassium ferrocyanide, $\text{ErKFe}(\text{CN})_6 + 7\text{H}_2\text{O}$.

(Hoglund.)

Gallium ferrocyanide.

Sol. in boiling HCl + Aq. (de Boisbaudran, C. R. 99.526.)

Glucinum ferrocyanide, $\text{Gl}_2\text{Fe}(\text{CN})_6 \cdot 4\text{GlO}_2\text{H}_2 + 7\text{H}_2\text{O}$ (?).

Sol. in H_2O . (Atterberg.)

Iron (ferric) ferrocyanide, $\text{Fe}_7(\text{CN})_{18} = \text{Fe}_4[\text{Fe}(\text{CN})_6]_3 + x\text{H}_2\text{O}$.

(*Prussian blue*.) Insol. in H_2O , alcohol, ether, or oils. Decomp. slowly by boiling H_2O . Insol. in dil. mineral acids. Sol. in conc. HCl + Aq. and conc. H_2SO_4 without decomp. Sol. in $\text{H}_2\text{C}_2\text{O}_4$ or NH_4 tartrate + Aq. Insol. in NH_4OH + Aq. Decomp. by NaOH , or KOH + Aq. Not pptd. in presence of tartrates or citrates.

Iron (ferrous) potassium ferrocyanide,
 $\text{FeK}_2\text{Fe}(\text{CN})_6$.

Insol. in H_2O . Decomp. on air.

Iron (ferric) potassium ferrocyanide,
 $\text{FeKFe}(\text{CN})_6$.

Is probably ferrous potassium ferrocyanide, which see.

Iron (ferric) ferrocyanide ammonia,
 $\text{Fe}_4[\text{Fe}(\text{CN})_6]_3 \cdot 6\text{NH}_3 + 9\text{H}_2\text{O}$.

Insol. in NH_4 tartrate + Aq.

Lanthanum potassium ferrocyanide,
 $\text{LaKFe}(\text{CN})_6 + 4\text{H}_2\text{O}$.

Ppt.

Lead ferrocyanide, $\text{Pb}_2\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$.

Insol. in H_2O , acids, or NH_4OH + Aq. (Wyruboff, A. ch. (5) 8. 480.)

Sl. sol. in conc. H_2SO_4 , from which it is pptd. by H_2O . (Berzelius.)

Sol. in hot NH_4Cl , or NH_4 succinate + Aq; insol. in other NH_4 salts + Aq. (Wittstein.)

Insol. in NH_4Cl + Aq. (Brett.)

Not pptd. in presence of Na citrate. (Spiller.)

Lithium ferrocyanide, $\text{Li}_4\text{Fe}(\text{CN})_6 + 9\text{H}_2\text{O}$.

Deliquescent. Very sol. in H_2O .

Lithium potassium ferrocyanide,
 $\text{Li}_2\text{K}_2\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$.

Very sol. in H_2O . Sol. in 1.5 pts. H_2O at ord. temp. (Wyruboff, A. ch. (4) 21. 274.)

Magnesium ferrocyanide, $\text{Mg}_2\text{Fe}(\text{CN})_6 + 6\text{H}_2\text{O}$.

Sol. in 3 pts. cold H_2O . (Bette, A. 22. 148.)

Magnesium potassium ferrocyanide, $\text{MgK}_2\text{Fe}(\text{CN})_6$.

Sol. in 1575 pts. H_2O at 15° , and 238 pts. at 100° . Solution is decomp. by boiling. (Storer's Dict.)

1 l sat solution at 17° contains 1.95 g $\text{MgK}_2\text{Fe}(\text{CN})_6$. (Robinson, Chem Soc 1909, 75. 1353.)

Manganous ferrocyanide, $\text{Mn}_2\text{Fe}(\text{CN})_6 + 7\text{H}_2\text{O}$.

Insol. in H_2O . Sol in $\text{HCl} + \text{Aq}$. Insol. in NH_4Cl , or $\text{NH}_4\text{NO}_3 + \text{Aq}$

Manganic ferrocyanide, $\text{Mn}_2\text{Fe}_3(\text{CN})_{12}$.

Insol. in H_2O . Easily decomp. in the air. Sol. in HCl . (Straus, Z. anorg. 1895, 9. 8.)

Manganous potassium ferrocyanide, $\text{MnK}_2\text{Fe}(\text{CN})_6$.

Ppt. (Berzelius.)
 $5\text{Mn}_2\text{Fe}(\text{CN})_6, 4\text{K}_4\text{Fe}(\text{CN})_6 + 4\text{H}_2\text{O} (?)$.
Ppt. Sol. in dil. $\text{HCl} + \text{Aq}$. (Wyruboff.)

Mercuric potassium ferrocyanide, $\text{K}_2\text{HgFe}(\text{CN})_6$.

Insol. in H_2O . Appreciably sol. in $\text{K}_4\text{Fe}(\text{CN})_6 + \text{Aq}$ (Fernekes, J. Am. Chem Soc 1906, 28. 87)

Molybdenum ferrocyanide, $\text{Mo}_4\text{Fe}(\text{CN})_6 + 20\text{H}_2\text{O} (?)$.

Very sol. in $\text{NH}_4\text{OH} + \text{Aq}$ (Wyruboff.)
 $\text{Mo}_2\text{Fe}(\text{CN})_6 + 8\text{H}_2\text{O} (?)$. (W.)
 $+ 14\text{H}_2\text{O} (?)$. Very sol. in H_2O ; insol. in alcohol. (W.)

Molybdenum potassium ferrocyanide,

$\text{K}_4\text{Mo}_3[\text{Fe}(\text{CN})_6]_2 + 40\text{H}_2\text{O} (?)$.
(Wyruboff.)
 $\text{K}_2(\text{MoO}_4)_3[\text{Fe}(\text{CN})_6]_2, 2\text{MoO}_3 + 20\text{H}_2\text{O} (?)$.
(Atterberg.)
 $\text{K}_2\text{Mo}_2[\text{Fe}(\text{CN})_6]_2, 2\text{MoO}_3 + 12\text{H}_2\text{O} (?)$.
(Atterberg.)

Nickel ferrocyanide, $\text{Ni}_2\text{Fe}(\text{CN})_6 + 11\text{H}_2\text{O}$, or $14\text{H}_2\text{O}$.

Ppt. Insol. in H_2O or $\text{HCl} + \text{Aq}$. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$; insol. in NH_4 salts $+ \text{Aq}$. Sol. in $\text{KCN} + \text{Aq}$.

Nickel ferrocyanide ammonia, $\text{Ni}_2\text{Fe}(\text{CN})_6, 4\text{NH}_3 + \text{H}_2\text{O}$.

Completely insol. in H_2O and not attacked thereby; sol. in $\text{NH}_4\text{OH} + \text{Aq}$ to form—
 $\text{Ni}_2\text{Fe}(\text{CN})_6, 10\text{NH}_3 + 4\text{H}_2\text{O}$. Decomp. by hot H_2O . (Reynoso, A. ch. (3) 30. 252.)

$\text{Ni}_2\text{Fe}(\text{CN})_6, 2\text{NH}_3 + 4$, and $9\text{H}_2\text{O}$. Hygro-

scopic. Easily decomp. (Gintl, J. B. 1868. 304.)

$\text{Ni}_2\text{Fe}(\text{CN})_6, 8\text{NH}_3 + 4\text{H}_2\text{O}$. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (G)

$\text{Ni}_2\text{Fe}(\text{CN})_6, 12\text{NH}_3 + 9\text{H}_2\text{O}$. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$, but less so than the above compounds. (G)

Nickel potassium ferrocyanide, $\text{NiK}_2\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$.

Ppt. (Wyruboff.)

Osmium ferrocyanide, $\text{Os}_2\text{Fe}(\text{CN})_6$.

Ppt. (Martius, A. 117. 368.)

Potassium ferrocyanide, $\text{K}_4\text{Fe}(\text{CN})_6$.

Permanent. Easily sol. in cold, and more easily in hot H_2O .

Sol. in 4.23 pts. H_2O at 15° , or 100 pts. H_2O dissolve 23.6 pts. salt at 15° . (Schiff, A. 113. 350.)

100 pts. H_2O dissolve 27.8 pts. at 12.2° ; 65.8 pts. at 37.7° ; 87.6 pts. at 65.5° ; and 90.6 pts. at 96.3° . (Thomson.)

Sol. in 4 pts. cold, and 2 pts. boiling H_2O . (Wittstein.)

100 pts. H_2O dissolve 29.2 pts. salt at 15° , and solution has sp. gr. = 1.1441. (Michel and Kraft, A. ch. (3) 41. 478.)

Solubility of $\text{K}_4\text{Fe}(\text{CN})_6$ in H_2O at t° .

-2°	$+7^\circ$	14°	30°	56°
10.8	15.4	17.9	23.0	31.7%
60°	75°	89°	98°	157°
34.0	39.1	41.9	42.6	46.8%

(Étard, A. ch. 1894, (7) 2. 546.)

$\text{K}_4\text{Fe}(\text{CN})_6 + \text{Aq}$ sat. at 8° has sp. gr. = 1.13. (Anthon.)

Sp. gr. of $\text{K}_4\text{Fe}(\text{CN})_6 + \text{Aq}$ at 15° .

% hydrous salt	Sp gr	% hydrous salt	Sp. gr.	% hydrous salt	Sp gr.
1	1.0058	8	1.0479	15	1.0932

7	1.0417	14	1.0866

(Schiff, A. 113. 199.)

Sp. gr. of $\text{K}_4\text{Fe}(\text{CN})_6 + \text{Aq}$ at 25° .

Concentration of $\text{K}_4\text{Fe}(\text{CN})_6 + \text{Aq}$.	Sp gr.
1—normal	1.0617
$\frac{1}{2}$ —“	1.0300
$\frac{1}{4}$ —“	1.0150
$\frac{1}{8}$ —“	1.0074
$\frac{1}{16}$ —“	1.0037

(Wagner, Z. phys. Ch. 1890, 5. 37.)

Solubility in KOH+Aq at 25°.	
KOH Normahty	g $K_4Fe(CN)_6 + 3H_2O$ per l.
0 09984	308 5
0 2496	283 5
0 4963	247 1
0 7036	217 4
0 9415	184 8
1 395	132 1
1 883	86 12

(Grube, Z. Electrochem, 1914, 20. 342.)

$K_4Fe(CN)_6 + NaCl + Aq$ sat. at 20° contains 26.6 g. $NaCl$ and 17.8 g. $K_4Fe(CN)_6$ per 100 g. H_2O ; sat. at 93° it contains 27.4 g. $NaCl$ and 35.9 g. $K_4Fe(CN)_6$ per 100 g. H_2O . (Conroy, J. Soc. Chem. Ind. 1898, 17. 105.)

$K_4Fe(CN)_6 + KCl + Aq$ sat. at 21° contains 27.2 g. KCl and 4.2 g. $K_4Fe(CN)_6$ per 100 g. H_2O ; sat. at 99° it contains 39.6 g. KCl and 17.0 g. $K_4Fe(CN)_6$ per 100 g. H_2O . (Conroy.)

$K_4Fe(CN)_6 + Na_2CO_3 + Aq$ sat. at 22° contains 29.9 g. Na_2CO_3 and 26.7 g. $K_4Fe(CN)_6$ per 100 g. H_2O ; sat. at 97° it contains 42.0 g. Na_2CO_3 and 27.5 g. $K_4Fe(CN)_6$ per 100 g. H_2O . (Conroy.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 829.)

Insol. in alcohol even when dilute.

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370)

Sol. in acetone. (Naumann, B. 1904, 37. 4328.)

+3 H_2O . 1 l. sat. solution in H_2O contains 319.4 g. $K_4Fe(CN)_6 + 3H_2O$ (Grube, Electrochem. Z. 1914, 20. 342.)

Two modifications with different solubilities

25.0 g. of α modification are contained in 100 g. of solution at 20°.

24.6 g. of β modification are contained in 100 g. of solution at 20°. (Briggs, Chem. Soc. 1911, 99. 1024.)

32.0 g. $K_4Fe(CN)_6$ (anhydrous) are dissolved in 100 g. H_2O at 25°. (Wagner, Z. phys. Ch. 1910, 71. 428.)

Potassium samarium ferrocyanide,

Precipitate. (Cleve.)

Potassium sodium ferrocyanide,

Sol. in H_2O .

$K_2Na_2Fe(CN)_6 + 8H_2O$. Easily sol. in H_2O .

$K_2NaFe(CN)_6 + 3H_2O$. Permanent. Easily sol. in H_2O ; insol. in alcohol.

Potassium sodium ferrocyanide nitrate,

Sol. in H_2O . (Martius.)

Potassium strontium ferrocyanide,

Easily decomp. Sol. in H_2O ; sl. sol. in alcohol. (Wyruboff, A. ch. (4) 21. 276.)

Potassium stannic ferrocyanide,

Ppt. (Wyruboff.)

$K_4Sn_{10}[Fe(CN)_6]_{11} + 230H_2O$ (?). (Atterberg.)

Potassium titanium ferrocyanide,

Ppt. Sol. in $K_4Fe(CN)_6 + Aq$. (Wyruboff.)

$K_4Fe(CN)_6, 11Ti_2Fe(CN)_6 + 43H_2O$ (?). Ppt. (Wyruboff.)

$K_2(TiO)_3[Fe(CN)_6]_2 + 23H_2O$ (?). Ppt. (Atterberg.)

$K_2(TiO)_{11}[Fe(CN)_6]_6 + 110H_2O$ (?). Ppt. (Atterberg.)

Potassium tungsten ferrocyanide,

Sol. in H_2O . (Wyruboff.)

$K_2W_6Fe(CN)_6 + 20H_2O$ (?). Sol. in H_2O . (W.)

Potassium uranium ferrocyanide,

Ppt. (Wyruboff.)

$K_2(UO_2)_3[Fe(CN)_6]_2 + 6H_2O$. Ppt. (Atterberg.)

$K_6(UO_2)_6[Fe(CN)_6]_4 + 12H_2O$. Sol. in H_2O . (Atterberg.)

Potassium vanadium ferrocyanide,

Ppt. Sl. sol. in H_2O . (Wyruboff.)

$K_6(VO)_3[Fe(CN)_6]_4 + 60H_2O$ (?). Ppt. (Atterberg.)

Potassium ytterbium ferrocyanide,

Ppt. Sol. in excess $K_4Fe(CN)_6 + Aq$. (Cleve, Z. anorg. 1902, 32. 140.)

Potassium yttrium ferrocyanide,

Ppt. (Wyruboff, A. ch. (5) 8. 444.)

Potassium zinc ferrocyanide,

Absolutely insol. in H_2O . (Wyruboff, A. ch. (5) 8. 485.)

Potassium ferrocyanide carbonyl,

See Carbonyl ferrocyanide, potassium.

Rubidium ferrocyanide, $Rb_4Fe(CN)_6 + 2H_2O$.

Sol. in less than 1 pt. H_2O at ord. temp. with great absorption of heat. (Wyruboff, A. ch. (4) 16. 307.)

Silver ferrocyanide, $\text{Ag}_4\text{Fe}(\text{CN})_6 + \text{H}_2\text{O}$.

Insol. in H_2O or dil. acids. Insol. in NH_4OH , or NH_4 salts + Aq. Sol. in KCN + Aq.

Decomp. by warm NH_4OH + A-. (Weith, Z. Ch. (2) 5. 381.)

Silver ferrocyanide ammonia, $\text{Ag}_4\text{Fe}(\text{CN})_6 \cdot 2\text{NH}_3 + \text{H}_2\text{O}$.

(Wyruboff)
+ $6\text{H}_2\text{O}$ (Gintl.)

Sodium ferrocyanide, $\text{Na}_4\text{Fe}(\text{CN})_6 + 12\text{H}_2\text{O}$.

Efflorescent. Less sol. in H_2O than $\text{K}_4\text{Fe}(\text{CN})_6$. Sol. in 4.5 pts. H_2O at 12° . (John.)

100 pts. H_2O at 15.5° dissolve 22 pts. (Ure's Dict.)

100 pts. H_2O dissolve at:

18°	20°	42°	53°	
16	7	17	875	30 2 37 1 pts. $\text{Na}_4\text{Fe}(\text{CN})_6$,
58°	60°	77°	80°	
41	7	42	5	54 8 59 2 pts. $\text{Na}_4\text{Fe}(\text{CN})_6$,
	96°		98°	98 5°
	62	1	61.6	6 30 pts. $\text{Na}_4\text{Fe}(\text{CN})_6$.

(Conroy, J. Soc. Chem. Ind. 1898, 17. 104.)

+ $10\text{H}_2\text{O}$.

100 pts. H_2O dissolve at:

18°	20°	42°	
29	45	31	85 5 pts. $\text{Na}_4\text{Fe}(\text{CN})_6 + 10\text{H}_2\text{O}$,
53°	58°	60°	
75.9	88.4	90	2 pts. $\text{Na}_4\text{Fe}(\text{CN})_6 + 10\text{H}_2\text{O}$,
77°	80°	96°	
129.5	146.0	157.0	pts. $\text{Na}_4\text{Fe}(\text{CN})_6 + 10\text{H}_2\text{O}$,
98°	98	5°	
156	5	161	0 pts. $\text{Na}_4\text{Fe}(\text{CN})_6 + 10\text{H}_2\text{O}$.

(Conroy.)

Strontium ferrocyanide, $\text{Sr}_2\text{Fe}(\text{CN})_6 + 15\text{H}_2\text{O}$.

Efflorescent. Sol. in 2 pts. cold, and less than 1 pt. boiling H_2O . (Bette.)

Excessively sol. in H_2O . (Wyruboff, A. ch. (4) 16. 280.)

+ $8\text{H}_2\text{O}$. (Wyruboff.)

Thalious ferrocyanide, $\text{Th}_4\text{Fe}(\text{CN})_6 + 2\text{H}_2\text{O}$.

100 pts. H_2O dissolve 0.37 pt. at 18° , and 3.93 pts. at 101° . (Lamy.)

Sol. in KCN + Aq. (Kühlmann.)

Thorium ferrocyanide, $\text{ThFe}(\text{CN})_6 + 4\text{H}_2\text{O}$.

Ppt. (Cleve, Bull. Soc. (2) 24. 355.)

Tin (stannous) ferrocyanide, $\text{Sn}_2\text{Fe}(\text{CN})_6 + 4\text{H}_2\text{O}$.

Insol. in H_2O or acids; sl. sol. in NH_4OH + Aq. (Wyruboff.)

Tin (stannic) ferrocyanide, $\text{Sn}_6[\text{Fe}(\text{CN})_6]_2 + 18\frac{1}{2}\text{H}_2\text{O}$ (?).

(Wyruboff.)

Titanium ferrocyanide, $\text{Ti}_7[\text{Fe}(\text{CN})_6]_2$ (?).

Ppt. (Wyruboff)

Uranium ferrocyanide, $\text{UFe}(\text{CN})_6 + 10\text{H}_2\text{O}$.

Ppt. (Wyruboff)

Vanadyl ferrocyanide, $(\text{VO})_2\text{Fe}(\text{CN})_6 + 11\text{H}_2\text{O}$

Ppt. (Atterberg.)

Yttrium ferrocyanide, $\text{Y}_4[\text{Fe}(\text{CN})_6]_3$.

Easily sol. in H_2O ; insol. in alcohol. (Popp, A. 131. 179.)

Zinc ferrocyanide, $\text{Zn}_2\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$.

Insol. in H_2O or acids.

Insol. in HCl + Aq. (Lea, Sill. Am. J. (2) 31. 191.)

Sol. in NH_4OH , or NH_4 salts + Aq. (Wittstein)

Insol. in NH_4Cl , or NH_4NO + Aq. (Brett.)

Sl. sol. in boiling $\text{K}_4\text{Fe}(\text{CN})_6$, or $\text{K}_3\text{Fe}(\text{CN})_6$

+ Aq. (Gore)

$\text{Na}_4\text{Fe}(\text{CN})_6 + \text{NaCl}$ + Aq. sat. at 21° contains 29.0 g. NaCl and 5.8 g. $\text{Na}_4\text{Fe}(\text{CN})_6$ per 100 g. H_2O ; sat. at 90° it contains 24.7 g. NaCl and 21.3 g. $\text{Na}_4\text{Fe}(\text{CN})_6$ per 100 g. H_2O .

(Conroy, J. Soc. Chem. Ind. 1898, 17. 105.)

$\text{Na}_4\text{Fe}(\text{CN})_6 + \text{Na}_2\text{CO}_3$ + Aq. sat. at 22° contains 22.6 g. Na_2CO_3 and 6.5 g. $\text{Na}_4\text{Fe}(\text{CN})_6$ per 100 g. H_2O ; sat. at 95° it contains 29.8 g. Na_2CO_3 and 36.8 g. $\text{Na}_4\text{Fe}(\text{CN})_6$ per 100 g. H_2O . (Conroy.)

Very sl. sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 830.)

Insol. in alcohol.

+ $4\text{H}_2\text{O}$ Absolutely insol. in H_2O . (Wyruboff, A. ch. (5) 8. 485.)

+ $8\text{H}_2\text{O}$. (Weith, A. 147. 329.)

+ $10\text{H}_2\text{O}$ (Pebal, A. 233. 165.)

Ferrotetranitrososulphydic acid,

$\text{H}_2\text{S}_2(\text{NO})_4\text{Fe}_2$.

Insol. in H_2O ; sl. sol. in alcohol; more easily in ether; very sol. in CS_2 or CHCl_3 .

Not obtained in a pure state. (Pawel, B. 15. 2600.)

Ethyl ferrotetranitrososulphide,

$(\text{C}_2\text{H}_5)_2\text{S}_2(\text{NO})_4\text{Fe}_2$.

Insol. in H_2O , difficultly sol. in alcohol, more easily in ether, and very easily in CS_2 ,

CHCl_3 , $\text{C}_2\text{H}_5\text{I}$, or C_6H_6 . (Pawel, B. 15. 2609.)

Ferrous —, $\text{FeS}_2(\text{NO})_4\text{Fe}_2$.

More difficultly sol. in H_2O and alcohol than the hepta salt.

Sol. in ether.

Potassium —, $\text{K}_2\text{S}_2(\text{NO})_4\text{Fe}_2 + 4\text{H}_2\text{O}$.

Sol. in H_2O . Easily sol. in alcohol; insol. in ether. (Pawel, B. 15. 2600.)

True composition of "nitrosulphide of

iron and potassium" of Roussin. (A. ch. (3) 52. 297.) (Pawel, B. 13. 1949.)

Sodium ferro*tetran*itrososulphide,
 $\text{Na}_2\text{S}_2(\text{NO})_4\text{Fe}_2 + 8\text{H}_2\text{O}.$

Sol. in H_2O , easily sol. in alcohol; insol. in ether. (Pawel.)

True composition of "nitrosulphide of iron and sodium" of Roussin. (Pawel.)

Thallium —, $\text{Tl}_2\text{S}_2(\text{NO})_4\text{Fe}_2.$

Insol. in H_2O , alcohol, or ether. (Pawel.)

Ferro*heptan*itrososulphydic acid,
 $\text{HS}_3(\text{NO})_7\text{Fe}_4.$

Insol. in H_2O , alcohol, and ether. Easily sol. in CS_2 or CHCl_3 . (Pawel, B. 15. 2604.)

May be called Ferrinitrososulphydic acid.

Ammonium ferro*heptan*itrososulphide,
 $\text{NH}_4\text{S}_3(\text{NO})_7\text{Fe}_4 + \text{H}_2\text{O}.$

Less easily sol. in H_2O than the K compound. (Pawel, B. 15. 2600.)

"Binitrosulphide of iron" of Roussin. Sol. in about 2 pts. boiling H_2O ; very sl. sol. in cold H_2O . Very sol. in alcohols, methyl, ethyl, or amyl, and in $\text{HC}_2\text{H}_3\text{O}_2$. Miscible with ether. Insol. in CS_2 or CHCl_3 .

Decomp. by conc. HCl , HNO_3 , or H_2SO_4 .

Not attacked by $\text{H}_2\text{C}_2\text{O}_4$, or $\text{H}_3\text{C}_4\text{H}_4\text{O}_6 + \text{Aq}.$

Insol. in NH_4OH , and $\text{KOH} + \text{Aq}.$ (Roussin, A. ch. (3) 52. 286.)

Sol in H_2O Insol. in alcohol (Hofmann, Z. anorg. 1895, 9. 299.)

Barium —.

Easily sol. in H_2O . (Pawel.)

Cæsium —, $\text{Fe}_4(\text{NO})_7\text{S}_3\text{Cs} + \text{H}_2\text{O}.$

Insol. in H_2O . Difficultly sol. in alcohol and ether. (Pawel.)

Sparingly sol. in H_2O . (Hofmann, Z. anorg. 1895, 9. 298.)

Calcium —.

Easily sol. in H_2O . (Pawel.)

Ferrous —, $\text{Fe}[\text{S}_3(\text{NO})_7\text{Fe}_4]_2 + 8\text{H}_2\text{O}.$

More easily sol. in H_2O than Na salt. (Pawel.)

Lead —.

Difficultly sol. in H_2O . (Pawel.)

Magnesium —.

Easily sol. in H_2O . (Pawel.)

Potassium —, $\text{KS}_3(\text{NO})_7\text{Fe}_4.$

Sol. in H_2O , alcohol, and very sol. in ether with slight decomp. (Pawel, B. 15. 2600.)

Rubidium ferro*heptan*itrososulphide,
 $\text{RbS}_3(\text{NO})_7\text{Fe}_4.$

Less soluble in H_2O than the NH_4 salt. (Pawel.)

$+ \text{H}_2\text{O}.$ Ppt. (Hofmann, Z. anorg. 1895, 9. 298.)

Sodium —, $\text{NaS}_3(\text{NO})_7\text{Fe}_4 + 2\text{H}_2\text{O}.$

More sol. in H_2O than the potassium salt. (Pawel.)

Thallium —, $\text{TlS}_3(\text{NO})_7\text{Fe}_4 + \text{H}_2\text{O}.$

Very difficultly sol. in H_2O . More easily sol. in alcohol. (Pawel.) (Hofmann, Z. anorg. 1895, 9. 297.)

Ferrodinitrosothiosulphonic acid.

Ammonium ferrodinitrosothiosulphonate,
 $\text{Fe}(\text{NO})_2\text{S}_2\text{O}_3\text{NH}_4 + \text{H}_2\text{O}.$

Can be cryst. from warm H_2O without decomp. (Hofmann, Z. anorg. 1895, 8. 321.)

Cæsium —, $\text{Fe}(\text{NO})_2\text{S}_2\text{O}_3\text{Cs}.$

Sparingly sol. in H_2O . (Hofmann.)

Potassium —, $\text{Fe}(\text{NO})_2\text{S}_2\text{O}_3\text{K} + \text{H}_2\text{O}.$

Sl. sol. in H_2O without decomp. at 80° . Sol in 50% alcohol.

Sol. in H_2SO_4 without decomp. (Hofmann.)

Rubidium —, $\text{Fe}(\text{NO})_2\text{S}_2\text{O}_3\text{Rb} + \text{H}_2\text{O}.$

Less sol. in H_2O than the corresponding Na salt. (Hofmann.)

Sodium —, $\text{Fe}(\text{NO})_2\text{S}_2\text{O}_3\text{Na} + 2\text{H}_2\text{O}.$

Closely resembles K salt, but is more sol. in H_2O and alcohol. (Hofmann.)

Ferrotungstic acid.

Sol. in H_2O . (Laurent, C. R. 31. 693.)

Ammonium manganous ferrotungstate,
 $12(\text{NH}_4)_2\text{O}, 6\text{MnO}, 2\text{Fe}_2\text{O}_3, 3\text{H}_2\text{O},$
 $45\text{WO}_3 + 81\text{H}_2\text{O}.$

Sol. in H_2O . (Laurent.)

Barium ferrotungstate, $21\text{BaO}, 2\text{Fe}_2\text{O}_3,$
 $45\text{WO}_3 + 27\text{H}_2\text{O}.$

Sol. in H_2O . (Laurent.)

Potassium ferrotungstate, $9\text{K}_2\text{O}, 2\text{Fe}_2\text{O}_3,$
 $12\text{H}_2\text{O}, 45\text{WO}_3 + 54\text{H}_2\text{O}.$

Sol. in H_2O . (Laurent.)

$18\text{K}_2\text{O}, 2\text{Fe}_2\text{O}_3, 3\text{H}_2\text{O}, 45\text{WO}_3 + 54\text{H}_2\text{O}.$ (Laurent.)

Ferrous acid.

Barium ferrite, $\text{BaO}, \text{Fe}_2\text{O}_3.$

Ppt. (List, B. 11. 1512.)

Calcium ferrite, $4\text{CaO}, \text{Fe}_2\text{O}_3$.

Insol. in H_2O , or sugar+ H_2O . Decomp. by the weakest acids, but not by boiling $\text{KOH}+\text{Aq.}$ (Pelouze, A. ch. (3) 33. 5.)

$\text{CaO}, \text{Fe}_2\text{O}_3$. (List.)

$3\text{CaO}, \text{Fe}_2\text{O}_3$. Much less readily attacked by H_2O and acids than the silicates. (Hilpert, B. 1909, 42. 4581.)

$3\text{CaO}, 2\text{Fe}_2\text{O}_3$. As above. (Hilpert, B. 1909, 42. 4581.)

Calcium ferrite chloride, $\text{CaO}, \text{Fe}_2\text{O}_3, \text{CaCl}_2$.

Not decomp. by H_2O . (Chatelier, C. R. 99. 276.)

Cupric ferrite, $\text{CuO}, \text{Fe}_2\text{O}_3$.

Ppt. (List.)

+ $5\text{H}_2\text{O}$. (List.)

Ferrous argentous ferrite, $2\text{FeO}, \text{Ag}_2\text{O}, \text{Fe}_2\text{O}_3$ (?).

Easily decomp. by $\text{HCl}+\text{Aq.}$ Not completely sol. in dil. $\text{HNO}_3+\text{Aq.}$ Easily sol. in conc. HNO_3 . Decomp. by acetic acid. (Rose, Pogg. 10. 323.)

Magnesium ferrite, $\text{MgO}, \text{Fe}_2\text{O}_3$.

Insol. in H_2O . Not attacked by boiling conc HNO_3 . (Deville, C. R. 52. 1264.)

Min. *Magnesioferrite*. Difficultly sol. in $\text{HCl}+\text{Aq.}$ (Rammelsberg, Pogg. 107. 451.)

+ $4\text{H}_2\text{O}$. Ppt. (List, B. 11. 1512.)

$6\text{MgO}, \text{Fe}_2\text{O}_3+9\text{H}_2\text{O}$. Ppt.

+ $15\text{H}_2\text{O}$. Min. *Pyroaurite*.

Manganous ferrite, $\text{MnO}, \text{Fe}_2\text{O}_3$.

Ppt. (List.)

Nickel ferrite, $\text{NiO}, \text{Fe}_2\text{O}_3$.

Ppt. (List.)

Potassium ferrite, $3\text{K}_2\text{O}, 4\text{Fe}_2\text{O}_3$.

Decomp. by $\text{H}_2\text{O}, \text{KOH}+\text{Aq.}, \text{NaOH}+\text{Aq.}$, etc., but only slowly by $\text{NH}_4\text{Cl}+\text{Aq.}$ (Salm-Horstmar, J. pr. 55. 349.)

$\text{K}_2\text{Fe}_2\text{O}_4$. Decomp. by H_2O . (Rousseau and Bernheim, C. R. 107. 240.)

Silver (argentous) ferrite, $\text{Ag}_2\text{O}, \text{Fe}_2\text{O}_3$ (?).

Decomp. by dil. $\text{HNO}_3+\text{Aq.}$ (Rose, Pogg. 10. 323.)

Sodium ferrite, $\text{Na}_2\text{O}, \text{Fe}_2\text{O}_3$.

Na_2O is dissolved out by H_2O . Easily sol. in dil. $\text{HCl}+\text{Aq.}$ Not easily decomp. by $\text{NH}_4\text{Cl}+\text{Aq.}$ (Salm-Horstmar.)

Zinc ferrite, $\text{ZnO}, \text{Fe}_2\text{O}_3$.

Sol. in boiling conc. $\text{HCl}+\text{Aq.}$ (Ebelmen, A. ch. (3) 33. 47.)

Min. *Franklinite*.

Flavocobaltic compounds.

See also Xanthocobaltic compounds.

Flavocobaltic chloraurate, $(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4\text{AuCl}_4$.

More easily sol. than the chloroplatinate. Not wholly insol. in absolute alcohol. (Jorgensen, Z. anorg. 5. 159.)

— chloroplatinate, $[(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4]_2\text{PtCl}_6$
As the chloroplatinite. (Jorgensen)

— chloroplatinite, $[(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4]_2\text{PtCl}_4$.

Somewhat sol. in H_2O , and not insol. in 50% alcohol. (Jorgensen.)

— chromate, $[(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4]_2\text{Cr}_2\text{O}_7$.
Ppt. (Jorgensen.)

— nitrate, $\text{Co}(\text{NO}_2)_2(\text{NH}_3)_4\text{NO}_3$.

Sol. in about 33 pts. cold H_2O ; insol. in HNO_3 . (Jorgensen.)

$\text{Co}(\text{NO}_2)_2(\text{NH}_3)_4\text{NO}_3, \text{HNO}_3$. Decomp. by H_2O or alcohol. (Jorgensen.)

— cobaltic nitrite, $3(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4$,
 $\text{Co}_2(\text{NO}_2)_6+2\text{H}_2\text{O}$.

Sl. sol. in H_2O . (Jorgensen, Z. anorg. 5. 179.)

— diamine cobaltic nitrite,

$(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4$,

$(\text{NO}_2)_2(\text{NH}_3)_2\text{Co}(\text{NO}_2)_2$.

Very sl. sol. in H_2O . (Jorgensen.)

— sulphate, $[(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4]_2\text{SO}_4$.

Sl. sol. in H_2O , more easily in $\text{HC}_2\text{H}_3\text{O}_2+\text{Aq.}$ (Jorgensen.)

Fluoborhydric acid, HBF_4 .

Decomp. by H_2O very rapidly. (Landolph, C. R. 86. 603.)

Aluminum fluoboride, $2\text{AlF}_3, 3\text{BF}_3$.

Sol. in H_2O only when acidulated; sol. in acids. (Berzelius.)

Ammonium fluoboride, NH_4BF_4 .

Easily sol. in H_2O . Sol. in 4 pts. H_2O at 16° , and 1.02–1.05 pts. boiling H_2O . (Stolba, Chem. techn. Cent. Anz. 7. 459.) Sl. sol. in alcohol.

Barium fluoboride, $\text{Ba}(\text{BF}_4)_2+2\text{H}_2\text{O}$.

Deliquescent; easily sol. in H_2O ; decomp. by alcohol. (Berzelius.)

Cæsium fluoboride, CsBF_4 .

100 pts. H_2O dissolve 0.92 pt. CsBF_4 at 20° , and 0.04 pt. at 100° . (Godeffroy, B. 9. 1367.)
0.02 pts. are sol. in 100 pts. H_2O at 267° . (Erdmann, Arch. Pharm. 1894, 232. 21.)

Calcium fluoboride, $\text{Ca}(\text{BF}_4)_2$.

Decomp. by H_2O , with formation of a sol. acid salt and an insol. basic salt. (Berzelius.)

Cupric fluoboride, $\text{Cu}(\text{BF}_4)_2$.

Deliquescent, and very sol. in H_2O . (Berzelius.)

Lead fluoboride, $\text{Pb}(\text{BF}_4)_2$.

Sol. in H_2O . Decomp. by boiling with H_2O or alcohol into an acid soluble, and a basic insoluble salt. (Berzelius.)

Lithium fluoboride, LiBF_4 .

Hygroscopic. Easily sol. in H_2O . (Berzelius.)

Magnesium fluoboride.

Easily sol. in H_2O . (Berzelius.)

Potassium fluoboride, KBF_4 .

Sol. in 223 pts. H_2O at 20° . (Stolba.)

Sol. in 70.4 pts. cold H_2O . (Berzelius.)

Sol. in 15.94 pts. H_2O at 100° . (Stolba.)

1.43 pts. are sol. in 100 pts. H_2O at 20° . (Erdmann, Arch. Pharm. 1894, 232. 21.)

Not more sol. in $\text{NH}_4\text{OH} + \text{Aq}$ than in H_2O ; sol. in hot KOH , NaOH , or $\text{M}_2\text{CO}_3 + \text{Aq}$. (Berzelius.) More sol. in $\text{NH}_4\text{Cl} + \text{Aq}$. (Rose, Pogg. 80. 276.) Insol. in 20% $\text{KC}_2\text{H}_3\text{O}_2 + \text{Aq}$. (Stromeyer.) Insol. in cold, sl. sol. in boiling alcohol.

Rubidium fluoboride, RbBF_4 .

100 pts. H_2O dissolve 0.55 pt. at 20° , and 1.0 pt. at 100° . (Godeffroy, B. 9. 1337.)

0.55 pts. are sol. in 100 pts. H_2O at 20° . (Erdmann, Arch. Pharm. 1894, 232. 21.)

Sodium fluoboride, NaBF_4 .

Easily sol. in H_2O . Very sl. sol. in alcohol. (Berzelius.)

Yttrium fluoboride.

Sol. in H_2O with excess of acid. (Berzelius.)

Zinc fluoboride, $\text{Zn}(\text{BF}_4)_2$.

Deliquescent. Sol. in H_2O . (Berzelius.)

Fluoboric acid, HBF_4 .

See Fluoborhydric acid.

$\text{H}_4\text{B}_2\text{O}_7$, 3HF and $\text{H}_4\text{B}_2\text{O}_5$, 2HF (?). Fume on air, and are decomp. with H_2O . (Landolph, B. 12. 1583.)

HBO_2 , 3HF. Decomp. by H_2O . (Berzelius, Pogg. 59. 644.)

Is either a mixture, or a solution of HBO_2 in HF, and is decomp. by distillation, and the salts are decomp. by recrystallisation. (Basarow, C. R. 78. 1698.)

Potassium fluoborate, $\text{K}_2\text{B}_2\text{O}_5\text{F}_2$ (?).

Sl. deliquescent. Scarcely sol. in boiling alcohol. (Schiff, A. Suppl. 5. 175.)

See Boron trioxide potassium fluoride, B_2O_3 , 2KF.

Fluochromic acid.**Ammonium fluochromate, $\text{NH}_4\text{CrO}_5\text{F}$.**

Sol. in H_2O . (Varenne, C. R. 91. 989.)

Potassium fluochromate, KCrO_5F .

Efflorescent. Sol. in H_2O , with gradual decomp. (Streng, A. 129. 225.)

Fluocolumbic acid.

See also Fluoxycolumbic acid.

Ammonium fluocolumbate fluoxycolumbate, $(\text{NH}_4)_2\text{CbF}_3$, 2CbOF_3 , NH_4F .**Cadmium fluocolumbate, $\text{Cd}_5\text{H}_5\text{Cb}_3\text{F}_{30} + 28\text{H}_2\text{O}$.**

Insol. in, and decomp. by H_2O . (Streng.)

Cobalt fluocolumbate, $\text{Co}_5\text{H}_5\text{Cb}_3\text{F}_{30} + 28\text{H}_2\text{O}$.

Insol. in, and decomp. by H_2O . (Streng.)

Copper fluocolumbate, $\text{Cu}_2\text{HCBF}_{10} + 9\text{H}_2\text{O}$.

Insol. in, and decomp. by H_2O .

Ferrous fluocolumbate, $\text{Fe}_3\text{H}_4\text{Cb}_2\text{F}_{20} + 19\text{H}_2\text{O}$.

As above.

Manganous fluocolumbate, $\text{Mn}_5\text{H}_5\text{Cb}_3\text{F}_{30} + 28\text{H}_2\text{O}$.**Mercuric fluocolumbate, $\text{Hg}_3\text{CbF}_{11} + 8\text{H}_2\text{O}$.**

As above.

Nickel fluocolumbate, $\text{Ni}_3\text{H}_4\text{Cb}_2\text{F}_{20} + 19\text{H}_2\text{O}$.

As above.

Potassium fluocolumbate, K_2CbF_7 .

Decomp. by solution in H_2O . (Marignac A. ch. (4) 8. 34.)

Rubidium fluocolumbate, Rb_2CbF_7 .

Sol. in H_2O and $\text{HF} + \text{Aq}$ Insol in alcohol. (Pennington, J. Am. Chem. Soc. 1896, 18. 58.)

Zinc fluocolumbate, $\text{Zn}_5\text{H}_5\text{Cb}_3\text{F}_{30} + 28\text{H}_2\text{O}$.

Insol. in cold H_2O , decomp. by hot H_2O . (Santesson, Bull. Soc. (2) 24. 52.)

Fluodithionic acid.**Cæsium monofluodithionate,**

Easily sol. in H_2O with decomp.

Sol. in HF; very unstable. (Weinland, Z. anorg. 1899, 21. 66.)

Potassium difluodithionate, $\text{S}_2\text{O}_5\text{F}_2\text{K}_2 + 3\text{H}_2\text{O}$.

Easily sol. in H_2O with decomp.

Sol. in HF; very unstable. (Weinland.)

Rubidium difluodithionate, $\text{S}_2\text{O}_5\text{F}_2\text{Rb}_2 + 3\text{H}_2\text{O}$.

Easily sol. in H_2O with decomp.

Sol. in HF ; very unstable. (Weinland.)

Fluogermanic acid, H_2GeF_6 .

Known only in solution. (Winkler, J. pr. (2) 36. 177.)

Potassium fluogermanate, K_2GeF_6 .

Sol. in 173.98 pts. H_2O at 18° . (Winkler.)

Sol. in 184.61 pts. H_2O at 18° . (Kruss and Nilson, B. 20. 1696.)

Sol. in 34.07 pts. H_2O at 100° . (Winkler.)

Sol. in 38.76 pts. H_2O at 100° . (Kruss and Nilson.)

Insol. in alcohol.

Difluoiodic acid.

Ammonium difluoiodate, $\text{NH}_4\text{IO}_2\text{F}_2$.

Like K salt.

Sol. in 40% $\text{HF} + \text{Aq.}$ (Weinland, Z. anorg. 1899, 20. 30.)

Sol. in H_2O . Easily decomp. (Weinland, B. 1897, 30. 868.)

Cæsium difluoiodate, CsIO_2F_2 .

(Weinland, Z. anorg. 1899, 20. 36.)

Cæsium hydrogen difluoiodate,

$\text{CsIO}_2\text{F}_2, \text{HIO}_2\text{F}_2 + 2\text{H}_2\text{O}$.

Efflorescent. Sol. in H_2O with decomp. (Weinland, Z. anorg. 1899, 22. 257.)

Potassium difluoiodate, KIO_2F_2 .

Sol. in H_2O . Decomp. in moist air. (Weinland, B. 1897, 30. 867.)

Decomp. in air. Sol. in H_2O with decomp. Sol. without decomp. in 40% $\text{HF} + \text{Aq.}$ (Weinland, Z. anorg. 1899, 20. 31.)

Rubidium difluoiodate, RbIO_2F_2 .

Resembles K salt. Sol. in $\text{HF} + \text{Aq.}$ (Weinland, Z. anorg. 1899, 20. 35.)

Rubidium hydrogen difluoiodate,

$\text{RbIO}_2\text{F}_2, \text{HIO}_2\text{F}_2 + 2\text{H}_2\text{O}$.

Sol. in 40–60% $\text{HF} + \text{Aq.}$ (Weinland, Z. anorg. 1899, 22. 260.)

Sodium difluoiodate, NaIO_2F_2 .

Decomp. by H_2O . (Weinland, B. 1897, 30. 868.)

Sol. in HF . (Weinland, Z. anorg. 1899, 20. 37.)

Fluomanganic acid, H_2MnF_6 .

Decomp. by H_2O . Sol. in alcohol and ether in absence of H_2O . (Nicklès, C. R. 65. 107.)

Ammonium fluomanganate, $(\text{NH}_4)_2\text{MnF}_6$.

More sol. than the K salt. (Nicklès, C. R. 65. 107.)

True composition is $(\text{NH}_4)_4\text{Mn}_2\text{F}_{10} = 4\text{NH}_4\text{F}, \text{Mn}_2\text{F}_6$. (Christensen, J. pr. (2) 34. 41.)

Cobalt fluomanganate, $2\text{CoF}_3, \text{Mn}_2\text{F}_6 + 8\text{H}_2\text{O}$.

Sol. in H_2O . (Christensen.)

Nickel fluomanganate, $2\text{NiF}_2, \text{Mn}_2\text{F}_6 + 8\text{H}_2\text{O}$.

Sol. in H_2O . (Christensen.)

Potassium fluomanganate, K_2MnF_6 .

Difficultly sol. in H_2O . Decomp. by much H_2O . (Nicklès, C. R. 65. 107.)

Composition is $\text{K}_4\text{Mn}_2\text{F}_{10} = 4\text{KF}, \text{Mn}_2\text{F}_6$. Also with $2\text{H}_2\text{O}$. (Christensen, J. pr. (2) 34. 41.)

Decomp. by H_2O . Sol. in HCl , H_2SO_4 and HNO_3 with decomp. Can be recryst. from 40% $\text{HF} + \text{Aq.}$ Insol. in acetic acid. (Weinland and Lauenstein, Z. anorg. 1899, 20. 41.)

Rubidium fluomanganate, $\text{Rb}_2\text{MnF}_6 + 2\text{H}_2\text{O}$.

As the K salt. (Weinland and Lauenstein, Z. anorg. 1899, 20. 44.)

Silver fluomanganate, $\text{Ag}_2\text{Mn}_2\text{F}_8 + 14\text{H}_2\text{O}$.

(Christensen, J. pr. (2) 34. 41.)

Sodium fluomanganate, $4\text{NaF}, \text{Mn}_2\text{F}_6$.

Decomp. by much H_2O . (Christensen.)

Zinc fluomanganate, $2\text{ZnF}_2, \text{Mn}_2\text{F}_6 + 8\text{H}_2\text{O}$.

Sol. in H_2O . (Christensen.)

Fluomolybdic acid.

See Fluoxyhypomolybdic, and Fluoxymolybdic acids.

Fluopalladous acid.

Potassium fluopalladite,

Sl. sol. in H_2O .

Sodium fluopalladite.

Sl. sol. in H_2O . (Berzelius.)

Fluoperboric acid.

Ammonium fluoperborate,

$\text{NH}_4\text{O}(\text{O}(\text{F})\text{O}(\text{F})\text{O}(\text{F})\text{O})\text{NH}_4$.

Ppt. Insol in ether. (Petrenko, C. C. 1902, I. 1191.)

Potassium fluoperborate, $\text{K}_4\text{B}_4\text{F}_{40} + \text{H}_2\text{O}$.

Dry salt is rather stable.

Easily sol. in H_2O . Aqueous solution decomp. rapidly when warmed; at ordinary

temp. the decomp. proceeds slowly. Insol. in alcohol. (Melikoff, B. 1899, **32**, 3350.)

$\text{KOOB(F)OBF(F)OK} + 1\frac{1}{2}\text{H}_2\text{O}$. Ppt. Insol. in ether. (Petrenko, C. C. 1902, I. 1191, J. Russ. phys. chem. Soc **34**, 37.)

Fluoperuranic acid.

Potassium fluoperurate, $\text{K}_4\text{U}_4\text{F}_{16}\text{O}_{15} + 4\text{H}_2\text{O} = 3\text{UO}_4\text{KF}, \text{UO}_3\text{F}_2, \text{KF} + 4\text{H}_2\text{O}$.

Ppt. (Lordkipanidse, C. C. 1900, II. 525.)

Sodium fluoperurate, $\text{UO}_4\text{NaF} + 5\text{H}_2\text{O}$.

Ppt. (Lordkipanidse, C. C. 1900, II. 525.)

Fluophosphamide, $\text{PF}_3(\text{NH}_2)_2$.

Sol. in H_2O . (Poulenc, A. ch. (6) **24**, 566.)

Fluophosphoric acid.

Monocæsium monofluophosphate, $\text{P}(\text{OH})_3(\text{OCs})\text{F}$.

Like the K salt. (Weinland, Z. anorg. 1899, **21**, 48.)

Monopotassium monofluophosphate, $\text{P}(\text{OH})_3(\text{OK})\text{F}$.

Sol. in 40% HF+Aq, decomp. in the air. (Weinland, Z. anorg. 1899, **21**, 44.)

Potassium monofluophosphate, $\text{KHF}_2\text{PO}_3 + \text{H}_2\text{O}$.

Decomp. by H_2O ; unstable. (Weinland, B. 1898, **31**, 124-125.)

Monorubidium monofluophosphate, $\text{P}(\text{OH})_3(\text{ORb})\text{F}$.

Sol. in 40% HF+Aq. (Weinland, Z. anorg. 1899, **21**, 47.)

Rubidium monofluophosphate, $\text{RbHF}_2\text{PO}_3 + \text{H}_2\text{O}$.

Decomp. by H_2O . (Weinland, B. 1898, **31**, 124.)

Fluoplatinic acid.

Ammonium fluoplatinate.

Secomp by H_2O to a sol. acid, and an insol. basic salt. Insol. in alcohol. (Berzelius.)

Potassium fluoplatinate.

Deliquescent. Insol. in alcohol. Decomp. by H_2O . (Berzelius.)

Sodium fluoplatinate.

Decomp. by H_2O . (Berzelius.)

Fluor- and Fluoro-

See Fluor-

Fluorhydric (Hydrofluoric) acid, HF or H_2F_2 .

Attracts H_2O from air with great avidity. Very sol. in H_2O with evolution of much heat. Sat. solution has sp gr. 1.25. (H. Davy.)

On boiling the aqueous solution an acid of constant composition is obtained, which boils at 120° , has sp gr. 1.15, and contains 35.37% HF (Bineau, A. ch. (3) **7**, 257.) The residual acid after boiling contains 36 to 38% HF, and by standing over CaO gives off HF until an acid containing 32.5 to 32.7% HF is formed. Weaker acids increase their strength to 32.2 to 32.4% HF, while an acid containing 32.5% HF remains unchanged. (Roscoe, A. **116**, 218.)

Does not attack gutta-percha. Sol. in H_2SO_4 .

Sp. gr of HF+Aq at 15° .

Sp gr	% HF	Sp gr	% HF	Sp gr	% HF

7.75	1.028
15 85	1.058
24 47	1.087
29.83	1.103

(Hill.)

Aq. solution of sp. gr. 1.138 at 18° contains 43.2% HF and has a constant bpt. of 111° at 750 mm. (Deussen, Z. anorg. 1906, 49. 297.)

The strongest acid that can be obtained by distillation contains 48.17% HF and boils at 125–125.5°. (Gore.)

Fluorides.

The alkali fluorides, also AgF and SnF₂, are sol. in H₂O, the fluorides of Fe, Sr, and Cd are sl. sol.; the others are insol. in H₂O. Most fluorides are sol in acids, especially HF +Aq.

Insol. in liquid NH₃. (Franklin, Am. Ch. J 1898, 20. 822.)

See under each element.

Fluorine, F₂.

Decomposes H₂O and all organic solvent with great violence. (Moissan, C. R. 103. 202 and 256.)

Liquified at –185° to a yellowish liquid which does not dissolve glass nor ignite cooled Si, B, C, S, P, or Fe. (Moissan, C. R. 1897, 124. 1202–1204.)

Fluomolybdic acid.

Ammonium fluomolybdate, (NH₄)MoF₄+H₂O.

Somewhat more sol. in H₂O than the K salt. Hydrolysed by H₂O. (Rosenheim, Z. anorg. 1905, 46. 321.)

(NH₄)₂Mo₂F₇+2H₂O. (Rosenheim.)

Potassium fluomolybdate, KMoF₄+H₂O.

Nearly insol. in H₂O. (Rosenheim.)

Fluoselenic acid.

Ammonium monofluoselenate,

SeO₃(OH)F(NH₄)₂.

Not hygroscopic.

Easily sol. H₂O with decomp.

Sol. in HF. (Weinland, Z. anorg. 1899, 21. 58.)

Tripotassium difluodiselenate, Se₂O₇F₂K₃H+H₂O.

Decomp. in the air; sol. in H₂O with decomp.; sol. in HF. (Weinland.)

Trirubidium difluodiselenate, Se₂O₇F₂Rb₃H+H₂O.

Decomp. in the air; sol. in H₂O with decomp.; sol. in HF. (Weinland, Z. anorg. 1899, 21. 57.)

Fluosilicic acid, H_2SiF_6 .

Sp gr. of $\text{H}_2\text{SiF}_6 + \text{Aq}$ at 17.5° (H_2O at $17.5^\circ = 1.000$).

$\% \text{H}_2\text{SiF}_6$	Sp gr	$\% \text{H}_2\text{SiF}_6$	Sp gr
2	1.0161	20	1.1748
4	1.0324	22	1.1941
6	1.0491	24	1.2136
8	1.0661	26	1.2335
10	1.0834	28	1.2537
12	1.1011	30	1.2742
14	1.1190	32	1.2951
16	1.1373	34	1.3162
18	1.1559		

(Stolba, J. pr 90. 193.)

+ $2\text{H}_2\text{O}$. Very deliquescent, and sol. in H_2O . (Kessler, C. R. 90. 1285) Solution decomp. into HF and SiF_4 on evaporation, when it becomes concentrated.

Fluosilicates.

Most of the fluosilicates are sol. in H_2O , but the alkali salts (especially K) and the Ba salt are only sl. sol. in H_2O .

Aluminum fluosilicate, $\text{Al}_2(\text{SiF}_6)_3$.

Easily sol. in H_2O . After evaporating to dryness, the residue is slowly but completely sol. in H_2O . (Deville, A. ch (3) 61. 327.)

Insol. in acetone. (Naumann, B. 1904, 37. 4328.)

Aluminum fluosilicate silicate, $\text{Al}_2\text{SiF}_{10}$, $5\text{Al}_2\text{SiO}_5$.

Min. *Topaz*. Insol. in acids.

Ammonium fluosilicate, $(\text{NH}_4)_2\text{SiF}_6$.

Sol. in 5.38 pts. H_2O at 17.5° to form a solution of 1.0961 sp. gr.; sol. in 1.8 pts. hot H_2O ; sol. in 45.5 pts. alcohol of 31%. (Stolba, C. C. 1877. 418.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329; Eidmann, C. C. 1899, II. 1014.)

$3\text{NH}_4\text{F}, \text{SiF}_4 = (\text{NH}_4)_2\text{SiF}_6, \text{NH}_4\text{F}$. Sol. in H_2O . (Marignac, Ann. Min. (5) 15. 221.)

Barium fluosilicate, BaSiF_6 .

Sol. in 3802 pts. cold H_2O . (Fresenius, A. 59. 120.)

Sol. in 731 pts. H_2O at 17.5° ; in 3315 pts. at 21° ; in 1175 pts. at 100° . (Stolba, J. pr. 96. 22.)

Sol. in 640-733 pts. H_2O containing a little HCl . (Fresenius.)

488 pts. $\text{HCl} + \text{Aq}$ containing 4.25% HCl dissolve 1 pt. at 22° . (Stolba.)

More sol. in $\text{HNO}_3 + \text{Aq}$ than in H_2O . (Fresenius.)

272 pts. $\text{HNO}_3 + \text{Aq}$, containing 8% N_2O_5 , dissolve 1 pt. at 22° . (Stolba.)

1 pt. BaSiF_6 dissolves in 428 pts. sat. $\text{NH}_4\text{Cl} + \text{Aq}$; in 589 pts. sat. $\text{NH}_4\text{Cl} + \text{Aq} + 2$ vols. H_2O . (Mallet, Sill. Am. J. (2) 28. 48.)

1 pt. BaSiF_6 dissolves in 306 pts. sat. $\text{NH}_4\text{Cl} + \text{Aq}$ at 22° ; in 361 pts. 15% solution of NH_4Cl , in 563 pts. sat. boiling $\text{NaCl} + \text{Aq}$; in 349 pts. 10% solution of NaCl at boiling temp; in 2185 pts. 10% solution of NaCl at 20° ; in 1140 pts. 5% solution of NaCl at 20° . (Stolba.)

Nearly absolutely insol. in alcohol. (Fresenius.)

Solubility in a mixture of H_2O , alcohol (96%), $\text{HCl} + \text{Aq}$ (20%), $\text{H}_2\text{SiF}_6 + \text{Aq}$ (3.7%).

1 pt. BaSiF_6 is sol. in pts. of solutions of given composition.

H_2O	Alcohol	$\text{HCl} + \text{Aq}$	$\text{H}_2\text{SiF}_6 + \text{Aq}$	BaSiF_6
50	50	0	0	37,219
74.1	25	0 9	0	5,263
70 8	25	4. 2	0	2,860
77 95	20	0 9	1. 15	39,061
73 0	25	0. 9	1 1	70,679
97. 09	0	1 25	1 66	3,247
75. 0	25	0	0	16,914

(Fresenius, Z. anal. 29. 143.)

Cadmium fluosilicate, $\text{CdSiF}_6 + 6\text{H}_2\text{O}$.

Extremely sol. in H_2O . Easily sol. in 50% alcohol. (Engelskirchen, Dissert. 1903.)

Cæsium fluosilicate, Cs_2SiF_6 .

Sol. in 166 pts. H_2O at 17° , and much less h2t H_2O Insol in alcohol. (Preis, J. pr. 103. 410.)

Calcium fluosilicate, $\text{CaSiF}_6 + 2\text{H}_2\text{O}$.

Sl. sol. in, and partly decomp. by H_2O . Sol. in HF and $\text{HCl} + \text{Aq}$. Sol. in fluosilicic acid without decomp. Easily sol. in 60% alcohol. (Fleischer.)

Cerium fluosilicate.

Very difficulty sol in H_2O , acetic, or fluosilicic acids. Insol. in alcohol. (Stolba, C. C. 1874. 130.)

Chromium fluosilicate.

Deliquescent. (Berzelius.)

Efflorescent Sol. in H_2O . (Berlin.)

Cobaltous fluosilicate, $\text{CoSiF}_6 + 6\text{H}_2\text{O}$.

Easily sol. in H_2O . (Berzelius.)

Cuprous fluosilicate, Cu_2SiF_6 .

Insol. in H_2O . (Berzelius, Pogg. 1. 199.)

Cupric fluosilicate, $\text{CuSiF}_6 + 6\text{H}_2\text{O}$.

Deliquescent in moist, efflorescent in dry air.

Sol. in 0.428 pt. H_2O at 17° . Sp. gr. of solution sat. at $17^\circ = 1.6241$.

Sol. in 17 5 pts. alcohol of 62 vol. % at 20° ; in 150 pts. of 85% at 20° ; in 617 pts. of 92% at 20° . (Stolba, J. pr. 102. 7.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)
Contains $6\frac{1}{2}$ H₂O (Stolba.)
+ $5\frac{1}{2}$ H₂O. (Knop and Wolf.)

Cupric fluosilicate phosphate, CuSiF₆, Cu₃(PO₄)₂.

Insol. in H₂O, but easily sol. in dil. HCl + Aq. (Thorpe and Rodger, Chem. Soc. 55. 320.)

Glucinum fluosilicate.

Known only in solution.

Iron (ferrous) fluosilicate, FeSiF₆ + 6H₂O.

Easily sol. in H₂O. (Berzelius.)

Iron (ferric) fluosilicate, Fe₂(SiF₆)₃.

Sol. in H₂O. (Berzelius.)

Lead fluosilicate, PbSiF₆ + 2H₂O.

Deliquescent. Easily sol. in H₂O.

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

+ 4H₂O. (Marignac)

Lithium fluosilicate, Li₂SiF₆ + 2H₂O.

100 pts. H₂O at 17° dissolve 73 pts. crystalline salt. (Marignac.)

100 pts. cold H₂O dissolve 52.6 pts. crystals.

Sol. in dil. alcohol. (Stolba, J. pr. 91. 456.)

100 pts. alcohol of 46 vol. % dissolve about 4 pts., and 100 pts. alcohol of 79 vol. % dissolve about 0.4 pt. crystals. (Stolba, Z. anal. 3. 311.)

Insol. in ether or benzene.

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Magnesium fluosilicate, MgSiF₆ + 6H₂O.

Efflorescent. Sol. in 1534 pts. cold H₂O, forming a solution of 1.235 sp. gr. at 17.5°. Separates out SiO₂ on warming, which nearly all redissolves on cooling. (Stolba, C. C. 1877. 578.)

Magnesium fluosilicate silicate, Mg₃Si₂F₁₃, xMg₃Si₂O₉.

Min. *Humite*; *Chondrodite*. Gelatinises with HCl, or H₂SO₄ + Aq.

Manganous fluosilicate, MnSiF₆ + 6H₂O.

Sol. in H₂O. (Marignac, J. pr. 83. 202.)

100 pts. dissolve in 71.4 pts. H₂O at 17.5°, and sp. gr. of solution = 1.44825. Much more sol. in hot H₂O, and less sol. in alcohol, the stronger the alcohol. (Stolba, C. C. 1883. 292.)

Mercurous fluosilicate, Hg₂SiF₆.

Sl. sol. in H₂O without decomp (Lemaire, C. C. 1897, I. 1046.)

+ 2H₂O Sl. sol. in H₂O More easily sol. in acidified H₂O, but precipitated by HCl + Aq. (Berzelius.)

Mercuric fluosilicate, basic, HgSiF₆, HgO + 3H₂O.

Decomp. by H₂O, but sol. in weakest acids (Berzelius, Pogg. 1. 200.)

Mercuric fluosilicate, HgSiF₆ + 6H₂O

Deliquescent, and easily sol. in H₂O. (Finkener, Pogg. 111. 246.)

Nickel fluosilicate, NiSiF₆ + 6H₂O.

Easily sol. in H₂O. (Marignac, Ann. Min. (5) 15. 262.)

Potassium fluosilicate, K₂SiF₆.

Sol. in 833.1 pts. H₂O at 17.5°, and 104.8 pts. at 100°. (Stolba, J. pr. 103. 396.) Sol. in 3800 pts. cold, and more easily sol. in hot H₂O. (Fresenius.)

More sol. in HCl + Aq than in H₂O.

Sol. in 337 pts. HCl + Aq of 26.5% at 14°; in 307 pts. of 25.7% at 15°; in 340 pts. of 14.1% at 14°; in 303 pts. of 13.6% at 15°; in 327 pts. of 9.6% at 14°; in 313 pts. of 9.2% at 15°; in 376 pts. of 2.7% at 14°; in 319 pts. of 2.4% at 15°; in 409 pts. of 1.8% at 14°. (Stolba, l. c.)

Sol. in 428 pts. sat., and 589 pts. dil. NH₄Cl + Aq. (Mallet.)

Much less sol. in K₂SO₄, KNO₃, or KCl + Aq, but more sol. in NH₄Cl + Aq than in H₂O. (Stolba.)

Sol. in 24,066 pts. K₂SO₄ + Aq containing 9.92% K₂SO₄ at 17°; in 17,858 pts. containing 6% at 18°; in 19,530 pts. containing 5% at 17°; in 10,721 pts. containing 1% at 17°.

Sol. in 125,000 pts. KNO₃ + Aq containing 18.4% KNO₃ at 15°; in 43,478 pts. containing 8.7% at 15°; in 1735 pts. containing 8.8% at 100°; in 35,814 pts. containing 4.3% at 15°; in 10,203 pts. containing 1.00% at 15°.

Sol. in 40,070 pts. KCl + Aq containing 25% KCl at 17°; in 38,352 pts. containing 18.4% at 17°; in 41,254 pts. containing 13.4% at 14°; in 24,032 pts. containing 6.7% at 12°; in 1200 pts. containing 0.65% at 17°; in 1095 pts. containing 0.45% at 18°.

Sol. in 358 pts. NH₄Cl + Aq containing 26.3% NH₄Cl at 17°; in 306 pts. containing 15% at 15°; in 339 pts. containing 10% at 15°; in 436 pts. containing 5% at 15°. (Stolba, J. pr. 103. 306.)

Insol. in liquid CO₂. (Büchner, Z. phys. Ch. 1906, 54. 674.)

Insol. in liquid NH₃. (Gore, Am. ch. J. 1898, 20. 829.)

Completely pptd. from aqueous solution by an equal vol. of alcohol.

Sl. sol. in benzonitrile. (Naumann, B. 1914, **47**. 1369.)
 Insol. in methyl acetate. (Naumann, B. 1909, **42**. 3790.)

Rubidium fluosilicate, Rb_2SiF_6 .

Sol. in 625 pts. H_2O at 20° , and 73.05–74.5 pts. at 100° . More sol. in acidified water. Insol. in alcohol. (Stolba, J. pr. **101**. 1.)
 Insol. in H_2O . (Eggeling, Z. anorg. 1905, **46**. 175.)
 Less sol. in H_2O than K_2SiF_6 . (Gossner, Zeit. Kryst. 1904, **38**. 149.)

Silver fluosilicate, $\text{Ag}_2\text{SiF}_6 + 4\text{H}_2\text{O}$

Deliquescent. Easily sol. in H_2O . (Marignac, Ann. Min. (5) **15**. 221.)

Sodium fluosilicate, Na_2SiF_6 .

Much more sol. in H_2O than K_2SiF_6 , especially in hot H_2O . Addition of acid does not increase solubility. (Berzelius.)
 Sol. in 153.3 pts. H_2O at 17.5° , and 40.66 pts. at 100° . Easily forms supersaturated solutions. (Stolba, Z. anal. **11**. 199.)

Much less sol. in $\text{NaCl} + \text{Aq}$ than in H_2O . (Stolba, J. pr. 1865 (1) **96**. 26.)

Precipitated completely from aqueous solution by alcohol. (Rose.)

Insol. in methyl acetate. (Naumann, B. 1909, **42**. 3790.)

Strontium fluosilicate, $\text{SrSiF}_6 + 2\text{H}_2\text{O}$.

Sol. in cold H_2O , but decomp. somewhat on heating. Sol. in 31.06 pts. H_2O . (Fresenius.)

Easily sol. in acidified H_2O without decomp. Sol. in alcohol.

Solubility in a mixture of H_2O , alcohol (96%), $\text{HCl} + \text{Aq}$ (20%), $\text{H}_2\text{SiF}_6 + \text{Aq}$ (3.7%).
 1 pt. SrSiF_6 is sol. in pts. of solutions of given composition.

H_2O	Alcohol	$\text{HCl} + \text{Aq}$	$\text{H}_2\text{SiF}_6 + \text{Aq}$	SrSiF_6
50	50	0	0	15.29
74.1	25	0	0	82.93
70.8	25	4.2	0	50.9
77.95	20	0.9	1.15	55.0
73	25	0.9	1.1	82.97
75	25	0	0	147.4
95.24	0	2.04	2.72	7.3

(Fresenius, Z. anal. **29**. 143.)

Thallous fluosilicate, $\text{Tl}_2\text{SiF}_6 + 2\text{H}_2\text{O}$.

Very easily sol. in H_2O . (Kuhlmann.)

Thorium fluosilicate, $\text{Th}(\text{OH})_2\text{SiF}_6$ (?). (Cleve.)

Tin (stannic) fluosilicate, $\text{SnF}_4, \text{SiF}_4$.

Very easily sol. in H_2O . (Berzelius.)

Uranyl fluosilicate.

Very sl. sol. in acids. (Berzelius.)

Sol. in alcohol. (Stolba, Z. anal. **3**. 71.)

Vanadium fluosilicate.

Deliquescent. Sol. in H_2O . (Guyard, Bull. Soc. (2) **25**. 352.)

Yttrium fluosilicate.

Insol. in pure, sol. in acidified H_2O . (Berzelius.)

Zinc fluosilicate, $\text{ZnSiF}_6 + 6\text{H}_2\text{O}$.

Very easily sol. in H_2O . (Berzelius.)

Zirconium fluosilicate.

Sol. in H_2O . Solution clouds up on boiling. (Berzelius.)

Fluostannic acid.

Ammonium fluostannate, $(\text{NH}_4)_2\text{SnF}_6$.

Sol. in H_2O . (Marignac, Ann. Min. (5) **15**. 224.)

$4\text{NH}_4\text{F}, \text{SnF}_4$. Sol. in H_2O . (Marignac.)

Barium fluostannate, BaSnF_6 .

Slowly sol. in H_2O .

$+ 3\text{H}_2\text{O}$. Sol. in 18 pts. H_2O at 18° . (Marignac, Ann. Min. (5) **15**. 246.)

Decomp. by warming with H_2SO_4 with evolution of HF . (Emich, M. 1904, **25**. 1912.)

Calcium fluostannate, $\text{CaSnF}_6 + 2\text{H}_2\text{O}$.

Sol. in H_2O . (Marignac, Ann. Min. (5) **15**. 250.)

Cadmium fluostannate, $\text{CdSnF}_6 + 6\text{H}_2\text{O}$.

Sol. in H_2O . (Marignac.)

Cobaltous fluostannate, $\text{CoSnF}_6 + 6\text{H}_2\text{O}$.

(Gossner, Zeit. Kryst. 1907, **42**. 482.)

Cupric fluostannate, $\text{CuSnF}_6 + 4\text{H}_2\text{O}$.

Not deliquescent. (Marignac, Ann. Min. (5) **15**. 291.)

Lithium fluostannate, $\text{Li}_2\text{SnF}_6 + 2\text{H}_2\text{O}$.

Sol. in H_2O . (Marignac, Ann. Min. (5) **15**. 242.)

Magnesium fluostannate, $\text{MgSnF}_6 + 6\text{H}_2\text{O}$.

Not deliquescent. Sol. in H_2O . (Marignac, Ann. Min. (5) **15**. 256.)

Manganous fluostannate, $\text{MnSnF}_6 + 6\text{H}_2\text{O}$.

Slowly efflorescent. (Marignac.)

Nickel fluostannate, $\text{NiSnF}_6 + 6\text{H}_2\text{O}$

Sol. in H_2O . (Marignac, Ann. Min. (5) **15**. 262.)

Potassium fluostannate, $K_2SnF_6 + H_2O$.

Two modifications—(a) *Thin plates*. Sol in 2.3 pts. H_2O at 100° , and in 15–16 pts. at 18° . (Marignac.)

(b) *Octahedra*. Sol. in 3 pts. H_2O at 100° , and 27 pts. at 18° . (Marignac.)

Sol. in hot H_2O . Can be cryst. from hot H_2O . With conc. H_2SO_4 , HF is evolved (Emich, M. 1904, 25. 911.)

Potassium hydrogen fluostannate, $3KF, HF, SnF_4$.

Sol. in H_2O . (Marignac.)

Silver fluostannate, $Ag_3SnF_6 + 4H_2O$.

Sl. deliquescent. Easily sol in H_2O . (Marignac.)

Sodium fluostannate, Na_4SnF_6 .

Sol. in 18–19 pts. H_2O at 20° . (Marignac.)

Strontium fluostannate, $SrSnF_6 + 2H_2O$.

Sol. in 5.5 pts. H_2O at 18° . (Marignac.)

Zinc fluostannate, $ZnSnF_6 + 6H_2O$.

Sol in H_2O (Marignac.)

Fluosulphonic acid, HSO_3F .

See Sulphuryl hydroxyl fluoride.

Ammonium fluosulphonate, FSO_3NH_4 .

Easily sol. in H_2O from which it can be cryst.

Sol. in ethyl alcohol, more sol. in methyl alcohol. Can be cryst. from abs. alcohol. (Traube, B. 1913, 46. 2528.)

Sodium fluosulphonate, FSO_3Na .

Hydroscopic.

Sol. in alcohol and acetone. (Traube.)

Fluosulphuric acid.

Tricæsium difluodisulphate, $S_2O_7F_2Cs_3H + H_2O$.

As the K salt. (Weinland, Z. anorg. 1899, 21. 53.)

Tripotassium difluodisulphate, $S_2O_7F_2K_3H + H_2O$.

Sol. in HF ; quite stable in air; sol. in H_2O with decomp. (Weinland, Z. anorg. 1899, 21. 51.)

Tetrarubidium difluodisulphate, $S_2O_7R_2Tb_3H + H_2O$.

Sol. in HF . (Weinland, Z. anorg. 1899, 21. 53.)

Fluotantallic acid.

Ammonium fluotantalate, $(NH_4)_2TaF_7$.

Very sol. in H_2O . (Marignac, A. ch. (4) 9. 272.)

$(NH_4)_3TaF_8$. (Balke, J. Am. Chem. Soc. 1905, 27. 1151.)

Cæsium fluotantalate, $CsTaF_6$.

Can be recryst. from $HF + Aq$. (Balke.)

Cs_2TaF_7 . Can not be recryst. from H_2O as it tends to go into CsF, TaF_5 . (Balke, J. Am. Chem. Soc. 1905, 27. 1151.)

$15CsF, TaF_5$. Sl. sol. in H_2O . (Pennington, J. Am. Chem. Soc. 1896, 18. 59.)

Calcium fluotantalate.

Difficulty sol. in H_2O (Berzelius.)

Cupric fluotantalate, $CuTaF_7 + 4H_2O$

Deliquescent. Easily sol. in H_2O (Marignac, A. ch. (4) 9. 294)

Lead fluotantalate.

Difficulty sol in H_2O (Berzelius.)

Lithium fluotantalate, $LiF, TaF_5 + 2H_2O$.

Can be recryst. from conc. HF . (Balke, J. Am. Chem. Soc. 1905, 27. 1143.)

Potassium fluotantalate, K_2TaF_7 .

Sl. sol. in cold, much more easily in hot H_2O . Decomposes, with formation of a white precipitate on boiling. (Berzelius.)

Much more sol. in $HF + Aq$. 1 pt. of the salt is sol. in 200 pts. H_2O containing a trace of HF , and in 150–160 pts. of H_2O containing a little more HF . (Marignac, A. ch. (4) 9. 267.)

Potassium hydrogen fluotantalate, $KF, HF, TaF_5 (?)$.

Sol. in H_2O . (Berzelius.)

Rubidium fluotantalate, Rb_2TaF_7 .

Sol. in $HF + Aq$. (Pennington, J. Am. Ch. Soc. 1896, 18. 58.)

$3RbF, 2TaF_5$. (Balke, J. Am. Chem. Soc. 1905, 27. 1151.)

Sodium fluotantalate, $3NaF, TaF_5$.

Easily sol. in H_2O .

$Na_2TaF_7 + H_2O$. Sol. in H_2O . (Marignac.)

Thallous fluotantalate, Tl_2TaF_7 .

Sol. in H_2O . On boiling the aqueous solution tantalic acid separates.

Decomp. by conc. H_2SO_4 . Difficulty sol. in cold, easily sol. in hot HF . (Ephraim. B. 1909, 42. 4461.)

Zinc fluotantalate, $ZnTaF_7 + 7H_2O$.

Very deliquescent. Sol. in H_2O . (Marignac, A. ch. (4) 9. 249.)

Fluotelluric acid.

Ammonium fluotellurate, $NH_4TeF_6 + H_2O$.

Decomp. by H_2O . (Högbom, Bull. Soc. (2) 35. 60.)

Barium fluotellurate, $\text{Ba}(\text{TeF}_6)_2 + \text{H}_2\text{O}$.
As above.

Potassium fluotellurate, KTeF_6 .

As above.

$\text{TeO}_3\text{F}_2\text{K}_2 + 3\text{H}_2\text{O}$. Stable in dry air; only sl. sol. in H_2O with decomp.; sol. in HF . (Weinland, Z. anorg. 1899, 21. 61.)

Rubidium difluotellurate, $\text{TeO}_3\text{F}_2\text{Rb}_2 + 3\text{H}_2\text{O}$.

Sl. sol. in H_2O with decomp. Sol. in HF (Weinland, Z. anorg. 1899, 21. 62.)

Fluotitanic acid.

Known only in solution as titanium hydrogen fluoride.

Ammonium fluotitanate, $(\text{NH}_4)_2\text{TiF}_6$.

Sol. in H_2O . (Marignac.)

$3\text{NH}_4\text{F}$, TiF_4 . Sol. in H_2O . (Marignac.)

Ammonium fluosequititanate, $6\text{NH}_4\text{F}$, Ti_2F_6 .

Easily sol. in H_2O . Sl. sol. in $\text{NH}_4\text{F} + \text{Aq}$. (Petersen, J. pr. (2) 40. 54.)

Insol. in $\text{NH}_4\text{F} + \text{Aq}$. (Piccini, C. R. 97. 1064.)

$4\text{NH}_4\text{F}$, Ti_2F_6 . Properties as the corresponding K salt. (Piccini, B. 18. 257 R.)

Barium fluotitanate, BaTiF_6 .

Very sl. sol. in H_2O . More easily sol. in dil. HNO_3 or HCl . (Engelskirchen, Dissert. 1903.)

$+ \frac{1}{2}\text{H}_2\text{O}$. (Emich, M. 1904, 25. 907.)

Cadmium fluotitanate, $\text{CdTiF}_6 + 6\text{H}_2\text{O}$.

Extremely sol. in H_2O . Easily sol. in 50% alcohol. (Engelskirchen, Dissert. 1903.)

Cæsium fluotitanate, Cs_2TiF_6 .

More sol. in hot than cold H_2O and much more sol. than the Rb comp. (Engelskirchen, Dissert. 1903.)

4CsF , TiF_4 . More sol. in H_2O than $\text{Cs}_{14}\text{TaF}_{20}$ and is not decomp. by pure H_2O . (Pennington, J. Am. Chem. Soc. 1896, 18. 60.)

Calcium fluotitanate, $\text{CaTiF}_6 + 3\text{H}_2\text{O}$.

Decomp. by pure H_2O . Sol. without decomp. in acidified H_2O . (Berzelius.)

Separates a precipitate with cold H_2O , which dissolves on heating. (Marignac, Ann. Min. (5) 15. 250.)

Cupric fluotitanate, $\text{CuTiF}_6 + 4\text{H}_2\text{O}$.

Sol. in pure H_2O with partial decomp.; easily and completely sol. in acidified H_2O . (Berzelius.)

Cupric fluotitanate ammonium fluoride, CuTiF_6 , $\text{NH}_4\text{F} + 4\text{H}_2\text{O}$.

Efflorescent. Easily sol. in H_2O . (Marignac, Ann. Min. (5) 15. 267.)

Cupric fluotitanate potassium fluoride, CuTiF_6 , $\text{KF} + 4\text{H}_2\text{O}$.

As the above salt. (Marignac.)

Ferrous fluotitanate, $\text{FeTiF}_6 + 6\text{H}_2\text{O}$.

Sol. in H_2O . (Weber, Pogg. 120. 287.)

Ferric fluotitanate.

Decomp. by H_2O . (Berzelius.)

Lead fluotitanate.

Easily sol. in H_2O . (Berzelius.)

Lithium fluotitanate, $\text{Li}_2\text{TiF}_6 + 2\text{H}_2\text{O}$.

Very sol. in H_2O . (Engelskirchen, Dissert. 1903.)

Magnesium fluotitanate, $\text{MgTiF}_6 + 6\text{H}_2\text{O}$.

Easily sol. in cold H_2O . (Marignac, Ann. Min. (5) 15. 257.)

Nickel fluotitanate, $\text{NiTiF}_6 + 6\text{H}_2\text{O}$.

Easily sol. in H_2O . (Weber, Pogg. 120. 282.)

Potassium fluotitanate, K_2TiF_6 .

Difficultly sol. in cold, much more easily in hot H_2O .

100 pts. H_2O dissolve at:

0° 3° 6° 10° 14° 20°

0.556 0.667 0.775 0.909 1.042 1.28 pts. K_2TiF_6 .

(Marignac, A. ch. (4) 8. 65.)

Sol. in 78.6 pts. H_2O at 21°. Sol. in acids. (Piccini, Gazz. ch. it. 1886, 16. 104.)

Sol. in 78 pts. H_2O at 20°; 9.4 pts. at 100°. By addition of small amount of HF , the solubility is increased. (Weiss and Kaiser, Z. anorg. 1910, 65. 354.)

Sol. in HF . (Marchetti, Z. anorg. 1895, 10. 66.)

$+ \text{H}_2\text{O}$. Much less sol. in H_2O in presence of KBr or KI . (Hall, J. Am. Chem. Soc. 1904, 26. 1246.)

Sol. in H_2O or HF with decomp. (Marchetti, Z. anorg. 1895, 10. 66.)

Potassium fluosesquititanate, 4KF , Ti_2F_6 .

Scarcely sol. in H_2O ; sol. in dil. acids. (Piccini, B. 18. 257 R.)

Rubidium fluotitanate, Rb_2TiF_6 .

Very sl. sol. in cold, somewhat more sol. in hot H_2O . (Engelskirchen, Dissert. 1903.)

Silver fluotitanate.

Very deliquescent. (Marignac.)

Sodium fluotitanate, Na_2TiF_6 .

Much more sol. in H_2O than the corresponding potassium salt. (Marignac, Ann. Min. (5) 15. 238.)

Sodium hydrogen fluotitanate, Na_2TiF_6 , NaHF_2 .
Sol. in H_2O . (Marignac.)

Strontium fluotitanate, $\text{SrTiF}_6 + 2\text{H}_2\text{O}$.
Sol. in cold H_2O . Solution clouds up on heating. (Marignac.)

Zinc fluotitanate, $\text{ZnTiF}_6 + 6\text{H}_2\text{O}$.
Sol. in H_2O . (Marignac, A. ch. (3) 60. 304.)

Fluovanadic acid.

Ammonium fluovanadate, $3\text{NH}_4\text{F}$, VF_3 .
Moderately sol. in H_2O . More easily sol. in dil. acids. Nearly insol. in alcohol or MF + Aq. (Petersen, J. pr. (2) 40. 52.)
 $2\text{NH}_4\text{F}$, $\text{VF}_3 + \text{H}_2\text{O}$. Easily sol. in H_2O . Sl. sol. in alcohol. (Petersen.)
 NH_4F , $\text{VF}_3 + 2\text{H}_2\text{O}$. As above. (Petersen.)

Cadmium fluovanadate, CdF_2 , $\text{VF}_3 + 7\text{H}_2\text{O}$.
Very sl. sol. in H_2O . (Piccini and Giorgis, Gazz. ch. it. 22, 1. 89.)

Cobalt fluovanadate, CoF_2 , $\text{VF}_3 + 2\text{H}_2\text{O}$.
Sol. in H_2O without decomp. (Petersen, l. c.)

Nickel fluovanadate, NiF_2 , $\text{VF}_3 + 2\text{H}_2\text{O}$.
As the Co salt. (Petersen.)

Potassium fluovanadate, 2KF , $\text{VF}_3 + \text{H}_2\text{O}$.
Sl. sol. in H_2O ; easily sol. in acids. Insol. in $\text{KF} + \text{Aq}$. (Petersen, J. pr. (2) 40. 51.)

Potassium fluovanadate fluoxyvanadate, 4KF , VF_3 , VOF_3 .
Easily sol. in H_2O , and still more easily in $\text{HF} + \text{Aq}$. Sl. sol. in $\text{KF} + \text{Aq}$. (Petersen, J. pr. (2) 40. 274.)

Sodium fluovanadate, 5NaF , $2\text{VF}_3 + \text{H}_2\text{O}$.
As the potassium salt. (Petersen.)

Thalious fluovanadate, TlF , $\text{VF}_3 + 2\text{H}_2\text{O}$.
Easily sol. in H_2O .
Sol. with decomp. in conc. H_2SO_4 , dil. HNO_3 or cold dil. HCl .
Insol. in $\text{NaOH} + \text{Aq}$. (Ephraim, B. 1909, 42. 4460.)
 2TlF , $\text{VF}_3 + \text{H}_2\text{O}$. Easily sol. in H_2O .
Sol. in conc. H_2SO_4 , dil. HNO_3 , or cold dil. HCl with decomp.
Insol. in cold or hot $\text{NaOH} + \text{Aq}$. (Ephraim, B. 1909, 42. 4461.)

Zinc fluovanadate, ZnF_2 , $\text{VF}_3 + 7\text{H}_2\text{O}$.
Sl. sol. in cold H_2O . Decomp. on heating. (Piccini and Giorgis.)

Fluoxycolumbic acid.

Ammonium fluoxycolumbate, $3\text{NH}_4\text{F}$, CbOF_3 .
Cubic salt. Sol. in H_2O . (Marignac, A. ch. (4) 8. 38.)
 $2\text{NH}_4\text{F}$, CbOF_3 . *Lamellar salt.* Much more sol. in H_2O than 2KF , CbOF_3 . (M.)
 $5\text{NH}_4\text{F}$, $3\text{CbOF}_3 + \text{H}_2\text{O}$. *Hexagonal salt.* (M.)
 NH_4F , CbOF_3 . *Rectangular salt.* (M.)

Ammonium fluoxycolumbate columbium fluoride, $3\text{NH}_4\text{F}$, CbOF_3 , CbF_3 .
(Marignac.)

Cupric fluoxycolumbate, CuF_2 , $\text{CbOF}_3 + 4\text{H}_2\text{O}$.
Sl. deliquescent. Sol. in H_2O . (Marignac, A. ch. (4) 8. 42.)

Potassium fluoxycolumbate, 2KF , $\text{CbOF}_3 + \text{H}_2\text{O}$.

Sol. in 12.5-13 pts. H_2O at $17-21^\circ$. Much more sol. in hot H_2O , or H_2O containing HF . (Marignac.)

3KF , CbOF_3 . Decomp. by H_2O into above salt. (M.)

5KF , $3\text{CbOF}_3 + \text{H}_2\text{O}$. Sol. in H_2O . (M.)
 4KF , $3\text{CbOF}_3 + \text{H}_2\text{O}$. Sol. in H_2O . (M.)
 3KF , $2\text{Cb}_2\text{O}_5 + 5\text{H}_2\text{O}$. Sl. sol. in H_2O . (Petersen, J. pr. (2) 40. 287.)

KF , $\text{Cb}_2\text{O}_5 + 3\text{H}_2\text{O}$. Sl. sol. in H_2O . (Petersen.)
 2KF , $3\text{CbO}_2\text{F}$. Insol. in H_2O . Sol. in HF . (Kruiss and Nilson, B. 20. 1689.)

See also Fluoxypercolumbate, potassium.

Potassium hydrogen fluoxycolumbate, 3KF , HF , CbOF_3 .
Sol. in H_2O . (Marignac.)

Sodium fluoxycolumbate, 2NaF , $\text{CbOF}_3 + 2\text{H}_2\text{O}$.
Sol. in H_2O .
 NaF , $\text{CbOF}_3 + \text{H}_2\text{O}$. (Marignac.)

Zinc fluoxycolumbate, ZnF_2 , $\text{CbOF}_3 + 6\text{H}_2\text{O}$.
Sol. in H_2O . (Marignac, A. ch. (4) 8. 41.)

Fluoxyhypomolybdic acid.

Ammonium fluoxyhypomolybdate, MoOF_3 , $2\text{NH}_4\text{F}$.

Decomp. by H_2O . (Mauro, Gazz. ch. it. 19. 179.)

3MoOF_3 , $5\text{NH}_4\text{F} + \text{H}_2\text{O}$. Decomp. by H_2O . (Mauro.)

Cupric fluoxyhypomolybdate, CuF_2 , $\text{MoOF}_3 + 4\text{H}_2\text{O}$.

Deliquescent. Sol. in H_2O . (Mauro, Real. Ac. Linc. 1892, 1. 194.)

- Potassium fluoxyhypomolybdate**, $\text{MoOF}_3 \cdot 2\text{KF} + \text{H}_2\text{O}$.
Sol. in H_2O with decomp.
Sol. in HF or $\text{HCl} + \text{Aq.}$ (Mauro and Panabianco, Gazz. ch. it. 12. 80.)
 $3\text{MoOF}_3 \cdot 5\text{KF} + \text{H}_2\text{O}$. Sol. in H_2O with decomp. (Mauro, Gazz. ch. it. 19. 179.)
- Thallous fluoxyhypomolybdate**, $2\text{TlF} \cdot \text{MoOF}_3$.
(Mauro, B. 1894, 27R. 109.)
- Zinc fluoxyhypomolybdate**, $\text{ZnF}_2 \cdot \text{MoOF}_3 + 6\text{H}_2\text{O}$.
Rapidly deliquescent. Sol. in H_2O .
(Mauro, Real. Ac. Linc. 1892. 1. 194.)
- Fluoxypovanadic acid**.
See Fluoxylvanadic acid.
- Fluoxymanganic acid**.
- Ammonium fluoxymanganate**, $(\text{NH}_4)_2\text{MnOF}_4$.
Precipitate. (Nicklès.)
- Potassium fluoxymanganate**, K_2MnOF_4 .
Precipitate. (Nicklès, C. R. 65. 107.)
- Sesquifluoxymanganic acid**.
- Potassium sesquifluoxymanganate**,
 $\text{K}_4\text{Mn}_2\text{O}_7\text{F}_8 = 4\text{KF} \cdot \text{Mn}_2\text{O}_7\text{F}_4$.
Precipitate. (Nicklès.)
- Fluoxymolybdic acid**.
See also Fluoxyhypomolybdic, and fluoxypermolybdic acids.
- Ammonium fluoxymolybdate**, $\text{NH}_4\text{F} \cdot \text{MoO}_2\text{F}_2$.
Sol. in H_2O . (Mauro, Gazz. ch. it. 20. 109.)
 $+ \text{H}_2\text{O}$. More sol. in H_2O than $2\text{NH}_4\text{F} \cdot \text{MoO}_2\text{F}_2$. (Delafontaine, N. Arch. Sci. ph. nat. 30. 250.)
Correct formula is $3\text{NH}_4\text{F} \cdot \text{MoO}_2\text{F}_2$.
(Mauro, Gazz. ch. it. 18. 120.)
 $2\text{NH}_4\text{F} \cdot \text{MoO}_2\text{F}_2$. Much more sol. than $2\text{KF} \cdot \text{MoO}_2\text{F}_2$. (Delafontaine.)
 $3\text{NH}_4\text{F} \cdot \text{MoO}_2\text{F}_2$. Sol. in H_2O . (Mauro.)
 $5\text{NH}_4\text{F} \cdot 3\text{MoO}_2\text{F}_2 + \text{H}_2\text{O}$. Sol. in H_2O .
(Mauro, Gazz. ch. it. 20. 109.)
- Ammonium fluoxymolybdate molybdate**,
 $\text{MoO}_2\text{F}_2 \cdot 4\text{NH}_4\text{F} \cdot (\text{NH}_4)_2\text{MoO}_4$.
Sol. in H_2O , but with decomp. (Mauro, Gazz. ch. it. 18. 120.)
- Cadmium fluoxymolybdate**, $\text{CdF}_2 \cdot \text{MoO}_2\text{F}_2 + 6\text{H}_2\text{O}$.
Sl. efflorescent. (Delafontaine, J. B. 1867. 236.)
- Cobaltous fluoxymolybdate**, $\text{CoF}_2 \cdot \text{MoO}_2\text{F}_2 + 6\text{H}_2\text{O}$.
Sol. in H_2O . (Delafontaine, J. B. 1867. 236.)
- Cupric fluoxymolybdate**, $\text{CuF}_2 \cdot \text{MoO}_2\text{F}_2 + 4\text{H}_2\text{O}$.
Deliquescent. (Mauro, Real. Ac. Linc. 1892. 1. 194.)
- Nickel fluoxymolybdate**, $\text{NiF}_2 \cdot \text{MoO}_2\text{F}_2 + 6\text{H}_2\text{O}$.
Sol. in H_2O . (Delafontaine, J. B. 1867. 236.)
- Potassium fluoxymolybdate**, $2\text{KF} \cdot \text{MoO}_2\text{F}_2 + \text{H}_2\text{O}$.
Easily sol. in boiling H_2O .
Sol. in H_2O with decomp. Sol. in HF .
(Marchetti, Z. anorg 1895, 10. 68.)
 $\text{KF} \cdot \text{MoO}_2\text{F}_2 + \text{H}_2\text{O}$. Gradually efflorescent. (Delafontaine.)
- Rubidium fluoxymolybdate**, $2\text{RbF} \cdot 2\text{MoO}_2\text{F}_2 + 2\text{H}_2\text{O}$.
Sol. in cold, more sol. in hot H_2O . (Delafontaine.)
- Sodium fluoxymolybdate**, $\text{NaF} \cdot \text{MoO}_2\text{F}_2 + \frac{1}{2}\text{H}_2\text{O}$.
Sol. in H_2O . (Delafontaine.)
- Thallous fluoxymolybdate**, $2\text{TlF} \cdot \text{MoO}_2\text{F}_2 + \text{H}_2\text{O}$.
Sol. in hot H_2O . (Delafontaine.)
- Zinc fluoxymolybdate**, $\text{ZnF}_2 \cdot \text{MoO}_2\text{F}_2 + 6\text{H}_2\text{O}$.
Sol. in H_2O . (Delafontaine.)
- Fluoxypercolumbic acid**.
- Potassium fluoxypercolumbate**, $2\text{KF} \cdot \text{CbO}_2\text{F}_2 + \text{H}_2\text{O}$.
(Piccini, Z. anorg. 2. 21.)
Sol. in H_2O with decomp.
Sol. in HF . (Marchetti, Z. anorg. 1895, 10. 67.)
- Fluoxypermolybdic acid**.
- Ammonium fluoxypermolybdate**, $\text{MoO}_2\text{F}_2 \cdot 3\text{NH}_4\text{F}$.
Sol. in H_2O . (Piccini, Z. anorg. 1. 51.)
- Cæsium fluoxypermolybdate**, $\text{MoO}_2\text{F}_2 \cdot 2\text{CsF} + \text{H}_2\text{O}$.
(Piccini.)
- Potassium fluoxypermolybdate**, $\text{MoO}_2\text{F}_2 \cdot 2\text{KF} + \text{H}_2\text{O}$.
Not very sol. in H_2O ; more sol. in $\text{HF} + \text{Aq}$ without decomp. (Piccini.)

Rubidium fluoxypermolybdate, MoO_3F_2 , $2\text{RbF} + \text{H}_2\text{O}$.

Somewhat more sol. in H_2O than K salt.
Easily sol. in $\text{HF} + \text{Aq.}$ (Piccini.)

Fluoxypertantalic acid.

Potassium fluoxypertantalate, 2KF , $\text{TaO}_2\text{F}_3 + \text{H}_2\text{O}$.

Sol. in H_2O . (Piccini, Z. anorg. 2. 21.)

Fluoxypertitanic acid, TiO_2F_2 , HF .

Known only in solution. (Piccini, B. 18. 255 R.)

Ammonium fluoxypertitanate, TiO_2F_2 , $2\text{NH}_4\text{F}$.

Very unstable. (Piccini, Gazz. ch. it. 17. 479.)

TiO_2F_2 , $3\text{NH}_4\text{F}$. Sol. in H_2O .

Sol. in H_2O_2 . (Piccini, Z. anorg. 1895, 10 439.)

$2\text{TiO}_2\text{F}_2$, $3\text{NH}_4\text{F}$. Sol. in H_2O . (Piccini, B. 18. 698 R.)

Barium fluoxypertitanate, TiO_2F_2 , BaF_2 .

Precipitate. Easily sol. in acids. (Piccini, B. 18. 698 R.)

$2\text{TiO}_2\text{F}_2$, 3BaF_2 . Insol. in H_2O ; sol. in dil. acids. (Piccini, Gazz. ch. it. 17. 479.)

Potassium fluoxypertitanate, TiO_2F_2 , 2KF .

Sol. in H_2O . (Piccini, B. 21. 1391.)

Sol. in H_2O_2 . (Piccini, Z. anorg. 1895, 10. 438.)

Fluoxypertungstic acid.

Potassium fluoxypertungstate, 2KF , $\text{WO}_3\text{F} + \text{H}_2\text{O}$.

(Piccini, Z. anorg. 2. 11.)

Fluoxytantalic acid.

See also Fluoxypertantalic acid.

Ammonium fluoxytantalate, $3\text{NH}_4\text{F}$, TaOF_2 .

Easily sol. in H_2O . The solution clouds up by standing or on warming. (Joly, C. R. 81. 1266.)

Fluoxytitanic acid.

See also Fluoxypertitanic acid.

Barium fluoxytitanate, TiOF_2 , BaF_2 .

Insol. in H_2O ; sol. in dil. acids. (Piccini, Gazz. ch. it. 17. 479.)

Fluoxytungstic acid.

Ammonium fluoxytungstate, $2\text{NH}_4\text{F}$, WO_2F_2 .

Very sol. in H_2O . (Marignac, A. ch. (3) 69. 65.)

NH_4F , $\text{WO}_2\text{F}_2 + \text{H}_2\text{O}$. Decomp. by H_2O . Crystallises unchanged from H_2O containing HF . (Marignac.)

Ammonium fluoxytungstate tungstate, $4\text{NH}_4\text{F}$, WO_2F_2 , $(\text{NH}_4)_2\text{WO}_4$.

Incompletely sol. in H_2O . Residue dissolves in $\text{NH}_4\text{OH} + \text{Aq.}$ (Marignac.)

Cadmium fluoxytungstate.

Very sol. in H_2O . (Marignac.)

Cupric fluoxytungstate, CuF_2 , $\text{WO}_2\text{F}_2 + 4\text{H}_2\text{O}$.

Very sol. in H_2O . (Marignac, C. R. 55. 888.)

Cupric fluoxytungstate ammonium fluoride, CuF_2 , WO_2F_2 , $\text{NH}_4\text{F} + 4\text{H}_2\text{O}$.

Sol. in H_2O . (Marignac.)

Manganese fluoxytungstate.

Very sol. in H_2O . (Marignac.)

Nickel fluoxytungstate, NiF_2 , $\text{WO}_2\text{F}_2 + 10\text{H}_2\text{O}$.

Deliquescent. Very sol. in H_2O . (Marignac.)

Potassium fluoxytungstate, KF , $\text{WO}_2\text{F}_2 + \text{H}_2\text{O}$.

Can be recrystallised without decomp. only from H_2O containing HF . (Marignac, A. ch. (3) 69. 70.)

2KF , $\text{WO}_2\text{F}_2 + \text{H}_2\text{O}$. Difficultly sol. in cold, more easily in hot H_2O . (Berzelius.) Sol. in 17 pts. H_2O at 15° . (Marignac.)

Can be recrystallised without decomp. from H_2O , or H_2O containing HF . (Marignac.)

Sol. in H_2O with decomp. Sol. in HF . (Marchetti, Z. anorg. 1895, 10. 71.)

See also Fluoxypertungstate, potassium.

Silver fluoxytungstate.

Very easily sol. in H_2O . (Marignac.)

Sodium fluoxytungstate, 2NaF , WO_2F_2 .

More sol. in H_2O than the corresponding K compound. (Berzelius.)

Thalious fluoxytungstate, TlF , WO_2F_2 .

Insol. in H_2O . Decomp. by H_2O . (Ephraim and Heymann, B. 1909, 42. 4463.)

2TlF , WO_2F_2 . Insol. in H_2O but decomp. thereby. (Ephraim and Heymann, B. 1909, 42. 4462.)

3TlF , $2\text{WO}_2\text{F}_2$. Insol. in H_2O . Decomp. by acids. (Ephraim and Heymann, B. 1909, 42. 4462.)

Zinc fluoxytungstate, ZnF_2 , $\text{WO}_2\text{F}_2 + 10\text{H}_2\text{O}$.

Very sol. in H_2O . (Marignac.)

Fluoxxyuranic acid.**Ammonium fluoxxyuranate**, $3\text{NH}_4\text{F}$, UO_2F_2 .Easily sol. in H_2O , less in HF . Insol. in alcohol. (Bolton.)100 g. solution sat. at 27° contain 10.11 g. salt.100 g. solution sat. at 81.3° contain 20.71 g. salt.

(Burger, Dissert. 1904.)

Barium fluoxxyuranate, 3BaF_2 , $2\text{UO}_2\text{F}_2 + 2\text{H}_2\text{O}$.Traces dissolve in hot H_2O . Easily sol. in dil. acids. (Bolton.)**Potassium fluoxxyuranate**, 3KF , UO_2F_2 .Sol. in 8 pts. H_2O at 21° . Insol. in alcohol and ether. (Bolton, J. pr. 99. 269.)

Does not exist. (Smithells, Chem. Soc. 43. 125.)

 4KF , UO_2F_2 . Insol. in H_2O . Easily sol. in dil. acids. (Ditte, C. R. 91. 115.) 5KF , $2\text{UO}_2\text{F}_2$. (Baker, Chem. Soc. 35. 760.) 3KF , $2\text{UO}_2\text{F}_2 + 2\text{H}_2\text{O}$. (Baker.)**Sodium fluoxxyuranate**, NaF , UO_2F_2 . $+2\text{H}_2\text{O}$. Not efflorescent. $+4\text{H}_2\text{O}$. Insol. in H_2O and dil. acids. Sl. sol. in conc. $\text{HCl} + \text{Aq}$. Sol. in conc. H_2SO_4 . (Bolton, J. B. 1866. 212.) 4NaF , UO_2F_2 . (Ditte.)

Does not exist. (Smithells, Chem. Soc. 43. 125.)

Fluoxxyvanadic acid.**Ammonium fluoxxyvanadate**, $12\text{NH}_4\text{F}$, V_2O_5 , 2VOF_3 .Easily sol. in H_2O , and not attacked by cold conc. H_2SO_4 . (Baker, Chem. Soc. 33. 388.)Formula is $3\text{NH}_4\text{F}$, VO_2F . (Petersen, J. pr. (2) 40. 289.) $3\text{NH}_4\text{F}$, VO_2F . Sol. in H_2O . (Petersen, l. c.)Much less sol. in H_2O in presence of NH_4F . (Piccini and Giorgis, Gazz. ch. it. 27. 1. 65.) $+ \text{H}_2\text{O}$. (Piccini and Giorgis, Gazz. ch. it. 1892. 22. 55.) $3\text{NH}_4\text{F}$, VOF_3 . "Hypovanadate." Quite sol. in H_2O . Very sl. sol. in $\text{MF} + \text{Aq}$. Less sol. in alcohol than in H_2O . (Petersen, J. pr. (2) 40. 195.) $2\text{NH}_4\text{F}$, VOF_3 . Sol. in H_2O . (Petersen.) $+ \text{H}_2\text{O}$. (Piccini and Giorgis.) $7\text{NH}_4\text{F}$, $4\text{VOF}_3 + 5\text{H}_2\text{O}$. Very sol. in H_2O . (Petersen.) $3\text{NH}_4\text{F}$, $2\text{VO}_2\text{F}$. Sol. in H_2O without decomp. Sol. in conc. $\text{HF} + \text{Aq}$. (Piccini and Giorgis, Gazz. ch. it. 24. 1. 68.) $3\text{NH}_4\text{F}$, $2\text{VOF}_3 + \text{H}_2\text{O}$. Sol. in H_2O with decomp. V_2O_5 , $2\text{NH}_4\text{F}$. (Ditte, C. R. 106. 270.) V_2O_5 , $8\text{NH}_4\text{F} + 4\text{H}_2\text{O}$. As above. V_2O_5 , $4\text{NH}_4\text{F} + 4\text{H}_2\text{O}$. As above. Sol. in H_2O .**Ammonium hydrogen fluoxxyvanadate**, $7\text{NH}_4\text{F}$, HF , 4VOF_3 .Very sol. in H_2O . (Petersen, J. pr. (2) 40. 284.)**Ammonium hydrogen trifluoxxyvanadate**, 3HF , $9\text{NH}_4\text{F}$, 5VOF_3 .Easily sol. in H_2O . Sl. sol. in $\text{MF} + \text{Aq}$.

(Petersen, J. pr. (2) 40. 280.)

 $3\text{NH}_4\text{F}$, 3HF , 2VOF_3 . Sol. in H_2O . (Baker, Chem. Soc. 33. 388.)Identical with 3HF , $9\text{NH}_4\text{F}$, 5VOF_3 . (Petersen.)**Barium fluoxxyvanadate**, BaF_2 , VO_2F .

Ppt. (Ephraim, Z. anorg. 1903. 35. 79.)

Cadmium fluoxxyvanadate, CdF_2 , $\text{VOF}_3 + 7\text{H}_2\text{O}$.

"Hypovanadate." As the Co salt. (Piccini and Giorgis.)

Cobalt fluoxxyvanadate, CoF_2 , $\text{VOF}_3 + 7\text{H}_2\text{O}$."Hypovanadate." Sol. in H_2O . (Piccini and Giorgis.)**Nickel fluoxxyvanadate**, NiF_2 , $\text{VOF}_3 + 7\text{H}_2\text{O}$.

"Hypovanadate." As the Co salt. (Piccini and Giorgis.)

Potassium fluoxxyvanadate, 7KF , 3VOF_3 .Very sl. sol. in H_2O and $\text{MF} + \text{Aq}$. Easily sol. in dil. acids. (Petersen, J. pr. (2) 40. 199.) 2KF , VOF_3 . As above. (Petersen.) 2KF , $2\text{V}_2\text{O}_5 + 8\text{H}_2\text{O}$. Sol. in H_2O and H_2SO_4 . (Ditte, C. R. 105. 1067.) 2KF , $3\text{V}_2\text{O}_5 + 5\text{H}_2\text{O}$. As above. 2KF , $4\text{V}_2\text{O}_5 + 8\text{H}_2\text{O}$. As above. 4KF , V_2O_5 . Less sol. than 4KF , $3\text{V}_2\text{O}_5 + 2\text{H}_2\text{O}$, and $+3\text{H}_2\text{O}$. Sol. in H_2O . 4KF , $3\text{V}_2\text{O}_5 + 4\text{H}_2\text{O}$, and $+6\text{H}_2\text{O}$. Less sol. than 2KF , $3\text{V}_2\text{O}_5 + 5\text{H}_2\text{O}$. 8KF , $\text{V}_2\text{O}_5 + 2\text{H}_2\text{O}$, and $+3\text{H}_2\text{O}$. Sol. in H_2O .**Potassium trifluoxxyvanadate**, 2KF , VOF_3 .

Ppt. (Petersen, J. pr. (2) 40. 272.)

 6KF , V_2O_5 , $2\text{VOF}_3 + 2\text{H}_2\text{O}$. Sol. in H_2O . Insol. in cold conc. H_2SO_4 . (Baker, Chem. Soc. 33. 300.)Formula is 3KF , $2\text{VO}_2\text{F}$. (Piccini and Giorgis.)

See also Fluovanadate fluoxxyvanadate, potassium.

Potassium fluoxxyvanadate, 2KF , VO_2F .Easily sol. in H_2O . (Petersen, J. pr. (2) 40. 278.)

3KF, VO₂F. As above. (Petersen.)
3KF, 2VO₂F. Sol. in H₂O; scarcely attacked by H₂SO₄. (Piccini and Giorgis.)

Potassium hydrogen fluoxyvanadate, 3KF, HF, 2VOF₃.
Sol. in H₂O. (Petersen.)

Sodium fluoxyvanadate, 8NaF, 3VOF₂+2H₂O

Sol. in H₂O. (Petersen, J. pr. (2) 40. 200.)
3NaF, VO₂F, VOF₃ (?). Very easily decomp. (Piccini and Giorgis.)

2NaF, 2V₂O₅+10H₂O. Sol. in H₂O. (Ditte, C. R. 106. 270.)

4NaF, V₂O₅. As above.
4NaF, 3V₂O₅+18H₂O. As above.
6NaF, V₂O₅+5H₂O. As above.
8NaF, V₂O₅+3H₂O. (As above.)

Thalious fluoxyvanadate, 2TlF, VOF₂.

Somewhat sol. in cold H₂O without decomp.
Sol. in boiling H₂O with exception of a black residue, which is easily sol. in dil. H₂SO₄. (Ephraim, B. 1909, 42. 4460.)

3TlF, 2VO₂F. Insol. in H₂O. Sol. in H₂O containing H₂SO₄. (Ephraim and Heymann, B. 1909, 42. 4459.)

Zinc fluoxyvanadate, ZnF₂, ZnO, 2VOF₃+14H₂O.

Decomp. on air; sol. in H₂O. (Baker, Chem. Soc. 33. 388.)

True composition is represented by the formula ZnF₂, VO₂F+7H₂O. (Petersen.)

ZnF₂, VO₂F+7H₂O. Very sol. in H₂O. (Piccini and Giorgis.)

ZnF₂, VOF₃+7H₂O. "Hypovanadate."
Sol. in cold H₂O, but decomp. by boiling; sol. in dil. HF+Aq. (Piccini and Giorgis.)

Fluozirconic acid.

Ammonium fluozirconate, (NH₄)₂ZrF₆.

Sol. in H₂O.
3NH₄F, ZrF₄. Sol. in H₂O. (Marignac.)

Cadmium fluozirconate, 2CdF₂, ZrF₄+6H₂O.

Sol. in H₂O; can be recrystallised therefrom. (Marignac, A. ch. (3) 60. 257.)

CdZrF₆+6H₂O. Sol. in H₂O. (Marignac.)

Cæsium fluozirconate, CsF, ZrF₄+H₂O.

Sol. in H₂O without decomp. (Wells, Z. anorg. 1895, 10. 434.)

2CsF, ZrF₄. Sol. in H₂O without decomp. (Wells, Z. anorg. 1895, 10. 434.)

2CsF, 3ZrF₄+2H₂O. Only sl. sol. in H₂O. (Wells, Z. anorg. 1895, 10. 434.)

Cupric fluozirconate, 2CuF₂, ZrF₄+12H₂O.

Easily sol. in cold H₂O. (Marignac, A. ch. (3) 60. 296.)

3CuF₂, 2ZrF₄+16H₂O. Sol. in H₂O. (Marignac.)

Lithium fluozirconate, 2LiF, ZrF₄.

Ppt. (Wells, Am. J. Sci. 1897, (4) 3. 468.)

4LiF, ZrF₄+½H₂O. Sol. in H₂O with decomp. (Wells, Am. J. Sci. 1897, (4) 3. 469.)

Magnesium fluozirconate, MgZrF₆+5H₂O.

Sol. in H₂O. (Marignac.)

Manganous fluozirconate, MnZrF₆+5H₂O.

Sol. in H₂O. (Marignac, J. pr. 83. 202.)

Nickel fluozirconate, 2NiF₂, ZrF₄+12H₂O.

Sol. in H₂O. (Marignac, A. ch. (3) 60. 291.)

NiZrF₆+6H₂O. Sol. in H₂O. (Marignac.)

Nickel potassium fluozirconate, K₂ZrF₆,

NiZrF₆+8H₂O.

Sol. in H₂O. (Marignac.)

Potassium fluozirconate, KF, ZrF₄+H₂O.

Much more sol. in hot, than cold H₂O. (Marignac.)

2KF, ZrF₄=K₂ZrF₆. 100 pts. H₂O dissolve at 2°, 0.781 pt.; at 15°, 1.41 pts.; at 19°, 1.69 pts.; at 100°, 25.0 pts. K₂ZrF₆. (Marignac.)

Insol. in liquid NH₃. (Gore, Am. Ch. J. 1898, 20. 829.)

3KF, ZrF₄.

Sodium fluozirconate, 5NaF, ZrF₄.

100 pts. H₂O dissolve 0.387 pt. at 18°, and 1.67 pts. at 100°. (Marignac.)

2NaF, ZrF₄. (Wells, Am. J. Sci. 1897, (4) 3. 469.)

5NaF, 2ZrF₄. Sol. in H₂O with decomp. (Wells.)

Tellurium fluozirconate, TeF, ZrF₄.

Sol. in H₂O without decomp. (Wells, Am. J. Sci. 1897, (4) 3. 470.)

+H₂O. Sol. in H₂O without decomp. (Wells.)

3TeF, ZrF₄. Sol. in H₂O without decomp. (Wells.)

5TeF, 3ZrF₄. Sol. in H₂O without decomp. (Wells.)

Zinc fluozirconate, ZnZrF₆+6H₂O.

Sol. in H₂O. (Marignac.)

2ZnF₂, ZrF₄+12H₂O. Sol. in H₂O. (Marignac, A. ch. (3) 60. 257.)

Fulminating gold.

See Auroamidoimide.

Fulminating platinum.

See Fulminoplatinum.

Fulminating silver.

See Silver nitride.

Fulminoplatinum compounds.

See—

Dichlorofulminoplatinum.

Trichlorofulminoplatinum.

Tetrachlorofulminoplatinum.

Chloroxyfulminoplatinum.

Fusocobaltic chloride, $\text{Co}(\text{NH}_3)_4(\text{OH})\text{Cl}_2 + \text{H}_2\text{O}$.

Sol. in H_2O , from which it is precipitated by $\text{NH}_4\text{Cl} + \text{Aq}$; decomp. by boiling H_2O ; pptd. from aqueous solution by alcohol. (Fremy, C. R. 32. 501.)

— **nitrate**, $\text{Co}(\text{NH}_3)_4(\text{OH})(\text{NO}_3)_2 + \text{H}_2\text{O}$.

Sol. in H_2O . Properties as the chloride. (Fremy.)

— **sulphate**, $\text{Co}(\text{NH}_3)_4(\text{OH})\text{SO}_4 + 1\frac{1}{2}\text{H}_2\text{O}$.

Sol. in H_2O . Insol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Fremy, C. R. 32. 501.)

Insol. in H_2O . Sol. in conc. $\text{HCl} + \text{Aq}$, or H_2SO_4 , from which it is precipitated by H_2O . (Vortmann, N. 6. 412.)

Fusible white precipitate.

See Mercuridiammonium chloride.

Gadolinium, Gd.

(Marignac, C. R. 102. 92.)

Gadolinium bromide, $\text{GdBr}_3 + 6\text{H}_2\text{O}$.

Sol. in HBr . (Benedicks, Z. anorg. 1900, 22. 403.)

Gadolinium chloride, $\text{GdCl}_3 + 6\text{H}_2\text{O}$.

Somewhat deliquescent. Sol. in H_2O . (Benedicks.)

Gadolinium platinum chloride.

See Chloroplatinate, gadolinium.

Gadolinium fluoride, GdF_3 .

Insol. in H_2O ; sl. sol. in hot HF . (Popovici, B. 1908, 41. 635.)

Gadolinium hydroxide, $\text{Gd}(\text{OH})_3$.

Ppt. (Benedicks, Z. anorg. 1900, 22. 402.)

Gadolinium oxide, Gd_2O_3 .

Sol. in acids. (de Boisbaudran, C. R. 111. 394.)

Somewhat hygroscopic; easily sol. in acids. (Benedicks.)

Gallium, Ga.

Not decomp. by H_2O ; easily sol. in cold $\text{HCl} + \text{Aq}$. Slowly sol. in warm dil. $\text{HNO}_3 + \text{Aq}$. Not attacked by conc. HNO_3 free from

N_2O_3 , below $40-50^\circ$, and only slowly in presence of N_2O_3 . (Dupré, C. R. 86. 720.)

Easily sol. in cold or warm $\text{KOH} + \text{Aq}$. (de Boisbaudran, A. ch (5) 10. 100.)

Gallium bromide, GaBr_3 .

Deliquescent, and sol. in H_2O .

Gallium dichloride, GaCl_2 .

Deliquescent, and decomp. by H_2O . (Nilsson and Petersen, C. R. 107. 527.)

Gallium chloride, GaCl_3 .

Deliquescent, and very sol. in little H_2O . Decomp. by much H_2O , with formation of basic salt, which is slowly sol. in dil. $\text{HCl} + \text{Aq}$.

Gallium hydroxide.

Sol. in acids; sol. in KOH or $\text{NaOH} + \text{Aq}$, less easily in $\text{NH}_4\text{OH} + \text{Aq}$, even in presence of ammonium salts.

Gallium iodide, GaI_3 .

Deliquescent, and sol. in H_2O . (de Boisbaudran and Jungfleisch, C. R. 86. 578.)

Gallium suboxide, GaO (?).

Sol. in $\text{HNO}_3 + \text{Aq}$. (Dupré.)

Sol. in dil. $\text{H}_2\text{SO}_4 + \text{Aq}$.

Gallium oxide, Ga_2O_3 .

Sol. in acids.

Germanium, Ge.

Insol. in $\text{HCl} + \text{Aq}$. Easily sol. in aqua regia. Decomp. by $\text{HNO}_3 + \text{Aq}$ to oxide. Conc. H_2SO_4 decomp. to sulphate. Insol. in boiling $\text{KOH} + \text{Aq}$. (Winkler, J. pr. (2) 34. 177; 36. 177.)

Germanium tetrabromide, GeBr_4 .

Decomp. by H_2O . (Winkler.)

Germanium dichloride, GeCl_2 .

Decompl by H_2O . (Winkler.)

Germanium tetrachloride, GeCl_4 .

Sinks in H_2O , and is gradually decomp. thereby. (Winkler, J. pr. 34. 177.)

Insol. in and not attacked by hot conc. H_2SO_4 . (Friedrich, W. A. B. 102, 2b. 540.)

Germanium chloroform, GeHCl_3 .

Decomp. by H_2O . Sol. in $\text{HCl} + \text{Aq}$. (Winkler.)

Germanium tetrafluoride, GeF_4 .

Deliquescent, and sol. in H_2O . $+3\text{H}_2\text{O}$. Deliquescent. Melts in its crystal H_2O when warmed. (Winkler.)

Germanium potassium fluoride.

See Fluogermanate, potassium.

Germanium hydride, GeH_4 .

Sl. sol. in hot HCl . Sol. in $\text{NaOCl} + \text{Aq.}$ (Voegelen, Z. anorg. 1902, 30. 327.)

Germanium tetraiodide, GeI_4 .

Deliquescent, and sol. in H_2O with decomp. (Winkler)

Germanium monoxide, GeO .

Not appreciably sol. in dil. $\text{H}_2\text{SO}_4 + \text{Aq.}$ Easily sol. in $\text{HCl} + \text{Aq.}$ Insol. in alkalis. (Winkler, J. pr. (2) 34. 177.)

Somewhat sol. in H_2O ; insol. in $\text{H}_2\text{SO}_4 + \text{Aq.}$ even when hot and conc. (van Bemmelen, R. t. c. 6. 205.)

Germanium dioxide, GeO_2 .

Not very difficultly sol. in H_2O . Sol. in 247.1 pts. H_2O at 20° ; in 93.3 pts. at 100° . (Winkler.)

Easily sol. in alkali carbonates or hydrates + Aq; sl. sol. in acids.

Germanium oxychloride, GeOCl_2 .

Insol. in H_2O ; sol. in acids. (Winkler, J. pr. (2) 36. 177.)

Germanium monosulphide, GeS .

Sol. in 402.9 pts. H_2O . Sol. in conc. hot $\text{HCl} + \text{Aq.}$ Sol. in $\text{KOH} + \text{Aq.}$ Sol. in $(\text{NH}_4)_2\text{S} + \text{Aq}$ when precipitated. Insol. in $(\text{NH}_4)_2\text{S} + \text{Aq}$ if crystalline. Also exists in a colloidal state. (Winkler.)

Germanium disulphide, GeS_2 .

Sol. in 221.9 pts. H_2O . Easily sol. in $\text{KOH} + \text{Aq.}$ or $\text{NH}_4\text{OH} + \text{Aq.}$ Insol. in acids. Exists also in a colloidal state. (Winkler.)

Glass.

Numerous and extensive researches have been made on the action of H_2O and various solutions on glass. The older work has a certain historical interest, but only a brief statement of some of the more important results can be given here. For a very thorough résumé of the work before the year 1861, Storer's Dictionary, p. 555, should be consulted.

All glass is more or less attacked by H_2O , the more easily the greater the amount of alkali present, the finer it is powdered, and the higher the temperature.

Glass, as that of a flask, is decomposed to a considerable extent by several days' boiling with H_2O , a portion of the fixed alkali being dissolved, but when powdered glass is rubbed with distilled H_2O in a mortar, the H_2O remains pure and exhibits no alkalinity. (Scheele.)

Glass of alembics is partially dissolved by long boiling with H_2O . (Lavoisier.)

H_2O extracts potash or soda from glass together with

a portion of the silica, the decomposition taking place the more easily in proportion as the glass is richer in alkalis, more minutely divided, or the temperature of the water higher (Bischof, Kasin Arch. 1. 443.)

Powdered crown glass and some varieties of window glass render cold H_2O alkaline when in contact therewith. (Dumas.)

100 pts finely divided flint glass lose 7 pts. potash when boiled one week with H_2O . (Griffiths, Q. J. Sci. 20. 258.)

Retorts of ordinary or flint glass are partially dissolved by H_2O when it is evaporated therein (Chevreul, 1811.)

Finely powdered plate-glass (Faraday, Pogg. 18. 509), and Thuringian potash glass (Ludwig, Arch. Pharm. 91. 47) reddened moistened turmeric paper

The alkaline reaction disappears by continued washing, but reappears when the glass is freshly rubbed. (Griffiths.)

Cold H_2O takes up SiO_2 as well as alkali from glass powder. (Fuchs.)

Powdered lead glass gives up appreciable amounts of PbO to weakly acidified H_2O . (Pelouze.)

When powdered white glass, containing 12.4% Na_2O , 15.5% CaO , and 72.1% SiO_2 , is treated repeatedly with H_2O , more than 3% of the glass is dissolved, and the undissolved part gives up 1.5% CaO to $\text{HCl} + \text{Aq}$ with effervescence. A glass containing more alkali, i. e. 16.3% Na_2O , 6.4% CaO , 77.3% SiO_2 , lost with the same treatment 18.2%, and the residue gave up 2% CaO to $\text{HCl} + \text{Aq}$. (Pelouze, C. R. 43. 117.)

In the above case the fineness of the glass has an influence as well as its composition. When the same sample of glass was boiled 1 hour with H_2O , amounts were dissolved in the proportion 1 : 4.28, according as the glass was in form of a coarse, fine, or very fine powder. Glass of the composition of the above samples, as given by Pelouze, lost 10 and 32% respectively.

If powdered glass is boiled with H_2O and CO_2 conducted into the solution, it is absorbed; if boiled with K_2SO_4 , Na_2SO_4 is dissolved. (Pelouze.)

Glass tubes are converted into a white crystalline mass by heating with H_2O several months to 75 – 150° ; lead glass and Bohemian glass most easily, English crown glass least. A little H_2O attacks glass more than much H_2O .

The action of H_2O is greatly increased by finely pulverising the glass.

H_2O dissolved 10% of a glass containing 12% Na_2O , 15.5% CaO , and 72.5% SiO_2 , and 32% of another glass containing 16.3% Na_2O , 6.4% CaO , and 77.3% SiO_2 . (Vogel, B. A. Munchen, 1867. 437.)

Action of H_2O on a glass containing 74% SiO_2 , 8.6% CaO , 14% Na_2O , 0.6% K_2O , with traces of Al_2O_3 , Fe_2O_3 , MnO , and MgO .

By boiling with H_2O a decrease of 3.9 mg. was observed for the first hour, which soon became constant at 2.2 mg. per hour. The action was then proportional to the time, and also to the surface in contact with the liquid, but independent of the amount of liquid evaporating.

The action decreases rapidly with the temperature, so that at 90 – 100° only $\frac{1}{4}$ as much glass is dissolved as by boiling H_2O . (Emmerling, A. 150. 257.)

When steam condenses in tubes of Na glass, they are so strongly attacked that the H_2O has an alkaline reaction, but tubes of hard or Bohemian K glass are not so strongly attacked. (Tollens, B. 9. 1540.)

The effect of H_2O is so great as to impart a distinctly alkaline reaction to water condensing in a tube of ordinary glass. By condensing water in long tubes of various kinds of glass the following results were obtained.

I. Easily fusible Thuringian glass. Surface exposed = 324 sq. cm.

After 2 hours, 62.0 mg. KOH were dissolved.

After 3 hours more, 36.0 mg. KOH were dissolved.

After 3 hours more, 33.2 mg. KOH were dissolved.

After 3 hours more, 20.8 mg. KOH were dissolved.

After 3 hours more, 20.8 mg. KOH were dissolved.

Or, in 14 hours, 172.8 mg. KOH were dissolved.

II. Less easily fusible Thuringian glass. Surface exposed = 499 sq. cm.

After 3 hours, 19.2 mg. KOH were dissolved.

After 3 hours more, 15.2 mg. KOH were dissolved.

After 3 hours more, 12.4 mg. KOH were dissolved.

After 3 hours more, 11.2 mg. KOH were dissolved.

Or, after 12 hours, 58.0 mg. KOH were dissolved.

III. Combustion tubing of very difficultly fusible Bohemian glass. Surface exposed = 1130 sq. cm.

After 3 hours 4.16 mg. KOH were dissolved.

After 3 hours more 4.16 mg. KOH were dissolved.

After 3 hours more 4.16 mg. KOH were dissolved.

After 3 hours more 4.16 mg. KOH were dissolved.

Or, after 12 hours, 16.64 mg. KOH were dissolved.

IV. Easily fusible Bohemian glass. Surface exposed = 1394 sq. cm.

After 3 hours, 7.88 mg. KOH were dissolved.

After 3 hours more, 8.56 mg. KOH were dissolved.

After 3 hours more, 1.97 mg. KOH were dissolved.

Or, after 9 hours, 24.32 mg. KOH were dissolved. (Kreusler and Henzold, B. 17. 34.)

From the above the following table has been calculated.

50 ccm. H₂O dissolves from a surface of 1000 sq. m. in 1 hour:—

96.0 mg. from easily fusible Thuringian glass.

12.8 mg. from less fusible Thuringian glass.

1.2 mg. from combustion tube of Bohemian glass.

2.0 mg. from harder tube of Bohemian glass.

(Kreusler and Henzold, B. 17. 34.)

100 ccm. H₂O dissolves so much glass from a flask every 2 seconds when in contact therewith that 0.1 ccm. $\frac{1}{2}$ normal oxalic acid is neutralised thereby. (Bohlig, Z. anal. 23. 518.)

Action of H₂O on various kinds of Na glass. 1 g. of finely powdered glass was boiled 10–15 minutes in a silver dish with 100 ccm. H₂O, and the per cent of Na₂O (or K₂O) in the solution was determined.

	%Na ₂ O (K ₂ O)
Orthoclase feldspar	0 17
Glass of a Bohemian combustion tube	0 56
“ flask (German manuf.)	0 69
“ champagne bottle	1 7
Natrolite	1.32
Glass of a wine bottle (Hungarian)	2.22
Glass which was attacked by H ₂ O under pressure	3.7
Lead glass	3.8
Glass that broke easily	4 8
Glass tubing that became rough when fused	6 1
Glass tubing that became opaque by fusing	14 35
Solid water glass	26.97

(Wartha, Z. anal. 24. 220.)

The relative ease by which various kinds of glass are attacked by H₂O is shown by the following table. The glass was powdered and heated on a water bath with exclusion of atmospheric CO₂.

Potassium water glass	291
Sodium water glass	196
Yellow glass rich in alkali	34
Thuringian glass	19
Ditto from Tittel and Co.	8
Window glass	8
Lead glass from Jena	6
Bohemian glass from Kavalier	2.4
Lead crystal glass	1.4
Thermometer glass, 16IV, from Jena	1.0
Zinc glass, 362, from Jena	0.8
Lead glass, 434, from Jena	0 6
Lead glass, 483, from Jena	0.2
Heaviest lead silicate, from Jena.	0.0

(Mylus, C. C. 1888. 1313.)

Solubility of various kinds of glass in H₂O.

The amounts dissolved from various kinds of glass by heating 5 hours with H₂O were as follows.

Yellow glass rich in alkali (13% K ₂ O, 15% Na ₂ O)	249 mg.
Poor Thuringian glass (6.6% K ₂ O, 16.5% Na ₂ O)	91.4 “
Glass from Tittel and Co. (7.1% K ₂ O, 14.3% Na ₂ O)	30.4 “
Bottle glass from Schilling (4.2% K ₂ O, 11.9% Na ₂ O)	13.0 “
Bohemian glass from Kavalier (13.3% K ₂ O, 11.4% Na ₂ O)	10.1 “
Rhenish window glass (13.5% Na ₂ O)	8.4 “
Lead crystal glass from Ehrenfeld (12.1% K ₂ O)	8.5 “
Green bottle glass (1.3% K ₂ O, 9.5% Na ₂ O)	6.5 “

Solubility of various kinds of glass in H_2O —
Continued.

Thermometer glass 16III from Jena (14.0% Na_2O , 7% ZnO)	6.4 mg.
Lead glass, No. 483, from Jena (47% PbO , 7.3% K_2O)	3.3 "
Lead silicate	0.6 "

(Mylius and Forster, B. 22. 1100.)

By calculation from the electrical conductivity of the solutions formed, various data were obtained by Kohlrausch (B. 24. 3565), which showed that different varieties of glass were attacked in very different degree by cold H_2O , and, moreover, the amount dissolved was proportionately much greater during the first few minutes of treatment with H_2O than afterwards, and, furthermore, the rate of decrease was much faster for good glass than poor. Increase of temperature increased the rate of solubility to a very great degree, the increase for $1^\circ C.$ being about 17%. In 7 hours at 80° half as much was dissolved as in 6 months at 18° . Extensive tables are given. (Kohlrausch, B. 24. 3651.) See also Kohlrausch (W. Ann. 44. 577).

A very extensive research on the action of H_2O on glass, with a historical review of the work previously done on the subject, has been published by Mylius and Forster. (Z. anal. 31. 241.) The general results may be summed up as follows:—

1. The solution of glass in H_2O is caused by a decomposition, by which free alkali is formed.

2. The silicic acid of the glass is brought into solution by a secondary reaction of the free alkali in the solution.

3. The constituents of the solution change according to the conditions of the digestion.

4. The amount of alkali going into solution from a given surface under certain conditions is a measure for the resistance of a glass under those conditions.

5. The rate of attack of glass surfaces by cold H_2O decreases rapidly with the length of time of digestion, and finally approaches a constant value.

6. The solubility increases very rapidly with increase of temperature.

7. The ratio of the solubility of several kinds of glass is dependent on the temperature.

8. From glasses which show the same ease of attack unequal amounts of substance may be dissolved.

9. The solubility of a glass is influenced by the condition of the surface from "weathering" by prolonged exposure to the CO_2 and H_2O of the air.

10. The poorer a glass is the less will its solubility decrease by prolonged treatment with H_2O .

11. A good glass is essentially less easily

attacked after having been previously treated with H_2O .

12. After treatment with H_2O , glass surfaces have the property of fixing alkali from the solutions formed, and giving it up again by a subsequent treatment with H_2O .

13. Potassium glass is much more sol. than sodium glass (contrary to previous researches), but the difference decreases as the glass becomes richer in CaO .

14. In glass flasks which are to be only slightly attacked by cold or hot H_2O , the CaO , alkalis, and SiO_2 must stand in a fixed relation to each other.

15. Of the more common varieties of glass, lead flint glass is least sol. in H_2O , but its surface is corroded, and it is easily decomp. by acids.

(Mylius and Forster, Z. anal. 31. 241.)

Bottle glass containing much Al_2O_3 is easily attacked by acids.

From powdered flint glass, boiling $HCl + Aq$ extracts K , but no Pb (Griffiths).

Bottles of flint glass with $(NH_4) \cdot CO_3 + Aq$ became so fragile that on shaking pieces of glass were detached (Griffiths.)

All glass is decomp. by HF .

Conc. H_2PO_4 also attacks all glass.

Glass containing small amounts of SiO_2 are attacked by H_2SO_4 , poorer glass by boiling HCl , HNO_3 , and aqua regia. (Berzelius.)

Conc. HNO_3 does not act on flint glass at $145-150^\circ$. (Sorby, C. R. 30. 990)

Glass of ordinary chemical apparatus gives up traces of metals to HCl and $HNO_3 + Aq$, but hard Bohemian glass consisting of 75% SiO_2 , 15% K_2O , 10% CaO , resists the action of warm conc. acids; also an easily fusible Na K glass with 77 % SiO_2 , 7.7% K_2O , 5% Na_2O , 10.3% CaO , is not easily attacked. (Stas.)

KOH , and $NaOH + Aq$ dissolve SiO_2 from glass the more easily the hotter and the more conc. the solutions are. (Müller.) NH_4OH , and $(NH_4)_2CO_3 + Aq$ attack many kinds of glass, especially flint glass. CaO_2H_2 attacks glass appreciably at 45° and lower; still more strongly on boiling. (Lamy, A. ch. (5) 14. 155.)

The action of various solvents on the glass mentioned on page 359 in Emmerling's experiments is as follows:

The action of $HCl + Aq$ containing 0.2 to 3% HCl is practically null, but is increased either by dilution or concentration. A very small quantity (0.02%) HCl added to H_2O almost wholly prevents its action on glass. With $HCl + Aq$ (11% HCl) a decrease of 4.2 mg. was noticed in the first hour, and only 3-4 mg. afterwards. The same is the case for $HNO_3 + Aq$ in still greater degree, 0.008% HNO_3 sufficing to nearly counteract the solvent action of H_2O .

$H_2SO_4 + Aq$ has about double the solvent effect possessed by H_2O .

Oxalic and acetic acids both diminish the solvent action of H_2O .

The addition of even traces (0.04%) of

Na_2CO_3 increases the solvent action, and this is further rapidly increased by an increase in the amount of Na_2CO_3 . $\text{Na}_2\text{CO}_3 + \text{Aq}$ containing 1% Na_2CO_3 dissolves about 10 times as much as pure H_2O , i. e. about 35 mg. per hour.

The above is also the case with $\text{KOH} + \text{Aq}$, but in even greater degree. $\text{KOH} + \text{Aq}$ containing 0.025% KOH dissolved three times as much as pure H_2O .

$(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ has about the same action as H_2O .

With $\text{NH}_4\text{OH} + \text{Aq}$ (9% NH_3) 7 mg. decrease for the first hour, and 3 mg. afterwards was noticed. The concentration of the $\text{NH}_4\text{OH} + \text{Aq}$ was apparently without effect.

The addition of NH_4Cl decreases the solvent action of H_2O proportionately to the amount added, but with new flasks large amounts are dissolved.

With $\text{NH}_4\text{Cl} + \text{Aq}$ (7% NH_4Cl) 4.2 mg. were dissolved in the first hour, and the amount dissolved gradually decreased to null after 24 hours on account of the liberation of HCl by the decomp. of NH_4Cl .

NaCl , KCl , KNO_3 , and Na_2SO_4 show a similar behaviour to that of NH_4Cl .

$\text{Na}_2\text{HPO}_4 + \text{Aq}$ containing 0.4% Na_2HPO_4

has six times the solvent action of pure H_2O . but the action is not increased by further concentration.

In general, those salts the acids of which form insol. Ca salts, as Na_2CO_3 , Na_2SO_4 , Na_2HPO_4 , $(\text{NH}_4)_2\text{C}_2\text{O}_4$, increase the solvent action of H_2O , and this effect is greater the more concentrated the solution. KCl , KNO_3 , NH_4Cl , and CaCl_2 decrease the effect, and the stronger the solution the less is the action.

All Na glass with approximately the above composition has the same power of resistance against H_2O ; Bohemian K glass shows a greater resistance, especially against acids. (Emmerling, A. 150. 257.)

Action of various reagents on hard Bohemian glass. 100 ccm. substance dissolved mg. glass in 6 days at 100° .

H_2O	10.0
$\text{H}_2\text{S} + \text{Aq}$	8.7
Dil. $(\text{NH}_4)_2\text{S} + \text{Aq}$	52.5
Conc. $(\text{NH}_4)_2\text{S} + \text{Aq}$	47.2
Conc. $\text{NH}_4\text{OH} + \text{Aq}$	42.5
Dil. $\text{NH}_4\text{OH} + \text{Aq}$	7.7
$\text{NH}_4\text{SH} + \text{Aq}$	51.2
(Cowper, Chem. Soc. 41. 254.)	

Action of various solutions on glass of different composition. (The figures denote decrease in weight in mg. of a 100 ccm. flask.)

Composition of above varieties of glass.

	1	2	3	4	5	6	7	8	9	10
SiO_2	76.22	74.09	76.39	68.56	74.48	74.69	66.75	74.12	77.07	74.40
Al_2O_3	..	0.40	0.50	1.85	0.50	0.45	1.31	0.50	0.30	0.70
CaO	4.27	5.85	5.50	7.60	7.15	7.85	13.37	8.55	8.10	8.85
K_2O	..	7.32	4.94	2.24	6.64	8.64	05.50	4.86	3.75	4.40
Na_2O	19.51	12.34	12.67	19.75	11.23	8.37	3.07	11.97	10.78	11.65

It is seen that glass which resists the attack of H_2O also resists acids and alkalis, and that the relative resistance of all varieties to any of the solutions is the same. Therefore the action of H_2O may be accepted as a criterion for judging of the resistance of a glass to all solvents. Glass No. 10, in which the molecular ratio of $\text{SiO}_2 : \text{CaO} : \text{K}_2\text{O} (\text{Na}_2\text{O})$ is 8:1:1.5, is recommended as best suited for chemical uses. (Weber and Sauer, B. 25. 70.)

Mylius and Förster (B. 25. 97) recommend a glass in which the molecular ratio of $\text{SiO}_2 : \text{CaO} : \text{K}_2\text{O} (\text{Na}_2\text{O})$ is 7.2:1:1.1 as the best suited for chemical apparatus.

In an exhaustive research on the action of aqueous solutions on glass, which cannot be given in full on account of its great length, the following conclusions are reached:—

1. Solutions of caustic alkalis act on glass much more strongly than H_2O , dissolving all the constituents of the glass—that is, the glass as such. Very dilute solutions form an exception.

2. Of the caustic alkalis, $\text{NaOH} + \text{Aq}$ has the strongest action, then come KOH , NH_4OH , and $\text{BaO}_2\text{H}_2 + \text{Aq}$ in the order named.

3. Increase in temperature increases the

strength of the attack of alkalis very considerably.

4. At high temperatures, the ease with which glass is attacked increases at first rapidly with the concentration of the alkali, but afterwards more slowly.

5. At ordinary temperatures very concentrated alkali solutions have less action on glass than dil solutions.

6. Solutions of pure alkalis, if not too conc., act less on glass than when contaminated with small amounts of SiO_2 .

7. Alkali carbonates + Aq attack glass much more than H_2O , even when they are very dilute. The action corresponds less to that of the caustic alkalis than to that of other salts. With equivalent concentration, Na_2CO_3 + Aq has a stronger action than K_2CO_3 + Aq.

8. The action of salt solutions on glass is a compound one, depending both on the concentration and the kind of salt dissolved, and is made up of the action of the H_2O and the salt in solution.

9. Each kind of attack is differently influenced by the composition of the glass.

10. Solutions of those salts, the acids of which form insol. Ca salts, have a stronger action than H_2O , and the action increases with the concentration.

11. Solutions of those salts, the acids of which form sol. Ca salts, have less action than H_2O , and the action decreases with the concentration. (Förster, B. 25. 2494.)

Data on this subject published since the first edition of this work have not been considered.

Glucinic acid.

Potassium glucinate, K_2GLO_2 .

Very deliquescent. Sol. in H_2O and acids. (Kruss and Morahit, B. 23. 733.)

Glucinum (Beryllium), Gl.

Not attacked by hot or cold H_2O . Sol. in cold dil. HNO_3 + Aq. (Wöhler, Pogg. 13. 577.)

Sol. only in boiling conc. HNO_3 + Aq. (Debray, A. ch. (3) 44. 5.)

Sol. in dil. HCl + Aq. dil. and conc. H_2SO_4 + Aq. and KOH + Aq. but insol. in NH_4OH + Aq. (Wöhler, Debray.)

Sol. in hot HCl hot conc. HNO_3 , and hot conc. H_2SO_4 . (Lebeau, A. ch. 1899, (7), 16. 474.)

Glucinium azoimide, Gln_3 .

Decomp. by hot H_2O . (Curtius, J. pr. 1898, (2), 58. 292.)

Glucinum borocarbide, $3\text{Gl}_2\text{C}$, B_4C .

Insol. in H_2O . Easily sol. in mineral acids especially HNO_3 . (Lebeau, A. ch. 1899, (7) 16. 481.)

$\text{C}_4\text{B}_5\text{Gl}_6$ Stable in air.

Easily sol. in mineral acids, conc. and dil. (Lebeau, C. R. 1898, 126. 1349.)

Glucinum bromide, GlBr_2 .

Sol. in H_2O with evolution of much heat. (Wöhler.)

Sol. in abs. alcohol. (Lebeau, A. ch. 1899, (7) 16. 484.)

Glucinum carbide, Gl_2C .

Decomp. by H_2O . Slowly attacked by cold or hot conc. HCl and HNO_3 . Gradually but completely sol. in dil. acids. (Lebeau, A. ch. 1899, (7), 16. 476.)

GlC_2 . Not easily decomp. by strong acids. Easily sol. with decomp. in dil acids. (Lebeau, C. R. 1895, 121. 497.)

Glucinum chloride, GlCl_2 .

Anhydrous. Fumes and deliquesces in air. Sol. in H_2O with hissing and evolution of much heat. Easily sol. in alcohol.

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 828.)

Sol. in alcohol and ether. Sl. sol. in C_6H_6 , CHCl_3 , Cl_4 and CS_2 . (Lebeau, A. ch. 1899, (7) 16. 493.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

+4 H_2O . Very hygroscopic.

Easily sol. in H_2O and in alcohol. (Mieleitner, Z. anorg. 1913, 80. 73.)

Glucinum chloride ammonia, GlCl_2 , 4 NH_3 .

(Mieleitner, Z. anorg. 1913, 80. 73.)

Glucinum chloride iodine trichloride, 2 ICl_3 , GlCl_2 + 8 H_2O .

Hygroscopic. (Weinland, Z. anorg. 1902, 30. 140.)

Glucinum ferric chloride, GlCl_2 , FeCl_3 + H_2O .

Decomp. by H_2O . (Neumann, A. 244. 329.)

Glucinum mercuric chloride, GlCl_2 , 3 HgCl_2 + 6 H_2O .

Sol. in H_2O . (Atterberg, B. 6. 1288.)

Glucinum thallic chloride, 3 GlCl_2 , 2 TiCl_3 .

Cryst. from HCl solution. (Neumann, A. 244. 348.)

Glucinum stannic chloride.

See Chlorostannate, glucinum.

Glucinum fluoride, basic, 2GIO , 5GIF_2 .

Sol. in H_2O . (Lebeau, A. ch. 1899, (7) 16. 484.)

Glucinum fluoride, GIF_2 .

Deliquescent. Sol. in H_2O . Insol. in anhydrous HF. Sol. in alcohol. (Lebeau, C. R. 1898, 126. 1421.)

Sol in H_2O in all proportions. Somewhat sol. in abs. alcohol. Easily sol. in 90% alcohol, also in a mixture of alcohol and ether. Insol. in anhydrous HF. (Lebeau, A. ch. 1899, (7) 16. 484.)

Glucinum potassium fluoride, GIF_2 , KF.

Sl. sol. in H_2O . (Awdejew.) Much more sol. in hot than cold H_2O . (Berzelius.)

GIF_2 , 2KF. Sol. in about 50 pts. H_2O at 20° , and 19 pts. boiling H_2O . (Marignac.)

Glucinum sodium fluoride, GIF_2 , 2NaF .

Sol. in $\frac{3}{4}$ pts. H_2O at 100° , and 68 pts. at 18° . (Marignac.)

Glucinum hydroxide, GIO_2H_2 .

Easily sol. in acids. Sol. in $\text{H}_2\text{SO}_4 + \text{Aq}$.

Sol. in $\text{CO}_2 + \text{Aq}$; 100 ccm. sat. $\text{CO}_2 + \text{Aq}$ dissolve 0.0185 g. GIO. (Sestini, Gazz. ch. it. 20. 313.)

Also sol. in KOH, NaOH, NH_4OH , or $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$, especially when freshly precipitated; also in Na_2CO_3 , or $\text{K}_2\text{CO}_3 + \text{Aq}$. (Debray)

Insol. in $\text{NH}_4\text{OH} + \text{Aq}$ containing $\text{NH}_4\text{Cl} + \text{Aq}$.

Very sl. sol. in $\text{Li}_2\text{CO}_3 + \text{Aq}$. (Gmelin.)

Sol. in $\text{H}_2\text{SO}_4 + \text{Aq}$. (Berthier.)

Sol. in $\text{BaO}_2\text{H}_2 + \text{Aq}$, from which it is pptd. by NH_4 salts, but not by boiling. Sol. in boiling $\text{NH}_4\text{Cl} + \text{Aq}$ when freshly pptd.

Sol. in $\text{NH}_4\text{F} + \text{Aq}$. (Helmholtz, Z. anorg. 3. 130.)

Solubility of GIO_2H_2 in $\text{NaOH} + \text{Aq}$.

G. Na in 20 ccm	G. Gl. in 20 ccm.
0.3358	0.0358
0.6717	0.0882
0.8725	0.1175
1.7346	0.2847

(Rubenbauer, Z. anorg. 1902, 30. 334.)

When glucinum hydroxide is treated with alkali, more dissolves at first than corresponds with the true equilibrium under the prevailing conditions, for such solutions spontaneously deposit more or less glucinum hydroxide according to the concentration. (Rubenbauer.)

Solubility of freshly pptd. GIO_2H_2 in $\text{NaOH} + \text{Aq}$ at room temperature.

millimols Na per l.	G GIO dissolved in 1 l.
649	3.6
540	2.92
540	2.53
483	1.69
383	1.64
388	1.53
386	1.45
390	1.24

In the first two cases the values were obtained by adding to $\text{GICl}_2 + \text{Aq}$ at 0° , ice cold NH_4OH and treating the ppt. with $\text{NaOH} + \text{Aq}$. In the remaining cases by dissolving basic GICl_3 in HCl and pouring into $\text{NaOH} + \text{Aq}$. (Haber, Z. anorg. 1904, 38. 386.)

Solubility of GIO_2H_2 , which is one week old, in $\text{NaOH} + \text{Aq}$ at t° .

NaOH	t°	G GIO in 1 l
$\frac{1}{2}\text{-N}$	$20\text{-}23^\circ$	0.060

(Wood, Chem. Soc. 1910, 97. 884.)

Insol. in $\text{NH}_4\text{OH} + \text{Aq}$ and in alkyl amines. (Renz, B. 1903, 36. 2753.)

Sol. in $\text{GISO}_4 + \text{Aq}$. (Parsons, J. phys. Chem. 1907, 11. 658.)

A form insol. in acids and alkalis can be obtained by sufficiently long heating in boiling H_2O , $\text{Na}_2\text{CO}_3 + \text{Aq}$, $\text{NH}_4\text{OH} + \text{Aq}$, or solutions of NaOH or KOH so dil. that the GIO_2H_2 is either insol or very sl. sol. therein. (van Oordt, C. C. 1906, I. 108.)

100 ccm. of glycerine + Aq containing about 60% by vol. of glycerine dissolve 0.1 g. GIO. (Müller, Z. anorg. 1905, 43. 322.)

Contains $\frac{1}{3}\text{H}_2\text{O}$ (Schaffgotsch); $\frac{4}{3}\text{H}_2\text{O}$ (Atterberg).

Solubility of GlO_2H_2 , which has been boiled with alkali, in various solvents.

(Haber.)

Glucinum iodide, GII_2 .Sol. in H_2O with evolution of much heat. (Wöhler.)Decomp. in moist air and by H_2O .

Sol. in abs. alcohol. Insol. in most neutral organic solvents, as benzene, toluene, etc. (Lebeau, C. R. 1898, 126. 1273.)

Insol. in C_6H_6 , C_7H_8 and oil of turpentine. Easily sol. in CS_2 . Sol. in anhydrous alcohols without evolution of heat. (Lebeau, A. ch. 1899, (7) 16. 490.)**Glucinum iodide ammonia, $2\text{GII}_2, 3\text{NH}_3$.**

Ppt. (Lebeau, A. ch. 1899, (7) 16. 492.)

Glucinum oxide, GIO .*Crystalline.* Insol. in acids except conc. H_2SO_4 . (Ebelmen, C. R. 32. 710.)*Amorphous.* Absolutely insol. in H_2O . The higher the temp. to which the substance has been heated the more insol. is it in acids. Insol. in $\text{NH}_4\text{OH} + \text{Aq}$ or $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. Insol. in conc. $\text{NH}_4\text{Cl} + \text{Aq}$, or KOH, and $\text{NaOH} + \text{Aq}$. (Rose.)When obtained by ignition of GISO_4 , it is very slowly but completely sol. in HCl, and $\text{H}_2\text{SO}_4 + \text{Aq}$. (Rose.)Insol. in hydracids. Sol. in conc. H_2SO_4 . (Lebeau, C. R. 1896, 123. 819.)Insol. in liquid NH_3 . (Gore, Am. ch. J. 1898, 20. 828.)**Glucinum peroxide basic, $2\text{GlO}_2, 3\text{GIO}$.**+ $8\frac{1}{2}\text{H}_2\text{O}$. (Komarovski, Chem. Soc. 1913, 104 (2) 707.)**Glucinum oxybromides.**Sol. in H_2O if three or less equivalents of base are present to one of acid; insol. if more of the base is present. (Ordway, Am. J. Sci. (2) 26. 207.)**Glucinum oxychloride, $\text{Gl}_2\text{OCl}_2 = \text{GIO}, \text{GICl}_2$.**Insol. in H_2O . $3\text{GICl}_2, 2\text{GIO} + 2\text{H}_2\text{O}$ (?). Sol. in H_2O . (Atterberg.) $\text{GlCl}_2, 3\text{GIO} + 3\text{H}_2\text{O}$ (?). Sol. in H_2O , but solution soon becomes cloudy and deposits a fine ppt. By boiling the solution it is decomp. into above salt, and $\text{GlCl}_2, 12\text{GIO}_2\text{H}_2 + 10\text{H}_2\text{O}$, which is insol. in H_2O ; decomp. into GIO_2H_2 by washing. Sol. in acids. (Atterberg.)**Glucinum oxyfluoride, $5\text{GlF}_2, 2\text{GIO}$.**Readily sol. in H_2O . (Lebeau, C. R. 1898, 126. 1419.)**Glucinum phosphide.**Decomp. by H_2O . (Wöhler.)**Glucinum selenide.**Sl. sol. in H_2O . (Berzelius.)

Glucinum sulphide.

Slowly sol. without decomp. in H_2O , but easily decomp. by acids. (Wöhler.)

Gold, Au.

Gold which has been pptd. from $AuCl_3 + Aq$ by $FeSO_4$ is sl. sol. in HCl . (Awerkiew, Z. anorg. 1909, 61. 10.)

Not attacked by H_2O . Insol. in HNO_3 or $HCl + Aq$. Easily sol. in aqua regia or any mixture evolving Cl or Br . Sol. in selenic acid, or antimonie acid + Aq ; less easily in arsenic acid + Aq . Sol. in mixtures of HCl and nitrates, or HNO_3 and chlorides; also in $(NaCl + KNO_3 + K_2Al_2(SO_4)_4) + Aq$ (?). Insol. in H_2SO_4 , except in presence of $KMnO_4$, HNO_3 , or HIO_3 . Sol. in a solution of I in ether in direct sunlight.

Sol. in solutions of ferric, and cupric salts.

Sol. in $HCl + Aq$ containing H_2CrO_4 , H_2MnO_4 , H_2SeO_4 , H_2AsO_4 , or $FeCl_3$. (Wurtz.)

Attacked by fuming HCl (sp. gr. 1.178) at ord. temp. in direct light, especially in the presence of a trace of $MnCl_2$, but not attacked in the dark even in the presence of this salt. (Berthelot, C. R. 1904, 138. 1298.)

100 ccm. hot conc. HCl dissolve 0.008 g. yellow Au powder in 4 hours. (Hanriot and Raoult, C. R. 1912, 155. 1086.)

Upon boiling 25 and 50 cc. $HCl + Aq$ (sp. gr. 1.178), dil. to 125 cc. with 250 mg. sheet Au $\frac{1}{8}$ in. square, 0.009 in. thick, weighing 250 mg. for several hours, there was no loss of weight of Au . (McCaughy, J. Am. Chem. Soc. 1909, 31. 1263.)

From 5 g. finely divided ordinary yellow gold; 100 cc. HNO_3 of 22° B. dissolve 0.002 g. in 2 hrs.

100 cc. HNO_3 of 32° B. dissolve 0.0119 g. in 2 hrs.

100 cc. HNO_3 of 36° B. dissolve 0.028 g. in 2 hrs.

100 cc. HNO_3 monohydrate dissolve 0.076 g. in 2 hrs. (Hanriot and Raoult, C. R. 1912, 155. 1085.)

From 5 g. brown gold:

100 ccm. HNO_3 of 22° Baume dissolve 0.006 g. in 2 hrs.

100 ccm. HNO_3 of 32° Baume dissolve 0.039 g. in 2 hrs.

100 ccm. HNO_3 of 36° Baume dissolve 0.078 g. in 2 hrs.

100 ccm. HNO_3 monohydrate dissolve 1.540 g. in 2 hrs. (Hanriot and Raoult.)

Sl. sol. in boiling HNO_3 (sp. gr. = 1.42). The solution deposits Au by standing several days. (Dewey, J. Am. Chem. Soc. 1910, 32. 320.)

Best composition of aqua regia for dissolving Au is 200 cc. HCl (sp. gr. 1.1946) 45 cc. HNO_3 (sp. gr. 1.4) and 245 cc. H_2O . 1 pt. Au is sol. in 4.3 pts. of such a mixture. (Priwoznik, C. C. 1910, II. 1743.)

Sol. in 1 pt. $HNO_3 + 4$ pts. HCl as representing the most economical mixture. (Priwoznik, Chem. Soc. 1911, 100. (2), 484.)

Easily sol. in nitrosulphonic acid from sulphuric acid manufacture, when mixed with equal parts conc. $HCl + Aq$. (Borntrager, Rep. anal. Ch. 1887. 741.)

Sol. in hot conc. H_2SO_4 in the presence of MnO_2 , Mn_2O_3 , Mn_3O_4 , PbO_2 , Pb_2O_3 , Pb_3O_4 , CrO_3 , CrO_4 and Ni_2O_3 . Solution also takes place slowly in the cold. Sol. in hot $H_2SO_4 + KMnO_4$. Slowly sol. in cold, more rapidly in hot $H_2SO_4 + HNO_3$. (Lenher, J. Am. Chem. Soc. 1904, 26. 550.)

Sol. in a hot solution of crystalline telluric acid in H_2SO_4 or H_3PO_4 .

Sol. in hot H_3PO_4 in the presence of MnO_2 , Mn_2O_3 , Mn_3O_4 , the higher oxides of lead, CrO_3 , chromium tetroxide and nickelic oxide. Solution takes place more slowly in the cold. Sol. in hot H_3PO_4 in the presence of $KMnO_4$. Slowly sol. in a cold, more rapidly sol. in a hot mixture of H_3PO_4 and HNO_3 .

Sol. in hot arsenic acid in the presence of MnO_2 , Mn_2O_3 and Mn_3O_4 . (Lenher, J. Am. Chem. Soc. 1904, 26. 550.)

Gold leaf is not attacked by cold conc. H_2SeO_4 , when completely free from halogens, but is dissolved by conc. H_2SeO_4 at 300°. (Lenher, J. Am. Chem. Soc. 1902, 24. 354.)

Solubility of thin sheet Au in HCl solution of iron alum.

Time, hours	Mg. Au dissolved			
	1 g. Fe 25 cc. HCl	1 g. Fe 50 cc. HCl	2 g. Fe 25 cc. HCl	2 g. Fe 50 cc. HCl

Temp. 38–43°.

(Awerkiew.)

Colloidal gold is sol. in dil. alkalis. (Paal, B. 1902, 35. 2236.)

Rather quickly sol. in 10-15% solution I in KI+Aq.

Very slowly sol. in 5% solution of I in KI+Aq.

Scarcely sol. in more dil. solution of I in KI+Aq.

Easily sol. in 10% NH₄I+I. Less easily sol. in 5% NH₄I+I. (Döring.)Sol. in cold Na₂S+Aq when Na₂S is present in proportion of 843 pts. Na₂S to 1 pt. Au. (Becker, Sill. Am. J. (3) 33. 199.)In finely divided state Au is sol. in boiling KCN+Aq. Not attacked by boiling HgCl₂+Aq. (Vogel, J. pr. 20. 366.)Solubility of Au (disks) in KCN+Aq with
(A) oxygen passed through solution, and
(B) agitated with oxygen.

% KCN	g. Au dissolved in 24 hours	
	A	B
1	0.00845	0.0187
5	0.01355	0.0472
20	0.0115	0.0314
50	0.00505	0.108

(Maclaurin, Chem. Soc. 1893, 63. 729.)

The solution of Au in KCN+Aq is essentially hastened by sunlight. (Caldecott, Proc. Chem. Soc. 1904, 20. 199.)

The presence of oxygen is necessary for the solution of Au in KCN+Aq. The rate of solution of Au in KCN+Aq varies with the strength of the solution, being small for conc. solutions, increasing as the solution becomes more dilute, reaching a maximum at 0.25% KCN, and then again diminishing. (Maclaurin, Chem. Soc. 1895, 67. 211.)

Solubility of Au (strips) in dil KCN+Aq.

% KCN	Mg. Au dissolved in 24 hours
0	0.010
0 0005	0 043-0 07
0 001	0.10-0.23
0.0016	0 16
0.002	0.44
0 00325	1 77
0 004	4 29
0 008	48 43
0 016	74.96
0.0325	150.54
0 065	168 12

(Christy, Elektrochem. Z. 1901, 7. 205.)

Finely divided metallic gold is completely sol. at the ord. temp. in solutions of potassium ferrocyanide. Solution takes place very slowly even when the potassium ferrocyanide solution is boiling. (Beutel, Z. anorg. 1912, 78. 158.)

Sol. in $\text{RbCl}_4\text{I}+\text{Aq.}$ (Erdmann, Arch. Pharm. 1894, 232, 30.)

Not attacked by FeCl_3+Aq when air is excluded but very energetically attacked in presence of HCl and oxygen. (McIlhiney, Am. J. Sci., 1896, (4), 2. 293.)

Not attacked by several days heating with SOCl_2 at 150° . At 200° there is sl. action in 10 days. (North, J. Am. Chem. Soc. 1912, 34. 892.)

SO_2Cl_2 in excess dissolves pulverulent Au by several hours heating at 160° . (North, Bull. Soc. (4), 9. 647.)

Sol. in PCl_5 . (Baudrimont, A. ch. (4) 2. 416.)

Easily sol. in acid solutions of thiocarbamide especially in presence of suitable oxidizing compounds. (Moir, Chem. Soc. 1906, 89. 1345.)

Gold arsenide, AuAs .

H_2O or alcohol slowly extracts As; HNO_3+Aq converts into Au and H_3AsO_4 . Sol. in aqua regia. Not attacked by cold, decomp. by hot conc. H_2SO_4 . (Tivoli, C. C. 1887. 778; J. B. 1887. 610.)

Gold bismuthide, Au_2Bi .

Min. *Maldonite*. Sol. in aqua regia.

Aurous bromide, AuBr .

Insol. in H_2O . (Thomsen, C. C. 1860. 606.)

Insol. in H_2O , HNO_3 , H_2SO_4 .

Sol. in $\text{NH}_4\text{OH}+\text{Aq.}$ with decomp.

Decomp. by HBr and KBr+Aq. Sol. in KCN+Aq without decomp. Slowly decomp. by alcohol, ether, acetone and moist CHCl_3 . (Lengfeld, Am. Ch. J. 1901, 26. 325.)

Gold (auroauric) bromide, Au_2Br_4 .

Not deliquescent. H_2O or ether dissolves out AuBr_3 . (Thomsen, C. C. 1860. 606.)

Does not exist. (Krüss, B. 20. 640.)

Existence is maintained by Petersen. (J. pr. (2) 46. 334.)

Auric bromide, AuBr_3 .

Not deliquescent. Slowly sol. in H_2O , more readily in ether.

Can be recryst. from AsBr_3 , SbBr_3 , TiBr_3 or SnBr_2 . (Lindet, Bull. Soc. 1886, (2) 45. 149.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Aurous phosphorus tribromide, AuBr , PBr_3 .

Decomp. by H_2O . (Lindet, J. pr. (2) 32. 494.)

Auric phosphorus pentabromide, AuBr_3 , PBr_5 .

Decomp. by H_2O . (Lindet.)

Aurous bromide phosphorus trichloride, AuBr , PCl_3 .

Decomp. by H_2O . (Lindet.)

Auric praseodymium bromide, PrBr_3 , $\text{AuBr}_3+10\text{H}_2\text{O}$.

Very sol. in H_2O ; sol. in conc HBr. (Von Schule, Z. anorg. 1898, 18. 355.)

Aurous bromide ammonia, AuBr , 2NH_3 .

Decomp. by H_2O and dil. HCl.

Sol. in aqua regia. (Meyer, C. R. 1906, 143. 281.)

Gold carbide, Au_2C_2 .

Ppt. Decomp. by boiling H_2O without evolution of C_2H_2 . Decomp. by HCl with evolution of C_2H_2 . (Mathews, J. Am. Chem. Soc. 1900, 22. 110.)

Aurous chloride, AuCl .

Insol. in H_2O , but gradually decomp. thereby into Au and AuCl_3 . (Thomsen, J. pr. (2) 13. 341.)

Insol. in H_2O and dil. HNO_3 .

Decomp. by conc. HNO_3 to Au and AuCl_3 .

Sol. in HCl, HBr and in sol. of alkali chloride and bromides, with decomp.

Decomp. by alcohol, ether and acetone. (Lengfeld, Am. Ch. J. 1901, 26. 324.)

Gold (auric) chloride, AuCl₃.

Deliquescent. Very sol in H₂O. Sol. in 1.47 pts. H₂O. (Abl.) Sol. in conc. HCl, or HNO₃+Aq without decomp.

AsCl₃ dissolves about 22% at 160° and 2.5% at 15°. Solubility in SbCl₅ is about the same. Much less sol. in SnCl₄ or TiCl₄, SnCl₄ dissolving 4% at 160° and hardly a trace at 0°. Very sl. sol. in hot or cold SiCl₄. (Lindet, Bull. Soc. (2) 45. 149.)

Sl. sol. in liquid NH₃. (Franklin and Kraus, Am. Ch. J. 1898, 20. 829)

Sol. in alcohol with gradual decomp. (Gmelin.) Sol. in ether with decomp. in light or on long standing. Ether extracts AuCl₃ from AuCl₃+Aq (Proust). Sol. in volatile oils with gradual decomp.

Sol. in ether. (Mylius, Z. anorg. 1911, 70. 207.)

Very sol. in ether. (Willstätter, B. 1903, 36. 1830.)

Completely sol. in ether. (Frank, C. C. 1913, II. 541.)

Insol. in or decomp. by alcohol, ether, CS₂, C₆H₆, oil of turpentine, pentane, hexane, CHCl₃, CCl₄, ethyl nitrate, nitrobenzol, ethyl acetate, ethyl propionate and pyridine. (Lenher, J. Am. Chem. Soc. 1903, 25. 1138.)

+2H₂O. (Thomsen.)

Auroauric chloride, Au₂Cl₄.

Decomp. by H₂O into AuCl₃ and AuCl. (Thomsen, J. pr. (2) 13. 357.)

Does not exist. (Kruss and Schmidt, J. pr. (2) 38. 77.)

Existence is maintained by Christensen. (J. pr. (2) 46. 328.)

Auric chloride with MCl.

See Chloraurate, M.

Auric nitrosyl chloride, AuCl₃, NOCl.

Sol. in H₂O with decomp. (Sudborough, Chem. Soc. 59. 662.)

Aurous phosphorus trichloride, AuCl, PCl₃.

Decomp. by H₂O. Sol. in about 100 pts. PCl₃ at 15°, and about 8 pts. at 120°. Sol. in AsCl₃. (Lindet, C. R. 101. 1492.)

Auric phosphorus pentachloride, AuCl₃, PCl₅.

Decomp. by H₂O. Nearly insol. in PCl₅. Sol. in AsCl₃. (Lindet.)

Aurous potassium chloride, AuCl, KCl.

Decomp. by H₂O or HCl+Aq into KCl, KAuCl₄, and Au. (Berzelius.)

Auric potassium chloride.

See Chloraurate, potassium.

Auric selenium chloride, AuCl₃, SeCl₄.

Decomp. by H₂O. Sol. in AsCl₃. (Lindet, C. R. 101. 1492.)

Gold (aurous) sodium chloride, AuCl, NaCl.

Insol. in H₂O. Sol. in alcohol (Meillet, J. Pharm. 3. 447)

Formula is 4NaCl, AuCl, AuCl₂ (Jørgensen)

Auric sodium chloride.

See Chloraurate, sodium.

Auric sulphur chloride, AuCl₃, SCl₄.

Easily decomp. by H₂O. (Lindet, C. R. 101. 1492.)

Aurous chloride ammonia, AuCl, NH₃.

Ppt Unstable (Diemer, J. Am. Chem. Soc. 1913, 35. 554.)

AuCl, 3NH₃. Decomp. by H₂O and dil. acids.

Sol. in aqua regia. Sol. in conc. H₂SO₄ with decomp. (Meyer, C. R. 1906, 143. 282.)

AuCl, 12NH₃. (Meyer.)

Auric fluoride, AuF₃.

Very unstable.

Is incapable of existence not only in presence of H₂O but under the ordinary conditions met with in the laboratory and in nature. (Lenher, J. Am. Chem. Soc. 1903, 25. 1138.)

Auric hydroxide, AuO₃H₃.

Nearly insol. in most acids. Easily sol. in very conc. HNO₃+Aq (Proust), from which all AuO₃H₃ is separated by dilution (Fremy). Extremely sl. sol. in fuming HNO₃. Sol. in dil HNO₃+Aq when pure (Kruss, A. 237. 281). Not attacked by H₃PO₄. Insol. in HF. Sol. in HCl, or HBr+Aq (Fremy).

Sol. in H₂SeO₄+Aq. (Mitscherlich.)

Sl. sol. in conc. H₂SO₄; somewhat sol. in HC₂H₃O₃+Aq. (Rose.)

Nearly insol. in cold KOH+Aq, but dissolved on boiling. Insol. in NH₄OH+Aq or alkali carbonates + Aq (Rose). Sl. sol. in boiling CaCl₂+Aq, NaCl+Aq, BaCl₂+Aq (Pelletier). Sol. in NH₄CN, and KCN+Aq (Himly).

Sl. sol. in KCl, or NaCl+Aq. (Pelletier.) Sol. in K₄Fe(CN)₆+Aq at ord. temp. rapidly on boiling. (Beutel, Z. anorg. 1912, 78. 154.)

AuO, OH=Au₂O₃, H₂O. (Krüss.)

Auroauric hydroxide, Au₃O₂(OH)₂=3Au₂O₂+2H₂O.

Insol. in boiling conc. KOH+Aq. Decomp. by conc. HCl or HNO₃+Aq into Au and Au₂O₃, which dissolves. (Schöttlander, A. 217. 336.)

Aurous iodide, AuI.

Insol. in cold, decomp. by hot H₂O, H₂SO₄, HCl, or HNO₃+Aq, with separation of Au. Decomp. immediately by ether, more slowly by alcohol.

Partially sol. in KI, FeI_3 , or $\text{HI} + \text{Aq}$ (Pelletier). Sl. attacked by NH_4OH , or $\text{NaCl} + \text{Aq}$ at 35° (Fordos). Instantly decomp. by $\text{KOH} + \text{Aq}$.

Gold (auric) iodide, AuI_3 .

Insol. in H_2O . Sol. in alkali iodides, and $\text{HI} + \text{Aq}$. Decomp. on air or by alkalies. (Johnston, Phil. Mag. J. 9. 286.)

Aurous iodide ammonia, AuI, NH_3 .

Decomp. by H_2O or dil. acids. (Meyer, C. R. 1906, 143. 281.)

Sol. in aqua regia.

$\text{AuI}, 6\text{NH}_3$. (Meyer.)

Aurous oxide, Au_2O .

Insol. in H_2O or alcohol. Decomp. by boiling with $\text{HCl} + \text{Aq}$ into Au and AuCl_3 . H_2SO_4 , HNO_3 , or $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ do not attack. Sol. in cold aqua regia. Sol. in $\text{HI} + \text{Aq}$. Sol. in KOH , or $\text{NaOH} + \text{Aq}$ when freshly precipitated. (Berzelius.)

According to Kruss (A. 237. 281) all hitherto prepared Au_2O is impure. Pure Au_2O is sol. in cold H_2O when freshly precipitated, from which hydroxide is precipitated by boiling. Partly sol. in HCl , or $\text{HBr} + \text{Aq}$. Sol. in KOH , or $\text{NaOH} + \text{Aq}$ when freshly precipitated. Not affected by any other acid or solvent. (Kruss.)

The so-called solution of Au_2O in H_2O is in reality a colloidal suspension. (Vanino, B. 1905, 38. 462.)

Auric oxide, Au_2O_3 .

See Auric hydroxide.

Auroauric oxide, Au_3O_2 .

Sol. in cold $\text{HCl} + \text{Aq}$; forms insol. comp. with HF . (Prat, C. R. 70. 842.)

Obtained pure by Krüss (A. 237. 296.)

Gold phosphide, Au_4P_3 .

Not attacked by $\text{HCl} + \text{Aq}$. HNO_3 forms H_3PO_4 and leaves undissolved Au. (Schröter, J. B. 1849. 247.)

AuP . Decomp. on air or with H_2O . (Cavazzi, Gazz. ch. it. 15. 40.)

Au_3P_4 . Readily attacked by aqua regia or $\text{Cl}_2 + \text{Aq}$. (Granger, C. R. 1897, 124. 498.)

Gold purple (mixture of Au and SnO_2).

Insol. in H_2O . Easily sol. in aqua regia.

$\text{HCl} + \text{Aq}$ dissolves all Sn and leaves Au.

Boiling $\text{HNO}_3 + \text{Aq}$ dissolves a little Sn.

Insol. in boiling $\text{KOH} + \text{Aq}$ (Berzelius).

$\text{KOH} + \text{Aq}$ extracts excess of SnO_2 , and the residue becomes sol. in H_2O , from which it is pptd. by $\text{NH}_4\text{Cl} + \text{Aq}$. (Figuier, A. ch. (3) 11. 353.)

Sol., when still moist, in $\text{NH}_4\text{OH} + \text{Aq}$, but insol. if it has been dried.

Obtained in colloidal state in aqueous solution containing 0.58 g. Au. and 5.41 g. SnO_2

in a litre. This solution may be concentrated without coagulation. The solution is coagulated by dil. HNO_3 , or $\text{HCl} + \text{Aq}$, more easily by dil. $\text{H}_2\text{SO}_4 + \text{Aq}$; also by KCl , HgCl_2 , $\text{FeSO}_4 + \text{Aq}$, and many other salts. Not coagulated by alcohol, but easily when ether is added to the alcohol. (Schneider, Z. anorg. 5. 80.)

Gold (auric) selenide, Au_2Se_3 .

$\text{HNO}_3 + \text{Aq}$ dissolves out Se. Sol in aqua regia or alkali sulphides + Aq . (Uelsmann, J. B. 1860. 90.)

Aurous sulphide, Au_2S .

Easily sol. in H_2O when freshly prepared, but precipitated from aqueous solution by HCl , KCl , or $\text{NaCl} + \text{Aq}$. When dried is insol. in H_2O .

Insol. in boiling dil. or conc. HCl , or $\text{H}_2\text{SO}_4 + \text{Aq}$. Easily sol. in aqua regia, $\text{HCl} + \text{Aq}$ with KClO_3 , etc. Slowly sol. in alkali monosulphides + Aq . Easily sol. in polysulphides + Aq .

Insol. in $\text{KOH} + \text{Aq}$. Sol. in $\text{KCN} + \text{Aq}$. (Kruss, B. 20. 2369.)

Known also in colloidal state in aqueous solution containing 1.74 g. Au_2S per l. (Schneider, B. 24. 2241.)

Auric sulphide, Au_2S_3 .

Insol. in H_2O and acids except aqua regia; sol. in alkali sulphides, or $\text{KOH} + \text{Aq}$. (Berzelius.)

Does not exist (Krüss, B. 22. 2369), but has since been made by Antony and Luchesi (Gazz. ch. it. 20. 601). Insol. in HCl , or dil. $\text{HNO}_3 + \text{Aq}$. Decomp. by conc. HNO_3 , KOH , or $\text{NaOH} + \text{Aq}$ with separation of Au. Sl. decomp. by $\text{NH}_4\text{OH} + \text{Aq}$. Easily sol. in $\text{KCN} + \text{Aq}$; decomp. by $(\text{NH}_4)_2\text{S} + \text{Aq}$. Sol. in cold Na_2S or $\text{K}_2\text{S} + \text{Aq}$; decomp. on boiling. (Antony and Luchesi, Gazz. ch. it. 21, 2. 209.)

Insol. in ether. (Hofmann, B. 1904, 37. 246.)

Auroauric sulphide, Au_3S_2 .

Insol. in H_2O or acids except aqua regia. Sl. sol. in cold alkali monosulphides + Aq , but easily sol. on warming. Sol. in cold polysulphides + Aq , but less in ammonium polysulphide than the other alkali polysulphides.

Not attacked by cold, but easily sol. in hot $\text{KOH} + \text{Aq}$. Sol. in $\text{KCN} + \text{Aq}$. (Hoffmann and Krüss, B. 20. 2704.)

Obtained also in colloidal state in aqueous solution containing 0.8 g. per l. (Schneider.)

Insol. in $\text{Na}_2\text{S} + \text{Aq}$. sat. with S. (Ditte, A. ch. 1907, (8) 12. 273.)

Aurous potassium sulphide, $\text{Au}_2\text{S}, 3\text{K}_2\text{S}$.

(Antony and Lucchesi, Gazz. ch. it. 1896, 26. (2) 350.)

Au_2S , $4\text{K}_2\text{S}+12\text{H}_2\text{O}$. Very sol. in H_2O . (Ditte, C. R. 1895, 120. 322.)

Gold silver sulphide, Ag_3AuS_2 .

Ppt. (Lucchesi, Gazz. ch. it. 1896, 26. 350-53.)

Aurous sodium sulphide, $\text{NaAuS}+4\text{H}_2\text{O}$.

Sol. in H_2O and alcohol. (Yorke, Chem. Soc. Q. J. 1. 236.)

$+5\text{H}_2\text{O}$. Sol. in H_2O . (Ditte, C. R. 1895, 120. 321.)

Na_3AuS_2 . Sol. in H_2O . (Lucchesi, Gazz. ch. it. 1896, 26. 350-53.)

Au_2S , $2\text{Na}_2\text{S}+20\text{H}_2\text{O}$. Very sol. in H_2O . (Ditte, C. R. 1895, 120. 321.)

Gold telluride.

Ppt. (Berzelius, Pogg. 8. 178.)

Gold silver telluride, Au_2Te_2 , Ag_2Te .

Min. *Sylvanite*. Sol. in HNO_3 +Aq with separation of Au, in aqua regia with separation of AgCl .

$3\text{Ag}_2\text{Te}$, Au_2Te . Min. *Petzite*. |

Hartshorn, salts of.

See Carbonate carbamate, ammonium hydrogen.

Helium, He.

Coefficient of absorption for H_2O at $18.2^\circ=0.0073$. (Ramsay, Z. phys. Ch. 1906, 55. 347.)

Absorption of helium by H_2O at t° and 760 mm. pressure.

(Antropoff, Roy. Soc. Proc. 1910, 83. A 480.)

Completely insol. in benzene and in alcohol (Ramsay, Chem. Soc. 1895, 67. 684.)

Hexamine chromium compounds.

See Luteochromium compounds.

Hexamine cobaltic compounds,

$\text{Co}_2(\text{NH}_3)_6\text{X}_6$.

See Dichrochromic compounds.

$\text{Co}(\text{NH}_3)_6\text{X}_3$.

See Luteocobaltic compounds.

Hexamine iridium chloride, $\text{Ir}_2(\text{NH}_3)_6\text{Cl}_6$.

See Iridotriamine chloride.

Hexathionic acid, $\text{H}_2\text{S}_6\text{O}_6$.

Known only in aqueous solution, which decomposes rapidly, even in presence of free sulphuric acid. (Debus, A. 244. 76.)

Potassium hexathionate, $\text{K}_2\text{S}_6\text{O}_6$.

Sol. in H_2O , with rapid decomp. Not obtained in pure state. (Debus, A. 244. 76.)

Holmium, Ho.

Holmium oxide, Ho_2O_3 .

(Cleve, C. R. 89. 478; 91. 328.)

Consists of at least two elements. (Lecoq de Boisbaudran, C. R. 102. 1005.)

Consists of seven elements. (Krüss and Nilson.)

Sesquihydraurylamine, $(\text{AuOH})_3\text{N}$, $\text{NH}_3=\text{Au}_3\text{N}_2+3\text{H}_2\text{O}$.

Decomp. by boiling with H_2O . (Raschig, A. 235. 341.)

Hydrazidophosphoric acid.

Barium hydrazidophosphate,

$\text{OP}(\text{N}_2\text{H}_3)_2\text{O}_2\text{Ba}$.

(Ephraim, B. 1911, 44. 3420.)

Lead hydrazidophosphate, $\text{OP}(\text{N}_2\text{H}_3)_2\text{O}_2\text{Pb}$.

Easily sol. in HNO_3 . (Ephraim.)

Potassium hydrazidophosphate,

$\text{OP}(\text{N}_2\text{H}_3)_2(\text{OK})_2$. (Ephraim.)

Sodium hydrazidophosphate,

$\text{OP}(\text{N}_2\text{H}_3)_2(\text{ONa})_2$.

Can be cryst. from dil. alcohol. (Ephraim.)

Hydrazine, $\text{N}_2\text{H}_4=\text{NH}_2-\text{NH}_2$.

Very sol. in H_2O . (Curtius, B. 20. 1632.)

Very hygroscopic; decomp. by H_2O ; solvent for sulphur, KCl , KBr , KNO_3 . (de Bruyn, R. t. c. 1894, 13. 433-40; Chem. Soc. 1895, 68 (2) 347.)

Mixes in all proportions with alcohols; sl. sol. in organic solvents. (Lobry de Bruyn, Chem. Soc. 1897, 72 (2) 22.)

Hydrazine amidosulphonate,
 $\text{N}_2\text{H}_4, \text{HSO}_3, \text{NH}_3.$

Very sol. in H_2O . (Sabanejeff, Z. anorg. 1899, 20. 22.)

Hydrazine azoimide, $\text{N}_2\text{H}_4, \text{HN}_3$.

Deliquescent Easily sol. in H_2O . Sl. sol. in alcohol, and can be crystallised therefrom. (Curtius, B. 24. 2344.)

Hydrazine borate, $(\text{N}_2\text{H}_4)_2(\text{B}_2\text{O}_3)_3$.

Sol. in H_2O . (Dschawachow, C. C. 1902, I. 1394.)

$(\text{N}_2\text{H}_4)_3(\text{H}_2\text{B}_4\text{O}_7)_3$. Sol. in H_2O . (Dschawachow, C. C. 1902, I. 1394.)

+5 H_2O . Sol. in H_2O . (Dschawachow, C. C. 1902, I. 1394.)

+10 H_2O . Ppt. (Dschawachow, C. C. 1902, I. 1394.)

Hydrazine cuprous bromide chloride,

(Ranfaldi, Real Ac. Linc. 1906 (5) 15, II, 95.)

Hydrazine mercuric bromide,

Very sol. in H_2O , sol. in alcohol and acetone. Sl. sol. in acetic ether.

Insol. in ethyl ether. (Ferratini, C. A. 1912. 1612.)

Hydrazine zinc bromide, $2\text{N}_2\text{H}_4\text{HBr}, \text{ZnBr}_2 + \text{H}_2\text{O}$.

Very sol. in H_2O ; sol. in alcohol and acetone. (Ferratini, C. A. 1912. 1612.)

Hydrazine carbonate.

Very deliquescent, but only sl. sol. in H_2O . Sl. sol. in alcohol. (Curtius and Jay, J. pr. 1889, (2) 39. 41.)

Hydrazine zinc carbonate hydrazine,

Easily sol. in H_2O . (Ebeler and Schott, J. pr. 1909, (2) 79, 72.)

Hydrazine chlorate, $\text{N}_2\text{H}_4, \text{HClO}_3$.

Very sol. in H_2O ; sl. sol. in alcohol. Insol. in ether, CHCl_3 and benzol. (Salvadori, Gazz. ch. it. 1907, 37, (2) 32.)

Hydrazine dichlorate, $\text{N}_2\text{H}_4, 2\text{HClO}_3$.

Ppt. Decomp. in aq. solution. (Turrentine, J. Am. Chem. Soc. 1915, 37. 1123.)

Hydrazine cupric chloride, $\text{N}_2\text{H}_5\text{Cl}, \text{CuCl}_2 + \frac{1}{2}\text{H}_2\text{O}$.

Decomp. by H_2O . (Ranfaldi, Real. Ac. Linc. 1906, (5) 15, II. 95.)

+2 H_2O . Decomp. by H_2O . (Ranfaldi.)

Hydrazine mercuric chloride, $\text{N}_2\text{H}_5\text{Cl}, \text{HgCl}_2$.
(Hoffmann and Marburg, A. 1899, 305. 221)**Hydrazine dithionate, $\text{N}_2\text{H}_4, \text{H}_2\text{S}_2\text{O}_6$.**

Sol. in H_2O ; decomp. on standing in aq. solution (Sabanejeff, Z. anorg. 1899, 20. 21.)

$2\text{N}_2\text{H}_4, \text{H}_2\text{S}_2\text{O}_6$. Sol. in H_2O (Sabanejeff.)

Hydrazine fluosilicate, $\text{N}_2\text{H}_4, \text{H}_2\text{SiF}_6$.

Easily sol. in H_2O .

Difficultly sol. in ethyl and methyl alcohol. (Ebeler, J. pr. 1910, (2) 81. 552.)

Hydrazine fluotitanate, $(\text{N}_2\text{H}_4)_2, \text{H}_2\text{TiF}_6 + 2\text{H}_2\text{O}$.

Ppt. Sol. in H_2O . (Ebeler, J. p. r. 1910, (2) 81. 555.)

Hydrazine monohydrobromide, $\text{N}_2\text{H}_4, \text{HBr}$.

Very easily sol. in H_2O or hot alcohol. (Curtius and Schultz, J. pr. (2) 42. 537.)

Hydrazine dihydrobromide, $\text{N}_2\text{H}_4, 2\text{HBr}$.

Easily sol. in H_2O . Sl. sol. in alcohol. (Curtius and Schulz, J. pr. (2) 42. 535.)

Hydrazine monohydrochloride, $\text{N}_2\text{H}_4, \text{HCl}$.

Extremely sol. in H_2O . Sl. sol. in boiling absolute alcohol. (Curtius and Jay, J. pr. (2) 39. 38.)

Hydrazine dihydrochloride, $\text{N}_2\text{H}_4, 2\text{HCl}$.

Easily sol. in cold H_2O ; sl. sol. in hot alcohol. (Curtius, l. c.)

Sol. in 2.67 pts. H_2O at 23° . Sp. gr. of sat. solution at $20^\circ/4^\circ = 1.4226$. (Schiff, Z. phys. Ch. 1896, 21. 292.)

Sp. gr. of aqueous solution at 20° .

% salt	Sp gr
25	1.1183
20	1.0923
15	1.0675
10	1.0436
5	1.0206

(Schiff, Z. phys. Ch. 1896, 21. 292.)

Nearly insol. in hot absolute alcohol (Curtius and Jay, J. pr. (2) 39. 37.)

Hydrazine dihydrofluoride, $\text{N}_2\text{H}_4, 2\text{HF}$.

Easily sol. in H_2O . Nearly insol. in alcohol. (Curtius and Schulz, J. pr. (2) 42. 533.)

Hydrazine monohydroiodide, $\text{N}_2\text{H}_4, \text{HI}$.

Easily sol. in H_2O . (Curtius and Schulz.)

Hydrazine dihydroiodide, $\text{N}_2\text{H}_4, 2\text{HI}$.

Very deliquescent. Easily sol. in H_2O . Sl. sol. in alcohol. (Curtius and Schulz, J. pr. (2) 42. 536.)

Trihydrazine dihydroiodide, $3\text{N}_2\text{H}_4, 2\text{HI}$.

Easily sol. in H_2O and alcohol. (Curtius and Schulz, J. pr. (2) 42. 540.)

Hydrazine hydroxide, $\text{N}_2\text{H}_4, \text{H}_2\text{O}$.

Miscible with H_2O or alcohol, but not with ether, chloroform, or benzene. (Curtius and Schulz, J. pr. (2) 42. 530.)

Hydrazine hypophosphate, $\text{N}_2\text{H}_4, \text{H}_4\text{P}_2\text{O}_6$.

Sl. sol. in H_2O . 15 pts. dissolve in 100 pts. H_2O . (Sabanejeff, Z. anorg 1898, 17. 490.)

Hydrazine hypophosphate ammonia,
 $\text{N}_2\text{H}_4, \text{H}_4\text{P}_2\text{O}_6, \text{NH}_3$.

Sol in H_2O . (Sabanejeff, Z. anorg. 1899, 20. 23.)

Hydrazine mercuric iodide,
 $2\text{N}_2\text{H}_4\text{I}, \text{HgI}_2 + \text{H}_2\text{O}$.

Very sol. in H_2O , alcohol, acetone, acetic ether.

Insol. in ether. Excess of H_2O decomp. (Ferratini, Gazz. ch. it. 1912, 42. (1), 172.)

Hydrazine zinc iodide,
 $\text{ZnI}_2, 2\text{N}_2\text{H}_4, \text{HI} + \frac{1}{2}\text{H}_2\text{O}$.

Very sol. in H_2O , sol. in alcohol and acetone. (Ferratini, C. A. 1912. 1612.)

Hydrazine nitrate, $\text{N}_2\text{H}_4, \text{HNO}_3$.

Very sol. in H_2O ; sl. sol. in abs. alcohol. (Sabanejeff, Z. anorg. 1899, 20. 24.)

Solubility in H_2O at t° .

t°	g $\text{N}_2\text{H}_4, \text{HNO}_3$ per 100 g.	
	Sat. solution	H_2O
10	63.63	174.9
15	68.47	217.2
20	72.70	266.3
25	76.61	327.5
30	80.09	402.2
35	83.06	490.3
40	85.86	607.2
45	88.06	737.6
50	91.18	1034
55	93.58	1458.
60	95.51	2127.

(Sommer, Z. anorg. 1914, 86. 85.)

$\text{N}_2\text{H}_4, 2\text{HNO}_3$. Very unstable.

Sol. in H_2O but solution cannot be concentrated beyond 30% without decomp.

Decomp. by abs. alcohol.

Very sol. in hydrazine hydroxide + Aq. (Sabanejeff, Z. anorg. 1898, 20. 25.)

Hydrazine nitrite, $\text{N}_2\text{H}_4, \text{HNO}_2$.

Very sol. in H_2O . Pptd. by ether from solution in alcohol; insol. in ether.

Very hygroscopic. (Sommer, Z. anorg. 1913, 83. 125.)

Hydrazine perchlorate, $\text{N}_2\text{H}_4, \text{HClO}_4 + 2\text{H}_2\text{O}$.

Sol. in 1.48 pts. H_2O at 30° and 34 pts. alcohol; crystallizes from boiling absolute alcohol. (Salvadori, Ch. Z. 31. 680.)

+ $3\text{H}_2\text{O}$.

Solubility in H_2O at t°

t°	% $\text{N}_2\text{H}_4, \text{HClO}_4$	Sp gr
18	41.72	1.264
35	66.9	1.391

(Carlson, Dissert. 1910.)

Hydrazine diperchlorate, $\text{N}_2\text{H}_4, 2\text{HClO}_4 + 2\text{H}_2\text{O}$.

Efflorescent.

Deliquescent.

102 pts. salt sol. in 100 pts. H_2O at 29° .

28 pts. salt sol. in 100 pts. alcohol.

10 pt. " " " 100 " ether.

(Turrentine, J. Am. Chem. Soc. 1915, 37. 1123.)

Hydrazine phosphate, $\text{N}_2\text{H}_4, \text{H}_3\text{PO}_4$.

Very sol. in H_2O . (Sabanejeff, Z. anorg. 1898, 17. 488.)

$\text{N}_2\text{H}_4, 2\text{H}_3\text{PO}_4$. Sol. in H_2O (Sabanejeff.)

Hydrazine phosphite, $\text{N}_2\text{H}_4, \text{H}_3\text{PO}_3$.

Sol. in H_2O . (Sabanejeff, Z. anorg. 1898, 17. 468.)

Hydrazine hydrogen phosphite,
 $\text{N}_2\text{H}_4, 2\text{H}_3\text{PO}_3$.

Less sol. in H_2O than the normal salt. (Sabanejeff.)

Hydrazine selenate, $\text{N}_2\text{H}_4, \text{H}_2\text{SeO}_4$.

Sol. in H_2O with decomp. (Rimini, C. C. 1907, I. 86.)

Hydrazine zinc selenate,
 $(\text{N}_2\text{H}_4)_2\text{SeO}_4, \text{ZnSeO}_4$.

Sl. sol. in H_2O but more sol. than Cu salt. (Rimini and Malagnini, Gazz. ch. it. 1907, 37. (1), 265.)

Hydrazine sulphocyanide, $\text{N}_2\text{H}_4, \text{HSCN}$.

Very deliquescent. Sol. in H_2O and alcohol. (Curtius and Herdenreich, J. pr. 1895, [2] 52. 488.)

Hydrazine sulphate, $\text{N}_2\text{H}_4, \text{H}_2\text{SO}_4$.

Sol. with difficulty in cold, easily in hot H_2O . Insol. in alcohol. (Curtius, l. c.)

100 pts. H_2O dissolve 3.055 pts. salt at 22° .

(Curtius and Jay, J. pr. (2) 39. 39.)

$2\text{N}_2\text{H}_4, \text{H}_2\text{SO}_4$. Very deliquescent, and

sol. in H_2O . Insol. in alcohol. (Curtius, J. pr. (2) 44. 101.)

Hydrazine sulphite, $(\text{N}_2\text{H}_4)_2\text{H}_2\text{SO}_3$.
(Sabanejeff, Z. anorg. 1899, 20, 24)

Hydrazine pyrosulphite, $2\text{N}_2\text{H}_4, \text{H}_2\text{S}_2\text{O}_5$.
Sol. in H_2O with decomp.; insol. in alcohol.
(Sabanejeff, Z. anorg. 1899, 20, 23.)

Hydrazine thiosulphate, $(\text{N}_2\text{H}_4)_2\text{H}_2\text{S}_2\text{O}_3$.
Ppt. (Not pure.) (Ferratini, Gazz. ch. it. 1912, 42. (1) 138.)

Hydrazine lead thiosulphate,
 $\text{PbS}_2\text{O}_3, 2(\text{N}_2\text{H}_4)_2\text{H}_2\text{S}_2\text{O}_3 + \text{H}_2\text{O}$.
Insol. in H_2O and alcohol.
Sol. in $\text{HCl} + \text{Aq}$ and in $\text{HNO}_3 + \text{Aq}$.
(Ferratini, C. A. 1912. 1612)

Hydrazine silver thiosulphate,
 $\text{Ag}_2\text{S}_2\text{O}_3, (\text{N}_2\text{H}_4)_2\text{H}_2\text{S}_2\text{O}_3$.
Insol. in H_2O ; sol. in $\text{NH}_4\text{OH} + \text{Aq}$ and in HNO_3 . (Ferratini.)

Hydrazine sulphinic acid.

Barium hydrazine disulphinate,
 $\text{Ba}_2\text{N}_2(\text{SO}_2)_2$.

Insol. in H_2O ; sol. in acids. (Ephraim, B. 1911, 44. 390.)

Hydrazinesulphonic acid, $\text{N}_2\text{H}_3\text{SO}_2\text{OH}$.

Sol. in about 24 pts. H_2O at ord. temp. Decomp. by mineral acids; nearly insol. in alcohol and other organic solvents. (Traube, B. 1914, 47. 941.)

Ammonium hydrazinesulphonate,
 $(\text{N}_2\text{H}_3\text{SO}_3)\text{NH}_4$.
Deliquescent; decomp. by acids. (Traube.)

Barium hydrazinesulphonate,
 $(\text{N}_2\text{H}_3\text{SO}_3)_2\text{Ba} + 2\text{H}_2\text{O}$.
Sol. in H_2O ; pptd. by alcohol; decomp. by acids. (Traube.)

Calcium hydrazinesulphonate,
 $(\text{N}_2\text{H}_3\text{SO}_3)_2\text{Ca} + \text{H}_2\text{O}$.
Sol. in H_2O . Decomp. by acids. Insol. in alcohol. (Traube.)

Potassium hydrazinesulphonate, $\text{N}_2\text{H}_3\text{SO}_3\text{K}$.
Decomp. by acids. (Traube.)

Silver hydrazinesulphonate, $\text{N}_2\text{H}_3\text{SO}_3\text{Ag}$.
(Traube.)

Sodium hydrazinesulphonate,
 $\text{N}_2\text{H}_3\text{SO}_3\text{Na} + \text{H}_2\text{O}$.
Decomp. by acids. (Traube.)

Strontium hydrazinesulphonate,
 $(\text{N}_2\text{H}_3\text{SO}_3)_2\text{Sr} + 2\text{H}_2\text{O}$.

Sol. in H_2O . Decomp. by acids. Insol. in alcohol. (Traube.)

Hydriodic acid, HI .
See Iodhydric acid.

Hydrobromic acid, HBr .
See Bromhydric acid.

Hydrochloric acid, HCl .
See Chlorhydric acid.

Hydrofluorboric acid, HBF_4 .
See Fluoborhydric acid.

Hydrofluoric acid, HF .
See Fluorhydric acid.

Hydrogen, H_2 .
Sl. absorbed by H_2O .

Sol in 150 pts H_2O , 1 vol. H_2O absorbs 0.016 vol H . Recently boiled H_2O absorbs 1.53% H . (Henry, 1803.) 100 vols. H_2O at 18° absorb 4.6 vols H (de Saussure, 1814)

1 vol. H_2O absorbs 0.0193 vol. H at 760 mm. and all temperatures between 0° and 23.6° . (Bunsen.)

Later work does not confirm the above statement.

Absorption of H by H_2O at t and 760 mm.
 β = coefficient of absorption; β_1 = "solubility" (see under Oxygen).

(Just, Z. phys. Ch. 1901, 37. 359.)

Extended investigations have been made by Findlay and Shen. (Chem. Soc. 1912, 101. 1465) on the effect of colloids on solubility of H_2 in H_2O . See original article.

Hydrogen arsenide.

See Arsenic hydride.

Hydrogen peroxide, H_2O_2 .

Miscible with H_2O . Not stable in conc. solution. Aqueous solution gives up its H_2O_2 to ether. Ethereal solution is more stable than an aqueous solution of the same strength, and may be distilled without decomp. Miscible with alcohol.

Very stable in aq. solution of various conc. if perfectly free from impurity such as compds. of heavy metals, etc. (Woffenstein, B. 1894, 27. 3307.)

Coefficient of distribution between ether and H_2O determined at 3° , 7° , and 17.5° with varying quantities (1.7-5%) of H_2O_2 . (Osipoff, C. C. 1903, II. 1265.)

As sol. in ether as in H_2O . A 50% solution in H_2O still contained about 25% H_2O_2 after

being shaken 6 times with large quantities of fresh ether.

Insol. in petroleum ether. (Brühl, B. 1895, 28. 2855.)

+H₂O, and +2H₂O. Does not solidify at -20°. (Wolffenstein, B. 1894, 27. 3311).

Hydrogen phosphide, gaseous (Phosphine), PH₃.

Very slightly absorbed by H₂O.

Statements as to solubility in H₂O vary considerably.

(a) *Difficultly inflammable gas*—

1 vol. H₂O absorbs 0.1122 vol. PH₃. (Dybowski, J. B. 1866. 735)

1 vol. H₂O absorbs 0.125 vol. PH₃. (H. Davy.)

(b) *Easily inflammable gas*—

1 vol. H₂O absorbs 0.018 vol PH₃. (Gengembre, Crell. Ann. 1. 450)

1 vol. H₂O absorbs 0.0214 vol. PH₃. (Henry.)

1 vol. H₂O absorbs 0.025 vol. PH₃. (Davy.)

1 vol. H₂O absorbs 0.125 vol. PH₃. (Dalton, Ann. Phil. 11. 7.)

1 vol. H₂O absorbs 0.255 vol. PH₃. (Raymond, Scher. J. 5. 389.)

1 vol. H₂O dissolves 0.26 vols. PH₃ at 17°. (Stock, Böttger and Lenger, B. 1909, 42. 2855)

Sol. in conc. H₂SO₄ without immediate decomp. (Buff, Pogg. 16. 363.)

1 vol. 50% H₂SO₄ dissolves 0.05 vol. PH₃. (S. B. and L.)

Absorbed by CuSO₄+Aq and by Br. (Berthelot.)

Absorbed rapidly by Cu₂Cl₂+Aq with formation of Cu₃Cl₂, 2PH₃, and Cu₂Cl₂, 4PH₃. (Ruban, C. R. 88. 581.)

1 vol. alcohol of 0.85 sp. gr. absorbs 0.5 vol.; 1 vol. ether absorbs 2 vols. (Graham.)

Sol. in volatile oils; 1 vol. oil of turpentine absorbs 3.25 vols. (Graham.)

Several varieties of blood absorb PH₃.

Hydrogen phosphide, liquid, P₂H₄.

Insol. in H₂O. Apparently sol. in alcohol and oil of turpentine, but solution is very quickly decomp. (Thénard, A. ch. (3) 145.)

Hydrogen phosphide, solid, P₄H₂.

Insol. in H₂O and alcohol. (Leverrier, A. ch. 60. 174.)

Insol. in all liquids except liquid PH₃. (Thénard, A. ch. (3) 14. 5.)

Instantly decomp. by HNO₃, or H₂SO₄+Aq. Sol. with decomp. in alcoholic solution of KOH. (Thénard.)

Somewhat sol. in liquid phosphorus. (Buck, Dissert. 1904.)

P₂H₂. Insol. in all solvents. (Stock, Böttger and Lenger, B. 1909, 42. 2851.)

P₁₂H₄. Sol. in liquid hydrogen phosphide and molten P. There are no other solvents which appreciably dissolve it. Insol. in liquid PH₃. (S. B. and L.)

Hydrogen selenide, H₂Se.

More sol. in H₂O than hydrogen sulphide. (Berzelius.)

Solubility coefficient of H₂Se at t°.

t°	Sol. Coeff.
4	3.77 vols.
9 65	3.43
13 2	3.31
22 5	2.70

(Forcrand and Fonzes-Diacon, C. R. 1902, 134. 171.)

Sol. in cold COCl₂. (Besson, C. R. 1869, 122. 140)

Hydrogen silicide.

See Silicon hydride.

Hydrogen sulphide, H₂S.

(a) *Liquid*. Dissolves S on warming, which separates on cooling.

(b) *Gas*.

1 vol. H₂O absorbs 1.08 vols H₂S at 10° (Henry, 1803.)

1 vol. H₂O absorbs 2.53 vols H₂S at 15° (de Saussure, Ann. Phil. 6. 340)

1 vol. H₂O absorbs 3 vols H₂S at 11°. (Gay-Lussac and Thénard.)

1 vol. H₂O absorbs 3.66 vols. H₂S at ord. temp. (Thompson)

1 vol. H₂O absorbs 2.5 vols. H₂S at ord. temp. (Dalton.)

1 vol. H₂O absorbs 4.3706-0.083687t+0.0005213t² vols. H₂S at temperatures between 2 and 43.3°. (Bunsen and Schönfeld, A. 93. 26.)

At 0° and about 820 mm. pressure, 1 ccm. H₂O absorbs 100 ccm. H₂S, while only about 4 ccm. are absorbed at ord. pressure. (de Forcrand and Villard, C. R. 106. 1402.)

1 vol. H₂O at 760 mm. pressure and t° absorbs V vols. H₂S, reduced to 0° and 760 mm.

t°	V	t°	V	t°	V

98.58	1.42	3.81

(McLauchlan.)

Hydrogen persulphide, H_2S_2 or H_2S_8 .

Decomp. by contact with H_2O , in which it is apparently insol. Sol. in ether with subsequent decomp. Sol. in CS_2 . (Thénard, A. ch. 48. 79.)

H_2S_2 . Quickly decomp. by ether, acetic ether, ethyl, or amyl alcohol. H_2S has no action.

Conc. HCl , or $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ have no action. Sol. in a solution of S in CS_2 , and in liquid hydrocarbons.

Chloroform dissolves without decomp.

(Sabatier, C. R. 100. 1346, 1585.)

Alkalies, and $\text{K}_2\text{S} + \text{Aq}$ decomp. instantly.

Decomp. by H_2O , dil. and conc. HCl , conc. H_2SO_4 , alkali and alcohol. Sol. in alcohol containing HCl but soon decomp. in this solution. Miscible in all proportions and without decomp. with benzene, ether and CS_2 . (Bloch, B. 1908, 41. 1977.)

Formula is H_2S_8 . (Rebs, A. 246. 356.)

+ $7\text{H}_2\text{O}$. Easily decomp. by heat. (de Forcrand and Villard, C. R. 106. 1402.)

Hydrogen trisulphide, H_2S_3 .

Decomp. by H_2O , dil. and conc. HCl , conc. H_2SO_4 , alkali and alcohol. Somewhat sol. in alcohol containing HCl , but slowly decomp. in this solution. Miscible with ether, benzene and CS_2 and these solutions are relatively stable. (Bloch, B. 1908, 41. 1974.)

Hydrogen telluride, H_2Te .

Sl. sol. in H_2O . Decomp. in the air. (Ernyei, Z. anorg. 1900, 25. 313.)

Hydrosulphuric acid, H_2S .

See Hydrogen sulphide.

Hydrosulphurous acid, H_2SO_2 .

See Hyposulphurous acid.

Hydroxylamic acid.
Calcium hydroxylamate, $Ca(OH)_2$.

Very explosive; decomp. by H_2O . (Ebler and Schott, J. pr. 1908, (2) 78. 323.)

Zinc hydroxylamate $Zn(OH)_2$.

Decomp. by H_2O (Ebler and Schott.)

Zinc hydroxylamate, hydroxylamine, $Zn(H_2NO)_2, 3NH_3O$.

Very unstable.

Insol. in abs. alcohol. (Ebler and Schott.)

Hydroxylamine, $NH_3O = NH_2(OH)$.

Known only in solution.

Sol. in alcohol. (Lossen, J. pr. 96. 462.)

Prepared in free state by de Bruyn.

Very deliquescent, and sol. in H_2O and alcohol. Sl. sol. or insol. in $CHCl_3$, C_6H_6 , ether, or ethyl acetate.

Methyl alcohol at 5° dissolves 35%; ethyl alcohol at 15° , 15%; boiling dry ether, 1.2%; boiling ethyl acetate, 1.6%. (de Bruyn, R. t. c. 11. 18.)

Hydroxylamine arsenate, $AsO_4H_3(NH_3O)_3$.

Sl. sol. in cold H_2O ; sol. in hot H_2O from which it can be cryst. (Hofmann, A. 1899, 307. 331.)

Hydroxylamine azoimide.

See Azoimide, hydroxylamine.

Hydroxylamine bromide, NH_2OH, HBr .

Very sol. in H_2O ; insol. in ether by which it is pptd. from solution in alcohol. (Adams, Am. Ch. J. 1902, 28. 205.)

$2NH_2OH, HBr$. Easily sol. in H_2O ; insol. in ether and ligroin. Sl. sol. in alcohol. (Adams.)

Hydroxylamine mercuric bromide hydroxylamine, $2NH_2OH, 2HBr, HgBr_2, 2NH_2OH$.

Decomp. by H_2O and methyl alcohol.

Readily decomp. by alkalis. (Adams.)

Hydroxylamine calcium, $HO.Ca.ONH_2$.

Partially decomp. by H_2O at ordinary temp. (Hofmann, Z. anorg. 1898, 16. 464.)

Hydroxylamine chloride, basic, $NH_3(OH)Cl, NH_3OH$.

Sol. in H_2O . Alcohol precipitates from aqueous solution. Insol. in ether. (Lossen.) $2NH_3(OH)Cl, NH_3OH$. Deliquescent; very sol. in H_2O , less in alcohol, and insol. in ether. (Lossen.)

Hydroxylamine chloride, $NH_3(OH)Cl$.

Not deliquescent. Very sol. in H_2O and hot ordinary alcohol. Sl. sol. in absolute alcohol. Insol. in ether (Lossen.)

Sol. in 1.2 pts. H_2O at 17° . (Schiff, Z. phys. Ch. 1896, 21. 290.)

Sp. gr. of aqueous solution at 17° .

% salt	sp gr
40	1.1852
28	1.1260
20	1.0888
14	1.0616
10	1.0437
7	1.0303
5	1.0214
3.5	1.0147

(Schiff, Z. phys. Ch. 1896, 21. 290.)

100 pts. absolute methyl alcohol dissolve 16.4 pts. at 19.75° ; 100 pts. absolute ethyl alcohol dissolve 4.43 pts. at 19.75° . (de Bruyn, Z. phys. Ch. 10. 783.)

Somewhat sol. in alcohol. (Adams, Am. Ch. J. 1902, 28. 204.)

Hydroxylamine mercuric chloride, $NH_2OH, HCl, HgCl_2$.

Very sol. in H_2O and alcohol. Less sol. in ether. (Adams, Am. Ch. J. 1902, 28. 213.)

$5(NH_2OH)_2, HCl, 2HgCl_2$. Sol. in cold H_2O , alcohol and ether. More easily sol. in methyl alcohol. Sol. in HCl . The slightest trace of alkali causes decomp. (Adams.)

Hexahydroxylamine cobaltic bromide,

$[Co(NH_2OH)_6]Br_3$.

(Werner, B. 1905, 38. 897.)

Hexahydroxylamine cobaltic chloride,

$[Co(NH_2OH)_6]Cl_3$.

Very stable toward HCl . (Werner, B. 1905, 38. 895.)

Hexahydroxylamine cobaltic nitrate,

$[Co(NH_2OH)_6](NO_3)_3$.

(Werner.)

Hexahydroxylamine cobaltic sulphate,

$[Co(NH_2OH)_6](SO_4)_2 \cdot 2H_2O$.

Easily sol. in H_2O . (Werner.)

Hydroxylamine columbate, $CbO_6N_3H_{10}$.

Explosive. Sl. sol. in H_2O . (Hofmann, Z. anorg. 1898, 16. 473.)

Hydroxylamine dithionate, $(\text{NH}_2\text{OH})_2, \text{H}_2\text{S}_2\text{O}_6$.

Sol. in H_2O ; decomp. on heating the aq. solution. (Sabanejeff, Z. anorg. 1898, 17. 485.)

Hydroxylamine fluosilicate, $(\text{NH}_2\text{O})_2, \text{H}_2\text{SiF}_6 + 2\text{H}_2\text{O}$.

Easily sol. in H_2O . Nearly insol. in methyl and abs. ethyl alcohol. (Ebler, J. pr. 1908, (2), 78. 338.)

Hydroxylamine fluotitanate, $(\text{NH}_2\text{O})_3, \text{H}_2\text{TiF}_6$

Sol. in H_2O . Sl. sol. in methyl alcohol. (Ebler, J. pr. 1908, (2) 78. 340.)

Hydroxylamine hypophosphite, $(\text{NH}_2\text{OH})\text{H}_2\text{PO}_2$.

Very sol. in H_2O . (Sabanejeff, Z. anorg. 1898, 17. 483.)

Sol. in H_2O and absolute alcohol. Insol. in ether. (Hofmann and Kohlschutter, Z. anorg. 1898, 16. 469.)

Hydroxylamine potassium hypophosphite, $(\text{H}_2\text{PO}_2)_2(\text{NH}_2\text{O})_2\text{K}_2$.

Easily sol. in H_2O , decomp. on heating; sol. in hot abs alcohol. (Hofmann and Kohlschutter, Z. anorg. 1898, 16. 468.)

Hydroxylamine hypophosphate, $(\text{NH}_2\text{OH})_2\text{H}_2\text{P}_2\text{O}_6$.

Easily sol. in H_2O . (Sabanejeff, Z. anorg. 1898, 17. 489.)

Hydroxylamine iodide, $\text{NH}_2\text{OH}, \text{HI}$.

Hygroscopic; sol. in methyl alcohol. Very explosive. (Wolffenstein and Groll, B. 1901, 34. 2419.)

Dihydroxylamine iodide, $(\text{NH}_2\text{OH})_2, \text{HI}$.

Deliquescent. More sol. in H_2O , methyl and ethyl alcohol than the tri compound. Is decomp. when recryst. from these solvents. Insol. in ether. (Dunstan, Chem. Soc. 1896, 69. 841.)

Trihydroxylamine iodide, $(\text{NH}_2\text{OH})_3, \text{HI}$.

Deliquescent in moist air. Sol. in H_2O , methyl and ethyl alcohol. Insol. in ether. (Dunstan.)

Hydroxylamine nitrate, $\text{NH}_2(\text{OH})\text{NO}_3$.

Very sol. in H_2O and absolute alcohol. (Lossen.)

Hydroxylamine orthophosphate, $(\text{NH}_2\text{OH})_3\text{PO}_4$.

Sl. sol. in cold H_2O . (Lossen.)

Only sl. sol. in H_2O . (Hofmann, A. 1899, 307. 330.)

Moderately sol. in H_2O . (Ross, Chem. Soc. 1906, 90, (2) 19.)

Solubility in H_2O .

1 g. of aqueous solution contains at

0°	10°
0 012	0 015 g. hydroxylamine phosphate,
20°	30°
0 019	0 027 g. hydroxylamine phosphate,
40°	50°
0 040	0 055 g. hydroxylamine phosphate,
60°	70°
0 077	0 102 g. hydroxylamine phosphate,
80°	90°
0 133	0 168 g. hydroxylamine phosphate.

(Adams, Am. Ch. J. 1902, 28. 204.)

$(\text{NH}_2\text{OH})\text{H}_2\text{PO}_4$. Hygroscopic. Aq solution is decomp. on heating. (Sabanejeff, B. 1897, 30. 287.)

Hydroxylamine phosphite, $(\text{NH}_2\text{OH})_2\text{HPO}_3$.

Sol. in H_2O and absolute alcohol. (Hofmann and Kohlschutter, Z. anorg. 1898, 16. 467.)

$(\text{NH}_2\text{OH})\text{H}_2\text{PO}_3$. Sol. in H_2O . Insol. in alcohol. (Sabanejeff, Chem. Soc. 1900, 78, (2), 14.)

Hydroxylamine phosphite ammonia, $(\text{NH}_2\text{OH})\text{H}_2\text{PO}_3, \text{NH}_3$.

Sol. in H_2O . (Sabanejeff, Chem. Soc. 1900, 78, (2) 14.)

Hydroxylamine sodium, NaONH_2 .

Very hygroscopic. (de Bruyn, R. t. c. 1892, 11. 18.)

Hydroxylamine sulphate, $(\text{NH}_2\text{OH})_2\text{SO}_4$.

Easily sol. in H_2O . Precipitated from concentrated aqueous solution by alcohol. (Lossen.)

Sol. in conc. $\text{NH}_4\text{OH} + \text{Aq}$. Insol. in alcohol and ether. (Preibisch, J. pr. 1873, (2) 7. 480.)

Not deliquescent. Sol. in $\frac{3}{4}$ of its wt. of H_2O at 20°. (Divers and Haga, Chem. Soc. 1896, 69. 1665.)

1 g. of aqueous solution contains at:

-8°	0°	+10°
0.307	0.329	0.366 g. hydroxylamine sulphate,
20°	30°	40°
0.413	0.441	0.482 g. hydroxylamine sulphate,
50°	60°	90°
0.522	0.560	0.685 g. hydroxylamine sulphate.

(Adams, Am. Ch. J. 1902, 28. 203.)

Dry hydroxylamine sulphate is insol. in abs. and almost insol. in 95% alcohol. (Adams.)

For double salts, see under sulphuric acid. $\text{NH}_2\text{OH}, \text{H}_2\text{SO}_4$. Deliquescent. Sol. in H_2O . (Divers, Chem. Soc. 1895, 67. 226.)

Hydroxylamine tungstate, $4\text{NH}_2\text{OH}, 3\text{WO}_3 + 3\text{H}_2\text{O}$.

Moderately sol. in H_2O . (Allen and Gottschalk, Am. Ch. J. 1902, 27. 338.)

Hydroxylamine uranate, $\text{UO}_4(\text{NH}_3\text{O})_2 + \text{H}_2\text{O}$.
Decomp. by heat. (Hofmann, Z. anorg. 1897, 15. 78.)

Hydroxylamine uranate ammonia,
 $\text{UO}_4(\text{NH}_3\text{O})_2, 2\text{NH}_3$.
Decomp. by H_2O . (Hofmann, Z. anorg. 1897, 15. 79.)

Hydroxylamine metavanadate, $\text{VO}_6\text{N}_3\text{H}_{16}$.
Decomp. by moisture. (Hofmann, Z. anorg. 1898, 16. 472.)

Hydroxylamine metavanadate ammonia,
 $\text{VO}_3\text{H}, (\text{NH}_3\text{O})_2, 2\text{NH}_3$.
Easily decomp. by H_2O and HCl . (Hofmann, Z. anorg. 1898, 16. 471.)

Hydroxylamine monosulphonic acid,
 $\text{HONH}(\text{SO}_3\text{H})$.
"Sulphazidic acid" of Fremy.
"Sulphhydroxylamic acid" of Claus.
Sol. in H_2O . Slowly decomp. on boiling. (Raschig, A. 241. 161.)

Ammonium hydroxylamine monosulphonate,
 $(\text{OH})\text{HN}, \text{SO}_3\text{NH}_4$.
(Sabanéjéff, Z. anorg. 1898, 17. 491.)

Monobarium — — —, $(\text{HONHSO}_3)_2\text{Ba} + \text{H}_2\text{O}$.
Easily sol. in H_2O . (Divers and Haga, Chem. Soc. 55. 760.)

Dibarium — — —, $\text{Ba}(\text{HONSO}_3)_2\text{Ba} + \text{H}_2\text{O}$.
Nearly insol. in H_2O ; sol. in $\text{HCl} + \text{Aq}$. (Divers and Haga, Chem. Soc. 55. 760.)

Potassium — — —, $\text{HONH}(\text{SO}_3\text{K})$.
"Potassium sulphhydroxylamate" of Claus.
"Potassium sulphazidate" of Fremy.
Sol. in cold H_2O . Easily sol. in hot H_2O without decomp. Insol. in alcohol. (Raschig, A. 241. 161.)
+ H_2O . (Divers and Haga, Chem. Soc. 55. 760.)

Hydroxylamine disulphonic acid,
 $\text{HON}(\text{SO}_3\text{H})_2$.
"Disulphhydroazotic acid" of Claus.
"Sulphazotic acid" of Fremy.
Not known in free state. (Raschig, A. 241. 161.)

Barium hydroxylamine disulphonate,
 $\text{Ba}_3(\text{NS}_2\text{O}_7)_2 + 4\text{H}_2\text{O}$ and $+ 8\text{H}_2\text{O}$.
Practically insol. in H_2O . Sol. in $\text{NH}_4\text{Cl} + \text{Aq}$. (Divers, Chem. Soc. 1894, 65. 559.)

Barium potassium — — —.
 $\text{Ba}_3\text{K}_4\text{H}_4(\text{NS}_2\text{O}_7)_5 + 9\text{H}_2\text{O}$.
 $\text{BaKNS}_2\text{O}_7 + \text{H}_2\text{O}$.
 $(\text{HO})_2\text{Ba}_6\text{K}_4\text{H}(\text{NS}_2\text{O}_7)_5 + \text{H}_2\text{O}$. . .

$\text{Ba}_9\text{K}_3(\text{NS}_2\text{O}_7)_7 + 14\text{H}_2\text{O}$.
 $3\text{Ba}(\text{OH})_2, \text{Ba}_9\text{K}_3(\text{NS}_2\text{O}_7)_7$.
Above salts are all ppts. (Divers, Chem. Soc. 1894, 65. 561.)

Barium sodium hydroxylamine disulphonate,
 $\text{Ba}_6\text{Na}_3(\text{NS}_2\text{O}_7)_5 + 7\text{H}_2\text{O}$.
 $\text{Ba}_2\text{Na}_3(\text{NS}_2\text{O}_7)_7 + 7\text{H}_2\text{O}$.
 $\text{Ba}_{13}\text{Na}_{15}(\text{NS}_2\text{O}_7)_{17} + 24\text{H}_2\text{O}$.
Above salts are ppts. (Divers.)

Potassium — — —, $\text{HON}(\text{SO}_3\text{K})_2 + 2\text{H}_2\text{O}$.
"Potassium disulphhydroxazotate" of Claus (A. 158. 75). Insol. in cold H_2O .
Very unstable. Very difficultly sol. in H_2O , more easily in dil. $\text{KOH} + \text{Aq}$ (Raschig, A. 241. 161.)
 $\text{HON}(\text{SO}_3\text{K})_2, \text{KON}(\text{SO}_3\text{K})_2 + \text{H}_2\text{O}$. True composition of potassium sulphazotate of Fremy. (Divers and Haga, Chem. Soc. 1900, 77. 432.)

Potassium sodium — — —.
 $3\text{K}_2\text{NS}_2\text{O}_7, 2\text{Na}_3\text{NS}_2\text{O}_7 + 2\text{H}_2\text{O}$. Sol. in H_2O .
 $6\text{K}_3\text{NS}_2\text{O}_7, \text{Na}_3\text{NS}_2\text{O}_7, \text{H}_3\text{NS}_2\text{O}_7 + 20\text{H}_2\text{O}$. Sol. in H_2O .
 $\text{K}_2\text{Na}_{16}\text{H}_3(\text{NS}_2\text{O}_7)_7 + 5\text{H}_2\text{O}$. Less sol. in H_2O than the others.
 $\text{K}_{16}\text{Na}_8\text{H}_4(\text{NS}_2\text{O}_7)_8 + 9\text{H}_2\text{O}$. Sol. in H_2O .
 $\text{KNa}_4\text{H}(\text{NS}_2\text{O}_7)_2 + \text{H}_2\text{O}$. Readily sol. in H_2O .
 $\text{K}_6\text{NaH}_2(\text{NS}_2\text{O}_7)_3 + 2\text{H}_2\text{O}$. Moderately sol. in H_2O .
 $\text{KNaHNS}_2\text{O}_7 + 3\text{H}_2\text{O}$. Sol. in H_2O .
(Divers, Chem. Soc. 1894, 65. 552.)

Potassium strontium — — —,
 $(\text{HO}, \text{Sr})_3\text{NS}_2\text{O}_7, 8(\text{SrKNS}_2\text{O}_7, 2\text{H}_2\text{O})$.
Ppt. (Divers.)

Potassium hydroxylamine disulphonate nitrite, $\text{HON}(\text{SO}_3\text{K})_2, \text{KNO}_2$.
Very sl. in H_2O . (Divers and Haga, Chem. Soc. 1900, 77. 433.)
 $\text{K}_3\text{H}(\text{NS}_2\text{O}_7)_2, 3\text{KNO}_2 + \text{H}_2\text{O}$. Decomp. by H_2O . (Divers and Haga.)
 $2\text{KON}(\text{SO}_3\text{K})_2, \text{KNO}_2 + 4.4\text{H}_2\text{O}$. Very sol. in H_2O which decomp. it into its constituent salts. (Divers and Haga.)
+ $6\text{H}_2\text{O}$. Very sol. in H_2O which decomp. it into its constituent salts (Divers and Haga.)
 $2\text{K}_3\text{H}(\text{NS}_2\text{O}_7)_2, 7\text{KNO}_2 + 3\text{H}_2\text{O}$. Decomp. by H_2O . (Divers and Haga.)
 $3\text{K}_3\text{H}(\text{NS}_2\text{O}_7)_2, 7\text{KNO}_2$. Decomp. by H_2O . (Divers and Haga.)

Potassium hydroxylamine disulphonate sodium chloride, $5\text{K}_2\text{HNS}_2\text{O}_7, 8\text{NaCl} + 3\text{H}_2\text{O}$.
Decomp. by H_2O . (Divers, Chem. Soc. 1894, 65. 551.)

Sodium hydroxylamine disulphonate,
 $\text{HON}(\text{SO}_3\text{Na})_2$.

Sol. in somewhat more than its own wt. of H_2O at 14° . (Divers, Chem. Soc. 1894, 65. 546.)

$\text{Na}_2\text{HNS}_2\text{O}_7$, $2\text{Na}_2\text{NS}_2\text{O}_7 + 3\text{H}_2\text{O}$. Sol. in less than 1.5 pts. H_2O at 14° . (Divers.)

Hydroxylamine isomonosulphonic acid,
 NH_2 , O , SO_2 , OH .

Very hygroscopic. Sol. in water; sol. in alcohol. (Sommer, B. 1914, 47. 1226.)

[Compare Raschig, A. 1887, 241. 161.]

Hydroxylamine isodisulphonic acid.**Ammonium hydroxylamine isodisulphonate,**
 $(\text{SO}_3\text{NH}_4)\text{ONH}(\text{SO}_3\text{NH}_4)$.

3 pts. are sol. in 2 pts. H_2O at 18° . Apt to form supersat. solutions. (Haga, Chem. Soc. 1906, 89. 246.)

Dipotassium — — —, $\text{K}_2\text{HS}_2\text{O}_7\text{N}$.

Only sl. sol. in cold H_2O . Easily sol. in boiling H_2O . Decomp. by hot dil. HCl . (Raschig, B. 1906, 39. 246.)

6.44 pts. are sol. in 100 pts. H_2O at 16.4° .

7.18 " " " " 100 " H_2O " 17.8° .

8.05 " " " " 100 " H_2O " 20° .

(Haga, Chem. Soc. 1906, 39. 243.)

Tripotassium — — —, $(\text{SO}_3\text{K})\text{ONK}(\text{SO}_3\text{K}) + 2\text{H}_2\text{O}$.

Very sol. in H_2O ; ppt. by alcohol. (Haga.)

Disodium — — —, $(\text{SO}_3\text{Na})\text{ONH}(\text{SO}_3\text{Na})$.

Very sol. in H_2O ; insol. in alcohol by which it is ppt. from aqueous solution. (Haga.)

Trisodium — — —, $(\text{SO}_3\text{Na})\text{ONNa}(\text{SO}_3\text{Na}) + 2\text{H}_2\text{O}$.

Sol. in H_2O ; ppt. by alcohol. (Haga.)

+ $3\text{H}_2\text{O}$. Sol. in 1.3 pts. H_2O at 20° . Less sol. in $\text{NaOH} + \text{Aq}$. (Divers, Chem. Soc. 1894, 65. 546.)

Hydroxylamine trisulphonic acid.**Ammonium hydroxylamine trisulphonate,**
 $2(\text{SO}_3\text{NH}_4)\text{ON}(\text{SO}_3\text{NH}_4)_2 + 3\text{H}_2\text{O}$.

Sol. in 0.61 pts. H_2O at 16° . (Haga, Chem. Soc. 1904, 85. 84.)

Potassium — — —, $2(\text{SO}_3\text{K})\text{ON}(\text{SO}_3\text{K})_2 + 3\text{H}_2\text{O}$.

1 pt. is sol. in 25.37 pts. H_2O at 18° . (Haga.)

Sodium — — —, $(\text{SO}_3\text{Na})\text{ON}(\text{SO}_3\text{Na})_2 + 2\text{H}_2\text{O}$.

Sol. in 2.84 pts. H_2O at 21.5° .

Dihydroxylamine sulphonic acid,
 $(\text{HO})_2\text{N}(\text{SO}_3\text{H})$.

"Sulphazinous acid" of Fremy.

Known only in its salts. (Raschig, A. 241. 161.)

Potassium dihydroxylamine sulphonate,
 $(\text{HO})_2\text{NSO}_3\text{K}$.

Not obtained in pure state; forms basic salt $\text{KO}\cdot\text{NSO}_3\text{K}$, which is quite sol. in H_2O , and HO corresponds to "sulfazite de potasse" of Fremy (A. ch. (3) 15. 421).

Sol. in H_2O ; insol. in alcohol and ether. (Fremy.)

Hydroxylodoplatindiamine sulphate,
 $(\text{OH})\text{IPt}(\text{NH}_3)_4\text{SO}_4 + \text{H}_2\text{O}$.

Very sl. sol., even in boiling H_2O . (Carl-gren, Sv. V. A. F. 47. 312.)

Hydroxylonitratoplatindiamine nitrate,

Sl. sol. in cold, more easily in hot H_2O . Very sl. sol. in H_2O containing HNO_3 . (Cleve.)

— pyrophosphate,

Very sl. sol. in H_2O . (Cleve.)

Hydroxyloplatinamine hydroxide,
 $(\text{OH})_2\text{Pt}(\text{NH}_3\text{OH})_2$.

Insol. in H_2O . Easily sol. in dil. acids, even $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. Not decomp. by boiling $\text{KOH} + \text{Aq}$. (Gerhardt, Compt. Chem. 1849. 490.)

Hydroxyloplatinamine nitrate,
 $(\text{OH})_2\text{Pt}(\text{NH}_3\text{NO}_3)_2 + 2\text{H}_2\text{O}$.

Sl. sol. in cold, easily in hot H_2O ; not attacked by cold $\text{HCl} + \text{Aq}$. (Cleve.)

— oxalate, $(\text{OH})_2\text{Pt}(\text{NH}_3)_2\text{C}_2\text{O}_4 + \text{H}_2\text{O}$.

Sol. in hot H_2O .

— sulphate, $(\text{OH})_2\text{Pt}(\text{NH}_3)_2\text{SO}_4 + \text{HO}_2$.
Difficultly sol. in H_2O . (Cleve.)**Hydroxyloplatinidiamine bromide,**
 $(\text{OH})_2\text{Pt}(\text{NH}_3)_4\text{Br}_2$.

Sl. sol., even in boiling H_2O . (Carl-gren, Sv. V. A. F. 47. 320.)

— chloride, $(\text{OH})_2\text{Pt}(\text{NH}_3)_4\text{Cl}_2$.

Sol. in 206 pts. cold, and 49 pts. boiling H_2O . (Carl-gren, Sv. V. A. F. 47. 316.)

— chromate, $(\text{OH})_2\text{Pt}(\text{NH}_3)_4\text{Cr}_2\text{O}_7$.

Very sl. sol. in cold or hot H_2O . (Carl-gren, Sv. V. A. F. 47. 319.)

Hydroxyloplatindiamine iodide,
 $(\text{OH})_2\text{Pt}(\text{NH}_3)_4\text{I}_2$.Sl. sol. in hot or cold H_2O . (Carlgren.)— **nitrate,** $(\text{OH})_2\text{Pt}(\text{NH}_3)_4(\text{NO}_3)_2$.Sl. sol. in cold, moderately sol. in hot H_2O . (Gerhardt, A. 76. 315.)Sol. in 343 pts. cold, and 38 pts. boiling H_2O . (Carlgren, Sv. V. A. F. 47. 318.)— **nitrite,** $(\text{OH})_2\text{Pt}(\text{NH}_3)_4(\text{NO}_2)_2$.Easily sol. in H_2O . (Carlgren.)— **sulphate,** $(\text{OH})_2\text{Pt}(\text{NH}_3)_4\text{SO}_4$.Very sl. sol. in boiling H_2O . (Cleve.)
 $+4\text{H}_2\text{O}$. Efflorescent. (Carlgren, Sv. V. A. F. 47. 313.)**Hydroxyloplatinmonodiamine nitrate,**Very easily sol. in H_2O . (Cleve.)**Hydroxyloplatinsemidiamine nitrate,**Easily sol. in H_2O . (Cleve.)— **sulphate,**Sol. in hot H_2O .**Hydroxylodiplatindiamine chloride,**Extremely sl. sol. in H_2O .— **dichromate,** $(\text{OH})_2\text{Pt}_2(\text{N}_2\text{H}_6)_4(\text{Cr}_2\text{O}_7)_2$.

Ppt. (Cleve.)

— **nitrate,** $(\text{OH})_2\text{Pt}_2(\text{N}_2\text{H}_6)_4(\text{NO}_3)_4$.Very sl. sol. in cold, more easily in hot H_2O . (Cleve.)— **phosphate,** $(\text{OH})_2\text{Pt}_2(\text{N}_2\text{H}_6)_4(\text{PO}_4\text{H})_2$.

Ppt.

— **sulphate,** $(\text{OH})_2\text{Pt}_2(\text{N}_2\text{H}_6)_4(\text{SO}_4)_2 + 2\text{H}_2\text{O}$.Ppt. Nearly insol. in H_2O .**Hydroxylosulphatoplatindiamine**Easily sol. in H_2O . (Cleve.)— **chloride,** $(\text{OH})\text{Pt}(\text{N}_2\text{H}_6)_2\text{Cl} \begin{array}{c} \text{SO}_4 \\ \end{array} + 2\text{H}_2\text{O}$.Moderately sol. in cold, very sol. in hot H_2O .**Hydroxylosulphatoplatindiamine chloroplatinate,**

Ppt.

— **chromate,**Sl. sol. in H_2O .— **dichromate,** $\left[(\text{OH})\text{Pt}(\text{N}_2\text{H}_6)_2 \begin{array}{c} \text{SO}_4 \end{array} \right]_2 \text{Cr}_2\text{O}_7$.Sl. sol. in H_2O .— **nitrate,** $(\text{OH})\text{Pt}(\text{N}_2\text{H}_6)_2\text{NO}_3 \begin{array}{c} \text{SO}_4 \end{array}$.Sol. in hot H_2O .— **sulphate,**Sl. sol. in H_2O . (Cleve.)**Hypoantimonic acid.****Calcium hypoantimonate (?)**, $\text{Ca}_2\text{Sb}_2\text{O}_8$.Min. *Romete*. Insol. in acids.**Potassium hypoantimonate**, $\text{K}_2\text{Sb}_2\text{O}_8$.Sol. in hot H_2O . Sol. in 425 pts. boiling H_2O (Brandes). Sol. in boiling $\text{KOH} + \text{Aq}$ (Berzelius). $\text{K}_2\text{Sb}_4\text{O}_9$. Ppt.**Hypoboric acid.****Sodium hypoborate**, NaOBH_3 .

Deliquescent, decomp. in aq. solution at room temp. Decomp. by acids. Sl. sol. in alcohol with decomp. (Stock, B. 1914, 47. 821.)

Hypobromous acid, HBrO .

Known only in aqueous solution.

Solution containing 6.21 pts. Br as HBrO in 100 ccm. H_2O decomposes at 30° . If dilute solution is distilled in vacuo, an acid containing 0.736 pt. Br as HBrO in 100 ccm. is obtained at first, but the distillate slowly grows weaker. Dil. solution, stable at ordinary temp., decomp. by heating over 60° . (Dancer A. 125. 237.)**Barium hypobromite.**

Known only in solution.

Calcium hypobromite bromide.

Deliquescent, and sol. in H_2O with partial decomp. (Berzelius.)

Potassium hypobromite, KBrO .

Known only in solution.

Sodium hypobromite.

Known only in solution.

Strontium hypobromite.

Known only in solution.

Hypochlorous acid, HClO .

Miscible with H_2O . Decomposes at 0° in the dark, more rapidly at higher temp. or in light. The stronger the solution the more rapid the decomposition. Moderately strong acid may be distilled without any considerable decomp., a stronger acid distilling over at first, and afterwards an acid weaker than the original acid. Very conc. or very dil. acids decomp. by distillation.

Ammonium hypochlorite.

Known only in aqueous solution, which decomposes at once.

Barium hypochlorite.

Known only in solution.

Calcium hypochlorite, $\text{Ca}(\text{OCl})_2 + 4\text{H}_2\text{O}$.

Deliquescent, and sol. in H_2O . (Kinzgett, Chem. Soc. (2) 13. 404.)

Calcium hypochlorite chloride, etc. (bleaching powder), $\text{Ca}(\text{OCl})_2$, CaCl_2 , $\text{Ca}(\text{OH})_2 + \text{H}_2\text{O}$.

Not deliquescent. Sol. in H_2O . Alcohol does not dissolve out CaCl_2 . Sol. in 20 pts. H_2O with a slight residue.

Correct formula is CaOCl_2 (Lunge and Schappi; Kraut, A. 214. 354), $\text{Ca} \begin{smallmatrix} \text{OCl} \\ \text{OH} \end{smallmatrix}$ (Stahlschmidt, B. 8. 869), CaOCl , Cl (Odling).

CaCl_2 is dissolved out by alcohol. Formula = $2\text{Ca} \begin{smallmatrix} \text{OH} \\ \text{OCl} \end{smallmatrix} \text{CaCl} + 2\text{H}_2\text{O}$. (Dreyfuss, Bull. Soc. (2) 41. 600.)

Didymium hypochlorite, $\text{Di}(\text{OCl})_2$.

Difficultly sol. in H_2O . Easily sol. in acids. (Frerichs and Smith, A. 191. 348.)

Lanthanum hypochlorite, $\text{La}(\text{OCl})_3$.

Easily sol. in H_2O . (Frerichs and Smith.)

Lithium hypochlorite, LiClO .

Known only in solution. (Kraut, A. 1882, 214. 356.)

Magnesium hypochlorite.

Known only in solution.

Potassium hypochlorite, KClO

Known only in solution.

Silver hypochlorite, AgClO .

Very sol. in H_2O , and decomp. very quickly. (Stas, Acad. R. de Belg. 35. 103.)

Sodium hypochlorite, NaClO .

Known only in solution.

Hypoiodic acid, I_2O_4 .

See Iodine tetroxide.

Hypoiodous acid, HOI .

Known only in solution which decomp. on standing. (Taylor, C. N. 1897, 76. 97.)

Calcium hypoiodite iodide, $\text{Ca}(\text{OI})_2$, CaI_2 .

Not very unstable. (Lunge and Shoch, B. 15. 1883.)

Hyponitric acid, N_2O_4 .

See Nitrogen tetroxide.

Hyponitrous acid, HNO , or better $\text{H}_2\text{N}_2\text{O}_2$.

Known only in aqueous solution. Solution is quite stable. (van der Plaats, B. 10. 1507.)

Very deliquescent; sol. in H_2O and alcohol; sol. in ether, chloroform, benzene; sl. sol. in petroleum ether. (Hantzsch and Kaufmann, A. 1896, 292. 323.)

Ammonium hyponitrite, $(\text{NH}_4)_2\text{N}_2\text{O}_2$.

Sol. in H_2O and in alcohol. (Jackson, C. N. 1893, 68. 266)

Ammonium hydrogen hyponitrite, $\text{NH}_4\text{HN}_2\text{O}_2$

Easily sol. in H_2O . The solid salt slowly decomp. at ord. temp. into ammonia, H_2O and N_2O . (Hantzsch and Kaufmann, A. 1896, 292. 328.)

Barium hyponitrite, BaN_2O_2 .

Nearly insol. in, but gradually decomp. by H_2O . Sol. in conc. acids with evolution of N_2O , but sol. in dil. $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ without decomp. (Zorn, B. 15. 1007.)

+ $4\text{H}_2\text{O}$. Sl. sol. in H_2O ; insol. in alcohol and ether. (Kirschner, Z. anorg. 1898, 16. 424.)

+ $x\text{H}_2\text{O}$. Efflorescent. (Maquenne, C. R. 108. 1303.)

Barium hydrogen hyponitrite, $\text{BaH}_2(\text{N}_2\text{O}_2)_2$.

Easily sol. in H_2O . (Zorn, B. 1882, 15. 1011.)

Calcium hyponitrite, $\text{CaN}_2\text{O}_2 + 4\text{H}_2\text{O}$.

Nearly insol. in H_2O ; easily sol. in dil. acids. (Maquenne, C. R. 108. 1303.)

Sl. sol. in H_2O ; insol. in alcohol. (Kirschner, Z. anorg. 1898, 16. 426.)

Cupric hyponitrite, basic, CuN_2O_2 , $\text{Cu}(\text{OH})_2$

Insol. in H_2O ; not decomp. by hot H_2O . Sol. in dil. acids and in ammonia. Decomp. by NaOH . (Divers, Chem. Soc. 1899, **75**, 121.)

Insol. in H_2O . Sol. in dil. acids and in $\text{NH}_4\text{OH} + \text{Aq.}$ (Kirschner, Z. anorg. 1898, **16**, 430.)

Cuprous hyponitrite, $\text{Cu}_2\text{N}_2\text{O}_2 + 2\text{H}_2\text{O}$.

Ppt. (Kolotow, C. C. 1891, I. 1859.)

Cannot be formed. (Divers, Chem. Soc. 1899, **75**, 121.)

Lead hyponitrite, basic, PbN_2O_2 , PbO .

Insol. in H_2O . Sol. in dil. acids from which it may be pptd. by $\text{NaOH} + \text{Aq}$ or $\text{NH}_4\text{OH} + \text{Aq.}$ (Kirschner, Z. anorg. 1898, **16**, 430.)

Lead hyponitrite, PbN_2O_2 .

Insol. in H_2O ; sol. in dil. acids from which it may be pptd. by $\text{NaOH} + \text{Aq}$ or $\text{NH}_3 + \text{Aq.}$ (Kirschner.)

Mercuric hyponitrite, basic, 3HgO , $\text{HgN}_2\text{O}_2 + 3\text{H}_2\text{O}$.

Ppt. Sl. sol. even in boiling dil. HNO_3 . Scarcely sol. in conc., very sol. in warm dil. HCl . (Ray, Chem. Soc. 1897, **71**, 349.)

Mercurous hyponitrite, $\text{Hg}_2\text{N}_2\text{O}_2$.

Sol. in dil. HNO_3 with slow decomp. (Ray, Chem. Soc. 1907, **91**, 1404.)

Mercuric hyponitrite, HgN_2O_2 .

Sol. in HCl , and in $\text{NaCl} + \text{Aq.}$

Sl. sol. in very dil. alkali. (Divers, Chem. Soc. 1899, **75**, 119.)

Potassium hyponitrite, $\text{K}_2\text{N}_2\text{O}_2$.

Sol. in H_2O . (van der Plaats.)

Stable when dry.

Sol. in 90% alcohol, and sl. sol. in abs. alcohol. (Divers, Chem. Soc. 1899, **75**, 103.)

Silver hyponitrite (nitrosyl silver),

$\text{Ag}_2\text{N}_2\text{O}_2$.

Insol. in H_2O . Easily sol. in dil. $\text{HNO}_3 + \text{Aq}$ or $\text{H}_2\text{SO}_4 + \text{Aq.}$

Decomp. by H_3PO_4 , H_2S , and boiling $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq.}$ (van der Plaats.)

Insol. in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq.}$; sol. in $\text{NH}_4\text{OH} + \text{Aq.}$ (Divers, C. N. **23**, 206.)

Sol. in dil. HNO_3 and H_2SO_4 and in conc. $\text{NH}_4\text{OH} + \text{Aq.}$; decomp. by HCl . (Kirschner, Z. anorg. 1898, **16**, 431.)

Sodium hyponitrite, $\text{Na}_2\text{N}_2\text{O}_2 + 6\text{H}_2\text{O}$.

Sol. in H_2O . (van der Plaats.)

Strontium hyponitrite, SrN_2O_2 .

Easily sol. in H_2O . (Roederer, Bull. Soc. 1906, (3) **35**, 715.)

+ $5\text{H}_2\text{O}$. Nearly insol. in H_2O ; easily sol.

in dil. acids. (Maquenne, C. R. **108**, 1303.) Sl. sol. in H_2O , insol. in alcohol. (Kirschner, Z. anorg. 1898, **16**, 426.)

Hypophosphomolybdic acid, Mo_5O_{15} , $7\text{H}_3\text{PO}_2 + 3\text{H}_2\text{O}$.

Very sl. sol. in cold H_2O . Scarcely sol. in cold dil. H_2SO_4 . Sol. in cold conc. H_2SO_4 . Sol. in warm conc. HCl . Warm HNO_3 oxidizes forming clear solution. (Mawrow, Z. anorg. 1901, **28**, 164.)

Ammonium hypophosphomolybdate, $2(\text{NH}_4)_2\text{O}$, $2\text{H}_3\text{PO}_2$, $8\text{MoO}_3 + 2\text{H}_2\text{O}$.

Not very sol. in cold H_2O , readily in hot H_2O . (Gibbs, Am. Ch. J. **3**, 402.)

Hypophosphoric acid, $\text{H}_4\text{P}_2\text{O}_6$.

Very deliquescent, and sol. in the least amount of H_2O . (Joly, C. R. **101**, 1058.)

100 cc. $\text{H}_4\text{P}_2\text{O}_6 + \text{Aq.}$ containing 4.1% P_2O_4 has sp. gr. = 1.036.

100 cc. $\text{H}_4\text{P}_2\text{O}_6 + \text{Aq.}$ containing 12.3% P_2O_4 has sp. gr. = 1.122.

(Salzer, A. 1878, **194**, 28.)

+ H_2O . (Sanger, A. **232**, 14.)

Does not exist. (Joly.)

+ $2\text{H}_2\text{O}$. Appears to be the only stable hydrate between 0° and 60° .

Sanger's hydrate, $\text{H}_4\text{P}_2\text{O}_6 + \text{H}_2\text{O}$, and Joly's anhydride could not be obtained. (Rosenheim, B. 1908, **41**, 2711.)

Aluminum hypophosphate, $\text{Al}_4(\text{P}_2\text{O}_6)_3 + 23\text{H}_2\text{O}$.

Easily sol. in mineral acids. Sol. in $\text{Na}_4\text{P}_2\text{O}_6 + \text{Aq.}$ (Palm, Dissertation, Rostock, **1890**.)

Ammonium hypophosphate, $(\text{NH}_4)_4\text{P}_2\text{O}_6 + \text{H}_2\text{O}$.

Sol. in 30 pts. H_2O . (Salzer, A. **194**, 32.)

Ammonium hydrogen hypophosphate, $(\text{NH}_4)_2\text{H}_2\text{P}_2\text{O}_6$.

Sol. in 14 pts. cold, and 4 pts. boiling H_2O . (Salzer, A. **194**, 32.)

Ammonium trihydrogen hypophosphate, $\text{NH}_4\text{H}_3\text{P}_2\text{O}_6$.

Sol. in H_2O . (Salzer, A. **211**, 1.)

Ammonium magnesium hypophosphate, $(\text{NH}_4)_2\text{MgP}_2\text{O}_6 + 6\text{H}_2\text{O}$.

Precipitate. (Salzer, A. **232**, 114.)

Barium hypophosphate, $\text{Ba}_2\text{P}_2\text{O}_6$.

Very slightly sol., but not wholly insol. in H_2O . Very slightly sol. in acetic acid, but more soluble in hydrochloric, and hypophosphoric acids. (Salzer, A. **194**, 34.)

Barium hydrogen hypophosphate, $\text{BaH}_2\text{P}_2\text{O}_6 + 2\text{H}_2\text{O}$.

Soluble in about 1000 pts. H_2O . Solution decomposes by heating. (Salzer, A. **194**, 34.)

Bismuth hypophosphate, $\text{Bi}_1(\text{P}_2\text{O}_6)_3 + 8\frac{1}{2}\text{H}_2\text{O}$.

Completely sol. in $\text{HCl} + \text{Aq}$, also in warm $\text{HNO}_3 + \text{Aq}$. Insol. in boiling dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. Sl. sol. by long boiling with conc. H_2SO_4 . (Palm, Rostock, 1890.)

Cadmium hypophosphate, $\text{Cd}_2\text{P}_2\text{O}_6 + 2\text{H}_2\text{O}$.

Insol. in H_2O . Sol. in dil. acids. (Draue, B. 21. 3403.)

Cadmium potassium hydrogen hypophosphate, $\text{CdK}_2(\text{H}_2\text{P}_2\text{O}_6)_2 + 2\frac{1}{2}\text{H}_2\text{O}$.

(Bausa, Z. anorg. 1894, 6. 147.)

Cadmium sodium hypophosphate, $\text{CdNa}_2\text{P}_2\text{O}_6 + 6\text{H}_2\text{O}$.

Insol. in H_2O , but decomp. thereby. Sol. in dil. acids. (Draue.)

Calcium hypophosphate, $\text{Ca}_2\text{P}_2\text{O}_6 + 2\text{H}_2\text{O}$.

Insol. in H_2O ; difficultly sol. in $\text{HC}_2\text{H}_3\text{O}_2$; easily sol. in $\text{H}_4\text{P}_2\text{O}_6$, or $\text{HCl} + \text{Aq}$. (Salzer, A. 194. 36.)

Calcium hydrogen hypophosphate, $\text{CaH}_2\text{P}_2\text{O}_6 + 6\text{H}_2\text{O}$.

Sol. in 60 pts. H_2O . (Salzer, A. 232. 114.)

Chromic hypophosphate, $\text{Cr}_4(\text{P}_2\text{O}_6)_2 + 34\text{H}_2\text{O}$.

Sol. in $\text{HCl} + \text{Aq}$ on sl. warming, also in $\text{HNO}_3 + \text{Aq}$. Not completely sol. in dil. $\text{H}_2\text{SO}_4 + \text{Aq}$, but completely sol. in conc. H_2SO_4 . (Palm, Dissertation, Rostock, 1890.)

Cobaltous hypophosphate, $\text{Co}_2\text{P}_2\text{O}_6 + 8\text{H}_2\text{O}$.

Insol. in H_2O . Easily sol. in acids. (Draue, B. 21. 3403.)

Cobaltous potassium hypophosphate, $\text{CoK}_2\text{P}_2\text{O}_6 + 5\text{H}_2\text{O}$.

Ppt. (Bausa, Z. anorg. 1894, 6. 156.)

Cobaltous potassium hydrogen hypophosphate, $\text{CoH}_2\text{P}_2\text{O}_6, 3\text{K}_2\text{H}_2\text{P}_2\text{O}_6 + 15\text{H}_2\text{O}$.

Cobaltous sodium hypophosphate, $\text{CoNa}_2\text{P}_2\text{O}_6 + 1\frac{1}{2}\text{H}_2\text{O}$.

Insol. in H_2O , but decomp. thereby. Sol. in dil. acids. (Draue, B. 21. 3403.)

Cupric hypophosphate, $\text{Cu}_2\text{P}_2\text{O}_6 + 6\text{H}_2\text{O}$.

Insol. in H_2O . Sol. in dil. acids. (Draue, B. 21. 3403.)

Ppt. (Bausa, Z. anorg. 1894, 6. 145.)

Cupric potassium hydrogen hypophosphate, $\text{CuH}_2\text{P}_2\text{O}_6, 3\text{K}_2\text{H}_2\text{P}_2\text{O}_6 + 15\text{H}_2\text{O}$.

Ppt. (Bausa, Z. anorg. 1894, 6. 152.)

Glucinum hypophosphate, $\text{Gl}_2\text{P}_2\text{O}_6 + 7\text{H}_2\text{O}$.

Insol. in H_2O . Moderately sol. in all mineral acids. (Palm, Rostock, 1890.)
+ $3\text{H}_2\text{O}$. (Rammelsberg.)

Iron (ferrous) hypophosphate, $\text{Fe}_2\text{P}_2\text{O}_6 + 4\frac{1}{2}\text{H}_2\text{O}$.

Insol. in H_2O . Sol. in cold $\text{HCl} + \text{Aq}$. Decomp. by hot $\text{HNO}_3 + \text{Aq}$ into $\text{Fe}_4(\text{P}_2\text{O}_6)_3$. Insol. in $\text{HNO}_3 + \text{Aq}$. Insol. in boiling dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. Somewhat sol. in cold H_2SO_4 , but a ppt. separates out on heating. (Palm, Rostock, 1890.)

Iron (ferric) hypophosphate, $\text{Fe}_4(\text{P}_2\text{O}_6)_3 + 20\text{H}_2\text{O}$.

Easily sol. in $\text{HCl} + \text{Aq}$. Wholly insol. in HNO_3 , and dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. Completely sol. in conc. H_2SO_4 by warming a short time, but a ppt. separates out on boiling. (Palm.)

Lead hypophosphate, $\text{Pb}_2\text{P}_2\text{O}_6$.

Insol. in H_2O , $\text{HC}_2\text{H}_3\text{O}_2$, or $\text{H}_4\text{P}_2\text{O}_6 + \text{Aq}$; sol. in dil. $\text{HNO}_3 + \text{Aq}$. (Salzer.)

Lithium hypophosphate, $\text{Li}_4\text{P}_2\text{O}_6 + 7\text{H}_2\text{O}$.

Very sl. sol. in H_2O . (Salzer, A. 194. 28.)

Sol. in 120 pts. H_2O at ord. temp. (Rammelsberg, J. pr. (2) 45. 153.)

$\text{Li}_2\text{H}_2\text{P}_2\text{O}_6 + 2\text{H}_2\text{O}$. Deliquescent. (Rammelsberg.)

Magnesium hypophosphate, $\text{Mg}_2\text{P}_2\text{O}_6 + 12\text{H}_2\text{O}$.

Sol. in 15,000 pts. H_2O ; sl. sol. in acetic, easily in hypophosphoric, or mineral acids. (Salzer, A. 232. 114.)

+ $24\text{H}_2\text{O}$. (Rammelsberg.)

Magnesium hydrogen hypophosphate, $\text{MgH}_2\text{P}_2\text{O}_6 + 4\text{H}_2\text{O}$.

Sol. in 200 pts. H_2O . (Salzer, A. 232. 114.)

Manganese hypophosphate, $\text{Mn}_2\text{P}_2\text{O}_6 + 2\frac{1}{2}\text{H}_2\text{O}$.

Insol. in H_2O ; sol. in mineral acids, insol. in acetic acid. (Palm, Dissertation, Rostock, 1890.)

Manganous potassium hydrogen hypophosphate, $\text{MnH}_2\text{P}_2\text{O}_6, \text{K}_2\text{H}_2\text{P}_2\text{O}_6 + 3\text{H}_2\text{O}$.

Ppt. (Bausa, Z. anorg. 1894, 6. 150.)

Manganous sodium hypophosphate, $\text{Mn}_2\text{P}_2\text{O}_6, \text{Na}_4\text{P}_2\text{O}_6 + 11\text{H}_2\text{O}$.

Insol. in H_2O ; sol. in mineral acids. (Palm.)

Nickel hypophosphate, $\text{Ni}_2\text{P}_2\text{O}_6 + 12\text{H}_2\text{O}$.

Insol. in H_2O . Sol. in dil. acids. (Draue, B. 21. 3401.)

Nickel potassium hypophosphate, $\text{NiK}_2\text{P}_2\text{O}_6 + 6\text{H}_2\text{O}$.

Ppt. (Bausa, Z. anorg. 1894, 6. 155.)

Nickel potassium hydrogen hypophosphate, $\text{NiH}_2\text{P}_2\text{O}_6, 3\text{K}_2\text{H}_2\text{P}_2\text{O}_6 + 15\text{H}_2\text{O}$.

Ppt. (Bausa, Z. anorg. 1894, 6. 144.)

Nickel sodium hypophosphate, $\text{NiNa}_2\text{P}_2\text{O}_6 + 12\text{H}_2\text{O}$

Insol. in H_2O , but decomp. thereby. Easily sol. in dil. acids. (Drawe.)

Potassium hypophosphate, $\text{K}_4\text{P}_2\text{O}_6 + 8\text{H}_2\text{O}$.

Sol. in $\frac{1}{4}$ pt. H_2O ; insol. in alcohol. (Salzer, A. 211. 1.)

Potassium hydrogen hypophosphate, $\text{K}_3\text{HP}_2\text{O}_6 + 3\text{H}_2\text{O}$.

Sol. in $\frac{1}{2}$ pt. H_2O . (Salzer, A. 211. 1.)

Potassium dihydrogen hypophosphate, $\text{K}_2\text{H}_2\text{P}_2\text{O}_6 + 3\text{H}_2\text{O}$, and $+2\text{H}_2\text{O}$.

Sol. in 3 pts. cold, and 1 pt. boiling H_2O . (Salzer, A. 211. 1.)

Potassium trihydrogen hypophosphate, $\text{KH}_3\text{P}_2\text{O}_6$.

Sol. in $1\frac{1}{2}$ pts. cold, and $\frac{1}{2}$ pt. hot H_2O . (Salzer, A. 211. 1.)

Potassium pentahydrogen dihypophosphate, $\text{K}_5\text{H}_5(\text{P}_2\text{O}_6)_2 + 2\text{H}_2\text{O}$.

Sol. in $2\frac{1}{2}$ pts. cold, and $\frac{4}{5}$ pt. boiling H_2O . (Salzer, A. 211. 1.)

Potassium sodium hypophosphate, $\text{Na}_2\text{K}_2\text{P}_2\text{O}_6 + 9\text{H}_2\text{O}$.

Sol. in about 25 pts. cold, and 3 pts. hot H_2O . (Bausa, Z. anorg. 1894, 6. 158.)

Potassium zinc hydrogen hypophosphate, $\text{ZnH}_2\text{P}_2\text{O}_6, 3\text{K}_2\text{H}_2\text{P}_2\text{O}_6 + 15\text{H}_2\text{O}$.

Ppt. (Bausa, Z. anorg. 1894, 6. 148.)

Silver hypophosphate, $\text{Ag}_4\text{P}_2\text{O}_6$.

Sl. sol. in H_2O . Easily sol. in HNO_3 , or $\text{NH}_4\text{OH} + \text{Aq}$. Very sl. sol. in $\text{H}_4\text{P}_2\text{O}_6 + \text{Aq}$. (Salzer, A. 232. 114.)

Sodium hypophosphate, $\text{Na}_4\text{P}_2\text{O}_6 + 10\text{H}_2\text{O}$.

Sol. in about 30 pts. cold, much more easily in hot H_2O . (Salzer.)

Sodium hydrogen hypophosphate, $\text{Na}_3\text{HP}_2\text{O}_6 + 9\text{H}_2\text{O}$.

Sol. in 22 pts. H_2O . (Salzer.)

Sodium dihydrogen hypophosphate, $\text{Na}_2\text{H}_2\text{P}_2\text{O}_6 + 6\text{H}_2\text{O}$.

Sol. in 45 pts. cold, and 5 pts. boiling H_2O . More sol. in dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. Insol. in alcohol. (Salzer, A. 187. 331.)

Sodium trihydrogen hypophosphate, $\text{NaH}_3\text{P}_2\text{O}_6$.

Sol. in H_2O . (Salzer, A. 211. 1.)

Sodium trihydrogen dihypophosphate,

Very efflorescent. Sol. in 15 pts. cold H_2O . (Salzer, A. 211. 1.)

Thallium hypophosphate, $\text{Tl}_4\text{P}_2\text{O}_6$.

Sl. sol. in H_2O . Decomp. in sunlight. (Joly, C. R. 1894, 118. 650.)

Thallium hydrogen hypophosphate, $\text{Tl}_2\text{H}_2\text{P}_2\text{O}_6$.

Sol. in H_2O . (Joly.)

Zinc hypophosphate, $\text{Zn}_2\text{P}_2\text{O}_6 + 2\text{H}_2\text{O}$.

Insol. in H_2O . Easily sol. in dil. acids. (Drawe, B. 21. 3403.)

Hypophosphorosomolybdc acid.

Barium hypophosphorosomolybdate, $\text{BaO}, \text{Mo}_7\text{O}_{20}, 3\text{H}_3\text{PO}_2 + 12\text{H}_2\text{O}$.

Very sol. in H_2O and $\text{BaCl}_2 + \text{Aq}$. (Mawrow, Z. anorg. 1902, 29. 156.)

Hypophosphorous acid, H_3PO_2 .

Very sol. in H_2O and alcohol. (Rose.)

Aluminum hypophosphite.

Not deliquescent, but very sol. in H_2O . (Rose, Pogg. 12. 86.)

Ammonium hypophosphite, $\text{NH}_4\text{H}_2\text{PO}_2$.

Sol. in H_2O , less deliquescent than the potassium salt. (Wurtz, A. ch. (3) 7. 193.)

Very sol. in absolute alcohol. (Dulong.) Moderately sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 826.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4328.)

Barium hypophosphite, $\text{Ba}(\text{H}_2\text{PO}_2)_2 + \text{H}_2\text{O}$.

Sol. in 3.5 pts. cold, and 3 pts. boiling H_2O . Insol. in alcohol. (Wurtz, A. 43. 323.)

Bismuth hypophosphite, $\text{Bi}(\text{H}_2\text{PO}_2)_3$.

Ppt. (Vanino, J. pr. 1906, (2) 74. 150.) $+ \text{H}_2\text{O}$. Sol. in acid $\text{Bi}(\text{NO}_3)_3 + \text{Aq}$. (Haga, Chem. Soc. 1895, 67. 229.)

Cadmium hypophosphite.

Sol. in H_2O . (Rose, Pogg. 12. 91.)

Calcium hypophosphite, $\text{Ca}(\text{PH}_2\text{O}_2)_2$.

Sol. in 6 pts. cold, and not much more sol. in hot H_2O . Insol. in strong, very sol. in weak alcohol. (Rose, Pogg. 9. 361.)

Calcium cobaltous hypophosphite.

$2\text{Ca}(\text{PH}_2\text{O}_2)_2, \text{Co}(\text{PH}_2\text{O}_2)_2 + 2\text{H}_2\text{O}$.

Efflorescent. (Rose, Pogg. 12. 295.)

Calcium ferrous hypophosphite.

Sol. in H_2O . (Rose, Pogg. 12. 294.)

Cerous hypophosphite, $\text{Ce}(\text{PH}_2\text{O}_2)_3 + \text{H}_2\text{O}$.

Sl. sol. in H_2O . (Rammelsberg, B. A. B. 1872. 437.)

Chromium hypophosphite, $\text{Cr}_2(\text{OH})_2(\text{H}_2\text{PO}_2)_4$.

Anhydrous. Insol. in H_2O or dil. acids.
 $+3\text{H}_2\text{O}$. Sol in H_2O . (Wurtz, A. ch. (3) 16. 196.)

Cobaltous hypophosphite, $\text{Co}(\text{PH}_2\text{O}_2)_2 + 6\text{H}_2\text{O}$.

Efflorescent. Easily sol. in H_2O . (Rose, Pogg. 12. 87.)

Cupric hypophosphite, $\text{Cu}(\text{PH}_2\text{O}_2)_2$.

Very sol. in H_2O , but very easily decomp on heating. (Wurtz, A. ch. (3) 16. 199.)

Glucinum hypophosphite.

Sol. in H_2O . (Rose, Pogg. 12. 86.)

Iron (ferrous) hypophosphite, $\text{Fe}(\text{PH}_2\text{O}_2)_2 + 6\text{H}_2\text{O}$.

Sol. in H_2O . (Rose, Pogg. 12. 294.)

Iron (ferric) hypophosphite.

Difficultly sol. in H_2O or acids. Decomp. on boiling. Sl. sol. in $\text{H}_3\text{PO}_2 + \text{Aq}$. (Rose.)

Lead hypophosphite, $\text{Pb}(\text{PH}_2\text{O}_2)_2$.

Difficultly sol. in cold, more easily in hot H_2O . Insol. in alcohol. (Rose, Pogg. 12. 288.)

Lithium hypophosphite, $\text{LiH}_2\text{PO}_2 + \text{H}_2\text{O}$.

Sol. in H_2O . (Rammelsberg, B. A. B. 1872. 416.)

Magnesium hypophosphite, $\text{Mg}(\text{PH}_2\text{O}_2)_2 + 6\text{H}_2\text{O}$.

Efflorescent in dry air. Sol. in H_2O . (Rose.)

Manganous hypophosphite, $\text{Mn}(\text{H}_2\text{PO}_2)_2 + \text{H}_2\text{O}$.

Permanent. Very sol. in H_2O . (Wurtz, A. ch. (3) 16. 195.)

Mercurous hypophosphite nitrate,

Sl. sol. in H_2O with rapid decomp. Sol. in hot conc. HNO_3 . (Haga, Chem. Soc. 1895, 67. 227.)

Nickel hypophosphite, $\text{Ni}(\text{PH}_2\text{O}_2)_2 + 6\text{H}_2\text{O}$.

Efflorescent. Sol. in H_2O . (Rammelsberg, B. 5. 494.)

Nickel hypophosphite ammonia,

(Ephraim, B. 1913, 46. 3111.)

Platinous hypophosphite $\text{Pt}(\text{PH}_2\text{O}_2)_2$.

Insol. in H_2O , HCl , $\text{H}_2\text{SO}_4 + \text{Aq}$, etc. Sol. in $\text{HNO}_3 + \text{Aq}$. Insol. in alcohol. (Engel, C. R. 91. 1068.)

Potassium hypophosphite, KH_2PO_2

Very deliquescent. Very sol. in H_2O . sol in weak, less in absolute alcohol. Insol. in ether. (Wurtz, A. ch. (3) 7. 192.)

Sl. sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 828.)

Sodium hypophosphite, $\text{NaH}_2\text{PO}_2 + \text{H}_2\text{O}$.

Very deliquescent. Somewhat less sol. than the K salt. Very sol. in absolute alcohol. (Dulong.)

Very sol. in H_2O , and somewhat less sol. in alcohol. (Rammelsberg, B. A. B. 1872. 412.)

Sl. sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 829.)

Strontium hypophosphite, $\text{Sr}(\text{PH}_2\text{O}_2)_2$.

Very easily sol. in H_2O . (Dulong.)

Insol. in alcohol. (Wurtz.)

Thallous hypophosphite, TlH_2PO_2

Sol. in H_2O . (Rammelsberg, B. A. B. 1872. 492.)

Uranyl hypophosphite, $\text{UO}_2(\text{H}_2\text{PO}_2)_2 + \text{H}_2\text{O}$.

Sl. sol. in H_2O . Easily sol. in HCl , or $\text{HNO}_3 + \text{Aq}$. (Rammelsberg, Chem. Soc. (2) 11. 1.)

Divanadyl hypophosphite, $\text{V}_2\text{O}_5(\text{H}_2\text{PO}_2)_4 + 2\text{H}_2\text{O}$.

Insol. in cold, sl. sol. in hot H_2O .

Sol. in hot dil. HCl , H_2SO_4 and HNO_3 and in warm conc. HCl and H_2SO_4 .

Insol. in oxalic acid. (Mawrow, Z. anorg. 1907, 55. 147.)

Zinc hypophosphite, $\text{Zn}(\text{H}_2\text{PO}_2)_2 + \text{H}_2\text{O}$.

Sol. in H_2O .

$+6\text{H}_2\text{O}$. Efflorescent. (Wurtz, A. ch. (3) 16. 195.)

Zirconium hypophosphite, $\text{Zr}(\text{OPH}_2\text{O})_4 + \text{H}_2\text{O}$.

Sensitive to light. Insol. in alcohol, by which it is pptd. from aqueous solution. (Hauser, Z. anorg. 1913, 84. 93.)

Hypophosphotungstic acid.**Potassium hypophosphotungstate, $4\text{K}_2\text{O}$, $6\text{H}_3\text{PO}_3$, $18\text{WO}_3 + 7\text{H}_2\text{O}$.**

Precipitate. Sol. in hot, very sl. sol. in cold H_2O . (Gibbs, Am. Ch. J. 5. 361.)

Hyposulpharsenious acid.**Hyposulpharsenites, As_2S_2 , M_2S .**

Difficultly sol. in H_2O . (Berzelius.)

Do not exist. (Nilson, B. 4. 989.)

Hyposulphuric acid, $\text{H}_2\text{S}_2\text{O}_6$.

See Dithionic acid.

Hyposulphurous acid, $\text{H}_2\text{S}_2\text{O}_3$.*See Thiosulphuric acid.***Hyposulphurous (Hydrosulphurous) acid, H_2SO_2 .**

Known only in dil. aqueous solution, which decomposes rapidly.

Correct formula is $\text{H}_2\text{S}_2\text{O}_4$, according to Bernthsen (A. 211. 285.)More sol. in alcohol than in H_2O . (Rossler, Arch. Pharm. (3) 25. 845.)**Ammonium hyposulphite, $(\text{NH}_4)_2\text{S}_2\text{O}_4$.**

Known only in solution. (Prudhomme, Bull. Soc. 1899, (3) 21. 326.)

Ammonium hydrogen hyposulphite, $\text{NH}_4\text{HS}_2\text{O}_4$.

Known only in solution. (Prudhomme, Bull. Soc. 1899, (3) 21. 326.)

Calcium hyposulphite, $\text{CaS}_2\text{O}_4 + 1.5\text{H}_2\text{O}$.Difficultly sol. in H_2O . (Bazlen, B. 1905, 38. 1059.)**Magnesium hyposulphite, MgS_2O_4 .**

(Billy, C. R. 1905, 140. 936.)

Potassium hyposulphite, $\text{K}_2\text{S}_2\text{O}_4 + 3\text{H}_2\text{O}$.

Easily decomp.

Insol. in alcohol. (Bazlen, B. 1905, 38. 1058.)

Sodium hyposulphite, $\text{Na}_2\text{S}_2\text{O}_4$.*Anhydrous.* Stable in dry air. (Bazlen, B. 1905, 38. 1061.)100 g. H_2O dissolve 24.1 g. of the anhydrous salt at 20° . (Jellinek, Z. anorg. 1911, 70. 130.) $+2\text{H}_2\text{O}$. Solubility in H_2O .

11.6 g. of the solution contain at:

 20° 1.91 g. $\text{Na}_2\text{S}_2\text{O}_4$ 10° 1.67 g. " 1° 1.49 g. "

(Jellinek, Z. anorg. 1911, 70. 128.)

Insol. in alcohol. (Bazlen, B. 1905, 38. 1058.)

Sodium zinc hyposulphite, $\text{Na}_2\text{S}_2\text{O}_4, \text{ZnS}_2\text{O}_4$.Less sol. in H_2O than ZnS_2O_4 . (Bazlen, B. 1905, 38. 1060.)**Strontium hyposulphite, SrS_2O_4 .**Sol. in H_2O . (Moissan, C. R. 1902, 135. 653.)**Zinc hyposulphite, ZnS_2O_4 .**Easily sol. in H_2O ; about 1 pt. in 7 pts. H_2O . Forms supersat. solutions readily. (Bazlen, B. 1905, 38. 1060.)**Hypovanadic acid, $\text{V}_2\text{O}_2(\text{OH})_4$.***See Vanadium tetrhydroxide.***Hypovanadic acid, $\text{H}_2\text{V}_4\text{O}_9$.***See Vanadous acid.***Hypovanadic acid with vanadic acid.***See Vanadicovanadic acid.***Imidodimetaarsenic acid.****Ammonium imidodimetaarsenate, $(\text{NH}_4\text{O}_2\text{As}_2\text{O}_3\text{NH})$.**

(Rosenheim and Jacobsohn, Z. anorg. 1906, 50. 307.)

Imidochromic acid.**Ammonium imidochromate, $\text{NHCrO}(\text{ONH}_4)_2$.**Very sol. in H_2O with decomp. (Rosenheim and Jacobsohn, Z. anorg. 1906, 50. 299.)**Ammonium potassium imidochromate, $\text{NH}_4\text{KCrO}_3\text{NH}$.**Decomp. on solution in H_2O . (Rosenheim, Z. anorg. 1906, 50. 302.)**Imidodimidochromic acid.****Ammonium imidodimido chromate, $\text{NH}[\text{CrO}(\text{NH})\text{ONH}_4]_2$.**

(Rosenheim and Jacobsohn, Z. anorg. 1906, 50. 303.)

Imidomolybdic acid.**Potassium imidomolybdate, $\text{NKMbO}(\text{OK})_2$.**

Unstable in air.

Very hygroscopic. Very sol. in H_2O . (Rosenheim, Z. anorg. 1906, 50. 305.)**Diimidodiphosphormonamic acid,**Correct formula for *pyrophosphotramic* acid of Gladstone. (Mente, A. 248. 241.)**Imidodiphosphoric acid,**Correct name for *pyrophosphamic* acid. (Mente, A. 248. 251.)**Barium imidodiphosphate, $\text{Ba} \begin{smallmatrix} \text{O} \\ \text{O} \end{smallmatrix} \begin{smallmatrix} \text{PO} \\ \text{PO} \end{smallmatrix} > \text{NH}$.**Sl. sol. in H_2O . (Mente, A. 248. 243.)**Barium imidodiphosphate, basic,** $2\text{H}_2\text{O}$.

Ppt. (Mente.)

Ferric imidodiphosphate.

Sl. sol. in conc. acids. (Mente, A. 248. 241.)

Silver imidodiphosphate, $\text{Ag}_3\text{H}_2\text{P}_2\text{NO}_6$.Insol. in H_2O . (Stokes, Am. Ch. J. 1896, 18. 660.) $\text{Ag}_3\text{HP}_2\text{NO}_6$. Ppt. (Stokes.)**Diimidodiphosphoric acid,**Correct name for *pyrophosphodiamic acid*. (Mente, A. 248. 241.)**Barium diimidodiphosphate,**

Sl. sol. in dil. acids. (Mente, A. 248. 244.)

Sodium diimidodiphosphate, basic,Sl. sol. in H_2O . (Mente, A. 248. 245.)**Diimidotriphosphoric acid.****Silver diimidotriphosphate, $\text{Ag}_3\text{H}_4\text{P}_3\text{N}_2\text{O}_8$.**Insol. in H_2O . Very sol. in $\text{NH}_4\text{OH} + \text{Aq}$. Rather sl. sol. in dil. HNO_3 . (Stokes, Am. Ch. J. 1896, 18. 657.) $\text{Ag}_5\text{H}_2\text{P}_3\text{N}_2\text{O}_8$. Insol. in H_2O . Very sol. in $\text{NH}_4\text{OH} + \text{Aq}$.Decomp. by HNO_3 . (Stokes.)**Trisodium diimidotriphosphate,**Sol. in H_2O .

Insol. in alcohol. (Stokes.)

Triimidotetraphosphoric acid.**Silver triimidotetraphosphate.**

Ppt. (Stokes, Am. Ch. J. 1898, 20. 755.)

Sodium triimidotetraphosphate,Easily sol. in H_2O ; insol. in sodium acetate solution and dil. alcohol. (Stokes, Am. Ch. J. 1898, 20. 754.)**Imidosulphamide, $\text{NH}_2\text{SO}_2\text{NH}\cdot\text{SO}_2\text{NH}_2$.**

"Sulphamide" of Traube.

Very sol. in H_2O with decomp. appreciably sol. in cold, easily sol. in hot methyl and ethyl alcohol. Insol. in C_6H_6 and CHCl_3 . Sl. sol. in ether, cold and hot acetic ether and glacial acetic acid. Moderately stable toward alkalis. (Hantzsch and Stuer, B. 1905, 38. 1022.)**Ammonium imidosulphamide,**

(Hantzsch and Stuer.)

Imidosulphonic acid,

Ammondisulphonic acid of Claus. Known only in aqueous solution. (Divers and Haga, Chem. Soc. 61. 943.)

Very unstable. (Berglund, B. 9. 252.)

Ammonium imidosulphonate, basic,Sol. in 9 pts. of H_2O . Solution is stable. Insol. in alcohol.Sl. sol. in warm conc. H_2SO_4 without decomp. (Rose, Pogg. 1834, 32. 81.)

Much less sol. than the neutral salt. (Berglund, B. 9. 255.)

= "Parasulphatammon."

+ H_2O . Gradually efflorescent. Sol. in H_2O with subsequent decomp. (Divers and Haga.)**Ammonium imidosulphonate, $\text{HN}(\text{SO}_3\text{NH}_4)_2$.**Sol. in H_2O . (Raschig, A. 241. 161.)**Ammonium barium imidosulphonate,**Very sl. sol. in H_2O . (Divers and Haga.) $(\text{NH}_4)_2\text{Ba}_5\text{N}_4(\text{SO}_3)_8 + 8\text{H}_2\text{O}$. (D. and H.)**Ammonium calcium imidosulphonate.**

(Divers, Chem. Soc. 1892, 61. 968.)

Ammonium sodium imidosulphonate,Very sl. sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Divers and Haga.)**Ammonium sodium imidosulphonate nitrate,**Very sol. in H_2O . (Divers and Haga.)**Barium imidosulphonate, $\text{Ba}[\text{N}(\text{SO}_3)_2\text{Ba}]_2 + 5\text{H}_2\text{O}$.**Sl. sol. in H_2O . (Berglund, B. 9. 255.)Sol. in dil. $\text{HNO}_3 + \text{Aq}$ without decomp. (Divers and Haga.) $\text{HN}(\text{SO}_3)_2\text{Ba} + \text{H}_2\text{O}$. Moderately sol. in H_2O . (D. and H.)**Barium mercury imidosulphonate,**Almost insol. in cold H_2O . (Divers and Haga, Chem. Soc. 1892, 61. 977.)**Barium sodium imidosulphonate,**Sparsely sol. in H_2O . Readily sol. in HNO_3 or HCl . (Divers, Chem. Soc. 1892, 61. 967.)

Calcium imidosulphonate, $\text{Ca}[\text{N}(\text{SO}_3)_2\text{Ca}]_2 + 6\text{H}_2\text{O}$.

Sl. sol. in H_2O . (Berglund.)

Calcium mercury imidosulphonate,
 $\text{N}_2\text{Hg}[(\text{SO}_3)_2\text{Ca}]_2$.

Very sol. in H_2O . (Divers and Haga, Chem. Soc. 1896, 69. 1629.)

Calcium mercury imidosulphonate chloride,
 $(\text{NS}_2\text{O}_6\text{Ca})_2\text{Hg}_2\text{Cl} + 12\text{H}_2\text{O}$.

Decomp. by H_2O . (Divers and Haga, Chem. Soc. 1896, 69. 1629.)

Calcium sodium imidosulphonate,
 $\text{NaN}(\text{SO}_3)_2\text{Ca} + 3\text{H}_2\text{O}$

Sl. sol. in cold H_2O . (Divers and Haga, Chem. Soc. 61. 968.)

Lead imidosulphonate, $(\text{PbOHSO}_3)_2\text{NPbOH}$.

Ppt. (Berglund.)

Insol. in H_2O . (Divers and Haga.)

$(\text{PbOH})_3\text{N}(\text{SO}_3)_2$, PbO . Insol. in H_2O ; easily sol. in dil. $\text{HNO}_3 + \text{Aq}$. (D. and H.)

Mercurous imidosulphonate, basic,
 $[\text{Hg}_2\text{N}(\text{SO}_3)_2\text{Hg}_2]\text{O} + 6\text{H}_2\text{O}$.

Much more sol. in dil. HNO_3 than mercuric salt. Sol. in cold conc. $\text{KI} + \text{Aq}$, leaving half Hg as metal. (Divers and Haga, Chem. Soc. 1896, 69. 1631.)

Mercuric imidosulphonate, basic,
 $\text{NH}(\text{SO}_3)_2\text{HgO}_2\text{Hg}$.

Easily decomp. (Divers and Haga.)

Mercuriomercuric imidosulphonate,
 $[\text{Hg}^{\text{II}}\text{N}(\text{SO}_3)_2\text{Hg}_2^{\text{I}}]\text{O} + 3\text{H}_2\text{O}$.

(Divers and Haga.)

$[\text{Hg}^{\text{II}}\text{N}(\text{SO}_3)_2\text{Hg}_2^{\text{I}}]\text{O}$, $[\text{Hg}_2^{\text{I}}\text{N}(\text{SO}_3)_2\text{Hg}_2]$,
 $\text{Hg}^{\text{II}}\text{N}(\text{SO}_3)_2\text{Hg}_2^{\text{I}}\text{O} + 6\text{H}_2\text{O}$. (Divers and Haga.)

Mercury sodium imidosulphonate, basic,
 $\text{Hg}_2\text{ON}(\text{SO}_3)_2\text{Na} + 2\text{H}_2\text{O}$.

Slightly efflorescent. Decomp. by long washing with H_2O . Much more readily sol. in HCl than in HNO_3 or H_2SO_4 and is wholly decomp. thereby. (Divers and Haga, Chem. Soc. 1892, 61. 983)

Mercury sodium imidosulphonate,
 $\text{HgN}_2(\text{SO}_3)_2\text{Na}_4 + 6\text{H}_2\text{O}$.

Sparingly sol. in cold H_2O .

Readily sol. in HNO_3 and in HCl .

Decomp. by HCl immediately, but not by HNO_3 . (Divers and Haga, Chem. Soc. 1892, 61. 981.)

Potassium imidosulphonate, basic,
 $\text{KN}(\text{SO}_3\text{K})_2 + \text{H}_2\text{O}$.

Sol. in H_2O . (Raschig, A. 241. 161.)

Less sol. than neutral salt. (Berglund.)

Potassium imidosulphonate, $\text{HN}(\text{SO}_3\text{K})_2$.

Sol. in H_2O . (Raschig, A. 241. 161.)

= Potassium ammondisulphonate of Claus.

Difficultly sol. in cold H_2O , sol. in 64 pts. H_2O at 23° . (Fremy.) Gradually decomp. by boiling. (Claus)

Sl. sol. in H_2O . (Berglund, B. 9. 255.)

Potassium mercury imidosulphonate,
 $\text{N}_2\text{Hg}(\text{SO}_3\text{K})_4 + 4\text{H}_2\text{O}$.

See Mercurimidosulphonic acid.

Silver imidosulphonate, $\text{AgN}(\text{SO}_3\text{Ag})_2$.

Sl. sol. in H_2O . (Berglund.)

Silver sodium imidosulphonate,

$\text{NaN}(\text{SO}_3\text{Ag})_2$.

Sl. sol. in H_2O . (Divers and Haga.)

$\text{AgNa}_2\text{N}(\text{SO}_3)_2$. Sl. sol. in H_2O , but more sol. than the two preceding salts. (D. and H.)

Sodium imidosulphonate, $\text{HN}(\text{SO}_3\text{Na})_2 + 2\text{H}_2\text{O}$.

Not efflorescent. Very sol. in H_2O . (Diver and Haga.)

$\text{NaN}(\text{SO}_3\text{Na})_2 + 12\text{H}_2\text{O}$. Efflorescent. Sl. sol. in cold H_2O , but very sol. in hot H_2O . Sol. in 5.4 pts. H_2O at 27.5° . (Divers and Haga)

Sodium strontium imidosulphonate,
 $\text{SrNaNS}_2\text{O}_6 + 3\text{H}_2\text{O}$.

Sl. sol. in H_2O . (Divers, Chem. Soc. 1896, 69. 1625.)

Strontium imidosulphonate,

$\text{SrN}(\text{SO}_3)_2\text{Sr}_2 + 6\text{H}_2\text{O}$.

Sl. sol. in H_2O . (Berglund.)

$+ 12\text{H}_2\text{O}$. Somewhat sol. in hot H_2O . (Divers, Chem. Soc. 1896, 69. 1623.)

Imidotrisulphoorthophosphoric acid,
 $\text{NH}_2\text{P}(\text{SH})_3$.

Insol. in CS_2 and readily decomp. by H_2O . (Stock, B. 1906, 39. 1991.)

Ammonium imidotrisulphoorthophosphate,
 $\text{NHP}(\text{SNH}_4)_3$.

Very hygroscopic.

Loses NH_3 in the air.

Somewhat sol. in liquid NH_3 .

Decomp. by any other solvent in which it is sol. (Stock, B. 1906, 39. 1983.)

Diammonium hydrogen imidotrisulphoorthophosphate, $\text{SHP}(\text{SNH}_4)_2\text{NH}_2$.

(Stock, B. 1906, 39. 1983.)

Ammonium dihydrogen ———,
 $\text{SNH}_2\text{P}(\text{SH})_2\text{NH}_2$.

(Stock.)

Disodium hydrogen imido*trisulpho*thophosphate, SHP(SNa)₂NH.

Very easily sol in H₂O. Decomp. by H₂O. Somewhat sol. in methyl and ethyl alcohol. (Stock.)

***Diimidopentasulphopyrophosphoric acid*, P₂S₅N₂H₆.**

Not known in pure state (Stock, B. 1906, 39. 1967.)

Ammonium *diimidopentasulphopyrophosphate*, S[P(SNH₄)₂NH]₂.

Very hygroscopic. Sol in cold H₂O with decomp. (Stock, B. 1906, 39. 1978.)

Indiosulphurous acid.**Ammonium imidosulphite, HN(SO₂NH₄)₂.**

Somewhat deliquescent. Very unstable. Easily sol. in H₂O with decomp. into thiosulphate and amidosulphate. Insol. in alcohol. (Divers and Ogawa, Chem. Soc. 1901, 79. 1100.)

Ammonium barium imidosulphite, Ba(SO₂NH₄SO₂NH₄)₂.

Sol. in H₂O. (Divers, Chem. Soc. 1901, 79. 1102.)

Potassium imidosulphite, NH(SO₂K)₂.

(Divers and Owaga, Proc. Chem. Soc. 1900, 16. 113.)

Very sol. in H₂O. (Divers, Chem. Soc. 1901, 79. 1101.)

Imidosulphuryl amide, S₂O₄N₃H₅=

Sol. in NH₄OH + Aq. Decomp. by conc. HCl. Insol. in alcohol sat. with NH₃. (Mente, A. 248. 265.)

Indic acid.**Magnesium indate, MgIn₂O₄ + 3H₂O.**

Ppt. Insol. in H₂O. Sol. in HCl + Aq. (Renz, B. 1901, 34. 2764.)

Indium, In.

Does not decomp. hot H₂O.

Sol. in dil. HCl and H₂SO₄ + Aq. Decomp. by conc. H₂SO₄. Easily sol. in HNO₃ + Aq. Insol. in acetic acid. Insol. in KOH + Aq. (Winkler, J. pr. 102. 273.)

Insol. in liquid NH₃. (Gore, Am. Ch. J. 1898, 20. 830.)

½ ccm. oleic acid dissolves 0.0039 g. In in 6 days. (Gates, J. phys. Chem. 1911, 15. 143.)

Indium monobromide, InBr.

Decomp. by hot H₂O. Easily sol. in acids. Easily sol in cold conc. HCl. (Thiel, Z. anorg 1904, 40. 328.)

Indium dibromide, InBr₂.

Decomp. by hot H₂O. Easily sol. in acids. (Thiel, Z. anorg. 1904, 40. 329.)

Indium tribromide, InBr₃.

Deliquescent. Very sol. in H₂O.

Indium monochloride, InCl.

Deliquescent. Decomp. by H₂O into InCl₃ and In. (Nilson and Pettersson, Chem. Soc. 43. 820.)

Indium dichloride, InCl₂.

Deliquescent in moist air; decomp. by H₂O into InCl₃ and In. (Nilson and Pettersson, Chem. Soc. 43. 818.)

Indium trichloride, InCl₃.

Very deliquescent; sol. in H₂O with hissing and great evolution of heat.

Indium lithium chloride.

Extremely deliquescent. Sol. in H₂O. (Meyer, A. 150. 144.)

Indium potassium chloride, 3KCl, InCl₃ + 1½H₂O.

Easily sol. in H₂O. (Meyer.)

Indium trifluoride, InF₃ + 3H₂O.

Sol. in H₂O; readily decomp. (Thiel, B. 1904, 37. 175.)

1 l. H₂O dissolves 86.4 g. at 25°. Decomp. on boiling. (Thiel, Z. anorg. 1904, 40. 331.)

+ 9H₂O. Sl. sol in cold H₂O.

Sol. in HCl and in HNO₃.

Insol. in alcohol and ether. (Chabrié, C. R. 1905, 140. 90.)

Indium hydrosulphide.

Decomp. by acids. (Meyer.)

Indium hydroxide, In₂O₃H₆.

Sol. in acids; also in KOH, or NaOH + Aq but the solution clouds up on standing or boiling, with separation of In₂O₃H₆. Insol. in NH₄OH, or NH₄Cl + Aq.

Sl. sol. in NH₄OH + Aq. (Renz, B. 1904, 37. 2110.)

Sl. sol. in alkylamines but completely ppt. by addition of the hydrochloride of the base. (Renz, B. 1903, 36. 2754.)

Indium monoiodide, InI.

Slowly decomp. in moist air. Not attacked by boiling H₂O.

Sol. in dil. HNO₃ in presence of AgNO₃. Very slowly sol. in cold, more rapidly sol. in

hot acids with evolution of H_2 . Very sol. in sulphurous acid.

Insol. in alcohol ether and chloroform. (Thiel, Z. anorg. 1910, 66. 302.)

Indium diiodide, InI_2 .

(Thiel, Z. anorg. 1910, 66. 302.)

Indium triiodide, InI_3 .

Deliquescent. (Meyer.)

Sol. in $CHCl_3$. Decomp. by xylene. (Thiel, Z. anorg. 1904, 40. 330.)

Indium nitride, InN .

Decomp. by heat. (Franz Fischer, B. 1910, 43. 1469.)

Indium monoxide, InO .

Gradually sol. in $HCl + Aq.$ (Winkler, J. pr. 94. 1.)

Indium sesquioxide, In_2O_3 .

Slowly sol. in cold, easily in hot acids.

Four modifications:

(1) Yellow. Amorphous. Sol. in acids. Its hydroxide is insol. in ammonia and NH_4Cl .

(2) White. Amorphous. Insol. in acids.

(3) White. Amorphous. Sol. in acids. Its hydroxide is sol. in ammonia, but pptd. by NH_4Cl .

(4) Crystallized. Crystalline modification is insol. in acids. (Renz, B. 1904, 37. 2112.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 830.)

Indium oxide, $In_7O_9 = 3InO, 2In_2O_3$ (?).

(Winkler.)

$In_4O_5 = 2InO, In_2O_3$ (?). (Winkler.)

Indium oxybromide (?).

Not decomp. by hot acids or alkalis. (Meyer, A. 150. 137.)

Indium oxychloride, $InOCl$.

Very sl. sol. in H_2O . (Thiel, B. 1904, 37. 176.)

Very sl. sol. in cold or hot dil. acids. Quickly sol. in hot conc. acids. (Thiel, Z. anorg. 1904, 40. 327.)

Indium triselenide, In_2Se_3 .

Sol. in strong acids with evolution of H_2Se . (Thiel, Z. anorg. 1910, 66. 315.)

Diindium sulphide, In_2S .

Sol. in acids. (Thiel, Z. anorg. 1904, 40. 326.)

Indium monosulphide, InS .

Easily sol. in HCl with evolution of H_2S . Sol. in HNO_3 with evolution of oxides of nitrogen. (Thiel, Z. anorg. 1910, 66. 314.)

Indium sesquisulphide, In_2S_3 .

Partially sol. in $(NH_4)_2S + Aq.$

Indium potassium sulphide, In_2S_3, K_2S .

Insol. in H_2O ; decomp. by weak acids with separation of In_2S_3 ; sol. in conc. acids. (Schneider, J. pr. (2) 9. 209.)

Indium silver sulphide, In_2S_3, Ag_2S

Insol. in H_2O . (Schneider, l. c.)

Indium sodium sulphide, $In_2S_3, Na_2S + 2H_2O$.

Insol. in H_2O . (Schneider, l. c.)

Indium monotelluride, $InTe$.

Sol. in HNO_3 ; insol. in $HCl + Aq.$ (Thiel, Z. anorg. 1910, 66. 318.)

Infusible white precipitate.

Diiodamine, NHI_2 .

Decomp. by H_2O .

Iodammonium iodide, NH_3I .

Decomp. by H_2O , caustic alkalis, and acids. Sol. in $KI + Aq.$, alcohol, ether. CS_2 , $CHCl_3$. (Guthrie, Chem. Soc. (2) 1. 239.)

Iodauric acid, $HAuI_4$ (?).

Not known with certainty.

Ammonium iodaureate.

Deliquescent. Decomp. by H_2O . (Johnston, Phil. Mag. (3) 9. 266.)

Barium iodaureate.

Sol. in $BaI_2 + Aq.$

Cæsium iodaureate, $CsAuI_4$.

(Gupta, J. Am. Chem. Soc. 1914, 36. 748.)

Ferrous iodaureate.

Sol. in H_2O . (Johnston.)

Potassium iodaureate, $KAuI_4$.

Decomp. by H_2O . Sol. in KI , and $HI + A$. (Johnston.)

Sodium iodaureate.

Very deliquescent. (Johnston.)

Iodauricyanhydric acid, $HAu(CN)_2I_2$.

Known only in its salts.

Barium iodauricyanide, $Ba[Au(CN)_2I_2]_2 + 10H_2O$.

Sl. sol. in cold, easily in hot H_2O . Easily sol. in alcohol. (Landbom, Lund. Univ. Arsk. 12. No. 6.)

Calcium iodaurycyanide, $\text{Ca}[\text{Au}(\text{CN})_2\text{I}_2]_2 + 10\text{H}_2\text{O}$.

Not stable. (L.)

Cobalt iodaurycyanide, $\text{Co}[\text{Au}(\text{CN})_2\text{I}_2]_2 + 10\text{H}_2\text{O}$.

Most insol. of all iodaurycyanides, and only sl. sol. in warm H_2O . Easily sol. in alcohol.

Potassium iodaurycyanide, $\text{KAu}(\text{CN})_2\text{I}_2 + \text{H}_2\text{O}$.

Sl. sol. in cold, easily sol. in warm H_2O and alcohol. (L.)

Strontium iodaurycyanide, $\text{Sr}[\text{Au}(\text{CN})_2\text{I}_2]_2 + 10\text{H}_2\text{O}$.

Sl. sol. in cold, more easily in hot H_2O .

Iodhydric Acid, HI.

Very easily and quickly absorbed by H_2O , with evolution of much heat.

Solution is decomp. on exposure to the air. 1 vol. H_2O absorbs 450 vols. HI at 10° . (Thomson.)

1 vol. H_2O absorbs 425 vols. HI at 10° . (Berthelot, C. R. 76. 679.)

Weak or strong solutions when boiled in an atmosphere of H leave a residue of constant composition, which distills unchanged at 126° (de Luynes), at 127° (Roscoe, Chem. Soc. 13. 146; Naumann; Topsoe), at 128° (Bineau, A. ch. (3) 7. 266); and has a sp. gr. of 1.67 (Naumann), of 1.70 (Bineau, de Luynes), of 1.708 (Topsoe); and contains 56.26 % HI (Bineau), 57.0% HI (Roscoe), 57.75% HI (Topsoe.)

By conducting dry H gas through the aqueous solution of HI, a constant residue is obtained, containing 60.3–60.7% HI if temp. is 15 – 19° , and 58.2–58.5% HI if temp. is 100° . (Roscoe.)

Solubility of HI in H_2O at t° .

Only a "moderate degree of accuracy" is claimed for this table. (Wright, C. N. 23. 253.)

+2H₂O. Mpt.—43°. (Pickering, B. 1893, 26. 2308)

+3H₂O. Mpt.—48°. (Pickering)

+4H₂O. Mpt.—36.5°. (Pickering.)

Iodic acid, HIO₃.

Very sol. in H₂O and alcohol.

100 g. H₂O dissolve 286.1 g. HIO₃ at 13.5°.

Sp. gr. of HIO₃+Aq.=2.4256.

100 g. H₂O dissolve 293 g. HIO₃ at 18°.

Sp. gr. of HIO₃+Aq.=2.4711.

(Groschuff, Z. anorg. 1905, 47. 337.)

Solubility of HIO₃ in H₂O at t°.

25	1 2773	60	1.9954
30	1.3484	65	2.1269

(Kammerer.)

According to Thomsen (B. 7. 71) solutions of HIO₃ have sp. gr.—

HIO₃+ 10H₂O = 1.6609.

HIO₃+ 20H₂O = 1.3660.

HIO₃+ 40H₂O = 1.1945.

HIO₃+ 80H₂O = 1.1004.

HIO₃+160H₂O = 1.0512.

HIO₃+320H₂O = 1.0258.

H₂SO₄ at nearly boiling temp. dissolves 1/2 its weight of iodic acid. (Millon.)

Solubility in HNO₃ containing 27.73% HNO₃.

100 g. of the sat. solution contain at:

0°	20°	40°	60°
18	21	27	38 g. HIO ₃ .

Solubility in HNO₃ containing 40.88% HNO₃.

100 g. of the sat. solution contain at:

0°	20°	40°	60°
9	10	14	18 g. HIO ₃ .

(Groschuff, Z. anorg. 1905, 47. 344.)

Less sol. in HNO₃ than H₂O; nearly insol. in anhydrous HNO₃. (Groschuff, Z. anorg. 1905, 47. 347.)

Insol. in liquid NH₃. (Franklin, Am. Ch. J. 1898, 20. 830.)

Unattacked and undissolved by liquid NO₂. (Frankland, Chem. Soc. 1901, 79. 1362.)

Insol. in absolute alcohol. Alcohol of 35° B. dissolves half its weight in HIO₃. (Kammerer.)

+4 1/2 H₂O.

HIO₃, I₂O₅. (Groschuff, Z. anorg. 1905, 47. 343.)

Iodates.

The alkali iodates are sol. in H₂O, the others are sl. sol. or insol. therein.

Aluminum iodate, Al(IO₃)₃ (?).

Deliquescent. (Berzelius.)

Ammonium iodate, NH₄IO₃.

Sl. sol. in H₂O. Sol. in 38.5 pts. H₂O at 15°, 6.9 pts. at 100°. (Rammelsberg, Pogg. 44. 555.)

Solubility of NH_4IO_3 in $\text{HIO}_3 + \text{Aq}$ at 30° .

(Harkins and Winninghof, J. Am. Chem. Soc. 1911, 33. 1829.)

Insol. in alcohol.

100 cc. 95% alcohol dissolve 0.0011 g. $\text{Ba}(\text{IO}_3)_2$ at room temp. (Hill and Zink.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014.)

 $+ \text{H}_2\text{O}$. Sol. in 3333 pts. H_2O at 18° , and 625 pts. H_2O at 100° . (Gay-Lussac, A. ch. 91. 5.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Barium manganic iodate,
 $\text{Mn}(\text{IO}_3)_4, \text{Ba}(\text{IO}_3)_2$.

Insol. in H_2O .
 Insol. in HIO_3 . (Berg, C. R. 1899, **128**, 675.)

Bismuth iodate, basic.

Insol. in H_2O . Very difficultly sol. in $\text{HNO}_3 + \text{Aq.}$ (Rammelsberg, Pogg. **44**, 568.)
 $\text{Bi}(\text{IO}_3)_3 + 1\frac{1}{2}\text{H}_2\text{O}$. Insol. in H_2O .

Cadmium iodate, $\text{Cd}(\text{IO}_3)_2$.

Very sl. sol. in H_2O . Easily sol. in HNO_3 , or $\text{NH}_4\text{OH} + \text{Aq.}$ Sol. in $\text{Cd}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq.}$ (Rammelsberg, Pogg. **44**, 566.)
 $+ \text{H}_2\text{O}$. Sl. sol. in H_2O . Very sol. in dil. $\text{HNO}_3 + \text{Aq.}$ (Ditte, A. ch. (6) **21**, 145.)

Cadmium iodate ammonia, $\text{Cd}(\text{IO}_3)_2, 2\text{NH}_3$.

Insol. in H_2O ; sol. in $\text{NH}_4\text{OH} + \text{Aq.}$ (Ditte.) A. ch. (6) **21**, 145.)
 $\text{Cd}(\text{IO}_3)_2, 2\text{NH}_3 + \text{H}_2\text{O}$. As above. (Ditte.)

Cæsium iodate, CsIO_3 .

100 pts. H_2O dissolve 2.6 pts. CsIO_3 at 24° . Insol. in alcohol. (Wheeler, Sill. Am. J. **144**, 123.)

$2\text{CsIO}_3, \text{I}_2\text{O}_5$. 100 pts. H_2O dissolve 2.5 pts. at 21° . Not decomp. by hot H_2O . (Wheeler.)
 $2\text{CsIO}_3, \text{I}_2\text{O}_5, 2\text{HIO}_3$. Sl. sol. in cold H_2O . and decomp. thereby into $2\text{CsIO}_3, \text{I}_2\text{O}_5$. (Wheeler.)

Cæsium iodate chloride, $\text{CsCl}, \text{HIO}_3$.

Decomp. by H_2O into $2\text{CsIO}_3, \text{I}_2\text{O}_5$. (Wheeler.)

Cæsium hydrogen iodate periodate,
 $\text{HCsIO}_3, \text{IO}_4 + 2\text{H}_2\text{O}$.

Ppt. Sol. in dil. HNO_3 . (Wells, Am. Ch. J. 1901, **26**, 280.)

Calcium iodate, $\text{Ca}(\text{IO}_3)_2$.

100 pts. dissolve 0.22 pt. at 18° and 0.986 pt. at 100° . (Gay-Lussac.) Sol. in conc. $\text{HCl} + \text{Aq.}$ (Filhol.) Much more sol. in $\text{HNO}_3 + \text{Aq.}$ than in H_2O . (Rammelsberg.) Insol. in H_2SO_4 . (Ditte.) Scarcely sol. in sat. $\text{KIO}_3 + \text{Aq.}$ (Sonstadt, C. N. **29**, 209.)

$+ \text{H}_2\text{O}$. Sat. solution contains at:

21°	35°	40°	45°
0.37	0.48	0.52	0.54% $\text{Ca}(\text{IO}_3)_2$,
50°	60°	80°	100°
0.59	0.65	0.79	0.94% $\text{Ca}(\text{IO}_3)_2$.

(Mylius and Funk, B. 1897, **30**, 1724.)

$+ 6\text{H}_2\text{O}$. Efflorescent.

Sol. in 253 pts. H_2O at 15° , and 75 pts. at 100° . (Rammelsberg.)

Sat. solution contains at:

0°	10°	18°	30°
0.1	0.17	0.25	0.42% $\text{Ca}(\text{IO}_3)_2$,
40°	50°	54°	60°
0.61	0.89	0.14	1.36% $\text{Ca}(\text{IO}_3)_2$

(Mylius and Funk, B. 1897, **30**, 1724.)

Much more sol. in $\text{HNO}_3 + \text{Aq.}$ Pptd. by alcohol from $\text{Ca}(\text{IO}_3)_2 + \text{Aq.}$

Insol. in H_2SO_4 . (Ditte.)

Pptd. by alcohol from aqueous solution (Henry.)

Cerous iodate, $\text{Ce}(\text{IO}_3)_3 + 2\text{H}_2\text{O}$.

Sl. sol. in cold, easily sol. in hot H_2O and in acids. (Holzmann, J. pr. **75**, 321.)

Solubility in H_2O . 100 cc of the sat. solution contain 0.1456 g. at 25° (Rumbach, Z. phys. Ch. 1909, **67**, 199.)

Calc. from electrical conductivity of $\text{Ce}(\text{IO}_3)_3 + \text{Aq.}$, 100 cc of the sat. solution contain 0.1636 g. $\text{Ce}(\text{IO}_3)_3$ at 25° . (Rumbach, Z. phys. Ch. 1909, **67**, 199.)

Ceric iodate, $\text{Ce}(\text{IO}_3)_4$.

Slightly hydrolyzed by H_2O .

0.34 g. is sol. in 100 cc hot conc. HNO_3 . (Barbieri, Chem. Soc. 1907, **92**, (2) 467.)

Cobaltous iodate, $\text{Co}(\text{IO}_3)_2$.

Anhydrous. Sol. in warm dil. H_3PO_4 , or $\text{H}_2\text{SO}_4 + \text{Aq.}$ (Ditte, A. ch. (6) **21**, 14.)

Solubility in H_2O

Form	Temp.	% $\text{Co}(\text{IO}_3)_2$	Mols of water free salt to 100 mols H_2O

(Meusser, B. 1901, **34**, 2435.)

$+ \text{H}_2\text{O}$. Sol. in 148 pts. H_2O at 15° and 90 pts. at 100° . Sol. in $\text{NH}_4\text{OH} + \text{Aq.}$ (Rammelsberg, Pogg. **44**, 561.)

Does not exist. (Meusser, B. 1901, **34**, 2434.)

$+ 2\text{H}_2\text{O}$. (Meusser.)

$+ 4\text{H}_2\text{O}$. (Meusser.)

Cupric iodate, basic, $6\text{CuO} \cdot 3\text{I}_2\text{O}_5 + 2\text{H}_2\text{O}$.

Insol. in H_2O . (Millon, A. ch. (3) 9. 400)
 Mixture of CuO and $\text{Cu}(\text{IO}_3)_2$. (Ditte, A. ch. (6) 21. 175)
 $2\text{CuO} \cdot \text{I}_2\text{O}_5 + \text{H}_2\text{O}$. Slowly sol. in dil. H_2SO_4 . (Granger and de Schulten, Bull. Soc. 1904, (3) 31. 1027.)

Cupric iodate, $\text{Cu}(\text{IO}_3)_2$

1 l. H_2O dissolves 3.32×10^{-3} mol. $\text{Cu}(\text{IO}_3)_2$ at 25° . (Spencer, Z. phys. Ch. 1913, 83. 295.)

Solubility in $\text{CuSO}_4 + \text{Aq} = 3.28 \times 10^{-3}$ mol. per l. at 25° .

Solubility in $\text{KIO}_3 + \text{Aq} = 3.29 \times 10^{-3}$ mol. per l. at 25° . (Spencer.)

+ H_2O . (Ditte.)

+ $2\text{H}_2\text{O}$. Sol. in 302 pts. H_2O at 15° , and 154 pts. at 100° . Sol. in $\text{HCl} + \text{Aq}$ or $\text{NH}_4\text{OH} + \text{Aq}$. (Millon.)

Cupric iodate ammonia, $\text{Cu}(\text{IO}_3)_2 \cdot 2\text{NH}_3 + \text{H}_2\text{O}$.

Insol. in H_2O . (Ditte, A. ch. (6) 21. 145.)
 $\text{Cu}(\text{IO}_3)_2 \cdot 4\text{NH}_3 + 2\text{H}_2\text{O}$. Ppt. (Ephraim, B. 1915, 48. 52.)

+ $3\text{H}_2\text{O}$. Partially sol. in H_2O . Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. Insol. in alcohol. (Rammelsberg.)

$\text{Cu}(\text{IO}_3)_2 \cdot 5\text{NH}_3$. (Ephraim.)

$\text{Cu}(\text{IO}_3)_2 \cdot 8\text{NH}_3 + 4\text{H}_2\text{O}$. Sol. in H_2O . Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. Insol. in alcohol. (Ditte, A. ch. (6) 21. 145.)

Decipium iodate, $\text{Dp}(\text{IO}_3)_3 + 3\text{H}_2\text{O} (?)$.

Precipitate; scarcely sol. in H_2O . (Dela-fontaine.)

Didymium iodate, $\text{Di}(\text{IO}_3)_3 + 2\text{H}_2\text{O}$.

Ppt. (Cleve.)

Erbium iodate, $\text{Er}(\text{IO}_3)_3 + 3\text{H}_2\text{O}$.

Very sl. sol. in H_2O . (Hoglund.)

Glucinum iodate.

Deliquescent.

Indium iodate, $\text{In}(\text{IO}_3)_3$.

1 pt. is sol. in 1500 pts. H_2O at 20° .

1 pt. is sol. in 150 pts. HNO_3 (1:5) at 80° .

Sol. in HCl with decomp. Sol. in dil. H_2SO_4 . (Mathers, J. Am. Chem. Soc. 1908, 30. 213.)

Iodine iodate, $\text{I}(\text{IO}_3)_3$.

Decomp. by H_2O or by alcohol. (Fichter, Z. anorg. 1915, 91. 142.)

Iron (ferrous) iodate.

Ppt. Sl. sol. in H_2O ; more sol. in $\text{FeSO}_4 + \text{Aq}$. (Geiger, Mag. Pharm. 29. 252.)

Iron (ferric) iodate, $\text{Fe}_2\text{O}_3 \cdot \text{I}_2\text{O}_5$.

Insol. in acids. (Ditte, A. ch. (6) 21. 145.)

$\text{Fe}_2\text{O}_3 \cdot 2\text{I}_2\text{O}_5 + 8\text{H}_2\text{O}$ Sol. in 500 pts. H_2O . Difficultly sol. in $\text{HNO}_3 + \text{Aq}$. Sol. in $\text{FeCl}_3 + \text{Aq}$. (Geiger.)

$3\text{Fe}_2\text{O}_3 \cdot 5\text{I}_2\text{O}_5 + 15\text{H}_2\text{O}$. Sol. in HCl , or $\text{HNO}_3 + \text{Aq}$ (Rammelsberg.)

Lanthanum iodate, $\text{La}(\text{IO}_3)_3 + 1\frac{1}{2}\text{H}_2\text{O}$.

Sl. sol. in cold, easily sol. in hot H_2O . Very sol. in warm $\text{HCl} + \text{Aq}$. (Holzmann, J. pr. 75. 349.)

100 cc. of the sat. solution in H_2O contain 0.1681 g at 25° (Rimbach, Z. phys. Ch. 1909, 67. 199.)

Calc. from electrical conductivity of $\text{La}(\text{IO}_3)_3 + \text{Aq}$, 100 cc. of the sat. solution contain 0.1871 g. $\text{La}(\text{IO}_3)_3$ at 25° . (Rimbach.)

Lead iodate, basic, $3\text{PbO} \cdot \text{Pb}(\text{IO}_3)_2 + 2\text{H}_2\text{O}$.

Ppt. (Strömholm, Z. anorg. 1904, 38. 442.)

Lead iodate, $\text{Pb}(\text{IO}_3)_2$.

Very sl. sol. in H_2O (Pleischl), and difficultly sol. in $\text{HNO}_3 + \text{Aq}$. (Rammelsberg.)

Insol. in H_2O and $\text{H}_2\text{SO}_4 + \text{Aq}$. Very sl. sol. in $\text{HNO}_3 + \text{Aq}$, and wholly insol. therein after being heated to 100° . (Ditte, A. ch. (6) 21. 169.)

Sl. sol. in H_2O . 1.83×10^{-2} are dissolved in 1 liter of sat. solution at 20° . (Böttger, Z. phys. Ch. 1903, 46. 603.)

1 l. H_2O dissolves 19 mg. $\text{Pb}(\text{IO}_3)_2$ at 18° . (Kohlrausch, Z. phys. Ch. 1904, 50. 356.)

17.8 mg. are dissolved in 1 l. sat. solution at 18° . (Kohlrausch, Z. phys. Ch. 1908, 64. 168.)

1 l. H_2O dissolves 0.0307 g. $\text{Pb}(\text{IO}_3)_2$ at 25° . (Harkins, J. Am. Chem. Soc. 1911, 33. 1830.)

Solubility of $\text{Pb}(\text{IO}_3)_2$ in salts + Aq at 25° .

C = concentration of salt in salt solution expressed in equivalents per l.

S = solubility of $\text{Pb}(\text{IO}_3)_2$ in salt solution expressed in equivalents per l.

(Harkins and Winninghof, J. Am. Chem. Soc. 1911, 33. 1830.)

Insol. in liquid NH_3 . (Gore, Am Ch. J. 1898, 20. 828.)

Lithium iodate, $\text{LiIO}_3 + \frac{1}{2}\text{H}_2\text{O}$.

Deliquescent, and very sol. in H_2O .

Sol. in 2 pts. cold, and not much less hot H_2O . Insol. in alcohol (Rammelsberg, Pogg. 44. 555.)

Sp. gr. of solution sat at $18^\circ = 1.568$, containing 44.6% LiIO_3 . 100 g H_2O dissolve 80.3 pts LiIO_3 . (Mylius and Funk, B. 1897, 30. 1718.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

+ H_2O . Very deliquescent. (Ditte, A. ch. (6) 21. 145.)

Magnesium iodate, $\text{Mg}(\text{IO}_3)_2$.

Anhydrous. Insol. in H_2O . (Millon, A. ch. (3) 9. 422.)

+ H_2O . Very sol. in H_2O . (Ditte.)

Sol. in 9.43 pts. H_2O at 15° , and 3.04 pts. at 100° . (Berzelius.) Very sl. sol. in H_2O . (Serullas, A. ch. 45. 279.) Easily sol. in dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. (Ditte.)

Sat. solution contains at:

0° 10° 20°
6.8 6.4 7.7% $\text{Mg}(\text{IO}_3)_2$,

35° 63° 100°
8.9 12.6 19.3% $\text{Mg}(\text{IO}_3)_2$.

(Mylius and Funk, B. 1897, 30. 1722.)

Sat. aq. solution at 18° contains 6.44% $\text{Mg}(\text{IO}_3)_2$ or 6.88 g. are sol. in 100 g. H_2O . Sp. gr. of sat. solution = 1.078. (Mylius and Funk, B. 1897, 30. 1718.)

+ $10\text{H}_2\text{O}$. Sat. aq. solution contains at:

0° 20° 30° 35° 50° (m.pt.).
3 1 10.2 17.4 21.9 67.5% $\text{Mg}(\text{IO}_3)_2$.
(Mylius and Funk, B. 1897, 30. 1723.)

Manganous iodate, $\text{Mn}(\text{IO}_3)_2 + \text{H}_2\text{O}$.

Sol. in about 200 pts. H_2O . (Rammelsberg.)

Insol. in H_2O and $\text{HNO}_3 + \text{Aq}$, even on boiling. Insol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Ditte.)

Manganous manganic iodate,

$\text{Mn}(\text{IO}_3)_4, \text{Mn}(\text{IO}_3)_2$.

Insol. in H_2O . (Berg, C. R. 1899, 128. 675.)

Manganic potassium iodate,

$\text{Mn}(\text{IO}_3)_4, 2\text{KIO}_3$.

Insol. in and only sl. attacked by H_2O .

Insol. in HIO_3 . (Berg, C. R. 1899, 128. 674.)

Mercurous iodate, $\text{Hg}_2(\text{IO}_3)_2$.

Insol. in boiling H_2O , or cold $\text{HNO}_3 + \text{Aq}$. Easily sol. in dil. $\text{HCl} + \text{Aq}$. Sol. in very

conc. $\text{HIO}_3 + \text{Aq}$. (Lefort, J. Pharm. 1845. 5.)

Mercuric iodate, $\text{Hg}(\text{IO}_3)_2$.

Insol. in H_2O or alcohol (Millon, A. ch. (3) 18. 367.) Sol. in H_2O . (Berzelius.) Sol. in dil. $\text{HCl} + \text{Aq}$. (Rammelsberg.)

Nearly insol. in H_2O . Easily sol. in HCl , HBr , or $\text{HI} + \text{Aq}$; very sl. sol. in $\text{HNO}_3 + \text{Aq}$; insol. in HF , H_2SiF_6 , or $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. Sol. in alkali chlorides, bromides, iodides, cyanides, and cyanates + Aq ; also in $\text{Na}_2\text{S}_2\text{O}_3$, dil. MnCl_2 , and $\text{ZnCl}_2 + \text{Aq}$. Insol. in KOH , NaOH , NH_4OH , Na_2S , $\text{Na}_2\text{B}_4\text{O}_7$, Na_2HPO_4 , and the alkali chlorates, bromates, and iodates + Aq . (Cameron, C. N. 33. 253.)

Nickel iodate, $\text{Ni}(\text{IO}_3)_2$.

Solubility in H_2O .

Form	Temp	Percent of $\text{Ni}(\text{IO}_3)_2$ in solution	Mols. water free salt to 100 mols H_2O

(Meusser, B. 1901, 34. 2440.)

+ H_2O . Sol. in 120.3 pts. H_2O at 15° , and 77.35 pts. at 100° . (Rammelsberg, Pogg. 44. 562.)

Sol. in HNO_3 , and dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. (Ditte.)

Sol. in $\text{NH}_4\text{OH} + \text{Aq}$.

Does not exist (Meusser.)

+ $2\text{H}_2\text{O}$. See Meusser above.

+ $3\text{H}_2\text{O}$. Insol. in H_2O . Sol. in HNO_3 . (Ditte, A. ch. 1890, (6) 21. 160.)

+ $4\text{H}_2\text{O}$. See Meusser above.

Nickel iodate ammonia, $\text{Ni}(\text{IO}_3)_2, 4\text{NH}_3$.

Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. Insol. in alcohol. (Rammelsberg, Pogg. 44. 562.)

$\text{Ni}(\text{IO}_3)_2, 5\text{NH}_3$. Ppt. (Ephraim, B. 1915, 48. 53.)

+ $3\text{H}_2\text{O}$. (Ephraim.)

Potassium iodate, KIO_3 .

1 pt. KIO_3 dissolves in 13 pts. H_2O at 14° . (Gay-Lussac.)

1 pt. KIO_3 dissolves at:

0° in 21 11 pts. H_2O

20° " 12 20 "

40° " 7 76 "

60° " 5.40 "

80° " 4 02 "

100° " 3.10 "

Sat. solution boils at 102°. (Kremers, Pogg. 97. 5.)

Sp. gr. of KIO_3 + Aq containing:

1 2 3 4 5 $\% \text{KIO}_3$,

1.010 1.019 1.027 1.035 1.044

6 7 8 9 10 $\% \text{KIO}_3$.

1.052 1.061 1.071 1.080 1.090

(Kremers, Pogg. 96. 62.)

Stable at 10° in H_2O or potassium acetate + Aq. (Eakle, C. C. 1896, II. 649.)

Solubility of KIO_3 in HIO_3 + Aq at 30°.

$\% \text{HIO}_3$ in the solution	$\% \text{KIO}_3$ in the solution	Solid phase

76.70	0	HIO_3

(Meerburg, Z. anorg. 1905, 45. 330.)

More sol. in $\text{KI} + \text{Aq}$ than in H_2O . Sol. in warm $\text{H}_2\text{SO}_4 + \text{Aq}$.

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 829.)

Insol. in alcohol.

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314.)

+ $\frac{1}{2}\text{H}_2\text{O}$. (Ditte, C. R. 70. 621.)

Potassium hydrogen iodate, $\text{KH}(\text{IO}_3)_2$.

Sol. in 18.65 pts. H_2O at 17°. (Meineke, A. 261. 360.)

Sol. in 75 pts. H_2O at 15°. Insol. in alcohol. (Serullas, A. ch. 22. 181.)

See also Meerburg under KIO_3 .

Potassium dihydrogen iodate, $\text{KH}_2(\text{IO}_3)_2$.

Sol. in 25 pts. H_2O at 15°. (Serullas, A. ch. 43. 117.)

See also Meerburg under KIO_3 .

Potassium tellurium iodate.

See Iodotellurate, potassium.

Potassium uranyl iodate,

$\text{KUO}_2(\text{IO}_3)_3 + 3\text{H}_2\text{O}$.

Decomp. by H_2O , dil. salt solutions and $\text{UO}_2(\text{NO}_3)_2 + \text{Aq}$. (Artmann, Z. anorg. 1913, 79. 340.)

Potassium iodate chloride, $\text{KH}(\text{IO}_3)_2, 2\text{KCl}$.

Sol. in 19 pts. H_2O at 15° with decomp. Cold alcohol dissolves out KCl .

Potassium iodate molybdate, $\text{KIO}_3, \text{MoO}_3 + 2\text{H}_2\text{O}$.

See Molybdatoiodate, potassium.

Potassium iodate selenate.

See Iodoselenate, potassium.

Potassium iodate sulphate, $\text{KIO}_3, \text{KHSO}_4$.

Decomp. by H_2O . (Marignac, J. B. 1856. 299.)

$\text{KHIO}_3, \text{KHSO}_4$. More sol. in H_2O than KHIO_3 . (Serullas.)

Potassium iodate tungstate.

See Tungstoiodate, potassium.

Rubidium iodate, RbIO_3 .

100 pts. H_2O dissolve 2.1 pts. RbIO_3 at 23°. Easily sol. in cold $\text{HCl} + \text{Aq}$. (Wheeler Sill. Am. J. 144. 123.)

Rubidium hydrogen iodate, $\text{RbH}(\text{IO}_3)_2$.

Sl. sol. in cold, more readily in hot H_2O , RbIO_3 separating on cooling. Insol. in alcohol. (Wheeler.)

$\text{RbH}_2(\text{IO}_3)_3$. As above. (Wheeler.)

Rubidium iodate chloride, $\text{RbIO}_3, \text{HCl}$, or $\text{HIO}_3, \text{RbCl}$.

Decomp. by cold H_2O . (Wheeler.)

$3\text{RbCl}, 2\text{HIO}_3$. Sol. in H_2O , from which RbIO_3 separates. (Wheeler.)

Rubidium iodate selenate.

See Iodoselenate, rubidium.

Samarium iodate, $\text{Sm}(\text{IO}_3)_3 + 6\text{H}_2\text{O}$.

Precipitate. (Cleve.)

Scandium iodate, $\text{ScIO}_3 \cdot 10, 13, 15$, and $18\text{H}_2\text{O}$.

Nearly insol. in H_2O . (Crookes, Phil. Trans. 1910, 210. A, 361.)

Silver iodate, AgIO_3 .

1.89×10^{-4} moles or 5.36×10^{-2} g. AgIO_3 are sol in 1 liter H_2O at 25° . (Noyes and Kohr, Z. phys. Ch. 1903, 42. 338.)

Sl. sol in H_2O 4.35×10^{-2} g are dissolved in 1 liter of sat. solution at 20° . (Büttger, Z. phys. Ch. 1903, 46. 603.)

1 l. H_2O dissolves 40 mg. AgIO_3 at 18° . (Kohlrausch, Z. phys. Ch. 1904, 50. 356.)

1 l. H_2O dissolves 0.0275 g. AgIO_3 at 9.43° ; 0.039 g. at 18.4° ; 0.0539 g. at 26.6° . Solubility increases rapidly with temp. (Kohlrausch, Z. phys. Ch. 1908, 64. 168.)

1 l. H_2O dissolves 0.039 g. AgIO_3 at 20° . (Whitby, Z. anorg. 1910, 67. 108.)

Not completely insol. in H_2O . (Rose.) Sol. in $\text{NH}_4\text{OH} + \text{Aq}$; sol. in $\text{HNO}_3 + \text{Aq}$. (Naquet, J. B. 1860. 201.) Sol. in conc. $\text{KI} + \text{Aq}$. (Ladenburg, A. 135. 1.)

Sol. in 27,700 pts. H_2O at 25° ; in 42.4 pts. 5% $\text{NH}_4\text{OH} + \text{Aq}$ at 25° ; in 2.1 pts. 10% $\text{NH}_4\text{OH} + \text{Aq}$ at 25° ; in 1044.3 pts. 35% $\text{HNO}_3 + \text{Aq}$ (sp. gr. 1.21) at 25° . (Longi, Gazz. ch. it. 13. 87.)

Solubility in $\text{HNO}_3 + \text{Aq}$ at 25° .

Normality HNO_3	G. AgIO_3 dissolved per l
0.000	0.0503
0.125	0.0864
0.250	0.1075
0.500	0.1414
1.00	0.2067
2.00	0.3319
4.00	0.6985
8.00	1.5875

(Hill and Simmons, Z. phys. Ch. 1909, 67. 602.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 829.)

Insol. in methyl acetate. (Bezold, Dissert. 1906; Naumann, B. 1909, 42. 3790); ethyl acetate (Hamers, Dissert. 1906; Naumann, B. 1910, 43. 314.)

Silver iodate ammonia, $2\text{AgIO}_3, 3\text{NH}_3 + 1\frac{1}{2}\text{H}_2\text{O}$.

Very sol. in cold H_2O . (Ditte, A. ch. (6) 21. 145.)

$\text{AgIO}_3, 2\text{NH}_3$.

Sl. sol. in conc. $\text{NH}_4\text{OH} + \text{Aq}$. (Rosenheim, A. 1899, 308. 52.)

Sodium iodate, NaIO_3 .

100 pts. H_2O dissolve 7.25 pts. NaIO_3 at 14.5° . (Gay-Lussac.) 100 pts. H_2O dissolve 2.52 pts. at 0° ; 9.07 pts. at 20° ; 14.39 pts. at 60° ; 27.7 pts. at 80° ; 33.9 pts. at 100° . (Krem-

ers, Pogg. 97. 5.) Sat. solution boils at 102° (Kreiners., 105° Ditte).

Sol. in warm $\text{H}_2\text{SO}_4 + \text{Aq}$ diluted with $\frac{1}{2}$ vol. H_2O . Crystallizes out on standing over H_2SO_4 . (Ditte.)

Solubility of NaIO_3 in $\text{HIO}_3 + \text{Aq}$ at 30° .

% HIO_3 in the solution	% NaIO_3 in the solution	Solid phase
0	9.36	$\text{NaIO}_3 + 1\frac{1}{2}\text{H}_2\text{O}$

(Meerburg, Z. anorg. 1905, 45. 334.)

Insol. in alcohol. Sol. in dil. $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$.

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

$+1\frac{1}{2}\text{H}_2\text{O}$. See Meerburg above.

Sodium diiodate, $\text{Na}_2\text{O}, 2\text{I}_2\text{O}_5$.

See Meerburg under NaIO_3 .

Sodium triiodate, $\text{NaIO}_3, 2\text{HIO}_3 + \frac{1}{2}\text{H}_2\text{O}$.

Very sol. in H_2O . (Blomstrand, J. pr. (2) 42. 337.)

See also Meerburg under NaIO_3 .

Sodium iodate bromide, $\text{NaIO}_3, 2\text{NaBr} + 9\text{H}_2\text{O}$.

Sol. in H_2O . (Rammelsberg.)

Sodium iodate chloride, $\text{NaIO}_3, \text{NaCl} + 4\text{H}_2\text{O}$, and $2\text{NaIO}_3, 3\text{NaCl} + 18\text{H}_2\text{O}$.

Cold H_2O dissolves out NaCl .

Sodium iodate iodide, $\text{NaIO}_3, \text{NaI}$.

Hot H_2O or alcohol dissolves out NaI .

$+8\text{H}_2\text{O}$.

$+10\text{H}_2\text{O}$.

$2\text{NaIO}_3, 3\text{NaI} + 20\text{H}_2\text{O}$. (Penny, A. 37. 202.)

Stable in a solution of $\text{NaI} + \text{NaOH} + \text{Aq.}$
(Eakle, C. C. 1896, II. 650.)

Strontium iodate, $\text{Sr}(\text{IO}_3)_2$.

Anhydrous. Insol. in H_2SO_4 (Ditte); easily sol. in cold $\text{HCl} + \text{Aq.}$ (Rammelsberg, Pogg. 44. 575.)

+ H_2O . Difficultly sol. in H_2O .
+ $6\text{H}_2\text{O}$. Sol. in 416 pts. H_2O at 15° , and 138 pts. at 100° (Gay-Lussac); 342 pts. at 15° , and 110 pts. at 100° . Difficultly sol. in warm $\text{HNO}_3 + \text{Aq.}$ (Rammelsberg, Pogg. 44. 575.)

Thallous iodate, TlIO_3 .

Difficultly sol. in warm H_2O . (Oettinger.)
Insol. in H_2O ; difficultly sol. in $\text{HNO}_3 + \text{Aq.}$ (Rammelsberg.)

Sl. sol. in H_2O .
 0.58×10^{-1} g. are dissolved in 1 liter of sat. solution at 20° . (Böttger, Z. phys. Ch. 1903, 46. 603.)

2.12×10^{-3} mols. = 0.667 g. are sol. in 1 l. H_2O at 25° . (Spencer, Z. phys. Ch. 1912, 80. 707.)

Sol. in a little $\text{NH}_4\text{OH} + \text{Aq.}$ also in boiling HNO_3 , H_2SO_4 , or $\text{HCl} + \text{Aq.}$ Insol. in alcohol. (Oettinger.)

+ $\frac{1}{2}\text{H}_2\text{O}$. Very sl. sol. in H_2O or dil. boiling acids. (Ditte, A. ch. (6) 21. 145.)

Thallic iodate, basic, $\text{Tl}(\text{OH})(\text{IO}_3)_2 + \text{H}_2\text{O} = \text{Tl}_2\text{O}_3, 2\text{I}_2\text{O}_5 + 3\text{H}_2\text{O}$.

Insol. in H_2O ; sol. in cold $\text{HCl} + \text{Aq.}$ and warm dil. $\text{H}_2\text{SO}_4 + \text{Aq.}$ (Ditte, A. ch. (6) 21. 145.)

Thallic iodate, $\text{Tl}(\text{IO}_3)_3 + 1\frac{1}{2}\text{H}_2\text{O}$.

Insol. in H_2O ; sl. sol. in $\text{HNO}_3 + \text{Aq.}$
Decomp. by alkalis. (Rammelsberg.)
+ $12\text{H}_2\text{O}$. Difficultly sol. in H_2O .

Easily sol. in dil. acids. (Gewecke, Z. anorg. 1912, 75, 275.)

Thorium iodate, $\text{Th}(\text{IO}_3)_4$.

Precipitate. (Cleve.)

Tin (stannous) iodate.

Ppt. Sol. in $\text{SnCl}_2 + \text{Aq.}$; insol. in $\text{NaIO}_3 + \text{Aq.}$

Tin (stannic) iodate.

Ppt.

Uranous iodate.

Precipitate. Very unstable. (Rammelsberg.)

Uranyl iodate, $\text{UO}_2(\text{IO}_3)_2$.

Sol. or insol. in HNO_3 and $\text{H}_3\text{PO}_4 + \text{Aq.}$ according to method of preparation. (Ditte.)
+ H_2O . Sl. sol. in $\text{HNO}_3 + \text{Aq.}$ (Rammelsberg.)

Ytterbium iodate, $\text{Yb}(\text{IO}_3)_3 + 6\text{H}_2\text{O}$.

Ppt. (Cleve, Z. anorg. 1902, 32. 136.)

Yttrium iodate, $\text{Y}(\text{IO}_3)_3 + 3\text{H}_2\text{O}$.

Sol. in 190 pts. H_2O . (Berlin.)

Zinc iodate, $\text{Zn}(\text{IO}_3)_2$.

Anhydrous. (Ditte, A. ch. (6) 21. 145.)
+ $2\text{H}_2\text{O}$. Sol. in 114 pts. cold, and 76 pts. hot H_2O . (Rammelsberg, Pogg. 43. 665.)

Sol. in HNO_3 , and $\text{NH}_4\text{OH} + \text{Aq.}$
Exists also in a very sol. modification. (Mylius and Funk, B. 1897, 30. 1723.)

Zinc iodate ammonia, $3\text{Zn}(\text{IO}_3)_2, 8\text{NH}_3$.

Decomp. by H_2O ; sol. in $\text{NH}_4\text{OH} + \text{Aq.}$ from which it is pptd. by alcohol. (Rammelsberg, Pogg. 44. 563.)

$\text{Zn}(\text{IO}_3)_2, 2\text{NH}_3$. Insol. in H_2O . (Ditte, A. ch. (6) 21. 145.)

$\text{Zn}(\text{IO}_3)_2, 3\text{NH}_3 + \text{H}_2\text{O}$. Insol. in H_2O . (Ditte.)

$\text{Zn}(\text{IO}_3)_2, 4\text{NH}_3$. (Ditte, A. ch. 1890, (6) 21. 164.) (Ephraim, R. 1915, 48. 53.)

Periodic acid.

See Periodic acid.

Iodides.

The iodides are in general easily sol. in H_2O ; exceptions are HgI_2 , PbI_2 , AgI , Cu_2I_2 , and BiI_3 , also the iodides of the Pt metals, all of which are insol. SnI_4 , SbI_3 , and TlI_3 are decomp. by H_2O . Many iodides are more sol. in solutions of salts than in H_2O , and several are sol. in alcohol or ether.

See under each element.

Iodine, I_2 .

Sol in 5524 pts H_2O at $0-12^\circ$. (Wittstein, J. B. 1857. 123)

Sol in 7000 pts H_2O . (Gay-Lussac.)

Sol in 3800 pts H_2O at 15° . (Basse)

Sol in 500 pts H_2O . (Jacquelin)

Sol in 7196 4 pts. B_2O at 18.75 . (Abl)

Pure H_2O dissolves 0.01519173 g. I per litre, or I is sol. in 6582 pts. H_2O at 6.3° . (Dossius and Weith, Zeit. Ch. 12. 378.)

Sol. in about 4500 pts. H_2O . (Hager, Comm. 1833.)

Sol. in 7000 pts. H_2O . (Cap and Garot, J. Pharm. (3) 26. 80.)

1 l. H_2O at 25° dissolves 0.3387 g. I_2 . (Jakowkin, Z. phys. Ch. 1895, 18. 590.)

1 l. H_2O dissolves 1.342 millimols of iodine at 25° . (Noyes, Z. phys. Ch. 1898, 27. 359.)

When iodine is shaken with H_2O at 15° , 1 pt. dissolves in 3750 pts. H_2O ; when iodine and H_2O are heated together and then cooled to 15° , 1 pt. iodine dissolves in 3500 pts. H_2O .

At 30° , 1 pt. is sol. in 2200 pts. H_2O . (Dietz, Chem. Soc. 1899, 76, (2) 150.)

1 l. H_2O dissolves 0.279 grams I_2 at 25° . (McLauchlan, Z. phys. Ch. 1903, 44. 617.)

Solubility of I_2 in H_2O at t° .

t°	g. I_2 per l. H_2O
18	0 2765
25	0 3395
35	0 4661
45	0 6474
55	0 9222

(Hartley, Chem. Soc. 1908, 93. 744.)

Solubility of I_2 in H_2O at t° .

t°	g per l	milliat per l
0	0.1649	1 30
20	0.2941	2 30
40	0 5684	4 56

(Fedotieff, Z. anorg. 1910, 69. 30.)

1.32 millimol I_2 are sol. in 1 l. H_2O . (Bray, J. Am. Chem. Soc., 1910, 32. 938.)

Calculated from electrical conductivity of sat. I_2 +Aq. 1 l. H_2O dissolves 0.0006383 mols. I_2 at 0° . (Jones, J. Am. Chem. Soc. 1915, 37. 256.)

Conc. H_2SO_4 , HCl , HNO_3 , H_3PO_4 , $HC_2H_3O_2$, tartaric, or citric acids+Aq dissolve I_2 , but give it up to CS_2 on shaking therewith. (Tessier, Z. anal. 11. 313.)

Sol. in 150 pts. H_2SO_4 on warming, but crystallizes out in part on cooling. (Kraus.)

Much more sol. in HBr +Aq than in pure H_2O ; HBr +Aq of sp. gr. 1.486 dissolves 3-4%. (Bineau.)

Sl. sol. in HCl +Aq. Easily sol. in even dil. HI +Aq.

1 l. 0.001 N- HCl +Aq sat. with I_2 contains 0.338 g. I_2 . (Bray and Mackay, J. Am. Chem. Soc. 1910, 32. 1919.)

1 l. 0.1 N- HNO_3 +Aq sat. with I_2 contains 0.340 g. I_2 . (Sammet, Z. phys. Ch. 1905, 53. 644.)

1 l. 0.1 N- H_2SO_4 +Aq sat. with I_2 contains 0.341 g. I_2 . (Sammet.)

Sol. in H_2SO_4 +Aq with decomp.

1 l. 0.9 N. H_3BO_3 dissolves 0.300 g. I_2 at 25° . (McLauchlan, Z. phys. Ch. 1903, 44. 617.)

100 cc. of a 10% solution of $BaBr_2$ dissolve 0.231 g. I_2 at 13.5° . (Meyer, Z. anorg. 1902, 30. 114.)

100 cc. of a 10% solution of $BaCl_2$ dissolve 0.067 g. I_2 at 18.5° . (Meyer.)

100 cc. of a 10% solution of BaI_2 dissolve 6.541 g. I_2 at 13.5° . (Meyer.)

100 cc. of a 10% solution of $CaBr_2$ dissolve 0.274 g. I_2 at 13.5° . (Meyer.)

100 cc. of a 10% solution of $CaCl_2$ dissolve 0.078 g. I_2 at 18.5° . (Meyer.)

100 cc. of a 10% solution of CaI_2 dissolve 8.062 g. I_2 at 13.5° . (Meyer.)

Easily sol. in boiling dil. $HgCl_2$ +Aq. (Selmi.)

Solubility in $HgCl_2$ +Aq at 25° .

10 ccm. of the solution contain

millimols I_2	millimols Hg
0 0134	0
0 1294	0 9444
0.1460	1.2442
0 1806	1 9542
0 2543	3.3460

(Herz and Paul, Z. anorg. 1914, 85. 214.)

Sol. in solutions of soluble iodides.

100 pts. KI +200 pts. H_2O dissolve 153 pts. I_2 ; from this solution H_2O precipitates $\frac{1}{2}$ the dissolved I_2 . 100 pts. KI +400 pts. H_2O dissolve quickly 76.5 pts. I_2 . If more water is present, the solution takes place more slowly. (Baup.)

CS_2 extracts the I_2 from the above solutions.

Solubility of I_2 in KI +Aq at $7-7.3^\circ$

% KI in KI +Aq	Pts I_2 dissolved	Sp gr of solution
1.802	1.173	1.0234
3.159	2.303	1.0433

(Arcowski, Z. anorg. 1894, 6. 404.)

1 l. CS_2 dissolves 230 g. I_2 at 25°.

1 l. $CHBr_3$ dissolves 189.55 g. I_2 at 25°.

1 l. CCl_4 dissolves 30.33 g. I_2 at 25°.

(Jakowkin, Z. phys. Ch. 1895, 18. 590.)

Solubility in CS_2 .

100 g. of the sat. solution contain at:

—80°	—87°	—92.5°	—94°
0.509	0.440	0.391	0.378 g. I_2 .

(Arcowski, Z. anorg. 1896, 11. 274.)

When an aqueous solution of I is shaken with CS_2 , 400 pts. go into solution in CS_2 for 1 pt. remaining in H_2O . (Berthelot and Jungfleisch, C. R. 69. 338.)

Abundantly sol. in methane. (Villard, A. ch. 1897, (7) 10. 387.)

Easily sol. in hot, less in cold naphtha. Pelletier and Walker.)

Sol. in about 8 pts. hot petroleum from Amiano (de Saussure)

Sl. sol. in cold, more readily in hot benzene. (Mansfield.) Easily sol. in benzene. (Moride, A. ch. (3) 39. 452.)

Solubility in benzene.

100 g. of the sat. solution contain at:

47°	6.6°	10.5°	13.7°	16.3°
S. 08	8.63	9.60	10.44	11.23 g. I_2 .

(Arcowski, Z. anorg. 1896, 11. 276.)

1 l. benzene sat. with iodine at 25° contains 139 g. iodine. Abegg, Z. anorg. 1906, 50. 409.)

1 l. nitrobenzene dissolves 50.62 g. I_2 at 16–17°. (Dawson and Gawler, Chem. Soc. 1902, 81. 524.)

Solubility of I_2 in nitrobenzene + iodides at room temp.

(Dawson and Goodson, Chem. Soc. 1904, 85. 796.)

Sol. in quinoline. (Beckmann and Gabel, Z. anorg. 1906, 51. 236.)

Easily sol. in oil of turpentine, but an explosion soon occurs. (Walker.)

Sol. in oil of mandarin. (Luca.)

Sol. in oil of arnica root (Zeller)

Very sol. in CS_2 , lignone, furfural, glycerine, aldehyde, chloral, warm retinole, toluene, salicylic acid, methyl nitrate, methyl salicylate, mercaptan, amyl carbamate, ethyl sulphhydrate, allyl iodide, ethyl disulphocarbonate, carbon chloride, SCl_2 , ICl_3 , H_2S_5 , chlorochromic acid, amyl valerianate, valerianic acid, warm butyric acid, creosote, aniline, quinoline, methylsalicylic acid. Quickly sol. in oil of dill, peppermint, sassafras, and tansy. Slowly sol. in oil of cloves, cinnamon, cajeput, and rue. Other essential oils decompose it. (Various authorities)

Sol. in potassium croconate + Aq. (Gmelin.)

Sol. in potassium antimony tartrate + Aq. 176 pts. H_2O + 6 pts. potassium antimony tartrate dissolve 2.75 pts. I; 378 pts. H_2O + 6 pts. potassium antimony tartrate dissolve 4.12 pts. I.

More sol. in tannic acid than in H_2O . 1 pt. I is sol. in 450 pts. H_2O with 3.3 pts. tannic acid at 12° ; 1 pt. I is sol. in 240 pts. H_2O with 0.015 pt. tannic acid at about 30° . (Koller, Zeit. Ch. 1866. 380.)

200 g. H_2O containing 0.3 g. tannic acid dissolve 1.0 g. I. (Hager, Comm. 1883.)

Sol. in considerable quantity, especially on warming, in resorcin, orcin, or phloroglucin + Aq, without coloration or formation of HI + Aq. These solutions withdraw I from CS_2 solution, and do not give it up on boiling, but on evaporation in vacuo the I is sublimed in a pure state. (Hlasiwetz, Z. anal. 6. 447.)

Partition coefficient for iodine between CS_2 and Aq at 25°C .

A = concentration of the water layer.

C = concentration of the carbon bisulphide layer.

(Landau, Z. phys. Ch. 1910, 73. 205.)

Iodine monobromide, IBr .

Slowly sol. in H_2O with slight decomp. Sol. in $CHCl_3$, CS_2 , ether, and alcohol.

+5 H_2O . (Löwig, Pogg. 14. 485.) Does not exist. (Bornemann, A. 189. 183.)

Iodine pentabromide, $\text{IBr}_5(?)$.

Sol. in H_2O with separation of iodine. (Lowig, Pogg. 14. 485.)

Iodine monochloride, ICl .

Decomp. by H_2O ; sol. without decomp. in alcohol, ether, and $\text{HCl} + \text{Aq}$.

Sol. in CS_2 .

Iodine hydrogen chloride, ICl , HCl .

Unstable. Sol. in ether. (Schutzenberger, C. R. 84. 389.)

Iodine trichloride, ICl_3 .

Deliquescent. With H_2O , a part is dissolved without decomp., and the rest is decomp. The aqueous solution contains more unchanged ICl_3 , the more conc. it is. (Serullas.) Precipitated from aqueous solution by H_2SO_4 . Sol. in $\text{HCl} + \text{Aq}$. Sol. in warm conc. H_2SO_4 without decomp. Sol. in alcohol, and benzene. Decomp. by small amount of CS_2 . (Christomanos, B. 10. 434.) Ether does not remove it from aqueous solution. (Serullas.)

Iodine lithium chloride, ICl_3 , $\text{LiCl} + 4\text{H}_2\text{O}$.

See Lithium chloriodide.

Iodine trichloride magnesium chloride, 2ICl_3 , $\text{MgCl}_2 + 5\text{H}_2\text{O}$.

Very deliquescent and easily decomposed. (Filhol, J. Pharm. 25. 442.)

+ $8\text{H}_2\text{O}$. Hygroscopic. (Weinland, Z. anorg. 1902, 30. 141.)

Iodine trichloride manganous chloride, 2ICl_3 , $\text{MnCl}_2 + 8\text{H}_2\text{O}$.

Hygroscopic. (Weinland, Z. anorg. 1902, 30. 139.)

Iodine trichloride nickel chloride, 2ICl_3 , $\text{NiCl}_2 + 8\text{H}_2\text{O}$.

Hygroscopic. CCl_4 dissolves out ICl_3 . (Weinland, Z. anorg. 1902, 30. 138.)

Iodine monochloride phosphorus pentachloride, ICl , PCl_5 .

Very deliquescent; decomp. by H_2O .

Iodine potassium chloride, ICl_3 , KCl .

Sol. in H_2O with decomp.

Ether dissolves out ICl_3 . (Filhol, J. Pharm. 25. 433, 506.)

See Potassium chloriodide.

Iodine sodium chloride, ICl_3 , $\text{NaCl} + 2\text{H}_2\text{O}$.

See Sodium chloriodide.

Iodine trichloride strontium chloride, 2ICl_3 , $\text{SrCl}_2 + 8\text{H}_2\text{O}$.

Hygroscopic. (Weinland, Z. anorg. 1902, 30. 142.)

Iodine trichloride sulphur tetrachloride, ICl_3 , SCl_4 .

Very deliquescent in air; decomp. by H_2O . Decomp. with formation of clear solution by dil. $\text{HNO}_3 + \text{Aq}$. (Weber, Pogg. 128. 459.)

SCl_2 , 2ICl_3 . (Jaillard, J. B. 1860. 95.)

Correct formula is as above (Weber, l. c.)

2ICl_3 , SCl_4 . Sol. in SO_2Cl_2 , SOCl_2 , POCl_3 , warm SCl_2 , petroleum ether, ligroin, CHCl_3 , CCl_4 , CS_2 and abs. ether. (Ruff, B. 1904, 37. 4519.)

Iodine trichloride zinc chloride, 2ICl_3 , $\text{ZnCl}_2 + 8\text{H}_2\text{O}$.

Unstable. Hygroscopic. (Weinland, Z. anorg. 1902, 30. 140.)

Iodine pentafluoride, IF_5 .

Fumes in air; decomp. with H_2O . (Gore, C. N. 24. 291.)

Decomp. by H_2O into iodic acid and HF . Decomp. by solutions of the alkalis. (Moissan, C. R. 1902, 135. 564.)

Iodine trioxide, I_2O_3 .

Decomp. by H_2O . (Ogier, C. R. 85. 957; 86. 722.)

Probably a mixture.

Iodine tetroxide, $\text{I}_2\text{O}_4(?)$.

Insol. in cold, decomp. by hot H_2O ; insol. in alcohol. Decomp. by $\text{HNO}_3 + \text{Aq}$. Sol. in H_2SO_4 . (Millon, J. pr. 34. 319, 337.)

Iodine pentoxide, I_2O_5 .

Very sol. in H_2O , and in dil. alcohol. Insol. in absolute alcohol, ether, CS_2 , chloroform, and hydrocarbons.

Forms hydrates, iodic acid HIO_3 , and $3\text{I}_2\text{O}_5$, H_2O ; insol. in ordinary alcohol.

For sp. gr. of aqueous solution, see *iodic acid*.

Iodine oxides, $\text{I}_{10}\text{O}_{19}$, I_3O_{13} .

The compounds, $\text{I}_{10}\text{O}_{19}$ (Millon, J. pr. 34. 336), and I_3O_{13} (Kammerer, J. pr. 83. 81), are probably mixtures.

Millon's oxides are impure I_2O_4 . (Kappeler, B. 1911, 44. 3496.)

Iodine sulphur oxide, $5\text{I}_2\text{O}_5$, SO_3 .

Decomp. by H_2O . (Kammerer.)

I_2O_5 , 3SO_3 . Decomp. by H_2O ; sl. sol. in hot SO_4 . (Weber, B. 20. 86.)

= $(\text{IO})_2(\text{SO}_4)_3$. Iodyl sulphate (?).

Iodine oxyfluoride, $\text{IOF}_3 + 5\text{H}_2\text{O}$.

Fumes in the air. (Weinland, Z. anorg. 1908, 60. 163.)

Iodine sulphide, S_2I_2 .

Sol. in CS_2 . (Linebarger, Am. Ch. J. 1895, 17. 57.)

Iodine sulphoxide, I_2SO_3 (?).

Decomp. by H_2O . (Schultz-Sellack.)
 $\text{I}_2(\text{SO}_3)_2$ (?). Decomp. by H_2O . (Weber, J. pr. (2) 25. 224.)

$\text{I}_2(\text{SO}_3)_6$ (?). As above. (Weber.)
See also Iodosulphuric anhydride.

Iodiridic acid.

Ammonium iodiridate, $(\text{NH}_4)_2\text{IrI}_6$

Very easily sol. in cold H_2O , decomp. on warming. Insol. in alcohol. (Oppler, J. B. 1857. 263.)

Potassium iodiridate, K_2IrI_6 .

Very easily sol. in H_2O . Insol. in alcohol.

Sodium iodiridate, Na_2IrI_6 .

Insol. in cold, sl. sol. in hot H_2O . Easily sol. in acids. (Oppler.)

Iodiridous acid.

Ammonium iodiridite, $(\text{NH}_4)_6\text{Ir}_2\text{I}_{12} + \text{H}_2\text{O}$.

Very sol. in H_2O , but decomp. on warming. (Oppler.)

Potassium iodiridite, $\text{K}_6\text{Ir}_2\text{I}_{12}$.

Insol. in H_2O , or alcohol. Slowly sol. in acids; easily in warm alkalis + Aq.

Silver iodiridite, $\text{Ag}_6\text{Ir}_2\text{I}_{12}$.

Ppt.

Iodochloroplatindiamine chloride,

Sl. sol. in H_2O .

Iodochromic acid.

Potassium iodochromate, KCrO_3I .

Decomp. by boiling H_2O . (Guyot, C. R. 73. 46.)

See also Chromoiodic acid.

Iodomolybdic acid.

See Molybdoiodic acid.

Iodonitratoplatinmonodiamine bromide,

Very sl. sol. in H_2O . (Cleve.)

Iodonitritoplatindiamine nitrate,

Quite easily sol. in hot H_2O . (Cleve.)

Iodopalladous acid.

Potassium iodopalladite.

Deliquescent. (Lassaigne.)

Iodophosphoric acid.

See Phosphoiodic acid.

Iodoplatinamine iodide, $\text{I}_2\text{Pt}(\text{NH}_3\text{I})_2$.

Sol. in H_2O , especially easily if boiling. (Cleve.)

Iodoplatindiamine iodide, $\text{I}_2\text{Pt}(\text{N}_2\text{H}_5\text{I})_2$

Sol. in H_2O , especially when hot. (Cleve.)

— **mercuric iodide**, $\text{I}_2\text{Pt}(\text{N}_2\text{H}_5\text{I})_2, 2\text{HgI}_2$.

Extremely difficultly sol. in cold H_2O ; partly decomp. by boiling (Jorgensen, Gm. K. 3. 1214)

— **nitrate**, $\text{I}_2\text{Pt}(\text{N}_2\text{H}_5\text{NO}_3)_2$.

More sol. in hot than cold H_2O .

— **sulphate**, $\text{I}_2\text{Pt}(\text{N}_2\text{H}_5)_2\text{SO}_4$.

Very sl. sol. in H_2O . (Jorgensen, J. pr. (2) 15. 429.)

Iodoplatinsemidiamine iodide,

Sl. sol. in H_2O . (Jorgensen, J. pr. (2) 16. 345.)

— **periodide**, $\text{I}_3\text{Pt}(\text{NH}_3)_2\text{I}$.

Moderately sl. sol. in H_2O . (Cleve.)

Iododiplatinamine iodide, $\text{I}_2\text{Pt}_2(\text{N}_2\text{H}_5)_2\text{I}_4$.

Insol. in H_2O .

Iododiplatindiamine anhydroiodide,

Insol. in $\text{NH}_4\text{OH} + \text{Aq}$.

— **anhydronitrate**, $\text{I}_2\text{Pt}_2(\text{N}_2\text{H}_5)_4\text{O}(\text{NO}_3)_2$.

Easily sol. in warm $\text{H}_2\text{SO}_3 + \text{Aq}$. (Cleve.)

— **iodide**, $\text{I}_2\text{Pt}_2(\text{N}_2\text{H}_5)_4\text{I}_4$.

Ppt.

— **nitrate**, $\text{I}_2\text{Pt}_2(\text{N}_2\text{H}_5)_4(\text{NO}_3)_4 + 4\text{H}_2\text{O}$.

Sl. sol. in cold, moderately sol. in hot H_2O . (Cleve.)

— **phosphate**, $\text{I}_2\text{Pt}_2(\text{N}_2\text{H}_5)_4[\text{O}_3\text{P}(\text{OH})]_2$.

Nearly insol. in H_2O .

— **sulphate**, $\text{I}_2\text{Pt}_2(\text{N}_2\text{H}_5)_4(\text{SO}_4)_2$.

Nearly insol. in H_2O .

— **platodiamine sulphate**, $\text{I}_2\text{Pt}_2(\text{N}_2\text{H}_5)_4\text{SO}_4$,
 $\text{Pt}(\text{NH}_3)_2\text{SO}_4$.

Very sl. sol. in H_2O . (Carlgren Sv. V. A. F. 47. 306.)

Iodoplatinic acid, $\text{H}_2\text{PtI}_6 + 9\text{H}_2\text{O}$.

Deliquescent. Easily sol. in H_2O , with decomp. into PtI_4 and HI on standing or warming. (Topsøe.)

Ammonium iodoplatinate, $(\text{NH}_4)_2\text{PtI}_6$.

Easily sol. in H_2O . (Topsoe)
 NH_4I , PtI_4 . Sl. sol in H_2O ; insol. in alcohol. (Lassaigne, A. ch. (2) 51. 124.)

Barium iodoplatinate, BaPtI_6 .

Deliquescent, but less so than Na_2PtI_6 which it otherwise resembles. (Lassaigne.)

Calcium iodoplatinate, $\text{CaPtI}_6 \cdot 12\text{H}_2\text{O}$.

Not so deliquescent as Na salt.

Cobalt iodoplatinate, $\text{CoPtI}_6 \cdot 9\text{H}_2\text{O}$.

Very deliquescent.

Lead tetraiodoplatinate, $[\text{PtI}_4(\text{OH})_2]\text{Pb}$, $\text{Pb}(\text{OH})_2$.

Ppt. (Belluci, C. C. 1902, I. 625)

Magnesium iodoplatinate, $\text{MgPtI}_6 \cdot 9\text{H}_2\text{O}$.

Sol. in H_2O .

Manganese iodoplatinate, $\text{MnPtI}_6 \cdot 9\text{H}_2\text{O}$.

Very deliquescent.

Mercuric tetraiodoplatinate, $[\text{PtI}_4(\text{OH})_2]\text{Hg}$.

Ppt. (Belluci, C. C. 1902, I. 625.)

Nickel iodoplatinate, $\text{NiPtI}_6 \cdot 9\text{H}_2\text{O}$.

Very deliquescent.

Potassium iodoplatinate, K_2PtI_6 .

Easily sol. in H_2O . Insol. in alcohol. Not attacked by cold conc. H_2SO_4 .

Silver tetraiodoplatinate, $[\text{PtI}_4(\text{OH})_2]\text{Ag}_2$.

Ppt. (Belluci, C. C. 1902, I. 625.)

Sodium iodoplatinate, $\text{Na}_2\text{PtI}_6 \cdot 6\text{H}_2\text{O}$.

Not deliquescent, but easily sol. in H_2O and alcohol. (Vauquelin.) Deliquescent. (Lassaigne.)

Thallium tetraiodoplatinate, $[\text{PtI}_4(\text{OH})_2]\text{Tl}_2$.

Ppt. (Belluci, C. C. 1902, I. 625.)

Zinc iodoplatinate, $\text{ZnPtI}_6 \cdot 9\text{H}_2\text{O}$.

Easily sol. in H_2O .

Iodoplatinocyanhydric acid, $\text{H}_2\text{Pt}(\text{CN})_4\text{I}_2$.

See Periodoplatinocyanhydric acid.

Silver iodoplatinocyanide, $\text{Ag}_2(\text{PtI}_2(\text{CN})_4)_2$.

Ppt. (Miolati, Gazz. ch. it. 1900, 30. 588.)

Strontium iodoplatinocyanide platinocyanide, $\text{SrPt}(\text{CN})_4\text{I}_2$, $10\text{SrPt}(\text{CN})_4 + x\text{H}_2\text{O}$.

(Holst.)

Iodopurpleochromium chloride,

$\text{ICr}(\text{NH}_3)_5\text{Cl}_2$.

Quite sol. in H_2O . (Jorgensen, J. pr. (2) 25. 83.)

— **chloroplatinate, $\text{ICr}(\text{NH}_3)_5\text{PtCl}_6$.**

Precipitate. (Jorgensen, l. c.)

— **iodide, $\text{ICr}(\text{NH}_3)_5\text{I}_2$.**

Difficultly sol in H_2O . Insol in HI , or $\text{KI} + \text{Aq}$; insol. in alcohol. (Jorgensen, l. c.)

— **nitrate, $\text{ICr}(\text{NH}_3)_5(\text{NO}_3)_2$.**

Much less sol. in H_2O than the chloride. (Jorgensen, l. c.)

Iodopurpleocobaltic iodide, $\text{CoI}(\text{NH}_3)_5\text{I}_2$

(Claudet.)

Does not exist. (Jorgensen, J. pr. (2) 25. 94.)

Iodopurpleorhodium chloride,

$\text{IRh}(\text{NH}_3)_5\text{Cl}_2$.

Relatively easily sol. in H_2O ; insol. in $\text{HCl} + \text{Aq}$ and alcohol. Insol. in $\text{KI} + \text{Aq}$. (Jorgensen, J. pr. (2) 27. 433.)

— **fluosilicate, $\text{IRh}(\text{NH}_3)_5\text{SiF}_6$.**

Nearly insol. in cold H_2O .

— **iodoplatinate, $\text{IRh}(\text{NH}_3)_5\text{PtI}_6$.**

Ppt.

— **iodide, $\text{IRh}(\text{NH}_3)_5\text{I}_2$.**

Very sl. sol. in cold H_2O ; more sol. in hot H_2O ; insol. in dil. $\text{HI} + \text{Aq}$, and alcohol. (Jorgensen, J. pr. (2) 27. 433.)

— **nitrate, $\text{IRh}(\text{NH}_3)_5(\text{NO}_3)_2$.**

Sl. sol. in H_2O , more easily sol. in hot H_2O ; insol. in dil. $\text{HNO}_3 + \text{Aq}$, and alcohol.

— **sulphate, $\text{IRh}(\text{NH}_3)_5\text{SO}_4$, and $+3\text{H}_2\text{O}$.**

Sl. sol. in even hot H_2O . (Jorgensen.)

Iodoselenic acid.

Ammonium iodoselenate, $2(\text{NH}_4)_2\text{O}$, I_2O_5 , $2\text{SeO}_3 + \text{H}_2\text{O}$.

Decomp. by H_2O . (Weinland, B. 1903, 36. 1400.)

$2(\text{NH}_4)_2\text{O}$, $3\text{I}_2\text{O}_5$, $2\text{SeO}_3 + 5\text{H}_2\text{O}$. Sol. in H_2O with decomp.(?). (Weinland.)

Potassium iodoselenate, $2\text{K}_2\text{O}$, I_2O_5 , $2\text{SeO}_3 + \text{H}_2\text{O}$.

Decomp. by H_2O . (Weinland.)

$2\text{K}_2\text{O}$, $3\text{I}_2\text{O}_5$, $2\text{SeO}_3 + 5\text{H}_2\text{O}$. Sol. in H_2O with decomp.(?) (Weinland.)

Rubidium iodoselenate, $2\text{Rb}_2\text{O}$, $3\text{I}_2\text{O}_5$, $2\text{SeO}_3 \cdot 5\text{H}_2\text{O}$.

Sol. in H_2O . (Weinland.)

Iodostannous acid.

Data concerning solubility of SnI_2 in $\text{HI} + \text{Aq}$ indicate formation of this compound. (Young, J. Am. Chem. Soc. 1897, **19**, 853.)

Iodosulphobismuthous acid.

Cuprous iodosulphobismuthite, $2\text{Cu}_2\text{S}$, Bi_2S_3 , 2BiSI .

Decomp. by H_2O at ord. temp. Decomp. by mineral acids with evolution of H_2S . (Ducatte, C. R. 1902, **134**, 1213.)

Lead iodosulphobismuthite, PbS , Bi_2S_3 , 2BiSI .

Insol. in H_2O . Partially decomp. by boiling H_2O . Decomp. by dil. mineral acids with evolution of H_2S . (Ducatte.)

Iodosulphuric acid.

Ammonium iodosulphate, $(\text{NH}_4)_2\text{SO}_3\text{I}_2(?)$.

Very sol. in H_2O . (Zinno, N. Rep. Pharm. **20**, 449.)

Mercuric iodosulphate, $\text{Hg}_2(\text{SO}_4)\text{I}_2$.

See Mercuric sulphate iodide.

Potassium iodosulphate, $\text{K}_2\text{SO}_3\text{I}_2(?)$.

Sol. in 7.14 pts. H_2O at 15° . (Zinno, N. Rep. Pharm. **20**, 449.)

Sodium iodosulphate, $\text{Na}_2\text{SO}_3\text{I}_2 + 10\text{H}_2\text{O}$.

Sol. in 3.64 pts. H_2O at 15° and in dil. alcohol. (Zinno, N. Rep. Pharm. **20**, 449.)

Does not exist. (Michaels and Koethe, B. **6**, 999.)

Iodosulphuric anhydride, ISO_3 .

Decomp. very violently by H_2O . (Weber, J. pr. (2) **25**, 224.)

Diiodosulphuric anhydride, I_2SO_3 .

Decomp. with H_2O , but not so violently as ISO_3 . (Weber, J. pr. (2) **25**, 224.)

Iodo*tri* sulphuric anhydride, $\text{I}(\text{SO}_3)_3$.

Decomp. by H_2O . (Weber, J. pr. (2) **25**, 224.)

Iodotelluric acid.

Ammonium iodotellurate, $(\text{NH}_4)_2\text{O}$, I_2O_5 , $2\text{TeO}_3 + 6\text{H}_2\text{O}$.

Sol. in H_2O . (Weinland, Z. anorg. 1901, **28**, 52.)

$(\text{NH}_4)_2\text{O}$, I_2O_5 , $2\text{TeO}_3 + 8\text{H}_2\text{O}$. Sol. in H_2O . (Weinland, B. 1900, **33**, 1017.)

Cæsium iodotellurate, Cs_2TeI_4 .

Insol. in CsI , or $\text{HI} + \text{Aq}$. Decomp. slowly by cold, rapidly by hot H_2O . (Wheeler, Sill. Am. J. **145**, 267.)

Potassium iodotellurate, $\text{K}_2\text{TeI}_6 + 2\text{H}_2\text{O}$.

Sl. efflorescent. Somewhat sol. in $\text{KI} + \text{Aq}$, and dil. $\text{HI} + \text{Aq}$. (Wheeler.)

K_2O , I_2O_5 , $\text{TeO}_3 + 3\text{H}_2\text{O}$. Sol. in H_2O . Partially decomp. on recryst. from H_2O . (Weinland, Z. anorg. 1901, **28**, 53.)

K_2O , I_2O_5 , $2\text{TeO}_3 + 6\text{H}_2\text{O}$. Sol. in H_2O without decomp. (Weinland.)

Rubidium iodotellurate, Rb_2TeI_6 .

Sl. sol. in HI , or $\text{RbI} + \text{Aq}$. Decomp. by H_2O . Somewhat sol. in alcohol. (Wheeler.)

Rb_2O , I_2O_5 , $2\text{TeO}_3 + 6\text{H}_2\text{O}$. Sol. in H_2O . (Weinland.)

Iodotetramine chromium iodide,

$\text{ICr}(\text{NH}_3)_4\text{I}_2 + \text{H}_2\text{O}$.

Sol. in H_2O . Pptd. by alcohol. (Cleve.)

Iodotetramine cobaltic sulphate,

$\text{ICo}(\text{NH}_3)_4\text{SO}_4$.

(Vortmann and Blasberg, B. **22**, 2652.)

Iodotungstic acid.

See Tungstoiodic acid.

Iodous acid, I_2O_3 .

See Iodine trioxide.

Iodovanadic acid, I_2O_5 , $\text{V}_2\text{O}_5 + 5\text{H}_2\text{O}$.

Very easily sol. in H_2O .

$2\text{V}_2\text{O}_5$, $3\text{I}_2\text{O}_5 + 18\text{H}_2\text{O}$. (Ditte, C. R. **102**, 757.)

Ammonium iodovanadate, $3(\text{NH}_4)_2\text{O}$, $2\text{V}_2\text{O}_5$, $5\text{I}_2\text{O}_5 + 20\text{H}_2\text{O}$.

Sol. in H_2O . (Ditte, C. R. **102**, 1019.)

Irididiamine compounds, $\text{Cl}_2\text{Ir}(\text{NH}_3)_4\text{X}_2$.

See Chloriridiamine compounds.

Iridic acid.

Potassium iridate (?).

Sol. in H_2O and $\text{HCl} + \text{Aq}$.

Iridicyanhydric acid, $\text{H}_3\text{Ir}(\text{CN})_6$.

Easily sol. in H_2O , still more easily in alcohol, less in ether. (Martius, A. **117**, 369.)

Barium iridicyanide, $\text{Ba}_3[\text{Ir}(\text{CN})_6]_2 + 18\text{H}_2\text{O}$.

Efflorescent. Easily sol. in hot or cold H_2O . Nearly insol. in alcohol. Not decomp. by acids.

Cupric iridicyanide ammonia, $\text{Cu}_2\text{Ir}(\text{CN})_{12}$, $6\text{NH}_3 + 4\text{H}_2\text{O}$.

Ppt. Decomp. in air. (Rimbach, Z. anorg 1907, **52**, 413.)

Potassium iridicyanide, $\text{K}_2\text{Ir}(\text{CN})_6$.

Easily sol. in H_2O .

Silver iridicyanide ammonia, $\text{Ag}_2\text{Ir}(\text{CN})_6$, $2\text{NH}_3 + 3\text{H}_2\text{O}$.

Ppt. Decomp. in the light. (Rimbach, Z. anorg 1907, **52**, 414.)

Iridium, Ir

Insol. in all acids, including aqua regia, except when in finely divided state, as "iridium black," when it is sol. in aqua regia. (Claus, J. pr. **42**, 251)

Iridium ammonia compounds.

See—

Chlorirididiamine comps., $\text{ClIr}(\text{NH}_3)_2\text{X}$.

Iridotriamine " $\text{Ir}(\text{NH}_3)_3\text{X}_3$.

Iridopentamine " $\text{Ir}(\text{NH}_3)_5\text{X}_3$.

Iridotetramine " $\text{Ir}(\text{NH}_3)_4\text{X}_2$.

Iridoquoopentamine " $\text{Ir}(\text{NH}_3)_5(\text{OH}_2)\text{X}_3$.

Iridosoamine " $\text{Ir}(\text{NH}_3)_2\text{X}_2$.

Iridosodiamine " $\text{Ir}(\text{NH}_3)_4\text{X}_2$.

Iridium tribromide, $\text{IrBr}_3 + 4\text{H}_2\text{O}$.

Easily sol. in H_2O . Insol. in alcohol or ether. (Birnbbaum.)

Iridium tetrabromide, IrBr_4 , or H_2IrBr_6 .

Deliquescent. Sol. in H_2O and alcohol. (Birnbbaum.)

See Bromiridic acid.

Iridium hydrogen sesquibromide, 3HBr , $\text{IrBr}_3 + \text{H}_2\text{O} = \text{H}_2\text{IrBr}_6 + 3\text{H}_2\text{O}$.

See Bromiridous acid.

Iridium sesquibromide with MBr.

See Bromiridite, M.

Iridium tetrabromide with MBr.

See Bromiridate, M.

Iridium phosphorous bromide, $\text{IrBr}_3 \cdot 3\text{PBr}_3$.

Partially decomp. by H_2O into a sol., and insol. modification. Sol. in PBr_3 . (Geisenheimer)

$\text{IrBr}_3 \cdot 2\text{PBr}_3$. Not easily attacked by H_2O .

$\text{IrBr}_4 \cdot 2\text{PCl}_3$.

See Iridium phosphorus chlorobromide.

Iridium carbide, $\text{IrC}_4(?)$.

(Berzelius.)

Stable toward H_2O , acids, and alcohol. (Strecker, B. 1909, **42**, 1773.)

Iridium monochloride, IrCl .

Insol. in acids and bases. (Wohler, B. 1913, **46**, 1584.)

Iridium dichloride, IrCl_2 .

Insol. in acids and bases. (Wohler, B. 1913, **46**, 1585)

Iridium trichloride, IrCl_3 .

Insol. in acids or alkalies. (Claus, C. C. **1861**, 690.)

Insol. in H_2O , acids and alkalies, (Leidie, C. R. 1899, **129**, 1251.)

$+4\text{H}_2\text{O}$. Sol. in H_2O . (Claus.)

Iridium tetrachloride, IrCl_4 , or $\text{H}_2\text{IrCl}_6(?)$.

Deliquescent, and easily sol. in H_2O .

Iridium trichloride with MCl.

See Chloriridite, M.

Iridium tetrachloride with MCl.

See Chloriridate, M.

Iridium chloride with potassium chloride and sulphite.

See Chloriridosulphite, potassium.

Iridium phosphorus chloride, IrP_2Cl_3 .

Insol. in cold H_2O . Sl. decomp. by hot H_2O . (Geisenheimer, A. ch. (6) **23**, 254.)

$\text{IrP}_2\text{Cl}_{10}$. Very sol. in chloroform (G.)

$\text{IrP}_2\text{Cl}_{12}$. Easily sol. in PCl_3 , or CHCl_3 , also in CS_2 with gradual decomp. Sl. sol. in cold H_2O . Decomp. by boiling into IrCl_3 , $3\text{H}_3\text{PO}_4$. Sl. sol. in benzene, ligroin and CCl_4 . (Strecker, B. 1909, **42**, 1772.)

$+ \text{H}_2\text{O}$. Insol. in PCl_3 at 100° . Very slowly sol. in boiling H_2O . (Geisenheimer, A. ch. (6) **23**, 266.)

$\text{IrP}_2\text{Cl}_{15}$. Decomp. by H_2O into 2IrCl_3 , $3\text{H}_3\text{PO}_4$, $3\text{H}_3\text{PO}_4$. Violently decomp. by alcohol. Sl. sol. in cold, more in hot POCl_3 , without decomp. Very sol. in PCl_3 with decomp. into $\text{IrP}_2\text{Cl}_{12}$; similarly in PBr_3 . Sol. in AsCl_3 with combination. Sol. in CS_2 with decomp. Sol. in SCl_2 with combination. Easily sol. in cold C_6H_6 with decomp. Insol. in CCl_4 . Sol. in CHCl_3 with decomp. (Geisenheimer, A. ch. (6) **23**, 254.)

Iridium phosphorus arsenic chloride,

$2\text{IrP}_2\text{Cl}_{15}$, 5AsCl_3 .

Sol. in H_2O with decomp. into corresponding acid. (Geisenheimer, C. R. **110**, 1336.)

IrCl_3 , 2PCl_3 , 2AsCl_3 . Very sol. in H_2O with decomp. Sol. in AsCl_3 ; insol. in CCl_4 . (Geisenheimer.)

Iridium phosphorus sulphur chloride, IrCl_3 , 2PCl_3 , 2SCl_2 .

Very sol. in sl. amt. H_2O , with decomp. into an acid analogous to chlorophosphoridic acid. Sol. in SCl_2 . (Geisenheimer.)

Iridium phosphorus chlorobromide, $\text{IrBr}_4 \cdot 2\text{PCl}_5$.

(Geisenheimer, C. R. 111. 40.)

Iridium dihydroxide, $\text{IrO}_2 \cdot 2\text{H}_2\text{O} = \text{Ir}(\text{OH})_2$.

Insol. in dil HNO_3 , or $\text{H}_2\text{SO}_4 + \text{Aq}$. Slowly but completely sol. in $\text{HCl} + \text{Aq}$. Sol. in KOH , and $\text{NaOH} + \text{Aq}$. (Claus, J. pr. 39. 104.)

Iridium sesquihydroxide, $\text{Ir}_2\text{O}_5\text{H}_6$.

Not attacked by acids, except slightly by conc. $\text{HCl} + \text{Aq}$. (Claus, C. C. 1861. 690.)

Iridium triiodide, IrI_3 .

Very sl. sol. in cold, somewhat more in hot H_2O . Insol. in alcohol. (Oppler, J. B. 1857. 263.)

Iridium tetraiodide, IrI_4 .

Insol. in H_2O or acids. (Lassaigne.)

Sol. in solutions of iodides. (Oppler.)

Iridium triiodide with MI.

See Iodiridite, M.

Iridium tetraiodide with MI.

See Iodiridate, M.

Iridium dioxide, IrO_2 .

Very sl. sol. in acids.

Freshly pptd. Sol. in conc. H_2SO_4 , hot 2-N H_2SO_4 , HNO_3 , HCl . Insol. in 2-N KOH and sl. sol. in hot 1-N KOH .

Dried in a desiccator. Sol. in HCl . Insol. in H_2SO_4 , HNO_3 , and KOH .

Dried at 100° . Sol. in hot conc. HCl . Insol. in H_2SO_4 , HNO_3 , and KOH . (Wöhler, Z. anorg. 1908, 57. 334.)

See also Iridium dihydroxide.

Iridium trioxide, IrO_3 .

Unstable. (Wöhler, Z. anorg. 1908, 57. 340.)

Iridium sesquioxide, Ir_2O_3 .

Insol. in acids.

Sol. in conc. H_2SO_4 , and hot conc. HCl . Forms colloidal solution with dil. HCl . Conc. HNO_3 converts it into the dioxide.

Insol. in $\text{KOH} + \text{Aq}$. (Wöhler, Z. anorg. 1908, 57. 339.)

Iridium oxybromide, $\text{Ir}_2\text{Br}_7\text{O}_2 = 2\text{IrBr}_4 \cdot \text{IrO}_2$.

Not decomp. by H_2O . (Geisenheimer, A. ch. (6) 23. 286.)

Iridium phosphide, Ir_2P .

(Clarke and Joslin, Am. Ch. J. 5. 231.)

Iridium sesquiselenide, Ir_2Se_3 .

Insol. in HNO_3 ; slowly sol. in hot aqua regia. (Chabré and Bouchonnet, C. R. 1903, 137. 1060.)

Iridium monosulphide, IrS .

Insol. in $\text{HNO}_3 + \text{Aq}$, and very sl. sol. if at all in aqua regia. (Berzelius.)

Sol. in K_2S , and $\text{KSH} + \text{Aq}$.

$+x\text{H}_2\text{O}$. Sl. sol. in H_2O ; sol. in cold $\text{HNO}_3 + \text{Aq}$. Insol. in $\text{NH}_4\text{Cl} + \text{Aq}$ or dil. acids. More sol. in $\text{K}_2\text{S} + \text{Aq}$ than PtS_2 . (Berzelius.)

Iridium disulphide, IrS_2 .

Not attacked by H_2O , but decomp. when exposed moist in air. Not attacked by sat. $\text{HCl} + \text{Aq}$ or by conc. $\text{HNO}_3 + \text{Aq}$, but is oxidised by fuming $\text{HNO}_3 + \text{Aq}$, and aqua regia. Insol. in NH_4 sulphides, or polysulphides $+ \text{Aq}$. Slowly sol. in alkali polysulphides $+ \text{Aq}$. (Antony, Gazz. ch. it. 23. 1. 190.)

Iridium sesquisulphide, Ir_2S_3 .

Sl. sol. in H_2O . Sol. in HNO_3 , or $\text{K}_2\text{S} + \text{Aq}$.

Iridotriamine chloride, $\text{Ir}(\text{NH}_3)_3\text{Cl}_3$.

Sl. sol. in H_2O . Not attacked by boiling H_2SO_4 . (Palmaer, B. 22. 15.)

Iridotetraamine chloride, $\text{Ir}(\text{NH}_3)_4\text{Cl}_3$.

Very sol. in H_2O . (Palmaer, B. 22. 15.)

— chlorosulphate, $[\text{Ir}(\text{NH}_3)_4\text{Cl}_2]\text{SO}_4 + 4\text{H}_2\text{O}$.

(Palmaer.)

Iridopentamine bromide, $\text{Ir}(\text{NH}_3)_5\text{Br}_3$.

Sol. in 352 pts. H_2O at 12.5° . (Palmaer, B. 23. 3817.)

— bromochloride, $\text{Ir}(\text{NH}_3)_5\text{ClBr}_2$.

Sol. in H_2O . (Palmaer, B. 24. 2090.)

— bromonitrite, $\text{Ir}(\text{NH}_3)_5\text{Br}(\text{NO}_2)_2$.

Sol. in 17.9 pts. H_2O at 18° . (Palmaer.)

— bromosulphate, $\text{Ir}(\text{NH}_3)_5\text{BrSO}_4 + \text{H}_2\text{O}$.

Sol. in H_2O . (Palmaer.)

— carbonate, $[\text{Ir}(\text{NH}_3)_5]_2(\text{CO}_3)_3 + 3\text{H}_2\text{O}$.

Sol. in H_2O . (Claus, J. pr. 63. 99.)

— trichloride, $\text{Ir}(\text{NH}_3)_3\text{Cl}_3$.

Sol. in 153.1 pts. H_2O at 15.1° . (Palmaer, B. 23. 3810.)

Sol. in hot H_2O containing HCl . (Claus, J. pr. 69. 30.)

— chlorobromide, $\text{Ir}(\text{NH}_3)_5\text{ClBr}_2$.

Sol. in 213.6 pts. H_2O at 15° . (Palmaer.)

— chloroiodide, $\text{Ir}(\text{NH}_3)_5\text{ClI}_2$.

Sol. in 104.5 pts. H_2O at 15° . (Palmaer.)

— chlorooxalate, $\text{Ir}(\text{NH}_3)_5\text{ClC}_2\text{O}_4$.

Sl. sol. in H_2O . (Palmaer.)

Iridopentamine chloronitrate,Sol. in 51.54 pts. H_2O at 15.4° . (Palmaer.)— **chloronitrite,**Easily sol. in H_2O . (Palmera.)— **chloroplatinate,** $\text{Ir}(\text{NH}_3)_5\text{Cl}_3, \text{PtCl}_4.$ Very sl. sol. in H_2O . (Palmear.)— **chlorosulphate,** $\text{Ir}(\text{NH}_3)_5\text{ClSO}_4 + 2\text{H}_2\text{O}.$ Sol. in 134.5 pts. H_2O at 15° . (Palmaer.)— **hydroxide,** $\text{Ir}(\text{NH}_3)_5(\text{OH})_3.$

Known only in solution, which decomp. on evaporation. (Claus.)

— **nitrate,** $\text{Ir}(\text{NH}_3)_5(\text{NO}_3)_3.$ Moderately sol. in H_2O . (Claus.)Sol. in 349 pts. H_2O at 16° . (Palmaer.)— **sulphate,** $[\text{Ir}(\text{NH}_3)_5]_2(\text{SO}_4)_3.$ Sol. in H_2O . (Claus.)**Iridoaquopentamine bromide,**Sol. in 4 pts. H_2O . Pptd. from aqueous solution by $\text{HBr} + \text{Aq}$. (Palmaer, B. 24. 2090.)— **chloride,** $\text{Ir}(\text{NH}_3)_5(\text{OH}_2)\text{Cl}.$ Sol. in 1.2 to 1.5 pts. H_2O at ord. temp. Pptd. by $\text{HCl} + \text{Aq}$ from aqueous solution. (Palmaer, B. 24. 2090.)— **nitrate,** $\text{Ir}(\text{NH}_3)_5(\text{OH}_2)(\text{NO}_3)_3.$ Sol. in about 10 pts. H_2O at 17° . Pptd. from aqueous solution by $\text{HNO}_3 + \text{Aq}$. (Palmaer.)**Iridonitrous acid,** $\text{H}_5\text{Ir}_2(\text{NO}_2)_{12}.$ Easily sol. in H_2O . (Gibbs, B. 4. 281.)**Ammonium iridonitrite,** $(\text{NH}_4)_6\text{Ir}_2(\text{NO}_2)_{12}.$ Almost insol. in cold H_2O ; decomp. by hot H_2O with evolution of N_2 . Decomp. by hot conc. H_2SO_4 or HCl . Insol. in sat. $\text{NH}_4\text{Cl} + \text{Aq}$. (Leidié, C. R. 1902, 134. 1583.)**Barium iridonitrite iridochloride,**Sol. in H_2O . (Lang.)**Mercuric iridonitrite,** $\text{Hg}_2\text{Ir}_2(\text{NO}_2)_{12}.$ Insol. in H_2O . (Gibbs, B. 4. 280.)**Potassium iridonitrite,** $\text{K}_6\text{Ir}_2(\text{NO}_2)_{12}.$ Sl. sol. in cold, more sol. in boiling H_2O . Decomp. by hot HCl or H_2SO_4 . Insol. in $\text{KCl} + \text{Aq}$. (Leidié, Bull. Soc. 1902, (3) 27. 937.)+ $2\text{H}_2\text{O}$. Moderately sol. in H_2O .**Potassium iridonitrite iridochloride,**Sol. in H_2O .**Silver iridonitrite,** $\text{Ag}_6\text{Ir}_2(\text{NO}_2)_{12}.$ Difficultly sol. in cold, more easily in hot H_2O .**Sodium iridonitrite,** $\text{Na}_6\text{Ir}_2(\text{NO}_2)_{12} + 2\text{H}_2\text{O}.$ Sl. sol. in H_2O . Sol. in cold H_2O . Decomp. by hot conc. H_2SO_4 or HCl . (Leidié, C. R. 1902, 134. 1583.)**Sodium iridonitrite iridochloride,**Sl. sol. in H_2O . (Gibbs.) $\text{Na}_6\text{Ir}_2(\text{NO}_2)_{12}, \text{Na}_6\text{Ir}_2\text{Cl}_6.$ Insol. in cold, sl. sol. in hot H_2O . (Lang.)**Iridosamine chloride,** $\text{Ir}(\text{NH}_3)_2\text{Cl}_2.$ Nearly insol. in H_2O . (Skoblikoff, A. 84. 275.)— **sulphate,** $\text{Ir}(\text{NH}_3)_2\text{SO}_4.$ Easily sol. in H_2O . (Skoblikoff.)**Iridosodiamine chloride,** $\text{Ir}(\text{N}_2\text{H}_5)_2\text{Cl}_2.$ Insol. in cold, decomp. by hot H_2O . (Skoblikoff.)— **nitrate,** $\text{Ir}(\text{N}_2\text{H}_5)(\text{NO}_3)_2.$ Easily sol. in H_2O .— **sulphate,** $\text{Ir}(\text{N}_2\text{H}_5)_2\text{SO}_4.$ Sl. sol. in cold, easily in boiling H_2O . Sl. sol. in alcohol.**Iridosulphuric acid.****Potassium iridosulphate,** $\text{K}_4\text{Ir}_2(\text{SO}_4)_6.$ Sol. in H_2O . (de Boisbaudran, C. R. 96. 1406.)**Iridosulphurous acid.****Ammonium iridosulphite,** $(\text{NH}_4)_6\text{Ir}_2(\text{SO}_3)_6 + 6\text{H}_2\text{O}.$ Slightly sol. in H_2O . (Birnbbaum, A. 136. 179.)**Potassium iridosulphite,** $\text{K}_4\text{Ir}_2(\text{SO}_3)_6 + 6\text{H}_2\text{O}.$ Slightly sol. in H_2O .**Sodium iridosulphite,** $\text{Na}_6\text{Ir}_2(\text{SO}_3)_6 + 8\text{H}_2\text{O}.$ Scarcely sol. in H_2O .**Iron, Fe.**Permanent in dry air; oxidises only slowly in moist air, but rapidly when in contact with air and H_2O simultaneously.

Fe does not rust in contact with air and

H₂O containing alkalis even in very small amounts. (Payen, A. ch. 50. 305.)

Not attacked at ord. temp. by H₂O free from air. More easily oxidised by NH₄ salts + Aq than by H₂O when exposed to air simultaneously. (Persoz, A. ch. (3) 24. 506.)

Iron is slowly attacked by distilled H₂O in presence of air. 100 ccm. distilled water removed 29 mg. from 11.8 sq. cm. iron in one week, while air free from CO₂ was passed through the solution. In presence of CO₂, 54 mg. were removed. (Wagner, Dingl. 221. 260.)

CO₂ acts as a catalyst for the solution of Fe by H₂O. (Whitney, J. Am. Chem. Soc. 1903. 25. 394.)

Iron is most easily oxidised when it is exposed to air, and H₂O is deposited on it at the same time in liquid form.

100 l. sea water dissolve 27.37 g. from 1 sq. metre Fe, 29.16 g. from 1 sq. metre steel; 1.12 g. from 1 sq. metre galvanised Fe (Calvert and Johnson, C. N. 11) 171.)

Readily sol. in HCl, dil. H₂SO₄ + Aq, and most other acids.

Action of H₂SO₄ + Aq (1:12) is very much accelerated by a few drops of PtCl₄ + Aq; the addition of As₂O₃ arrests the action completely. Tartar emetic and HgCl₂ diminish the action, but do not arrest it. CuSO₄ + Aq strongly accelerates the action, and Ag₂SO₄ + Aq also to a less extent.

In the case of HCl + Aq, the addition of small amts. of metallic salts also influences the action. Weak HC₂H₃O₂ + Aq has but little action, and the addition of PtCl₄ increases it; As₂O₃ stops it; other solutions have no effect. With racemic and tartaric acids the phenomena are the same.

With oxalic acid, PtCl₄ prevents the action. Saline solutions and even distilled H₂O, when mixed with PtCl₄, have slight solvent action. (Millon, C. R. 21. 45.)

Above phenomena are due to galvanic action from metal deposited on the iron. (Barreswill, C. R. 21. 292.)

H₂SO₄ has only sl. action on cast-iron at ord. temp. with exclusion of air.

Weak acids have a strong action at higher temperatures.

Charcoal pig-iron, and case-hardened cast-iron are much less attacked by weak acids at b.-pt. than other sorts of Fe. Scotch pig-iron is most strongly attacked.

99.8% H₂SO₄ has very sl. action on iron at ord. temp. when air is excluded. (Lunge, Dingl. 261. 131.)

Resistance against dil. H₂SO₄ + Aq is greatly increased by increase in amt. of C if chemically combined, less so by P or Si. (Ledebur, Dingl. 223. 326.)

Passive Iron.—When Fe is treated with pure conc. HNO₃ + Aq of 1.512–1.419 sp. gr., it soon becomes coated with a bluish or black coating, apparently FeO, and when thus

covered Fe is not attacked by HNO₃ + Aq of any strength at ord. temp. or at the temp. of a freezing mixture; but action occurs on heating. Nor is Fe attacked at ord. temp. by acid of 1.401 sp. gr. or even somewhat weaker acid, though action begins at once on heating. Very dil. HNO₃ + Aq attacks Fe at ord. temp. with formation of NH₄NO₃ and Fe(NO₃)₂. The action of HNO₃ + Aq is influenced by PtCl₄. If acid containing 4.5 equivalents of H₂O is diluted with 2–3 vols. H₂O, and then poured on Fe turnings, they dissolve at once with evolution of nitrous fumes and formation of ferric salt, but if to the acid one drop of PtCl₄ is added, only H gas is evolved, and NH₄NO₃ and Fe(NO₃)₂ are formed. (Millon, C. R. 21. 47.)

The more H₂O the acid contains the lower will be the temp. at which the Fe remains passive. Shaking the wire hastens the passivity. Contact with Pt, Au, or C does not prevent it. Fe wire becomes passive by remaining 10 min. in HNO₃ vapour (Renard, C. R. 79. 159.)

Iron may be made passive by HClO₃, HBrO₃, HIO₃, H₂CrO₄, in the same way as by HNO₃.

Iron may also be made passive by moderate ignition.

Passivity occurs with HNO₃ + Aq of 1.38 sp. gr. after a short time at 31°; but if temp. is 32°, passivity does not occur.

Colourless HNO₃ + Aq of 1.42 sp. gr. produces passivity at 55° but not at 56°. Red fuming HNO₃ + Aq of 1.42 sp. gr. produces passivity at 82° but not at 83°. (Ordway, Sill. Am. J. (2) 40. 316.)

The passivity of Fe is destroyed when it is placed in a magnetic field at a much lower temperature than when in normal condition. (Nichols and Franklin, Sill. Am. J. (3) 34. 419.)

Passivity depends on a coating of NO which hinders the action of the acid. All operations which remove this layer terminate the passivity, as shaking, rubbing, placing in a vacuum, etc. (Varenne, C. R. 89. 783.)

When Fe is plunged in HNO₃ + Aq of 1.42 sp. gr. there is a sudden evolution of gas which ceases after 3 to 20 seconds, and the surface becomes bright. The same phenomena take place with a more dilute acid, if of not less than 1.32 sp. gr. In the latter case, there is an immediate evolution of gas, which suddenly ceases and the metal becomes bright, but soon the acid begins to act again at a single point, and the action gradually spreads over the whole surface; this, however, soon ceases again, and we have an "intermittent passivity."

If a part of a piece of iron is immersed in strong acid, the whole of it is made passive. This is explained by the NO spreading over the whole surface by capillarity.

The passivity ceases when the Fe is placed in dil. acid, after a longer or shorter time,

according to the dilution of the acid,—when the acid has sp. gr. = 1.30, after 11 days

"	"	1.28	"	5	"
"	"	1.26	"	32	hours
"	"	1.16	"	12	"

Iron may also be made passive by long standing in NO gas under pressure. (Varenne, C. R. 90. 998.)

Fe is made passive by a coating of Fe_2O_3 , not by NO. (Schonbein, Pogg. 39. 342.) (Beetz, Pogg. 67. 286.) (Ramann, B. 14. 1430.)

Passivity may also be caused by NH_4NO_3 + Aq, ammoniacal AgNO_3 + Aq, $\text{Fe}(\text{NO}_3)_3$, $\text{Fe}(\text{NO}_3)_2$, $\text{Al}(\text{NO}_3)_3$, $\text{Co}(\text{NO}_3)_2$, $\text{Ni}(\text{NO}_3)_2$, etc. + Aq instead of HNO_3 + Aq (Ramann, B. 14. 1933.)

Hardly attacked by either dil or conc acids when they are under high pressure. (Cailliet C. R. 68. 395.)

Iron is dissolved by HNO_3 + Aq, even when very conc., but no gas is evolved and the process is very slow.

HNO_3 + Aq of the following sp. gr. dissolves the given amts. from strips of pure Fe

Sp gr. of acid	Diminution of weight in 24 hours
1.28	0.82%
1.34	0.75
1.38	0.29
1.48	0.34
1.53	5.80

(Gautier and Charpy, C. R. 113. 1451.)

Insol. in liquid chlorine below 90° . (Lange, Zeit. angew. Ch. 1900, 13. 686.)

Insol. in liquid NH_3 . (Gore, Am. ch. J. 1898, 20. 828.)

Not attacked by alkalis

Sol. in NaOH + Aq (34%) when air is blown through the liquid. (Zirnité, Ch. Ztg. 12. 355.)

NaOH + Aq attacks iron and steel. (Venator, Dingl. 261. 133.)

NaOH + Aq has slight action on Fe between 15° and 100° . (Lunge, Dingl. 261. 131.)

Presence of alkalis prevent rusting entirely, and fats and oils greatly hinder it. (Wagner.)

Sol. in alkali hydrogen carbonates + Aq. (Berzelius.)

Sat. NaCl + Aq has sl. but perceptible action on Fe. NH_4Cl + Aq has stronger action than NaCl + Aq. (Lunge.)

100 ccm. H_2O containing 0.5 g. NaCl or KCl removed 42 mg. from 11.8 sq. cm. iron in one week, while air free from CO_2 was passed through the solution, and 72 mg. in presence of CO_2 .

100 ccm. H_2O containing 1 g. NH_4Cl removed 45 mg., and 76 mg. respectively under the above conditions.

100 ccm. H_2O containing 0.8 g. MgCl_2 re-

moved 49 mg., and 65 mg. respectively under the above conditions.

Not attacked by 100 ccm. H_2O containing 1 g. Na_2CO_3 , or by CaO_2H_2 + Aq. (Wagner, Dingl. 221. 260.)

Action of KClO_3 + Aq KClO_2 + Aq (6.3% KClO_3) oxidised 11.21 g. cast iron and 20.1 g. pure iron from a surface of 1 sq. metre in 7 hours; KClO_2 + Aq (25% KClO_3) oxidised 24.59 g. cast, and 44.90 g. pure Fe under above conditions; $\text{Ca}(\text{ClO}_3)_2$, CaCl_2 + Aq (20° Baume) obtained by passing Cl through CaO_2H_2 + Aq oxidised 85 g. cast, and 95 g. pure Fe under the above conditions. (Lunge and Deggeler, J. Soc. Chem. Ind. 4. 32.)

Easily sol in organic acids.

Comparative action of oils on Fe.

	Amount Fe dissolved
Neatsfoot oil	0.0875 grains
Colza "	0.0800 "
Sperm "	0.0460 "
Lard "	0.0250 "
Olive "	0.0062 "

Paraffine "	0.0045 "
Almond "	0.0040 "
"Lubricating" oil	0.0018 "

(Watson, C. N. 42. 190.)

$\frac{1}{2}$ ccm. oleic acid dissolves 0.0097 g. Fe in 6 days. (Gates, J. phys. Chem. 1911, 15. 143.)

Fe dissolves in albumen solution to the extent of 1 to 2 per cent. (Buchner, Arch. Pharm. (3) 20. 417.)

Attacked by sugar + Aq at 115 – 120° , also by inverted sugar or malt extract, not by glycerine or mannite + Aq. (Klein and Berg, C. R. 102. 1170.)

Iron arsenide, FeAs_2 .

Min. *Löllingite*. Sol. in HNO_3 + Aq with separation of As_2O_3 .

Fe_3As_4 . Min. *Leucopyrite*

Iron arsenide sulphide, FeAs_2 , FeS_2 .

Min. *Arsenopyrite*. Sol. in HNO_3 + Aq with separation of S and As_2O_3 ; wholly sol. in aqua regia; not attacked by HCl + Aq.

Iron boride, Fe_3B .

Decomp. by H_2O . Sol. in hot dil. HCl or H_2SO_4 , and in hot conc. HCl or H_2SO_4 . Sol. in hot dil., or cold conc. HNO_3 . (Jassonneix, C. R. 1907, 145. 122.)

FeB . Sol. in molten alkali carbonates; not sol. in dil. or conc. H_2SO_4 in the cold; sol. in boiling H_2SO_4 , and in HNO_3 . (Moissan, Bull. Soc. 1895, (3) 13. 958.)

Stable in dry air. Decomp. by aqua regia,

but not readily sol. in conc. H_2SO_4 and HCl . (Moissan, C. R. 1895, 120, 176.)

FeBr_2 . Decomp. by H_2O . Sol. in HNO_3 and in hot conc. HCl . (Jassonneix, C. R. 1907, 145, 122.)

Iron (ferrous) bromide, FeBr_2

Sol. in H_2O . Decomp. by heating on air. Sat. $\text{FeBr}_2 + \text{Aq}$ contains at

-21°	-7°	+10°	21°
47 0	48 3	52 3	53 7% FeBr_2 .
37°	50°	65°	95°
56 0	58 0	59 4	63 3% FeBr_2 .

(Étard, A. ch. 1894, (7) 2, 541.)

+4 H_2O . Very sol. in H_2O ; pptd. from cooled aq. solution. (Volkman, C. C. 1894, II, 611.)

+6 H_2O . Sol. in H_2O . (Lowig.)

+9 H_2O . (Volkman.)

Ferric bromide, FeBr_3 .

Deliquescent. Sol. in H_2O , alcohol, and ether (Lowig.)

Sl. sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20, 828.)

+6 H_2O . Sol. in alcohol and ether. (Bolschakoff, C. C. 1898, II, 660.)

Ferrous mercuric bromide.

Deliquescent. (v. Bonsdorff.)

Ferric rubidium bromide, $\text{Rb}_2\text{FeBr}_5 + \text{H}_2\text{O}$.

Sol. in H_2O . (Walden, Z. anorg. 1894, 7, 332.)

Ferrous stannic bromide.

See Bromostannate, ferrous.

Ferrous bromide nitric oxide, $3\text{FeBr}_2, 2\text{NO}$.

Sol. in H_2O . Not isolated. (Thomas, C. R. 1896, 123, 944.)

Ferric bromochloride, FeCl_2Br .

Very deliquescent, and sol. in H_2O , alcohol, and ether. Notably sol. in chloroform, benzene, and toluene. Insol. in CS_2 . (Lenormand, C. R. 116, 820.)

Iron carbide, Fe_3C .

(Gurlt, J. B. 1856, 781.)

Mixture of Fe and FeC_4 . (Tunner, Polyt. Centralbl. 1861, 1227.)

Fe_4C . (Karsten, J. pr. 40, 229.)

Fe_3C . Sol. in hot conc. HCl ; oxidized slowly by moist air. (Campbell, Am. Ch. J. 1896, 18, 840-841.)

Fe_2C_2 . (Rammelsberg, C. C. 1847, 60.)

Iron molybdenum carbide, $\text{Fe}_3\text{C}, \text{Mo}_3\text{C}$.

Sol. in hydric acids; insol. in HNO_3 . (Williams, C. R. 1898, 127, 484.)

Iron tungsten carbide, $2\text{Fe}_3\text{C}, 3\text{W}_2\text{C}$.

Insol. in H_2O and hydric acids; sol. in HNO_3 and H_2SO_4 . (Williams, C. R. 1898, 127, 411.)

Iron carbonyl, $\text{Fe}(\text{CO})_5$.

Slowly decomp. on air. Not attacked by dil. H_2SO_4 , HNO_3 , or $\text{HCl} + \text{Aq}$. Conc. HNO_3 , $\text{Cl}_2 + \text{Aq}$, or $\text{Br}_2 + \text{Aq}$ decomp. easily. Sol. in alcoholic solution of KOH or NaOH with subsequent decomp. Sol. in alcohol, ether, benzene, mineral oils, etc. (Mond and Langer, Chem. Soc. 59, 1090.)

$\text{Fe}_2(\text{CO})_7$. Decomp. on air. Not attacked by H_2SO_4 or $\text{HCl} + \text{Aq}$. Sol. in alcoholic potash. Very much less sol. in organic solvents than $\text{Fe}(\text{CO})_5$. (Mond and Langer.)

Ferrous chloride, FeCl_2 .

Deliquescent. Easily sol. in H_2O with evolution of heat, or in alcohol. Insol. in ether. (Jahn.)

Sol. in 2 pts. H_2O at 18 75°. (Abl.)

Sol. in 1 pt. strong alcohol. (Wenzel.)

Sp. gr. of $\text{FeCl}_2 = \text{Aq}$ at 15 5°.

(Dunn, J. Soc. Chem. Ind. 1902, 21, 390.)

Insol. in liquid HF. (Franklin, Z. anorg. 1905, 46. 2.)

Sol. in acetone; insol. in methylal. (Eidmann, C. C. 1899, II. 1014.)

Sol. in acetone. (Naumann, B. 1904, 37, 4328.)

Sl. sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Sol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Yellow modification is sol. in benzonitrile (Naumann, B. 1914, 47. 1369.)

Mol. weight determined in pyridine. (Werner, Z. anorg. 1897, 15. 21.)

+2H₂O (Jonas.)

+4H₂O. Deliquescent. Easily sol. in alcohol. Sol. in 0.68 pt. cold H₂O. (Reimann, Mag. Pharm. 17. 215.)

Sat. aq. solution contains at:

16° 18° 25° 28° 43°
40 5 40.9 41.0 42 5 44 4% FeCl₂,

50° 53° 72° 89° 96° 118°
45 0 45 9 49.2 51.3 51 0 51 7% FeCl₂.

(Étard, A. ch. 1894, (7) 2. 537.)

100 g. FeCl₂, 4H₂O + Aq contain 17.54 g. Fe at 22.8°; 18.59 g. at 43.2°. (Boecke, N. Jahrb. Min. 1911, I, 61.)

More sol. in water containing NO than in pure H₂O. (Gay, Bull. Soc. (2) 44. 175.)

Sol. in hot HCl + Aq. (Sabatier, Bull. Soc. 1895, (3) 13. 599.)

[Sabatier could not obtain FeCl₂ + 6H₂O of Lescœur.]

Ferroferric chloride, Fe₂Cl₅ + 18H₂O.

Deliquescent. (Lefort, J. Pharm. (4) 10. 85.)

Ferric chloride, Fe₂Cl₆ or FeCl₃.

Very deliquescent, and sol. in H₂O with evolution of great heat

100 mols. H₂O dissolve mols. anhydrous Fe₂Cl₆ at t°.

t°	Mols. Fe ₂ Cl ₆	t°	Mols. Fe ₂ Cl ₆
66	29 20	80	29 20
70	29 42	100	29.75
75	28.92		..

(Roozeboom, Z. phys. Ch. 10. 477.)

See also hydrated salts below.

Solution in H₂O is decomp. into colloidal Fe₂O₃, xH₂O and HCl, upon heating if conc., and on simple standing if dil.

Krecke (J. pr. (2) 3. 286) gives the following table.

% Fe ₂ Cl ₆ in solution	Temp. at which Graham's colloidal hydrate is formed	Temp. at which Saint Gilles' colloidal hydrate is formed	Temp. at which oxychlorides are formed	Temp. at which Fe ₂ O ₃ is formed
32	100-130°	..	100°+	140°

30	70	30	17.7
30	90	30	17.6
30	110	30	17.67
50	30	20	23.5
50	45	20	23.9
40	35	30	25.4
40	50	30	25.5
30	30	20	23.8
30	45	20	24.0
17.6	30	20	24.47
17.6	50	20	24.5

(Hinrichsen and Sachsels, Z. phys. Ch. 1904, 50. 95.)

Difficultly sol. in AsBr_3 . (Walden, Z. anorg. 1902, **29**, 374.)

Attacked by liquid NO_2 in the presence of traces of moisture. (Frankland, Chem. Soc. 1901, **79**, 1361.)

Sol. in liquid SO_2 . (Walden, B. 1899, **32**, 2864.)

Sol. in alcohol ether, acetic ether (Cann. C. R. 102, 363), and acetone (Krug and M'Elroy, J. anal. Ch. **6**, 184.)

Sl. sol. in ethylamine. (Shinn, J. phys. Chem. 1907, **11**, 538.)

Sol. in benzonitrile. (Naumann, B. 1914, **47**, 1369.)

Sol. in methyl acetate. (Naumann, B. 1909, **42**, 3790.)

Insol. in ethyl acetate. (Naumann, B. 1910, **43**, 314.)

1 g. FeCl_3 is sol. in 1.59 g. acetone at 18° . Sp. gr. of sat. solution $18^\circ/4^\circ = 1.160$. (Naumann, B. 1904, **37**, 4333.)

Sol. in acetone and in methylal. (Eidmann, C. C. 1899, II, 1014.)

Sol. in quinoline (Beckmann and Gabel, Z. anorg. 1906, **51**, 236.)

Sl. sol. in CS_2 . (Arctowski, Z. anorg. 1894, **6**, 257.)

Mol. weight determined in pyridine. (Werner, Z. anorg. 1897, **15**, 22.)

Sublimed.

Sol. in AsCl_3 , POCl_3 , SO_2Cl_2 and PBr_3 ; sl. sol. in PCl_3 . (Walden, Z. anorg. 1900, **25**, 214.)

The salts with different amts. of crystal H_2O have different solubilities. (Roozeboom, +4 H_2O . Melts in crystal H_2O at 73.5° .)

100 mols. H_2O dissolve mols. Fe_2Cl_6 from $\text{Fe}_2\text{Cl}_6 + 4\text{H}_2\text{O}$ at t° .

t°	Mols. Fe_2Cl_6	t°	Mols. Fe_2Cl_6	t°	Mols. Fe_2Cl_6
50	19.96	69	21.53	72.5	26.15
55	20.32	72.5	23.35	70	27.90
60	20.70	73.5	25.00	66	29.20

(Roozeboom, Z. phys. Ch. **10**, 477.)

+5 H_2O . Correct formula for +6 H_2O salt.

100 mols. H_2O dissolve mols. Fe_2Cl_6 from $\text{Fe}_2\text{Cl}_6 + 5\text{H}_2\text{O}$ at t° .

t°	Mols. Fe_2Cl_6	t°	Mols. Fe_2Cl_6	t°	Mols. Fe_2Cl_6
12	12.87	30	15.12	55	19.15
20	13.95	35	15.64	56	20.00
27	14.85	50	17.50	55	20.32

(Roozeboom.)

Melts in crystal H_2O at 31° (Engel, C. R. 104, 1708); at 56° (Roozeboom.)

+6 H_2O . Very deliquescent. Sol. in alcohol. Ether dissolves out Fe_2Cl_6 .

M.-pt. is 31° . (Ordway.) Contains only 5 H_2O . (Roozeboom.)

+7 H_2O . Melts in crystal H_2O at 32.5° .

100 mols. H_2O dissolve mols. Fe_2Cl_6 from $\text{Fe}_2\text{Cl}_6 + 7\text{H}_2\text{O}$ at t° .

t°	Mols. Fe_2Cl_6	t°	Mols. Fe_2Cl_6	t°	Mols. Fe_2Cl_6
20	11.35	32	13.55	30	15.12
27.4	12.15	32.5	14.99	25	15.54

(Roozeboom.)

+12 H_2O . Less deliquescent than Fe_2Cl_6 or $\text{Fe}_2\text{Cl}_6 + 5\text{H}_2\text{O}$.

100 mols. H_2O dissolve mols. Fe_2Cl_6 from $\text{Fe}_2\text{Cl}_6 + 12\text{H}_2\text{O}$ at t° .

t°	Mols. Fe_2Cl_6	t°	Mols. Fe_2Cl_6	t°	Mols. Fe_2Cl_6
-55	2.75	30	5.93	27.4	11.20
-41	2.81	35	6.78	20	12.15
-27	2.98	36.5	7.93	10	12.83
0	4.13	37	8.33	8	13.70
10	4.54	36	9.29
20	5.10	30	10.45

(Roozeboom.)

Sol. in alcohol. Ether dissolves out Fe_2Cl_6 . Melts in crystal H_2O at 37° (Roozeboom); at 35.5° (Ordway).

Ferric hydrogen chloride, FeCl_3 , $\text{HCl} + 2\text{H}_2\text{O}$. Decomp. by H_2O . (Sabatier, Bull. Soc. (2) 197.)

More sol. in H_2O than FeCl_3 . (Engel, C. R. 104, 1708.)

For solubility, see $\text{FeCl}_3 + \text{HCl}$, under ferric chloride.

+6 H_2O . (Roozeboom and Schreinemakers.)

For solubility, see $\text{FeCl}_3 + \text{HCl}$, under ferric chloride.

Ferrous lithium chloride, FeCl_2 , $\text{LiCl} + 3\text{H}_2\text{O}$. (Chassevant, A. ch. (6) **30**, 17.)

Ferric magnesium chloride, FeCl_3 , $\text{MgCl}_2 + \text{H}_2\text{O}$.

Deliquescent. (Neumann, B. **18**, 2890.)

Ferrous mercuric chloride, FeCl_2 , $\text{HgCl}_2 + 4\text{H}_2\text{O}$.

Deliquescent. (v. Bonsdorff.)

Ferric nitrosyl chloride, FeCl_3 , NOCl .

Very deliquescent. (Weber, Pogg. **118**, 477.)

Ferric phosphoric chloride, FeCl_3 , PCl_5 .

Decomp. by H_2O . (Baudrimont, A. ch. (4) **2**, 15.)

Iron (ferrous) potassium chloride, FeCl_2 , $2\text{KCl} + 2\text{H}_2\text{O}$.

Sol. in H_2O (Berzelius.)

Ferric potassium chloride, FeCl_3 , $2\text{KCl} + \text{H}_2\text{O}$.

A little H_2O dissolves out FeCl_3 (Fritzsche J. pr. 18. 483.)

Sol. in H_2O . (Walden, Z. anorg. 1894, 71. 332.)

Ferric rubidium chloride, FeCl_3 , 3RbCl .

Easily sol. in H_2O . Insol. in $\text{HCl} + \text{Aq}$. (Godeffroy, Arch. Pharm. (3) 9. 343.)

FeCl_3 , $2\text{RbCl} + \text{H}_2\text{O}$. Decomp. by H_2O (Neumann, A. 244. 329.)

Sol. in H_2O . (Walden, Z. anorg. 1894, 7. 332.)

Ferric sulphur chloride, FeCl_3 , SCl_4 .

Very sensitive toward heat and moisture. (Ruff, B. 1904, 37. 4518.)

Ferric thallium chloride, FeCl_3 , 3TlCl

Decomp. by H_2O . Can be crystallised from $\text{HCl} + \text{Aq}$. (Wohler, A. 144. 250.)

Ferrous chloride ammonia, 3FeCl_2 , 2NH_3 .

Decomp. by H_2O . (Rogstadius, J. pr. 86. 310.)

FeCl_2 , 6NH_3 . Loses 4NH_3 at 100° . (Miller, Am. Ch. J. 1895, 17. 577.)

FeCl_2 , 2NH_3 . Decomp. in the air (Miller).

Ferric chloride ammonia, FeCl_3 , NH_3

Slowly deliquescent. Sol. in H_2O with evolution of heat. (Rose, Pogg. 24. 302.)

FeCl_3 , 6NH_3 . Not deliquescent; not sol. in H_2O ; sol. in HCl with decomp. (Miller, Am. Ch. J. 1895, 17. 577.)

Loscs NH_3 to give FeCl_3 , 5NH_3 , and FeCl_3 , 4NH_3 .

Ferric chloride cyanhydric acid, FeCl_3 , 2HCN .

Deliquescent. (Klein, A. 74. 85.)

Ferrous chloride nitric oxide, FeCl_2 , NO .

Sol. in H_2O without evolution of gas. (Thomas, C. R. 1895, 121. 204.)

$+2\text{H}_2\text{O}$. Sol. in cold H_2O without decomp. (Thomas, C. R. 1895, 120. 448.)

2FeCl_2 , NO . Very hygroscopic. (Thomas, C. R. 1895, 121. 129.)

10FeCl_2 , NO . Very hygroscopic. (Thomas C. R. 1895, 121. 128.)

Ferric chloride nitric oxide, Fe_2Cl_6 , NO .

Very hygroscopic. Loses NO when exposed to the air.

$2\text{Fe}_2\text{Cl}_6$, NO . Very hygroscopic. In contact with H_2O gives off NO . (Thomas, C. R. 1895, 120. 447.)

Iron (ferrous) fluoride, FeF_2 .

Sl. sol. in H_2O ; insol. in alcohol and ether. Partly sol. in hot $\text{HCl} + \text{Aq}$, slowly sol. in cold, easily in hot HNO_3 ; decomp. by H_2SO_4 . (Poulenc, C. R. 115. 941.)

$+8\text{H}_2\text{O}$. Difficultly sol. in H_2O ; more easily if it contains HF . (Berzelius.)

Ferroferric fluoride, FeF_3 , $\text{FeF}_2 + 7\text{H}_2\text{O}$.

Sol. in dil. $\text{HF} + \text{Aq}$. (Weinland, Z. anorg. 1899, 22. 268.)

Ferric fluoride, FeF_3 .

Sl. sol. in H_2O ; insol. in alcohol or ether. Sl. attacked by HNO_3 , HCl , or $\text{H}_2\text{SO}_4 + \text{Aq}$. (Poulenc, C. R. 115. 941.)

$+4\frac{1}{2}\text{H}_2\text{O}$. More sol. in hot than cold H_2O . Insol. in alcohol. (Scheurer-Kestner, A. ch. (3) 68. 472.)

Ferric nickel fluoride, FeF_3 , $\text{NiF}_2 + 7\text{H}_2\text{O}$.

Sl. sol. in dil. $\text{HF} + \text{Aq}$. (Weinland, Z. anorg. 1899, 22. 268.)

Ferrous potassium fluoride, FeF_2 , $\text{KF} + 2\text{H}_2\text{O}$.

(Wagner, B. 19. 896.)

FeF_2 , 2KF . Sl. sol. in H_2O . (Berzelius.)

Ferric potassium fluoride, FeF_3 , 2KF .

Somewhat sol. in H_2O , especially if hot. (Berzelius.)

$+ \text{H}_2\text{O}$ (Christensen, J. pr. (2) 35. 164.)

FeF_3 , 3KF . Properties as above. (Berzelius.)

Ferric sodium fluoride, FeF_3 , $2\text{NaF} + \frac{1}{2}\text{H}_2\text{O}$.

Rather easily sol. in H_2O . Solution decomp. on heating. Very sol. in $\text{FeCl}_3 + \text{Aq}$. (Nicklès, J. Pharm. (4) 10. 14.)

FeF_3 , 3NaF . (Wagner, B. 19. 896.)

Ferric thalious fluoride, 2FeF_3 , 3TlF .

Sol. in hot H_2O , less sol. in cold. Sl. sol. in HF . (Ephraim, Z. anorg. 1909, 61. 239.)

Ferrous titanium fluoride.

See Fluotitanate, ferrous.

Ferric zinc fluoride, FeF_3 , $\text{ZnF}_2 + 7\text{H}_2\text{O}$.

Sl. sol. in dil. $\text{HF} + \text{Aq}$. (Weinland, Z. anorg. 1899, 22. 269.)

Ferrous hydroxide, FeO_2H_2 .

Sol. in 150,000 pts. H_2O . (Bineau, C. R. 41. 509.)

Insol. in KOH , or $\text{NaOH} + \text{Aq}$. Sol. in NH_4 salts $+ \text{Aq}$. Sl. sol. in $\text{NaC}_2\text{H}_3\text{O}_2 + \text{Aq}$. (Mercer.)

Not pptd. in presence of Na citrate. Insol. in boiling cane sugar $+ \text{Aq}$, but sl. sol. when KOH has been added. Not pptd. in presence of much $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$. (Rose.)

Solubility in glycerine + Aq containing about 60% by vol. of glycerine.

100 ccm. of the solution contain 1.0 g. FeO (Muller, Z. anorg. 1905, 43. 322.)

Iron (ferric) hydroxides, $\text{Fe}_2\text{O}_3 \cdot x\text{H}_2\text{O}$.

Many indefinite compounds of Fe_2O_3 and H_2O are known, and uncertainty exists as to their composition.

According to van Bemmelen (R. t. c. 7. 106), there are probably no true definite compounds of Fe_2O_3 and H_2O .

According to Tommasi (B. 12. 1924, 2334), there are two series of Fe hydroxides, α , red hydroxides, and β , yellow hydroxides.

α Hydroxides. $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ (unstable), $\text{Fe}_2\text{O}_3 \cdot 2\text{H}_2\text{O}$ (loses H_2O at 50°), and $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ (loses H_2O at 92°).

Sol. in dil. acids and in Fe_2Cl_6 + Aq, and pptd. from the latter solution by Na_2SO_4 , or H_2SO_4 + Aq.

β Hydroxides. $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ (stable below 70°), $\text{Fe}_2\text{O}_3 \cdot 2\text{H}_2\text{O}$ (loses H_2O at 105°), $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ (loses H_2O at 150°).

Sl. sol. in acids, and insol. in Fe_2Cl_6 + Aq. (Tommasi.)

The following more or less uncertain data are given.

$2\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$. Sol. in HCl + Aq. Very sl. sol. in HNO_3 + Aq. (Davies, Chem. Soc. (2) 4. 69.)

Min. *Turgite*.

$\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$. Insol. in cold acids, difficultly sol. in warm HCl and H_2SO_4 + Aq, and especially in warm HNO_3 + Aq. (Schiff, A. 114. 199.)

Min. *Göthite*.

$2\text{Fe}_2\text{O}_3 \cdot 3\text{H}_2\text{O}$. Sl. sol. in tartaric, citric, or acetic acids, but easily sol. in HCl + Aq. (Wittstein.)

Scarcely attacked by conc. HNO_3 , or HCl + Aq. Sol. in acetic acid or dil. HNO_3 , or HCl + Aq, from which solution it is pptd. by trace of alkali salts. (St. Gilles.)

Min. *Limonite*.

$3\text{Fe}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$. (Muck.)

$\text{Fe}_2\text{O}_3 \cdot 2\text{H}_2\text{O}$. Easily sol. in HCl + Aq.

Min. *Xanthosiderite*.

$\text{Fe}_2\text{O}_3 \cdot 3\text{H}_2\text{O}$. Sl. sol. in acetic acid of 1.03 sp. gr., but easily sol. if of 1.076 sp. gr. Sol. in mineral acids. (Limberger, J. B. 1853. 70.)

Pptd. $\text{Fe}_2\text{O}_3 \cdot x\text{H}_2\text{O} = \text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ (?). Insol. in H_2O , or in solutions of the alkalis or NH_4 salts. When recently pptd. is easily sol. in acids. (Fresenius.)

Sl. sol. in NH_4OH , and NH_4 salts + Aq. (Odling.)

Apparently insol. in NH_4Cl , or $(\text{NH}_4)_2\text{CO}_3$ + Aq. (Brett, 1837.)

Sl. sol. in conc., but insol. in dil. KOH + Aq. (Chodnew, J. pr. 28. 221.)

Sl. sol. in very conc. KOH + Aq free from CO_2 . (Völcker, A. 59. 34.)

Not at all sol. in pure conc. KOH + Aq, solubility noticed by previous observers being caused by the presence of silicic acid. (Sandrock.)

Sl. sol. in conc. alkali carbonates + Aq.

When freshly pptd., it is not acted upon by conc. K_2CO_3 + Aq. (Grotthaus.)

Readily sol. in conc. $(\text{NH}_4)_2\text{CO}_3$ + Aq, but pptd. by addition of H_2O .

Sol. in excess of $(\text{NH}_4)_2\text{CO}_3$ + Aq when pptd. by that reagent (Wohler.)

Sol. in solutions of the alkali bicarbonates. (Berzelius.)

Sol. in aqueous solutions of water-glass. (Ordway.)

Immediately dissolved by H_2SO_3 + Aq.

Sol. in NH_4F + Aq. (Helmholtz, Z. anorg. 3. 124.)

Sol. in conc. $\text{Al}_2(\text{SO}_4)_3$ + Aq (Schneider, B. 23. 1352.)

Sl. sol. in a solution of MgCO_3 (?). (Bischhof.)

Insol. in ethylamine, or amylamine + Aq. (Wurtz, A. ch. (3) 30. 472.)

Sol. in boiling solution of $\text{Bi}(\text{NO}_3)_3$, with pptn. of Bi_2O_3 . (Persoz.)

Sol. in Cr_2Cl_6 + Aq; after 3 months 15 mols. $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ were dissolved by 1 mol. Cr_2Cl_6 . (Béchamp, A. ch. (3) 57. 296.)

Insol. in fumaric acid, even when freshly pptd.

When recently pptd., it is easily sol. in $\text{KHC}_4\text{H}_4\text{O}_6$ + Aq, but after drying it is difficultly sol. therein.

When moist easily sol. in $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$ + Aq, but after drying is scarcely sol. therein when cold, and only sl. sol. when hot. (Werther.)

Easily sol. in acetic, citric, and other acids. (Wittstein.)

Solubility in glycerine + Aq containing about 60% by vol. of glycerine.

100 ccm. of the solution contain 0.8 g. Fe_2O_3 . (Müller, Z. anorg. 1905, 43. 322.)

Easily sol. in aqueous solution of sucrates of Ca, Ba, Sr, K, Na. (Hunton, 1837.)

Unacted upon by cane sugar + Aq. (Gladstone.)

Sl. sol. in cane sugar + Aq, from which it is pptd. by $(\text{NH}_4)_2\text{S}$ + Aq, but not by NH_4OH , or $\text{K}_4\text{FeC}_6\text{N}_6$ + Aq. (Peschier.)

Solubility of $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ in sugar solutions. 1 l. of sugar solution of given strength dissolves mg. of $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$.

% Sugar	Mg. $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$		
	at 17.4°	at 45°	at 75°
10	3 4	3 4	6 1
30	2 3	2 7	3 8
50	2 3	1 9	3 4

(Stolle, Z. Ver. Zuckerind. 1900, 50. 340.)

Not pptd. from solutions by alkalies or alkali carbonates in presence of many organic substances, as tartaric acid, sugar, etc.

Not pptd. by NH_4OH from solutions containing $\text{Na}_4\text{P}_2\text{O}_7$. (Rose, Pogg. 76. 19.)

Not pptd. by NH_4OH in presence of Na citrate. (Spiller.)

Soluble. (a) *By dialysis* Solutions containing 1% can be concentrated somewhat, whereupon they gelatinise. They also gelatinise by cold, or addition of traces of H_2SO_4 , alkalis, alkali carbonates or sulphates, or neutral salts, not, however, by HCl , HNO_3 , alcohol, or sugar. (Graham, A. 121. 46.)

When a dil. solution of a solid organic acid, or an alkali, or salt is added to a dialysed solution of $\text{Fe}_2\text{O}_3\text{H}_2$, a coagulum sol in H_2O is formed, but if the solutions are conc the separating coagulum is no longer sol. in H_2O . (Athenstadt, C. C. 1871. 822.)

(b) *Pean St. Gilles' hydroxide, or meta-iron hydroxide.* Sol. in H_2O . Pptd. from solution by traces of H_2SO_4 , HCl , HNO_3 +Aq, and alkalis; the ppt. is insol in cold acids, but sol. in pure H_2O . (Pean St. Gilles, A. ch (3) 46. 47.)

See also table by Krecke in the article on ferric chloride.

Iron (Ferroferric) hydroxide, Fe_2O_4 , H_2O (?).

Sol. in acids.

Fe_2O_4 , $4\text{H}_2\text{O}$. (Lefort.)

Ferrous iodide, FeI_2 .

Very deliquescent. Sol. in H_2O . Solution decomp. on evaporating.

+ $4\text{H}_2\text{O}$. Very deliquescent; sl. sol. in H_2O ; sol. in ether. (Jackson, Am. Ch. J. 1900, 24. 19.)

+ $5\text{H}_2\text{O}$. Deliquescent. Sol. in alcohol. Sol. in sugar+Aq, and solution is much more stable than aqueous solution. Easily sol. in glycerine.

Insol. in methylene iodide. (Retgers, Z. anorg. 3. 343.)

+ $6\text{H}_2\text{O}$, and + $9\text{H}_2\text{O}$. Very sol; pptd. from cooled aq. solution. (Volkman, C. C. 1894, II. 611.)

Ferric iodide, FeI_3 .

Has not been isolated. Solution of I in FeI_2 +Aq in the molecular ratio of I : FeI_2 probably contains FeI_3 .

Very sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 823.)

Ferrous mercuric iodide, FeI_2 , 2HgI_2 + $6\text{H}_2\text{O}$.

As the corresponding Mg salt (Duboin, C. R. 1907, 145. 714.)

Ferrous iodide ammonia, FeI_2 , 6NH_3 .

Decomp. by H_2O . (Jackson, Am. Ch. J. 1900, 24. 27.)

Ferrous mercuric iodide.

Very deliquescent. Decomp. by H_2O ; sol. in $\text{HC}_2\text{H}_3\text{O}_2$ or alcohol.

Iron molybdenide, FeMo_2 .

Attacked by HCl +Aq with difficulty. Sol. in hot conc. H_2SO_4 . (Steinacker.)

Iron nitride.

Easily decomp. by H_2O when finely powdered. (Rossel, C. R. 1895, 121. 942.)

Fe_2N . Easily sol. in HNO_3 , HCl , or H_2SO_4 +Aq. Very slowly decomp. by H_2O . (Stahlschmidt, Pogg. 125. 37.)

Sol in HCl with decomp.; decomp. by steam and by H_2S at 200° . (Fowler, C. N. 1894, 68. 152.)

Fe_3N_2 . Probably the same as the above compound. (Rogstadius, J. pr. 86. 307.)

Iron nitrososulphantimonate, $\text{Fe}_4\text{S}(\text{NO})_6\text{Sb}_2\text{S}_6$.

(Low, C. C. 1865. 948.)

Does not exist, but was impure sodium ferrotetranitrososulphide. (Pawel, B. 15. 2600.)

Iron nitrososulphides.

See *Ferrotetranitrososulphydic acid and Ferroheptanitrososulphide, ammonium.*

$\text{Fe}_3\text{S}_5\text{H}_2(\text{NO})_4$. (Roussin, C. R. 46. 224.)

$\text{Fe}_3\text{S}_2(\text{NO})_4$ + $2\text{H}_2\text{O}$. (Porczynsky, A. 125. 302.)

$\text{Fe}_3\text{S}_5(\text{NO})_{19}$ + $4\text{H}_2\text{O}$. (Rosenberg, B. 3. 312.)

The compound to which the above formula were given was impure, according to Pawel (B. 12. 1407 and 1949; 15. 2600), and contained more or less Na or NH_4 . Pawel considers the substance as NH_4 salt of ferroheptanitrososulphydic acid, which see.

$\text{Fe}_3\text{S}_2\text{N}_5\text{O}_6$ + $1\frac{1}{2}\text{H}_2\text{O}$. Sol. in H_2O , alcohol, ether, CHCl_3 , acetone and ethyl acetate. Insol in benzene and light petroleum. (Marie, C. R. 1896, 122. 138.)

Iron sodium nitrososulphide, $3\text{Na}_2\text{S}$, Fe_2S_3 , 2NO .

(Roussin.)

$\text{Na}_5\text{FeS}_3(\text{NO})_{18}$. (Rosenberg.)

Correct formula is $\text{Na}_2\text{S}_2(\text{NO})_4\text{Fe}_2$, sodium ferrotetranitrososulphide.

Iron nitrososulphocarbonate, $\text{Fe}_4\text{S}(\text{NO})_6\text{CS}_2$ + $3\text{H}_2\text{O}$.

(Low, C. C. 1865. 948.)

Correct formula is $\text{NaS}_3(\text{NO})_7\text{Fe}_4$ + $2\text{H}_2\text{O}$, sodium ferroheptanitrososulphide (Pawel, B. 15. 2600.)

Ferrous oxide, FeO .

Insol. in H_2O . Sol. in acids

Easily sol in HCl , and HNO_3 +Aq; nearly insol. in H_2SO_4 , even when heated. (Tissandier, C. R. 74. 531.)

Ferric oxide, Fe_2O_3 .

Attacked by acids with difficulty, the more so the higher it has been heated. HCl +Aq is the best solvent, in which it is more quickly sol. by long digestion at a gentle heat than by boiling. (Fresenius.)

Most easily sol. in 16 pts. of a mixture of 8 pts. H_2SO_4 and 3 pts. H_2O . (Mitscherlich, J. pr. 81. 110.)

Solubility of Fe_2O_3 in $\text{HF} + \text{Aq}$ at 25° .

(Deussen, Z. anorg. 1905, 44. 413.)

See also Ferric hydroxide.

Min. *Hematite*. Rather easily sol. in $\text{HCl} + \text{Aq.}$ but not readily sol in other acids.

*Metairon oxide.**See Ferric hydroxides.***Ferroferric oxide, $6\text{FeO}, \text{Fe}_2\text{O}_3$.**

$\text{FeO}, \text{Fe}_2\text{O}_3 = \text{Fe}_3\text{O}_4$. With insufficient $\text{HCl} + \text{Aq}$ for complete solution, FeO is dissolved and Fe_2O_3 left. (Berzelius.)

Insol. in $\text{HNO}_3 + \text{Aq}$ at the ordinary temperature. (Millon.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Solubility of Fe_2O_3 in sugar solutions. 1 l. of sugar solution of given strength dissolves mg. Fe_2O_3 .

% Sugar	mg. Fe_2O_3		
	at 17.5°	at 45°	at 75°
10	10.3	10.3	12.4
30	12.4	10.3	12.4
50	14.5	10.3	14.5

(Stolle, Z. Ver. Zuckerind. 1900, 50. 340.)

Min. *Magnetite*. Insol. in HNO_3 , but sol in hot $\text{HCl} + \text{Aq}$.

Iron sesquioxide zinc oxide, $\text{Fe}_2\text{O}_3, \text{ZnO}$.

See Ferrite, zinc.

Ferric oxybromide.

Basic ferric bromides containing three equivalents, or less, of base to one of acid may be obtained dissolved in H_2O . (Ordway, Am. J. Sci. (2) 26. 202.)

The most basic soluble compound obtained by three months' digestion of $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ with $\text{Fe}_2\text{Br}_6 + \text{Aq}$, is Fe_2Br_6 , $14\text{Fe}_2\text{O}_3$. (Béchamp.)

Ferric oxychlorides.

(a) *Soluble*. $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ dissolves in $\text{Fe}_2\text{Cl}_6 + \text{Aq}$. By digesting until the acid reaction of the chloride has disappeared a solution of Fe_2Cl_6 , $2\text{Fe}_2\text{O}_3$ is obtained. (Pettenkofer, Repert. (2) 41. 289.)

By digesting for several days in the cold, $\text{Fe}_2\text{Cl}_6, 5\text{Fe}_2\text{O}_3$ is obtained, and still more basic compounds by further addition of $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$. When the solution contains Fe_2Cl_6 , $12\text{Fe}_2\text{O}_3$ it gelatinises, but still dissolves completely in H_2O . The most basic soluble compound is Fe_2Cl_6 , $20\text{Fe}_2\text{O}_3$. (Béchamp, A. ch. (3) 57. 296.)

If the digestion is carried on several weeks, a solution containing Fe_2Cl_6 , $23\text{Fe}_2\text{O}_3$ is obtained; this can be boiled and diluted without pptn., but $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ is precipitated by the addition of very many salts. (Ordway, Sill. Am. J. (2) 26. 197.)

Solutions containing 10 or less molecules Fe_2O_3 to 1 mol. Fe_2Cl_6 can be dried without the oxychloride becoming insoluble. (Ordway.)

The above solutions do not become cloudy by boiling or diluting. (Phillips.)

A very dil. solution of Fe_2Cl_6 , $10\text{Fe}_2\text{O}_3$ remains clear after protracted boiling, and may be boiled without decomp. even when Fe_2Cl_6 , $20\text{Fe}_2\text{O}_3$ is present. (Béchamp.)

HNO_3 , and $\text{HCl} + \text{Aq}$ form precipitates in the above solutions, which are sol. on addition of more H_2O . $\text{H}_2\text{SO}_4 + \text{Aq}$ forms a precipitate insol. in H_2O . (Béchamp.)

Fe_2Cl_6 , $9\text{Fe}_2\text{O}_3$ is easily sol. in H_2O , weak alcohol, and glycerine; but solutions are pptd. by small amts. of H_2SO_4 , M_2SO_4 , citric or

tartaric acids, or a few drops of HCl , or $\text{HNO}_3 + \text{Aq}$ (Jeannel, C. R. 46. 799.)

Solutions containing 5 mols. Fe_2O_3 to 1 mol. Fe_2Cl_6 are completely precipitated by K_2SO_4 , Na_2SO_4 , MgSO_4 , KNO_3 , NaNO_3 , $\text{Zn}(\text{NO}_3)_2$, KCl , NaCl , NH_4Cl , CaCl_2 , MgCl_2 , ZnCl_2 , KBr , or KSCN . (Béchamp.)

$\text{Ba}(\text{NO}_3)_2$ does not precipitate solutions of less than 18–20 Fe_2O_3 to 1 Fe_2Cl_6 .

$\text{Pb}(\text{NO}_3)_2$ or $\text{Pb}(\text{C}_2\text{H}_3\text{O}_2)_2$ do not precipitate solutions containing the compound Fe_2Cl_6 , $12\text{Fe}_2\text{O}_3$, but a mixture of the two salts causes complete precipitation.

Solution has been obtained containing 116 Fe_2O_3 to 1 FeCl_3 , probably owing to a formation of soluble colloidal Fe_2O_3 . (Magnier de la Source, C. R. 90. 1352.)

Solubility determinations in the system Fe_2O_3 , HCl and H_2O , show that at 25° no definite basic chloride is formed, but that the stable solid phase is one of a series of solid solutions containing Fe_2O_3 , HCl and H_2O . (Cameron, J. phys. Chem. 1907, 11. 694.)

(b) *Insoluble*. Fe_2Cl_6 , $6\text{Fe}_2\text{O}_3 + 9\text{H}_2\text{O}$.

(1) By exposing $\text{Fe}_2\text{Cl}_6 + \text{Aq}$ to air. Insol. in H_2O ; sl. sol. in $\text{HCl} + \text{Aq}$. (Wittstein.)

(2) From $\text{FeCl}_3 + \text{Aq}$ and HNO_3 . Insol. in H_2O , and sl. sol. in $\text{HCl} + \text{Aq}$. (Béchamp.)

$2\text{Fe}_2\text{Cl}_6$, $25\text{Fe}_2\text{O}_3 + 41\text{H}_2\text{O}$. Insol. in H_2O . (Béchamp.)

Fe_2Cl_6 , $2\text{Fe}_2\text{O}_3 + 3\text{H}_2\text{O}$. Decomp. by H_2O with residue of Fe_2O_3 ; sl. sol. in dil. acids. (Rousseau, C. R. 110. 1032.)

Fe_2Cl_6 , $3\text{Fe}_2\text{O}_3$. As above. (Rousseau, C. R. 113. 542.)

Ferric oxyfluoride, $3\text{Fe}_2\text{O}_3$, $2\text{FeF}_3 + 4\text{H}_2\text{O}$.

Ppt. (Scheurer-Kestner.)

Ferric oxysulphide, Fe_2O_3 , $3\text{Fe}_2\text{S}_3$.

(Rammelsberg.)

Iron phosphide, FeP .

Very slowly (Freese), not (Hvoslef, A. 100. 99) sol. in hot $\text{HCl} + \text{Aq}$. Still more insol. in dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. (Freese.)

Slowly sol. in $\text{HNO}_3 + \text{Aq}$, and easily sol. in aqua regia. (Struve.)

Insol. in ammonium citrate + Aq ; sl. sol. in HCl . (Dennis, J. Am. Chem. Soc. 1894, 16. 483.)

Fe_3P . Slowly but completely sol. in HCl , or dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. Sol. in hot conc. H_2SO_4 , in HNO_3 , and in aqua regia. (Freese, Pogg. 132. 225.)

Insol. in all acids except in a mixture of HNO_3 and HF . (Maronneau, C. R. 1900, 130. 657.)

Fe_3P_4 . Very slowly sol. in hot conc. $\text{HCl} + \text{Aq}$. 0.1 g. dissolves by 4 days' heating with $\text{HCl} + \text{Aq}$; 0.3 g. dissolves in hot conc. H_2SO_4 in 1½ hours; 0.4 g. in 2 hours in $\text{HNO}_3 + \text{Aq}$. Quite easily sol. in aqua regia on warming. (Freese.)

Fe_2P_3 . Insol. in HCl , HNO_3 and aqua regia: Sol. in potassium hypobromite solu-

tion. (Granger, Bull. Soc. 1896, (3) 15. 1086.)

Fe_4P_3 . Very slowly sol. in boiling $\text{HCl} + \text{Aq}$. Easily sol. in HNO_3 or aqua regia. (Struve, J. B. 1860. 77.)

Mixture. (Freese, Pogg. 132. 225)

Almost insol. in aqua regia. Sol. in fused alkali. (Granger)

Fe_3P . Nearly insol. in dil. acids; rapidly sol. in HNO_3 or aqua regia; decomp. by conc HCl , or $\text{KOH} + \text{Aq}$. (Schneider, J. B. 1886. 2026.)

Of the nine iron phosphides described the constitution has been established for only two, Fe_3P and Fe_2P .

Fe_3P . Sol. in conc. HCl

Fe_2P . Sol. in hot aqua regia. Insol. in other acids. (Le Chatelier, C. R. 1909, 149. 709.)

Iron selenide, Fe_2Se .

Not attacked by HNO_3 or acetic acid. Sl. attacked by conc. HCl . Readily attacked by aqua regia. Sol. in HF . (Vigouroux, C. R. 1905, 141. 829.)

$\text{FeSe} + x\text{H}_2\text{O}$. Sol. in HCl , HNO_3 , or $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. Insol. in alkalis, or $(\text{NH}_4)_2\text{S} + \text{Aq}$. (Reeb, J. Pharm. (4) 9. 173.)

Fe_2Se_3 . Sol. in dil. HCl , or $\text{HNO}_3 + \text{Aq}$ with evolution of H_2Se . Sol. in conc. $\text{HNO}_3 + \text{Aq}$. (Little, A. 112. 211.)

Fe_3Se_4 . Decomp. by fuming HNO_3 (Fonze-Diacon, C. R. 1900, 130. 1711.)

Fe_7Se_8 . Decomp. by fuming HNO_3 . (Fonze-Diacon, C. R. 1900, 130. 1711.)

FeSe_2 . Insol. in conc. HCl ; decomp. by fuming HNO_3 . (Fonze-Diacon, C. R. 1900, 130. 1711.)

Iron silicide, Fe_2Si .

Difficultly sol. in $\text{HCl} + \text{Aq}$; easily sol. even in dil. $\text{HF} + \text{Aq}$. (Hahn, A. 129. 57.)

Fe_2Si . Not easily sol. in conc. HCl and HNO_3 but readily sol. in HF . (Moissan, C. R. 1895, 121. 623.)

$\text{Fe}_{10}\text{Si}_8$. Sol. in hot $\text{HCl} + \text{Aq}$ only when most finely powdered. (Hahn.)

FeSi_2 . Not attacked by conc. HF or H_2SO_4 . (Hahn.)

Sol. in cold HF . (de Chalmot, Am. Ch. J. 1897, 19. 123.)

Existence questioned by Jouve, (Bull. Soc. 1901, 25. 290-293.)

Fe_2Si_2 . Sol. in HF and in fused KNO_3 and KNaCO_3 . (de Chalmot, J. Am. Chem. Soc. 1895, 17. 924.)

Iron semisulphide, Fe_2S .

Sol. in dil. acids with decomposition. (Arfvedson, Pogg. 1. 72.)

Ferrous sulphide, FeS .

Decomp. by dil. acids, with evolution of H_2S and without separation of S , except with $\text{HNO}_3 + \text{Aq}$.

$+ x\text{H}_2\text{O}$. Sl. sol. in H_2O , especially if hot. (Berzelius.)

1 l. H_2O dissolves 70.1×10^{-6} moles FeS at 18° . (Weigel, Z. phys. Ch. 1907, 58. 294.)

Very violently decomp., even by dil. acids. Sol. in $\text{H}_2\text{SO}_3 + \text{Aq}$. Insol. in H_2S , or $(\text{NH}_4)_2\text{S} + \text{Aq}$. Sl. sol. in Na_2S , or $\text{K}_2\text{S} + \text{Aq}$. Sol. in Na_2S or $\text{K}_2\text{S} + \text{Aq}$. (de Koninck, Z. angew. Ch. 1891. 204.)

Insol. in NH_4NO_3 , or $\text{NH}_4\text{Cl} + \text{Aq}$. (Brett.)

Not completely pptd. in presence of Na citrate. (Spiller.)

Contrary to assertion of Persoz, it can be nearly completely pptd. in presence of $\text{Na}_4\text{P}_2\text{O}_7$ by $(\text{NH}_4)_2\text{S} + \text{Aq}$. (Rose, Pogg. 76. 18.)

Sol. in alkali sulpho-molybdates, -tungstates, -vanadates, -arsenates, -antimonates, and -stannates. (Storch, B. 16. 2015.)

Sol. in $\text{KCN} + \text{Aq}$.

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 828.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Solubility of FeS in sugar solutions. 1 l. sugar of given strength dissolves mg FeS

% Sugar	mg. FeS		
	at 17.5°	at 45°	at 75°
10	3 8	3 8	5 3
30	7 1	9 1	7.2
50	9 9	19 8	9 1

(Stolle, Z. Ver. Zuckerind. 1900, 50. 300)

Colloidal.—A very dilute solution has been obtained which coagulated very readily. (Winssinger, Bull. Soc. (2) 49. 452.)

Ferric sulphide, Fe_2S_3 .

Decomp. by dil HCl , or $\text{H}_2\text{SO}_4 + \text{Aq}$ with evolution of H_2S , leaving a residue of FeS_2 .

$+ 1\frac{1}{2}\text{H}_2\text{O}$. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$, also in alcoholic ammonia. Sl. sol. in $(\text{NH}_4)_2\text{S} + \text{very dil. Na}_2\text{S}_2\text{O}_3 + \text{Aq}$. (Phipson, C. N. 30. 139.)

Iron disulphide, FeS_2 .

Insol. in dil. HCl , or $\text{H}_2\text{SO}_4 + \text{Aq}$. Decomp. by HNO_3 or aqua regia with separation of S . Insol. in a 10% solution of alkali sulphide.

Min. *Pyrite*, *Marcasite*. Sol. in a mixture of Na_2S and $\text{NaOH} + \text{Aq}$, $\text{Na}_2\text{S} + \text{Aq}$, or mixture of Na_2S and $\text{NaSH} + \text{Aq}$; insol. in cold $\text{NaSH} + \text{Aq}$. *Marcasite* is more easily sol. in above than *pyrite*. (Becker, Sill. Am. J. (3) 33. 199.)

Ferroferric sulphide, Fe_3S_8 or Fe_7S_8 .

Min. *Pyrrhotite*. Sol. in dil. acids with a residue of S . Extremely slowly sol. in a 10% solution of alkali sulphides. (Terreil, C. R. 69. 1360.)

Iron (ferrous) nickel sulphide, 2FeS , NiS .

Min. *Pentlandite*.

Ferrous phosphorus sulphide, FeS , P_2S_3 .

(Berzelius.)

2FeS , P_2S_3 . Slowly decomp. by H_2O . Insol. in boiling $\text{HCl} + \text{Aq}$; decomp. by aqua regia. (Berzelius, A. 46. 256.)

Iron potassium sulphide (potassium sulphoferrite), $\text{K}_2\text{Fe}_2\text{S}_4 = \text{K}_2\text{S}$, Fe_2S_3 .

Insol. in cold or hot H_2O . Violently attacked by dil. acids. Not decomp. by boiling with alkalis, alkali carbonates, or sulphides + Aq . Decomp. by KCN , or $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$. (Preis, J. pr. 107. 16.)

K_2S , 2FeS . (Schneider, Pogg. 136. 460.)

Iron silver sulphide (silver sulphoferrite), Ag_2S , Fe_2S_3 .

Not attacked by dil. $\text{HCl} + \text{Aq}$; decomp. by conc. $\text{HCl} + \text{Aq}$. (Schneider.) $2\text{Ag}_2\text{S}$, FeS_2 . (Schneider, Pogg. 138. 305.) Ag_2S , 3FeS , FeS_2 . Min. *Sternbergite*. Decomp. by aqua regia.

Iron sodium sulphide (sodium sulphoferrite), $\text{Na}_2\text{Fe}_2\text{S}_4 + 4\text{H}_2\text{O}$.

Insol. in H_2O . Decomp. by very dil. acids (Schneider, Pogg. 138. 302.)

Iron sulphophosphide, Fe_2PS_3 .

Attacked by acids at 100° . Decomp. by boiling $\text{NaOH} + \text{Aq}$ (Ferrand, A. ch. 1899, (7) 17. 410.)

Ferrous telluride, FeTe .

Insol. in H_2O ; sol. in acids. (Fabre, C. R. 105. 277.)

Kermes.

Lanthanic acid.

Barium metalanthanate, $\text{Ba}(\text{H}_3\text{La}_5\text{O}_{15})_2$.

(Baskerville, J. Am. Chem. Soc. 1904, 26. 79.)

Lithium metalanthanate, $\text{LiH}_3\text{La}_5\text{O}_{15} + 2\text{H}_2\text{O}$.

(Baskerville.)

Potassium metalanthanate, $\text{KH}_3\text{La}_5\text{O}_{15} + 15\text{H}_2\text{O}$

Decomp. by H_2O . (Baskerville.)

Sodium metalanthanate, $\text{NaH}_3\text{La}_5\text{O}_{15} + 4\text{H}_2\text{O}$.

Almost insol. in H_2O , but decomp. by it. (Baskerville)

Disodium tetralanthanate, $\text{Na}_2\text{La}_4\text{O}_7$.

Insol. in H_2O . (Baskerville.)

Lanthanicotungstic acid.

Ammonium lanthanicotungstate, $2(\text{NH}_4)_2\text{O}$, La_2O_3 , $16\text{WO}_3 + 16\text{H}_2\text{O}$.

Ppt. Insol. in H_2O . (E. F. Smith, J. Am. Chem. Soc. 1904, 26. 1481.)

Barium lanthanicotungstate, 5BaO , La_2O_3 , $16\text{WO}_3 + 16\text{H}_2\text{O}$.

Ppt. (E. F. Smith.)

Silver lanthanicotungstate, $5\text{Ag}_2\text{O}$, La_2O_3 , $16\text{WO}_3 + 4\text{H}_2\text{O}$.

Very insol. in H_2O . (E. F. Smith.)

Lanthanum, La.

Slowly decomp. cold, rapidly hot H_2O . Not attacked by cold conc. H_2SO_4 , but energetically by cold conc. $\text{HNO}_3 + \text{Aq}$. Sol. in dil. acids. (Hillebrand and Norton, Pogg. 155. 633.)

Lanthanum bromide, $\text{LaBr}_3 + 7\text{H}_2\text{O}$.

Easily sol. in H_2O . Not very sol. in absolute alcohol. Insol. in ether. (Cleve, Sv. V. A. H. Bih. 2. No. 7.)

Lanthanum nickel bromide, 2LaBr_3 , $3\text{NiBr}_2 + 18\text{H}_2\text{O}$.

Deliquescent. (Frerichs and Smith, A. 191. 355.)

Lanthanum zinc bromide, 2LaBr_3 , $3\text{ZnBr}_2 + 36\text{H}_2\text{O}$.

Very deliquescent. (F. and S.)

Lanthanum carbide, LaC_2 .

Decomp. by H_2O and dil. acids. (Pettersson, B. 1895, 28. 2422.)

Sol. in conc. H_2SO_4 and dil. acids; insol. in conc. HNO_3 .

Sol. in fused oxidizing agents; decomp. by H_2O at ordinary temps. (Moissan, C. R. 1896, 123. 149.)

Lanthanum chloride, $LaCl_3$.

Anhydrous. Deliquescent. (Hermann.)

Insol. in acetone. (Naumann, B. 1904, 37. 329.)

+ $7\frac{1}{2}H_2O$. Not deliquescent. (Zschiesche.)

Easily sol. in alcohol. (Hermann)

Lanthanum mercuric chloride, $2LaCl_3, HgCl_2 + \frac{8}{3}H_2O$.

Not deliquescent. Very sol. in H_2O . (Marignac, Ann. Min. (5) 15. 272)

Lanthanum stannic chloride.

See Chlorostannate, lanthanum.

Lanthanum fluoride, $LaF_3 + H_2O$.

Precipitate. Sl. sol. in $HCl + Aq$. (Cleve.)

Lanthanum hydrogen fluoride, $2LaF_3, 3HF$.

Precipitate. (Frerichs and Smith, A. 191. 355)

Does not exist. (Cleve, B. 11. 910.)

Lanthanum hydride, La_2H_3 .

Decomp. by dil. acids. (Winkler, B. 24. 1966.)

LaH_3 . Decomp. by H_2O . Sol. in acids with evolution of H_2 . Decomp. by alkalis. (Muthmann, A. 1902, 325. 266.)

Lanthanum hydroxide, $La_2O_3H_6$.

Insol. in H_2O ; easily sol. in acids; insol. in KOH , or $NaOH + Aq$.

Sol. in citric acid. (Baskerville, J. Am. Chem. Soc. 1904, 26. 49.)

Lanthanum zinc iodide, $2LaI_3, 3ZnI_2 + 27H_2O$.

Very sol. in H_2O . (Frerichs and Smith, A. 191. 358.)

Lanthanum nitride, LaN .

Decomp. by H_2O with evolution of NH_3 . Sol. in mineral acids. Decomp. by alkali. (Muthmann, A. 1902, 325. 275.)

Lanthanum oxide, La_2O_3 .

Easily sol., even when ignited, in mineral, and acetic acids. (Hermann)

Sol. in boiling conc. $NH_4Cl + Aq$. (Mosander.)

Sol. in cold conc. $NH_4NO_3 + Aq$. (Damour and Deville.)

Insol. in $(NH_4)_2CO_3 + Aq$. (Mosander.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Lanthanum peroxide, La_2O_6 .

Sol. in HCl, H_2SO_4, HNO_3 , and $HC_2H_3O_2 + Aq$ with decomp. (Cleve, Bull. Soc. (2) 43. 359.)

$La_2O_6 + xH_2O$. Unstable. Sol. in dil. $H_2SO_4 + Aq$ with decomp. (Melikoff, Z. anorg. 1899, 21. 71.)

Lanthanum oxybromide, $LaOBr$.

Ppt. (Frerichs and Smith.)

Lanthanum oxychloride, $3La_2O_3, 2LaCl_3$.

Insol. in H_2O . Difficultly and slowly sol. in HCl , or $HNO_3 + Aq$. (Hermann.)

$LaOCl$. Boiling H_2O dissolves only traces. (Frerichs and Smith.)

Lanthanum sulphide, La_2S_3 .

Decomp. by H_2O and acids. (Didier.)

Lanthanum disulphide, LaS_2 .

Decomp. by heat. (Biltz, Z. anorg. 1911, 71. 435.)

Lead, Pb.

Lead, in contact with H_2O and air free from CO_2 , gives a solution of PbO which turns litmus blue and turmeric red, and is turned brown with H_2S .

H_2O which has been boiled does not dissolve Pb if there is no access of air. When shaken up with air it dissolves 0.01 to 0.008% PbO in 2 hours. Pure spring water, containing $1\frac{1}{2}$ grains salts in 2 pounds H_2O and no CO_2 , when conducted through a lead pipe 150 feet long, dissolves so much lead that it turns brown with H_2S (Yorke, Phil Mag J 5. 82)

CO_2 or small amts of salts prevent the solution of Pb . 1 vol H_2O with $\frac{3}{4}$ vol. CO_2 dissolves only a trace of Pb . Spring H_2O , containing in 10 pounds 1.21 grains $NaCl$ and $CaCl_2$, and 6.4 grains $CaCO_3$ dissolved in CO_2 does not dissolve lead. (Yorke.)

If the amt of salts in solution equals $\frac{1}{100}$ the amt of H_2O , and especially if they are carbonates, very slight amts of Pb are dissolved (Christison, Phil Mag. J. 21. 158)

$CaCO_3$ dissolved in CO_2 water decreases the solubility of Pb more than any other salt

Distilled H_2O , quietly standing in a closed flask with lead and air free from CO_2 , deposits white flocks of PbO_2H_2 , and dissolves $\frac{1}{100}$ pt PbO . The solution has an alkaline reaction. (v. Bonsdorff, Pogg. 41. 305)

Water of 3° hardness does not take up enough Pb to become injurious (Clarke, J. B. 1856. 008.)

Soluble carbonates increase the solubility of Pb in H_2O (Nevins, C. C. 1851. 608), especially $(NH_4)_2CO_3$ (Bottger.)

Presence of H_2SO_4 decreases the solubility of Pb . (Horsford, Chem. Gaz. 1849, 247.)

H_2O containing K_2SO_4 takes up only a trace of Pb . (Wetzlar, Schw J 54. 324)

Presence of sulphates diminishes (Christison), does not diminish (Graham, Miller, and Hoffmann), the action of H_2O on Pb .

$CaSO_4$ protects Pb , but it is attacked by much $MgSO_4$. (Nevins)

$NaCl + Aq$ dissolves only a trace of Pb . $\frac{1}{100}$ pt of a chloride in H_2O is not sufficient to prevent the solubility of Pb in H_2O . (Christison)

Presence of chlorides increases the solubility. (Graham, Miller, and Hoffmann, Nevins)

H_2O containing KNO_3 does not corrode Pb

Nitrates hinder the action of H_2O . (v. Bonsdorff.)

Nitrates increase the action of H_2O (Graham, Miller, and Hoffmann.) Nitrates have no influence. (Kersting.)

10 lbs. of H_2O dissolved the following amts. from Pb pipes in 24 hours: if distilled $H_2O + 1\%$ Na_2CO_3 , 0.38 grain Pb ; if Duna water, 0.19 grain Pb ; if canal water, 0.15 grain Pb ; if distilled $H_2O + 1\%$ NH_4NO_3 , 0.15 grain Pb ; if hard well water, 0.04 grain Pb ; if distilled $H_2O + 1\%$ KNO_3 , 0.01 grain Pb . (Kersting, Dingl. 169. 183.)

200 l. Manchester drinking water dissolved 2.094 g from 1 sq. metre Pb in 8 weeks; 9 l. well water dissolved 1.477 g. from 1 sq. metre Pb in 8 weeks; 11 l. distilled H_2O containing

are dissolved 110.003 g. from 1 sq. metre Pb in 8 weeks; distilled H_2O free from air dissolved 1.829 g. from 1 sq. metre Pb in 8 weeks; sea water dissolved 0.038 g. from 1 sq. metre Pb in 8 weeks. (Calvert and Johnson, C. N. 16. 171.)

A lead pipe taken up in Paris, which had been exposed to action of ordinary H_2O for 200 years, was found perfectly smooth and uncorroded. (Belgrand, C. R. 77. 1055)

Pb is attacked by all waters, hard or soft; even highly calcareous water dissolves some lead. (Mayençon and Bergeret, C. R. 78. 484.)

Pure distilled H_2O does not act on Pb, but extremely small quantities of NH_3 , HNO_3 , etc. cause an action; but for this action on Pb the presence of air and CO_2 is also required. (Stallman, Dingl. 180. 366.)

100 ccm. distilled H_2O dissolved 3 mg. from 11.8 sq. cm. lead in one week when air without CO_2 was passed through the solution. 8 mg. were dissolved when the air contained CO_2 . (Wagner, Dingl. 221. 260.)

Action of dil. salt solutions on lead. In 500 ccm. of the solutions containing salt, bright sheets of lead of 5600 sq. metres' surface were so suspended that the liquid reached all parts of the metal without hindrance, and the amts. dissolved determined after 24, 48, and 72 hours of action.

Salt	Grammes salt per litre	Dissolved Pb in mg. per litre

(Wagner, Dingl. 221. 260)

Solubility of Pb in salt solutions.

25 sq. cm. were acted upon by a solution containing 0.2 g. salt in a litre for 21 days.

Three series of experiments were carried on. I. In corked flasks. II. In beakers covered with porous paper; diameter of mouth of beaker = 11.5 cm. III. In basins covered with porous paper; diameter of mouth of basin = 14.5 cm. IV. In corked flasks with constant current of air. V. In beakers half filled and covered with porous paper, the lead being suspended so that equal amts. of surface were above and beneath the liquid.

The amts. in mgs. of Pb dissolved were as follows:—

Salt used	I.	II	III	IV	V.
NH_4NO_3	1.8	4.0	16.0		..
KNO_3	1.6	0.5	6.0	1.5	
CaCl_2	3.0	2.8	5.5	3.5	3.5
$(\text{NH}_4)_2\text{SO}_4$	0.7	1.3	16.0	5.0	2.5
K_2CO_3	0.3	0.3	0.7	0.6	0.3
Dist. H_2O	1.5	0.8	4.2	2.0	...

(Muir, Chem. Soc. 36. 660.)

H_2O sat. with CO_2 dissolves 0.012 g. Pb to a litre in 3 days (Marais, C. R. 77. 1529.)

Action of H_2O charged with CO_2 under 760 mm. pressure on Pb. 3 mg. of Pb were dissolved per litre in 24 hours, and the amt. was not increased by further action. The addition of 100 mg. $\text{K}_2\text{CO}_3 + 20$ mg. NH_4NO_3 to a litre prevented all action.

Action of H_2O charged with CO_2 under 6 atmos. pressure on Pb.

14.8 mg. were dissolved per l. in 24 hours, and 24 mg. per l. in 48 hours.

Action of various salt solutions added to above solution of CO_2 were as follows:—

	mg salt per l	mg Pb dissolved	
		after 24 hrs	after 48 hrs
K ₂ CO ₃ . . .	80	13.2	32.0
K ₂ CO ₃ . . .	160	..	6.0
CaCl ₂ . . .	160	32.0	44.0
NH ₄ NO ₃ . . .	16	5.0	..
NH ₄ NO ₃ . . .	40	10.0	35.0
Distilled H ₂ O	14.8	24.0

(Murr, C. N. 33. 125.)

The corrosion of Pb by ordinary distilled H₂O depends upon the presence of CO₂ and O. If the dissolved CO₂ is double the amt. of the dissolved O, the action is most energetic. When CO₂ is wholly absent and O present, the action is very slight, and when the H₂O contains 1½ or more vol. % CO₂ with normal amt. of oxygen, there is no visible corrosion. Pure distilled H₂O containing neither O nor CO₂ has no action on Pb. In the above cases the greater part of the Pb remains in the form of a white ppt. or crust on the Pb, but in the case where O and CO₂ are both present in the ratio of 1 : 2, very small amts. of Pb go into solution in a few days; the amt., however, diminishes on standing. As the amt. of CO₂ increases, the amt. of Pb dissolved in the H₂O also increases.

NH₄OH alone does not protect Pb from corrosion, but when in combination with CO₂ the action is much diminished.

CaO₂H₂ and NaOH+Aq attack Pb much more actively in absence of CO₂ and presence of air. In absence of dissolved O neither CaO₂H₂ nor NaOH attacks Pb.

Na₂CO₃+Aq in absence of CO₂ attacks Pb slightly, but NaHCO₃+Aq has not the slightest action.

CaH₂(CO₃)₂+Aq also has not the slightest action on Pb, and the presence of CaCO₃ and CO₂ wholly prevents H₂O attacking Pb.

CaSO₄+Aq in presence of air forms a crust on Pb, but no Pb is found in solution, but if air is excluded there is no visible action. Presence of CO₂ causes a strong corrosive action.

H₂O containing CaSO₄ and CaH₂(CO₃)₂ does not attack Pb.

The above reactions are not in the least altered by the presence of moderate amts. of nitrates, chlorides, or ammonium, or organic compounds; but ammonium salts in excess have a strong solvent action on Pb. (Muller, J. pr. (2) 36. 317.)

See also an extended report of the action of H₂O on Pb made to the Water Committee of Huddersfield, England, in 1886, by Messrs. Crookes, Odling, and Tidy.

Very extended researches are published by Cornolley and Frew (Jour. Soc. Chem. Ind. 7. 15), of which only the general conclusions can be given here.

The action of slaked lime, limestone, sand calcium silicate, mortar, etc., was tested. The results were as follows:—

1. In nearly all cases the corrosion is greater with free exposure to the air than when air is excluded. The difference is especially great in those cases where the greatest action on the lead takes place. Aluminum hydroxide and blue clay form exceptions, and exert a greater corrosive action when air is excluded. In the case of CaCO₃, old mortar, CaSiO₃, or a mixture of CaCO₃ and CaO₂H₂, the exclusion or presence of air makes no appreciable difference.

KNO₃+Aq shows a peculiar behaviour. In the presence of air it acts nearly as much on the Pb as pure H₂O, but when air is excluded it exerts nearly as much retarding action as CaSiO₃.

2. In the presence of air the action of H₂O on Pb is considerably increased by the presence of NH₄NO₃ or CaO₂H₂, with exclusion of air, by CaSO₄, also by a mixture of CaO₂H₂ and sand. All the other investigated substances, even KNO₃, hinder the action of H₂O on Pb either with or without exclusion of air.

3. CaO₂H₂+Aq exerts in all cases a much greater corrosive action than pure H₂O, and although this action is diminished by sand yet fresh mortar very quickly destroys lead pipes when in contact therewith. Old mortar, on the other hand, and also CaSiO₃ and CaCO₃, have a protective action.

4. The fact is very important that sand, CaCO₃, old mortar, CaSiO₃, and a mixture of sand and CaCO₃, afford considerable protection to lead against H₂O. A mixture of limestone and sandstone has more effect than the two substances separately.

5. CaSiO₃ totally prevents the corrosive action of KNO₃ and NH₄NO₃, so that the lead is not attacked by solutions of those salts any more than by H₂O containing CaSiO₃ alone. Sand, and a mixture of sand and CaCO₃, have a similar effect, but not to such a degree.

6. The protective influence of CaCO₃ does not appear to depend on the presence of CO₂ and the formation of CaH₂(CO₃)₂.

7. MgCO₃ prevents the corrosion of Pb as much as CaSiO₃. (Carnelley and Frew, Jour. Soc. Chem. Ind. 7. 15.)

Pb in contact with Zn or Fe is protected thereby from the solvent action of H₂O, and in fact the action is nearly null. Sn, on the other hand, increases the action. This is of importance in regard to the use of tin-coated lead pipes.

The presence of Ca salts does not influence the action of the H₂O on Pb, hard or soft H₂O provided it contains CO₂ having a strong corrosive action. Removal of air from H₂O diminishes the solvent action. Simple filtration will remove all Pb from H₂O if suitable filters are used. (Flögel, J. B. 1888. 2645.)

Pure distilled H_2O has strong corrosive action on Pb, which is very much weakened by addition of a solution of $CaCO_3$ in carbonic acid water, but the presence of sulphates increase the action. Pb is not appreciably attacked by H_2O in presence of chlorides alone,

but very strongly when $CaSO_4$ is also present. H_2O containing CO_2 also corrodes Pb. The conclusion was drawn that the absence of action of H_2O on Pb in lead pipes is due to the presence of traces of $CaH_2(CO_3)_2$. (Barbaglia and Gucci, C. C. 1888. 934.)

Solubility in H_2O containing various solids in solution.

Water used	Pts of lead per 100,000			
	1	2	3	4
Water alone, unfiltered	8 19	12 98	8 19	4 09
Water alone, filtered	3 00	4 09	2 07	2 32

$CaSO_4$ +Aq with Na_2SO_4	4 78	5 87	3 69	1 77

Column 1 gives the numbers for distilled water free from air; column 2 for distilled water aerated by agitation with air; column 3 for water continuously aerated by passing 1 litre of air through it per hour; column 4 for distilled water through which 1 litre of air and 400 cc. of CO_2 were passed per hour throughout the experiment. (Antony and Benelli, Gazz. ch. it. 1896, 26, (2) 97 and 352.)

Almost insol. in cold HCl +Aq, and only sl. attacked when boiling. Completely sol. in HNO_3 +Aq if not too conc., but presence of H_2SO_4 or HCl diminishes the solvent power to a great extent. (Rose)

Granulated Pb is sl. sol. in conc. HCl +Aq; addition of $PtCl_4$ makes the action very energetic. Dil. HCl +Aq may also be used with $PtCl_4$. (Millon, C. R. 21. 49.)

HCl +Aq of 1.2 sp. gr., with Pb, gives off H at ord. temp., more abundantly when heated. Evolution of H is hastened by placing Cu in contact with the Pb (Stolba, J. pr 94. 113)

Quickly decomp. by hot HCl +Aq, slowly by cold. (Sharples, C. N. 50. 126.)

Scarcely acted upon by boiling conc. HCl +Aq.

Sol. in aqua regia.

HNO_3 +Aq is the best solvent, but Pb is as good as insol in a mixture of HNO_3 and H_2SO_4 . (Berzelius.)

Not acted upon by very conc. HNO_3 +Aq.

Pb is only sl. attacked by HNO_3 +Aq of any strength below 15°. Above 15° it is most rapidly attacked by a rather weak acid. (Montemartini, Gazz. ch. it. 22. 397.)

Action of H_2SO_4 on Pb.

H_2SO_4 of 1.842 sp. gr. dissolves 201 g. from 1 sq. metre pure lead at ordinary temp. (time?), and H_2SO_4 of 1.705 sp. gr. dissolves only 59 g.

Slight impurities in the lead lessen this

solubility. (Calvert and Johnson, Chem. Soc. (2) 1. 66.)

Strongly attacked by 99.8% H_2SO_4 at ord. temp. with exclusion of air (Lunge, Dingl. 261. 131)

When 0.2 g. pure Pb was heated with 50 ccm. H_2SO_4 of 66° B. there was no appreciable action below 175°. At 230–250° all the Pb was suddenly converted into $PbSO_4$, which dissolved. (Bauer, B. 8. 210.)

Lead is slowly attacked by pure cold conc. H_2SO_4 +Aq (99.78% H_2SO_4). Lead vessels which held the H_2SO_4 were gradually destroyed by long standing. (Napier and Tatlock, C. N. 42. 314.)

H_2SO_4 +Aq (20%) does not evolve H under the same circumstances. (Stolba.)

Sol. in $HC_2H_3O_2$ +Aq when in contact with the air.

Strong NH_4OH +Aq does not dissolve litharge; but lead immersed in NH_4OH +Aq 3 days gives an ammonia solution containing 0.0139% lead. (Endemann, Am. Ch. J. 1897, 19. 892.)

Somewhat sol. in $NaCl$ +Aq. (Reichelt, Dingl. 172. 155.)

$NaCl$ +Aq attacks Pb at high temp. (Lunge, l. c.)

Action of $KClO_3$. $KClO_3$ +Aq (6.3% $KClO_3$) oxidised 64.31 g. Pb from 1 sq. metre surface by boiling 7 hours; $KClO_3$ +Aq (25% $KClO_3$) oxidised 151.12 g. under same conditions; and $Ca(ClO_3)_2$, $CaCl_2$ +Aq (20° Baume),

tions; and $\text{Ca}(\text{ClO}_3)_2$, $\text{CaCl}_2 + \text{Aq}$ (20° Baume), obtained by passing Cl_2 through $\text{CaO}_2\text{H}_2 + \text{Aq}$, oxidised 437.70 g. (Lunge and Deggeler, Jour. Soc. Chem. Ind. 4. 31.)

Insol in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 828.)

Sol. in a solution of K in liquid NH_3 . (Kraus, J. Am. Chem. Soc. 1907, 29. 1562.)

$\frac{1}{2}$ ccm. oleic acid dissolves 0.0592 g. Pb in 6 days. (Gates, J. phys. Chem. 1911, 15. 143.)

Solubility of Pb in petroleum.

If b.-pt. is under 230°, only slightest trace is dissolved in 4 months; if 230–300°, 0.0026% in 4 months; if over 300°, 0.0244% in 4 months in 4 months; if over 300°, 0.0244% in 4 months.

Solubility of Pb in commercial oil of turpentine and resin oil.

	Temp.	% Pb dissolved	
		in 8 days	in 14 days
Fresh oil of turpentine	15–20°	sl. trace	0 0722
Old oil of turpentine	15–20	0 0522	0 1435
Fresh oil of turpentine	100	0 265	0 715

(Engler and Kneis, Dingl 263. 193.)

Pb is strongly attacked by oil of turpentine. (Am. Chem. 4. 289.)

The fatty oils dissolve Pb in considerable amt. (Macadam, J. B. 1878. 1169.)

Not attacked by sugar + Aq. (Klein and Berg, C. R. 102. 1176.)

Lead potassium amide.

See Potassium ammonoplumbite.

Lead azoimide, basic, PbO , PbN_6 .

Insol. in H_2O . (Wohler, B. 1913, 46. 2054.)

Lead azoimide, PbN_6 .

Insol. in cold H_2O ; much less sol. in boiling H_2O than PbCl_2 . 1 l. H_2O dissolves about $\frac{1}{2}$ g. PbN_6 . Easily sol. in warm $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. Insol. in conc. $\text{NH}_4\text{OH} + \text{Aq}$. (Curtius, B. 24. 3344.)

Lead bromide, PbBr_2 .

Sl. sol. in cold, more easily in hot H_2O , or in H_2O containing HCl , HNO_3 , or $\text{HC}_2\text{H}_3\text{O}_2$ (Löwig)

1 l. H_2O dissolves 6 g. PbBr_2 at 10°; addition of HBr causes a ppt which redissolves on further addition of HBr . 1000 pts. of a liquid containing 720 pts HBr dissolve 550 g. PbBr_2 . This solubility increases by heating. (Ditte, C. R. 92. 718.)

1 l. H_2O dissolves 26.28 millimols. PbBr_2 at 25 2°. (von Ende, Z. anorg. 1901, 26. 159.)

Solubility in 100 g. H_2O at t°.

t°	G PbBr_2

95	4 3613
* 100	4 7510

* By extrapolation.

(Lichty, J. Am. Chem. Soc 1903, 25. 474.)

Sl. sol. in H_2O .

8.34×10^{-1} gram. are dissolved in 1 liter of sat solution at 20°. (Böttger, Z. phys. ch 1903, 46. 603.)

Solubility of PbBr_2 in $\text{HNO}_3 + \text{Aq}$ at 25.2°. S = solubility in millimols per litre.

HNO_3 normal	S
0.001	39 11
0.01	39.87
0.051	42.56
0.04 $\text{KNO}_3 +$	
0 01 HNO_3	42.77

(von Ende, Z. anorg. 1901, 26. 162.)

Slowly sol. in cold, easily in warm NH_4Cl , or $\text{NH}_4\text{NO}_3 + \text{Aq}$. (Wittstein.)

Not pptd. in presence of Na citrate. (Spiller.)

Insol. in H_2O containing $\text{Pb}(\text{NO}_3)_2$. (von Ende, Z. anorg. 1901, 26. 159.)

Insol. in benzene. (Franchimont, B. 16. 387.)

Moderately sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 828.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate (Naumann, B. 1910, 43. 314.)

Difficultly sol. in acetone. (Naumann, B. 1904, 37. 4328.)

+3 H_2O . (Ditte, l. c.)

Lead hydrogen bromide, 5PbBr_2 , $2\text{HBr} + 10\text{H}_2\text{O}$.

Sol. in $\text{HBr} + \text{Aq.}$ (Ditte, C. R. **92**. 718.)

Lead magnesium bromide, PbBr_2 , $2\text{MgBr}_2 + 16\text{H}_2\text{O}$.

Very deliquescent. Decomp. immediately by H_2O or alcohol. (Otto and Drewes, Arch. Pharm. **229**. 585.)

Lead potassium bromide (potassium bromoplumbite, PbBr_2 , $\text{KBr} + \text{H}_2\text{O}$.

(Remsen and Herty, Am. Ch. J. **14**. 124)

+ H_2O . (Wells, Sill. Am. J. **145**. 129)

PbBr_2 , 2KBr . Sol. in a little H_2O without decomp., but decomp. by an excess with separation of PbBr_2 . (Lowig.)

+ H_2O . (Wells, Sill. Am. J. **145**. 129.)

2PbBr_2 , KBr . (Wells.)

Lead potassium perbromide, $\text{K}_3\text{Pb}_2\text{Br}_8 + 4\text{H}_2\text{O}$.

Decomp. by H_2O and alcohol. (Wells, Z. anorg. **4**. 340.)

Lead rubidium bromide, PbBr_2 , $2\text{RbBr} + \frac{1}{2}\text{H}_2\text{O}$.

(Wells, Sill. Am. J. **146**. 34.)

2PbBr_2 , RbBr . (Wells.)

Lead sodium bromide.

Decomp. by H_2O . (Lowig.)

Lead bromochloride, $\text{PbBrCl} = \text{PbBr}_2$, PbCl_2 .

Can be recrystallised from H_2O without decomp (Iles, C. N. **43**. 216.)

3PbCl_2 , PbBr_2 . Sol. in H_2O with decomp. Sol. in HCl and in HBr . Insol. in cold alcohol; sl. sol. in boiling alcohol. (Thomas, C. R. **1899**, **128**. 1235.)

Lead bromiodide, $\text{PbBrI} = \text{PbBr}_2$, PbI_2 .

Decomp. by H_2O . Cryst. from a solution of PbI_2 in HBr . (Grissom and Thorp, Am. Ch. J. **10**. 229.)

3PbBr_2 , PbI_2 . Decomp. by H_2O . (Thomas C. R. **1899**, **128**. 1236.)

6PbBr_2 , PbI_2 . (G. and T.)

Lead bromosulphide, PbBr_2 , PbS .

Properties as chlorosulphide. (Parmentier.)

Lead chloride, PbCl_2 .

Slowly sol. in 135 pts H_2O at 12.5° , and in a much smaller quantity of hot H_2O . (Buschhoff)
Sol. in 30 pts cold, and 22 pts hot H_2O . (Wittstein.)
Sol. in 30 pts H_2O at 18.75° (Abl.)
100 pts. H_2O dissolve 4.59 pts. PbCl_2 at 15.5° . (Ure's Dict.)

100 pts. H_2O dissolve 0.9712 pt. PbCl_2 at 20° . (Formánek, C. C. **1887**. 270.)

100 pts. H_2O dissolve 0.946 pt. PbCl_2 at 17.7° . (Bell, Chem. Soc. (2) **6**. 355.)

Sol. in 105.2 pts. H_2O at 16.5° . (Bell, C. N. **16**. 69.)

100 pts. H_2O dissolve 0.8 pt. PbCl_2 at 0° ; 1.18 pts. at 20° ; 1.7 pts. at 40° ; 2.1 pts. at 55° ; 3.1 pts. at 80° . (Ditte, C. R. **92**. 718.)

1 l. H_2O dissolves 38.80 millimols. PbCl_2 at 25.2° . (von Ende, Z. anorg. **1901**, **26**. 148.)

9.61 $\times 10^{-1}$ gram are dissolved in 1 liter of sat. solution at 20° (Eottger, Z. phys. ch. **1903**, **46**. 603)

Solubility in H_2O .

(Lichty, J. Am. Chem. Soc. **1903**, **25**. 474.)

33.6 millimols. Pb are dissolved in 1 liter H_2O at 18° . (Pleissner, C. C. **1907**, **II**. 1056.)

1 l. H_2O dissolves 77.76 milliequivalents PbCl_2 at 25° . Sp. gr. of the solution $25^\circ/4^\circ = 1.0069$. (Harkins and Winninghoff, J. Am. Chem. Soc. **1911**, **33**. 1816.)

0.0388 mol. mg. PbCl_2 are sol. in 1 l. H_2O . (Kernot and Pomilio, Soc. R. Napoli, **1912**, (3), **XVII**, 353.)

A colloidal modification is sol. in hot water to give cryst. modification. (Van de Veide, Ch. Z. **1893**, **17**. 1908.)

Solubility in H_2O is not much increased by the addition of acids. (Fresenius.)

Sol. in conc. $\text{HCl} + \text{Aq.}$ from which it is pptd. by H_2O , but less sol. in dil. $\text{HCl} + \text{Aq.}$ than in H_2O . (Berzelius.)

Sol. in 1636 pts. H_2O containing HCl . (Bischof.)

Sat. solution of PbCl_2 in $\text{HCl} + \text{Aq.}$ of 1.116 sp. gr. contains 2.566% PbCl_2 at 16.5° .

Solubility in $\text{HCl} + \text{Aq.}$ 100 pts. liquid containing pts. HCl of 1.1162 sp. gr. in 100 pts. H_2O dissolve pts. PbCl_2 at 17.7° .

(Brönsted, Z. phys. Ch. 1912, 80. 208.)

PbCl_2 is sol. in 120 pts. pure H_2O , but on adding 5% NaCl 437 pts. are required to effect solution. When PbCl_2 is digested with conc. $\text{NaCl} + \text{Aq}$, 1 pt. dissolves in 129 pts. of the liquid.

A study of the equilibrium between lead chloride and sodium chloride in aqueous solution at 13° , 50° and 100° shows that at none of these temp. do these chlorides form a double salt. (Demassieux, C. R. 1914, 158. 702.)

Solubility in salts + Aq at 25° .

(Kernot and Pomilio, Soc. R. Napoli, (3) **17**, 353.)

Min. *Cotunnite*.

Lead tetrachloride, PbCl_4 .

Sol. in H_2O with subsequent decomp. (Rivot, Beudant, and Daguin, Ann. Min. (5) **4**, 239.)

Obtained in a pure state by Friedrich. Sol. in a little cold H_2O , but is decomp. by warming or diluting. Miscible with conc. HCl + Aq; not attacked by conc. H_2SO_4 even on warming. (Friedrich, W. A. B. **102**, 2b, 534.)

Lead tetrachloride with MCl.

See Chloroplumbate, M.

Lead magnesium chloride, PbCl_2 , $2\text{MgCl}_2 + 13\text{H}_2\text{O}$.

Deliquescent. Decomp. by H_2O . (Otto and Drewes, Arch. Pharm. **228**, 495.)

Lead potassium chloride (potassium chloroplumbite), PbCl_2 , KCl .

(Remsen and Herty, Am. Ch. J. **14**, 125.)

Contains $\frac{1}{3}\text{H}_2\text{O}$. (Wells, Sill. Am. J. **145**, 130.)

See also Demassieux, $\text{PbCl}_2 + \text{KCl}$ under PbCl_2

2PbCl_2 , KCl . (Wells.)

See also Demassieux as above.

Lead rhodium chloride.

See Chlororhodite, lead.

Lead rubidium chloride, PbCl_2 , $2\text{RbCl} + \frac{1}{2}\text{H}_2\text{O}$.

(Wells, Sill. Am. J. **146**, 34.)

2PbCl_2 , RbCl . (Wells.)

Lead sodium chloride.

Decomp. by H_2O .

Lead sodium tetrachloride, 2PbCl_4 , 9NaCl .

Very sol. in H_2O . (Sobrero and Selmi, A. ch. (3) **29**, 165.)

See also Chloroplumbate, lead.

Lead thalious chloride, PbCl_2 , 3TlCl .

Sl. sol. in cold, more in hot H_2O . (Noyes, Z. phys. Ch. **9**, 622.)

PbCl_2 , TlCl . Ppt (Ephraim, Z. anorg. 1909, **61**, 245)

Lead chloride ammonia, 2PbCl_2 , 3NH_3 .

(Rose, Pogg. **20**, 157.)

Lead tetrachloride ammonia, PbCl_4 , 4NH_3 .

Pptd. from chloroform solution (Matthews, J. Am. Chem. Soc. 1898, **20**, 825)

PbCl_4 , 2NH_3 . Fumes in the air. Decomp. by H_2O (Matthews)

Lead chloride arsenate, $3\text{Pb}_3(\text{AsO}_4)_2$, PbCl_2 .

See Arsenate chloride, lead.

Lead chloride borate, $\text{Pb}(\text{BO}_2)_2$, $\text{PbCl}_2 + \text{H}_2\text{O}$.

See Borate chloride, lead.

Lead chloride carbonate.

See Carbonate chloride, lead.

Lead chloride chlorite.

See Chlorite chloride, lead.

Lead chloride with fluoride and iodide.

See Lead chlorofluoride and Lead chloroiodide.

Lead chloride phosphate.

See Phosphate chloride, lead.

Lead chloride phosphite, PbCl_2 , $\text{Pb}_2\text{P}_2\text{O}_5(?)$.

Ppt. (Berzelius.)

Does not exist. (Rose.)

Lead chloride sulphate.

See Sulphate chloride, lead.

Lead chloride sulphide, PbCl_2 , 3PbS .

See Lead chlorosulphide.

Lead chlorofluoride, PbClF .

Sl. sol. in H_2O without decomp. Easily sol. in HNO_3 + Aq. (Berzelius.)

Solubility in H_2O .

100 g. H_2O dissolve 0.0211 g. PbClF at 0°; 0.0370 g. at 25°; 0.1081 g. at 100°. (Starck, Z. anorg. Ch. 1911, **70**, 174.)

Solubility in HCl + Aq at 25°.

Solution of PbClF in HCl + Aq containing 0.0535 g. equiv. per l. contains 0.0758 g. PbClF in 100 cc. of solvent.

Solution of PbClF in HCl + Aq containing

0.1069 g. equiv. per l. contains 0.1006 g. PbClF in 100 cc. of solvent. (Starck.)

Solubility in acetic acid at 25°.

Solution of PbClF in $\text{HC}_2\text{H}_3\text{O}_2$ containing 0.0518 g. equiv. per l. contains 0.05129 g. PbClF in 100 cc. of solvent.

Solution of PbClF in $\text{HC}_2\text{H}_3\text{O}_2$ containing 0.1055 g. equiv. per l. contains 0.0561 g. PbClF in 100 cc. of solvent (Starck.)

Solubility in $\text{PbCl}_2 + \text{Aq.}$

t°	G. equiv. per l PbCl_2	G. PbClF in 100 cc of solvent

(Starck.)

Lead chloriodide, $2\text{PbCl}_2, \text{PbI}_2$.

Sol. in hot $\text{NH}_4\text{Cl} + \text{Aq.}$ (Poggiale, J. pr. 35. 329.)

$\text{PbCl}_2, \text{PbI}_2$. Sol. in hot $\text{HCl} + \text{Aq.}$ (Engelhardt.)

Sol. in H_2O . (Thomas, C. R. 1898, 126. 1351)

Lead chloroselenide.

Decomp. by boiling H_2O and by conc. $\text{KOH} + \text{Aq.}$ (Fonzes-Diacon, C. R. 1900, 130. 1133.)

Lead chlorosulphide, $\text{PbCl}_2, 3\text{PbS}$.

Partially decomp. by hot H_2O . Not attacked by dil., but decomp. by conc. $\text{HCl} + \text{Aq.}$ (Hunefeld, J. pr. 7. 27.)

$\text{PbS}, \text{PbCl}_2$. Decomp. by H_2O , acids, or alkalis. (Parmentier, C. R. 114. 298.)

$\text{ClPbS}_2\text{PbS}, \text{PbS}_2\text{PbCl}$. Ppt. (Hofmann, B. 1904, 37. 250.)

Lead fluoride, PbF_2 .

Very sl. sol. in H_2O , and not more in $\text{HF} + \text{Aq.}$ (Berzelius, Pogg. 1. 31.)

5.5 millimols are sol. in 1000 ccm. H_2O . (Jaeger, Z. anorg. 1901, 27. 38.)

1 l. H_2O dissolves 640 mg. at 18°. (Kohlrausch, Z. phys. Ch. 1904, 50. 356.)

641 mg. in 1 l. of sat. solution at 18°. (Kohlrausch, Z. phys. Ch. 1908, 64. 168.)

More sol. in HNO_3 , or $\text{HCl} + \text{Aq.}$ Sl. sol. in $\text{KF} + \text{Aq.}$ (Herty, Am. Ch. J. 14. 107.)

Sl. sol. in dil. $\text{HF} + \text{Aq.}$; insol. in strong $\text{HF} + \text{Aq.}$

0.01302 g. atoms Pb are sol. in 1000 cc. HF . (Jaeger, Z. anorg. 1901, 27. 37.)

Insol. in liquid HF . (Franklin, Z. anorg. 1905, 46. 2.)

Insol. in liquid NH_3 . (Gore, Am. J. Ch. 1898, 20. 828.)

Insol. in ethylacetate. (Naumann, B. 1910, 43. 314.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Lead potassium fluoride, $3\text{KF}, \text{HF}, \text{PbF}_4$.

Decomp. H_2O , stable in dry air. (Brauner, Z. anorg. 1894, 7. 7.)

Lead silicon fluoride.

See Fluosilicate, lead.

Lead tantalum fluoride.

See Fluotantalate, lead.

Lead titanium fluoride.

See Fluotitanate, lead.

Lead fluoride sulphate.

See Sulphate fluoride, lead.

Lead hydroxide, PbO_2H_2 .

Not appreciably sol. in H_2O . (Jaeger, Z. anorg. 1901, 27. 38.)

1 l. H_2O dissolves 0.155 g. PbO_2H_2 at 20° and 100°. (Sehnal, C. R. 1909, 148. 1396.)

Solubility in $\text{NaOH} + \text{Aq.}$

G. Na in 20 ccm	G. Pb in 20 ccm.

1.519	0.101	"

(Wood, Chem. Soc. 1910, 97. 884.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

$2\text{PbO}, \text{PbO}_2\text{H}_2 = 3\text{PbO}, \text{H}_2\text{O}$. Sol. in 10,000 to 12,000 pts. H_2O . (Yorke.) Sol. in 7000 pts. H_2O . (v. Bonsdorff, Pogg. 41. 307.)

0.45 millimol. Pb are sol. in 1 liter H_2O at 18°. (Pleissner, C. C. 1907, II. 1056.)

Sol. in acids. Insol. in $\text{NH}_4\text{OH} + \text{Aq.}$ Sol. in NaOH , or $\text{KOH} + \text{Aq.}$ Sol. in hot $\text{NH}_4\text{Cl} + \text{Aq.}$ and reprecip. by $\text{NH}_4\text{OH} + \text{Aq.}$

Solubility in $\text{KOH} + \text{Aq.}$ according to Ditte (C. R. 94. 130). When $\text{KOH} + \text{Aq}$ is gradu-

ally added to lead hydroxide suspended in H_2O , the lead hydroxide is at first dissolved proportional to the amount of KOH, until the strength reaches 200 g. KOH to 1 litre H_2O . The solubility then diminishes and increases again until 400 g. KOH are dissolved in 1 litre H_2O . The amorphous lead hydroxide is then converted into crystalline $2PbO(PbO_2H_2)$. By further addition of KOH the solubility is suddenly decreased, and then increases again. (Ditte.)

Sol. in triethyl toluenyl ammonium hydrate + Aq.

Sol. in sorbine + Aq. (Pelouze.)

Sol. in acetates + Aq. (Mercer.)

Sol. in Ca, Ba, Sr, K, or Na succrate + Aq.

Not pptd. in presence of Na citrate + Aq. (Spiller.)

See also under Lead, and Lead oxide.

Lead perhydroxide, PbO_2 , H_2O .

See Lead peroxide.

Lead imide, $PbNH$.

Decomp. by H_2O and dilute acids. (Franklin, Z. anorg. 1905, 46. 27.)

Lead iodide, PbI_2 .

Sol. in 187 pts. boiling H_2O . (Berthelot.)

Sol. in 1235 pts. H_2O at ord. temp., and 194 pts. at 100° . (Denot, J. p. 1. 425.)

Sol. in 2400 pts. H_2O at 18.75° . (Abl.)

Sat. PbI_2 + Aq at 20° contains 0.0017 pt.; at 27° , 0.002 pt.; at 100° , 0.0039 pt. PbI_2 . (Lassaigne, J. chim. med. 7. 364.)

1 l. H_2O dissolves 0.6 g. PbI_2 at 10° . (Ditte, C. R. 92. 718.)

1 l. H_2O dissolves 1.58 millimols PbI_2 at 25.2° . (Von Ende, Z. anorg. 1901, 26. 159.)

0.47×10^{-1} gram are dissolved in 1 litre of sat. solution at 20° . (Böttger, Z. phys. Ch. 1903, 46. 603.)

(Lichty, J. Am. Chem. Soc. 1903, 25. 474.)

0.0013 g. mol. PbI_2 are dissolved in 1 l. H_2O at 20° . (Fedotieff, Z. anorg. 1911, 73. 178.)

Not more sol. in $HC_2H_3O_2$ + Aq than in H_2O , contrary to Henry. (Denot, l. c.)

Pptd. from aqueous solution by little HI + Aq, but redissolved by the addition of more. (Ditte, C. R. 92. 718.)

Insol. in cold, sol. in hot HCl + Aq with decomp.

Solubility of PbI_2 in HNO_3 + Aq at 25.2° .

S = Solubility in millimols. per litre.

HNO_3 normal	S
0.001	38.87
0.01	39.06
0.051	39.45
0.04 KNO_3 +	
0.01 HNO_3	39.45

(von Ende, Z. anorg. 1901, 26. 162.)

Sol. in KOH + Aq.

Sol. in conc. KI, NaI, BaI_2 , SrI_2 , CaI_2 , and MgI_2 + Aq, from which it is pptd. by H_2O . (Berthelot.)

Very sol. in KI + Aq, 2 mols. PbI_2 being dissolved for 1 mol. KI. (Boullay.)

Sol. in NH_4I + Aq. Easily sol. in $Na_2S_2O_3$ + Aq. (Werner, C. N. 53. 51.)

Not pptd. in presence of Na citrate. (Spiller.)

Solubility in sat. I_2 + Aq at $20^\circ = 0.00216$ g. mol. per l. Solid phase $PbI_2 + I_2$. (Fedotieff, Z. anorg. 1911, 73. 178.)

Very easily sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 828.)

Sl. sol. in alcohol. (Henry.) Decomp. by boiling ether. (Vogel.)

100 g. formic acid dissolve 0.25 g at 19.8° . (Aschan, Ch. Ztg. 1913, 37. 1117.)

Insol. in CS_2 . (Arcetowski, Z. anorg. 1894, 6. 257.)

Sl. sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Difficultly sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

0.02 pts. are sol. in 100 pts. acetone at 59° . 0.02 pts. are sol. in 100 pts. amyl alcohol at 133.5° .

0.50 pts. are sol. in 100 pts. aniline at 13° . 1.10 pts. are sol. in 100 pts. aniline at 184° .

(Laszczynski, B. 1894, 27. 2287.)

(Heise, J phys. Ch. 1912, 16, 273.)

Lead hydrogen iodide, $\text{PbH}_2\text{I}_4 = \text{PbI}_2, 2\text{HI}$.Cold H_2O dissolves out HI . Sol. in hot H_2O , from which crystallizes PbI_2 . (Guyot, J. chim. med. 12. 247)+10 H_2O . Decomp. by H_2O . (Berthelot, C. R. 91. 1024.)**Lead lithium iodide, $\text{PbI}_2, \text{LiI} + 5\text{H}_2\text{O}$.**Loses 1 mol. H_2O at 95° and loses another mol. H_2O at 100° . (Bogorodski, C. C. 1894, II 515.) $\text{PbI}_2, 2\text{LiI} + 6\text{H}_2\text{O}$. Sl. sol. in H_2O . (Mosnier, C. R. 1895, 120. 446)**Lead magnesium iodide, $\text{PbI}_2, 2\text{MgI}_2$.**Decomp. by H_2O and by alcohol. (Mosnier, A. ch. 1897, (7) 12. 402.)+16 H_2O . Very hygroscopic. Decomp. immediately by H_2O . (Otto and Drewes, Arch. Pharm. 229. 180.)**Lead nickel iodide, $\text{PbNi}_2\text{I}_6 + 3\text{H}_2\text{O}$.**Decomp. by H_2O . (Mosnier, A. ch. 1897, (7) 12. 411.)**Lead potassium iodide (Potassium iodoplumbite), PbI_2, KI .**Permanent. Completely decomp. by H_2O . Unacted upon by cold, but completely decomp. by hot alcohol. (Boullay, A. ch. (2) 34. 366.)+2 H_2O . The only salt that could be obtained by Remsen and Herty (Am. Ch. J. 14. 110.) $\text{PbI}_2, 2\text{KI}$. Sl. sol. in boiling chloroform; easily sol in strong $\text{KI} + \text{Aq}$, insol. in alcohol. (Brooks, C. N. 1898, 77. 191.)+2 H_2O . Decomp. by H_2O . (Berthelot, A. ch. (5) 29. 289.)

Does not exist. (R. and H.)

+4 H_2O . (Ditte, C. R. 92. 134.) Does not exist. (R. and H.) $\text{PbI}_2, 4\text{KI}$. Decomp. by H_2O ; insol. in alcohol. (Boullay.) Does not exist. (R. and H.) $3\text{PbI}_2, 4\text{KI} + 6\text{H}_2\text{O}$. (Berthelot, l. c.) Does not exist. (R. and H.)**Lead potassium periodide, $\text{K}_3\text{Pb}_2\text{I}_8 + 4\text{H}_2\text{O}$.**Decomp. by H_2O or alcohol. (Wells, Z. anorg. 4. 346.)**Lead rubidium iodide, $\text{PbI}_2, \text{RbI} + 2\text{H}_2\text{O}$.**

(Wells, Sill. Am. J. 146. 34.)

Lead silver iodide, $\text{PbI}_2, 2\text{AgI}$.

(Ruff and Geisel, B. 1905, 38. 2663.)

Lead silver iodide ammonia, $\text{PbI}_2, 2\text{AgI}, 5\text{NH}_3$.

(Ruff and Geisel, B. 1905, 38. 2663.)

Lead sodium iodide, PbI_2, NaI .Decomp. by H_2O . (Poggiale, C. R. 20. 1180)+ $x\text{H}_2\text{O}$. (Remsen and Herty, Am. Ch. J. 14. 124) $\text{PbI}_2, 2\text{NaI} + 6\text{H}_2\text{O}$. Sl. sol. in H_2O . (Moismier, C. R. 1895, 120. 445)**Lead iodide ammonia, $\text{PbI}_2, 2\text{NH}_3$.**Decomp. by H_2O . (Rammelsberg, Pogg. 48. 166.)**Lead iodide carbonate.**

See Carbonate iodide, lead.

Lead iodosulphide, $\text{PbS}, 4\text{PbI}_2$.

Decomp. by light, heat, acids and alkalies. (Lenher, J. Am. Chem. Soc. 1895, 17. 512.)

Sol. in conc. HI ; insol. in dil. $\text{HI} + \text{Aq}$. (Lenher, J. Am. Chem. Soc. 1901, 23. 681.) $\text{IPbS}_2\text{PbS}_2\text{PbI}$. Ppt. (Hofmann, B. 1904, 37. 251.)**Lead suboxide, Pb_2O .**Decomp. by H_2O into PbO_2H_2 .Decomp. by dil. $\text{H}_2\text{SO}_4, \text{HCl}, \text{HNO}_3, \text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$, or alkalies, into PbO , which dissolves, and Pb , which dissolves or not, according to the reagent. Sol. in dil. $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$.**Lead monoxide (Litharge), PbO .**Sol. in 7000 pts. H_2O . (Horsford.)Pure PbO is insol. in H_2O . (Brandecke, Report. 53. 155; Siebold, Report. 53. 174; Herbergen, Report. 55. 55.) Sl. sol. in H_2O . (Yorke, Phil. Mag. (3) 5. 82.)0.31 millimoles Pb are dissolved in 1 liter H_2O at 18° . (Pleissner, C. C. 1907, II. 1056.) 1.71×10^{-2} g. are dissolved in 1 litre of sat. solution at 20° . (Böttger, Z. phys. Ch. 1903, 46. 603.)

Easily sol. in acids.

Sol. in KOH, or NaOH + Aq; also in $\text{CaO}_2\text{H}_2 + \text{Aq}$.

Sol. in boiling $\text{Cu}(\text{NO}_3)_2 + \text{Aq}$ with pptn. of Aq.

Sol. in CaCl_2 , and $\text{SrCl}_2 + \text{Aq}$. (André, C. R. 104. 359.)

Sol. in $\text{MgCl}_2 + \text{Aq}$. (Voigt, Ch. Ztg. 13. 695.)

Sol. in boiling $\text{Cu}(\text{NO}_3)_2 + \text{Aq}$ with pptn. of CuO

Partially sol. in $\text{Cd}(\text{NO}_3)_2$, and $\text{Mn}(\text{NO}_3)_2 + \text{Aq}$ with pptn. of CdO and MnO respectively.

Not acted upon by Mg, Ag, Co, Ni, or Ce nitrates + Aq. (Persoz.)

Very sol. in $\text{Pb}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$. (Rochleder.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 828.)

Insol. in acetone. (Eidmann, C. C. 1899, II, 1014.)

When finely pulverised, sol. in cane sugar + Aq, but less than Pb_3O_4 . (Peschier.)

Sl. sol. in glycerine. Readily sol. in glucose + Aq. (Persoz.)

Sol. in volatile oils. (Schweitzer.)

Yellow modification.

Solubility in H_2O at 22°.

	Solubility in g-equiv. per litre
1. Yellow PbO, obtained by boiling lead hydroxide with 10% NaOH	1.03×10^{-4}
2. Yellow PbO, obtained by heating 1 at 630°	1.05×10^{-4}
3. Yellow PbO, obtained by heating at 740° red PbO, formed by boiling lead hydroxide with conc. NaOH	1.00×10^{-4}
4. Yellow PbO obtained by heating pure, commercial, yellow-brown PbO at 620°.	1.09×10^{-4}

(Ruer, Z. anorg. 1906, 50. 273.)

Red modification. Obtained by boiling lead hydroxide with conc. NaOH + Aq

Solubility in H_2O at 22° = 0.56×10^{-4} g. equiv. per l. (Ruer, Z. anorg. 1906, 50. 273.)

Yellow-brown modification. Solubility in H_2O at 22° = 1.10×10^{-4} g. equiv. per litre. (Ruer, Z. anorg. 1906, 50. 273.)

See also Lead.

Min. *Massicot*.

Lead oxide (Red lead), Pb_3O_4 .

Insol. in H_2O .

Converted by acids into PbO_2 and salts of monoxide.

Sol. in a large amt. of glacial acetic acid. (Berzelius.) Insol. in acetic acid. (Schonbein, J. pr. 74. 325.)

Solution in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ may decompose or not according to concentration of acid. When treated with an excess of $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ of 8° B, Pb_3O_4 is quickly dissolved, but the solution soon deposits PbO_2 ; this decomposition is facilitated by dilution. But if Pb_3O_4 is treated with a large excess of glacial $\text{HC}_2\text{H}_3\text{O}_2$, it dissolves, and the solution is permanent if atmospheric air is excluded, and temp. does not rise above 40°. (Jacquelain, J. pr. 53. 152.)

Insol. in acetone. (Eidmann, C. C. 1899, II, 1014; Naumann, B. 1904, 37. 4329.)

Easily sol. in cane sugar + Aq. (Peschier.) Min. *Minium*.

Lead sesquioxide, Pb_2O_3

Insol. in H_2O or in KOH + Aq.

Decomp. by strong acids into PbO_2 and corresponding salt of monoxide.

Lead peroxide, PbO_2 .

Insol. in H_2O . Sol. in acids, also in conc. alkali hydroxides + Aq. The solutions in acids are very unstable, except when concentrated and kept at a low temperature.

Decomp. by cold HCl, HCN, HBr, and HI + Aq. Not attacked by other acids when cold, but decomp. thereby when hot. Insol. in moderately conc. HNO_3 , H_2SO_4 , or $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$.

There are two forms of PbO_2 , the amorphous and the crystalline.

1 l. of very conc. H_2SO_4 dissolves 10 millimols crystalline PbO_2 .

Solubility of amorphous PbO_2 in $\text{H}_2\text{SO}_4 + \text{Aq}$ at 22°.

99.5 millimols PbO_2 are dissolved in 1 l. of acid containing 1720 g. H_2SO_4 .

4 millimols. PbO_2 are dissolved in 1 l. of acid containing 1097 g. H_2SO_4 .

v = moles H_2SO_4 per mole of H_2O .

c = millimols. PbO_2 dissolved in 1 litre.

v	c	v	c
0.32	0.82	0.20	8.10^{-3}
0.30	0.4	0.15	5.10^{-4}
0.25	7.10^{-3}	0.10	1.10^{-5}

(Dolezalek and Finckli, Z. anorg. 1906, 51. 323-5.)

Decomp. by $\text{NH}_4\text{OH} + \text{Aq}$. Sol. in conc. KOH, or NaOH + Aq.

Sol. with decomp. in $\text{Hg}_2(\text{NO}_3)_2 + \text{Aq}$. (Levol.)

Insol. in acetone. (Eidmann, C. C. 1899, II, 1014; Naumann, B. 1904, 37. 2943.)

Min. *Plattnerite*.

Lead manganese peroxide, $\text{PbO}_2, 4\text{MnO}_2$.

Ppt. (Gibbs and Parkmann, Sill. Am. J. (2) 39. 58.)

Lead oxybromide, PbBr_2 , PbO .

Insol. in H_2O .
 +1, $1\frac{1}{2}$, and $3\text{H}_2\text{O}$. (André, C. R. 96. 1502.)
 6PbO , $\text{PbBr}_2 + 2\text{H}_2\text{O}$. Ppt. (Stromholm, Z. anorg. 1904, 38. 436.)

Lead oxychloride, 2PbCl_2 , $\text{PbO} + 2\text{H}_2\text{O}$.

(André, C. R. 96. 435.)
 PbCl_2 , PbO . Absolutely insol. in hot or cold H_2O . (André, A. ch. (6) 3. 108.)
 Min. *Mallockite*.
 + H_2O . Sol. in hot $\text{NaOH} + \text{Aq}$. (André.)
 0.38 millimols. Pb are dissolved in 1 litre H_2O at 18° . (Pleissner, C. C. 1907, II. 1055.)
 PbCl_2 , 2PbO . Insol. in H_2O . Sol. in dil $\text{KOH} + \text{Aq}$ (about 110 g. in 1 l.) (Ditte, C. R. 94. 1180.)
 Min. *Mendipite*. Easily sol. in $\text{HNO}_3 + \text{Aq}$.
 + $2\text{H}_2\text{O}$. (André, A. ch. (6) 3. 111.)
 PbCl_2 , 3PbO . Insol. in H_2O . (Döbereiner.)
 + $\frac{1}{2}\text{H}_2\text{O}$. Ppt. (Stromholm, Z. anorg. 1904, 38. 435.)
 + $2\text{H}_2\text{O}$. 0.10 millimols Pb are dissolved in 1 litre H_2O at 18° . (Pleissner, C. C. 1907, II. 1056.)
 + $3\text{H}_2\text{O}$. Ppt. (André, C. R. 104. 359.)
 + $4\text{H}_2\text{O}$. Nearly insol. in H_2O . Sl. sol. in $\text{NaOH} + \text{Aq}$. (Vauquelin.)
 PbCl_2 , 5PbO . (Döbereiner.)
 6PbO , $\text{PbCl}_2 + 2\text{H}_2\text{O}$. Ppt. (Stromholm, Z. anorg. 1904, 38. 434.)
 PbCl_2 , 7PbO . Cassel-yellow.

Lead strontium oxychloride, 2PbO , $\text{SrCl}_2 + 5\text{H}_2\text{O}$.

(André, C. R. 104. 359.)

Lead oxychloride, iodide, PbCl_2 , PbI_2 , 4PbO .

Min. *Schwarzenbergite*. Sol. in dil. $\text{HNO}_3 + \text{Aq}$.

Lead oxyiodide, PbI_2 , PbO .

Insol. in boiling H_2O or $\text{KI} + \text{Aq}$. (Brandes, A. 10. 269.)
 + $\frac{1}{2}\text{H}_2\text{O}$. (Ditte, C. R. 92. 145.)
 + H_2O .
 PbI_2 , 2PbO . Insol. in H_2O . (Denot, J. Pharm. 20. 1.)
 + H_2O .
 PbI_2 , $3\text{PbO} + 2\text{H}_2\text{O}$. Ppt. (Kühn, C. C. 1847. 593.)
 PbI_2 , 5PbO . Insol. in H_2O . (Denot.)
 + $7\text{H}_2\text{O}$. (Ditte, C. R. 92. 145.)
 6PbO , $\text{PbI}_2 + 2\text{H}_2\text{O}$. Ppt. (Strömholm, Z. anorg. 1904, 38. 437.)
 9PbO , $\text{PbI}_2 + 2\text{H}_2\text{O}$. (Strömholm, Z. anorg. 1904, 38. 437.)

Lead oxyperiodide, PbO , PbI_2I_3 .

Decomp. by boiling H_2O . Sol. in dil. $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. (Gröger, W. A. B. 100, 2b. 415.)

Lead phosphide, PbP_2 .

Decomp. by H_2O and dil. acids. (Bossuet, C. R. 1913, 157. 721.)

Lead phosphoselenide, PbSe , P_2Se .

Insol. in H_2O or $\text{HCl} + \text{Aq}$. Sol. in $\text{HNO}_3 + \text{Aq}$.
 Insol. in cold, slowly decomp. by hot alkalis + Aq . (Hahn, J. pr. (2) 93. 436.)
 2PbSe , P_2Se_3 . Insol. in H_2O , HCl , or $\text{HNO}_3 + \text{Aq}$. Slowly sol. in red fuming HNO_3 . (Hahn.)
 2PbSe , P_2Se_3 . Decomp. by fuming HNO_3 . (Hahn.)

Lead selenide, PbSe .

Cold $\text{HNO}_3 + \text{Aq}$ dissolves Pb with separation of Se, which dissolves on warming. (Little, A. 112. 212.)
 Min. *Clausthalite*. Sol. in $\text{HNO}_3 + \text{Aq}$ with separation of Se, when warmed.

Lead mercury selenide, $(\text{Pb}, \text{Hg})\text{Se}$.

Min. *Lehrbachite*.

Lead sulphide, PbS .

Very sl. sol. in H_2O .
 1 l. H_2O dissolves 3.6×10^{-5} moles. PbS at 18° . (Weigel, Z. phys. Ch. 1907, 58. 294.)
 1 l. H_2O dissolves 3×10^{-4} g. PbS at 25° . (Hevesy, Z. anorg. 1913, 82. 328.)
 Insol. in dilute acids; alkalis, and alkali sulphides + Aq . Decomp. with solution in moderately dil. $\text{HNO}_3 + \text{Aq}$. With conc. HNO_3 or aqua regia, PbSO_4 is formed. Sol. in hot conc. $\text{HCl} + \text{Aq}$.
 1 l. H_2O sat. with H_2S dissolves 1.5×10^{-4} g. PbS at 25° . (Hevesy, Z. anorg. 1913, 82. 328.)
 Insol. in NH_4Cl or $\text{NH}_4\text{NO}_3 + \text{Aq}$. (Brett.)
 Somewhat sol. in $\text{H}_2\text{S} + \text{Aq}$ when heated therewith in a sealed tube. (Senarmont, A. ch. (3) 32. 168.)
 Insol. in potassium thiocarbonate + Aq . (Rosenblatt, Z. anal. 26. 15.)
 Sol. in $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$. (Waller, J. Anal. Ch. 5. 646.)
 Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 828.)
 Min. *Galena*, *Galenite*.

Lead polysulphide, PbS_x .

Ppt.; insol. in alkali sulphides; decomp. by conc. HNO_3 . (Bodroux, C. R. 1900, 130. 1398.)

Lead platinum sulphide.

See Sulphoplatinate, lead.

Lead sulphide mercuric chloride, 3PbS , 4HgCl_2 .

Decomp. by H_2O . (Levallois, C. R. 96. 1666.)

Lead sulphobromide, chloride, or iodide.*See Lead bromosulphide, etc.***Lead disulphodimide, PbN_2S_2 , NH_3 .**

Ppt.

Very stable in the air or in a vacuum.

Sol. in no solvent without decomp.

When rapidly heated it explodes very violently at 140° . (Ruff, B. 1904, 37. 1581.)**Lead telluride, PbTe .**Insol. in H_2O . Sol. in cold $\text{HNO}_3 + \text{Aq}$. (Rose, Pogg. 18. 68.)Min. *Allaite*. Easily sol. in $\text{HNO}_3 + \text{Aq}$.**"Leucone."**Wohler (A. 127. 268) gives this substance the formula $\text{H}_{10}\text{Si}_3\text{O}_{10}$, but it is identical with silicoformic anhydride, $\text{Si}_2\text{H}_2\text{O}_3$, which see.**Lime.***Quacklime*, CaO . See Calcium oxide.*Slaked lime*, $\text{CaO} \cdot \text{H}_2\text{O}$. See Calcium hydroxide.**Lithium, Li.**Decomposes H_2O .Easily sol. in dil. acids. Slowly attacked by conc. H_2SO_4 , rapidly by conc. $\text{HNO}_3 + \text{Aq}$. Insol. in hydrocarbons. Sol. in liquid NH_3 , but not so easily as K.Sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 320.)

1 gram atom dissolves:

at	0°	in	3.93	mol.	liquid	NH_3 .
"	-25°	"	3.93	"	"	"
"	-50°	"	3.93	"	"	"
"	-80°	"	3.93	"	"	"

(Ruff, B. 1906, 39. 840.)

Sol. in ethylamine. Insol. in propylamine and in secondary and tertiary amines. (Kraus, J. Am. Chem. Soc. 1907, 29. 1561.)

Lithium amalgam, LiHg_5 . LiHg_5 is obtained at all temp. up to 100° . Can be cryst. from Hg without decomp. at any temp. below 100° . (Kerp, Z. anorg. 1900, 25. 68.)**Lithium amide, LiNH_2 .**

(Ruff, B. 1911, 44. 505.)

Decomp. slowly in the air.

Slowly decomp. by cold, rapidly by hot H_2O .Slowly decomp. by HCl .

Slowly decomp. by cold, rapidly by hot abs. alcohol. (Titherley, Chem. Soc. 1894, 65. 518.)

Trilithium amide, Li_3NH_2 .Hydrosopic; decomp. by H_2O . (Dafert, M. 1910, 31. 994.)**Lithium ammonia, Li, NH_3 .**Decomp. by H_2O at ordinary temp.; sol. in liquid NH_3 . (Moissan, C. R. 1898, 127. 689.) $\text{Li}, 3\text{NH}_3$. (Moissan, C. R. 1901, 133. 716.)**Trilithium ammonium, Li_3NH_4 .**Very hydrosopic, decomp. by H_2O . (Dafert, M. 1910, 31. 992.)**Lithium antimonide, Li_3Sb .**Decomp. by H_2O with evolution of H_2 . Sol. in liquid NH_3 . (Lebeau, C. R. 1902, 134. 285.)**Lithium arsenide, Li_3As .**Decomp. by H_2O ; decomp. violently by fuming HNO_3 . (Lebeau, C. R. 1899, 129. 50.)**Lithium azoimide, LiN_3 .**

Deliquescent. Stable in aq. solution.

36.12 pts. are sol. in 100 pts. H_2O at 10° .
62.07 " " " " 100 " H_2O " 15.5° .
66.41 " " " " 100 " H_2O " 16° .
20.26 " " " " 100 " abs. alcohol at 16° .

Insol. in ether. (Curtius, J. pr. 1898, (2) 58. 277.)

+ H_2O . Very hydrosopic; decomp. in the air. Very sol. in H_2O and alcohol. (Dennis, Z. anorg. 1898, 17. 18.)**Lithium bromide, LiBr .**

Deliquescent.

100 pts. H_2O dissolve at:

0°	34°	59°	82°	103°
143	196	222	244	270

pts. LiBr .Sp. gr. of $\text{LiBr} + \text{Aq}$ at 19.5° containing:

0	10	15	20	25	30%
1.035	1.072	1.113	1.156	1.204	1.254

35	40	45	50	55%
1.309	1.368	1.432	1.500	1.580

(Kremers, Pogg. 103. 65; 104. 133; Gerlach, Z. anal. 8. 285.)

Temp. of maximum g.-mol. LiBr dissolved density of $\text{LiBr} + \text{Aq}$. in 1000 g. H_2O .

1.921°	0.2941
0.881°	0.4383

(de Coppet, C. R. 1900, 131. 178.)

Moderately sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 828.)

Sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Solubility in glycol at $14.7^\circ = 37.5\%$. (de Coninck, Belg. Acad. Bull. 1905, 359.)

Sol. in acetone. (Naumann, B. 1904, 37. 4328; Eidmann, C. C. 1899, II. 1014.)

Sol. in methyl acetate (Naumann, B. 1909, 42. 3789); ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Difficultly sol. in ethyl acetate. (Nau-
mann, B. 1910, **43**, 314.)

+H₂O. 100 g H₂O dissolve 209 g LiBr
at 44°. (Bogorodski, C. C. 1894, II. 514.)
+2H₂O (Bogorodski)
+3H₂O. 100 g H₂O dissolve 80 g. LiBr
at -30°, and 122 g. at -10°. (Bogorodski.)

Lithium molybdenyl bromide, LiBr, MoOBr₃
+4H₂O.

Very hygroscopic. (Weinland and Knöll,
Z. anorg. 1905, **44**, 111.)

Lithium bromide ammonia.

LiBr, NH₃. Sol. in H₂O with decomp.
LiBr, 2NH₃. " " " " "
LiBr, 3NH₃. " " " " "
LiBr, 4NH₃. " " " " "

(Bonnefoi, C. R. 1900, **130**, 1395.)

Lithium carbide, LiC₂.

Insol. in conc. acids.

Sol. in fused oxidizing agents; decomp. H₂O
in the cold. (Moissan, C. R. 1896, **122**, 363.)

Lithium subchloride, Li₂Cl.

Decomp. by H₂O. (Guntz, C. R. 1895,
121, 945.)

Lithium chloride, LiCl

Very deliquescent. Most deliquescent salt
known to Berzelius. Very sol. in H₂O. Sol.
in 1.315 pts. H₂O at 15°. (Gerlach.)

100 pts. H₂O dissolve at:

0° 20° 65° 80° 69° 140° 160°
63.7 80.7 104.2 115 129 139 145 pts. LiCl.
(Gerlach, Z. anal. **8**, 281.)

+ $2\text{H}_2\text{O}$. Sol. in acetone. (Krug and M'Elroy, J. Anal. Ch. 6. 184.)+ $3\text{H}_2\text{O}$. (Bogorodski, C. C. 1894, II. 514.)

Lithium gold chloride.

See Chloraurate, lithium.

Lithium manganous chloride, LiCl , $\text{MnCl}_2+3\text{H}_2\text{O}$.Decomp. by H_2O ; stable only in excess of LiCl. (Chassevant, A. ch. (6) 30. 10.)Lithium mercuric chloride, 2LiCl , HgCl_2 .Very deliquescent and sol. in H_2O . (Harth, Z. anorg. 1897, 14. 323.)Lithium nickel chloride, LiCl , $\text{NiCl}_2+3\text{H}_2\text{O}$.Deliquescent. Sol. in H_2O and alcohol. (Chassevant.)Lithium thallic chloride, 3LiCl , $\text{TlCl}_3+8\text{H}_2\text{O}$.Very deliquescent. Sol. in H_2O . (Pratt, Am. J. Sci. 1895, (3) 49. 404.)

Lithium stannic chloride.

See Chlorostannate, lithium.

Lithium uranous chloride, Li_2UCl_6 .

As K salt. (Aloy, Bull. Soc. 1899, (3) 21. 264.)

Lithium uranium chloride, UCl_4 , 2LiCl .Very hygroscopic; sol. in H_2O with decomp. Sol. in acetic acid. Decomp. by alcohol. (Aloy, Bull. Soc. 1899, (3) 21. 264.)

Lithium zinc chloride, LiCl , $\text{ZnCl}_2 + 3\text{H}_2\text{O}$.

Extremely deliquescent. (Ephraim, Z. anorg. 1908, 59. 68.)

3LiCl , $\text{ZnCl}_2 + 10\text{H}_2\text{O}$ (?). Not obtained in solid state. (Ephraim, Z. anorg. 1908, 59. 69.)

Lithium chloride ammonia.

LiCl , NH_3 .

LiCl , 2NH_3 .

LiCl , 3NH_3 .

LiCl , 4NH_3 .

Above salts are all decomp. by H_2O . (Bonnefoi, C. R. 1898, 127. 367-369.)

Lithium chloriodide, $\text{LiCl}_2\text{I} + 4\text{H}_2\text{O}$.

Deliquescent. (Wells and Wheeler, Sil. Am. J. 144. 42.)

Lithium fluoride, LiF .

Very difficultly sol. in H_2O . (Berzelius, Pogg. 1. 17.)

Two crystalline forms. Only very sl. sol. in H_2O . Very sl. decomp. by H_2O at red heat. (Poulenc, Bull. Soc. 1894, (3) 11. 17.)

Sp. gr. of solution sat. at $18^\circ = 1.003$ and contains 0.27% LiF . (Mylius, B. 1897, 30. 1718.)

Sol. in 800 pts H_2O , and the presence of NH_4F and NH_3 decreases solubility to 1 : 3500. (Carnot, Bull. Soc. 1889, (3) 1. 250.)

Two crystalline forms are very sl. sol. in HCl ; easily sol. in HNO_3 . (Poulenc, Bull. Soc. 1894, (3) 11. 17.)

Two crystalline forms are insol. in 95% alcohol. (Poulenc.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Difficultly sol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329; Eidmann, C. C. 1899, II. 1014.)

Lithium hydrogen fluoride, LiHF_2 .

Difficultly sol. in H_2O , but more easily than LiF . (Berzelius.)

Lithium silicon fluoride.

See Fluosilicate, lithium.

Lithium stannic fluoride.

See Fluostannate, lithium.

Lithium tantalum fluoride.

See Fluotantalate, lithium.

Lithium uranyl fluoride, UO_2F_2 , 4LiF .

(Ditte.)

Lithium zirconium fluoride.

See Fluozirconate, lithium.

Lithium hydride, LiH .

Not deliquescent. Decomp. by H_2O . (Guntz, C. R. 1896, 123. 997.)

Lithium hydrosulphide, LiSH (?).

Deliquescent. Sol. in H_2O and alcohol. (Berzelius, Pogg. 6. 439.)

Lithium hydroxide, LiOH .

Not so deliquescent as NaOH , and apparently not more sol. in hot than cold H_2O . (Gmelin, Gilb. 62. 399.)

Not deliquescent. (Arfvedson, A. ch. 10. 82.)

The solubility of LiOH in H_2O can be expressed by $y = 6.6750 + 0.00346t + 0.0003t^2$, where y = the percentage of Li_2O in a saturated solution. (Dittmar, Jour. Soc. Chem. Ind. 7. 730.)

Solubility of LiOH in H_2O at t° .

t°	G per 100 g Solution		G LiOH per 100 g H_2O
	Li_2O	LiOH	
0	6.67	10.64	12.7
10	6.74	10.80	12.7

(Kremers, Pogg. 104. 133; 111. 60; Gerlach, Z. anal. 8. 295.)

Sp. gr. of LiI +Aq at 18° containing:

5 10 15 20 25% LiI ,
1.0361 1.0756 1.1180 1.1643 1.2138

(Kohlrausch, W. Ann. 1879. 1.)

Temp. of maximum g.-mol. LiI dissolved
density of LiI +Aq. in 1000 g. H_2O .

2 516° 0 1795
0 039° 0 4666

(de Coppet, C. R. 1900, 131. 178.)

Very sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 828.)

100 g. methyl alcohol dissolve 343.4 g. LiI at 25°.

100 g. ethyl alcohol dissolve 250.8 g. LiI at 25°.

100 g. propyl alcohol dissolve 47.52 g. LiI at 25°.

100 g. isoamyl alcohol dissolve 112.50 g. LiI at 25°.

In the case of propyl alcohol the solid phase at 25° is LiI , $4C_3H_7O$. (Turner and Bissett, Chem Soc. 1913, 103. 1909.)

Solubility in organic solvents at t°.

C=pts. by wt. of LiI in 100 ccm. of the sat. solution.

L=no. of liters which at the saturation temp. hold in solution 1 mol. LiI .

Solvent	t°	C	L
Furfural	25°	45.86	0.292
Nitromethane	25°	2.519	5.32
"	0°	1.219	10.98

(Walden, Z. phys. Ch. 1906, 55. 718.)

Solubility in glycol at 15.3°=28%. (de Coninck, Belg. Acad. Bull. 1905, 359.)

Sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3789)

Difficultly sol. in ethyl acetate (Naumann, B. 1910, 43. 314.)

Sol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4328.)

+ H_2O . Mpt. below 200°. (Bogorodsky, C. C. 1897, II. 175.)

+2 H_2O . Mpt. 86-88°. (Bogorodsky.)

+3 H_2O . Mpt. 75°. (Bogorodsky.)

Sol. in absolute alcohol without decomp. (Thirsoff, Chem. Soc. 1894, 66. (2) 234.)

The composition of the hydrates formed by LiI at different dilutions is calculated from determinations of the lowering of the fr.-pt. produced by LiI and of the conductivity and sp. gr. of LiI +Aq. (Jones, Am. Ch. J. 1905, 34. 301.)

Lithium mercuric iodide, $2LiI, HgI_2+6H_2O$.

Very deliquescent. Decomp. by H_2O . Very sol. without decomp. in alcohols, glycerine, acetone, fuming formic acid, acetic acid, ethyl acetate, ethyl oxalate, etc. Less sol. in nitrobenzene. Insol. in benzene and methyl iodide. (Duboin, C. R. 1905, 141. 1017.)

+8 H_2O . Decomp. by H_2O . Very sol. in alcohols, glycerine, acetone, fuming formic acid, acetic acid, ethyl acetate, etc. without decomp. Sl. sol. in nitrobenzene. Insol. in benzene and methyl iodide. (Duboin, l. c.) +9 H_2O . Hydroscopic. Sol. in alcohol and acetone without decomp. (Dobrosersdoff, C. C. 1901, I. 664.)

Lithium nitride, Li_3N .

Sol. in H_2O with decomp. (Ouvrard, C. R. 114. 120.)

Very hygroscopic. (Dafert, M. 1910, 31. 987.)

Lithium oxide, Li_2O

Slowly sol. in H_2O to form $LiOH$.

See Lithium hydroxide.

Lithium peroxide, Li_2O_2 .

(de Forcrand, C. R. 1900, 130. 1467.)

Lithium hydrogen peroxide, $Li_2O_2, H_2O_2+3H_2O$.

Sol. in H_2O . Insol. in alcohol. (de Forcrand, C. R. 1900, 130. 1466.)

Lithium selenide, Li_2Se .

Sol. in H_2O . (Fabre, C. R. 103. 269.)

+9 H_2O . Sol. in H_2O . (Fabre.)

Lithium silicide, Li_4Si_2 .

Decomp. by H_2O and by dil. acids. Decomp. by aqueous solutions of alkalis with evolution of H_2 . (Moissan, C. R. 1902, 134. 1083.)

Lithium monosulphide, Li_2S .

More sol. in H_2O or alcohol than LiOH .

Luteochromium bromide, $\text{Cr}(\text{NH}_3)_6\text{Br}_3$.

Less sol. in H_2O than the chloride. (Jørgensen, J. pr. (2) 30. 1.)

— **bromoplatinate**, $[\text{Cr}(\text{NH}_3)_6]_2(\text{PtBr}_6)_3 + 4\text{H}_2\text{O}$.

Sl. sol. in H_2O . Insol. in alcohol. (Jørgensen.)

— **chloride**, $\text{Cr}(\text{NH}_3)_6\text{Cl}_3 + \text{H}_2\text{O}$.

Efflorescent, and very sol. in H_2O . (Jørgensen.)

— **chloroplatinate**.

(a) $[\text{Cr}(\text{NH}_3)_6]_2(\text{PtCl}_6)_3 + 6\text{H}_2\text{O}$. Nearly completely insol. in H_2O . (Jørgensen.)

(b) $\text{Cr}(\text{NH}_3)_6\text{Cl}(\text{PtCl}_6) + 2\frac{1}{2}\text{H}_2\text{O}$ Decomp. by H_2O into above; insol. in alcohol. (Jørgensen.)

(c) $[\text{Cr}(\text{NH}_3)_6]_2\text{Cl}_4(\text{PtCl}_6) + 2\text{H}_2\text{O}$. Decomp. by H_2O into (a). (Jørgensen.)

— **mercuric chloride**, $\text{Cr}(\text{NH}_3)_6\text{Cl}_3, \text{HgCl}_2$.

Decomp. by H_2O ; sl. sol. in dil. $\text{HCl} + \text{Aq}$; insol. in alcohol.

$\text{Cr}(\text{NH}_3)_6\text{Cl}_3, 3\text{HgCl}_2 + 2\text{H}_2\text{O}$. Decomp. by dil. $\text{HCl} + \text{Aq}$ into above salt. (Jørgensen.)

— **chromicyanide**, $\text{Cr}(\text{NH}_3)_6\text{Cr}(\text{CN})_6$.

Precipitate.

— **cobalticyanide**, $\text{Cr}(\text{NH}_3)_6\text{Co}(\text{CN})_6$.

Nearly insol. in H_2O or in conc. $\text{HCl} + \text{Aq}$. (Jørgensen.)

— **ferrocyanide**, $\text{Cr}(\text{NH}_3)_6\text{Fe}(\text{CN})_6$.

Very sl. sol. in cold H_2O or dil. acids. (Jørgensen.)

— **iodide**, $\text{Cr}(\text{NH}_3)_6\text{I}_3$.

Sl. sol. in H_2O . (Jørgensen, l. c.)

— **iodosulphate**, $\text{Cr}(\text{NH}_3)_6\text{SO}_4\text{I}$.

Sol. in H_2O ; nearly insol. in dil. $\text{NH}_4\text{OH} + \text{Aq}$ or alcohol. (Jørgensen.)

— **nitrate**, $\text{Cr}(\text{NH}_3)_6(\text{NO}_3)_3$.

Sol. in 35–40 pts. H_2O . Insol. in cold dil. $\text{HNO}_3 + \text{Aq}$ or alcohol. Can be crystallised out of H_2O containing a little HNO_3 . (Jørgensen, J. pr. (2) 30. 1.)

— **nitrate chloroplatinate**,

$\text{Cr}(\text{NH}_3)_6(\text{NO}_3)_3\text{PtCl}_6 + \text{H}_2\text{O}$.

Insol. in H_2O . Sol. in dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. (Jørgensen.)

— **nitratosulphate**, $\text{Cr}(\text{NH}_3)_6(\text{NO}_3)_2\text{SO}_4$.

Sol. in H_2O ; insol. in alcohol. (Jørgensen.)

Luteochromium oxalate, $[\text{Cr}(\text{NH}_3)_6]_2(\text{C}_2\text{O}_4)_3 + 4\text{H}_2\text{O}$.

Nearly insol. in cold H_2O . (Jørgensen.)

— **orthophosphate**, $\text{Cr}(\text{NH}_3)_6\text{PO}_4 + 4\text{H}_2\text{O}$.

Sl. sol. in H_2O ; easily sol. in dil. acids. (Jørgensen.)

— **sodium pyrophosphate**,

$\text{Cr}(\text{NH}_3)_6(\text{NaP}_2\text{O}_7) + 11\frac{1}{2}\text{H}_2\text{O}$.

Nearly insol. in cold H_2O ; wholly insol. in dil. $\text{NH}_4\text{OH} + \text{Aq}$. (Jørgensen.)

— **sulphate**, $[\text{Cr}(\text{NH}_3)_6]_2(\text{SO}_4)_3 + 5\text{H}_2\text{O}$.

Quite sol. in H_2O ; insol. in alcohol. (Jørgensen.)

— **sulphate chloroplatinate**,

$[\text{Cr}(\text{NH}_3)_6(\text{SO}_4)]_2\text{PtCl}_6$.

Nearly insol. in H_2O . (Jørgensen.)

Luteocobalt diamine chromium sulphocyanide.

See Diamine chromium luteocobalt sulphocyanide.

Luteocobaltic bromide, $\text{Co}(\text{NH}_3)_6\text{Br}_3$

Sol. in H_2O . Precipitated from saturated H_2O solution by dil. $\text{HBr} + \text{Aq}$. (Jørgensen, J. pr. (2) 35. 417.)

— **brompermanganate**,

$\text{Co}(\text{NH}_3)_6\text{Br}_2(\text{MnO}_4)$.

Easily sol. in H_2O . (Klobb, A. ch. (6) 12. 5.)

— **bromoplatinate**, $\text{Co}(\text{NH}_3)_6\text{Br}_3, \text{PtBr}_4 + \text{H}_2\text{O}$.

Sl. sol. in H_2O ; can be recrystallised from hot H_2O containing HBr . (Jørgensen.)

— **bromosulphate**, $\text{Co}(\text{NH}_3)_6\text{Br}(\text{SO}_4)$.

Nearly insol. in H_2O . Very sl. sol. in dil. $\text{NH}_4\text{OH} + \text{Aq}$. (Jørgensen.)

— **carbonate**, $[\text{Co}(\text{NH}_3)_6]_2(\text{CO}_3)_3 + 7\text{H}_2\text{O}$.

Efflorescent; easily sol. in H_2O .

$[\text{Co}(\text{NH}_3)_6]_2(\text{CO}_3)_3, \text{H}_2\text{CO}_3 + 5\text{H}_2\text{O}$. Less sol. in H_2O than the neutral salt. (Gibbs and Genth.)

— **chloride**, $\text{Co}(\text{NH}_3)_6\text{Cl}_3$.

Sol. in 17.09 pts. H_2O at 10.5° ; 16.81 pts. at 11.4° ; 16.48 pts. at 12° ; and more easily in hot H_2O . (F. Rose.)

100 pts. H_2O dissolve 4.26 pts. at 0° , and 12.74 pts. at 46.6° . (Kurnakoff, J. russ. Soc. 24. 629.)

Not appreciably sol. in conc. $\text{HCl} + \text{Aq}$. (Jørgensen.)

Insol. in alcohol or solutions of the alkali chlorides. (Gibbs and Genth.)

Insol. in $\text{NH}_4\text{OH} + \text{Aq}$.

Aqueous solution is pptd. by alcohol, mineral acids, or alkali chlorides.

Luteocobaltic mercuric chloride, $\text{Co}(\text{NH}_3)_6\text{Cl}_3 \cdot \text{HgCl}_2 + 1\frac{1}{2}\text{H}_2\text{O}$.

Sol. in hot H_2O . (Krok, 1870.)

By recrystallizing from hot H_2O containing HCl is converted into—

$\text{Co}(\text{NH}_3)_6\text{Cl}_3 \cdot 3\text{HgCl}_2 + \text{H}_2\text{O}$. Very sl. sol. in cold H_2O . (Jorgensen.)

$\text{Co}(\text{NH}_3)_6\text{Cl}_3 \cdot 2\text{HgCl}_2 + \frac{1}{2}\text{H}_2\text{O}$. Sol. in hot H_2O , from which it crystallizes on cooling. Insol. in cold conc. $\text{HCl} + \text{Aq}$, and is pptd. from H_2O solution by HCl or alcohol. (Carstanjen.)

Does not exist. (Jorgensen.)

$+3\text{H}_2\text{O}$. More easily sol. in cold H_2O and other solvents than the preceding comp (Carstanjen, Berlin, 1861.)

Does not exist. (Jorgensen.)

— **stannous chloride**, $2\text{Co}(\text{NH}_3)_6\text{Cl}_3 \cdot 3\text{SnCl}_2 + 10\text{H}_2\text{O} + 8\text{H}_2\text{O}$.

— **chloraurate**, $\text{Co}(\text{NH}_3)_6\text{Cl}_3 \cdot \text{AuCl}_3$.

Very sl. sol. in cold, more easily in hot H_2O containing HCl . (Gibbs and Genth, Sill. Am. J. (2) 23. 330.)

— **chloriodate**, $[\text{Co}(\text{NH}_3)_6\text{Cl}_2]_2\text{I}_4\text{O}_{11} + \text{H}_2\text{O}$.

— **chloriridite**, $\text{Co}(\text{NH}_3)_6 \cdot \text{IrCl}_3$. Insol. in boiling H_2O or dil. $\text{HCl} + \text{Aq}$. (Gibbs.)

— **chloriridate**, $2\text{Co}(\text{NH}_3)_6\text{Cl}_3 \cdot 3\text{IrCl}_4$. Insol. in H_2O . (Gibbs.)

— **chlorochromate**, $\text{Co}(\text{NH}_3)_6\text{CrO}_4\text{Cl} + 3\text{H}_2\text{O}$.

Sol. in H_2O . (Klobb, Bull. Soc. 1901, (3) 25. 1027.)

— **chlorofluoride**, $\text{Co}(\text{NH}_3)_6\text{Cl}_2\text{F}$. (Bohm, Z. anorg. 1905, 43. 339.)

— **chloropalladite**, $2\text{Co}(\text{NH}_3)_6\text{Cl}_3 \cdot 3\text{PdCl}_2$.

Easily sol. in dil. $\text{HCl} + \text{Aq}$. (Gibbs, Sill. Am. J. (2) 37. 58.)

— **chloroperchlorate**, $\text{Co}(\text{NH}_3)_6\text{Cl}(\text{ClO}_4)_2$. (Millosevich, Gazz. ch. it. 1901, 31. (2) 285.)

— **chloropermanganate**, $\text{Co}(\text{NH}_3)_6\text{Cl}_2(\text{MnO}_4)$.

Can be recrystallized from H_2O . (Klobb, C. R. 103. 384.)

— **chloropermanganate ammonium chloride**, $\text{Co}(\text{NH}_3)_6\text{Cl}_2(\text{MnO}_4) \cdot \text{NH}_4\text{Cl}$.

Easily sol. in H_2O . (Klobb.)

Luteocobaltic chloropermanganate potassium chloride, $\text{Co}(\text{NH}_3)_6\text{Cl}_2(\text{MnO}_4) \cdot \text{KCl}$.

Very easily sol. in H_2O , with decomp. into constituents; sol. in $\text{KCl} + \text{Aq}$ (Klobb.)

— **chloropermanganate sodium chloride**, $\text{Co}(\text{NH}_3)_6\text{Cl}_2(\text{MnO}_4) \cdot \text{NaCl}$.

Very sol. in H_2O . (Klobb.)

— **chloroplatinate**, $2\text{Co}(\text{NH}_3)_6\text{Cl}_3 \cdot 3\text{PtCl}_4 + 6\text{H}_2\text{O}$.

Can be recrystallized from much hot H_2O . (Gibbs and Genth.)

$+21\text{H}_2\text{O}$. (Gibbs and Genth.)

$\text{Co}(\text{NH}_3)_6\text{Cl}_3 \cdot \text{PtCl}_4 + \frac{1}{2}\text{H}_2\text{O}$. Very sl. sol. in cold, decomp. by hot H_2O into—

$2\text{Co}(\text{NH}_3)_6\text{Cl}_3 \cdot \text{PtCl}_4 + 2\text{H}_2\text{O}$. By recrystallizing from hot H_2O containing HCl this salt is converted into the above salt. (Jorgensen.)

— **chlororhodite**.

Nearly insol. in boiling H_2O or dil. acids. Sol. in conc. $\text{HCl} + \text{Aq}$ (Gibbs, Sill. Am. J. (2) 37. 57.)

— **chlororuthenate**, $2\text{Co}(\text{NH}_3)_6\text{Cl}_2 \cdot 3\text{RuCl}_4$. Sol. in dil. acids. (Gibbs.)

— **chloroselenate**, $\text{Co}(\text{NH}_3)_6\text{ClSeO}_4 + 3\text{H}_2\text{O}$. Decomp. by H_2O . (Klobb, Bull. Soc. 1901, (3) 25. 1029.)

— **chlorosulphate**, $\text{Co}(\text{NH}_3)_6\text{Cl}(\text{SO}_4)$.

Sol. in H_2O . $+3\text{H}_2\text{O}$. Only sl. sol. in cold H_2O . (Klobb, Bull. Soc. 1901, (3) 25. 1025.)

— **ammonium chlorosulphate**, $[\text{Co}(\text{NH}_3)_6]_4\text{Cl}_2(\text{SO}_4)_5 \cdot 3(\text{NH}_4)_2\text{SO}_4 + 6\text{H}_2\text{O}$.

Decomp. by H_2O . (Klobb, Bull. Soc. 1901, (3) 25. 1027.)

— **chlorosulphate chloroplatinate**, $2\text{Co}(\text{NH}_3)_6\text{Cl}(\text{SO}_4) \cdot \text{PtCl}_4$.

Very sl. sol. in cold pure H_2O . Can be recrystallized out of H_2O containing HCl . (Krok.)

— **chlorosulphate mercuric chloride**, $\text{Co}(\text{NH}_3)_6\text{Cl}(\text{SO}_4) \cdot \text{HgCl}_2$.

Scarcely sol. in pure H_2O , but can be crystallized from warm acidified H_2O . (Krok.)

— **chlorosulphite**, $\text{Co}(\text{NH}_3)_6(\text{SO}_3)\text{Cl} + 3\text{H}_2\text{O}$.

Sol. in H_2O . (Vortmann and Magdeburg, B. 22. 2637.)

— **chromate**, $[\text{Co}(\text{NH}_3)_6]_2(\text{CrO}_4)_3 + 5\text{H}_2\text{O}$.

Ppt. Sol. in hot H_2O . $[\text{Co}(\text{NH}_3)_6]_2(\text{Cr}_2\text{O}_7)_3 + 5\text{H}_2\text{O}$. Moderately sol. in hot H_2O .

Luteocobaltic chromicyanide,

Ppt. (Braun.)

— **cobalticyanide,** $\text{Co}(\text{NH}_3)_6\text{Co}(\text{CN})_6$

Ppt.

— **dithionate, basic,**Sol. in H_2O and dil. alcohol.— **ferricyanide,** $\text{Co}(\text{NH}_3)_6\text{Fe}(\text{CN})_6 + \frac{1}{2}\text{H}_2\text{O}$ Insol. in H_2O . (Braun.)— **fluoride,** $\text{Co}(\text{NH}_3)_6\text{F}_3$ Sl. sol. in cold H_2O . Nearly insol. in acids. (Bohm, Z. anorg. 1905, 43. 340.)— **hydrogen fluoride,** $\text{Co}(\text{NH}_3)_6\text{H}_3\text{F}_6$ Sl. sol. in H_2O . Decomp. by hot H_2O . (Miolati and Rossi, Real. Ac. Linc. 1896, (5) 5. II, 185.)— **hydrogen boron fluoride,**Cryst. from H_2O acidified with HF. (Miolati and Rossi.)— **molybdenyl fluoride,**Cryst. from H_2O containing HF. (Miolati and Rossi.)— **silicon fluoride,**— **titanium hydrogen fluoride,**— **tungstyl fluoride,**— **uranyl fluoride,**Can be cryst. from H_2O containing HF. (Miolati and Rossi.)— **vanadyl fluoride,**

Ppt. (Miolati and Rossi.)

— **fluoride nitrate,**

(Bohm, Z. anorg. 1905, 43. 336.)

— **hydroxide,** $\text{Co}(\text{NH}_3)_6(\text{OH})_3$

Known only in aqueous solution.

Luteocobaltic mercuric hydroxylchloride,

Ppt. Easily decomp. (Vortmann and Morgulis, B. 22. 2644.)

— **iodide,** $\text{Co}(\text{NH}_3)_6\text{I}_3$ Insol. in cold, but moderately sol. in hot H_2O .According to Jorgensen, contains HNO_3 and has the formula $\text{Co}_2(\text{NH}_3)_{12}\text{I}_4(\text{NO}_3)_2$.— **iodosulphate,** $\text{Co}(\text{NH}_3)_6\text{I}(\text{SO}_4)$ Can be recrystallized from hot H_2O . Sl. sol. in warm, nearly insol. in cold H_2O . (Krok, B. 4. 711.)— **mercuriodide,** $\text{Co}_2\text{N}_{12}\text{H}_{33}(\text{HgI})_3\text{I}_3$

Ppt. (Vortmann and Borsbach)

— **mercuriodide, basic,**Insol. in H_2O . Sl. sol. in H_2O . (Vortmann and Borsbach, B. 23. 2804.)— **nitrate,** $\text{Co}(\text{NH}_3)_6(\text{NO}_3)_3$ Sol. in H_2O . Can be recrystallized from boiling H_2O . Sol. in about 60 pts. H_2O . Insol. in conc. $\text{HNO}_3 + \text{Aq}$. (Jorgensen, J. pr. (2), 35. 417.)

Almost insol. in acids. (Rogojski, A. ch. (3), 41. 454.)

Insol. in NH_4OH , HCl , and $\text{HNO}_3 + \text{Aq}$; decomp. by $\text{H}_2\text{SO}_4 + \text{Aq}$. (Gibbs and Genth.) $\text{Co}(\text{NH}_3)_6(\text{NO}_3)_3$, HNO_3 . Decomp. by H_2O or dil. alcohol. (Jorgensen, J. pr. (2), 44. 63.)— **nitrate chloroplatinate,**Not decomp. by H_2O . (Jorgensen.)— **nitratosulphate,** $\text{Co}(\text{NH}_3)_6(\text{NO}_3)(\text{SO}_4)$ Sol. in H_2O . (Jorgensen.)— **nitrite cobaltic nitrite,**Nearly insol. in H_2O . (Jorgensen.)Much less sol. in H_2O than the corresponding roseo salt. (Gibbs.)— **diamine cobaltic nitrite,**

Ppt. (Gibbs.)

Nearly insol. in cold, sl. sol. in boiling H_2O . (Jorgensen, Z. anorg. 5. 179.)— **oxalate,** $[\text{Co}(\text{NH}_3)_6]_2(\text{C}_2\text{O}_4)_3 + 4\text{H}_2\text{O}$ Insol. in hot or cold H_2O . Easily sol. in $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$.

Luteocobaltic oxalate chloraurate,
 $2\text{Co}(\text{NH}_3)_6(\text{C}_2\text{O}_4)\text{Cl}, \text{AuCl}_3 + 4\text{H}_2\text{O}.$
 Easily sol. in hot H_2O . (Gibbs.)

— **perchlorate,** $\text{Co}(\text{NH}_3)_6(\text{ClO}_4)_3.$
 (Millosevich, Gazz. ch. it. 1901, 31, (2) 285.)

— **permanganate,** $[\text{Co}(\text{NH}_3)_6]_2(\text{MnO}_4)_3.$
 Nearly insol. in H_2O . 100 pts. H_2O at 0° dissolve only 0.072 pt. salt. Moderately sol. in hot H_2O . (Klobb, A. ch. (6) 12. 5.)

— **persulphate sulphate,**
 $[\text{Co}(\text{NH}_3)_6]_2\text{S}_2\text{O}_8(\text{SO}_4)_2.$
 Much less sol. in H_2O than the sulphate. Sol. in 641 pts. H_2O at 18.8° and in 632 pts. at 20° . Not easily sol. even in boiling H_2O . (Jørgensen, Z. anorg. 1898, 17. 459.)

— **orthophosphate,** $\text{Co}(\text{NH}_3)_6(\text{PO}_4) + 4\text{H}_2\text{O}.$
 Sl. sol. in cold H_2O . Easily sol. in dil. acids. (Jørgensen.)
 $[\text{Co}(\text{NH}_3)_6]_3(\text{PO}_4)(\text{PO}_4\text{H})_3 + 5\frac{1}{2}\text{H}_2\text{O}$ (?).
 Ppt. (Braun.)
 $[\text{Co}(\text{NH}_3)_6]_2(\text{PO}_4\text{H})_3 + 4\text{H}_2\text{O}$. Ppt. Easily sol. in very dil. $\text{HCl} + \text{Aq}$. (Jørgensen.)

— **metaphosphate.**
 Ppt.

— **pyrophosphate,** $[\text{Co}(\text{NH}_3)_6]_2\text{P}_2\text{O}_7 + 6\text{H}_2\text{O}.$
 (Gibbs, Am. Acad. Proc. 11. 29); or $\text{Co}_2(\text{NH}_3)_{12}\text{P}_2\text{O}_7(\text{ONa})_2$ (Vortmann, B. 11. 2181); or $\text{Co}(\text{NH}_3)_6(\text{P}_2\text{O}_7\text{Na}) + 11\frac{1}{2}\text{H}_2\text{O}$. (Jørgensen, J. pr. (2) 35. 438.)
 Very nearly insol. in H_2O . With H_2O at 80° it is decomp. into—
 $[\text{Co}(\text{NH}_3)_6]_4(\text{P}_2\text{O}_7)_3 + 20\text{H}_2\text{O}$. Less easily sol. than the preceding salt.

— **pyrophosphate, acid,** $\text{Co}(\text{NH}_3)_6(\text{P}_2\text{O}_7\text{H}).$
 Wholly insol. in H_2O . Somewhat sol. in dil. $\text{H}_2\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$. Easily sol. in $\text{HCl} + \text{Aq}$ (Jørgensen.)

— **sodium pyrophosphate,**
 $\text{Co}(\text{NH}_3)_6(\text{P}_2\text{O}_7\text{Na}) + 11\frac{1}{2}\text{H}_2\text{O}.$
 Ppt. Not wholly insol. in cold H_2O . Decomp. by hot H_2O . Less sol. in $\text{NH}_4\text{OH} + \text{Aq}$ than in H_2O . (Jørgensen.)
 $[\text{Co}(\text{NH}_3)_6]_4(\text{P}_2\text{O}_7)_3, 2\text{Co}(\text{NH}_3)_6(\text{NaP}_2\text{O}_7) + 39\text{H}_2\text{O}$. As above. (Jørgensen.)

— **selenate,** $[\text{Co}(\text{NH}_3)_6]_2(\text{SeO}_4)_3 + 5\text{H}_2\text{O}.$
 Very sol. in H_2O . (Klobb, Bull. Soc. 1901, (3) 25. 1028.)

— **hydrogen selenate,**
 $[\text{Co}(\text{NH}_3)_6]\text{H}(\text{SeO}_4)_2 + 2\frac{1}{2}\text{H}_2\text{O}.$
 Not decomp. by H_2O . (Klobb.)

Luteocobaltic ammonium selenate,
 $[\text{Co}(\text{NH}_3)_6]_2(\text{SeO}_4)_3, (\text{NH}_4)_2\text{SeO}_4 + 4\text{H}_2\text{O}.$

Very sol. in H_2O .
 $[\text{Co}(\text{NH}_3)_6]_2(\text{SeO}_4)_3, (\text{NH}_4)_2\text{SeO}_4 + 8\text{H}_2\text{O}.$
 Very sol. in H_2O . (Klobb.)

— **sulphocyanide,** $\text{Co}(\text{NH}_3)_6(\text{SCN})_3.$
 Decomp. by hot H_2O . (Miolati, Z. anorg. 1900, 23. 241.)

— **mercuric sulphocyanide,**
 $\text{Co}(\text{NH}_3)_6(\text{SCN})_3, 2\text{Hg}(\text{SCN})_2.$
 Decomp. by H_2O .
 Cryst. from dil. $\text{NH}_4\text{SCN} + \text{Aq}$. (Miolati.)

— **platinum sulphocyanide,**
 $[\text{Pt}(\text{SCN})_4]_3[\text{Co}(\text{NH}_3)_6(\text{SCN})_3]_1.$
 Decomp. by hot H_2O . (Miolati.)

— **silver sulphocyanide,**
 $\text{Co}(\text{NH}_3)_6(\text{SCN})_3, 2\text{AgSCN}.$
 Decomp. by hot H_2O . (Miolati.)

— **sulphate,** $[\text{Co}(\text{NH}_3)_6]_2(\text{SO}_4)_3 + 5\text{H}_2\text{O}.$
 Sl. sol. in cold, more easily in hot H_2O .
 $+ 6\text{H}_2\text{O}$. (Krok, B. 4. 711.)

— **hydrogen sulphate,**
 $\text{Co}(\text{NH}_3)_6\text{H}(\text{SO}_4)_2.$
 Decomp. by alcohol to sulphate. (Jørgensen, Z. anorg. 1898, 17. 458.)

$4[(\text{Co}_6\text{NH}_3)_2(\text{SO}_4)_3], 5\text{H}_2\text{SO}_4 + 10\text{H}_2\text{O}.$
 Very sol. in H_2O with decomp. into the normal sulphate.
 When pulverized it seems to dissociate slowly in contact with abs. alcohol. (Klobb, Bull. Soc. 1901, (3) 25. 1025.)

— **ammonium sulphate,**
 $[\text{Co}_6(\text{NH}_3)_6]_2(\text{SO}_4)_3, (\text{NH}_4)_2\text{SO}_4 + 8\text{H}_2\text{O}.$
 Sol. in H_2O with decomp. (Klobb.)

— **cerium sulphate,** $[\text{Co}(\text{NH}_3)_6]_2(\text{SO}_4)_3, \text{Ce}_2(\text{SO}_4)_3 + 1\frac{1}{2}\text{H}_2\text{O}.$
 Very sl. sol. in cold, and practically insol. in boiling H_2O . Sol. in acids. (Gibbs, Am. Ch. J. 15. 560.)
 $[\text{Co}(\text{NH}_3)_6]_2(\text{SO}_4)_3, 3\text{Ce}(\text{SO}_4)_2 + \text{H}_2\text{O}$. As above. (Wing, Sil. Am. J. (2) 49. 363.)

— **lanthanum sulphate,** $[\text{Co}(\text{NH}_3)_6]_2(\text{SO}_4)_3, \text{La}_2(\text{SO}_4)_3 + \text{H}_2\text{O}.$
 Sl. sol. in H_2O . (Wing.)

— **thallic sulphate,** $[\text{Co}(\text{NH}_3)_6]_2(\text{SO}_4)_3, \text{Tl}_2\text{O}(\text{SO}_4)_2 + 5\text{H}_2\text{O}.$
 Decomp. by cold H_2O . (Gibbs.)

— **sulphate bromaurate,**
 $\text{Co}(\text{NH}_3)_6(\text{SO}_4)(\text{AuBr}_4).$
 Very sl. sol. in H_2O with apparent decomp. Insol. in alcohol. (Jørgensen.)

Lutecobaltic sulphate chloraurate,Sl. sol. in H_2O . (Jørgensen.)

— **cobaltic sulphite**, $[\text{Co}(\text{NH}_3)_6]_2(\text{SO}_3)_3$, $\text{Co}_2(\text{SO}_3)_3 + \text{H}_2\text{O} =$ **dichrocoaltic sulphite**, $[\text{Co}(\text{NH}_3)_6]_2(\text{SO}_3)_3 + 2\text{H}_2\text{O}$, which see.

$[\text{Co}(\text{NH}_3)_6]_2(\text{SO}_3)_3$, $2\text{Co}_2(\text{SO}_3)_3 + 15\text{H}_2\text{O} =$ **diamine cobaltic sulphite**, $[\text{Co}(\text{NH}_3)_2]_2(\text{SO}_3)_2 + 5\text{H}_2\text{O}$, which see.

Luteorhodium bromide, $\text{Rh}(\text{NH}_3)_6\text{Br}_3$.Less sol. in H_2O than the chloride. (Jørgensen, J. pr. (2) 44. 51.)— **chloride**, $\text{Rh}(\text{NH}_3)_6\text{Cl}_3$.Sol. in 7 to 8 pts. H_2O at 8° . (J.)+ H_2O . Extremely efflorescent. (J.)— **rhodium chloride**, $\text{Rh}(\text{NH}_3)_6\text{Cl}_3$, RhCl_3 .Sol. in H_2O . (Jørgensen, Z. anorg. 5. 174.)— **chloroplatinate**, $2\text{Rh}(\text{NH}_3)_6\text{Cl}_3$, $3\text{PtCl}_4 + 6\text{H}_2\text{O}$.

Insol. in H_2O . Sol. in warm $\text{HCl} + \text{Aq}$. (J.)
 $\text{Rh}(\text{NH}_3)_6\text{Cl}_3$, $\text{PtCl}_4 + \frac{1}{2}\text{H}_2\text{O}$. Decomp. by H_2O into chloride and above salt. (J.)

— **nitrate**, $\text{Rh}(\text{NH}_3)_6(\text{NO}_3)_3$.

Sol. in 48 to 49 pts. H_2O at ord. temp.
 $\text{HNO}_3 + \text{Aq}$ diluted with 5 vols. H_2O ppt. the salt completely from aqueous solution. (Jørgensen, J. pr. (2) 44. 51.)

$\text{Rh}(\text{NH}_3)_6(\text{NO}_3)_3$, HNO_3 . Decomp. by H_2O or dil. alcohol. (Jørgensen, J. pr. (2), 44. 63.)

— **orthophosphate**, $\text{Rh}(\text{NH}_3)_6\text{PO}_4 + 4\text{H}_2\text{O}$.Sl. sol. in cold H_2O . (J.)— **sodium pyrophosphate**,

Nearly wholly insol. in H_2O . Wholly insol. in $\text{NH}_4\text{OH} + \text{Aq}$. (J.)

— **sulphate**, $[\text{Rh}(\text{NH}_3)_6]_2(\text{SO}_4)_3 + 5\text{H}_2\text{O}$.Sol. in 43 pts. H_2O at 20° . (J.)**Magnesium, Mg.**

Does not decomp. H_2O at ord. temp., but decomp. slowly at 100° . H_2O containing acids dissolves Mg easily. Sol. in cold dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. Difficultly sol. in cold $\text{H}_2\text{SO}_4 + \text{Aq}$. (Bunsen.) Cold nitrosulphuric acid does not attack. (Bunsen.) Cold $\text{NH}_4\text{OH} + \text{Aq}$, $\text{KOH} + \text{Aq}$, or $\text{NaOH} + \text{Aq}$ do not attack. (Maak, Phipps.) Sol. in NH_4Cl or $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ (Wöhler.)

Very rapidly sol. in $\text{K}_2\text{S}_2\text{O}_8 + \text{Aq}$ and $(\text{NH}_4)_2\text{S}_2\text{O}_8 + \text{Aq}$ with violent evolution of gas. (Levi, Gazz. ch. it. 1908, 38. (1), 533.)

Attacked by aqueous solution of KCl , NH_4Cl , NaCl , LiCl , CuCl_2 , CdCl_2 , CoCl_2 , PbCl_2 , HgCl_2 , FeCl_3 , CrCl_3 , PtCl_4 , AuCl_3 , CuSO_4 , ZnSO_4 , FeSO_4 and MnSO_4 .

Sl. attacked by hot 30% $\text{CaCl}_2 + \text{Aq}$, not by 30% $\text{MgCl}_2 + \text{Aq}$, $\text{BaCl}_2 + \text{Aq}$ and $\text{SrCl}_2 + \text{Aq}$. (Tommasi, Bull. Soc. 1899, (3), 21. 886.)

Not attacked by $\text{NH}_4\text{F} + \text{Aq}$, very slowly by solutions of BaCl_2 , CaCl_2 , KCl , $\text{K}_3\text{Fe}(\text{CN})_6$, NaNO_3 , $\text{Na}_2\text{S}_2\text{O}_3$ and Na_2HPO_4 . Solutions of $\text{Na}_2\text{C}_2\text{H}_3\text{O}_2$, $\text{Na}_2\text{B}_4\text{O}_7$, alum and chrome alum attack vigorously. Solutions of $(\text{NH}_4)_2\text{CO}_3$, NH_4Cl , $(\text{NH}_4)_2\text{C}_2\text{O}_4$, $(\text{NH}_4)_2\text{S}$ and Na_2CO_3 attack even more vigorously. (Mourmour, C. R. 1900, 130. 140.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 828.)

Insol. in liquid HF . (Franklin, Z. anorg. 1905, 46. 2.)

Somewhat sol. in liquid NH_3 , if a clean metallic surface is in contact with the pure solvent. (Kraus, J. Am. Chem. Soc. 1907, 29. 1561.)

$\frac{1}{2}$ ccm. oleic acid dissolves 0.0104 g. Mg in 6 days. (Gates, J. phys. Chem. 1911, 15. 143.)

Magnesium arsenide, Mg_3As_2 .

Decomp. on air. (Parkinson, Chem. Soc. 5. 127.)

Magnesium azoimide, $\text{Mg}(\text{N}_2)_2$.Decomp. by hot H_2O . (Curtius, J. pr. 1898, (2) 58. 292.)**Magnesium boride**, Mg_2B_3 .Sol. in $\text{HCl} + \text{Aq}$. (Winkler, B. 23. 774.)**Magnesium bromide**, MgBr_2 .Deliquescent. Very sol. in H_2O with evolution of heat.Sat. $\text{MgBr}_2 + \text{Aq}$ contains at:

—18°	+17°	48°	62°	97°
52	58	60	9	62.5
65.8% MgBr_2 .				

(Étard, A. ch. 1894, (7), 2. 541.)

See also $\text{MgBr}_2 + 6\text{H}_2\text{O}$.Sp. gr. of $\text{MgBr}_2 + \text{Aq}$ at 19.5° containing:

5	10	15	20	25 % MgBr_2
1.043	1.087	1.137	1.191	1.247

30	35	40	45	50 % MgBr_2
1.31	1.377	1.451	1.535	1.625

(Kremers, Pogg. 108. 118, calculated by Gerlach, Z. anal. 8. 285.)

 $\text{MgBr}_2 + \text{Aq}$ is sl. decomp. by evaporation.

Solubility of MgBr_2 in alcohols.

MgBr_2 forms with methyl alcohol a complex, $\text{MgBr}_2 \cdot 6\text{CH}_3\text{OH}$.

Solubility of $\text{MgBr}_2 \cdot 6\text{CH}_3\text{OH}$ in CH_3OH at t° .

(Menschutkin, Z. anorg. 1907, 52. 153.)

Sp. gr. of solution sat. at $18^\circ = 1.655$, and contains 50.8% MgBr_2 . (Mylus and Funk, B. 1897, 30. 1718.)

Sl. sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 828.)

Sol. in alcohol. Sol. in acetone. (Naumann, B. 1904, 37. 4328; Eidmann, C. C. 1899, II. 1014.)

Difficultly sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

+ $10\text{H}_2\text{O}$. Sol. in H_2O . (Panfiloff, Chem. Soc. 26. 234.)

Magnesium manganous bromide, $\text{MgBr}_2 \cdot 2\text{MnBr}_2 + 12\text{H}_2\text{O}$.

Deliquescent. (Saunders, Am. Ch. J. 14. 150.)

Magnesium mercuric bromide, $\text{MgBr}_2 \cdot \text{HgBr}_2$

Deliquescent.

$\text{MgBr}_2 \cdot 2\text{HgBr}_2$. Not deliquescent.

Magnesium molybdenyl bromide, $\text{MgBr}_2 \cdot \text{MoOBr}_3 + 7\text{H}_2\text{O}$.

(Weinland and Knoll, Z. anorg. 1905, 44. 112.)

Magnesium potassium bromide, $\text{MgBr}_2 \cdot 2\text{KBr} + 6\text{H}_2\text{O}$.

Easily sol. in H_2O , from which KBr crystallises at 75 to 87° . Alcohol dissolves out MgBr_2 . (Löwig, Repert. 29. 261.)

Formula is MgBr_2 , $\text{KBr} + 6\text{H}_2\text{O}$. Deliquescent. (Lerch, J. pr. (2) 28. 338.)

Magnesium stannic bromide.

See Bromostannate, magnesium.

Magnesium chloride, MgCl_2 .

Deliquescent. Very sol in H_2O with evolution of heat. The solution decomposes on evaporation losing HCl , when less than 6 mols. H_2O are present to 1 mol. MgCl_2 . (Casaseca, C. R. 37. 350.)

Anhydrous. Sol. in 1.857 pts H_2O at 15° . (Gerlach.)

Sol. in 1 pt cold H_2O (Fourcroy)
Sat. $\text{MgCl}_2 + \text{Aq}$ at 12.5° contains 64.8% MgCl_2 (Hassenzratz)
100 pts H_2O at 15.5° dissolve 200 pts MgCl_2 . (Ure's Dict.)

100 pts. H_2O dissolve 52.2 pts. MgCl_2 at 0° and sp. gr. of sat. solution = 1.3619 at 15° . (Engel, Bull. Soc. (2) 47. 318.)

1000 mols. H_2O dissolve 108 mols. MgCl_2 at 25°C . (Löwenherz, Z. phys. Ch. 1894, 13. 479.)

100 mols. $\text{MgCl}_2 + \text{Aq}$ contain at t° :

50.0	110.6	58 66

(Biltz and Marcus, Z. anorg. 1911, 71. 169.)

Solubility in KCl+NH₄Cl+Aq at 25° has been studied. (Biltz and Marcus, Z. anorg. 1911, 71. 178.)

When the solid phases are MgSO₄+6H₂O and MgCl₂+6H₂O, 1000 mols. H₂O dissolve 104 mols. MgCl₂ and 14 mols. MgSO₄ at 25°. (Löwenherz, Z. phys. Ch. 1894, 13. 480.)

Solubility of MgCl₂+6H₂O in (NH₄)MgCl₂+6H₂O+Aq at t°.

t°	Per 1000 mols H ₂ O	
	Mols NH ₄ Cl	Mols MgCl ₂
3 5	0.5	99.5
25.0	0.5	103.8
50.0	0.8	111.2

(Biltz and Marcus, Z. anorg. 1911, 71. 170.)

Solubility data of MgCl₂+KCl+MgKCl₃ are given by van't Hoff and Meyerhoffer. (Z. phys. Ch. 1899, 30. 64.)

+8H₂O. Pptd. from an aqueous solution which contains about 10 mols. H₂O to 1 mol. MgCl₂.

+12H₂O. Pptd. from an aq. solution which contains 1 mol. MgCl₂ in about 12.06 mols. of H₂O. (Bogorodsky, C. C. 1899, I. 246.)

Magnesium manganous chloride, MgCl₂, 2MnCl₂+12H₂O.

Deliquescent. Very sol. in H₂O and alcohol. (Saunders, Am. Ch. J. 14. 148.)

2MgCl₂, MnCl₂+12H₂O. Ppt. Deliquesces in the air. (Gossner, C. C. 1904, I. 707.)

Magnesium mercuric chloride, MgCl₂, HgCl₂+6H₂O.

Very deliquescent. More sol. than the following salt. (v. Bonsdorff, Pogg. 17. 133.)

MgCl₂, 3HgCl₂+5H₂O. Sol. in H₂O with-

out decomp. Easily sol. in alcohol. (v. Bonsdorff.)

Magnesium phosphoryl chloride, $\text{MgCl}_2 \cdot \text{POCl}_3$.

Deliquescent. Sol. in H_2O with evolution of heat and decomposition. Very sl. sol. in warm POCl_3 . (Casselmann, A. 98. 223)

Magnesium potassium chloride, $\text{MgCl}_2 \cdot 2\text{KCl} + 6\text{H}_2\text{O}$.

Deliquescent, forming a solution of MgCl_2 , while KCl remains undissolved. 100 pts. H_2O dissolve 64.5 pts. at 18.75° . 20 pts. salt dissolved in 80 pts. H_2O lower the temp. 1.75° . (Bischof.) Alcohol dissolves out MgCl_2 . Decomp. into the two salts by solution in H_2O . (Marcet.)

A sat. solution in contact with solid KCl and KCl , MgCl_2 , H_2O at 50° contains 79.5 mol. MgCl_2 and 14.9 mol. KCl per 1000 mol. H_2O . A sat. solution in contact with solid MgCl_2 , $6\text{H}_2\text{O}$ and KCl , MgCl_2 , H_2O at 50° contains 111.9 mol. MgCl_2 and 1.2 mol. KCl per 1000 mol. H_2O . (Uhlig, Chem. Soc. 1913, 104. (2) 775; C. B. Miner. 1913, 417.)

Min. *Carnallite*.

Magnesium rubidium chloride, $\text{MgCl}_2 \cdot \text{RbCl} + 6\text{H}_2\text{O}$.

Not decomp. by a small quantity of H_2O . (Feit and Kubierscky, Ch. Ztg. 16. 335.)

Magnesium sodium chloride, $\text{MgCl}_2 \cdot \text{NaCl} + 2\text{H}_2\text{O}$.

Sol. in H_2O . (Poggiale.)

Magnesium thallic chloride, $2\text{TlCl}_3 \cdot \text{MgCl}_2 + 6\text{H}_2\text{O}$.

Hydrosopic. Can be cryst. from H_2O . (Gewecke, A. 1909, 366. 224.)

Magnesium stannic chloride.

See Chlorostannate, magnesium.

Magnesium vanadium chloride, $\text{MgCl}_2 \cdot \text{VCl}_3 + \text{H}_2\text{O}$.

Difficultly sol. in H_2O and alcohol. (Stähler, B. 1904, 37. 4412.)

Magnesium zinc chloride, $\text{MgCl}_2 \cdot \text{ZnCl}_2 + 6\text{H}_2\text{O}$.

Deliquescent; sol. in H_2O . (Warner, C. N. 27. 271.)

Magnesium chloride ammonia, $\text{MgCl}_2 \cdot 4\text{NH}_3$.
Easily decomp. (Clark, A. 78. 369.)

Magnesium chloride hydroxylamine, $\text{MgCl}_2 \cdot 2\text{NH}_2\text{OH} + 2\text{H}_2\text{O}$.

100 g. of solution in H_2O contain 44.4% at 20° . (Antonow, J. Russ. Phys. Chem. Soc. 1905, 37. 478.)

Magnesium fluoride, MgF_2 .

1 l. H_2O dissolves 76 mg. MgF_2 at 18° . (Kohlrausch, Z. phys. Ch. 1904, 50. 356.)

87 mg. are dissolved in 1 l. of sat. solution at 18° . (Kohlrausch, Z. phys. Ch. 1908, 64. 168.)

Scarcely sol in acids. (Gay-Lussac and Thénard.) Insol. in excess of HF . When precipitated, is sol. in aqueous solution of ammonium and magnesium salts. Sol in dil. $\text{HNO}_3 + \text{Aq}$, from which it is precipitated by alcohol.

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Min. *Sellaite*.

Magnesium potassium fluoride, $\text{MgF}_2 \cdot \text{KF}$.

Decomp. by H_2SO_4 . (Duboin, C. R. 1895, 120. 679.)

$\text{MgF}_2 \cdot 2\text{KF}$. Decomp. by H_2SO_4 . (Duboin.)

Magnesium sodium fluoride, $\text{MgF}_2 \cdot \text{NaF}$.

Insol. in H_2O . (Geuther, J. B. 1865. 173.)

Magnesium stannic fluoride.

See Fluostannate, magnesium.

Magnesium titanium fluoride.

See Fluotitanate, magnesium.

Magnesium zirconium fluoride.

See Fluozirconate, magnesium.

Magnesium hydrosulphide, MgS_2H_2 .

Known only in aqueous solution, which decomposes on warming. Solution containing 16% MgS_2H_2 has sp. gr. 1.118 at 12° . (Divers and Shimidzu, Chem. Soc. 45. 699.)

Magnesium hydroxide, MgO_2H_2 .

MgO is sol in 55,368 pts H_2O at ordinary temp., and also at 100° . (Fresenius, A. 59. 117.)

MgO is sol in 5142 pts H_2O at 15.5° (Fyfe), in 5800 pts at 15.8° (Henry, J. Pharm 13. 2), in 7900 pts. (Kirkman), in 16,000 pts (Dalton); in 100,000–200,000 pts. cold H_2O (Bineau), in 36,000 pts boiling H_2O (Fyfe, Ed. Phil. J 5. 305.)

Calculated from electrical conductivity of $\text{MgO}_2\text{H}_2 + \text{Aq}$, 1 l. H_2O dissolves 9 mg. MgO_2H_2 at 18° . (Kohlrausch and Rose, Z. phys. Ch. 12. 241.)

Calculated from electrical conductivity, 1 l. H_2O dissolves 00.076 g. MgO_2H_2 at 18° . (Dupré and Brutus, Z. angew. Ch. 1903, 16. 55.)

Presence of CaO_2H_2 or CaSO_4 does not decrease the solubility. (Henry.) Presence of the salts of the alkali metals, especially ammonium salts, increase the solubility. Insol. in conc. Na_2SO_4 , NaNO_3 , NaCl , or $\text{KNO}_3 + \text{Aq}$. (Karsten.) Sol. in $\text{NH}_4\text{OH} + \text{Aq}$, but insol. in $\text{KOH} + \text{Aq}$. (Odling.)

Easily sol. in acids. Sol. in an aqueous solution of sugar. Boiling alcohol dissolves traces.

Solubility of MgO_2H_2 in $\text{NH}_4\text{Cl} + \text{Aq}$ at 29° .

Conc of $\text{NH}_4\text{Cl} + \text{Aq}$ (Normal)	Acid required for liberated NH_3 in 25 cc (Normal)	Normality of		G per l	
		MgO_2H_2	NH_4Cl	MgO_2H_2	NH_4Cl
0.7	0.09835	0.156	0.388	4.55	20.86

0.175	0.1108	0.0495	0.076	1.45	6.09

(Herz and Muhs.)

Completely insol. in 16% $\text{NaCl} + \text{Aq}$ in presence of 0.8 g. NaOH . (Maigret, Bull. Soc. (3) 33. 631.)

Solubility of MgO_2H_2 in $\text{NaCl} + \text{NaOH} + \text{Aq}$.

G NaCl per l	G MgO per l. of solution with added	
	0.8 g NaOH per l	4.0 g NaOH per l
125	0.07	0.03
140	0.045	...
160	None	None

(Maigret.)

Freshly pptd. $\text{Mg}(\text{OH})_2$ is sol. in $\text{Th}(\text{NO}_3)_4 + \text{Aq}$ forming a colloidal solution. (Halla, Z. anorg. 1912, 79. 262.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329; Eidmann, C. C. 1899, II, 1014.)

See also Magnesium oxide.

Min. *Brucite*. Sol. in cold citric acid + Aq . (Bolton, C. N. 37. 14.)

2 MgO , 3 H_2O . (Bender, B. 3. 932.)Magnesium iodide, MgI_2 .

Very deliquescent.

Solubility in H_2O . See $\text{MgI}_2 + 6$, and 8 H_2O .Sp. gr. of $\text{MgI}_2 + \text{Aq}$ at 19.5° containing:

5	10	15	20	25	30%	MgI_2
1.043	1.088	1.139	1.194	1.254	1.32	
35	40	45	50	55	60%	MgI_2
1.395	1.474	1.568	1.668	1.78	1.915	

(Kremers, Pogg. 111. 62, calculated by Gerlach, Z. anal. 8. 285.)

 $\text{MgI}_2 + \text{Aq}$ decomp. slightly on evaporation.Very sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 828.)

Sol. in alcohol, ether, and wood-spirit.

Solubility of MgI_2 in alcohols. MgI_2 forms with methyl alcohol a complex, $\text{MgI}_2 \cdot 6\text{CH}_3\text{OH}$.Solubility of $\text{MgI}_2 \cdot 6\text{CH}_3\text{OH}$ in CH_3OH at t° .

(Menschutkin.)

+ $6\text{H}_2\text{O}$.

Solubility of $\text{MgI}_2 \cdot 6\text{H}_2\text{O}$ in H_2O at t° .

t°	% by weight of $\text{MgI}_2 \cdot 6\text{H}_2\text{O}$	t°	% by weight of $\text{MgI}_2 \cdot 6\text{H}_2\text{O}$
43°	89.8	160°	91.7
80°	90.3	200°	93.4
120°	90 9	215°	94.3

(Menschutkin, Z. anorg. 1907, 52. 156.)

+ $8\text{H}_2\text{O}$. Sp. gr. of solution of $\text{MgI}_2 \cdot 8\text{H}_2\text{O}$ sat. at 18° containing 59.7% $\text{MgI}_2 = 1.909$. (Mylius, B. 1897, 30. 1718.)

Solubility of $\text{MgI}_2 \cdot 8\text{H}_2\text{O}$ in H_2O at t° .

t°	% by weight of $\text{MgI}_2 \cdot 8\text{H}_2\text{O}$
0	76 0
20	81 0
40	88 0
43 5	90 8

(Menschutkin.)

+ $10\text{H}_2\text{O}$. Sol. in H_2O . (Panfiloff, C. C. 1894, II. 610.)

Magnesium mercuric iodide, MgI_2 , HgI_2 .

Known only in solution.

+ $9\text{H}_2\text{O}$. Very deliquescent. (Duboin, C. R. 1906, 142. 1338.)

Very sol. in ethyl, methyl, propyl, butyl, isobutyl, amyl, isopropyl and allyl alcohols, ethyl, amyl, propyl and isobutyl acetates, ethyl cyanide and acetone. Sol. in benzyl alcohol. Decomp. by glycerine. Sl sol. in ethyl benzoate, amyl benzoate, nitrobenzene. Decomp. by ethyl oxalate. Insol. in toluene, benzene, ethyl iodide, CHCl_3 , CCl_4 , ethylene bromide, monochlor and monobrombenzene. (Duboin, A. ch. 1909, (8) 16. 276.)

MgI_2 , 2HgI_2 . Decomp. by H_2O into HgI_2 and above compound, which remains in solution. (Boullay.)

+ $7\text{H}_2\text{O}$. Sat. solution in H_2O at 17.8° has the composition MgI_2 , 1.29 HgI_2 , 11.06 H_2O . (Duboin, C. R. 1906, 142. 1338.)

Magnesium potassium iodide, MgI_2 , $\text{KI} + 6\text{H}_2\text{O}$.

Deliquescent. (Lerch, J. pr. (2) 28. 338.)

Very hygroscopic. (de Schulten, Bull. Soc. 1900 (3) 23. 158.)

Magnesium iodide ammonia, MgI_2 , 6NH_3 .

Practically insol. in liquid NH_3 . (Franklin, J. Am. Chem. Soc. 1913, 35. 1459.)

Magnesium nitride, Mg_3N_2 .

Decomp. by moist air or H_2O . Sol. in dil. or conc. $\text{HCl} + \text{Aq}$, or $\text{HNO}_3 + \text{Aq}$. Sol. in warm H_2SO_4 . Insol. in alcohol, ethyl iodide, or phosphorus oxychloride. (Briegleb and Geuther, A. 123. 236.)

Decomp. by H_2O . (Smits, R. t. c. 1894, 12. 198.)

Easily decomp. H_2O when finely powdered. (Rossel, C. R. 1895, 121. 942.)

Magnesium suboxide (?)

Decomp. H_2O . Sol. in dil. acids. (Beetz, Pogg. 127. 45.)

Magnesium oxide, MgO .

Sol. in 50,000-100,000 pts. H_2O (Bineau, C. R. 41. 510); in 55,388 pts. cold or hot H_2O (Fresenius, A. 59. 123); in 100,000-200,000 pts. H_2O (Bunsen); in 16,000 pts. H_2O at ord. temp. (Dalton), in 7900 pts. H_2O at ord. temp. (Kurwan), in 5760 pts. H_2O at 15.5° , and 36,000 pts. at 100° (Fyfe).

Calc. from electrical conductivity of MgO + Aq. 1 pt. MgO is sol. in 172,000 pts H₂O at 18°. (Dupré, Zeit angew. Ch. 1903, 16. 55.)

"Heavy" MgO is more sol. in H₂O than "light" MgO. The temp. of preparation affects the rate of solution, the rate being diminished as the temp. of preparation is increased. (Anderson, Chem. Soc. 1905, 87. 265.)

Easily sol. in acids, even in H₂SO₄ + Aq.

Solubility in P₂O₅ + Aq at 25°.

Composition of the solution		Sp. gr. 25°/25°	Solid phase

34 22	0.0030

(Robinson, J. phys. Chem. 1909, 13. 676.)

More sol. in K₂SO₄, and Na₂SO₄ + Aq than in H₂O. (Warrington.)

Insol. in liquid NH₃. (Franklin, Am. Ch. J. 1898, 20. 828.)

Sol. in methyl alcohol to form a colloidal solution containing 1.6% MgO. (Neuberg and Rewald. (Biochem. Z. 1908, 9. 547.)

Insol in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate (Naumann, B. 1904, 37. 3602.)

Insol in acetone. (Naumann, B. 1904, 37. 4329.)

Insol. in acetone and in methylal. (Eidmann, C. C. 1899, II. 1014.)

Solubility in (calcium succrate + sugar) + Aq.

1 l. solution containing 418.6 g. sugar and 34.3 g. CaO dissolves 0.30 g. MgO; containing 296.5 g. sugar and 24.2 g. CaO dissolves 0.24 g. MgO; containing 174.4 g. sugar and 14.1 g. CaO dissolves 0.22 g. MgO. (Bodenbender, J. B. 1865. 600.)

See also Magnesium hydroxide.

Min. Periclase.

Magnesium peroxide, MgO₂

Sol in 14,550 pts. H₂O at 20°. (Foregger and Philipp, J. Soc. Chem. Ind. 1906, 25. 298.)

5MgO, 2MgO₂ + 3H₂O.

3MgO, 2MgO₂ + 3H₂O.

2MgO, 2MgO₂ + 3H₂O.

4MgO, 2MgO₂ + 3H₂O.

Above salts are decomp. by H₂O.

(Carrasco, Gazz. ch. it. 1909, 39, (1) 47.)

Magnesium oxybromide, MgBr₂, 3MgO + 12H₂O.

Decomp. in the air and also by H₂O, alcohol and most reagents. (Tassilly, C. R. 1897, 125. 607.)

Magnesium oxychloride, Mg₂OCl₂ + 16H₂O.

Easily decomp. by H₂O and alcohol. (André, A. ch. (6) 3. 80.)

+6H₂O. (André.)

2MgO, HCl, 5H₂O or 3MgO, MgCl₂ + 10H₂O. Solubility determinations show that this salt is the solid phase in equilibrium at 25° with solutions of MgCl₂ and MgO containing from 10-15% MgCl₂. (Robinson, J. phys. Chem. 1909, 13. 677.)

Mg₂O₅Cl₂ + 6, 8, 14, or 17H₂O. Decomp. by H₂O, which dissolves out MgCl₂. (Bender, B. 3. 932.)

Mg₁₁O₁₀Cl₂ + 14, or 18H₂O. (Krause, A. 165. 38.)

Mg₁₀O₈Cl₂ + 24H₂O = 9MgO, MgCl₂ + 24H₂O. H₂O removes all MgCl₂ by long digesting. (Bender, A. 159. 341.)

+10, and 15H₂O. (Bender.)

Magnesium oxysulphide, Mg₂OS.

(Reichel, J. pr. (2) 12. 55.)

Magnesium phosphide, Mg_3P_2 .

Decomp. by H_2O , dil. $HCl + Aq.$ or $HNO_3 + Aq.$ (Parkinson, Chem. Soc. 5. (2) 125 and 309.)

Insol. in moderately dil. cold $HCl + Aq.$ or boiling dil. $H_2SO_4 + Aq.$ Difficultly and slowly sol. in aqua regia. (Blunt, Chem. Soc. 3. (2) 106.)

Decomp. by H_2O , HCl , conc. H_2SO_4 and by HNO_3 . (Gautier, C. R. 1899, 128. 1169.)

Magnesium silicide, Mg_2Si_3 .

Slowly decomp. by warm H_2O . Slowly decomp. by cold, rapidly by hot $NH_4Cl + Aq.$ Decomp. by cold dil. $HCl + Aq.$ (Geuther, J. pr. 95. 425.)

Mg_2Si . Decomp. by $HCl + Aq$ with residue of Si . (Wohler, A. 107. 113.)

Slowly decomp. by H_2O at ord. temp. Violently decomp. by HCl . (Lebeau and Bossuet, C. R. 1908, 146. 284.)

Magnesium sulphide, MgS .

Decomp. by H_2O . (Reichel, J. pr. (2) 12. 55.)

Sl. sol. in H_2O with rapid decomp. (Fremy.)

Sol. in acids with decomp.

Anhydrous. Crystalline. Only very sl. sol. in cold H_2O . Sol. in HNO_3 and H_2SO_4 at ord. temp. Sol. in PCl_5 and in chromyl chloride. (Mourlot, C. R. 1898, 127. 182.)

Magnesium polysulphide, MgS_x .

Known only in solution. (Reichel.)

Magnus' green salt.

See Platodiamine chloroplatinite.

Manganese, Mn.

Decomposes H_2O even in the cold, more rapidly when hot. (Regnault.)

Decomposes cold water violently. (Bunsen.)

Sol. in all dil. acids. Slowly sol. in cold H_2SO_4 . (John.)

Insol. in cold, but rapidly sol. in hot H_2SO_4 . Very easily sol. in dil. H_2SO_4 , or $HCl + Aq.$, HNO_3 , or $HC_2H_3O_2 + Aq.$ (Brunner.)

Pure manganese is unaltered in dry air, even when finely powdered. Slowly attacked by cold, quickly by hot H_2O . Very sl. attacked by cold H_2SO_4 , rapidly on warming; rapidly attacked by cold dil. $H_2SO_4 + Aq.$; violently by conc. $HNO_3 + Aq.$ and rapidly by dil. HNO_3 , HCl , $HC_2H_3O_2 + Aq.$ and also $NaOH + Aq.$ Sol. in $NH_4Cl + Aq.$ (Prelinger, W. A. B. 102, 2b. 359.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 828.)

$\frac{1}{2}$ ccm. oleic acid dissolves 0.0276 g. Mn in 6 days. (Gates, J. phys. Chem. 1911, 15. 143.)

Manganese antimonide, $MnSb$.

Sol. in hot aqua regia. (Wedekind, B. 1907, 40. 1266.)

Manganese azoimide, basic, $Mn(OH)N_3$.

Only sl. sol. in H_2O with decomp. (Curtius, J. pr. 1898, (2) 58. 293.)

Manganese bismuthide, $MnBi$.

Very sensitive towards acids with the exception of conc. HCl . (Wedekind, B. 1911, 44. 2665.)

Manganese boride, MnB .

Attacked by cold H_2O and by acids. (Jassoneix, C. R. 1904, 139. 1210.)

Easily attacked by HCl , H_2SO_4 and HF with evolution of BH_3 . (Wedekind, B. 1905, 38. 1231.)

MnB_2 . Sol. in acids, with evolution of H_2 . (Troost and Hautefeuille, A. ch. (5) 9. 65.)

Slowly decomp. by H_2O . Sol. in dil. HCl and other dil. acids with evolution of BH_3 . (Wedekind, B. 1905, 38. 1229.)

Manganous bromide, $MnBr_2$.

Anhydrous. Very deliquescent.

Sat. $MnBr_2 + Aq$ contains at:

−21°	+7°	11°	18°	38°	52°
52.1	56.5	57.0	59.1	62.7	64.2% $MnBr_2$,

64°	76°	89°	97°	105°
68.2	70.1	69.7	69.2	70.2% $MnBr_2$.

(Étard, A. ch. 1894, (7) 2. 541.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 828.)

+ H_2O . (Lescœur, A. ch. 1894, (7) 2. 104.)

+ $4H_2O$. More deliquescent than $MnCl_2$.

Melts in crystal water when heated. (Berthémot.)

+ $6H_2O$. (Kuznetsoff, C. C. 1897, II. 329.)

Manganous mercuric bromide.

Deliquescent.

Manganous palladium bromide.

See Bromopalladite, manganous.

Manganous stannic bromide.

See Bromostannate, manganous.

Manganese carbide, MnC .

(Brown, J. pr. 17. 492.)

MnC_2 .

Mn_3C . (Troost and Hautefeuille, A. ch. (5) 9. 60.)

Decomp. by H_2O and by dil. acids. (Moissan, C. R. 1896, 122. 422.)

Manganous chloride, $MnCl_2$.

Anhydrous. Deliquescent.

100 pts. H ₂ O at t° dissolve pts. MnCl ₂ :

(Suss, Z. Kryst. Min. 1912, 51. 262.)

Insol. in liquid NH₃. (Franklin, Am. Ch. J. 1898, 20. 828.)

Solutions of MnCl₂ in 75% alcohol saturated at t° contain:

t°	% MnCl ₂	t°	% MnCl ₂
10	23 1	43.75	37 5
25	36.1	87.5 (B.-pt.)	32.2

Solutions of MnCl_2 in absolute alcohol saturated at t° contain:

t°	% MnCl_2	t°	% MnCl_2
11.25	33.3	76.25	36.2
37.5	33.3	(B.-pt.)	

(Brandes, *l. c.*)

MnCl_2 crystallises from above solutions on standing.

When 15–20 vols. ether are added to 1 vol. absolute alcohol sat. with MnCl_2 , MnCl_2 is completely pptd. (Dobereiner.)

Insol. in oil of turpentine.

Sol. in urethane. (Castoro, *Z. anorg.* 1899, 20. 61.)

Sl. sol. in benzonitrile. (Naumann, *B.* 1914, 47. 1369.)

Difficultly sol. in methyl acetate. (Naumann, *B.* 1909, 42. 3790.)

Insol. in ethyl acetate. (Naumann, *B.* 1910, 43. 314.)

+ H_2O . Solubility in $\text{HCl} + \text{Aq}$ decreases with increasing amt. of HCl . It is greater when hot than cold, but is not inconsiderable even when HCl is conc. 1 l. conc. $\text{HCl} + \text{Aq}$ sat. at 12° dissolves 190 g. MnCl_2 from $\text{MnCl}_2 + \text{H}_2\text{O}$. (Ditte, *C. R.* 1881, 92. 243.)

+ $\frac{5}{3}\text{H}_2\text{O}$. $\text{MnCl}_2 + 4\text{H}_2\text{O}$ effloresces to $\text{MnCl}_2 \cdot \frac{5}{3}\text{H}_2\text{O}$ in a dry atmosphere and under low pressure and not to $\text{MnCl}_2 + 2\text{H}_2\text{O}$. (Sabatier, *Bull. Soc.* 1894, (3) 11. 547.)

+ $2\text{H}_2\text{O}$.

Solubility in H_2O at t° .

t°	Pts MnCl_2 per 100 pts. H_2O	Sp. gr. of sat solution
60	108.6	1.6108
70	110.6	1.6134
80	112.7	...

(Dawson and Williams, *Z. phys. Ch.* 1899, 31. 63.)

Sat. aqueous solution of $\text{MnCl}_2 + 2\text{H}_2\text{O}$. Contains 51.86% MnCl_2 at 62.6° . (Süss, *Z. Krist.* 1912, 51. 262.)

+ $4\text{H}_2\text{O}$. Deliquescent.

100 pts. H_2O at t° dissolve:

* Temp. of transition into $\text{MnCl}_2 + 2\text{H}_2\text{O}$. (Dawson and Williams, *Z. phys. Ch.* 1899, 31. 63.)

Sat. aqueous solution of $\text{MnCl}_2 + 4\text{H}_2\text{O}$ contains 40.23% MnCl_2 at 6° ; 44.6% MnCl_2 at 28.4° . (Süss, *Z. Krist.* 1912, 51. 262.)

100 pts. 75% alcohol dissolve at t° :

t°	Pts $\text{MnCl}_2 + 4\text{H}_2\text{O}$	t°	Pts $\text{MnCl}_2 + 4\text{H}_2\text{O}$
10	53	43.75	144
25	132	87.5	100.1

(Brandes, *l. c.*)

Insol. in absolute ether, which also does not abstract crystal H_2O .

Insol. in boiling oil of turpentine. (Brandes.)

Sol. in conc. $\text{HNO}_3 + \text{Aq}$.

+ $5\text{H}_2\text{O}$. (Muller-Erbach, *B.* 1889, 22. 3181.)

+ $6\text{H}_2\text{O}$. Pptd. from solution in 11.7 mols. H_2O at -21° . (Kuznetsoff, *C. C.* 1899, I. 246.)

Manganese trichloride, MnCl_3 .

Immediately decomp. by H_2O ; sol. in abs. ether and in abs. alcohol. (Holmes, *J. Am. Chem. Soc.* 1907, 29. 1285.)

Manganese tetrachloride, MnCl_4 .

Has not been isolated.

Sol. in H_2O , alcohol, or ether. (Nickless, *J. B.* 1865, 225.)

Composition is Mn_2Cl_6 . (Christensen, *J. pr.* (2) 34. 41.)

Manganese hydrogen tetrachloride (chloromanganic acid), $\text{MnCl}_4 \cdot 2\text{HCl}$.

Sol. in ether; decomp. by H_2O . (Franke, (2) 36. 31.)

Manganese heptachloride, MnCl_7 (?).

Decomp. by H_2O . (Dumas, *Berz. J. B.* 7. 112.)

Has the formula MnO_3Cl (?). (Aschoff, J. pr. 81. 29.)

Manganous mercuric chloride, MnCl_2 , HgCl_2 + $4\text{H}_2\text{O}$.

Deliquescent in moist air. Easily sol. in H_2O . (v. Bonsdorff.)

MnCl_2 , 2HgCl_2 . (Varet, C. R. 1896, 123, 422.)

Manganous potassium chloride, MnCl_2 , KCl + $2\text{H}_2\text{O}$.

Deliquescent. Very sol. in H_2O , but is decomp. thereby. (Remsen and Saunders, Am. Ch. J. 14. 129.)

MnCl_2 , 2KCl + $2\text{H}_2\text{O}$. (Suss, Z. Kryst. 1912, 51. 262.)

Manganic potassium chloride, MnCl_3 , 2KCl + H_2O .

Decomp. by H_2O . Sol. in HCl apparently without decomp. (Rice, Chem. Soc. 1898, 73. 261.)

MnCl_4 , 2KCl . Very easily decomp. (Meyer and Best, Z. anorg. 1899, 22. 186.)

MnCl_4 , MnCl_3 , 5KCl . Easily decomp. (Meyer and Best, Z. anorg. 1899, 22. 185.)

Manganous rubidium chloride, MnCl_2 , 2RbCl .

(Godeffroy.) + $3\text{H}_2\text{O}$. Easily sol. in H_2O . Insol. in alcohol; conc. HCl + ppt. anhydrous salt from aqueous solution. (Godeffroy, Arch. Pharm. (3) 12. 40.)

Contains only $2\text{H}_2\text{O}$. (Saunders, Am. Ch. J. 14. 139.)

Manganous thallic chloride, MnCl_2 , 2TlCl_3 + $6\text{H}_2\text{O}$.

Can be cryst. from H_2O . (Gewecke, A. 1909, 366. 224.)

Manganous stannic chloride.

See Chlorostannate, manganous.

Manganous chloride hydrazine, MnCl_2 , $2\text{N}_2\text{H}_4$.

Ppt. (Franzen, Z. anorg. 1908, 60. 285.)

Manganous chloride hydroxylamine, MnCl_2 , $2\text{NH}_2\text{OH}$.

Very stable; insol. in alcohol. (Feldt, B. 1894, 27. 405.)

Manganous fluoride, MnF_2 .

Only sol. in H_2O containing HF . (Berzelius.)

Insol. in H_2O ; decomp. by boiling with H_2O ; sl. sol. in liquid NH_3 ; easily sol. in cold or hot conc. HNO_3 and HCl ; slowly sol. in dil. HCl ; decomp. by fused K_2CO_3 , KOH , KNO_3 , and KClO_3 ; insol. in alcohol and

ether. Slowly sol. in acetic acid. (Moissan, C. R. 1900, 130. 1160.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 828.)

Insol. in acetone (Naumann, B. 1904, 37. 4329.)

Manganese trifluoride, MnF_3 .

Completely sol. in a little H_2O , but decomp. by dilution or boiling. (Berzelius.)

+ $6\text{H}_2\text{O}$. Efflorescent. (Christensen, J. pr. (2) 35. 57.)

Sol. in H_2SO_4 , HCl , HNO_3 ; decomp. by H_2O ; insol. in most organic solvents. (Moissan, C. R. 1900, 130. 626.)

Manganomanganic fluoride, Mn_3F_8 + $10\text{H}_2\text{O}$.

Sol. in a little H_2O , but decomp. by dilution (Nicklès, C. R. 67. 448.)

Manganese tetrafluoride, MnF_4 .

Not isolated. Sol. in absolute alcohol or ether; decomp. by H_2O . (Nicklès, C. R. 65. 107.)

Probably does not exist. (Christensen, J. pr. (2) 35. 161.)

Manganese heptafluoride, MnF_7 (?).

Sol. in H_2O with decomp. (Wöhler.)

Manganese sesquifluoride with MF.

See also Fluomanganate, M.

Manganic nickel fluoride, 2NiF_2 , Mn_2F_6 + $8\text{H}_2\text{O}$.

(Christensen, J. pr. (2) 34. 41.)

Manganic potassium fluoride, Mn_2F_6 , 4KF + $2\text{H}_2\text{O}$.

Decomp. by H_2O . Sol. in conc. HCl + Aq, dil. HNO_3 + Aq, conc. H_2SO_4 + Aq, H_3PO_4 + Aq, $\text{H}_2\text{C}_2\text{O}_4$ + Aq, $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$ + Aq, and dil. HF + Aq. (Christensen, J. pr. (2) 35. 72.)

MnF_4 , 2KF . Difficultly sol. in H_2O . Decomp. by much H_2O . (Nicklès, C. R. 65. 107.)

True composition is Mn_2F_6 , 4KF , also with $2\text{H}_2\text{O}$. (Christensen, J. pr. (2) 34. 41.)

MnF_4 , 4KF . (Nicklès.)

See also Fluomanganate, potassium.

Manganic rubidium fluoride.

See Fluomanganate, rubidium.

Manganic silver fluoride, 2AgF , Mn_2F_6 + $14\text{H}_2\text{O}$.

Sol. in HF + Aq. (Christensen, J. pr. (2) 34. 41.)

Manganic sodium fluoride, Mn_2F_6 , 4NaF .

Decomp. by much H_2O . Not as sol. in HF + Aq as the K salt. (Christensen, J. pr. (2) 35. 161.)

Manganomanganic thalious fluoride, 5TlF , 2MnF_3 , MnF_2 .

Decomp. by H_2O .
 Sl. sol. in dil., easily sol. in conc. HF .
 Sol. in conc. HCl , dil. HNO_3 , and cold or hot conc. H_2SO_4 .
 Sol. in warm H_2O_2 containing H_2SO_4 .
 Sol. in dil. tartaric and oxalic acids. (Ephraim, B. 1909, 42. 4458.)

Manganous stannic fluoride.

See Fluostannate, manganous.

Manganic zinc fluoride, 2ZnF_2 , $\text{Mn}_2\text{F}_8 + 8\text{H}_2\text{O}$

See Fluomanganate, zinc.

Manganous zirconium fluoride.

See Fluozirconate, manganous.

Manganous fluoride ammonia, 3MnF_2 , 2NH_3 .

(Moissan, C. R. 1900, 130. 1161.)

Manganous hydroxide, MnO_2H_2 .

2.15×10^{-5} g.-mol. are sol. in 1 l. H_2O at 18° . (Sackur, Z. Elektrochem, 1909, 15. 846.)

Solubility in $\text{H}_2\text{O} = 0.6 \times 10^{-4}$ g. mol. (Herz, Z. anorg. 1899, 22. 284.)

1 l. H_2O dissolves 2×10^{-4} mol. MnO_2H_2 . (Tamm, Z. phys. Ch. 1910, 74. 500.)

Very sl. sol in H_2O or alkalis. (Fresenius.) Easily sol. in acids. Insol. in NaOH , or $\text{KOH} + \text{Aq}$. Sol. in NH_4 salts + Aq . Insol. in $\text{NH}_4\text{OH} + \text{Aq}$. Sol. in $\text{NaOH} + \text{Aq}$ in presence of glycerine. (Donath, Dingl. 229. 542.)

Not pptd. by $\text{NH}_4\text{OH} + \text{Aq}$ in presence of $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$; by $\text{KOH} + \text{Aq}$ in presence of cane sugar; by $\text{KOH} + \text{Aq}$ in presence of Na citrate.

Solubility of MnO_2H_2 in organic Na salts + Aq . (0.5 normal.)

Na tartrate, 0.0068 mol. per l.

Na malate, 0.0042 " " "

Na citrate, 0.0126 " " "

(Tamm, Z. phys. Ch. 1910, 74. 496.)

Min. *Pyrochroite*.

Manganomanganic hydroxide, Mn_3O_4 , $x\text{H}_2\text{O}$.

Not attacked by boiling $\text{NH}_4\text{Cl} + \text{Aq}$. Behaves towards acids as Mn_2O_3 .

Manganic hydroxide, Mn_2O_3 , H_2O .

Insol. in hot or cold dil. $\text{H}_2\text{SO}_4 + \text{Aq}$.

Sol. in conc. H_2SO_4 at somewhat over 100° . (Carius.)

Sol. in tartaric, oxalic, and malic acids, with subsequent decomp. Insol. in formic, acetic, benzoic, or hippuric acids. (Hermann, Pogg. 74. 303.)

Insol. in $\text{NH}_4\text{Cl} + \text{Aq}$. Insol. in cane sugar + Aq . (Pescher.)

Min. *Manganite*. Sol. in conc. $\text{HCl} + \text{Aq}$. Sl. sol. in conc. H_2SO_4 .

Manganese dihydroxide, MnO_2 , H_2O .

See Manganous acid.

Manganous iodide, MnI_2 .

Anhydrous. Nearly insol in AsBr_3 . (Walden, Z. anorg. 1902, 29. 374.)

Sol. in POCl_3 . (Walden, Z. anorg. 1900, 25. 212.)

Moderately sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 828.)

+ $4\text{H}_2\text{O}$. Very deliquescent, and sol. in H_2O . (Kuznetzoff, C. C. 1900, II. 525.)

+ $9\text{H}_2\text{O}$. (Kuznetzoff.)

Manganous mercuric iodide, MnI_2 , $2\text{HgI}_2 + 6\text{H}_2\text{O}$.

Decomp. by H_2O . Sol. without decomp. in alcohol and acetone. (Dobroserdoff, C. C. 1901, I. 363.)

3MnI_2 , $5\text{HgI}_2 + 20\text{H}_2\text{O}$.

A sat. solution in H_2O at 17° has composition 1.4 MnI_2 , $\text{HgI}_2 + 10.22 \text{H}_2\text{O}$ and sp. gr. = 2.98. (Duboin, C. R. 1906, 142. 1838.)

Very sol. without decomp. in methyl, propyl, isopropyl, isobutyl, and allyl alcohols, ethyl acetate and ethyl cyanide. Somewhat less sol. in amyl, propyl and isobutyl acetates, acetone, acetic acid, formic acid (with ppt. of HgI_2), ethyl benzoate, ethyl oxalate, butyl alcohol, amyl alcohol and nitrobenzene. Sl. decomp. by glycerine. Insol. in ethyl nitrate, ethylene bromide, toluene, benzene, CHCl_3 , CCl_4 , ethyl iodide, monobrom- and monochlorobenzene. (Duboin, A. ch. 1909, (8), 16. 278.)

Manganese nitride, Mn_3N_2 .

Sol. in HNO_3 only on heating. $\text{HCl} + \text{Aq}$ dissolves only in presence of Pt. Aqua regia dissolves slowly. H_2SO_4 acts only when hot and conc. Insol. in acetic acid. (Prelinger, M. 1894, 15. 398.)

Mn_3N_2 . Sol. in $\text{NH}_4\text{Cl} + \text{Aq}$ and $\text{NH}_4\text{OH} + \text{Aq}$; insol. in HCl ; sol. in $\text{HNO}_3 + \text{Aq}$. with decomp. (Prelinger, M. 1894, 15. 398.)

Mn_7N_2 . Easily attacked by acids and alkalis. (Wedekind, B. 1908, 41. 3772.)

Manganous oxide, MnO .

Insol. in H_2O . Easily sol. in acids. Readily sol. in $\text{NH}_4\text{Cl} + \text{Aq}$.

Manganic oxide (Manganese sesquioxide), Mn_2O_3 .

Decomp. by boiling with $\text{HNO}_3 + \text{Aq}$ into MnO , which dissolves, and MnO_2 , which is insol. (Berthier); also by boiling with dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. (Turner.) Sol. in hot conc. H_2SO_4 or $\text{HCl} + \text{Aq}$. Sol. in cold $\text{HCl} + \text{Aq}$ without decomp. If perfectly pure, is insol. in dil. $\text{H}_2\text{SO}_4 + \text{Aq}$, but if it contains any MnO , it dissolves. (Rose.) Insol. in boiling $\text{NH}_4\text{Cl} + \text{Aq}$.

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Solubility in (calcium sucrate+sugar)+Aq.

1 l. solution containing 418.6 g. sugar and 34.3 g. CaO dissolves 0.50 g. Mn_2O_3 ; containing 296.5 g. sugar and 24.2 g. CaO dissolves 0.37 g. Mn_2O_3 ; containing 174.4 g. sugar and 14.1 g. CaO dissolves 0.32 g. Mn_2O_3 . (Bodenbender, J. B. 1865. 600.)

Min. *Braunite*.

Colloidal. Solution in H_2O containing 0.21 g. to a litre is precipitated by KNO_3 +Aq (1:1000); K_2SO_4 +Aq (1:1100); $(NH_4)_2SO_4$ +Aq (1:1500); $NaCl$ +Aq (1:1580); $MgSO_4$ +Aq (1:40,983); $BaCl_2$ +Aq (1:58,823); $MnSO_4$ +Aq (1:147,929); $(NH_4)_3Al(SO_4)_4$ +Aq (1:362,318); $K_2Cr_2(SO_4)_4$ +Aq (1:416,668); HCl +Aq (1:61,350); $HC_2H_3O_2$ (1:17,262); H_2SO_4 (1:62,500). (Spring and de Boeck, Bull. Soc. (2) 48. 170.)

Manganomanganic oxide, Mn_3O_4 .

Insol. in H_2O . Boiling dil. or conc. HNO_3 +Aq dissolves out MnO (Berthier); also boiling dil. H_2SO_4 +Aq. (Turner.) Sol. in hot HCl +Aq. (Otto.) NH_4Cl +Aq dissolves out MnO (Rose.) Sol. without decomp. in hot very conc. H_3PO_4 +Aq, and cold conc. H_2SO_4 , HCl , oxalic, and tartaric acids+Aq.

Min. *Hausmannite*.

Manganese dioxide, MnO_2 .

Min. *Pyrolusite*. Insol. in H_2O . Very slowly sol. in conc. H_2SO_4 with evolution of O_2 . Sol. in cold HCl +Aq; decomp. by hot HCl +Aq. Sol. in aqua regia. Sol. in SO_2 +Aq or N_2O_5 +Aq. (Karsten.)

Insol. in HNO_3 , or dil. H_2SO_4 +Aq, except in presence of organic reducing substances. Decomp. by citric acid, and more easily by oxalic acid. (Bolton.)

Sl. sol. in hot conc., but insol. in dil. HNO_3 +Aq. (Deville.) When pure it is insol. in cold dil. H_2SO_4 +Aq, but if a small quantity of MnO is added much MnO_2 dissolves. (Carius.)

Not decomp. by boiling NH_4Cl +Aq.

Easily sol. in a mixture of nitrososulphuric acid and conc. HCl +Aq. (Bornträger, Rep. anal. Ch. 1887. 741.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329; Eidmann, C. C. 1899, II. 1014.)

Manganese oxides, Mn_2O_3 , Mn_2O_7 , etc.

See *Manganite*, *manganous*.

Manganese trioxide, MnO_3 .

Deliquescent. Sol. in H_2O , with subsequent decomp. Decomp. by ether. Sol. in conc. H_2SO_4 . (Franke, J. pr. (2) 36. 31.)

Manganese tetroxide, MnO_4 (?).

Sl. sol. in H_2O with decomp. Decomp. by H_2SO_4 or ether. (Franke, J. pr. (2) 36. 166.)

Manganese heptoxide, Mn_2O_7 .

Very unstable; takes up H_2O from air. Sol. in H_2O with evolution of heat and rapid decomposition. Sol. in conc. H_2SO_4 without decomp. (Aschoff.)

Manganese oxychloride, $3Mn_2O_3$, $MnCl_2$.

Insol. in H_2O . (Saint-Gilles, C. R. 55. 329.) $MnCl_2$, MnO (?). (Gorgeu, A. ch. (6) 4. 515.)

MnO_3Cl . See *Manganyl chloride*.

Manganic oxyfluoride, $MnOF_2$.

Sol. in absolute ether.

$MnOF_2$, $2HF$ =fluoxymanganic acid. (Nicklès, C. R. 659. 107.)

Manganic oxyfluoride potassium fluoride.

See *Fluoxymanganate*, *potassium*.

Manganic sesquioxifluoride potassium fluoride.

See *Sesquifluoxymanganate*, *potassium*.

Manganous oxydide, MnI_2 , $MnO+6H_2O$.

Sol. in H_2O with decomp. (Kuznetsoff, C. C. 1913, I. 1659.)

Manganese oxysulphide, MnO , MnS .

Sol. in acids. (Arfvedson, Pogg. 1. 50.)

Manganese phosphide, Mn_3P_2 .

Insol. in dil. acids; sol. in hot conc. HNO_3 . (Wedekind, B. 1907, 40. 1268.)

Sol. in aqua regia; insol. in HNO_3 . (Granger, C. R. 1897, 124. 191.)

Mn_3P_2 . HCl +Aq. dissolves out Mn_3P_2 and leaves Mn_7P_2 , which is sol. in HNO_3 +Aq. (Wöhler and Merkel, A. 86. 371.)

Not attacked by boiling H_2O or by HCl . Easily sol. in warm HNO_3 , or aqua regia. (Wedekind and Veit, B. 1907, 40. 1268.)

αMn_3P_2 , γMn_4P_2 . Easily sol. in aqua regia; partly sol. in H_2SO_4 or HCl +Aq. (Struve, J. pr. 79. 321.)

Mn_2P_2 . Insol. in HCl +Aq. Sol. in HNO_3 +Aq. (Schrötter, W. A. B. 1849, 1. 305.)

Manganous phosphoselenide, MnS , P_2Se .

Insol. in H_2O . Sol. in HCl +Aq or HNO_3 +Aq. Insol. in cold, sl. decomp. by hot alkalis +Aq. (Hahn, J. pr. 93. 436.)

$2MnSe$, P_2Se_3 . Insol. in cold, slowly sol. in hot HCl +Aq. Not decomp. by alkalis.

$2MnSe$, P_2Se_3 . Easily decomp. by acids. (Hahn.)

Manganese selenide, $MnSe$.

Decomp. by H_2O and min. acids. (Wedekind, B. 1911, 44. 2667.)

Crysl. Sl. decomp. by H_2O at 100° ; easily sol in dil acids. Fonczes-Diacon, C. R. 1900, 130. 1025.)

Manganese silicide.

Sol. in HF; only very sl. sol. in other acids. (Warren, C. N. 1898, 78. 319.)

Mg_2Si_2 . Sol. in $HCl + Aq$ with evolution of SiH_4 . (Wöhler, A. 106. 54.)

Mn_2Si . Insol. in H_2O . (Vigouroux, C. R. 1895, 121. 772.)

Easily sol. in HF. (Wedekind, B. 1911, 44. 2668.)

Easily sol. in dil. acids, HF and HNO_3 . Insol. in $KOH + Aq$. (Vigouroux, A. ch 1897, (7) 12. 179.)

Easily sol. in HF when heated; in HCl when red hot. Sol. in dil. min. acids with decomp. (Vigouroux, C. R. 1895, 121. 772.)

Insol. in HNO_3 , sol in dil. or conc. HCl . Slowly decomp. by alkali hydroxides. (Lebeau, C. R. 1903, 136. 91.)

Mn_2Si . Easily sol. in molten alkali. (Vigouroux, C. R. 1895, 121. 772.)

$MnSi$. Slowly attacked by hot conc. HCl . Not acted upon by dil. or conc. HNO_3 or H_2SO_4 . (Lebeau, C. R. 1903, 136. 91.)

$MnSi_2$. Not attacked by HNO_3 or H_2SO_4 . Easily sol. in cold HF; decomp. by conc. alkalis + Aq . (Lebeau, C. R. 1903, 136. 233.)

Manganous sulphide, MnS .

Anhydrous. Insol. in H_2O . Sol. in weak acids, even in acetic acid.

1 l. H_2O dissolves 71.60×10^{-6} moles MnS at 15° . (Weigel, Z. phys. Ch. 1907, 58. 294.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Min. *Alabandite*. Sol. in $HCl + Aq$.

+ $\frac{1}{2}H_2O$. *Green.* Decomp. by boiling with H_2O . Sol. in weak acids, as acetic or sulphurous acid. Very sl. sol. in $(NH_4)_2S + Aq$. (Wackenroder.)

Sol. in NH_4 salts + Aq . 100 ccm. of sat. $NH_4Cl + Aq$ at 12° dissolve 0.43 g. MnS . (Clermont and Guyot, C. R. 85. 37.)

+ $\frac{3}{2}H_2O$. *Flesh-colored.* Less sol. in NH_4 salts, or acetic acid + Aq than the preceding salt. 100 ccm. of sat. $NH_4Cl + Aq$ at 12° dissolve 0.088 g. (Clermont and Guyot.)

Neither green nor flesh-coloured MnS contains H_2O . (Antony and Donnini, Gazz. ch. it. 23. 560.)

MnS is not pptd. in presence of alkali citrates, tartrates, or grape sugar; cane or milk sugar do not prevent precipitation. (Spiller.) Not pptd. in presence of $Na_4P_2O_7$. (Rose.)

Manganese sulphide, Mn_3S_4 .

Decomp. by H_2O . Sol. in cold dil. acids. (Gautier and Hallopeau, C. R. 1889, 108. 809.)

Manganese disulphide, MnS_2 .

(Senarmont, J. pr. 51. 385.)

Min. *Hauerite*. Decomp. by hot $HCl + Aq$ with separation of S.

Manganous phosphorus sulphide, MnS, P_2S_5 .

Sol. in $HCl + Aq$ with decomp. (Berzelius, A. 46. 147.)

Manganous potassium sulphide, $3MnS, K_2S$.

Nearly insol. in water, alcohol, or ether. Easily sol. in acids. (Volcker, A. 59. 35.)

Manganous sodium sulphide, $3MnS, Na_2S$.

Insol. in H_2O , alcohol, or ether. Sol. in dil. acids, and $SO_2 + Aq$. (Volcker.)

$2MnS, Na_2S$. Decomp. by H_2O . (Schneider, Pogg. 151. 446.)

Manganese telluride, $MnTe$.

Decomp. by H_2O and min. acids. (Wedekind, B. 1911, 44. 2667.)

Manganic acid, H_2MnO_4 .

Known only in solution, which decomposes rapidly. (Franke, J. pr. (2) 36. 31.)

Barium manganate, $BaMnO_4$.

Insol. in H_2O ; decomp. by acids. (Mitscherlich.)

Didymium manganate, $Di_2(MnO_4)_3$.

Insol. in H_2O . Sol. in $H_2SO_4 + Aq$. (Frerichs and Smith, A. 191. 331.)

Does not exist. (Cleve, B. 11. 912.)

Lanthanum manganate, $La_2(MnO_4)_3$.

Ppt. (Frerichs and Smith, A. 191. 331.)

Does not exist. (Cleve, B. 11. 912.)

Manganese manganate, $Mn_2O_3, MnO_3 = 3MnO_2$.

See *Manganese dioxide*.

Lead manganate, $PbMnO_4 + 2H_2O$.

Ppt. (Jolles, C. C. 1888. 58.)

Potassium manganate, K_2MnO_4 .

Sol. in water containing alkalies without decomp., but decomp. by pure H_2O . Can be recrystallised from dil. $KOH + Aq$.

Solubility in KOH + Aq at t°.			Permanganic acid.
Solvent	t°	Mol K_2MnO_4 in 1 l of sat solution	See Permanganic acid.
2-N KOH	0	0.907	Manganicyanhydric acid , $H_3Mn(CN)_6$
	10	1.013	Not known in the free state.
	20	1.140	Barium manganicyanide , $Ba_3[Mn(CN)_6]_2$.
	30	1.252	Sol. in H_2O . (Fittig and Eaton.)
	45	1.424	Barium potassium manganicyanide barium cyanide , $2KBaMn(CN)_6, 3Ba(CN)_2 + 8H_2O$.
4-N KOH	0	0.554	Decomp. by H_2O . (Lehmann, Dissert. 1898.)
	17	0.681	Calcium manganicyanide , $Ca_3[Mn(CN)_6]_2$.
	25	0.733	Sol. in H_2O . (Fittig and Eaton.)
	30	0.772	Potassium manganicyanide , $K_3Mn(CN)_6$.
	40	0.852	Sol. in H_2O . (Christensen, J. pr. (2) 31. 163.)
	45	0.889	Sodium manganicyanide , $Na_3Mn(CN)_6 + 2H_2O$.
	51	0.938	Sol. in H_2O . (Fittig and Eaton.)
	60	1.003	Manganimanganic acid.
	70	1.074	Barium manganimanganate , $Ba_3Mn_2O_8 + H_2O$.
	80	1.143	Insol. in H_2O . Identical with Rosenstiehl's "basic barium manganate," (J. Pharm. 1864, 46. 344). (Auger and Billy, C. R. 1904, 138. 501.)
6-N KOH	0	0.155	Lithium manganimanganate , $Li_3Mn_2O_8 + H_2O$.
	15	0.224	Insol. in H_2O . (Auger and Billy.)
	23	0.261	Manganiperiodic acid , H_2O, Mn_2O_3, I_2O_7 .
	30	0.303	Wholly insol. in H_2O , in hot dil. or conc. HNO_3 and in hot dil. H_2SO_4 . (Price, Am. Ch. J. 1903, 30. 182.)
	40	0.362	Potassium manganiperiodate , K_2O, Mn_2O_3, I_2O_7 .
	45	0.388	Apparently entirely insol. and unchanged when boiled with H_2O , dil. or conc. HNO_3 , or dil. H_2SO_4 . (Price.)
	60	0.469	Sodium manganiperiodate , Na_2O, Mn_2O_3, I_2O_7 .
	70	0.528	Apparently insol. and unchanged when treated with boiling H_2O , boiling dil. or conc. HNO_3 and boiling dil. H_2SO_4 . (Price.)
	80	0.587	Manganocyanhydric acid , $H_4Mn(CN)_6$.
8-N KOH	0	0.063	Most easily decomp. Sl. sol. in alcohol.
	10	0.070	Insol. in ether. (Descamps, A. ch. (5) 24. 185.)

(Sackur, Z. Elektrochem. 1912, 18. 724.)

Sol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Potassium manganate permanganate, $K_2MnO_4, KMnO_4$.

Sol. without decomp. in 20% KOH + Aq. (Gorgeu, A. ch. (3) 61. 355.)

Sodium manganate, $Na_2MnO_4 + 10H_2O$.

Sol. in H_2O , with partial decomp. (Genetele, J. pr. 82. 58.)

Strontium manganate, $SrMnO_4$.

Insol. in H_2O . (Fromherz.)

Ammonium cuprous manganocyanide,
 $(\text{NH}_4)_2\text{Cu}_2\text{Mn}(\text{CN})_6$.

Sol. in H_2O ; decomp. by acids and alkalis; very unstable. (Straus, Z. anorg. 1895, 9. 14.)

Ammonium manganous manganocyanide,

Sol. in $\text{NH}_4\text{CN} + \text{Aq.}$ (Fittig and Eaton, A. 145. 157.)

Barium manganocyanide, $\text{Ba}_2\text{Mn}(\text{CN})_6$.

Sol. in cold H_2O . (Fittig and Eaton.)

Calcium manganocyanide, $\text{Ca}_2\text{Mn}(\text{CN})_6$.

Very deliquescent. Sol. in H_2O ; insol. in alcohol. (Fittig and Eaton.)

Cuprous potassium manganocyanide,

Sol. in H_2O with sl. decomp. Easily decomp. by acids and alkalis. (Straus, Z. anorg. 1895, 9. 12.)

Cuprous sodium manganocyanide,

Sol. in H_2O with only sl. decomp. Partially decomp. by acids. (Straus.)

Manganous potassium manganocyanide,

Ppt. Sol. in $\text{KCN} + \text{Aq.}$

Potassium manganocyanide, $\text{K}_4\text{Mn}(\text{CN})_6 + 3\text{H}_2\text{O}$.

Very efflorescent. Sol. in H_2O ; decomp. by boiling.

Potassium manganocyanide chloride,

Easily sol. in H_2O . (Descamps.)

Sodium manganocyanide, $\text{Na}_4\text{Mn}(\text{CN})_6 + 8\text{H}_2\text{O}$.

Very efflorescent. Easily sol. in H_2O . (Fittig and Eaton.)

Strontium manganocyanide, $\text{Sr}_2\text{Mn}(\text{CN})_6$.

As the Ba comp. (Descamps.)

Permanganomolybdic acid.

See Permanganomolybdic acid.

Permanganotungstic acid.

See Permanganotungstic acid.

Manganosulphuric acid.

See Sulphate, manganic.

Manganous acid, $\text{H}_2\text{MnO}_3 = \text{MnO}_2, \text{H}_2\text{O}$.

Insol. in H_2O . (Franke, J. pr. (2) 36. 451.)
 $2\text{MnO}_2, \text{H}_2\text{O}$ (?). Min. Wad.

Barium manganite, $\text{BaO}, 5\text{MnO}_2$.

Sl. sol. in $\text{HCl} + \text{Aq.}$, less sol. in $\text{HNO}_3 + \text{Aq.}$ (Rissler, Bull. Soc. (2) 30. 111.)

$\text{BaO}, 7\text{MnO}_2$. (Rousseau, C. R. 104. 786.)

$\text{BaO}, 2\text{MnO}_2$. Insol. in H_2O .

BaO, MnO_2 . Insol. in H_2O . (Rousseau, C. R. 102. 425.)

$\text{Ba}(\text{H}_3\text{Mn}_2\text{O}_{10})_2$. (Morawski and Stingl, J. pr. (2) 18. 92.)

Calcium manganite, $\text{CaO}, 5\text{MnO}_2$.

Easily sol. in $\text{HCl} + \text{Aq.}$, less in $\text{HNO}_3 + \text{Aq.}$ (Rissler.)

$3\text{CaO}, \text{MnO}_2$ (?). Decomp. by H_2O . Sol. in $\text{HCl} + \text{Aq.}$ with evolution of Cl. Scarcely sol. in cold HNO_3 , but sol. on heating. (Dufau, A. ch. 1897, (7) 12. 275.)

$2\text{CaO}, \text{MnO}_2$. Sol. in dil. min. acids. (Rousseau, C. R. 116. 1060.)

$\text{CaO}, 2\text{MnO}_2$. (Rousseau, C. R. 102. 425.)

$\text{CaO}, 3\text{MnO}_2$.

CaO, MnO_2 . Sol. in fuming $\text{HCl} + \text{Aq.}$, but not in dil. $\text{HNO}_3 + \text{Aq.}$ (Rousseau, C. R. 116. 1060.)

Chromium manganite, $\text{Cr}_2\text{O}_3, 3\text{MnO}_2 = \text{Cr}_2(\text{MnO}_3)_3$.

Slowly decomp. by acids. (Gröger, Z. anorg. 1905, 44. 458.)

Cobaltous manganite, $\text{CoO}, \text{MnO}_2 + 2\text{H}_2\text{O}$.

Ppt. (Salinger, Z. anorg. 1903, 33. 352.)

$+4\text{H}_2\text{O}$. Ppt. (Salinger.)

Cobalt copper manganite, $\text{CoO}, \text{CuO}, 2\text{MnO}_2 + 4\text{H}_2\text{O}$.

Min. *Asbolite*. Sol. in $\text{HCl} + \text{Aq.}$ with evolution of Cl.

Cupric manganite, $\text{CuO}, 4\text{MnO}_2$.

(Gorgeu, Bull. Soc. 1903, (3) 29. 1167.)

$\text{CuO}, 8\text{MnO}_2 + 3\text{H}_2\text{O}$. (Baubigny, C. R. 1897, 124. 955.)

Cupric manganous manganite, $4\text{CuO}, \text{MnO}, 7\text{MnO}_2 + 8\text{H}_2\text{O}$.

Ppt. (Salinger, Dissert. 1902.)

$\text{Mn}_2\text{O}_3, 3\text{CuO}$. Sol. in $\text{HCl} + \text{Aq.}$ (Schneider, Am. Ch. J. 9. 269.)

Lead manganite, $\text{PbO}, 5\text{MnO}_2$.

Not attacked by conc. acids; sol. in aqua regia. (Rissler.)

Magnesium manganite, $2\text{MgO}, \text{MnO}_2$.

(Lemoine, Ann. Min. (7) 3. 5.)

$+x\text{H}_2\text{O}$. (Vollard.)

Manganous manganite, $\text{Mn}_2\text{O}_3 = \text{MnO}, 2\text{MnO}_2$.

(Reissig, A. 103. 27.)

$\text{Mn}_2\text{O}_{11} = \text{MnO}, 5\text{MnO}_2$. (Veley, Chem. Soc. 38. 581.)

$3\text{MnO}_2, 2\text{MnO}$. Decomp. by dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. (Franke, J. pr. (2) 36. 166.)
 $3\text{MnO}_2, \text{MnO} + \text{H}_2\text{O}$. Min. *Variscite*.

Manganous zinc manganite, $\text{MnO}, \text{ZnO}, \text{MnO}_2$.

(Gorgeu, Bull. Soc. 1903, (3) 29. 1168.)

$2\text{MnO}, \text{ZnO}, 2\text{MnO}_2$. (Gorgeu.)

Potassium manganite, $\text{K}_2\text{O}, 2\text{MnO}_2$

Insol. in H_2O .

$\text{K}_2\text{O}, 5\text{MnO}_2$.

$\text{K}_2\text{O}, 7\text{MnO}_2 + 3\text{H}_2\text{O}$.

$\text{K}_2\text{O}, 8\text{MnO}_2 + 3\text{H}_2\text{O} = \text{KH}_3\text{Mn}_4\text{O}_{10}$. (Morawski and Stingl, J. pr. (2) 18. 91.)

Does not exist. (Wright and Menke, Chem. Soc. 37. 22.)

$\text{K}_2\text{O}, 10\text{MnO}_2$.

$\text{K}_2\text{O}, 16\text{MnO}_2 + 6\text{H}_2\text{O}$. Sol. in conc. $\text{HCl} + \text{Aq}$. (Rousseau, C. R. 114. 72.)

Silver manganite, $\text{AgH}_3\text{Mn}_4\text{O}_{10}$.

(Morawski and Stingl, J. pr. (2) 18. 92.)

Ag_2MnO_3 . Ppt. (Gorgeu, C. R. 110. 958.)

Silver (argentous) manganite, $\text{Ag}_4\text{O}, \text{Mn}_2\text{O}_3$ (?).

Insol. in cold dil. $\text{HNO}_3 + \text{Aq}$, and separates Mn_2O_3 on warming. Insol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Rose, Pogg. 101. 229.)

Silver (argentoargentic) manganite, $\text{Ag}_4\text{O}, 2\text{Ag}_2\text{O}, \text{Mn}_2\text{O}_3$ (?).

(Rose)

Sodium manganite, $\text{Na}_2\text{O}, 5\text{MnO}_2$.

Insol. in H_2O . (Rousseau, C. R. 103. 261.)

$\text{Na}_2\text{O}, 12\text{MnO}_2$. Insol. in H_2O . (Rousseau.)

$+ 4\text{H}_2\text{O}$. (Rousseau, C. R. 112. 525.)

$\text{Na}_2\text{O}, 8\text{MnO}_2 + 5\text{H}_2\text{O}$. (Rousseau.)

$\text{Na}_2\text{O}, 16\text{MnO}_2 + 8\text{H}_2\text{O}$. (Rousseau.)

Strontium manganite, MnO_2, SrO .

Insol. in H_2O .

$2\text{MnO}_2, \text{SrO}$. Insol. in H_2O . (Rousseau, C. R. 101. 167.)

$\text{MnO}_2, 5\text{SrO}$. Sol. in HCl , or $\text{HNO}_3 + \text{Aq}$. (Rissler, Bull. Soc. (2) 30. 110.)

Zinc manganite, $\text{ZnO}, 5\text{MnO}_2$.

Insol. in H_2O . (Rissler.)

$\text{ZnO}, 4\text{MnO}_2$. (Gorgeu, Bull. Soc. 1903, (3) 29. 1168.)

$3\text{ZnO}, \text{MnO}_2 + 7\frac{1}{2}\text{H}_2\text{O}$. (Salinger, Dissert. 1902.)

$27\text{ZnO}, 2\text{MnO}_2 + 25\text{H}_2\text{O}$. Insol. in H_2O . (Salinger.)

Manganyl chloride, MnO_2Cl .

Decomp. by H_2O . (Aschoff, J. pr. 81. 29.)

Melanocobaltic chloride,
 $\text{Co}_2(\text{NH}_3)_6\text{Cl}_4\text{NH}_2\text{Cl}$, or
 $\text{Co}_2(\text{NH}_3)_6\text{Cl}_5\text{NH}_2$.

Very sl. sol. in cold H_2O or very dil. $\text{HCl} + \text{Aq}$. Decomp. by long standing or warming. Cold conc. HCl or dil. $\text{H}_2\text{SO}_4 + \text{Aq}$ does not attack, but decomp. on warming. $\text{HNO}_3 + \text{Aq}$ decomp. on warming. Sol. in cold H_2SO_4 or $\text{NH}_4\text{OH} + \text{Aq}$; from both solutions it can be precipitated by $\text{HCl} + \text{Aq}$. (Vortmann, B. 10. 1455.)

— chloroplatinate, $\text{Co}_2(\text{NH}_3)_6\text{NH}_2\text{Cl}_5$,
 PtCl_4 .

Ppt. (Vortmann, B. 15. 1902.)
 $\text{Co}_2(\text{NH}_3)_6\text{NH}_2\text{Cl}_5(\text{OH})_2$, PtCl_4 . Ppt. (Vortmann.)

— mercuric chloride,
 $\text{Co}_2(\text{NH}_3)_6(\text{NH}_2)\text{Cl}_5(\text{OH})_2, 3\text{HgCl}_2 + \text{H}_2\text{O}$.

Ppt. Difficultly sol. in cold H_2O , quite easily in warm H_2O acidified with HCl . (Vortmann.)

— chloride chromate,
 $\text{Co}_2(\text{NH}_3)_6\text{NH}_2\text{Cl}_5\text{Cr}_2\text{O}_7 + \text{H}_2\text{O}$.
 Sol. in hot H_2O . (Vortmann.)

Mercuriammonium comps.

See Mercury ammonium comps.

Mercuriammonium bromide, $\text{Hg}(\text{NH}_2)\text{Br}$.

See Dimercuriammonium ammonium bromide.

Mercuriammonium chloride, $\text{Hg}(\text{NH}_2)\text{Cl}$.

See Dimercuriammonium ammonium chloride.

Mercuriammonium oxydimercuriammonium chloride, $4\text{Hg}(\text{NH}_2)\text{Cl}, \text{NH}_2(\text{HgOHg})\text{Cl}$. (Millon.)

Correct composition is Dimercuriammonium ammonium chloride, $\text{NH}_2\text{HgCl}, \text{NH}_4\text{Cl}$, which see. (Balestra, Gazz. ch. it. 21. 2. 294.)

$\text{Hg}(\text{NH}_2)\text{Cl}, 2\text{NH}_2(\text{HgOHg})\text{Cl}$. (Millon.)

Correct composition is Dimercuriammonium mercuric chloride, $2\text{NH}_2\text{HgCl}, \text{HgCl}_2 + \text{H}_2\text{O}$, or Dimercuriammonium hydrogen chloride, $\text{NH}_2\text{HgCl}, \text{HCl}$. (Balestra.)

Mercuriammonium nitrate, $2\text{NH}_3, 2\text{HgO}, \text{N}_2\text{O}_5 = \text{NH}_2\text{HgNO}_3 + \frac{1}{2}\text{H}_2\text{O}$.

Easily decomp. by HCl , or alkali sulphides + Aq . Sl. sol. in $\text{HNO}_3 + \text{Aq}$. Insol. in $\text{H}_2\text{SO}_4, \text{NH}_4\text{OH}$, or $\text{KOH} + \text{Aq}$. (Mitscherlich.)

Is dimercuriammonium ammonium nitrate, $\text{NH}_2\text{HgNO}_3, \text{NH}_4\text{NO}_3 + \text{H}_2\text{O}$. (Pesci, Gazz. ch. it. 20. 485.)

Mercuriammonium oxy-/mercuriammonium nitrate, $3\text{Hg}(\text{O})$, 2NH_3 , $\text{N}_2\text{O}_5 = \text{NH}_2\text{HgNO}_2$, $\text{NH}_2(\text{OH}_2)\text{N}(\text{O})_3 + \text{H}_2\text{O}$.

Decomp. by boiling with H_2O , which dissolves out NH_4NO_3 . Sol. in $\text{NH}_4\text{NO}_3 + \text{Aq}$ containing NH_4OH . (Mitscherlich.)

Is *dimercuriammonium ammonium nitrate*, $3\text{NH}_2\text{NO}_3$, $\text{NH}_4\text{NO}_3 + 2\text{H}_2\text{O}$. (Pesci, Gazz. ch. it. 20. 485.)

Mercuriammonium oxy-/mercuriammonium sulphate, $(\text{NH}_2\text{Hg})_2\text{SO}_4$, $3\text{NH}_2(\text{OH}_2)_2\text{SO}_4$.

Boiling H_2O dissolves out H_2SO_4 . Gradually decomp. by boiling $\text{KOH} + \text{Aq}$. Completely sol. in $\text{NH}_4\text{Cl} + \text{Aq}$. Sol. in conc. or dil. HCl , or very dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. Insol. in conc. or dil. $\text{HNO}_3 + \text{Aq}$ or conc. H_2SO_4 (Schneider.)

Correct formula is $7(\text{NH}_2)_2\text{SO}_4$, $(\text{NH}_4)_2\text{SO}_4 + 12\text{H}_2\text{O}$, *dimercuriammonium ammonium sulphate*. (Pesci, Gazz. ch. it. 20. 485.)

Mercuridiammonium chloride (fusible white precipitate), $\text{Hg}(\text{NH}_3)_2\text{Cl}_2$.

Is *dimercuriammonium ammonium chloride*, Hg_2NCl , $3\text{NH}_4\text{Cl}$, which see. (Rammelsberg J. pr. 38. 558.)

Mercuri-/ammonium mercuric chloride, $\text{Hg}(\text{NH}_3)_2\text{Cl}_2$, HgCl_2 .

Insol. in H_2O , but gradually decomp. by boiling therewith. (Rose, Pogg. 20. 158.) Partly sol. in H_2O . (Kane.)

Mercuri-/ammonium iodide, $\text{Hg}(\text{NH}_3)_2\text{I}_2$.

H_2O extracts all the NH_3 . Partly sol. in little alcohol. Partly sol. in ether without decomp. (Nessler.)

Correct composition is *dimercuriammonium ammonium iodide*, NH_2HgI , $3\text{NH}_4\text{I}$. (Pesci, Gazz. ch. it. 20. 485.)

Mercuridiammonium cupric iodide, 4NH_3 , CuI_2 , HgI_2 .

Decomp. by H_2O . Sol. in alcohol + $\text{HC}_2\text{H}_3\text{O}_2$. (Jörgensen, J. pr. (2) 2. 347.) $2\text{Hg}(\text{NH}_3)_2\text{I}_2$. CuI_2 . (Decomp. by H_2O . (Jörgensen.)

Mercuridiammonium iodide, $\text{Hg}(\text{NH}_3)_2\text{I}_2$.

Decomp. by H_2O . Partly sol. in a little alcohol. Partly sol. in ether. (Nessler.)

Correct composition is *dimercuriammonium ammonium iodide*, NH_2HgI , $3\text{NH}_4\text{I}$. (Pesci.)

Mercuridiammonium mercuric iodide, $\text{Hg}(\text{NH}_3)_2$, HgI_2 , or NH_3 , HgI_2 .

Decomp. by H_2O or dil. acids. (Caillot and Corriol, J. Pharm. 9. 381.)

Correct composition is *dimercuriammonium ammonium mercuric iodide*, $3\text{NH}_2\text{HgI}$, $8\text{NH}_4\text{I}$, 4HgI_2 . (Pesci, Gazz. ch. it. 20. 485.)

Mercuri-/ammonium sulphate, $\text{Hg}(\text{NH}_3)_2\text{SO}_4$

Decomp. with H_2O .

Does not exist (Pesci, Gazz. ch. it. 20. 485.)

+ H_2O . Decomp. by H_2O . Easily sol. in HCl , very dil. $\text{H}_2\text{SO}_4 + \text{Aq}$, or $\text{HNO}_3 + \text{Aq}$. Insol. in conc. $\text{HNO}_3 + \text{Aq}$. Sol. in $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$ or $\text{NH}_4\text{Cl} + \text{Aq}$. Decomp. by $\text{KOH} + \text{Aq}$. (Schneider, J. pr. 75. 136.)

Correct composition is $(\text{NH}_2)_2\text{SO}_4$, $3(\text{NH}_4)_2\text{SO}_4 + 12\text{H}_2\text{O}$, *dimercuriammonium ammonium sulphate* (Pesci.)

Dimercuriammonium acetate, $\text{NH}_2\text{C}_2\text{H}_3\text{O}_2$.

Insol. in H_2O or alcohol. Sol. in HCl or $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$. (Balestra, Gazz. ch. it. 22, 2. 563.)

Dimercuriammonium ammonium acetate, $\text{NH}_2\text{C}_2\text{H}_3\text{O}_2$, $3\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{H}_2\text{O}$.

Deliquescent; sol. in a little H_2O without decomp., but decomp. into $\text{NH}_2\text{C}_2\text{H}_3\text{O}_2$ and $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$ by excess of H_2O . (Balestra.)

— **arsenate**, $\text{NH}_2\text{H}_2\text{AsO}_4$.

(Hirzel, Zeit. Pharm. 1853. 3.)

— **bromate**, $\text{NH}_2\text{BrO}_3 + 1\frac{1}{2}\text{H}_2\text{O}$.

Ppt. (Rammelsberg, Pogg. 55. 82.)

Is *oxydimercuriammonium bromate*, $(\text{NH}_2\text{Hg}_2\text{O})\text{BrO}_3$.

— **bromide**, NH_2Br .

Insol. in H_2O or HNO_3 . Sol. in $\text{HCl} + \text{Aq}$. (Pesci, Gazz. ch. it. 19. 509.)

Sol. in KI , or $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ with evolution of NH_3 . (Balestra, Gazz. ch. it. 22, 2. 558.)

Sol. in ammoniacal solutions of ammonium salts and in aq. acids. (Franklin, J. Am. Chem. Soc. 1905, 27. 839.)

— **ammonium bromide**, NH_2Br , NH_4Br .

Decomp. by H_2O . (Pesci, Gazz. ch. it. 19. 511.)

$4\text{NH}_2\text{Br}$, $5\text{NH}_4\text{Br}$. Decomp. by H_2O . Insol. in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. Sol. in conc. or dil. $\text{HCl} + \text{Aq}$. Insol. in $\text{HNO}_3 + \text{Aq}$. (Pesci.)

NH_2Br , $3\text{NH}_4\text{Br}$. Decomp. by H_2O . Easily sol. in $\text{HCl} + \text{Aq}$. Insol. in alcohol. (Pesci.)

Sol. in NH_4Br , NH_4Cl , or $\text{NH}_4\text{I} + \text{Aq}$; sol. in KI , or $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$.

— **mercuric bromide**, $2\text{NH}_2\text{Br}$, HgBr_2 .

Ppt. Sol. in HBr and in HCl . (Ray, Chem. Soc. 1902, 81. 649.)

— **carbonate**, $(\text{NH}_2)_2\text{CO}_3 + 2\text{H}_2\text{O}$.

Ppt. Not decomp. by $\text{KOH} + \text{Aq}$, but easily by K_2S , or $\text{KI} + \text{Aq}$. (Rammelsberg, J. pr. (2) 38. 567.)

Dimercuriammonium chloride, NH_2Cl .

Not attacked by boiling H_2O . Sl. attacked by cold dil. $\text{HCl} + \text{Aq.}$ but is gradually dissolved thereby. Decomp. by hot $\text{KOH} + \text{Aq}$ (Weyl.)

Sol. in KI , or $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ with evolution of NH_3 .

+ H_2O . Nearly insol. in H_2O , easily sol. in HNO_3 , and $\text{HCl} + \text{Aq.}$ Not decomp. by $\text{KOH} + \text{Aq.}$ Decomp. by KCl , NaCl , or $\text{KI} + \text{Aq.}$ (Rammelsberg, Pogg. 48. 181.)

— **hydrogen chloride, NH_2Cl , 2HCl .**

Correct composition of mercuric chloramide chloride. (Balestra, Gazz. ch. it. 21, 2. 299.)

Decomp. by H_2O .

NH_2Cl , HCl . Decomp. by H_2O . (Balestra, l. c.)

NH_2Cl , 4HCl . Sol. in H_2O . (Ray, Proc. Chem. Soc. 1901, 17. 96.)

— **ammonium chloride, NH_2Cl , NH_4Cl . (Infusible white precipitate.)**

Correct composition of what has been called mercuric chloramide, $\text{Hg}(\text{NH}_2)\text{Cl}$. (Rammelsberg, J. pr. 38. 558.)

Insol. in cold, decomp. by hot H_2O . (Milton, A. ch. (3) 18. 413.) Sol. in 600 pts. H_2O . (Wittstein.) Sol. in 719.98 pts. H_2O at 18.75° . (Abl.) Insol. in alcohol.

Sol. in acids, even in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq.}$ also in NH_4NO_3 , $(\text{NH}_4)_2\text{SO}_4$, and $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq.}$ (Pelouze and Fremy.)

Sol. in warm NH_4Cl , or $\text{NH}_4\text{NO}_3 + \text{Aq.}$ (Brett.)

Sl. sol. in alkali chlorides + Aq. which partially decomp. (Miahle, A. ch. (3) 5. 180.)

Decomp. by $\text{KOH} + \text{Aq.}$ Sol. in KI , or $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq.}$ with evolution of NH_3 . (Balestra.)

When freshly prepared is sol. in conc. $\text{NH}_4\text{OH} + \text{Aq.}$ (Saha and Choudhuri, Z. anorg. 1910, 67. 359.)

Sol. in excess of $(\text{NH}_4)_2\text{HPO}_4 + \text{Aq.}$ Insol. in excess of $\text{Na}_2\text{HPO}_4 + \text{Aq.}$ (Carnegie and Burt, C. N. 1897, 76. 175.)

Insol. in excess of $\text{NH}_4\text{OH} + \text{Aq.}$ (Carnegie and Burt.)

— **NH_2Cl , $3\text{NH}_4\text{Cl}$ (Fusible white precipitate).**

Correct composition of what has been called mercuridiammonium chloride, $\text{Hg}(\text{NH}_2)_2\text{Cl}_2$. (Rammelsberg, J. pr. (2) 38. 558.)

Decomp. by hot H_2O . Sol. in acids, even $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq.}$ Not decomp. by cold, but by boiling $\text{KOH} + \text{Aq.}$ (Weyl.)

Sol. in warm, less in cold $\text{NH}_4\text{OH} + \text{Aq.}$ (Mitscherlich.)

Sol. in KI , or $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq.}$ with evolution of NH_3 . (Balestra.)

Sol. in 10% HNO_3 , H_2SO_4 and acetic acid. (Hofmann and Marburg, A. 1899, 305. 198.)

Dimercuriammonium mercuric chloride, $2\text{NH}_2\text{Cl}$, HgCl_2 .

Insol. in, and not decomp. by boiling H_2O , alkalis, conc. HNO_3 , or dil. $\text{H}_2\text{SO}_4 + \text{Aq.}$ Sol. in boiling $\text{HCl} + \text{Aq.}$ (Mitscherlich, J. pr. 19. 453.)

Sl. decomp. by H_2O , readily by $\text{KOH} + \text{Aq.}$ (Gaudechon, A. ch. 1911, (8) 22. 212.)

Ppt. Sol. in HBr . (Ray, Proc. Chem. Soc. 1902, 18. 86.)

— **chloride ammonia, NH_2Cl , $\frac{1}{2}\text{NH}_3$.**

Decomp. by water and by $\text{NH}_4\text{OH} + \text{Aq.}$ (Gaudechon, A. ch. 1911, (8) 22. 212.)

— **chromate.**

See *Oxydimercuriammonium chromate*.

— **hydroxide, NH_2OH .**

Takes up H_2O to form $\text{NH}_2\text{OH} + \text{H}_2\text{O}$ or $(\text{NH}_2\text{OH})_2\text{OH}$, oxydimercuriammonium hydroxide, which also see.

Sol. in warm HCl or $\text{HNO}_3 + \text{Aq.}$

— **iodate, NH_2IO_3 , $2\text{NH}_4\text{IO}_3$.**

Insol. in HNO_3 . (Rammelsberg, J. pr. (2) 38. 568.)

— **iodide, NH_2I .**

Insol. in H_2O . Sol. in $\text{HCl} + \text{Aq.}$ Decomp. by boiling with $\text{KOH} + \text{Aq.}$ or $\text{KCl} + \text{Aq.}$ (Weyl, Pogg. 121. 601.) Decomp. by hot KI , or $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq.}$ (Balestra.)

Decomp. by dilute HCl . Sol. in ammonium salts + Aq. (Franklin, Z. anorg. 1905, 46. 21.)

+ H_2O . See *Oxydimercuriammonium iodide*.

— **ammonium iodide, NH_2I , $3\text{NH}_4\text{I}$.**

Correct composition of mercuridiammonium iodide, $\text{Hg}(\text{NH}_2)_2\text{I}_2$. (Pesci, Gazz. ch. it. 20. 485.)

$3\text{NH}_2\text{I}$, $8\text{NH}_4\text{I}$, 4HgI_2 . Correct formula for mercuridiammonium mercuric iodide, $\text{Hg}(\text{NH}_2)_2\text{I}_2$, HgI_2 . (Pesci.)

— **nitrate, NH_2NO_3 .**

Insol. in H_2O . (Rammelsberg, J. pr. (2) 38. 566.)

Sol. in KI , or $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq.}$ with evolution of NH_3 . (Balestra, Gazz. ch. it. 22. 2. 560.) + H_2O . (Hofmann and Marburg, A. 1899, 305. 212.)

Sl. sol. in HNO_3 . (Ray, Z. anorg. 1902, 33. 209.)

— **ammonium nitrate, NH_2NO_3 , NH_4NO_3 + H_2O .**

Correct formula for mercuriammonium nitrate, $\text{NH}_2\text{HgNO}_3 + \frac{1}{2}\text{H}_2\text{O}$. (Pesci, Gazz. ch. it. 20. 485.)

NH_2NO_3 , $2\text{NH}_4\text{NO}_3 + 2\text{H}_2\text{O}$. Correct for-

mula for oxydimercuriammonium ammonium nitrate, $(\text{NHg}_2\text{OH}_2)\text{NO}_3$, $2\text{NH}_4\text{NO}_3 + \text{H}_2\text{O}$ (Pesci.)

NHg_2NO_3 , $3\text{NH}_4\text{NO}_3$. Decomp. by cold H_2O ; sol. in $\text{NH}_4\text{OH} + \text{Aq.}$ (Pesci.)

$3\text{NHg}_2\text{NO}_3$, $\text{NH}_4\text{NO}_3 + 2\text{H}_2\text{O}$. Correct formula for mercuriammonium oxydimercuriammonium nitrate, NH_2HgNO_3 , $(\text{NHg}_2\text{OH}_2)\text{NO}_3 + \text{H}_2\text{O}$. (Pesci.)

Dimercuriammonium nitrite, NHg_2NO_2 .

Readily sol. in warm HCl or HBr . (Ray, Chem. Soc. 1902, 81. 648.)

$+ \frac{1}{2}\text{H}_2\text{O}$. Ppt. Sol. in HCl . (Ray, Proc. Chem. Soc. 1902, 18. 85.)

$+ \text{H}_2\text{O}$. (Hofmann and Marburg, A. 1899, 305. 214.)

— oxide, $(\text{NHg}_2)_2\text{O}$.

Slowly decomp. by H_2O . Sol. in HCl , or $\text{HNO}_3 + \text{Aq.}$ Decomp. by hot KOH , or $\text{KCl} + \text{Aq.}$ (Weyl, Pogg. 121. 601.)

Sol. in $\text{KCN} + \text{Aq.}$ by heating 4-5 hours at 130° . Not completely sol. in HCl owing to formation of Hg_2Cl_2 . (Gaudechon, C. R. 1907, 144. 1419.)

— phosphate, $(\text{NHg}_2)_2\text{PO}_4$, $2\text{NHg}_2\text{OH} + 10\text{H}_2\text{O}$.

(Rammelsberg, J. pr (2) 38. 567.)

See Oxydimercuriammonium phosphate.

— ammonium salicylate, $2\text{NHg}_2\text{C}_6\text{H}_4\text{OHCO}_2$, $5\text{NH}_4\text{C}_6\text{H}_4\text{OHCO}_2$.

Decomp. by H_2O . Sol. in $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$, HCl , or $\text{KI} + \text{Aq.}$ (Balestra.)

— selenate, $(\text{NHg}_2)_2\text{SeO}_4 + 2\text{H}_2\text{O}$.

Ppt. Insol. in H_2O ; sol. in $\text{NH}_4\text{OH} + \text{Aq.}$ (Cameron and Davy, C. N. 44. 63.)

— sulphate, $(\text{NHg}_2)_2\text{SO}_4 + 2\text{H}_2\text{O}$.

Insol. in H_2O . Easily sol. in $\text{HCl} + \text{Aq.}$ (Rammelsberg, J. pr. (2) 38. 565.) Sol. (Kane), insol. (Hirzel) in $\text{HNO}_3 + \text{Aq.}$

Sol. in KI , or $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq.}$ with evolution of NH_3 . (Balestra.)

$+ \text{H}_2\text{O}$. Insol. in H_2O ; sol. in HCl . (Ray, Chem. Soc. 1905, 87. 9.)

— ammonium sulphate, $(\text{NHg}_2)_2\text{SO}_4$, $3(\text{NH}_4)_2\text{SO}_4 + 4\text{H}_2\text{O}$.

Correct formula for mercuridiammonium sulphate, 2NH_3 , HgO , $\text{SO}_3 + \text{H}_2\text{O}$. (Pesci, Gazz. ch. it. 20. 485.)

$5(\text{NHg}_2)_2\text{SO}_4$, $14(\text{NH}_4)_2\text{SO}_4 + 16\text{H}_2\text{O}$. (Pesci.)

$7(\text{NHg}_2)_2\text{SO}_4$, $(\text{NH}_4)_2\text{SO}_4 + 12\text{H}_2\text{O}$. Correct formula for mercuriammonium oxydimercuriammonium sulphate, $(\text{NHg}_2\text{H}_2)_2\text{SO}_4$, $3(\text{NHg}_2\text{OH}_2)_2\text{SO}_4$. (Pesci.)

Dimercuriammonium tartrate, $(\text{NHg}_2)_2\text{C}_4\text{H}_4\text{O}_6 + 2\frac{1}{2}\text{H}_2\text{O}$.

Insol. in H_2O . Sol. in HCl , KI , $\text{Na}_2\text{S}_2\text{O}_3$, $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$, or $(\text{NH}_4)_2\text{C}_4\text{H}_4\text{O}_6 + \text{Aq.}$ (Balestra, Gazz. ch. it. 22. 2. 563.)

— ammonium tartrate, $2(\text{NHg}_2)_2\text{C}_4\text{H}_4\text{O}_6$, $(\text{NH}_4)_2\text{C}_4\text{H}_4\text{O}_6 + \text{H}_2\text{O}$.

As above. (B.)

Trimercuriammonium sulphate, $(\text{NHg}_2)(\text{NHgH}_2)\text{SO}_4 + 2\text{H}_2\text{O}$.

Decomp. by H_2O . (Millon.)

Does not exist. (Pesci, Gazz. ch. it. 20. 485.)

Dimercuriarsonium mercuric chloride,

$\text{AsHg}_2\text{Cl}_3 = \text{AsHg}_2\text{Cl} + \text{HgCl}_2$.

Decomp. by H_2O . Decomp. by warm $\text{HNO}_3 + \text{Aq.}$ (Rose, Pogg. 51. 423.)

Mercurimidosulphonic acid,

$(\text{HO}_3\text{S})_2\text{N}_2\text{Hg}$

Very unstable. (Berglund, B. 9. 256.)

Barium mercurimidosulphonate,

$\text{Ba}_2(\text{SO}_3)_4\text{N}_2\text{Hg} + 5\text{H}_2\text{O}$.

(Berglund, B. 9. 256.)

Cadmium —, $\text{Cd}_2\text{HgN}_2(\text{SO}_3)_4 + 12\text{H}_2\text{O}$.

Unstable; sl. sol. in H_2O . (Berglund, Bull. Soc. (2) 25. 452.)

Cobalt —, $\text{Co}_2\text{HgN}_2(\text{SO}_3)_4 + 15\text{H}_2\text{O}$.

Sol. in H_2O . (B.)

Copper —, $\text{Cu}_2\text{HgN}_2(\text{SO}_3)_4 + 15\text{H}_2\text{O}$.

Very sol. in H_2O . (B.)

Magnesium —, $\text{Mg}_2\text{HgN}_2(\text{SO}_3)_4 + 15\text{H}_2\text{O}$.

Very sol. in H_2O . (B.)

Manganous —, $\text{Mn}_2\text{HgN}_2(\text{SO}_3)_4 + 10\text{H}_2\text{O}$.

Unstable. (B.)

Mercuric —, $(\text{Hg}_2\text{O})_2\text{HgN}_2(\text{SO}_3)_4$.

Nearly insol. in H_2O . (B.)

Nickel —, $\text{Ni}_2\text{HgN}_2(\text{SO}_3)_4 + 15\text{H}_2\text{O}$.

(B.)

Potassium —, $(\text{KO}_3\text{S})_4\text{N}_2\text{Hg} + 4\text{H}_2\text{O}$.

Precipitate. (Raschig, A. 241. 161.)

Potassium silver —, $(\text{AgSO}_3)_2(\text{KSO}_3)_2\text{HgN}_2 + 3\text{H}_2\text{O}$.

Sl. sol. in H_2O . (Berglund.)

Sodium —, $(\text{NaSO}_3)_4\text{HgN}_2 + 5\text{H}_2\text{O}$.

More sol. in H_2O than K salt. (Berglund.)

Strontium —, $\text{Sr}_2(\text{SO}_3)_4\text{HgN}_2 + 15\text{H}_2\text{O}$.

More sol. than Ba salt. (B.)

Zinc mercurimidosulphonate,
 $\text{Zn}_2(\text{SO}_3)_4\text{HgN}_2 + 15\text{H}_2\text{O}$.

Very sol. in H_2O . (B.)

Dimercuriphosphonium mercuric bromide, $2\text{PHg}_2\text{Br}$, HgBr_2 .

(Lemoult; C. R. 1907, **145**. 1176.)

Dimercuriphosphonium mercuric chloride,
 HgCl_2 , PHg_2Cl .

(Lemoult, C. R. 1907, **145**. 1176.)

+ $1\frac{1}{2}\text{H}_2\text{O}$. Decomp. by hot, slowly by cold H_2O into Hg , HCl , and H_3PO_3 . Decomp. by acids or alkalis. (Rose, Pogg. **40**. 75.)

Dimercuriphosphonium mercuric iodide,
 HgI_2 , PHg_2I .

Slowly decomp. by cold or warm H_2O , quickly by $\text{MOH} + \text{Aq}$. Not attacked by HCl or $\text{H}_2\text{SO}_4 + \text{Aq}$. Rapidly attacked by HNO_3 and aqua regia. (Lemoult, C. R. 1904, **139**. 479.)

Dimercuriphosphonium mercuric nitrate,
 P_2Hg_3 , 6HgO , $3\text{N}_2\text{O}_5 = 2[\text{PHg}_2\text{NO}_3]$,
 $\text{Hg}(\text{NO}_3)_2$, 3HgO .

(Rose, Pogg. **40**. 75.)

Dimercuriphosphonium mercuric sulphate,
 P_2Hg_3 , 6HgO , $4\text{SO}_3 + 4\text{H}_2\text{O} = (\text{PHg}_2)_2\text{SO}_4$,
 3HgSO_4 , $2\text{HgO} + 4\text{H}_2\text{O}$.

Sol. in aqua regia. (Rose, Pogg. **40**. 75.)

Mercuric acid.

Calcium mercurate (?).

(Berthollet, A. ch. **1**. 61.)

Potassium mercurate, K_2O , 2HgO .

Gradually decomp. by H_2O ; less rapidly by absolute alcohol. (St. Meunier, C. R. **60**. 557.)

Sodium mercurate, Na_2O , HgO .

(Bettokoff, Bull. Soc. (2) **34**. 328.)

Mercurioammonium chloride,

$\text{Hg}(\text{NH}_2)_2\text{Cl}$.

(Rose, Pogg. **20**. 158.)

Mixture of Hg , HgNH_2Cl , and NH_4Cl . (Barfoed, J. pr. (2) **39**. 201.)

— **nitrate,** $(\text{NHg}_2\text{H}_2)\text{NO}_3$, "*Hahnemann's soluble mercury*."

Sol. in hot HCl , and $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. Decomp. by $\text{NH}_4\text{OH} + \text{Aq}$, or NH_4 salts + Aq . Probably mixture of mercurous salts and Hg .

Mercurodiammonium chloride,

$\text{Hg}_2(\text{NH}_3)_2\text{Cl}_2$.

Easily decomp. (Rose, Pogg. **20**. 158.)

Mixture of Hg , NH_2HgCl , and NH_4Cl . (Barfoed, J. pr. (2) **39**. 201.)

Mercurodiammonium fluoride,
 $\text{Hg}_2(\text{NH}_3)_2\text{F}_2$ (?).

Decomp. by H_2O . (Finkener, Pogg. **110**. 147.)

Mercuriosulphonic acid.

Mercuriosulphonates, $\text{Hg}(\text{SO}_3\text{M})_2$.

Correct composition for the double sulphites, HgSO_3 , M_2SO_3 . (Divers and Shimidzu, Chem. Soc. **49**. 583; Barth, Z. phys. Ch. **9**. 195.)

Mercuroxy-comps.

See Oxymercur-comps.

Mercury, Hg.

Not attacked by H_2O . Not attacked by boiling conc HCl or dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. Easily sol. in dil. or conc. $\text{HNO}_3 + \text{Aq}$; also in HBr or $\text{HI} + \text{Aq}$.

Not attacked by pure HNO_3 unless heated, but readily attacked by cold dil. $\text{HNO}_3 + \text{Aq}$ containing NO . (Millon.)

Anhydrous H_2SO_4 attacks Hg gradually at ord. temp. (Berthelot, C. R. 1897, **125**. 749.)

H_2SO_4 attacks only when hot and conc. (Ditte, A. ch. 1890, (6) **19**. 68.)

Conc. H_2SO_4 does not attack dry or moist Hg either with or without air. (Pitman, J. Am. Chem. Soc. 1898, **20**. 100.)

H_2SO_4 attacks Hg at 20° if it contains 99.7%; does not attack if it contains only 95.6%. (Baskerville, J. Am. Chem. Soc. 1898, **20**. 515.)

Insol. in $\text{H}_2\text{SO}_3 + \text{Aq}$ alone or in presence of HCl or dil. H_2SO_4 . (Berthelot, A. ch. 1898, (7) **14**. 198.)

Not attacked by $\text{HF} + \text{Aq}$ at any temp. (Gay-Lussac.)

HI dissolves Hg rapidly at ord. temp. (Norris and Cottrell, Am. Ch. J. 1896, **18**. 99.)

More rapidly attacked by $\text{HBr} + \text{Aq}$ than by $\text{HCl} + \text{Aq}$. Rapidly acted upon by HI in absence of O . (Bailey, Chem. Soc. 1888, **53**. 760.)

Not attacked by pure $\text{HCl} + \text{Aq}$, but in presence of O , $\text{Hg}_2\text{OCl}_2 + \text{H}_2\text{O}$ is formed. Action is apparently less in sunlight than in the dark. (Bailey, Chem. Soc. 1888, **53**. 759.)

Small amts. of ferric salts hinder action of HNO_3 on Hg , but it is hastened by presence of $\text{Mn}(\text{NO}_3)_2$ or NaNO_3 . (Ray, Chem. Soc. 1911, **99**. 1015.)

HNO_3 under 33% does not attack Hg if metal and acid are kept in motion and HNO_2 is absent. (Veley, B. 1895, **23**. 928.)

Rapidly sol. in HClO . (Balard, Dissert. **1834**.)

Alkali chlorides + Aq in presence of air decomp. Hg ; action is not increased by heat. (Miahle.)

Insol. in alkali chlorides + Aq in neutral or

alkaline solution. (Bhaduri, Z. anorg. 1897, **13**, 407.)

Very sol. in conc. solution of I in KI+Aq. (Varet, Bull. Soc. 1897, (3), **17**, 451.)

Slowly sol. in KCl or KI+Aq in presence of air. (Palmaer, Z. phys. Ch. 1907, **59**, 136.)

Slowly sol. in Na_2S +Aq in presence of air. (Palmaer, Z. phys. Ch. 1907, **59**, 137.)

Hg is appreciably sol. in the sulpho salts of Mo, W, V, As, Sb and Sn. (Storch, B. 1883, **16**, 2015.)

Persulphates in alkali or neutral solution attack Hg. $(\text{NH}_4)_2\text{S}_2\text{O}_8$ in NH_4OH solution has strongest action. This dissolves Hg by repeated shaking at high temp. (Tarugi, Gazz. ch. it. 1903, **33**, (1) 127.)

Insol. in KCN+Aq. (Elmer, J. pr. 1888, (2) **37**, 442.)

Slowly sol. in KCN+Aq in presence of air. (Palmaer, Z. phys. Ch. 1907, **59**, 136.)

Sol. in considerable quantity in 6% KCN+Aq. (Goyder, C. N. 1894, **69**, 268.)

Most sol. in $\text{K}_4\text{Fe}(\text{CN})_6$ +Aq when KOH is present. (Smith, J. Am. Chem. Soc. 1905, **27**, 544.)

Hg dissolves in Br_2 in the presence of KBr sl. faster than in I_2 but in CuBr_2 much more slowly. (Van Name and Edgar, Am. J. Sci. 1910, (4) **29**, 255.)

Not attacked by PCl_5 even at 350° (Moissan, A. ch. 1885 (6) **6**, 457.)

Insol. in liquid NH_3 (Gore, Am. Ch. J. 1898, **20**, 829.)

$\frac{1}{2}$ ccm. oleic acid dissolves 0.0075 g. Hg in 6 days. (Gates, J. phys. Chem. 1911, **15**, 143.)

Mercurous acetylide, $\text{Hg}_2\text{C}_2+\text{H}_2\text{O}$.

(Burkard and Travers, Chem. Soc. 1902, **81**, 1271.)

Mercuric acetylide, basic, 2HgO , $3\text{HgC}_2+2\text{H}_2\text{O}$.

(Burkard and Travers, Chem. Soc. 1902, **81**, 1272.)

Mercuric acetylide, HgC_2 .

Very sol. in HCl with evolution of H_2C_2 . (Keiser, Am. Ch. J. 1893, **15**, 535.)

$+\frac{1}{2}\text{H}_2\text{O}$. Insol. in H_2O , alcohol and ether. Sol. in NH_4 acetate+Aq, and in KCN+Aq. Sl. attacked by cold HCl, easily by hot. Easily sol. in HNO_3 . Dil. H_2SO_4 attacks slowly; conc. causes explosion. (Plimpton and Travers, Chem. Soc. 1894, **65**, 267.)

Mercuric acetylide chloride, HgC_2 , $\text{HgCl}_2+\frac{1}{2}\text{H}_2\text{O}$.

Not acted upon by dil. HCl. Decomp. by fuming HNO_3 or aqua regia. Insol. in alcohol and ether. (Keiser, Am. Ch. J. 1893, **15**, 538.)

Mercuric acetylide mercuriomercuric chloride, HgC_2 , HgCl , $\text{HgCl}_2+\text{H}_2\text{O}$.

Insol. in all ordinary solvents. (Biltz and Mumm, B. 1904, **37**, 4420.)

Mercurous amidofluoride, HgNH_2F .

Insol. in H_2O , HNO_3 and H_2SO_4 . Sol. in dil. HCl.

Probably *dimercuri*ammonium ammonium fluoride, $\text{NH}_4\text{Hg}_2\text{F}$, NH_4F . (Bohm, Z. anorg. 1904, **43**, 327.)

Mercury ammonium comps.

See—

Mercurioammonium comps., NH_3HgR .

Mercuri*diam*monium comps., $\text{Hg}(\text{NH}_2)_2\text{R}$.

Mercuri*ammonium* comps., HgNH_2R .

*Dimercuri**diammonium* comps., $\text{Hg}_2\text{N}_2\text{H}_4\text{R}$.

*Tri*mercuri*ammonium* comps., $\text{N}_2\text{H}_2\text{Hg}_3\text{R}$.

Oxy*dimercuri*ammonium comps., $(\text{NH}_2\text{Hg}_2\text{O})\text{R}$.

Mercurous arsinchloride, AsHgCl .

Decomp. by H_2O . (Capitaine, J. Pharm. 25, 559.)

Mercurous arsinchloride chloride, $\text{AsHg}_2\text{Cl}_2=2\text{AsHgCl}$, Hg_2Cl_2 (?).

Decomp. by H_2O . (Capitaine.)

Mercurous azoimide, HgN_3 .

Wholly insol. in H_2O . (Curtius, B. **24**, 332.)

1 l. H_2O dissolves 0.25 g. (Wöhler and Krupko, B. 1913, **46**, 2050.)

Mercuric azoimide, HgN_3 .

Sol. in H_2O especially when hot. (Berthelot and Vieille, Bull. Soc. 1894, (3) **11**, 747.)

Moderately sol. in H_2O . (Wöhler and Krupko, B. 1913, **46**, 2050.)

Mercuric bromamide, $\text{Hg}(\text{NH}_2)\text{Br}$.

Insol. in H_2O and alcohol. Sl. sol. in NH_4OH +Aq. (Mitscherlich, J. pr. **19**, 455.)

Correct composition is *dimercuri*ammonium ammonium bromide, Hg_2NBr , NH_4Br , which see. (Pesci, Gazz. ch. it. **19**, 511.)

Mercurous bromide, Hg_2Br_2 .

Solubility in $\text{H}_2\text{O}=9.1\times 10^{-7}$ g. equiv. per l. (Bodländer, Z. phys. Ch. 1893, **27**, 61.)

Solubility in $\text{H}_2\text{O}=7\times 10^{-8}$ mols. per liter at 25° . (Sherrill, Z. phys. Ch. **193**, **430**, 735.)

Solubility in H_2O at $25^\circ = 1.4 \times 10^{-7}$ equivalents per l. (Thompson, J. Am. Chem. Soc 1906, 28. 762.)

Insol in H_2O and dil acids. Decomp. by $HCl + Aq$. Sol. in hot conc H_2SO_4 with evolution of SO_2 . Sl. sol. in hot $HNO_3 + Aq$ of 1.42 sp. gr. (Stromann, B 20. 2818.)

Decomp into Hg and $HgBr_2$ by boiling with NH_4Br , or $NH_4Cl + Aq$; also by ammonium carbonate or succinate, but not by ammonium sulphate or nitrate. (Wittstein.)

Sol. in $Hg(NO_3)_2 + Aq$. (Wackenroder, A. 41. 317.)

Partially decomp. by alkali chlorides + Aq; when out of contact of air this decomp. is slight and $HgBr_2$ is formed, while in the air $HgCl_2$ is the resulting product. Much more rapidly decomp. in hot than cold solutions. (Mihale, A. ch. (3) 5. 177.)

A solution of $HgBr$ in 0.1-N KBr contains about 1 mg. Hg ions in 1300 l.

Insol. in alcohol.

Insol. in benzonitrile. (Naumann, B 1914, 47. 1370.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790), ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in acetone (Naumann, B. 1904, 37. 4329); (Eidmann, C. C. 1899, II. 1014.)

Mercuric bromide, $HgBr_2$.

Sol. in 250 pts H_2O at ordinary temp. and 25 pts boiling H_2O (Wittstein.) Sol in 240 pts. H_2O at 1875° (Abt.)

Sol in 94 pts. H_2O at 9° , and in 4-5 pts. at 100° (Lassaigne, J. chim. méd. 12. 177.)

Solubility in g-equivalents per litre = 2×10^{-2} . (Bodlander, Z. phys. Ch. 1898, 27. 61.)

1 l. H_2O dissolves about 4 g. at ord. temp. (Morse, Z. phys. Ch. 1902, 41. 731.)

1 l. H_2O dissolves 0.017 mol at 25° . (Jander, Dissert. 1902.)

Solubility in H_2O at $25^\circ = 0.017$ mol. liter. (Sherrill, Z. phys. Ch. 1903, 43. 735.)

Solubility at ord. temp. = 0.8%; at bpt. = 8-9%. (Larine, J. Pharm. 1904, (6) 20. 450.)

Solubility in cold $H_2O = 4\%$, but solution prepared by heating contains more Hg on account of decomp. into HBr and oxybromide. (Vicario, C. C. 1907, II. 1224.)

1 l. H_2O dissolves about 5-6 g. at ord. temp. (Gaudechon, A. ch. 1911, (8) 22. 212.)

1 l. aqueous solution at 25° contains 0.017 mol. (Herz and Paul, Z. anorg. 1913, 83. 431.)

Decomp. by warm HNO_3 , or $H_2SO_4 + Aq$. Sol. in warm H_2SO_4 . (Ditte, A. ch. (5) 17. 124.)

1 mol. is sol. in 1 mol. warm HI + Aq. in 1 mol. cold conc. HCl and in $\frac{1}{2}$ mol. hot conc. HCl. (Löwig.)

Solubility of $HgBr_2$ in KBr + Aq at 25° .

Mols. per liter	
KBr	$HgBr_2$
0	0.017

(Herz and Paul, Z. anorg. 1913, 82. 434.)

Solubility in 0.1-N $Hg(NO_3)_2 + Aq$ is about 20 g. per liter. (Morse, Z. phys. Ch. 1902, 41. 731.)

Sol. in KBr or NaBr + Aq. (Jander, Dissert. 1902.)

Solubility in 10 cc. $Br_2 + Aq$ at 25° .

Millimol Br_2 0.753 1.797 2.231
" Hg 0.1844 0.1947 0.2120

(Herz and Paul, Z. anorg. 1914, 85. 215.)

Sat. solution in liquid SO_2 contains about 1.5% HgBr_2 at 159.4° . (Niggli, Z. anorg. 1912, 75. 182.)

Moderately sol. in liquid NH_3 (Gore, Am. Ch. J. 1898, 20. 829.)

Sol. in AlBr_3 . (Isbekow, Z. anorg. 1913, 84. 27.)

1 ccm. of sat. solution in abs. alcohol at ord. temp. contains 0.0958 g. HgBr_2 ; at bpt contains 0.1262 g. (Hamper, Ch. Z. 1887, 11. 905.)

Solubility of HgBr_2 in alcohols + Aq at t° .

Alcohol	t°	G HgBr_2 per 100 g. alcohol

25	0.232
30	0.274

(Arctowski, Z. anorg. 1894, 6. 267.)

100 g. boiling methyl acetate (bpt. 56.2-56.7°) dissolves 24 g. HgBr_2 . (Schroeder and Steiner, J. pr. 1909, (2) 79. 49.)

1 g. HgBr_2 is sol. in 4.56 g. methyl acetate at 18°. Sp. gr. 18°/4° of sat. solution = 1.09. (Naumann, B. 1909, 42. 3795.)

100 g. anhydrous ethyl acetate or sat. with H_2O at 18° dissolve 130.5-135 g. HgBr_2 . (Hamers, Dissert. 1906.)

Solubility of HgBr_2 in ethyl acetate + Aq at 25°.

P = g. ethyl acetate in 100 g. ethyl acetate + Aq.

HgBr_2 = millimols HgBr_2 in 10 cc. of the solution.

P	HgBr_2	Sp. gr
0	0.167	1.0022
4.39	0.159	1.0018
96.76	7.42	1.1159
100	3.93	1.0113

(Herz and Anders, Z. anorg. 1907, 52. 172.)

1 pt. HgBr_2 sol. in 7.66 pts. ethyl acetate at 18°. (Naumann, B. 1910, 43. 315.)

Easily sol. in acetone. (Oppenheim, B. 2. 572.)

Sol. in acetone. (Eidmann, C. C. 1899, II. 1014.)

Acetone dissolves much more HgBr_2 than Hgl_2 . 100 g. sat. solution at 25° contain 34.58 g. HgBr_2 . (Reinders, Z. phys. Ch. 1900, 32. 514.)

Solubility in diethyl oxalate is much greater than that of Hgl_2 and is equal to 12% at 100°. (Reinders, Z. phys. Ch. 1900, 32. 507.)

Solubility in benzene = 0.0194 mol. per l. at 25°. (Sherrill, Z. phys. Ch. 1903, 43. 735.)

Sol. in allyl mustard oil. (Mathews, J. phys. Chem. 1905, 9. 647.)

Sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Solubility in aniline.

S = temp. of solidification.

Mols HgBr_2 per 100	S	Mols HgBr_2 per 100	S	Mols HgBr_2 per 100	S
4.9	9°	25.4	115.5°	49.6	123
10.	43.5	33.9	117	54.9	124
12.5	57	39.5	108	58.8	134

23.4	106	46.2	121		

(Staronka, Anz. Ak. Wiss. Krakau, 1910, 372.)

Solubility of HgBr_2 in quinoline.

S = temp. of solidification.

Mols. HgBr_2 per 100	4.4	8.9	14.3	17.6
S	88°	111°	127°	134°

(Staronka, Anz. Wiss. Krakau, 1910. 372.)

Mol. weight determined in ethyl sulphide. (Werner, Z. anorg. 1897, 15. 30.)

+ 4 H_2O . (Thomsen.)

Mercuric perbromide, HgBr_4 .

(Herz and Paul, Z. anorg. 1914, 85. 216.)

Mercuric hydrogen bromide (Bromomercuric acid), HgBr_2 , $\text{HBr} = \text{HHgBr}_3$.

Decomp. by H_2O . (Neumann, M. 10. 236.)

Mercuric nickel bromide, basic, HgBr_2 , NiBr_2 , 6 $\text{NiO} + 20\text{H}_2\text{O}$.

(Mailhe, A. ch. 1902, (7) 27. 369.)

Mercuric platinum bromide.

See Bromoplatinate, mercuric.

Mercuric potassium bromide, HgBr_2 , KBr .

Sol. in H_2O , but decomp. by a large amount, with separation of one half of the HgBr_2 . (v. Bonsdorff, Pogg. 19. 339.)

2 HgBr_2 , $\text{KBr} + 2\text{H}_2\text{O}$. Permanent. Sol. in H_2O and alcohol. (v. Bonsdorff.)

Mercuric sodium bromide, HgBr_2 , NaBr .

Deliquescent. (v. Bonsdorff.)

(Varet, C. R. 1890, 111, 527.)

$\text{HgBr}_2, 2\text{NaBr}$
 Very sol. in H_2O . (Vicario, J. Pharm. 1907, (i) 26, 145.)
 $2\text{HgBr}_2, \text{NaBr} + 3\text{H}_2\text{O}$. Sol. in H_2O and alcohol. (Berthelot.)

Mercuric strontium bromide, $\text{HgBr}_2, \text{SrBr}_2$.

Sol. in all proportions of H_2O . (Löwig, Mag. Pharm. 33, 7.)

$2\text{HgBr}_2, \text{SrBr}_2$. Decomp. by H_2O into HgBr_2 and $\text{Hg}_2\text{Br}_2, \text{SrBr}_2$. (Löwig.)

Mercuric zinc bromide.

Deliquescent in moist air. (v. Bonsdorff.)

Mercuric zinc bromide cyanide ammonia.

See Cyanide zinc bromide ammonia, mercuric.

Mercuric bromide ammonia, $\text{HgBr}_2, 2\text{NH}_3$.

Decomp. by boiling H_2O . Sol. in min. acids and acetic acid. (Naumann, B. 1910, 43, 316.)

Mercuric bromide cadmium oxide,

$\text{HgBr}_2, \text{CdO} + \text{H}_2\text{O}$.

(Mailhe, A. ch. 1902, (7) 27, 371.)

Mercuric bromide cupric oxide,

$\text{HgBr}_2, \text{CuO} + 3\text{H}_2\text{O}$.

(Mailhe, Bull. Soc. 1901, (3) 25, 791.)

Mercuric bromide hydrazine, $\text{HgBr}_2, \text{N}_2\text{H}_4$.

(Hofmann and Marburg, A. 1899, 305, 215.)

Mercuric bromide potassium chloride,

$\text{HgBr}_2, 2\text{KCl}$.

Decomp. by H_2O . (Harth, Z. anorg. 1897, 14, 345.)

Mercuric bromide zinc oxide, $\text{HgBr}_2, \text{ZnO} + 8\text{H}_2\text{O}$.

(Mailhe, C. R. 1901, 132, 1274.)

Mercuric bromoiodide, HgBrI .

Sol. in alcohol and ether. Can be recrystallised from ether without decomp. (Oppenheim, B. 2, 571.)

Mercurous chloramide, $\text{Hg}_2(\text{NH}_2)\text{Cl}$.

Insol. in boiling H_2O or $\text{NH}_4\text{OH} + \text{Aq}$. (Kane, A. ch. (2) 72, 215.)

Mixture of Hg and HgNH_2Cl . (Barfoed, J. pr. (2), 39, 201.)

Mercuric chloramide, $\text{Hg}(\text{NH}_2)\text{Cl}$.

Composition is *dimercuriammonium ammonium chloride*, $\text{Hg}_2\text{NCl}, \text{NH}_4\text{Cl}$, which see.

Mercuric chloramide oxymercuriammonium chloride, $4\text{Hg}(\text{NH}_2)\text{Cl}, (\text{NH}_2\text{OH}_2)\text{Cl}$. (Millon.)

Correct composition is *dimercuriammonium ammonium chloride*, $\text{NH}_2\text{Cl}, \text{NH}_4\text{Cl}$, which see. (Balestra, Gazz. ch. it. 21, (2) 294.)

$\text{Hg}(\text{NH}_2)\text{Cl}, (\text{NH}_2\text{OH}_2)\text{Cl}$ (Millon.)

True composition is *dimercuriammonium mercuric chloride*, $2\text{Hg}_2\text{NCl}, \text{HgCl}_2 + \text{H}_2\text{O}$; or *dimercuriammonium hydrogen chloride*, $\text{NH}_2\text{Cl}, \text{HCl}$. (Balestra.)

Mercuric chloramide chloride, $\text{Hg}(\text{NH}_2)\text{Cl}, \text{HgCl}_2$.

Properties as mercuric chloramide. Decomp. by cold $\text{HCl} + \text{Aq}$. (Millon.)

True composition is *dimercuriammonium hydrogen chloride*, $\text{NH}_2\text{Cl}, 2\text{HCl}$. (Balestra, Gazz. ch. it. 21, (2) 294.)

Mercuric chloramide chromate,

$2\text{Hg}(\text{NH}_2)\text{Cl}, \text{HgCrO}_4$.

Decomp. by hot H_2O . Easily sol. in HNO_3 or $\text{HCl} + \text{Aq}$. (Jager and Kruss, B. 22, 2048.)

Mercurous chloride, Hg_2Cl_2 .

Almost absolutely insol. in cold, but gradually sl. decomp. by boiling H_2O .

Calculated from electrical conductivity of $\text{Hg}_2\text{Cl}_2 + \text{Aq}$, 1 l. H_2O dissolves 3.1 mg. Hg_2Cl_2 at 18° . (Kohlrausch and Rose, Z. phys. Ch. 12, 241.)

1 l. H_2O dissolves 2 mg. Hg_2Cl_2 at 18° . (Kohlrausch, Z. phys. Ch. 1904, 50, 356.)

1 l. H_2O dissolves 1.4 mg. at 0.5° ; 21 mg. at 18° ; 2.8 mg. at 24.6° ; 7 mg. at 43° . (Kohlrausch, Z. phys. Ch. 1908, 64, 150.)

When finely divided, is 10% more sol. than when coarsely crystalline. (Sauer, Z. phys. Ch. 1904, 47, 184.)

Solubility in $\text{H}_2\text{O} = 0.8 \times 10^{-6}$ g. mol. (Ley, Z. Elektrochem. 1904, 10, 301.)

Sl. sol. with decomp. in boiling H_2O free from air, 20 ccm. H_2O affording 0.002 g. HgCl_2 after boiling 1 hour with Hg_2Cl_2 .

(Mialle, A. ch. (3) 5, 176.) $\text{Hg}_2(\text{NO}_3)_2 + \text{Aq}$ containing 1 pt. $\text{Hg}_2(\text{NO}_3)_2$ to 250,000 pts. H_2O give ppt. of Hg_2Cl_2 with $\text{HCl} + \text{Aq}$. Sol. with decomp. in conc. $\text{HCl} + \text{Aq}$, hot $\text{HNO}_3 + \text{Aq}$, aqua regia, or $\text{Cl}_2 + \text{Aq}$. (Fresenius.) Insol. in cold dil. acids, but slowly sol. on heating.

The solubility of Hg_2Cl_2 in $\text{HCl} + \text{Aq}$ increases slowly with time, and finally reaches a point where it increases very rapidly, which takes place sooner the more dil. the acid. Presence of $\text{Hg}_2(\text{NO}_3)_2 + \text{Aq}$ helps the solubility. (Why not oxidation to HgCl_2 ?) (Varenne, C. R. 92, 1161.)

Solubility of Hg_2Cl_2 in $\text{HCl} + \text{Aq}$ at 25° .
Solid phase = $\text{Hg}_2\text{Cl}_2 + 0.1 \text{ g. Hg.}$

G. per l.		Sp. gr. of solutions
HCl	Hg_2Cl_2	
31.69	0.034	...
36.46	0.048	...
95.43	0.207	1.042

(Richards and Archibald, *Z. phys. Ch.* 1902, 40, 385.)

Sol. in cold $\text{HCN} + \text{Aq}$ with separation of Hg.

Sol. in alkali chlorides + Aq. $\text{NH}_4\text{Cl} + \text{Aq}$ dissolves out Hg_2Cl_2 at ord. temp., much more at $40-50^\circ$. Dil. $\text{NH}_4\text{Cl} + \text{Aq}$ decomposes more slowly than conc. Access of air hastens reaction. (Miahle.)

When heated several hours to $40-50^\circ$, 100 pts. $\text{NH}_4\text{Cl} + 833$ pts. H_2O form 0.75 pt. Hg_2Cl_2 from 25 pts. Hg_2Cl_2 ; 100 pts. $\text{NaCl} + 833$ pts. H_2O form 0.33 pt. Hg_2Cl_2 from 25 pts. Hg_2Cl_2 ; 100 pts. $\text{KCl} + 833$ pts. H_2O form

0.25 pt. Hg_2Cl_2 from 25 pts. Hg_2Cl_2 ; 100 pts. $\text{BaCl}_2 + 833$ pts. H_2O form 0.33 pt. Hg_2Cl_2 from 25 pts. Hg_2Cl_2 . (Miahle, *J. Pharm.* 26, 108.)

Other chlorides act as NH_4Cl , only less vigorously. (Pettenkofer.)

By boiling 1 pt. Hg_2Cl_2 10 times with a solution of 1 pt. NaCl each time, the Hg_2Cl_2 is finally completely decomp. (Henne.)

Boiling $\text{BaCl}_2 + \text{Aq}$ or $\text{CaCl}_2 + \text{Aq}$ dissolve traces. $\text{K}_2\text{SO}_4 + \text{Aq}$, $\text{KNO}_3 + \text{Aq}$, or $\text{KHCO}_3 + \text{Aq}$ do not dissolve. (Pettenkofer.)

Sol. in $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$. Insol. in NH_4 nitrate, or succinate + Aq. (Wittstein.)

Sol. in hot $\text{Hg}(\text{NO}_3)_2 + \text{Aq}$, and still more in hot $\text{Hg}(\text{NO}_3)_2 + \text{Aq}$; on cooling it crystallises out completely. 25 g. Hg_2Cl_2 dissolve in 1.5 l. H_2O containing 50 g. $\text{Hg}(\text{NO}_3)_2$. (Debray, *C. R.* 70, 995.)

Sol. in $\text{PtCl}_2 + \text{Aq}$.

Decomp. by $\text{NH}_4\text{OH} + \text{Aq}$.

Decomp. by KOH , or $\text{NaOH} + \text{Aq}$.

Sol. in $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$. (Faktor, *C. C.* 1905, I, 1524.)

Very sl. sol. in NH_4 succinate. (Wittstein.)

Insol. in SbCl_3 . (Klemensiewicz, *C. C.* 1908, II, 1850.)

Very sol. in liquid NH_3 . (Franklin, *Am. Ch. J.* 1898, 20, 829.)

Insol. in alcohol or ether. More sol. in H_2O containing pepsin and an acid than in H_2O , and is not converted thereby into HgCl_2 . (Torsellini, *Ann. Chim. Ch. farm.* (4) 4, 105.)

Small amts. are sol. with decomp. in alcohol, ether and CHCl_3 . 1 g. CHCl_3 dissolves 0.0046 g. Hg_2Cl_2 . (MacLagan, *Arch. Pharm.* 1884, 222, 788.)

Formic acid (95%) dissolves at 16.5° , 0.02%; at 18° , 0.0003%. (Aschan, *Ch. Z.* 1913, 37, 1117.)

Insol. in methyl acetate (Naumann, *B.* 1909, 42, 3790); ethyl acetate. (Hamers, *Dissert.* 1906; Naumann, *B.* 1904, 37, 3602.)

Somewhat sol. in hydroxylamine hydrochloride. (Adams, *Am. Ch. J.* 1902, 28, 1216.)

Insol. in benzonitrile. (Naumann, *B.* 1914, 47, 1370.)

Insol. in acetone and in methylal. (Eidmann, *C. C.* 1899, II, 1014.)

Solubility in organic solvents at $18-20^\circ$.

100 g. chloroform dissolve traces of HgCl_2 .

100 g. bromoform dissolve 0.055 g. HgCl_2 .

100 g. ethyl bromide dissolve traces of HgCl_2 .

100 g. ethylene dibromide dissolve traces of HgCl_2 . (Sulc, *Z. anorg.* 1900, 25, 401.)

Mercuric chloride, HgCl_2 .

Permanent.

Sol in 18.5 pts. H_2O at 13.8° , and 2-3 pts. at 100° . (J. Davy, 1822.) Sol in 3 pts. boiling H_2O . (Wenzel.) Sol in 18 23 pts. H_2O at 10° , and 3 pts. at 100° . (M. R. and P.) Sol. in 18.46 pts. at 18.75° . (Abl.) Sol. in 16 pts. cold, and 3 pts. warm H_2O . (Dumas.)

100 pts. H₂O dissolve pts. HgCl₂ at t°.

t°	Pts. HgCl ₂	t°	Pts. HgCl ₂	t°	Pts. HgCl ₂
0	5.73	40	9.62	80	24.30

22.46	1.0285	1.0184	1.0083	0.9982

(Schröder, B. **19**, 161 R.)

Sp. gr. at 16°/4° of HgCl_2 + ethyl alcohol containing 23.5489% $\text{HgCl}_2 = 0.99885$, containing 11.8801% = 0.88572 (Schönrock, Z. phys. Ch. 1893, **11**, 768.)

Sp. gr. at 16°/4° of HgCl_2 + amyl alcohol containing 10.9948% $\text{HgCl}_2 = 0.89550$. (Schönrock, Z. phys. Ch. 1893, **11**, 769.)

Sol. in 4 pts. ether (Karls); in 4.1 pts. (Henry); in 2.86 pts. ether of 0.745 sp. gr. (sp. gr. of solution = 1.08); the solvent power is not increased by elevating the temp., and b.-pt. of ether is not raised. (J. Davy.)

Ether extracts HgCl_2 from HgCl_2 + Aq. (Orfila); very slightly if HgCl_2 + Aq. is dil. (Lassaigne.)

Very sl. sol. in pure ether. (Polis, B. **20**, 717.)

6.35 pts. are sol. in 100 pts. ether at 0°.

6.44 " " " " 100 " " " 18.

6.38 " " " " 100 " " " 35.5.

(Laszczynski, B. 1894, **27**, 2286.)

Sol. in $7\frac{1}{2}$ –8 pts. ether. (Madsen, Ch. Z. Repert. 1897, **21**. 169.)

Solubility in 100 cc. ether at $17^\circ = 4.1$ – 4.12 g. (Strömholm, J. pr. 1902, (2), **66**. 450.)

The solubility of HgCl_2 in H_2O is only sl. affected by the presence of ether. An aqueous solution sat. with ether and HgCl_2 contains about 10% less HgCl_2 than a pure sat. aqueous solution. Partition coefficient for ether
 $\text{HgCl}_2/\text{H}_2\text{O} = 4.9$ at 0° ; 3.02 at 14.6° ; 2.80 at 16.8° . (Strömholm, Z. phys. Ch. 1903, **44**. 70.)

Solubility of HgCl_2 in ether+Aq at 25° .

% Ether	% H_2O	% HgCl_2
87 86	5 22	6 92
1 2	93 6	5 2
5 2	90 5	4 3
5.4	91 8	2 8
5 4	93 1	1.5

(Abe, J. Tok. Chem. Soc. 1912, **33**. 1087.)

Solubility of HgCl_2 in ether+ethyl alcohol at 25°

% Alcohol	% HgCl_2	% Alcohol	% HgCl_2
67 57	32 43	27 16	36 29
58.59	32 50	22.48	34 08
51 02	37 39	15 20	28 55
44 79	37.96	8.97	20.67
38.69	38.24	0	5 49
32.84	37.75		

(Abe.)

4 pts. ether dissolve 1 pt. HgCl_2 , but 4 pts. ether+133 pts. camphor dissolve 1.33 pts. HgCl_2 ; 4 pts. ether+4 pts. camphor dissolve 2 pts. HgCl_2 ; 4 pts. ether+8 pts. camphor dissolve 4 pts. HgCl_2 ; 4 pts. ether+16 pts. camphor dissolve 8 pts. HgCl_2 . (Karls, Pogg. 10. 608.)

3 pts. alcohol dissolve 1 pt. HgCl_2 , but 3 pts. alcohol+1 pt. camphor dissolve 2 pts. HgCl_2 ; 3 pts. alcohol+3 pts. camphor dissolve 3 pts. HgCl_2 ; 3 pts. alcohol+6 pts. camphor dissolve 6 pts. HgCl_2 . (Karls, l. c.)

Solution can be obtained containing 25 pts. camphor, 16 pts. HgCl_2 , and only 4 pts. alcohol. Sp. gr. of solution = 1.326. (Simon, Pogg. **37**. 553.)

100 pts. acetone dissolve 60 pts. HgCl_2 at 25° . (Krug and M'Elroy, J. Anal. Appl. Ch. 184.)

98.35 pts. HgCl_2 are sol. in 100 pts. acetone at 0° .

110.95 pts. HgCl_2 are sol. in 100 pts. acetone at 10° .

126.80 pts. HgCl_2 are sol. in 100 pts. acetone at 18° . (Lasczynski, B. 1894, **27**. 2287.)

1 g. HgCl_2 is sol. in 0.70 g. acetone at 18° . Sg. gr. of sat. solution $18^\circ/4^\circ = 1.956$. (Naumann, B. 1904, **37**. 4334.)

Sat. solution in acetone contains 57.74 g. HgCl_2 in 100 g. solution at 25° . (Foote and Haigh, J. Am. Chem. Soc. 1911, **33**. 461.)

Sp. gr. at $26.7^\circ/4^\circ$ of HgCl_2 +acetone containing 36.25% $\text{HgCl}_2 = 1.1585$. (Schonrock, Z. phys. Ch. 1893, **11**. 769.)

Sp. gr. of HgCl_2 +acetone.

% HgCl_2	Sp. gr. $20^\circ/20^\circ$
0	0.8003
10.94	0.8847
21 05	0.9799

(Le Blanc and Rohland, Z. phys. Ch. 1896, **19**. 283.)

100 g. methyl acetate dissolve 46 g. at bpt. (56.5°). (Schroeder and Steiner, J. pr. 1909, (2) **79**. 49.)

1 g. HgCl_2 is sol. in 2.35 g. methyl acetate at 18° . Sp. gr. $18^\circ/4^\circ$ of the sat. solution = 1.251. (Naumann, B. 1909, **42**. 3793.)

Solubility in ethyl acetate.

Pts sol in 100 pts. ethyl acetate.

Pts HgCl_2	t°

21 4	74.5	33.1	108	47.5	159
25.0	83	35.1	115 5	52.8	173

(Staronka, Anz. Ak. Wiss. Krakau, 1910. 372.)

Sp gr. at 16°/4° of HgCl₂+pyridine containing 17.53% HgCl₂=1.1523; containing 6.57% HgCl₂=1.0388. (Schonrock, Z. phys. Ch. 1893, 11. 768.)

Mol. weight determined in benzonitrile, methyl- and ethyl-sulphide. (Werner, Z. anorg. 1897, 15. 31. 26 and 30.)

Sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Easily sol. in oil of turpentine and other essential oils; sl. sol. in cold benzene, but much more on heating, crystallising on cooling. (Franchimont, B. 16. 387.)

Easily sol. in boiling creosote.

Insol. in olive oil.

Insol. in oils and fats but sol. when first dissolved in alcohol, free ether or anhydrous ketones. (Glock, Ch. Z. Repert. 36. 315.)

Extracted from HgCl₂+Aq by volatile oils.

Mercuric hydrogen chloride (Chloromercuric acid), HgCl₂, HCl=HHgCl₂.

Decomp. by H₂O. (Boullay, A. ch. 34. 243.)

Easily decomposed. (Neumann, M. 10. 236.)

HgCl_2 , $2\text{HCl} + 7\text{H}_2\text{O}$. Decomp. by H_2O . (Ditte, A. ch. (5) 22. 551.)
 3HgCl_2 , $4\text{HCl} + 14\text{H}_2\text{O}$. As above.
 2HgCl_2 , $\text{HCl} + 6\text{H}_2\text{O}$. As above.
 4HgCl_2 , $2\text{HCl} + 9\text{H}_2\text{O}$. As above.
 3HgCl_2 , $\text{HCl} + 5\text{H}_2\text{O}$. As above.

Mercuric hydrazine chloride, HgCl_2 , $2(\text{N}_2\text{H}_4, \text{HCl})$.

Very sol. in H_2O . More sol. in hot alcohol than in cold; decomp. by HNO_3 . (Curtius, J. pr. 1894, (2) 50. 332.)

Mercuric nickel chloride, basic, HgCl_2 , 6NiO , $\text{NiCl}_2 + 20\text{H}_2\text{O}$, and HgCl_2 , 7NiO , NiCl_2 .

(Mailhe, A. ch. 1902, (7) 27. 369.)

Mercuric nickel chloride.

Deliquescent. (v. Bonsdorff.)

Mercuric nitrosyl chloride, HgCl_2 , NOCl .

Sol. in H_2O without effervescence. (Sudborough, Chem. Soc. 59. 659.)

Mercuric phosphoric chloride, 3HgCl_2 , 2PCl_5 .

Decomp. and dissolved by H_2O . (Baudrimont, A. ch. (4) 2. 45.)

Mercuric potassium chloride, 2HgCl_2 , $\text{KCl} + 2\text{H}_2\text{O}$.

Very easily sol. in warm H_2O . A clear solution at 18° is filled with crystals at 15° . Sl. sol. in alcohol. (v. Bonsdorff, Pogg. 17. 122.)

HgCl_2 , $\text{KCl} + \text{H}_2\text{O}$. Easily sol. in H_2O ; sl. sol. in alcohol. (v. Bonsdorff, Pogg. 19. 336.)

HgCl_2 , $2\text{KCl} + \text{H}_2\text{O}$. As above.

Solubility determinations show that the double salts formed by mercuric and potassium chlorides at 25° are:

2KCl , $\text{HgCl}_2 + \text{H}_2\text{O}$.

KCl , $\text{HgCl}_2 + \text{H}_2\text{O}$. Can be recryst. without decomp.

KCl , $2\text{HgCl}_2 + 2\text{H}_2\text{O}$. Gives HgCl_2 on recryst. from H_2O . (Foote and Levy, Am. Ch. J. 1906, 35. 237.)

Mercurous rhodium chloride.

See Chlororhodite, mercurous.

Mercuric rubidium chloride, HgCl_2 , RbCl .

Sol. in H_2O .

HgCl_2 , 2RbCl . Sol. in H_2O and $\text{HCl} + \text{Aq}$. (Godeffroy, Arch. Pharm. (3) 12. 47.)

$+ 2\text{H}_2\text{O}$. Sol. in H_2O . (Godeffroy.)

2HgCl_2 , RbCl . Sol. in H_2O . (Godeffroy.)

Solubility determinations show that at 25° there exist five double mercuric rubidium chlorides with the following formulas:

RbCl , 5HgCl_2 . Gives HgCl_2 on recryst. from H_2O .

3RbCl , $4\text{HgCl}_2 + \text{H}_2\text{O}$. Gives RbCl , 5HgCl_2 on recryst. from H_2O .

RbCl , $\text{HgCl}_2 + \text{H}_2\text{O}$. Gives 3RbCl , 4HgCl_2 on recryst. from H_2O .

3RbCl , $2\text{HgCl}_2 + 2\text{H}_2\text{O}$. Gives 3RbCl , 4HgCl_2 on recryst. from H_2O .

2RbCl , $\text{HgCl}_2 + \text{H}_2\text{O}$. Gives 3RbCl ,

4HgCl_2 on recryst. from H_2O .

(Foote and Levy, Am. Ch. J. 1906, 35. 241.)

Mercurous silver chloride, HgCl , AgCl .

(Jones, J. Soc. Chem. Ind. 1893, 12. 983.)

2HgCl , AgCl . Min. *Bordoste*. (Jones, J. Soc. Chem. Ind. 1893, 12. 983.)

3HgCl , AgCl (Jones, Chem. Soc. 1910, 97. 338.)

Mercuric sodium chloride, HgCl_2 , NaCl .

Sp. gr. at $16^\circ/4^\circ$ of aqueous solution containing 14.937% salt = 1.13310; containing 11.0736% = 1.09528. (Schönrock, Z. phys. Ch. 1893, 11. 782.)

$+ \text{H}_2\text{O}$. (Linebarger, Am. Ch. J. 1893, 15. 344.)

$+ 1\frac{1}{2}\text{H}_2\text{O}$. Sol. in 0.33 pt. H_2O at 15° . (Schindler, Repert. 36. 240.)

Extremely easily sol. in alcohol. (Voit.)

Sol. in 275 pts. ether. Ether dissolves the undecomposed salt out of H_2O solution. (Lassaigne, A. ch. 64. 104.)

HgCl_2 , 2NaCl . Deliquescent. Very sol. in H_2O . (Voit, A. 104. 354.)

2HgCl_2 , NaCl . Decomp. by H_2O in dil. solution. Sol. in acetone and acetic ether. (Linebarger, Am. Ch. J. 1893, 15. 344.)

Solubility determinations show that the only double salt formed by mercuric and sodium chlorides between 10.3° and 25° is NaCl , $\text{HgCl}_2 + 2\text{H}_2\text{O}$. Can be recryst. from H_2O . (Foote and Levy, Am. Ch. J. 1906, 35. 237.)

Mercuric strontium chloride, basic, SrCl_2 , $\text{HgO} + 6\text{H}_2\text{O}$.

Decomp. by H_2O . (André, C. R. 104. 431.)

Mercuric strontium chloride, 2HgCl_2 , $\text{SrCl}_2 + 2\text{H}_2\text{O}$.

Easily sol. in H_2O . (v. Bonsdorff.)

3HgCl_2 , $\text{SrCl}_2 + 5-6\text{H}_2\text{O}$. Very sol. in H_2O . (Swan, Am. Ch. J. 1898, 20. 632.)

Mercurous sulphur chloride.

See Mercurous sulphochloride.

Mercuric thalious chloride, HgCl_2 , TlCl .

Easily sol. in H_2O . (Jørgensen, J. pr. (2) 6. 83.)

Mercurous stannous chloride, Hg_2Cl_2 , SnCl_2 .

Decomp. by H_2O . (Capitaine, J. Pharm. 25. 549.)

Mercuric yttrium chloride, 3HgCl_2 , $\text{YCl}_3 + 9\text{H}_2\text{O}$.

Deliquescent. Very sol. in H_2O . (Popp, A. 131. 179.)

Mercuric zinc chloride, HgCl_2 , ZnCl_2 .

Very sol. in H_2O . (Harth, Z. anorg. 1897, 14. 323.)

2HgCl_2 , ZnCl_2 . (Varet, C. R. 1896, 123. 422.)

Mercuric zinc chloride ammonia, HgCl_2 , 4ZnCl_2 , $10\text{NH}_3+2\text{H}_2\text{O}$.

Insol. in boiling H_2O , but decomp. thereby. (André, C. R. 112. 995.)

HgCl_2 , 2ZnCl_2 , $6\text{NH}_3+\frac{1}{2}\text{H}_2\text{O}$. As above. (André.)

Mercuric chloride ammonia, HgCl_2 , 12NH_3 .

Sl. sol. in ammonia. (Franklin, Am. Ch. J. 1900, 23. 300.)

Mercuric chloride cadmium oxide, HgCl_2 , $\text{CdO}+\text{H}_2\text{O}$.

(Mailhe, A. ch. 1902, (7) 27. 371.)

Mercuric chloride cobaltous oxide, HgCl_2 , $3\text{CoO}+\frac{1}{2}\text{H}_2\text{O}$.

(Mailhe, C. R. 1901, 132. 1274.)

Mercuric chloride cupric oxide, HgCl_2 , $3\text{CuO}+\text{H}_2\text{O}$.

(Mailhe, Bull. Soc. 1901, (3) 25. 791.)

Mercuric chloride hydrazine, HgCl_2 , N_2H_4 .

Very unstable. Decomp. by H_2O . Pptd. from alcohol solution by H_2O ; very sol. in min. acids with decomp.

Easily sol. in HCl or HNO_3 . Decomp. by alkalies. Somewhat sol. in acetic acid. (Hofmann, B. 1897, 30. 2020.)

Mercuric chloride hydroxylamine, HgCl_2 , $2\text{NH}_2\text{OH}$.

Completely sol. in methyl and ethyl alcohol; insol. in ether; decomp. by H_2O and $\text{NaOH}+\text{Aq}$. Sol. in $\text{NH}_2\text{OH}, \text{HCl}+\text{Aq}$. (Adams, Am. Ch. J. 1902, 23. 210.)

Mercuric chloride lead oxide, HgCl_2 , $2\text{PbO}+2\text{H}_2\text{O}$.

(Mailhe, A. ch. 1902, (7) 27. 372.)

Mercuric chloride strontium chromate, 2HgCl_2 , HCl , SrCrO_4 .

Sol. in H_2O without decomp. (Imbert, Bull. Soc. 1897, (3) 17. 471.)

Mercuric chloroiodide, 2HgCl_2 , HgI_2 .

Sol. in H_2O . (Liebig.)

HgCl_2 , HgI_2 . Sl. sol. in hot H_2O with partial decomp. More easily sol. in alcohol. (Köhler, B. 12. 1187.)

Mercurous fluoride, Hg_2F_2 .

Decomp. by H_2O with separation of Hg_2O .

Mercuric fluoride, $\text{HgF}_2+2\text{H}_2\text{O}$.

Decomp. by cold H_2O , with separation of HgO . Sol. in dil. HNO_3+Aq , and $\text{HF}+\text{Aq}$. (Finkener, Pogg. 110. 623.)

Mercurous hydrogen fluoride, Hg_2F_2 , $4\text{HF}+4\text{H}_2\text{O}$.

Deliquescent. Easily sol. in H_2O . Sol. in dil. acids and dil. HF . (Böhm, Z. anorg. 1905, 43. 327.)

Mercurous silicon fluoride.

See Fluosilicate, mercurous.

Mercurous fluoride ammonia, Hg_2F_2 , 2NH_3 .

Stable on air. (Finkener, Pogg. 110. 142.)

Mercurous hydroxide, HgOH .

Nearly insol. in cold, sol. in hot H_2O . Sol. in $\text{NaOH}+\text{Aq}$. (Bhaduri, Z. anorg. 1897, 13. 410.)

Mercurous iodamide, $\text{Hg}_2(\text{NH}_2)\text{I}$.

(Rammelsberg, Pogg. 48. 184.)

Is a mixture of Hg and $\text{Hg}(\text{NH}_2)\text{I}$. (Barfoed.)

Mercurous iodide, Hg_2I_2 .

Sol. in over 2375 pts. H_2O . (Saladin, J. chim. méd. 7. 530.)

Solubility in $\text{H}_2\text{O}=2.6 \times 10^{-8}$ g.-equiv. per liter (calculated). (Bodländer, Z. phys. Ch. 1898, 27. 58.)

Solubility in $\text{H}_2\text{O}=3 \times 10^{-10}$ mols. per litre at 25° . (Sherrill, Z. phys. Ch. 1903, 43. 735.)

Sol. in $\text{Hg}(\text{NO}_3)_2+\text{Aq}$. (Stromann, B. 20. 2815.)

Sol. in $\text{KI}+\text{Aq}$. Easily sol. in $\text{Hg}_2(\text{NO}_3)_2+\text{Aq}$. Sl. sol. in $\text{NH}_4\text{OH}+\text{Aq}$. Sol. in hot $\text{NH}_4\text{Cl}+\text{Aq}$, but less than HgI_2 . Less sol. in NH_4NO_3 than in $\text{NH}_4\text{Cl}+\text{Aq}$. (Brett.)

Partially sol. with separation of Hg and formation of HgI_2 , in cold $\text{KI}+\text{Aq}$, hot NaI , CaI_2 , SrI_2 , BaI_2 , MgI_2 , ZnI_2 , and $\text{NH}_4\text{I}+\text{Aq}$; in warm NaCl , KCl and $\text{NH}_4\text{Cl}+\text{Aq}$, and slowly in hot $\text{HCl}+\text{Aq}$. (Boullay, A. ch. (2) 34. 358.)

Decomp. by alkali chlorides $+\text{Aq}$. (Miahle, A. ch. (3) 5. 177.)

Very easily sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 829.)

Not wholly insol. in alcohol, ether, or chloroform. (MacLagan, Rep. anal. Ch. 1884. 378.)

Decomp. by boiling alcohol; 1000 g. boiling alcohol decomp. about 3.15 g. Hg_2I_2 . (François, C. R. 1896, 121. 890.)

Boiling alcohol decomp. Hg_2I_2 to Hg and HgI_2 which dissolves until 0.220 g. HgI_2 are contained in 100 g. alcohol. (François, C. R. 1896, 121. 889.)

Insol. in cold ether. (François, J. Pharm. 1897, (6), 6. 445.)

Insol. in methylene iodide. (Retgers, Z. anorg. 3. 345.)

Difficultly sol. in methyl acetate. (Nauermann, B. 1909, 42. 3790.)

Phenol at 180° decomp. it into Hg and HgI_2 until a state of equilibrium is reached with

2.75 g. HgI_2 to 100 g phenol, above which point HgI_2 is sl sol. (0.05 g in 100 g.) in phenol- HgI_2 mixture. Decomp. by cold aniline more rapidly than by hot. Equilibrium is reached when 26.35 g. HgI_2 are present to 100 g. aniline at bpt of aniline. Aniline containing more than 26 g. HgI_2 to 100 g dissolves HgI_2 in considerable quantity. (François, C C 1896, 1, 470.)

Sl sol in benzonitrile (Naumann, B 1914, 47, 1369.)

Sl. sol. in allyl mustard oil (Mathews, J phys. Chem. 1905, 9, 647.)

Mercuric iodide, HgI_2

Sol in 150 (°) pts. H_2O (Wurtz.)

1 l. H_2O at 17.5° dissolves 0.0403 g. HgI_2 (Bourgoin, A. ch. (6) 3, 429.)

Sol. in about 6500 pts. H_2O (Hager.)

According to calculation from electrical conductivity of $\text{HgI}_2 + \text{Aq}$, HgI_2 is much less sol., 1 l. H_2O dissolving only 0.5 mg HgI_2 at 18°. (Kohlrausch and Rose, Z. phys. Ch 12, 241.)

1 l. H_2O dissolves 0.054 g. HgI_2 at 22°. (Rohland, Z. anorg. 1898, 15, 412.)

1 l. H_2O at 25° dissolves about 0.06 g (Morse, Z. phys. Ch. 1902, 41, 731.)

1 l. H_2O at 18° dissolves 4×10^{-6} mol. (Abege, Z. Elektrochem 1903, 9, 553.)

Solubility in H_2O at 25° = 0.00013 mol liter. (Sherrill, Z. phys. Ch. 1903, 43, 735.)

1 l. H_2O dissolves 0.4 mg. HgI_2 at 18°. (Kohlrausch, Z. phys. Ch. 1904, 50, 356.)

1 l. H_2O at 18° dissolves 0.2 to 0.4 mg (Kohlrausch, Z. phys. Ch. 1908, 64, 168.)

The yellow modification is always deposited from solution even in the presence of an excess of the red form. (Gernez, C. R. 1903, 136, 1323.)

Sol. in many acids, especially in HCl , and $\text{HI} + \text{Aq}$. Insol. in $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$ (Berthelot.) Scarcely sol. in dil $\text{HNO}_3 + \text{Aq}$.

Not attacked by cold H_2SO_4 , decomp. by hot. (Ditte, A. ch. 1879, (5) 17, 124.)

Sat. solution in $\text{H}_2\text{SO}_4 + \text{Aq}$ contains at critical temp. (158.2°), 0.7% HgI_2 . (Niggli, Z. anorg. 1912, 75, 182.)

Sol. in hot $(\text{NH}_4)_2\text{CO}_3$, $(\text{NH}_4)_2\text{SO}_4$, cold NH_4Cl , NH_4NO_3 , or ammonium succinate + Aq . (Wittstein.)

Sol. in HgCl_2 , $\text{Hg}(\text{NO}_3)_2$, or $\text{Hg}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$. Easily sol. in $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$. Easily sol. in soluble iodides + Aq . More sol. in hot than in cold NaI or $\text{KI} + \text{Aq}$. When conc., 1 mol. KI in hot solution dissolves 3 mols. HgI_2 , but a portion separates on cooling. BaI_2 , SrI_2 , MgI_2 , and CaI_2 act in the same way. Easily sol. in cold, more sol. in hot $\text{ZnI}_2 + \text{Aq}$, 2 mols. HgI_2 being dissolved to 1 mol. ZnI_2 . In $\text{NH}_4\text{I} + \text{Aq}$, 3 mols. HgI_2 are dissolved to 2 mols. NH_4I . Abundantly sol in hot KCl , NaCl , $\text{NH}_4\text{Cl} + \text{Aq}$, but separates out on cooling, and the trace remaining may be pptd. by H_2O , 2 g. KCl in solution dissolves 1.166 g. HgI_2 . Sol. in $\text{HgCl}_2 + \text{Aq}$, and very easily sol. in

alcoholic solution of HgCl_2 . (Boullay, A. ch. (2) 34, 346.)

Solubility in $\text{MI} + \text{Aq}$ at 25°.

Salt	In 10 ccm. of the solution	
	Millimols HgI_2	Millimols salt
NaI	4 12	7 94
	6 22	13.85
	9 45	22 25

(Dunningham, Chem. Soc. 1914, 105, 368.)

Very sol. in KSCN + Aq. (Philipp, Pogg. 1867, **131**, 93.)

Sol. in 1.09 pts. cryst. $\text{Na}_2\text{S}_2\text{O}_3$ + Aq. (Eder and Ulm, M. 1882, **3**, 197.)

Very sol. in hot CaCl_2 + Aq., less sol. in BaCl_2 , KCl and NaCl + Aq. (Lea, Z. anorg. 1896, **12**, 341.)

Solubility in normal $\text{Hg}(\text{NO}_3)_2$ + Aq = 48.0 g. per litre. (Morse, Z. phys. Ch. 1902, **41**, 731.)

Extremely sol. in cold conc. NH_4Br + Aq. (Grossmann, B. 1903, **36**, 1602.)

Sol. in alkali sulphites + Aq. (Barth, Z. phys. Ch. 1892, **9**, 215.)

Sol. in $\text{Ca}(\text{OCl})_2$ + Aq.; sol. in KOH + Aq. (Melsens, A. ch. (3) **26**, 222.)

Sol. in liquid SO_2 . (Walden and Centnerszwer, C. C. 1902, **1**, 344.)

Very easily sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, **20**, 829.)

Sol. in SOCl_2 , S_2Cl_2 , SO_2Cl_2 , warm AsCl_3 , PBr_3 , warm POCl_3 . (Walden, Z. anorg. 1900, **25**, 212.)

Easily sol. in AsBr_3 . (Walden, Z. anorg. 1902, **29**, 374.)

Insol. in liquid CO_2 . (Büchner, Z. phys. Ch. 1906, **54**, 674.)

More sol. in alcohol than in H_2O . 1 l. H_2O containing 10% of 90% alcohol dissolves 0.08 g. HgI_2 . 1 l. of alcohol of 80° B. dissolves 2.851 g. HgI_2 , 1 l. absolute alcohol dissolves 11.86 g. HgI_2 . (Bourgoin, A. ch. (6) **3**, 429.)

Sol. in 130 pts. cold, and 15 pts. hot 90% alcohol. (Hager.)

100 pts. absolute methyl alcohol dissolve 3.16 pts. at 19.5°; 100 pts. absolute ethyl alcohol dissolve 2.09 pts. at 19.5°. (de Bruyn, Z. phys. Ch. **10**, 783.)

0.00842 pt. is sol. in 1 pt. alcohol at 15°. (Gautier and Charpy, C. R. 1890, **111**, 647.)

100 g. methyl alcohol dissolve 3.7 g. HgI_2 at 19°; ethyl alcohol, 1.86 g.; propyl alcohol, 1.25 g.; isobutyl alcohol, at 22.5°, 0.51 g. (Timofeiew, Dissert. 1894.)

At 15–20°, 100 g. methyl alcohol dissolve 3.24 g. HgI_2 ; ethyl alcohol, 1.42 g.; propyl alcohol, 0.826 g. (Rohland, Z. anorg. 1898, **15**, 412.)

Solubility of HgI_2 in ethyl alcohol + Aq at 25°

A = g. alcohol in 100 g. alcohol + Aq.

HgI_2 = millimols. HgI_2 in 100 cc. of the solution.

A	HgI_2	Sp. gr.
100	3.86	0.80325
95.82	2.56	0.80950
92.44	1.92	0.81536
86.74	1.38	0.82996
78.75	0.935	0.84654
67.63	0.45	0.87214

(Herz and Knoch, Z. anorg. 1905, **45**, 266.)

Solubility of HgI_2 in methyl alcohol + Aq at 25°.

P = g. alcohol in 100 g. alcohol + Aq.

HgI_2 = millimols. HgI_2 in 10 cc. of the solution.

P	HgI_2	Sp. gr.
0	0.0013	
47.06	0.0098	0.9187
64.00	0.0347	0.8834
78.05	0.0981	0.8519
100	0.571	0.8155

(Herz and Anders, Z. anorg. 1907, **52**, 165.)

Solubility of HgI_2 in ethyl alcohol + Aq at 25°.

P = g. alcohol in 100 g. alcohol + Aq.

HgI_2 = millimols. HgI_2 in 10 cc. of the solution.

P	HgI_2	Sp. gr.
70.01	0.061	0.8636
100	0.386	0.8032

(Herz and Anders, Z. anorg. 1907, **52**, 170.)

At 15°, 1 pt. by weight is sol. in:—
24813 pts. H_2O .

30.8 pts. methyl alcohol of sp. gr. at 0.7990.
70 3 " ethyl " " " " " 0.8100.
121 0 " propyl " " " " " 0.8160.

(Rohland, Z. anorg. 1899, **18**, 328.)

Solubility of HgI_2 in mixtures of methyl and ethyl alcohol at 25°.

P = % methyl alcohol in the mixtures.

HgI_2 = g. HgI_2 in 10 ccm. of the solution.

S 25°/4° = Sp. gr. of the sat. solution.

P	HgI_2	S 25°/4°
0	0.180	0.8038
4.37	0.193	0.8039
10.4	0.208	0.8046

17.85	0.165	0.8043
56.6	0.155	0.8075
91.2	0.152	0.8099
95.2	0.144	0.8108
100	0.142	0.8116

(Herz and Kuhn, Z. anorg. 1908, 60. 161.)

Solubility in 100 pts. amyl alcohol equals:

0.66 pts. at 13°.
3.66 " " 71°.
5.30 " " 100°.
9.57 " " 133.5°.

(Laszcynski, B. 1894, 27. 2287.)

Sp. gr. at 16°/4° of HgI_2 +alcohol containing 1.8358% HgI_2 =0.80718; containing 1.7119%=0.80597. (Schönrock, Z. phys. Ch. 1893, 11. 770.)

Somewhat sol. in ether. Sol. in 77 pts. ether. (Saladin.) Sol. in 60 pts. ether. (Hager.)

Sol. in cold ether. (François, J. Pharm. 1897, (6) 6. 445.)

Very sl. sol. in anhydrous ether. (Hampe.)

0.62 pt. is sol. in 100 pts. ether at 0°.

0.97 pt. is sol. in 100 pts. ether at 36°.

(Laszcynski, B. 1894, 27. 2286.)

Solubility in ether=0.3% at ord. temp. (Marsh, Chem. Soc. 1910, 97. 2299.)

Nearly insol. in ether. (Dunningham, Chem. Soc. 1914, 105. 368.)

Data are given on the system HgI_2 +KI+ether. (Dunningham.)

Solubility at 23° in chloroform=0.071%; in ether=0.551%; in acetone=2.005%; in ethyl alcohol=2%; in methyl alcohol=3.975%; in benzene=0.247%. (Beckmann and Stock, Z. phys. Ch. 1895, 17. 130.)

Solubility in organic solvents at t°.

Solvent	t°	100 g. of the solvent dissolve g. HgI_2
Chloroform	61	0.163
Tetrachlormethane	75	0.094
Ethylene dichloride	85.5	1.200
Isobutyl chloride	69	0.328

Ethyl acetate	74-78	4.200

(Sulc, Z. anorg. 1900, 25. 402.)

Solubility in organic solvents at 18-20°.

100 g. chloroform dissolve 0.040 g. HgI_2 .

100 g. tetrachlormethane dissolve 0.006 g. HgI_2 .

100 g. bromoform dissolve 0.486 g. HgI_2 .

100 g. ethyl bromide dissolve 0.643 g. HgI_2 .

100 g. ethyl iodide dissolve 2.041 g. HgI_2 .

100 g. ethylene dibromide dissolve 0.748 g. HgI_2 .

(Sulc, Z. anorg. 1900, 25. 401.)

1 pt. ethylene bromide dissolves 0.00553 pts. HgI_2 at 15°. (Gautier and Charpy, C. R. 1890, 111. 647.)

100 pts. methylene iodide CH_2I_2 dissolve 2.5 pts. HgI_2 at 15°, 16.6 pts. at 100°, and 58 pts. at 180°. (Retgers, Z. anorg. 3. 252.)

1 l. sat. solution in CCl_4 at 15° contains 0.170 g. HgI_2 . (Dawson, Chem. Soc. 1909, 95. 874.)

Sol. in 340 pts. glycerine. (Fairley, Monit. Scient. (3) 9. 685.)

100 pts. acetone dissolve 2.09 pts. HgI_2 at 25°. (Krug and M'Elroy, J. Anal. Ch. 6. 84.)

Sol. in acetone and in methylal. (Eidmann, C. C. 1899, 11. 1014.)

Solubility in 100 pts. acetone equals:

2.83 pts HgI_2 at — 1°.
3.36 " " " 18°.
4.73 " " " 40°.
6.07 " " " 58°.

(Laszcynski, B. 1894, 27. 2287.)

100 g. methyl acetate solution, sat. at 18°, contain 1.10 g. HgI_2 . (Bezold, Dissert. 1906.)

100 g. boiling methyl acetate slowly dissolve 2.3 g. HgI_2 . (Schroeder and Steiner, J. pr. 1909, (2) 79. 49.)

Solubility in ethyl acetate at t° .

Pts. sol in 100 pts. ethyl acetate	t°
1 49	— 2
1 56	+17 5
1 64	21
2 53	40
3 19	55
4 31	76

(Laszczyński, B. 1894, 27. 2286.)

100 g. ethyl acetate anhydrous, or sat. with H_2O at 18° , dissolve at 18° , 14.70 g. HgI_2 . Solubility increases somewhat with temp. (Hamers, Dissert. 1906.)

Solubility of HgI_2 in ethyl acetate + Aq at 25° .

P = g. ethyl acetate in 100 g. ethyl acetate + Aq.

HgI_2 = millimols. HgI_2 in 10 cc. of the solution.

P	HgI_2	Sp. gr
4 39	0.0028	0.9973
96.76	0 412	0 9063
100	0.241	0.9011

(Herz and Anders, Z. anorg. 1907, 52. 172.)

1 pt. is sol. in 68.03 pts. ethyl acetate at 18° . (Naumann, B. 1910, 43. 316.)

Solubility in diethyl oxalate is 12.5% at bpt. and 2.5% at 100° . (Reinders, Z. phys. Ch. 1900, 32. 507.)

Solubility in CS_2 at t° .

t°	100 pts sat. solution contain pts HgI_2
—10	0.107
— 5	0.141
0	0.173
+ 5	0 207
10	0 239
15	0.271
20	0.320
25	0.382
30	0 445

(Arctowski, Z. anorg. 1894, 6. 267.)

Solubility in CS_2 .

100 g. of the sat. solution contain at:

— 86.5° — 93° — 116°
0.024 0.023 0.017 g. HgI_2 .

(Arctowski, Z. anorg. 1896, 11. 274.)

0.0028 pt. is sol. in 1 pt. CS_2 at 15° . (Gautier and Charpy, C. R. 1890, 111. 647.)

1 l. sat. solution in CS_2 at 15° contains 3.127 g. HgI_2 . (Dawson, Chem. Soc. 1909, 95. 874.)

Very sol. in liquid methylamine. (Gibbs, J. Am. Chem. Soc. 1906, 28. 1419.)

Abundantly sol. in methylamine. (Fitzgerald, J. phys. Chem. 1912, 16. 633.)

Somewhat sol. in allyl mustard oil. (Mathews, J. phys. Chem. 1905, 9. 647.)

Sol. in $\text{Sb}(\text{CH}_3)_4\text{I} + \text{Aq.}$

Very sl. sol. in Na citrate + Aq. (Spiller.)

1 pt. C_6H_6 dissolves 0.00217 pts HgI_2 at 15° . (Gautier and Charpy, C. R. 1890, 111. 647.)

Solubility in 100 pts. benzene equals:

0.22 pts at 15° .
0 88 " " 60° .
0.95 " " 65° .
1.24 " " 84° .

(Laszczyński, B. 1894, 27. 2284.)

1 l. C_6H_6 dissolves 0.00493 mol. HgI_2 at 25° . (Sherrill, Z. phys. Ch. 1903, 43. 735.)

100 g. boiling phenol dissolve 10 g. HgI_2 . (François, C. R. 1895, 121. 769.)

Sl. sol. in phenol with 20% H_2O . Not very sol. in acetic acid at 119° , in amyl acetate at 133° , in amyl bromide at 119° . Rather sol. in diethyl oxalate at 186° , in ethylene bromide at 131° , in amyl alcohol at 137° , in amyl iodide at 150° , in CHBr_3 at 151° , in iodo-benzol at 190° , in oil of turpentine at 160° . Very sol. in benzaldehyde at 179° , in methylene iodide at 182° . (Reinders, Z. phys. Ch. 1900, 32. 506.)

1000 pts. oil of bitter almonds dissolve 4 pts. HgI_2 at ord. temp.; 1000 pts. olive oil, 4 pts.; 1000 pts. poppy oil, 10 pts.; 1000 pts. nut oil, 15 pts.; 1000 pts. castor oil, 20 pts.; 1000 pts. lard oil, 4. 5 pts.; 1000 pts. vaseline, 2.5 pts.; 1000 pts. benzene, 4 pts. Sol. in phenol. (Mehn, Pharm. J. 3. 327; B. 19. 8 R.)

Solubility in aniline.

S = Temp. of solidification.

Mols. per 100	S	Mols. per 100	S	Mols. per 100	S

* Transition point.

(Pearce and Fry, J. phys. Ch. 1914, 18. 667.)

Very sol. in boiling alcoholic solution of aniline. (Vohl, Dissert. 1871.)

Abundantly sol. in hot benzonitrile and other aromatic nitriles. (Werner, Z. anorg. 1897, 15. 7.)

Sol. in benzonitrile (0.98 g. in 100 g. at 18°). 20 times more sol. by addition of 5 g. KI to 100 cc. benzonitrile. (Naumann, B. 1914, 47. 1375.)

Sol. in pyridine. (Naumann, B. 1904, 37. 4609.)

Solubility of HgI_2 in pyridine.

S = temp. of solidification.

Mols. per 100	S	Mols. per 100	S	Mols. per 100	S

26.7	145	41.6	165	54.4	166.5

(Staronka, Anz. Ak. Wiss. Krakau, 1910. 372.)

Mol. weight determined in pyridine, methyl- and ethyl-sulphide. (Werner, Z. anorg. 1897, 15. 20.)

More or less sol. at high temp. in petroleum (bpt. 160 – 230°), bromnaphthalene, pyridine, toluidine and amyl alcohol. (Reinders, Z. phys. Ch. 1900, 32. 503.)

Yellow modification.

100 g. of sat. solution in acetone at 25° contain 3.0 g HgI_2 . (Reinders, Z. phys. Ch. 1900, 32. 514.)

Red modification.

Solubility in alcohol equals:

0.717–0.724 g. in 100 g. solution at 0° 1.044–1.084 g. " " 25° 2.10–2.20 g. " " 50° .

(Reinders, Z. phys. Ch. 1900, 32. 522.)

100 g. of sat. solution in acetone at 25° contain 1.95 g. HgI_2 . (Reinders, Z. phys. Ch. 1900, 32. 514.)

HgI_2 is moderately sol. in abs. alcohol at its b.-pt. The solution has a decided yellow color. On cooling, yellow crystals separate out. They soon change to the red modification.

Readily sol. in hot amyl alcohol. Yellow crystals separate from the solution when cooled

Readily sol. in allyl alcohol, forming a yellow solution, from which yellow crystals separate on cooling.

Sl. sol. in acetone, giving a yellow solution. On cooling yellow plates separate from the solution and rapidly turn red.

Sol. in phenol at 150°C . Solution has yellow color and yellow crystals separate out on cooling.

Readily sol. in boiling benzene. Saturated solution is yellow. The yellow iodide separates out on cooling, and changes rapidly to the red.

Sol. in toluene giving yellow solution, from which yellow crystals separate on cooling. They rapidly change to red.

Readily sol. in naphthalene at temperatures above its transition point. Solution is yellow and on cooling yellow crystals separate out.

Readily sol. in hot pseudo-cumene giving a yellow solution. On cooling gives yellow crystals.

Readily sol. in ethyl iodide giving very

yellow solution, from which yellow crystals separate on cooling, which change to red rapidly

Only sl. sol. in ethyl bromide, giving yellow solution from which yellow crystals separate on cooling, which change rather slowly to the red.

Sparingly sol. in isopropyl bromide.

Moderately sol. in isobutyl bromide, giving a pink solution from which yellow crystals separate on cooling, which change slowly to red.

Sl. sol. in ethylidene chloride. On sudden cooling at 18° the iodide crystallizes out in yellow plates, which quickly change to red.

Sparingly sol. in propyl chloride, giving a pink solution, from which yellow crystals separate on cooling.

Readily sol. in ethyl cyanide, giving a yellow solution. On cooling yellow crystals separate and rapidly change to red.

Moderately sol. in benzene cyanide, giving a deep yellow solution. On sudden cooling the solution deposits yellow crystals, which rapidly turn red.

Rapidly sol. in benzoic acid at high temperatures.

Sparingly sol. in ethyl acetate, giving yellow solution.

Sol. in ethyl propionate.

Very sol. in ethyl butyrate, giving a yellow solution. On cooling the iodide crystallized from the solution.

Sl. sol. in ethyl isobutyrate.

Readily sol. in methyl salicylate, giving a yellow solution.

Sparingly sol. in phenyl salicylate, giving yellow solution. On cooling yellow crystals separate out, which gradually change to red. (Kastle, *Am. Ch. J.* 1899, 22, 474.)

Mercuriomercuric iodide, $\text{Hg}_2\text{I}_2 = \text{Hg}_2\text{I}_2$, 2HgI_2 .

Insol. in H_2O or alcohol. Partially sol. in $\text{KI} + \text{Aq.}$ in hot NaCl , and $\text{NH}_4\text{Cl} + \text{Aq.}$ and in hot $\text{HCl} + \text{Aq.}$ though very slowly. (Boullay, *A. ch.* (2) 34, 345.)

Mercury periodide, HgI_2 .

Sol. in $\text{KI} + \text{Aq.}$ Decomp. by cold H_2O or alcohol. (Jørgensen, *J. pr.* (2) 2, 347.)

Mercuric hydrogen iodide (Iodomeric acid), HI , $\text{HgI}_2 = \text{HHgI}_2$.

Crystallises from $\text{HI} + \text{Aq.}$ (Boullay.)

Easily decomp. (Neumann, *M.* 10, 236.)

3HgI_2 , $2\text{HI} + \text{H}_2\text{O}$. (François, *Dissert.* 1901.)

Mercuric nickel iodide, HgI_2 , $\text{NiI}_2 + 6\text{H}_2\text{O}$.

Sol. in alcohol, ether, and acetone; not decomp. by H_2O . (Dobrosedoff, *C. C.* 1901, II, 332.)

2HgI_2 , $\text{NiI}_2 + 6\text{H}_2\text{O}$. Hydrosopic; decomp. by H_2O ; sol. in acetone and ether. (Dobrosedoff, *C. C.* 1901, II, 332.)

Mercuric potassium iodide, HgI_2 , $\text{KI} + \frac{1}{2}\text{H}_2\text{O}$.

Deliquescent (v. Bonsdorff) Permanent; decomp. by H_2O into 2KI , HgI_2 , and HgI_2 (Boullay); sol. in alcohol, ether, and conc. $\text{HC}_2\text{H}_3\text{O}_2$, but decomp. by other acids (Berthelot, *J. Pharm.* 14, 186). Sp. gr. of sat. solution in $\text{H}_2\text{O} = 2.4$ to 3.1.

+ H_2O . Sol. in H_2O with decomp. Can be cryst. from alcohol. Very sl. sol. in dry ether. Very sol. in wet ether. (Marsh, *Chem. Soc.* 1910, 97, 2297.)

HgI_2 , 2KI . Sol. in H_2O . (Thomsen and Bloxam, *Chem. Soc.* 41, 379.)

Sat. solution of $\text{KI} + \text{HgI}_2$ in H_2O at 22.9° contains 8.66% K, 22.49% Hg and 52.48% I, corresponding to 0.22 mol. K, 0.11 mol. Hg and 0.45 mol. I. (Duboin, *C. R.* 1905, 141, 385.)

Sp. gr. at 16°/4° of aqueous solution containing 12.2875% salt = 1.10148; containing 12.2371% = 1.1033; containing 7.9843% = 1.06491. (Schonrock, *Z. phys. Ch.* 1893, 11, 782.)

Sol. in methyl acetate. (Bezold, *Dissert.* 1906.)

Sol. in ethyl acetate. (Alexander, *Dissert.* 1899; Hamers, *Dissert.* 1906.)

Sol. in acetone. (Eidmann, *C. C.* 1899, II, 1014; Naumann, *B.* 1904, 37, 4328.)

Sol. in methyl acetate (Naumann, *B.* 1909, 42, 3790); ethyl acetate. (Naumann, *B.* 1904, 37, 3601.)

+ $2\text{H}_2\text{O}$. Sol. in alcohol, ether and acetone; decomp. by H_2O . (Pawlow, *C. C.* 1901, I, 363.)

Solubility determinations show that KHgI_2 and $\text{KHgI}_3 + \text{H}_2\text{O}$ are the only double salts formed at 20°–30°. See $\text{HgI}_2 + \text{KI}$ under HgI_2 . (Dunningham, *Chem. Soc.* 1914, 105, 368.)

Mercuric rubidium iodide, HgI_2 , RbI .

Sol. in alcohol; decomp. by H_2O .

HgI_2 , 2RbI . Very easily sol. in H_2O . (Grossmann, *B.* 1904, 37, 1258.)

Very sol. in acetic acid and alcohol; decomp. by H_2O . Stable in aq. solution in the presence of an excess of RbI . (Erdmann, *Arch. Pharm.* 1894, 232, 30.)

Mercuric silver iodide, HgI_2 , 2AgI .

(Wegelin and Kilpi, *Z. anorg.* 1909, 61, 416.)

Mercuric sodium iodide, HgI_2 , NaI .

Deliquescent, and decomp. by much H_2O . (v. Bonsdorff, *Pogg.* 17, 286.)

Sol. in alcohol; decomp. by H_2O .

HgI_2 , 2NaI . Deliquescent; sol. in H_2O and alcohol. (Boullay.)

Sat. solution of $\text{NaI} + \text{HgI}_2$ in H_2O at 24.75° contains 4.59% Na, 25% Hg, and 58.25% I, corresponding to 0.20 mol. Na,

0.12 mol. Hg. and 0.45 mol. I. (Duboin, C. R. 1905, **141**, 385.)

—4H₂O Extremely deliquescent. (Duboin, C. R. 1906, **143**, 314.)

Mercuric strontium iodide, HgI₂, SrI₂ (?)

Sol in H₂O without decomp. (Boullay.)
+NH₄O As Ca salt (Duboin, C. R. 1906, **142**, 573.)

2HgI₂, SrI₂ (?). Decomp. by much H₂O into sol. HgI₂, SrI₂ and insol. HgI₂. (Boullay.)

Mercuric thorium iodide, 5HgI₂, ThI₄+18H₂O.

Very deliquescent. Easily decomp. by H₂O. (Duboin, A. ch 1909, (8) **16**, 282.)

5HgI₂, 2ThI₄+21H₂O. (Duboin.)

2HgI₂, ThI₄+12H₂O. (Duboin.)

Mercuric zinc iodide.

Deliquescent. Decomp. by H₂O. (v. Bonsdorff.)

Mercuric iodide ammonia, HgI₂, 2NH₃.

Decomp. by NH₃ giving NH₄I and NH₄L. (Francis, C. R. 1900, **130**, 333.)

Stable only in the presence of excess of ammonia. Gives off NH₃ in the air. (François, J. Pharm. 1897, (6) **5**, 388; C. C. 1897, **1**, 1088.)

Mercuric iodide hydrazine, HgI₂, N₂H₄.

Decomp. by H₂O (Hofmann and Marburg, A. 1899, **305**, 215.)

Mercuric iodide rubidium bromide,

HgI₂, 2RbBr.

Decomp. by H₂O.

Sol. in alcohol without decomp. (Grossmann, B. 1903, **36**, 1603.)

Mercuric iodide silver chloride, HgI₂, 2AgCl.

Insol. in H₂O. (Lea, Sill. Am. J. (3) **7**, 34.)

Mercury iodoantimonide, Hg₃Sb₄2HgI₃.

Sol. in HNO₃, aqua regia and hot H₂SO₄; insol. in HCl. (Granger, C. R. 1901, **132**, 1116.)

Mercury nitride, Hg₃N₂.

Gradually decomp. by H₂O. Decomp. by conc. HNO₃, or HCl+Aq. (Hirzel, J. B. 1852, 419.)

Not attacked by cold, but decomp. by hot dil. H₂SO₄.

Sol. in acids+Aq.

Sol. in ammoniacal solutions of ammonium salts.

Insol. in excess of KNH₃. (Franklin, Z. anorg. 1905, **46**, 18.)

Sol. in ammonia solutions of ammonium salts and in aq. acid solutions.

Very explosive. (Franklin, J. Am. Chem. Soc. 1905, **27**, 835.)

HgN₃

See Mercurous azoimide.

HgN₆

See Mercuric azoimide.

Mercurous oxide, Hg₂O.

Insol. in H₂O. Insol. in dil. HCl or HNO₃+Aq. Sol. in warm conc. HC₂H₃O₂+Aq.

Sol. in 150,000 pts. H₂O. (Bhaduri, Z. anorg. 1897, **13**, 410.)

Decomp. by H₂O or weak bases (Rose), (NH₄)₂CO₃+Aq (Wittstein), KNO₃+Aq (Rose), KI+Aq (Berthelot), or conc. NH₄Cl+Aq (Pagenstecher) into HgO and Hg₂ or HgCl₂, etc.

Sl. decomp. by alkali chlorides+Aq with formation of HgCl₂, which dissolves. (Mihale.)

Sl. sol. in alkali cyanides+Aq. (Jahn.)

Insol. in KOH, and NaOH+Aq.

Insol. in liquid NH₃. (Franklin, Am. Ch. J. 1898, **20**, 829.)

Insol. in alcohol and ether.

Mercuric oxide, HgO.

Sol. in 20,000 to 30,000 pts. H₂O. (Bineau, C. R. **41**, 509.)

Sol. in 200,000 pts. H₂O. (Wallace, Ch. Gaz. 1858, 345.)

Ordinary coarse HgO is sol in H₂O to the extent of 50 mg. per l. at 25°, but when finely powdered the solubility increases to 150 mg. per l. (Hulett, Z. phys. Ch. 1901, **37**, 406.)

Red modification is:—

Sol. in 19,500 pts. H₂O at 25°; in 2,600 pts. H₂O at 100°. (Schick, Z. phys. Ch. 1903, **42**, 172.)

1 l. H₂O dissolves 50 mg. red modification of HgO at 25°. (Hulett, Z. phys. Ch. 1901, **37**, 406.)

Yellow modification is:—

Sol. in 19,300 pts. H₂O at 25°; in 2400 pts. at 100°. (Schick, Z. phys. Ch. 1903, **42**, 172.)

Sol. in acids. Insol in H₃PO₄ or H₃AsO₄+Aq (Haack, A. 262, 190.)

Scarcely attacked by H₂C₂O₄+Aq. (Milton, A. ch. (3) **18**, 352.)

Solubility of HgO in HF at 25°.

Hg=g-atoms Hg in 1 l. of the solution.

HF normal	Hg
0.12	0.01258
0.24	0.0247
0.57	0.0629
1.11	0.1168
2.17	0.2586

(Jaeger, Z. anorg. 1901, **27**, 26.)

Solubility of HgO in HF is decreased by the addition of KF , which proves the non-existence of complex fluorides. (Jaeger)

Insol. in H_3AsO_4 , H_3PO_4 and in primary and secondary alkali salts of these acids. (Haack, A. 1891, 262. 190.)

Sol. in hot $\text{NH}_4\text{Cl} + \text{Aq.}$, less in $\text{NH}_4\text{NO}_3 + \text{Aq.}$ (Brett.)

Insol. in KOH , or $\text{NaOH} + \text{Aq.}$

Decomp. by alkali chlorides + Aq. into HgCl_2 , which dissolves. (Miahle, A. ch. (3) 5. 177.)

Sol. in $\text{Fe}(\text{NO}_3)_3$ and $\text{Bi}(\text{NO}_3)_3 + \text{Aq.}$ with pptn of oxides. Sol. in $\text{KI} + \text{Aq.}$ (Persoz)

Very sol. in acid sulphites + Aq. (Barth, Z. phys. Ch. 1892, 9. 192.)

Completely sol. in conc. CaCl_2 , BaCl_2 , MgCl_2 , and $\text{SrCl}_2 + \text{Aq.}$ (André, C. R. 1887, 104. 431.)

Solubility in Ag salts + Aq. 100 g. Ag_2SO_4 in aqueous solution dissolve 13 g. HgO . Solubility in $\text{AgNO}_3 + \text{Aq.}$ is 15.6 : 100; in Ag acetate + Aq. is 1.137 : 100. (Fincl, Gazz. ch. it. 1911, 41. (2) 545.)

Much less sol. in KCl and $\text{NaCl} + \text{Aq.}$ than in H_2O . (Schoch.)

Sol. in $\text{U}(\text{NO}_3)_3$, $\text{Al}(\text{NO}_3)_3$ and $\text{Fe}(\text{NO}_3)_3 + \text{Aq.}$ (Mailhe, A. ch. 1902, (7) 27. 373.)

Very sl. sol. in cold $\text{Hg}(\text{CN})_2 + \text{Aq.}$ abundantly sol. at 75° with evolution of HCN . (Barthe, J. Pharm. 1896, (6) 3. 183.)

Sol. in cold or hot alcoholic NH_4SCN in large amounts. (Fleischer, A. 1875, 179. 225.)

Completely sol. in $\text{KI} + \text{Aq.}$ (Jehn, Arch. Pharm. 1873, 201. 97.)

Solubility of red or yellow modification in $\text{N}/50$ $\text{KCl} + \text{Aq.}$ is about 25% greater than in pure H_2O . (Schick, Z. phys. Ch. 1903, 42. 163.)

Insol. in liquid HF . (Franklin, Z. anorg. 1905, 46. 2.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 829.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 829.)

Sol. in alcoholic solution of hydroxylamine hydrobromide below 0° . (Adams, Am. Ch. J. 1902, 28. 216.)

Insol. in alcohol.

Sol. in trichloroacetic acid + Aq. (Brand, J. pr. 1913, (2) 88. 342.)

Insol. in acetone and in methylal. (Eidmann, C. C. 1899, II. 1014.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)
